Circle No. 5.—In Mr. Howe's jurisdiction, the Rajah of Ramnuggurh as subscribed Rs. 2,000 to the charitable relief fund; this, with the Government subsidy, will be sufficient to begin with. Colonel Boulderson is collecting statistics village by village in the tract under his care, and distributing relief. Mr. Howe is doing the same for Ramnuggur; 200 persons have already been relieved; these are almost all cripples and men who from sickness or other cause are unable to work. A relief-house and dispensary are also being erected at Ramnuggur. At Bagha, Messrs. Chritien and Moore distribute relief to about 200 to 300 persons daily.

In Circle No. 3, the head-quarters have been fixed at Sangrampore, near Gobindgunge. There will be a sub-committee probably at Kessurea.

In Circle No. 2, the head-quarter will be at Puckree near Seeraha, with sub-committee probably at Dhaka.

The following arrangements have been made for medicel relief:

Hospitals are being established at Harnatour, Bugha, Ramnuggur, Balthur, Ramgurwa (Adapore), Pakri (Seeraha), and Tituriah, and native doctors have been sent to Harnatour and Ramnuggur, and one will shortly go to Ramgurwa. Appropriate accommodation for patients and the native doctors have been directed to be constructed, sums of money have been forwarded to most of the police stations and to European residents for the relief of persons who require immediate assistance, and a large number have already been relieved.

The telegraph has been constructed as far as Bettiah.

The condition of the people under Mr. Howe's charge is thus described by him :—

"The greatest distress has for a long time been experienced by all classes except a small and wealthy minority. The cultivators of the better class had little or no grain in store, while the Rajah of Ramnuggur, their natural protector, gave them no relief; the laboring classes could get but little work, famine prices, or all but famine prices, prevailed in the bazars, and the poor lived on bad and insufficient food, or fruits, roots, and everything they could get. There was, indeed, plenty of grain in the tract, but it was kept back from the market, and but little could be obtained even at the high prices which prevailed. Such was the condition of the people up to the present fortnight, and a great part of the description still applies. But our various relief measures, which have now for some time been in existence, are making rapid progress, and are becoming a practical reality to the people, so that a material and already perceptible improvement in their condition has been caused." Having thus described the previous condition of the people, Mr. Howe proceeds to notice the natural causes that have during the present fortnight increased and also those which have tended to mitigate the general distress. He says: "Besides the increase in the severity of the distress, naturally caused by its now lengthened duration, there has been much sickness. Fever has been prevalent, and the outbreak of small-pox, which I before reported, has, as I then anticipated, become general throughout the sub-division. Many have died, and the state of weakness to which those who recover are as a rule reduced, render them incapable of work. A large number of persons have in this way during the last fortnight been reduced to the greatest distress. Much suffering has also been caused by the large number of fires that have occurred, by which sometimes an entire village has been burnt down. Those fires are partly the result of accident, and partly the act of incendiaries. Almost all the houses in the tract are covered with thatch, and the reckless way in which fires are lit in these

Circumstances which have increased the sufferings of the people.

generally low-roofed buildings is astonishing, and quite sufficient to account for most of the fires that occur; others again are intentionally caused, the motive generally being revenge. I have come across two *bonâ fide* cases of arson, in which the owners of the village were wealthy and unpopular, and who had large quantities of grain, which were destroyed in the fire." He adds: "In estimating the degree of distress prevailing, these cases must not be overlooked, as frequently the inhabitants of an entire village are ruined in one night, their household property, their littte savings, destroyed, and their families reduced to begging and starvation."

Circumstances which have tended to diminish the general distress.

Mr. Howe describes these as follows:—"No rain has fallen during the present fortnight, but the good effect of what fell in the preceding week is becoming more and more apparent. 'Cheena' has to a considerable extent been sown, while the 'rubbee' in the south of the division has much benefited. In the north there is hardly any 'rubbee,' but even there the late rain has done much good, by enabling cultivators to prepare their fields for the early rice crop, and thus afforded employment to a considerable number."

Regarding payments in kind, Mr. Howe reports: "Sanction for payments in kind under rules A., Resolution No. 5,718, has been given by the Honorable Sir Richard Temple, but, owing to the necessity for European supervision, I have at present commenced on three roads only, one at Ramnuggur, and the two roads at Shikarpore, where Colonel Boulderson is stationed. I have not yet heard from Colonel Boulderson, but here at Ramnuggur, the system is very successful, and affords a great relief to the laborers. Prices are highest towards the north-west and at Ramnuggur, and the most immediate necessity for payments in kind is at Hurnatour, where, however, it cannot at present be started." . . . "Rice is now selling at 9 seers the rupee."

With reference to the sickness reported by Mr. Howe, native doctors, as already stated in this narrative, have been deputed with the necessary medicines to Hurnatour and Ramnuggur, and the police force has been greatly strengthened in the Ramnuggur tract, that station having been formed into a first-class thannah. The frequent occurrence of arson cases will therefore, it is hoped be checked, a few cases detected and successfully prosecuted will probably put a stop to them. Regarding storage of grain, Mr. Howe states: "The greater part of the grain allotted to this sub-division has arrived, and all the golahs are ready, and now that a sufficient force of police has been sanctioned, and most of the men arrived, the more remote golahs will be filled up." Mr. Howe considers the amount of grain allotted sufficient.

Mr. Howe gives the following account of the advance of grain given by orders of Sir Richard Temple to the Rajah of Ramnuggur, or rather to his asamees on the Rajah's security: "In the beginning of January the Rajah applied for an advance of Rs. 15,000 cash and 5,000 maunds of grain. When the Commissioner came to Ramnuggur, on the 23rd January, the Rajah had done nothing whatever to assist his ryots, and the Commissioner, seeing the urgency of the occasion, gave me instructions to the following effect: If (the Commissioner wrote) the Rajah satisfies the local officer that he has done something practical towards importing grain; if for instance, he has deposited Rs. 10,000, writes Mr. Gibbon, or some trustworthy person, for the purpose of importation, Mr. Howe is authorised to advance 5,000 maunds to the Rajah from the Government stores. This was on the 23rd January, the day on which I took over charge at Ramnuggur. Between this and 7th February, when Sir Richard Temple visited Ramnuggur, the Rajah did nothing, except make petty crop advances on my earnest representations. These advances, however, amounted to Rs. 1,200 only, which, considering the size of his "illaka," was comparatively of little use. By the time that Sir Richard Temple arrived it was but too manifest that the Rajah did not realize the importance of the crisis, and that he did not intend to assist the "asamees" on anything like an adequate scale. Sir Richard Temple then determined that advances should be made direct to the "asamees" by Government, and the Rajah finally agreed to be security for repayment of the advance. Authority was given me to make such advances in grain from the Government stores, and the Rajah signed a deed of security,—for the present for 5,000 maunds, for the money value of which he agreed to be security. He also agreed to be security for any further advances that might hereafter be required. Under this arrangement I am making advances of Government grain to all villages in which such are required. In order, however, to work through the Rajah as much as possible, I persuaded him to draw up a statement showing in a certain column what advances he approved of. This entry I treat as an advance for three or two months, during which time I shall carefully collect statistics with reference to all these villages. After this I shall be in a position to determine exactly how much more is required, or whether the advance made according to the Rajah's proposals is sufficient. The Rajah is satisfied with this arrangement, and agrees at the expiry of the time to be security for any further tuccavee advances that may be required. Under this arrangement about 50 villages have already received their first instalments, and in a few days I shall be able to complete the distribution. I will then submit a full report on the subject." Mr. Howe adds: "The question of advances for the purchase of seed grain is important, but not of such immediate urgency, and after two months, before further "tuccavee" advances are required, I shall be in a position to report." Before Sir Richard Temple departure, the Rajah of Ramnuggur purchased 500 maunds of grain at Beteiah. Mr. Howe concludes in these words: "We have now ample food supplies at all our 'golahs' which are so situated that every part of the tract can be daily reached; our relief works are attracting large numbers and are a practical success; our charitable committees have done much good, and afforded relief whenever it was wanted."

H. KEAN, Collector.

Enclosure No. 4.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT,

Calcutta, the 2nd March 1874.

READ—

The district narratives of the Bhaugulpore Division for the fortnight ending on the 21st February.

Monghyr report received on 25th February.
Bhaugulpore „ „ 26th „
Purneah „ „ 25th „
Sonthal Pergunnahs „ 26th „

The reports show that in the three distressed districts of Monghyr, Bhaugulpore, and Purneah the arrangements for meeting distress and for actually giving relief are fairly well forward.

2. *Monghyr.*—The spring crops are reported to be doing extremely well; in parts of the district the new food-crops are coming into the market, and the Magistrate-Collector expects these crops will yield enough to feed the whole district for four months. Supplies are as yet sufficient in the local bazars, and the prices are not reported very high. Common rice is 11 seers per rupee at the dearest marts, while millet and barley are considerably cheaper. North of the Ganges, the Begoo Serai relief committee, after meeting and considering the matter, found that charitable relief was not as yet needed in that sub-division, remarking that there are always plenty of people ready to live on the bounty of others, and that they should not be encouraged by indiscriminate alms till there is real necessity. The Lieutenant-Governor would beg attention to the condition of Buktearpore, which was at one time said to be very distressed, and which is a long way from the head-quarters of any relief committee. Distress is confined to parts of the Jamooee sub-division. Government relief works, as well as private relief works, are open in abundance throughout the worst parts of the district. The village inspections conducted in these very bad tracts show, it is said, that "distress is general," and the inspecting officers found on the road-side the "bodies of two men who had evidently died from starvation." It may, however, generally be gathered that distress is as yet principally confined to the classes who are at all times very badly off.

3. 3,845 people were employed daily on the Government relief works, besides the number (about 3,500) on the court of wards' works in Khurrukpore. The account given of the relief work started in Monghyr town shows that care and organisation is much required on a work of this kind. Private trade in grain is active, and the progress made with the transport and storage of Government grain is satisfactory.

4. Thirteen charitable relief centres appear to be already in operation giving daily relief to 985 persons. But with reference to the two cases of reported starvation, and to the extract from a relief officer's report stating that "many, especially the females, will die of starvation if no measures similar to those contemplated in clause *f*, section 3, part II. of the Relief Committee's Instructions are adopted for their relief," the Lieutenant-Governor begs that immediate steps may be taken (if they are not already taken) to work the relief centres, to have village to village inspections, and to give relief in the particular shape required throughout the tracts of which the relief officer speaks, so far as it is really necessary. The Commissioner of the division has a number of relief superintendents, and he has intimated that he requires no more, and the Lieutenant-Governor trusts that before this the necessary action has, as stated in Mr. Lockwood's 15th paragraph, been taken to organise sufficient relief under the rules.

5. The attention of the Commissioner of Patna will be invited to the statement (which seems not to be very fully substantiated), that the Patna authorities have turned back from the Ganges the Begooserai people who were going into the Patna district for harvest work. The Lieutenant-Governor hopes it is impossible that there can be any truth in this.

6. *Bhaugulpore.*—The spring crops of Bhaugulpore are in good case; and in the Soopole sub-division supplies of food are more easily obtainable, the price quoted for common rice being

10 seers. In Mudehpoorah (where distress had been supposed not to be so imminent as in Soopole) supplies of rice are scanty, and 8 seers per rupee is the price quoted. Marwa, however, is still quoted at 13 seers per rupee. The Magistrate-Collector who has just been over the worst parts of Mudhepoorah and over a part of Soopole writes—"The general condition of the people is better than I had anticipated." In the Banka and head-quarter sub-divisions south of the Ganges no distress exists or is anticipated.

On the Government relief works only 3,055 laborers are employed, but the Magistrate reports that a great many petty village works are being executed of the zemindars; and that work on clearing village tanks is being generally undertaken by Government officers in the northern sub-divisions. Still the Lieutenant-Governor is not satisfied that enough in the way of relief works has yet been done. Private trade in grain is not so brisk in Bhagulupore as in Monghyr and Purneah; but the exportations of grain are no longer large. The transport of grain northwards from the Ganges had been progressing but slowly; and it is hoped that the contracts for the transport of large quantities, now arranged by Mr. Hankey, will be fulfilled. It is satisfactory that the Magistrate-Collector should have been able to write from Soopole that he found 55,000 maunds of Government grain already in store there. The present report shows that the Bhaugulpore zemindars are beginning to do their duty to their ryots; and the Lieutenant-Governor begs that a special expression of his approval may be conveyed to Baboo Hurbullub Narain Sing of Sonbursa, who has set such an excellent example to the landholders of Mudhepoorah and Soopole.

7. Six relief centres appear to have been in active operation in North Bhaugulpore at the time of the Magistrate's tour, and he was engaged in starting eight more centres. At these relief centres in Soopole 290 people were being relieved, many of whom were children. At the other centres applicants for relief were few.

8. *Purneah.*—Prices in the Purneah district have generally fallen; trade is brisk; considerable private importations are going on. In the Kushbah Amour thannah only are prices dearer than 10 seers the rupee; there common rice was selling at eight seers, and Government grain is being sold to laborers on the roads and to the poorer classes of people in the villages. Village inspections disclosed distress in some parts of Kudbah; but with the exception of these two thannahs, the rest of the district seems to be better off than at the time of last narrative; laborers do not come largely to the roads, nor can private employers get sufficient work-people at ordinary rates.

9. Relief works are being opened and are kept open in every distressed part of the district. The number of laborers has risen to 2,650, wages are said to be regularly paid, and the Magistrate has authorised a slight increase of the piece-work rates. No tank-work is in operation except in the Purneah municipality. Effort should be made to employ the weavers to make gunny-bags. The rate at which Government grain was carried into the district during the fortnight was 3,856 maunds a day; but as this rate will not suffice to carry the whole of the Purneah and part of the Dinagepore supply, the carrying power of the district is being still further expanded under Mr. Hankey's superintendence. It is now expected of the Magistrate of Purneah to send from Caragola 140,000 maunds in all towards Dinagepore. Mr. Kemble's account of the dealers, who have sold off all the grain they imported under advances from Government, and have now started to fetch a second consignment is satisfactory.

10. The arrangements made by the Kudbah and Kusbah Amour relief committees to supply work to the impoverished weavers seem satisfactory. But from the Kudbah Deputy's and Mr. Wyer's accounts of their village visits, it would seem that more active steps must at once be taken to distribute relief from centres within these two thannahs, and the Lieutenant-Governor begs that this may immediately be done under the Commissioner's orders.

11. *Sonthal Pergunnahs.*—The accounts of prices and of the state of the people are more favorable than those given in last narrative. The people are said "everywhere to look healthy "and strong." Ample relief works seem to be provided in all the more distressed parts; but on no one work are there very many laborers, and the workpeople seem to bring their own food.

12. With reference to what is said in some of these reports about the need of advancing grain to ryots and of acting upon the relief committee's instructions, the Lieutenant-Governor desires very plainly to remind all officers that the relief instructions are issued for their guidance, and that they are to be observed. Those instructions give the committees and the relief superintendents under them sufficient discretion to advance grain, or even to sell it at below cost price to pauper ryots, or to others who cannot work on the roads. When the Government grain is at hand in abundance, when the instructions permit its being used in this particular way, and when Government permits and encourages the employment of an ample relief agency, mere reports that ryots will starve or are starved for want of advances, or that women will starve for want of relief, cannot be accepted as any evidence that the Government officers or the committees or their agents have done all what was possible to relieve distress.

13. Either the daily average or the number of persons receiving gratuitous relief on the last day of the fortnight should always be given under heading F. of the district narratives.

By order of the Lieutenant-Governor of Bengal,

C. Bernard,

Officiating Secretary to the Government of Bengal.

No. 1146—S.R.

Copy, with copies of the district narratives, forwarded to

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, 2nd March 1874.

Narrative of Scarcity and Relief in the Monghyr District for the Fortnight ending the 21st February 1874.

A.—State of the Country.

The bazars are generally well supplied, and those who have money to buy it, find no difficulty in getting grain. As stated in my last report, the Government golah was opened for the supply of grain to coolies working on the Butia road; but only a very small quantity was purchased. I visited Bucktearpur on Friday, and found that grain had since come into the market, and I have agreed to advance money to a respectable trader there for a further supply.

Regarding the thinly populated country between Gungta and Jumui mentioned in my last report, Babu Umbica Churu Sen is supplying grain purchased with Government money to a petty trader who sells to the people at a small profit.

The rubbee grain is now coming into the market, and by the time of my next report, we shall probably learn how prices are affected by it. At Khagaria on Friday last I found early peas selling at 17½ seers, and I have just received a sample of excellent gram offered for sale in Sheikpura and Secundra at 19 seers per rupee. As the mass of the people find difficulty in procuring the necessaries of life, luxuries such as tobacco, fish, and milk, are unusually cheap; whilst ghee produced in large quantities in this district, is almost a drug in the market. There is a great variety of opinion regarding the variation of the market. The inhabitants of the rubbee country appear satisfied that prices will become easy directly the rubbee is cut; whilst those who live on rice tracts, although they know the rubbee crop is a good one, declare that it will not materially affect the market. I calculate, however, that after deducting seed for future sowings, at least six million maunds of food grains, sufficient to feed the entire population for four months, will be cut. But, although a calculation regarding the outturn of the harvest may be made with some accuracy, it is impossible to calculate how much of the grain will remain in the district and how much be exported. The present high prices are sufficiently tempting to induce all who have grain to part with every available seer. Immense exportations of grain, even in years of plenty, take place to feed horses and cattle generally in Calcutta, and indeed however they are to be found in Bengal south of the district. Wheat also follows in the same track, and I am informed is even exported to supply the markets of Europe.

If, however, the price of grain goes down, as I expect it will, as low as Rs. 2 per maund, the condition of the district will improve; and except in the distressed rice tracts, I hope the people will be able to live without much distress until the bhadoi harvest of August. If, on the other hand, the exportations are so great as to leave no surplus for the agricultural classes living on the rice tracts where the crop has failed, and for the laboring population generally, the condition of these persons will get worse and worse, at all events until the bhadoi harvest is cut.

For the above reasons, I think the influence of the rubbee harvest on the markets should be ascertained before deciding on the sufficiency or otherwise of our present rice stores.

In the meanwhile I am making inquiries how far the rubbee crop has been already purchased, and, if necessary, where we can purchase in large quantities surplus grain set aside for sale. Hitherto I have not heard of any difficulty as regards seed grain. Even at Batara, where the rice had almost entirely failed, I found a golah of dhan religiously sealed up, and two days ago whilst riding through the equally bad rice tract north of Furkya towards Bucktearpore, I found the seed for the next crop had already been sown. However improvident ryots may be in other respects, they very wisely will not consume their seed grain so long as any degree of life is left in them.

The rain which has fallen during the month has done an incalculable amount of good, which becomes daily more and more apparent. I am of opinion now that the rubbee may be put down as a twelve-anna crop all round. The wheat is looking generally better than it did this time last year, and in many places it is looking very well indeed. Even at Bucktearpore, on Thursday I saw some fine wheat fields, and the zemindar there agrees with me in thinking that crops which without rain would have yielded five maunds will now yield 10 maunds per acre. The gram, musoor, and pea pods are also well filled, and the oil-seed harvest will be a good one. The crops on the extensive dearahs and low lying lands are as good as can be wished. Messrs. Wilkins and Campbell, I believe, agree with me in thinking the rubbee harvest will be generally a good one; but several indigo-planters say that the yield will not, so far as they can judge, be above half an average one. The factories, however, are generally situated on high lands, and of course, in striking an average, I take high and low lands together. I have also the advantage of having seen the rubbee crops now growing in every pergunnah in the district. But whilst prices continue so high as they are at present, the condition of the laboring population must continue to be very bad. In almost every village a number of half-starved people will be found, who in times of plenty subsist on the charity of neighbours, but who now get little or no support as their neighbours, however charitably inclined, can barely manage to support themselves.

Even in prosperous times wages are so low that most families can only afford one good meal a day, and under such circumstances a very simple calculation will show what the present condition of the people must be. Mr. Campbell, writing from Purbatpara, south west of Jumui, however, takes what appears to me rather a sanguine view of the state of affairs there; he says: "I beg to express my opinion as the result of my inspection that no distress at present exists among any class in this pergunnah, nor is any likely. Even the Mushars whose houses I visited are all in good condition. In their huts I found charpoys, cooking utensils, and hand-mills for grinding corn. These last were shown by the flour on them to be in daily use. In some enclosures I found dhan drying in the sun and being husked in dhenkies. In most of them, too, I found goats tethered, and they all have pigs. Just now a wild fruit called "kheri," about the size of an apricot, is extensively consumed. It is prepared by boiling, and is said to be nutritious. It abounds in the jungles, and can be had by every one who chooses to gather it. The condition of the Mushirs in this pergunnah forms a strong contrast to that of the Mushirs north of Jumui.

The works on the road to Gungta and many of the villages were deserted on account of the usual annual exodus of the laboring classes to cut the rubbee crops on the "tal," or lands subject to the Ganges inundation.

In many cases I found the women and children left behind with apparently no means of support. I found an old blind Musharin with two children, and an old Dosadh without relatives, who looked distressed, and these I ordered to be sent into the Mulleypore poor-house. The tal rubbee crop must therefore be a good one to attract all this foreign labor, and the fact of the women and children left behind not being destituted is a good sign.

The rubbee of the pergunnah itself is as a rule very fine near one village especially, Kalu or Kalliyanpur. I walked through upwards of a quarter of a mile of magnificent rahur. This crop indeed everywhere throughout the pergunnah is flourishing. The only crop which showed signs of suffering was the poppy, which though good on the whole had here and there withered away. "Baishakhi" janera and cheena is appearing above the ground, and much is being sown, and the turning up of the paddy fields is everywhere going on.

Altogether I considered affairs so promising that I considered it unnecessary to open any relief centre at Mungrar as contemplated.

Major Waller also, who has lately been on a tour in the north of the Beguserai sub-division, gives a favorable account of the condition of the people there. He mentions extensive embankments and tanks being excavated by the zemindars Luchmi Persad and Ganu Singh of Sukurpura, which give employment to all the laborers in the neighbourhood. Mr. Lamb of Sisowni Factory, north-east of Beguserai, and Mr. FitzPatrick near Tegra, on the other hand, say that the rubbee harvest in their neighbourhood will be scanty, and distress amongst the ryots greater than they at first anticipated.

As mentioned in former reports, the condition of the lower classes in the Umrethu and Bisthazaree pergunnahs is very bad; parts of Chandun, Bhuka, and Selimabad are also in a bad state. Hitherto, however, distress has been confined to the old, infirm, widows, and children. The Government works have kept the able-bodied from starving, and I have been doing my best under the Land Improvement Act to start works scattered over the most impoverished tracts. I paid a special visit to Bisthazaree last week to meet the zemindars, and up to the present time nearly Rs. 25,000 has been advanced to leading zemindars for digging out old tanks and repairing old embankments at 21 different villages in the distressed pergunnahs. The zemindars are beginning to feel alarmed regarding the state of affairs, and where the security for repayment is good, they find there is little difficulty or delay in getting the money they ask for.

The chief features of these pergunnahs are: scarcity of water, immense silted-up tanks, and worn-out irrigation embankments, so that if the money advanced is properly expended, as I hope it will be, much permanent benefit will be afforded. Each officer engaged in relief work will be provided with a skeleton map showing the projected works, and they will report from time to time how they are progressing.

15. The Commissioner is here arranging for the immediate inspection and relief of the distressed tracts village by village. We are to have officers stationed at Sondhi, Choara, and Bucktearpore in Furkya to hunt up the people within given distressed areas. Messrs. Money and Currie have for some time been relieving distress wherever found in the Umrithu and Bisthazaree pergunnahs, and I have lately sent Moulvie Abdul Jubbar, Deputy Magistrate, with grain to look up certain villages around Sondhi, pending the arrival of the regular relief officer, as I know from personal observation that that part of the country is in a critical condition.

In noticing the condition of the people, it may be mentioned that the approaching warm weather will afford much relief, as during the past season persons with hardly a rag to their backs have suffered almost as much from cold as from scanty food. During the frosty nights in January their sufferings at night must have been very considerable, many persons showed me where they had been burnt whilst crowding round fires at night, and whilst I was at Luckiserai in January one poor creature fell into a lime-kiln near the station whilst warming himself in the night.

The following extract from the proceedings of the Beguserai relief committee, just received, may be added whilst writing on the condition of the people:

"The various members present there entered into a discussion as to the condition of the people, and the opinions of by-standers, zemindars, cultivators, and so on, of whom large numbers were present, about the office were taken. It is the universal opinion that there is no actual distress as yet, and that there will be none if things go on as now. At all events till after the cutting of the rubbee crops, all agreed that charitable relief was as yet unnecessary and would not be undertaken, that is charitable relief to people who usually earn their own livelihood by work. There would always be found lots of people to live on the bounty of others, and in order not to encourage these, any distribution of money or grain would be impolitic.

"It was therefore generally resolved that until the committee see their way more clearly, *i.e.*, until things assume a more definite shape, it would be premature to draw out rules for the distribution of relief. This should be put off till a late date, and in the meanwhile every member of the committee is to keep on the alert and make himself well acquainted with the circumstances of the people about him. At the very first sign of distress the fact is to be reported to the Chairman, who will at once call a meeting to set affairs in motion."

In another letter, just received, Mr. Wilkins writes—

"Every year a large number of poorer classes pass through this sub-division from Tirhoot to Mogha (across the river) to cut dhan and the rubbee crop. This year, as usual, large numbers of the poorer classes have been flocking there, but they have all been turned back by the orders of the Collector of Patna and not allowed to remain on the other side of the river. Now, in the expectation of getting work (as usual) these poor people only bring down with them sufficient food to last them up to the end of their journey to Mogha. The result is that, being turned back, they cannot have any food to eat, and they certainly will not be able to buy any here. I was told yesterday that between Tegra and Mokamah Ghat, a distance of about 5 miles, a continuous stream of these people was seen, numbering in all not less than 3,000. I only heard of this yesterday evening, and have not been able as yet to inquire into the matter. But I will institute enquiries at once."

Another special point is that some people of the Jollah or weaving caste have been going across the river to cut the rubbee crop; and great stress is laid by the officer reporting this on the importance and significance of the fact. I do not think very much of it. The weaver caste have never much work to do at this time of the year, and if the truth were known, I dare say they eke out their livelihood by manual labor at a season when their craft keeps them with idle hands.

Mr. Money at Secundra in the Bisthazaree pergunnah, who for some time has been going from village to village relieving distress, reports that distress is general, and last week we found by the side of the Jumui and Luckiserai road the bodies of two old persons who had evidently died from starvation whilst travelling in search of food. Mr. Money complains that in some instances the prejudices of ignorant people repel relief although given with due allowance for native customs. Some mischief maker spreads a report that relieved persons are to be out casted or degraded or shipped off to the Mauritius, and the poor people who believe him refuse relief at our hands with a stoicism worthy of a better cause. Mr. Money further reports that the able-bodied Mushirs have almost without exception gone with their families to the low-lying rubbee lands bordering the Ganges, leaving their houses in ruins. In a month or six weeks they will return, and then the distress will be heavy.

I regret very much to state that I have not yet received the criminal statement from the Superintendent's office.

B.—Relief Work.

Since my last report, Mr. Campbell, Civil Engineer, has been appointed to assist in getting in hand the relief works around Jamui. He is at present engaged in setting out a projected road between Secundra and the Gya district. The new Secundra and Luckiserai road has been commenced, and will open out that part of the country in a very useful and satisfactory manner. The new road between Jamui and Secundra is almost finished, and will, I think, prove to be a capital work. The engineers complain, however, that directly a new work is opened, all the coolies leaving the old work incomplete rush off to the new one, as they find the excavation of new pits for embankments affords lighter labor than those on which they have been engaged for some time. If this difficulty proves to be really serious, our remedy will be a reduction of wages on the new works. For the next month our works will, I expect, be almost deserted for rubbee cutting. It has however come to my notice that in some villages the inhabitants drive away outsiders, saying that they have plenty of hands already to cut the crops. The dearas and lands bordering the Ganges will, however, require extra hands, and I expect there will be a great inundation of laborers from Tirhoot looking out for work. After the rubbee is cut these people will return to our works, and the works now undertaken by the zemindars. In one or two instances, I have lent surplus tools to zemindars for digging tanks, on the condition that they are supplied to non-professional laborers who have not koladies of their own. Throughout the district generally labor on the roads has fallen off, partly in consequence of the rain which moistened the ground for bhadoi, indigo, and rice planting, and partly in consequence of the rubbee harvest. At Bucktearpur I find it is not considered etiquette for the women, even of the most despised castes, to work on the roads, and their families suffer in consequence. At Monghyr, on the other hand, women are the chief laborers. The municipality lately opened a relief work in filling up a depression in the fort ditch, where stagnant water hitherto has remained all the year round and infect the neighbouring air. The wages offered were six pice for men, four pice for women, and two pice for children. Directly the work became generally known a vast multitude, chiefly composed of women and children, appeared. It was alleged that every available child was hunted up by the laborer, and borrowed for the occasion.

The number was so great as to be perfectly unmanageable, notwithstanding the united efforts of Colonel Murray, Dr. Purves, and Mr. Thomas, aided by a number of native subordinates. The first day, although the number in the morning was comparatively small, about a thousand appeared at pay time and all demanded pice. The next day directly tickets were distributed the main body disappeared until the evening, when they again came and presented their tickets with the rest. The third day, when the numbers had increased to over three thousand, numbers of old women were drafted off to the Government garden. Here also they proved quite unmanageable, they did little or no work; but directly the overseer's back was turned, they seized every available plant or root, either for themselves or to feed their goats and pigs at home. At Colonel Murray's suggestion piece-labor corresponding with the condition of the people was on the fourth day begun, and then nearly the entire multitude disappeared as rapidly as they had come. In dealing out money for relief works to zemindars, although it may be necessary to exercise due caution in estimating the cost of such works in times of scarcity, it is useful to have practical experience of the kind of work done by non-professional laborers north of the Ganges. Besides the Tirhoot road which affords labor, I have supplied Mr. Wilkins with money to carry on relief works through the planters and others wherever such work may be found useful and really necessary. I annex a statement marked (B) which will show the number of laborers on the relief roads. This does not include nearly 4,000 laborers at Karakpore.

C.—PRIVATE TRADE IN GRAIN.

Twenty thousand maunds of grain, imported by private individuals, have been received at the Monghyr railway station during the fortnight; much more has been imported by river, and trade is generally very brisk. I know of no reason why private trade should not be brisk. There is no interference whatever with free trade. Grain in any quantity is procurable up-country; the railway fares have been reduced. Grain offered at a reasonable price can be readily disposed of. Carriage to the interior is available, and the roads are at this season of the year as good and as safe as in any part of England. I have very little fear of starvation for those who have money in any part of the district. Those persons who are so fortunate as to possess a cart and a pair of bullocks are doing a capital trade, and are attracted to every point where required. On Thursday I took the opportunity of Mr. Hankey's presence in the district to ride with him over the roads leading to Bucktearpore and Soopole. We found the roads and ghâts swarming with carts carrying Government and private grain. We rode about seventy miles on Thursday and Friday, through the large Furkya pergunnah, where the cart tracts at this season of the year are in capital order. The chief features of this pergunnah, which is generally submerged during the rainy season, are at present vast plains of coarse thatching grass, dotted at short distances with extensive and deep pools of water swarming with alligators, fish, and wild fowl, their banks being completely hidden with wild roses just coming into the bloom. The abundant pools afford water for the cattle, and if fodder falls short any amount of coarse pasture can be obtained. Vast herds of buffaloes are fed in these grass plains, and the ghee is exported to Calcutta.

D.—STORAGE OF GOVERNMENT GRAIN.

During the past fortnight it has been determined to increase the amount of grain in distressed tracts, and this is being done as fast as possible. I am emptying the Monghyr, Khagaria, and Gogri golahs which can easily be filled again if necessary at any time of the year, and sending their contents over 20,000 maunds to Bucktearpore. I found the golahs being built by Mr. Moore at Bucktearpore well raised and generally good, whilst a previous golah built by the Canoongoe, I regret to say, in a very unsatisfactory condition. I am making inquiries with a view to ascertain where the fault lies. Besides the golahs already erected, I am building golahs and Sondhi at Chandowra conveniently situated in the distressed tracts of Jamui. These will be filled at once from Luckiserai and Jamui. Regarding the sufficiency or otherwise of the stocks for Government purposes as stated above, I wish to wait until the effect of the ensuing rubbee harvest on the market is known. I do not anticipate any evil from the delay as the railroads, rivers, roads, and available cartage will at any time suffice, I believe, to carry all we want to any given point. In my next report, I shall endeavour to give a reliable calculation regarding the amount of rubbee which will remain in the district, and the amount which will be exported. If necessary the Government might perhaps purchase grain from its own deara ryots without loss to itself or injury to any one else.

E.—ADVANCES TO PRIVATE PARTIES.

During the fortnight I have had applications for advances for the purchase of grain to the extent of Rs. 17,000. Order has been passed on the sub-divisional treasuries for payment. I believe the money has been paid, although I have not yet received official notice of it. In anticipation of a loan applied for by the municipality, Colonel Murray, Dr. Purves, and Mr. Dear, the most active members of the municipality, are doing their best to open relief works; but as before mentioned, their utmost exertions have hitherto failed to organize satisfactorily the multitude, composed principally of old women and children, who apply for work. The work performed by this rabble may be estimated as nil, and it will probably be found more convenient to feed the hungry without going through the farce of requiring labor in return.

I have numerous applications from private parties for advances for land improvements. Nearly all these applications hitherto are from the zemindars of the distressed pergunnahs, and I have as yet found no instance where a zemindar has refused to come forward. I have already advanced Rs. 24,050 to the leading zemindars, Nawab Ali Khan, Shah Abdul Hossen, Nawab Abdul Hossen, Malik Ali Kabir, and others equally rich and influential. I have numerous other applications under local investigation, and as I have mentioned above, I hope that not only present relief but that much permanent benefit to the estates will result from these advances. Hitherto the proposed works are of three kinds only,—digging out old tanks, repairing old embankments, and sinking wells. I have, however, been obliged to refuse some, though not many, applications, for reasons which need not be entered into here. We must, however, I think, look to these works more as reliefs for the able-bodied than the population generally, because non-professional labor proves itself to be most unprofitable to the capitalist. I have, however, in hand Rs. 3,000 for digging out tanks in Government estates situated in the distressed pergunnahs, and with proper supervision, I trust all will be able to find work there without loss to Government. Charitable relief is now coming into active operation wherever it is found necessary. On Friday at Buktearpore I superintended the distribution of cooked food to about 70 wretched looking creatures, chiefly children of the weaver caste. There are not so many deformed persons as generally attend such gatherings, but one woman had something wrapped up in a cloth which she attempted to conceal, but which proved to be an infant covered with small-pox.

Major Waller, who was present, has provided this person with money in order that she may not have occasion to attend the general distribution of food.

Officers engaged in distributing relief complain much of the difficulty in selecting candidates for tickets; crowds of lepers, blind, and cripples, styled professional beggars, whose profession, however, is the result of necessity rather than choice, present themselves. It appears hard to refuse charity to suit persons, but if once they come on our hands, it will be a problem of some difficulty to determine at what hour we are to shake them off. I have not thought proper to insist on any very hard and fast rules; the distributing committees must use their own discretion in each instance.

The following has just been received from Moulvie Abdul Jubbar, Deputy Magistrate at Luckiserai, whose judgment may be relied on;—"At Batara (one of the most distressed villages), I ascertained that some Babhuns and Brahmins, who will not go to the relief works, nor have admission to the poor-house, are in great and actual distress. I gave tickets to two old men for admission to the Sondhi poor-house, but one of them, a Babhun, refused to have a ticket. I left the ticket with Kuldip Narain Putwari, who accompanied me to the village, instructing him to supply the man with food from the poor-house if he sent for it. I am afraid many of them, especially the females, will die of starvation if no measures similar to those contemplated in clause F, section 3, part 2 of the Instructions to Relief Committees are adopted for their relief. They cultivate a considerable quantity of land in their village, and are respectable middlemen. Two successive rice crops having failed in the village, the mahajuns have discontinued to help them with loans. I request you will permit me, under the rule above quoted, to advance money to them and send me Rs. 200 for the purpose from the relief fund."

I have telegraphed to the Deputy Magistrate to draw on my agent at Luckiserai for the required amount.

The following is a list of the relief centres already opened.

No.	Name of relief centres.	Number of persons fed.	Under whose supervision.
1	Monghyr - - - -	359	Municipal committee.
2	Buktearpur - - -	70	Mr. More and committee.
3	Chupraun - - - -	65	Mr. H. Christian aided by a committee.
4	Luckiserai - - -	60	Local committee superintended by Mr. Currie.
5	Sheikpura - - - -	104	Mr. Currie aided by local committee.
6	Secundra - - - -	200	Mr. Money aided by committee.
7	Garua Parsanda - - -	12	Mr. Money aided by committee.
8	Orain - - - -	60	Moulvie Abdul Jubbar aided by committee.
9	Obeypur - - - -	20	Mr. J. Christian aided by committee.
10	Pachna - - - -	5	Mr. Currie aided by committee.
11	Sondhi - - - -	20	Only just opened by Moulvie Abdul Jubbar.
12	Choara - - - -	40	Mr. Money aided by committee.
13	Jumui - - - -	—	Return not received.

The numbers at Luckiserai, Shiekpura, Buktearpore, have diminished on account, it is alleged, of the persons going to the rubbee fields.

E. Lockwood.

No. 239—S.R., dated Bhaugulpore, the 24th February 1874.

From C. A. S. Bedford, Esq., District Grain Officer, Bhaugulpore, to the Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honor to submit the Bhaugulpore narrative for the fortnight ending 21st February 1874.

2. *Soopole.*—Grain appears to be more easily obtainable in the bazars of this sub-division, yet the prices are much the same as reported in the last narrative.

In the town of Soopole prices have slightly risen; also in a few other places from 11 to 10 seers.

In Pertabgunge and Dugmurrah rice is half a seer cheaper, and in the former place murwa is cheaper by three seers.

3. *Mudehpoorah.*—The sub-divisional officer reports that the bazars are badly supplied with rice, and that what little there is obtainable is selling at from 7 to 9 seers per rupee.

4. At the Singhessur fair, which was lately held, this commodity sold at 6 pice per seer, 64-tolahs weight. Mr. Marten writes that "the zemindars have still stocks of grain, but not in large quantities;" whether this is the case or not it is impossible to say. The people are very reticent in matters of this kind. One of the greatest difficulties we have had hitherto to contend against has been the discovering or attempting to discover what amount of grain is really stored in the district.

5. *Banka.*—The fortnightly narrative has not been received. It appears, however, from the weekly returns that the crops now in the ground are doing well.

6. We need, I think, be under no apprehension regarding this portion of district for some time to come. Grain is readily obtainable in the marts which are, I imagine, supplied to some extent from the Sonthal Pergunnahs.

7. In the sudder sub-division the people are experiencing no difficulty in obtaining grain. The prices are, on the whole, slightly higher than they were during the previous fortnight.

8. The weather during the fortnight up to yesterday has been all that could be desired. We had several slight showers yesterday at head-quarters, the total amount recorded being ·08.

9. No report regarding this rain have yet been received from the interior, but the appearance of the clouds on all sides indicated heavy rain.

10. Heavy rain just now would be anything but beneficial to the more valuable crops; it would cause material damage to wheat and barley. Peas also would suffer much. Cheena would probably be benefited, but the amount of benefit accruing would be too small to operate as a set off against the damage done to more important crops.

11. This morning was a bright cloudless one, so that we may hope for the best. I will let you know if any damage has been done as soon as I receive the reports from the interior.

12. Mr. Smith mentions in his narrative that the rubbee prospects of his sub-division are favorable. Soopole, however, is not a rubbee growing country, and though the aspect of affairs is not so gloomy as before, there is still much cause for anxiety. The mangoe trees in the sub-division present a most flourishing appearance, and indicate a plentiful outturn; I am not sure however that a good mangoe season is conducive to the health of the people generally, still this crop forms a valuable aid to the lower classes in years of scarcity.

13. From the Soopole report it appears that distress has already reached the lower orders, and that those previously disinclined are now seeking work.

14. It is gratifying to learn from Mr. Smith's report that zemindars are now exerting themselves in providing work for their poorer brethren and in removing grain where most wanted.

15. It appears, however, that much pressure had to be brought to bear on them before they reached the requisite pitch of exertion.

Mr. Smith hopes to get the relief system in full swing within the ensuing 10 days.

16. Three deaths from starvation were reported from Khabkhund in Soopole. Both the sub-divisional officer and Mr. Taylor made inquiries and came to the conclusion that the deaths were directly attributable to diarrhœa. The deceased were children and members of the same family; the disease had probably been brought on by the bitter cold winds which were blowing at the time. Being weak from scanty feeding the children succumbed. Mr. Marten reports that cases of actual misery have been reported to him, chiefly amongst widows and orphans, and in families in which the male members are incapacitated for work.

17. I do not think that any great importance ought to be attached to this fact as being indicative of anything but the usual condition of people.

Widows and orphans, even in the best of years, are not unfrequently in distress.

18. In Bhaugulpore itself the condition of the people is apparently much the same as in ordinary years.

Beggars are not on the increase. Enquiries, however, are being made.

Relief works in the town itself will be started, should such a measure be deemed necessary.

The reports received regarding condition of people in the sudder sub-division are favorable.

B.—Relief Works.

19. The only relief work in progress in the Soopole sub-division is the Pursurma Bhutea road; about 1,500 are reported to be engaged on this road. Laborers appear to experience no difficulty in obtaining good food, there being bazars in the vicinity.

20. Mr. Smith suggests that, as coarse rice is now selling at 10 seers per rupee, we commence payment in kind. This officer is also of opinion that the rates are too low, that wages should be raised to two annas per diem.

21. To the north of the sub-division the Court of Wards have several tanks in progress, and the people appear to be repairing very readily to these works; a large number are employed. Zemindars are also starting local works. Mr. Smith anticipates that there will be quite enough work in his sub-division for all classes seeking it.

22. *Mudehpoorah.*—There are between 50 and 60 persons employed on the Mudehpoorah and Atalkha road in Bissenpore. Mr. Marten reports that food is with difficulty procurable, and that payments are still made in cash.

The zemindars have undertaken small works in the shape of embankments and excavations.

23. The subjoined form will show what is being done under the head of relief works.

C.—Transport of Grain.

24. Under this head the sub-divisional officer of Soopole remarks:—"I have no account of private importations, but I am happy to have noticed during the last 10 days a few convoys of grain from Khagariah in this direction, and I hope the trade will be extended. I have looked on our means of transport as sufficient for the quantity of grain for this sub-division of which I had been advised, and the previous quantity would have been housed by the end of March at the latest. Now, however, with the enormous increase ordered by Sir Richard Temple, our capabilities will be taxed to the utmost. At present I have about 1,600 carts from this sub-division at work, and more coming in daily under the attraction of the higher rates which we are now paying and which are about double the ordinary rates."

25. The sub-divisional officer of Mudehpoorah reports that there is no change in the amount of grain received by him.

26. From the Bhaugulpore railway station, from the 8th to the 21st February 1874, the exportation has been 8,354 maunds against 11,439 maunds imports.

27. The exportations are as usual wheat (5,054 maunds), dhal (423 maunds), and gram (1,675 maunds) for Howrah. The remainder consisting of janera (Indian-corn), gram, and kulai for Patna and Monghyr. The imports consist of paddy and rice (3,444 maunds) from Howrah, Chandernagore and Pakour, and wheat (1,761 maunds), gram (3,242 maunds), janera (2,913 maunds), and over a 1,000 maunds of dhal from Delhi, Loodhiana, Mirzapore, and other localities in the north-west. The returns from the other railway stations within the district are only up to the 7th February.

As reported in my last narrative they show nothing important with the exception of the Colgong returns, which apparently include the Government rice.

28. We are still experiencing considerable difficulty in the removal of grain from Jugdischuck to Phoolout. There are not sufficient carts for our requirements, but I trust that this difficulty will shortly be overcome—it certainly ought to be with the inducements that we are now holding out to cartmen.

29. There is now a considerable quantity of grain accumulated at the former place, Jugdischuck, and further accumulation should, I think, be stopped for some time to come.

30. Judging from the reports received, the late heavy rain did but little damage to the grain in transit.

D.—Storage of Government Grain.

31. Up to date about 255,000 maunds of grain of all kinds have been received here and at Sooltangunge. The whole, with the exception of last consignment of 4,000 maunds, has been sent across the Ganges.

32. Mr. Smith reports that he has 56,746 maunds of rice stored at Soopole and 1,500 maunds Indian-corn, 15,000 maunds of rice at Bongong, and that 3,000 maunds have reached Pertabgunge. He states that no grain has yet been issued, and that he has commenced to stock the outlying places selected and at which private storage accommodation is available.

33. Mr. Marten reports that the places in his sub-division finally selected by the Commissioner and Collector for storage of Government grain are—Mudehpoorah, where 50,000 maunds are to be stored—

	Mds.
Byjnathpore - - - - - - - -	15,000
Sonebursa - - - - - - - -	18,000
Lalpore - - - - - - - -	10,000
Kamp - - - - - - - -	50,000
Bhowanipore - - - - - - - -	25,000
	168,000

The total amount of grain received in Mudehpoorah up to the 20th February was 18,666 maunds.

34. In the Soopole sub-division the places previously selected for storage were Bungaon, Soopole, Pertabgunge, Bullooah, and Bongong; but have lately, under orders from Sir Richard Temple, been largely increased.

35. The golah at Pertabgunge for storage of 20,000 maunds, and that at Soopole for 140,000 maunds are now finished. Those at the other selected places are in the course of construction.

36. In the Banka sub-division there are only two places at which grain are stored:—

Dhoorya, 2,250 maunds of Indian corn.
Kutoriah, 4,773 maunds of Indian-corn and gram.

37. From the reports received it appears that weevils are attacking this grain. As the amount stored is not sufficient to be of any practical value, it would perhaps be as well if it were sold off.

E.—ADVANCES TO PRIVATE PARTIES.

38. Rupees 17,300 have been advanced by the sub-divisional officer, Soopole, for purchase of grain.

Other applications for money, aggregating Rs. 16,100, are still pending sanction; also five applications from petty traders.

Rupees 11,500 have been sanctioned for purchase of grain, but not yet disbursed.

39. Mr. Smith reports that 23 applications for advances for land improvement have been filed before him, but that Rs. 200 only have been disbursed. He has finished his enquiries in regard to several applicants, and forwarded their applications to Collector for sanction.

40. In the Mudehpoorah sub-division only Rs. 2,000, as already reported, have been advanced. Further applications for money (aggregating Rs. 12,000) have been made, but the money has not yet been disbursed.

F.—CHARITABLE RELIEF.

41. Mr. Smith reports that he has started charitable relief at Soopole, Nowhatta, and Kunda in anticipation of formal sanction; that about 100 persons are now fed daily at Soopole, 150 at Nowhatta, and 50 at Kunda.

These persons appear to be chiefly of the lowest classes, and a large proportion of them children.

42. The cultivating classes have not as yet applied for relief. It appears from the Soopole report that orders have been passed for relief to be started at Nathpore, Pertabgunge, Bullooah, Dugmarrah, Nowabakar, Peepra, Patchgatchia, and Sookpore in that sub-division.

43. Mr. Smith remarks: "the sub-committees for the selected centres have been appointed and instructed in their duties, and have held one meeting of the sub-divisional committee on the 13th instant, when tracts for inspection were made over to the various members, and a few other details of management settled."

44. Mr. Marten reports that four centres have been started, "out of which three are in full work, relieving on an average ten daily. No one as yet seems willing to apply for relief at Ghylar."

Grain is not being supplied to these centres from the Government stocks.

EXTRACT FROM BANKA NARRATIVE.

Grain plentiful in the marts, though prices rather higher.

Slight rain during the fortnight, which proved most beneficial to the crops. The poorer classes in a few places take only one meal in the 24 hours. Only one case of grain-theft brought before Deputy Magistrate during the fortnight.

B.—RELIEF WORKS.

The road from Kutooria to Simultollah is in progress; 235 persons are employed in it, and are subsisting on Indian-corn and koorthi.

C.—TRANSPORT OF FOOD.

The sub-divisional officer reports that 2,000 maunds of grain have been exported during the fortnight.

D.

As has already been reported, Kutooria and Dhoonya are the places selected in this sub-division for storage of grain. The police are in charge.

E.

Applications have been made for advances, but none yet given.

F.—CHARITABLE RELIEF.

Six places selected as sites for relief centres, but there is no present necessity for commencing operations.

Price Current, showing approximately the difference in prices of some of the food-grains for the fortnight ending 24th February 1874.

C. Bedford,
District Grain Officer.

Dated Camp Soopole, the 20th February 1874.

Memorandum by V. T. Taylor, Esq., Collector of Bhaugulpore.

The fortnightly narrative has been entrusted to Mr. Bedford, as it is impossible for me at this distance from head-quarters to collect the materials in time for its punctual despatch were I to undertake the whole of it myself.

2. I have been over a large portion of the worst part of the Mudehpoorah sub-division, *i.e.*, to the west, and did not find matters so bad as I had anticipated. I have also been over a considerable portion of Ooturkhund and Kubkhund pergunnahs of the Soopole sub-division, to the extreme west across the Tiljooga river, where distress will be more than in other places of these pergunnahs, and shall complete this portion by Monday, when I shall inspect the Naridigur pergunnah to the north-west. As I reached Soopole earlier than I had intended to meet Sir Richard Temple, Commissioner, sub-divisional officers, and the Durbhanga raj officer.

A.—State of the Country.

3. *Condition of the people.*—In pergunnah Chye the rubbee crops are magnificent. The wheat in Muddehpoorah sub-division is fairly average in area and probable outturn. There is rubbee in every village I passed through—wheat, rahur (dhal), and "cheena;" this last is still being sown and is in all stages from full ear down-wards. It has been sown to an unusual extent, and will be of very great value. The wheat and "cheena" in Kubkhund and Ooturkhund far exceeds any ordinary year. The whole neighbourhood of the Telabeh and Dunray, usually under water at this time of year, is dry and sown down; the crop promises to be a very good one. The worst tract of all is to the west of the Tiljoogah river, where the rubbee amounts to almost nothing. It is a country in which aghani rice is almost the sole crop, too low for bhadoi rice or murwah, and the loss of the aghani rice, almost a total failure the past year, is a very serious thing indeed. This will be a special tract and specially looked after; luckily it is not so thickly populated as other portions of the district.

4. Throughout nearly the whole of the tract passed over by me, ploughing was being carried on everywhere, and in very many places the fields were being dug up, the men employed being hired laborers paid in kind. As yet the general condition of the people is better than I had anticipated. I came across special cases of distress—cases rather difficult to meet except through the zemindars, such as those of cultivators with small holdings 7 to 10 beegahs of land, large families, and already much involved; to leave their holdings would be future ruin, for their lands would be given to others. The zemindars or mahajuns decline to lend them money as there is but little prospect of ever recovering the money already lent. I went to the house of one man to whom one rupee had been given, and he told me he had purchased murwah at the nearest hât with it. At present there is still grain procurable in the markets. On the Mudehpoorah road I asked some of the laborers where they got their murwah they were eating, and they told me from the next village. Grain is brought still to the markets in, as far as I can judge, the usual quantities.

The people suffering most are of course the laboring classes; many of these find labor near their homes without going on the Government roads. In one village I went to I found a tank had been commenced by the head-man with the consent of the zemindar. The Musahirs and Jolahs of the neighbouring villages were at work, but they did not exceed 50 in number. And in another village I found another tank begun, but only 40 men at work. My impression was that no positive general distress exists as yet in the western part of Mudehpoorah. The relief centres at Mudehpoorah, Ghylar, and Byjnathpore have all been started, and the huts being run up rapidly. At Mudehpoorah a very few only are fed; at Ghylar still less. While I was there a man (a Musahir) was brought there by a chowkeedar picked up by the sub-divisional officer as one too old to work; he objected altogether, and said he preferred living in his own way and finding his own food; he had no intention of eating cooked food until everybody else did so. I could not persuade him, and as he did not appear starving I let him go away. At

Byjnathpore 22 were the largest number fed on any one day, chiefly beggars or travellers from Tirhoot, who after a meal went away. The cutting of the rubbee will, I believe and trust, keep off any severe distress from Muddehpoorah till the end of May; the relief centres are open, and the relief committee at work. Subscriptions promised and being paid in, and the sub-divisional officer is very active and energetic. The sub-division will be divided into circles, and every steps taken to insure the people from starvation and want.

6. In Soopole the relief centres at Soopole, Nowhatta, and Koondar are open, and those at Ekar, Bungaon, Patchgachia, Nowabakhur, Dugmurra, Peepra, Pertabgunge, and Bhulooa have all been ordered to be opened. About 90 are being fed at Soopole, 150 at Nowhatta, and 50 at Koonda. I saw the people fed at Nowhutta; nearly the whole lot were a miserable set of little children. I explained to the sub-divisional officer the necessity of strictly attending to the rules regarding relief.

7. The persons employed on the Court of Wards' tanks in Naradigur are said to be daily increasing. There are several small works being carried on independently of Government roads in the shape of tanks, bandhs, and roads by zemindars, though but very few persons and those from the immediate neighbourhood of them are employed. I have seen three tanks, three bandhs, and two roads of a few miles in length. The men on the Government relief roads are not in the hands of contractors; they are daily and regularly paid. The Commissioner has recently ordered the rates prevailing to be increased, and this will very probably cause an increase in the number employed, and grain from Government stores will be made use of should the laborers find any difficulty in procuring food from the neighbourhood.

8. Mr. John Christian of Bungaon is going to start at once a bandh of 6½ miles in length, and it is proposed to start another bandh in the same neighbourhood. Every available man should be put on these works to get them done before the rains. New tanks in my opinion are not wanted unless they can be completed if not this year in the next. The number of existing tanks is almost incredible, and it is arranged that almost the best form of relief in any village is undoubtedly the cleaning and deepening the existing tank or tanks belonging to it. Relief work will be at hand for any village, and in a far better form than making a high bunded road over such a country as the western portion of the Soopole sub-division, where unless the roads run north and south considerable danger may result from interfering with the natural drainage of the country, and without the slightest hopes of their ever being bridged.

9. Baboo Hurbullub Narain Singh of Sonebursa was with me in my travels and has promised every assistance throughout his zemindary. He has promised a subscription of Rs. 10,000 for the Bhaugulpore relief fund, 1,500 of which is specially for the Mudehpooroh sub-division. He has expressed his wish to take advantage of the rules both for advances and for works of utility, and will submit an application with a statement as to what he intends to do. Kooar Sri Nundun Singh of Kubkhund has given Rs. 500 to Mudehpoorah, Rs. 500 to Soopole, and Rs. 1,000 to the Bhaugulpore district committees, and promises to assist his ryots in every way. To-morrow I shall see some more zemindars of the Soopole sub-division and endeavour to induce them to act better than they are reported to be acting towards their ryots; some of them I know are making small roads, and one is said to be digging a large tank.

10. No exportations are being now carried on; a little private importation. I saw in most of the villages I passed through people were in possession of grain, and in one village in Mudehpoorah sub-division, I saw in granaries besides rice enough seed-grain, bhadoi and aghani rice, and murwa to sow down the whole of the village lands twice over. The zemindar's agent assured me the whole of it would be given out to the ryots when the time arrived.

11. Before I leave the sub-divisions, arrangements will be made for opening out all relief centres, and preparation for all golahs for the grain to be stored at them; over 55,000 maunds are already housed at Soopole.

FORTNIGHTLY NARRATIVE of Scarcity and Relief for the Purneah District.

A.

DURING last week prices rose very rapidly; at one time rice in the Purneah bazar was at 8 seers per rupee, and at Kishengunge, where it had been selling at 12 seers, it fell to 10, at which rate it is still sold. At Arrareah and Purneah, however, prices have fallen considerably during the last three days. In Purneah city this morning I found that the following were the rates in the retail shops:—

	Per rupee.
Rice	10 seers.
Indian-corn	12 „
Gram	11 „
Peas	14 „
Kalai	13 „
Small janera	12 „

The larger mahajuns were selling rice to small traders for retail trade at Rs. 3-14 per maund. The reason for this fall in prices was said to be that one Mohesh Lall, a large mahajun, had bought up a large quantity of grain which he was selling at 10 seers per rupee out of charity. This, however, was not sufficient to influence the market to the extent mentioned. I find that during the week large importations have been made by Marwaries and others who never before dealt in grain, but are now entering into competition with the regular traders. One Naulakan

Das had brought up 700 maunds during the last three days, and is expecting more; on the average 100 maunds a day are brought into Purneah and eagerly bought by baparies. Mr. Rattray, of Arrareah, reports: "The market is somewhat easier; a considerable quantity of rice is returned unsold from Toorkeli hât; traders are bringing it from Purneah for sale, and its quality is superior to what it was last week. Prices from 8 to 10 seers." Mr. Craven, from Kishengunge, reports that the prices have risen owing to the difficulty of procuring carriage. From Kudbah I have received much more favorable reports. I have lately visited this locality and Saifgunge further south, and found the laborers on the relief works refuse the offer to purchase Government rice, saying they could get it cheaper at Haflagunge hât. At Saifgunge the following prices prevailed:—

	Per rupee.
Rice - - - - - -	10 seers.
Kalai - - - - - -	14 „
Kurthi - - - - - -	12 „
Potatoes - - - - - -	2 pice per seer.

There was plenty of rice which was being taken in exchange for mustard, one seer for two. At Chandpore hât the day before, I found about 80 maunds brought for sale. Nearly the whole of this comes up from Sahibgunge either viâ Carragolah or by other ferries. The Deputy Collector reports that at Barsoe the price is 9½ seers of 85 sicca weight, which is more than 10 seers, and that the laborers do not generally take Government rice. Mr. McQueen, Sub-Manager of Dhurrumpore, reported from the south-west of the district on the 9th: "I met carts bringing makai and cheena into the district for sale, and some carts from Purneah which had gone south and bought rice and dhan at 13 and 19½ seers." From Damdaha on the 18th, he reports that rice was selling at 11 and 12 seers per rupee (64 sicca weight). Near Dengrah Ghât prices have also fallen. I was there on the 13th instant and found that rice was at 10 seers, and that three boats laden with it had found their way up the Mohanadi. At Kusbah Amour, and in some of the neighbouring villages, the price is 8 seers and supply scarce. Government grain is being sold to laborers on the roads and to the poorer class of people in some villages where it is with difficulty procurable. The rubbee crops are everywhere good. Mr. Craven from Kishengunge reports: "Kauni is being sown everywhere and by nearly every cultivator, so that we may look for a very plentiful crop in 2½ months." About Kudbah the mustard is good, and more wheat and grain have been sown than I thought. The condition of the people when these very high prices prevailed was not so bad as might have been expected; of course the old, the lame, the blind, and the lepers suffered. Several deaths were reported, but on inquiry nearly all turned out to be cases in which the diseased had been laboring under some disease for some time past. The Kudbah Deputy Collector reports that he went to Bumseli, a village in Kudbah, where he heard there was much distress, and heard two children had died from starvation. One case was fictitious; in the other the family were in want. He took measures to relieve them. The class who are beginning to feel distress are the weavers, who are numerous near Kudbah. The means we are taking for relieving them will be noticed hereafter. Mr. Wyer has just returned from an inspection of some villages near Damdaha, where distress was reported by the police in a tract previously considered well off. He found the worst village was a place called Bela Champabati which lies on the extreme west of the distressed tract. Beyond this the people are very well off, and are paid 3 seers of dhan and ½ a seer of cooked food a day for breaking up land for cultivating waste tracts, and that by task-work they got Rs. 4 a beegah. Mr. J. Shillingford, a few miles farther south, at these high rates only got five or six men to break up land for him at this. The only people found badly off were the professional beggars, who always live by charity. These people were relieved. A number of these were found begging at a hât at which rice was being sold at 9⅗, kalai at 13½ seers, and cheena 10 seers for a rupee. The latter was being bought for seed. A relief road had been started in this neighbourhood, and Gopi Jha appointed to look after it. He paid the men 2 annas a day without exacting a due proportion of labour from them. Mr. Pyne had complained that coolies in his employment had left him to work on this road. Mr. Wyer ordered the daily rate to be reduced to 1½ annas, and next morning no one appeared to work at the reduced rates. This report of Mr. Wyer's is corroborated by Mr. McQueen, who states that the only persons who in this quarter will need help are the old and infirm, as grain and labour are both to be had in all the villages. Mr. Craven from Kishengunge reports kauni is being sown to an extent never known before. All the cultivating populations are busy on their lands, and the laborers seem to find occupation of some kind on their own villages. Mr. Rattray from Arrareah reports no cases of actual distress, but the people in his neighbourhood are coming more readily to work on the roads. The beldar population is more numerous in this sub-division than elsewhere. I have seen Arrareah men working at Kishengunge where not a man could be had from the neighbouring villages. Baboo Srinath Bhudder, in a diary of a visit to some villages near Dengrah, remarks that the mahajuns have, since the storing of the Government rice, become much more liberal, but that many fictitious reports of death by starvation are made to induce the Government to sell grain to the public. He was also told by many persons in Bulrampore that they would not go to work on the roads until the mustard crop, which is good, was out. During the past fortnight I have myself visited Arrareah, Kusba Amour, Dengrah, Kudbah, and Saifgunge, holding meetings of the people and going into villages. The only place where I have seen any distressed persons, not cripples or professional beggars, was Dengrah Ghât. I have found agricultural work going on in every village, ploughing, sowing, and mustard plucking; for the last-named work people are paid one seer for every seven plucked. A man can earn more than a seer a day, and as women and little children all work and their mustard is exchanged for rice, a family can gain a living by very light labor. The wild fruits—bael and byar and herbs, "chatna"—gathered by women and children in the fields also help the people considerably; they are brought into the hât for sale. The number of grain-thefts and robberies this fortnight amount to 26; two of these were thefts from the Government golahs; the value of property stolen was Rs. 239-7. Dacoities have not decreased, but a very clever arrest of a part of a gang by Mr. Rattray personally in the very act of robbery will, I hope, have a capital effect. Another capture has also been effected in the sudder sub-division.

The annexed statement furnished by the District Engineer shows the progress made on his works. The main north road has been completely surveyed; while making the survey the Assistant Engineer complained that he could not get labor at any price even for carrying his pegs. I have heard that work is wanted, however, and have passed orders for its commencement and huts to be built, as it is to this line that we propose to send all professional beldars. The roads on which rice is sold, owing to the high price in the hâts, are—

5. Toorkaile to Dengra ghât.

6. Dengra to Baplah Tajpore.

At road No. 7 the rate in the bazar is over 10 seers.

It is the same on No. 9, Kudbah and Barsoe road.

On 16, Purneah to Kudbah, where the laborers refused it when offered to them.

The payments are now regularly made, and arrangements for sending out money, &c., got into order. It is only by constant visits that abuses can be prevented. The rate of wages fixed by me is from Re. 1-12-0 to Rs. 2-8-0 per 1,000 cubic feet according to the nature of the soil. I have also authorised 6 annas per 100 cubic feet to be paid where the ground is very hard; it is nowhere so hard here, however, as in Dinagepore. The order that in no case shall a laborer be paid less than 1½ annas a day, when from inability to use a kodali or other cause he cannot earn more will ensure that every man shall get enough to eat.

Besides the works under the Public Works Department officers, the following have been opened:—

(1.) Under Mr. Rattray at Arrareah.

Road Matiari to Purneah, 611 laborers reported on February 19th.

Road Arrareah to Koorsakatta, 131 laborers.

All the men on the first-named road are professional beldars. Grain is being sold to them.

Two other roads have been made over to Mr. Rattray.

(2.) Under Baboo R. N. Chatterjee at Kudbah, on February 19th.

70 men, 6 women, and 2 girls. These were mostly village people, paid at 2 annas a day. I saw them at work, and the work they did was very light. I reduced their wages to 1½ annas.

(3). Under Gopi Jha at Bela Champabuti the following number of persons were engaged at 2 annas a day. They were all strong and able-bodied who had left their fields to work on the roads—

February 17th	7
„ 18th	36
„ 19th	65½
„ 20th	101½
„ 21st	151½

As I noted above, when the rate was reduced to 1½ annas they all left the work. I certainly think that care should be taken to avoid the evil complained of, both by Europeans and natives, of taking away laborers from their fields to the roads by offering too high wages.

(4.) At Belgachi, on a road worked through Kharshed Ali, putnidar, under Mr. Wyer, 64 men were engaged when he last visited the place.

(5.) In the town and in the roads leading from it, work has been commenced under the municipality. The laborers employed were as follows on February 20th:—

Bursowni road	130
Two tanks near Cutcherry	77
One tank Begum Deori	44
Leheripattee road	21
Total	272

Work is also going on under Mr. Cave and Mr. G. Shillingford, but neither of these gentlemen have let me know how many laborers they employ.

Taking the average number of laborers under Department of Public Works as 1,495, and excluding Gopi Jha's men, who refused the 1½ annas a day, the total number of laborers employed last week on relief works was 2,650.

The Department Public Works returns are only carried up to the 14th, and the numbers have since increased.

I have sent out many more Government tools, but as long as so many of the laborers are beldars they can easily get them for themselves.

Since writing the above I have received Mr. Cave's returns. He has a daily average of 32 men on the Gondwara and Sowragaddi road, and 6 on the Koari road.

W. KEMBLE.

C.

I have above mentioned that I estimate the amount of grain brought into Purneah town at 100 maunds a day; besides this, large quantities are brought in by small traders on pack-ponies and bullocks, and a little by boat; some has also come in from Julpigoree. From what I heard and saw at Saifgunge, I do not think that less than 300 maunds a day are brought in by baparies. I have engaged, at two annas per maund for 10 miles, 200 pack-ponies for carrying grain to Bulrampore and Barsoe golahs, but I am unwilling to take up much of this carriage, seeing how very useful it is for keeping up the supplies at the hâts.

By orders of Mr. Hankey the rate of remuneration to the cartmen has been raised; the merchants complain of this, but I do not think they have suffered any loss in carriage, and considering the enormous profits made by them, they can well afford to pay more to their carters. Mr. Mulock has engaged carpenters to mend carts, and has bought a supply of wheels which he is selling to the carters.

Up to date, in this fortnight we have carted from Carragolah 53,985 maunds, or 3,856 maunds a day on an average; after the Mohurrum more carts will certainly be procurable. The carts are nearly all engaged through contractors, who are paid two annas on the rupee, and all the men are working well. The rates are well known to all parties concerned. Fodder is stored at Kishengunge, Dengrah, Purneah, and Carragolah.

D.

No more new golahs have been selected except Khaja, where Mr. Crowe, an indigo planter, has given us room for 1,000 maunds. Nearly the whole of the grain carted from Carragolah this fortnight has been sent to Arrariah, Dengrah, or Kudbah, all places within three days' transit of Caragola. I can add nothing fresh regarding the custody-administration of the golahs.

Arrangements are in progress for building more storage room at Arrariah, Bahadurgunge, Bulrampore. The quantity of grain given out of the different golahs is:—

Kishengunge, 200 maunds for Relief Committee.
Arrariah, 36 maunds for roads.
Kusba Amour, 46 maunds, Department Public Works.
Dingra, 55 maunds Relief Committee.
Sudder, 34 maunds for Mr. Wyer's relief operations.
Mutiari, 140 maunds for Mr. Rattray's roads.
Kudba, 100 maunds for Relief Committees.

More has been indented for, but the receipts are not yet in.

E.

The advances made by me this fortnight for the purchase of grain have been large (Rs. 25,200); but I have reason to believe that it is in a great measure owing to these advances that the prices have fallen.

All the traders, without exception, to whom I early made advances have brought up their rice, and most of them have sold it and returned for a second trip. Following their example, and finding that Government had no intention of entering into competition with the trade, other cloth merchants, &c., and other respectable men have now left their proper line of business and turned grain merchants, and compete with the "Seoris," and keep prices down, instead of entering into league with them te keep them up. It will be seen that I have not largely advanced to petty traders; they make large and quick profits, and do not, as a rule, need an advance. I have only given two sums of Rs. 500 to zemindars to assist their ryots. I have not had many applications, and among those which I had I found that many were not bonâ fide. Great caution is needed in this matter.

Baboo Hem Chunder Rai, to whom I gave an advance last month, has expended his money well, and given me a clear account of it.

F.

The district relief committee have held three regular sittings and arranged for the supply of money and grain to the sub-divisional committees, and what measures are to be taken for home relief, &c.

Money and grain have been placed at the disposal of each sub-divisional relief committee.

Mr. Wyer at the Sudder has purchased 66 maunds of cotton at Rs. 20 a maund, and sent 27 maunds to Kudba, 9 maunds to Kanharia, 9 maunds to Mohenderpore, and 9 maunds to Belgachi, 3 maunds to Bishenpore; the rest is in hand. This will be distributed by the local committees.

Dr. Picachy at head-quarters has built three sheds for sick paupers, and Mr. Wyer has built a stone shed, nearly completed a workhouse, and built a relief shed in the city.

Dr. Picachy has only as yet had two inmates in his hospital.

To each sub-inspector of police Rs. 20 has been sent to relieve urgent cases. Grain for charitable distribution was sent to each sub-committee under the Sudder sub-divisional committee, who have also been furnished with Rs. 100 each as a permanent advance for building sheds, &c. Arrangements have been made for the erection of four large sleeping sheds near the worksheds.

Babu Rajani Nath Chatterjee, in charge of the Kudba sub-divisional committee, has also been active. He was supplied with 100 maunds of rice, and has built sheds at Kudba; he sent 10 maunds of grain to Syud Golam Reza, of Russulpore, 2 maunds to Chandpore, and 2 maunds to Bhumeli, in all which neighbourhood distress was said to be existing. He is making arrangements for opening a sort of hât where the raw material will be advanced to the weavers, who are numerous about here, and their manufactured cloth bought.

At Kusba Amour Baboo Srinath Bhadra had built sheds and formed local committees in the neighbourhood. The committees have arranged to distribute jute for the manufacture of rope to the fishermen caste, who are numerous. Srinath Bhadra had to be recalled to the station to take charge of the treasury from Mr. Walker, who has met with an accident, but Mr. Gouldsbury at Dingra is working relief operations in his place, and has opened a shed, and has distributed rice to some distressed villages where it was not procurable. He has relieved a number of poor cripples and others from the neighbouring villages. Baboo Hem Chunder Ray, a native gentleman who has all along shown himself most ready to do all in his power to help us, has been requested to go to Kusba Amour and superintend the relief operations till further arrangement can be made. Most of the grain advanced to Arrareah has been expended on relief roads, but a supply of both money and grain has been sent to each sub-committee, and Mr. Gouldbroke, of Lallpore, has taken an advance of Rs. 500 from the district committee with which he purposes to buy grain for sale at cost price to the people in distress near him.

At Kishengunge Mr. Craven finds his sub-committees less ready to assist than they are in every other part of the district. Bahadurgunge is the only part of the sub-division from which any bad reports have yet come here. Roads are available, and I have sent up Mr. Bertelson with money and grain to open relief operations at once.

In Kishengunge there is not a single European to help us.

I have during the fortnight met relief committees at Arrareah, Kusba, Amour, Dingra, Kudba, Russulpore, and Saifgunge. The object and intention of Government, and the duties of committees, have been explained.

Dated Camp Baris, Rajmehal Daman, the 24th February 1874.

From J. BOXWELL, ESQ., Officiating Deputy Commissioner, Sonthal Pergunnahs, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I HAVE the honor to submit a narrative for the fortnight ending Sunday, 23rd February 1874.

A.

1. It is not very easy to give very definite information about the supplies in the bazar. Our population does not divide readily into purchasing and non-purchasing jâts. The numbers of different jâts are comparatively few. It is nearly true that some of all jâts do nearly everything; among other things, cultivate. It is also a fact that poor people buy food from their better-off neighbours a little cheaper than they can in the bazars. Supplies have nowhere run short, except for a day or two in Rajmehal. As has been reported, prices ran up to 8 seers of rice for a rupee, and it was said that rice was not to be had. I have heard two accounts of the matter, either an import or a threat of import brought prices down to 11 immediately.

I shall have more to say on the food-supply under B.

2. The last return of Rajmehal market was—

	Wheat. Seers.	Barley. Seers.	Best rice. Seers.	Common. Seers.	Millet. Seers.	Makai. Seers.	Gram. Seers.
Rajmehal -	12	0	9	10	13	13½	12
Sahebgunge -	13¼	16	9	10	15	15	13
Barhait -	11	0	9	10	12	16	12
Bario -	12	0	9	10	12	15	12

To-day the rates in Bario are—

Rice. Seers.	Bajra. Seers.	Makai. Seers.	Kesari. Seers.	Maskalai. Seers.	Rahar. Seers.	But. Seers.
10	16	15	13	10	9	10

In Godda the rates are about the same. In Deogurh they are lower. I have not heard from Dumka.

3. In Sahebgunge the traders are said to have plenty of rice stored, but I do not know what quantity. As usual I must report that without close search we cannot find out the quantity of grain in store. We have been told not to make close search, and guesses are no use. I know one manjhi who has about 400 maunds of rice stored in his bari.

4. Yesterday it drizzled the whole afternoon. To day is clear, bright and windy.

From Godda to Peerpointee, and yesterday and to-day in the north Rajmehal Daman, I have been able to see something of the crops.

Through a good deal of Manihari there is very fair rahar and wheat, some flax and a little kesari. The tone of the people is hopeful. Close north of Godda the country is very bare. Everywhere the rubbee that is on the ground is doing pretty well, but there is very little of it. The country varies a good deal. There is more rubbee north than south of Barkop in Godda. In this valley of Bario there is very little to be seen of any kind of crop; and the signs of past crops are poor. The people are hard at work ploughing for cultivation and bandhs.

Everywhere they look healthy and strong. There is a good deal of small-pox in Godda, but the people who appear are in good condition.

No known case of starvation or misery has been reported.

Grain-thefts are small and not very frequent.

No one tract deserves special notice.

B.

1. Dumka and Jamtara road, 40 miles.—Of this 38½ miles have been surveyed, sectioned, and staked out. Work has probably been opened, but not so reported yet.

2. Katikund to Amarapara, 19 miles.—Of this two miles have been staked out.

3. Jarmundi to Deogurh, 26 miles.—Of this 20 miles have been surveyed, sectioned, and staked out.

4. Hansdiha to Godda.—Nothing done.

5. Godda to Barahat, 34 miles.—Of this 12 miles have been staked out. Work was opened by me on the northern frontier on the 18th. Men are at work; I cannot tell how many.

6. Tin Pahar to Bario, 12 miles.—This is the most northern of our loop line feeders. It had been made partially, and work had been stopped, except repairs. It has now been found necessary to re-open and push on work on it, as it leads into the middle of the Rajmehal Daman, where distress was feared. Counting old repairs and new work, there are 400 persons of all classes at work on it. The road is a difficult one. The highest point is 1,200 feet above the sea, while the two ends are about 800 and 900. It has been well laid out over the hill, will be a good road in a month, open for wheel traffic in a fortnight, and I could drive it now. Carts have passed over it all.

7. Bario to Pratappar, 21 miles.—This is a continuation of No. 6; 11 miles have been surveyed, and sectioned; work will be opened immediately. It joins No. 5 at Pratappur.

8. Barhait to Sahebgunge viâ Bario.—This work is an improvement of an old road. Between Barhait and Bario 150 people are reported at work, and 200 between Bario and Sahebgunge. The numbers vary very much from day to day.

9. Modhupur to Patrol.—Nothing done.

This is a chord-line feeder, likely to be useful.

10. Bhaugulpore and Soory road, south of Dumka, 26 miles.—Metal is being collected, formerly by petty contract, now by task-work.

11. Kendua road.—Repairs going on.

12. Repairs to Bhaugulpore and Soory road going on. Nearly finished. Material for bridge repairs being collected.

13. Repairs to Bahawa and Barhit road, 13 miles.—Forty-five people at work; will be open for carts in six weeks with temporary bridges. Can be driven now.

14. Moradoy and Amarahara, 20 miles.—Repairs all but completed.

15. Pakam and Hiranpur road, 12 miles.—Repairs nearly completed. Six miles in full working order. Carts travel the whole distance now. Bridges will be up before the rains.

All our other road-works are classed as petty repairs. I need not dwell on them.

Roads Nos. 4, 5, 6, 7, 8, and 14 form a complete system. They are just now three roads:—

I.—Bahawa and Sahebgunge junction, Nos. 8 and 14, running through the middle of the north Rajmahal Daman between two stations of the loop line, East Indian Railway.

II.—Hansdia on the Bhaugulpore and Soory road to Peerpointee railway station in the Bhaugulpore district viâ Godda; about 50 miles north and south through the Godda sub-division, Nos. 4 and 5, with a Peerpointee continuation in Bhaugulpore.

III.—A cross line from Tin Pahar railway station viâ Bario, joining II. at Pratappur.

More than 800 persons are at work now on these roads.

They will always be of very great use, and they run where they will do the greatest amount of good in the present strait. Work can be indefinitely increased on them.

The supply of food has run short nowhere, but the price of rice is very high, about 10 seers everywhere. Laborers are chiefly Bagdi, Jola, or Musalman, weavers, the karigars of the east, Ghatwal, a sort of degenerate Rajput, and Sonthals.

Up to this they are living on their own stores mainly. They have not been driven to the bazaars for their daily food. Very little food-buying or selling is done in the bazaars, so much so that my camp does far the greater share of the buying wherever it is.

The laborers are looking well; but grumbling at the low rates of pay, 1 anna for women and 1½ anna for men.

On the Tin Pahar and Bario road Government supplies tools. On the Sahebgunge road the laborers supply their own. Everywhere we make them bring their own tools as much as possible, but on the Tin Pahar road we have to supply picks and crowbars.

In addition to roads, tanks, and bandhs are being projected and made.

In the 3rd week in January five bandhs, in places chosen by me, had been begun by the Daman Sonthals, and small sums of money paid to them as encouragement.

They had been too busy with their harvest and subsequent feasts to do much work; but they had made a good beginning, and promised to work during the following three months.

These five bandhs will be useful works, though not of a size to require professional superintendence. The district engineer has surveyed for me and is estimating a bandh in the south Daman, which will hold a very large quantity of water, and being on a high level irrigate the lands of eight or ten villages. Its catchment basin is 12 square miles. The ground is very unusually favorable for a great work.

C.

We have nothing to do yet with transport of grain for ourselves. The grain leaving Rajmehal for the northern districts is under special care.

Our means of transport, I expect, to be sufficient when we want them. Our worst tract, the north of Godda and Rajmehal, lies inside a crescent of hills, round the outside of which the loop line runs. A circle of 20 miles radius would include it all; and the railway would be a quadrant of the circle. The roads were described under relief works B. We shall work with carts, bullocks, and buffaloes from Bahawa, Tin Pahar, or Taljhari, and Pirpointee, and with bullocks and coolies from Sahebgunge, if the hill is found bad for carts, as indeed may be assumed at once.

I intend asking to have rice deposited and stored at Taljhari as well as Tin Pahar.

D.

We have chosen sites for storage of grain at Pakour, Patna close to Bahawa, Tin Pahar, Taljhari, Barhait, and Bario, for Rajmahal, and in Pirpointee, Belbadda, Barkoss, and Godda, for Godda.

There is nothing else to report under this head.

E.

No new payments have been made. For want of officers progress is delayed in investigating ryot's projects. One new zemindar and a few ryots have applied for advances.

F.

Nothing.

Enclosure No. 5.

RESOLUTION.

Scarcity and Relief Department.

Read— Calcutta, the 28th February 1874.

The narratives from the districts of the Rajshahye division for the fortnight ending 21st February 1874.

1. *Moorshedabad.*—The average price of common rice in this district is said to be 11¾ seers per rupee. Supplies come freely to the bazars, and export seems brisk and general; while imports are at the same time coming in in other parts of the district. The cold weather crop is expected to be good. The Collector remarks that the general condition of the people is not such as to "cause anxiety that the worst may befal." There is a great demand for work in places; but charitable relief will probably only be required for the helpless and infirm. The relief committees have been organised in all the sub-divisions save Rampore Haut, and are dealing with such cases, while over 3,562 laborers already find employment on roads and tanks. The demand for advances for land improvement in this district is by no means so brisk as in the Burdwan division. The donations for charitable relief have amounted, however, now to about Rs. 30,000, besides monthly subscriptions aggregating Rs. 450. This district has always been remarkable for the liberal and efficient way in which want has been met by private funds and private efforts, and the Lieutenant-Governor does not doubt that it will be so on the present occasion. The Rampore Haut relief committee was just about to be formed, which would make the arrangements of the district very complete.

2. *Rajshahye.*—It is satisfactory to notice that imports of grain to this district from the east are increasing, and that on the whole, no very general distress is now anticipated. The Collector believes that private imports will supply all the needs of the district, save those of the railway laborers. The relief committees will search out and deal with isolated cases of distress. The daily average number of laborers on relief works have slightly risen, being 465 for the last week of the fortnight. The proposed opening of village roads is a measure likely to prove very useful in bringing work near to the homes of the people needing it. As regards transport of Government grain, the despatches from Godagaree have lately been raised to 3,590 maunds a day, and the Collector hopes next week to send over [illegible],000 maunds daily. Between the water and the land routes the Lieutenant-Governor thinks that the despatches from Godagaree should be still farther considerably increased. The despatches from the other

store-houses should certainly be largely increased. The receipts and despatches from the several store-houses were for the fortnight,—

	Received. Mds.	Despatched. Mds.
Beauleah - - - -	8,000	5,514
Godagaree - - - -	23,688	46,672
Nowgong - - - -	6,824	3,922
Sahebgunge - - - -	1,516	1,516

3. *Maldah.*—Supplies are plentiful in the chief markets. Save in Gajole and the north-west tract (where the rate is 10 and 10½ seers), rice is selling at 12 to 13¾ seers a rupee. Crops on the ground are doing well. The boro dhan is estimated to yield about 200,000 maunds for the whole district. No starvation is yet heard of. In the Khurbah thannah the Chunchal estate manager is advancing rice to his own tenants and selling to outsiders, while the relief works are freely resorted to by about 2,019 laborers daily. The question of transport in this district and in Rajshahye has been separately dealt with. Up to the end of the fortnight 104,990 maunds had been received in Maldah, of which 89,707 maunds had been sent on to Dinagepore, while 15,282 were stored. The charitable relief arrangements are well advanced, but the amount subscribed is as yet small, only Rs. 4,338. Up to the end of the fortnight 5,006 persons had received charitable relief at seven centres opened in the specially distressed tract, or an average of 357 daily during the fortnight.

4. The *Dinagepore* report is clear and good and on the whole reassuring. The late rain and the importation of Government grain have brought stocks more freely into the market, and prices are lower. The rate is put at 12½ seers per rupee in Dinagepore itself. But the price-current in the *Gazette* gave 14 seers. Perhaps the narrative refers to some local seer, but this ought to be explained. The tracts that had some crop are sending grain into those that were more distressed. But there is much truth in what the Collector says, that the matter requires close watching, lest, prices being kept low by the existence of Government stores, the surplus stock of the district should all be used up unawares. The remarks made by Mr. Lowis on the difficulties of relief work management are very sensible and good. The numbers at work are given at about 25,000 persons. Kodalies must be at once indented for if there is any want of these. Colonel Nicolls will be requested to see at once that the supply is sufficient. The Lieutenant-Governor notices with satisfaction that in this district very much relief work is going on without any large staff of public works overseers. The three men of this class now in Dinagepore employ only about 2,000 coolies between them, all the rest being under civil officers. It is most important that cultivators should not be prevented from looking after their fields by the necessity of constantly laboring on the works. The Collector's plan of getting relief committees to pick out and assist men in such circumstances is excellent. The Collector must take care to secure a permanent right of use for the public in the tanks on which Government money is spent. As regards transport arrangements, the Lieutenant-Governor has passed separate orders. He hopes every one concerned will do his very utmost in this matter. Judging from Mr. Lowis's statement, there seems every prospect of all that is required being done. Mr. Robinson must take steps to have the grain properly looked after in transit if the two-maund bags arrive sometimes 15 or 20 seers short as is stated. A responsible chalander must accompany each convoy. For charitable relief Rs. 11,000 have been collected. The Lieutenant-Governor is glad to hear that the munduls and well-to-do ryots of Tamboolee are coming forward and taking an active interest in the relief of the poor, and in getting home work for the women. His Honor also recognizes with pleasure the liberal conduct of those zemindars who have given up the land free of charge for relief roads, &c. The acknowledgments of Government may be conveyed to them.

5. *Rungpore.*—Prices in this district are now ruling very high, averaging Rs. 4 per maund, and rising as high as Rs. 4-8. But a local 90-tolah seer is mentioned. It is not clear whether the rate does not refer to a large weight. This should always be made clear. The condition of the people is said to be "certainly much worse," while general distress has disclosed itself in many places. Sales of women, children, bullocks, ploughs, and ornaments are reported by the Police Inspector from the south of Mahigunj (a wife was sold for Rs. 10); though the Collector himself found but few applicants for relief at the two relief centres already opened in this tract. Two more are to be opened at once, and a road is being laid out. Similar reports of distress are noted from Meetapukhar, Sadullapore, Kamdiar, and elsewhere. It is strange, however, that if distress is so severe and general in this part of Rungpore, only 2,068 persons are on relief works. The Lieutenant-Governor hopes that the supervision and arrangements for payment, which were very defective, as Mr. Robinson discovered, have been put on a proper footing. Rice is now to be sold on Government account at Rs. 3-12 a maund, the Saigon rice at cheaper rates. The limit of 10 seers of 80 tolahs per rupee should be attended to. Crowds of ryots are said to attend the courts, asking for advances; but the Collector reports many to be persons in good circumstances, and no advances seem to have been actually made to any but zemindars, and to them only Rs. 11,100 have been given up to date. The Lieutenant-Governor trust that the Collector will now give full and proper effect to the orders passed on this subject which seem especially applicable to Rungpore. Charitable relief is given to 1,146 persons at nine centres, from which returns had been received. Private persons are also relieving large numbers. Local subscriptions amount only to Rs. 9,935. With reference to the grave and alarming nature of the Magistrate's report of the condition of this district, the Lieutenant-Governor requests that Mr. Robinson, who has so lately returned from Rungpore,

will examine the statements made in this narrative very particularly, and give his opinion whether things are really worse than was expected, and whether any additional measures, additional establishments, or other precautions are required. If so, anything that is necessary may be commenced in anticipation of sanction. It should be made quite certain that the relief works and other arrangements are efficiently managed. Mr. Molony's opinion is also invited.

6. *Bograh.*—The state of things in Bograh continues much the same. Supplies are sufficient. No part is in a critical state as yet. 2,810 persons are on relief works. The Collector begs that the last allotment of 25,000 maunds of Government rice may not be sent him, as it will not be wanted. The Relief Commissioner should report on this. No regular charitable relief has been required as yet.

7. Each narrative should contain a clear statement not only of the daily average number of laborers on all relief works, but of the daily average number receiving charitable relief.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

No. 1133—S.R.

COPY forwarded for information and guidance to the Commissioner and Relief Commissioner of Rajshahye and the district officers concerned; and to Commissioners of Patna and Bhaugulpore.

No. 1133½—S.R.

COPY forwarded to the Department of Public Works, with copy of narratives with special reference to paragraph 4.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Calcutta, 28th February 1874. Junior Secretary to the Government of Bengal.

NARRATIVE of Scarcity and Relief in the Moorshedabad District for the Fortnight ending Saturday, the 21st February 1874.

(A).—STATE OF THE COUNTRY.

1. Abundance or scarcity of supply in the bazar.

On the whole the bazar is at present well supplied. The partial scarcity of food-grains in some parts of the head-quarter's sub-division noticed in the last narrative has ceased, and the chief bazars and hâts are reported to be supplied with sufficient stock for the daily wants of the people. The improvement of prospects caused by the late rainfalls has probably led to the bringing of more rice to the markets than before.

2. Kind and price of grain selling at one or more specified principal marts.

The average price of common rice, taking the 12 principal marts of the Sudder sub-division is reported to be 11¾ seers per rupee, which is slightly dearer than in the preceding fortnight, but it is said that prices are easier in the interior than near the town of Berhampore. The highest rate is at Khagrach (Berhampore), where the price is 11½ seers per rupee, and the lowest at Teakata (Nowadah), where it is 15 seers per rupee. From the way in which rice is sold by petty dealers, who raise or lower the rates according to the amount of their stock, prices must fluctuate very much. In the Lalbag sub-division, rice is selling at 11 seers per rupee in the city, but the price is a little lower in the interior. In the Jangipur sub-division, the price of "bhadoi" rice is 12 seers and the prices of new hoimonto rice range from 10½ to 12¾ per rupee, the former rate prevailing in thannah Sooty. In the Rampore hât suh-divlsion, the prices range between 13¼ to 11¼ seers per rupee. Wheat is selling at 15 seers at Teakata, in thannah Nowadah, and grain at an average of a little over 15 seers per rupee in three of the principal marts of the Sudder sub-division. The price of grain appears very high at Rampore Haut, where it is 11½ seers, but it sells at 13½ seers in thannahs Nulhattee and Khangram. The quantity of grain grown in this part of the district is less this year than in ordinary years, and is always small.

3. Any information obtained regarding the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots, and others.

The stock of food-grains in the hands of zemindars, mahajuns, and others, cannot well be estimated just now, as a great deal is reported to have been given out to the ryots on loan, in consequence of the more favorable prospects for cultivation of the autumn and winter crops since the rain, and some of the rubbee crops, such as peas and oil-seeds (of which one at least, til, is used to a certain extent for food) are being gathered. The sub-divisional officer of Lalbagh reports that his opinion remains the same as before regarding the stock of grain in the hands of ryots, &c. While lately he was in camp along the Azimgunge and Nulhattee line of railway, he daily met strings of carts laden with paddy which had been purchased from the ryots in the Nulhattee thannah, and believes that in nearly every village in the "Rash" country, the ryots have stores of paddy which sooner or later they will be induced to sell. Little or no rice is now being imported from Calcutta. On the contrary, the mahajuns of Baloochur and Azimgunge are now exporting the stores of rice which they had laid in, and hence arises, it is believed, the increase of price in that sub-division. This rice is being exported principally to Colgong and Sahebgunge. This has been ascertained by the sub-divisional officer personally examining the traffic registers at Azimgunge. The exports are, however, not large at present, but it is feared this is only the beginning of the end, and that eventually much of the large stores of rice at Baloochur and Azimgunge will be exported. Kullye is being largely exported from this sub-division. It is reported by the sub-divisional officer of Rampore Haut, that there is a very small quantity of rice and other grains in the hands of zemindars, traders, and ryots, of this sub-division. In thannah Pulsah, the small quantity of grain remaining in the hands of the people is now being exported to other parts of the country. I have some doubts as to the accuracy of the surmises of the sub-divisional officer on this subject. The stocks are probably less in thannah Pulsah than in the other thannahs of the sub-division, and yet export is still going on from thence. A few days ago I came across a number of carts conveying paddy purchased at Bhuddurpore, a large village in Rampore Haut to Bhugwangollah, near the Ganges.

Rainfall, if any.—In the Sudder sub-division a little rain fell on the 13th, 14th, and 16th instant at Nowada, Soojagunge, and Gowas respectively; it was not sufficient to do much harm to the rubbee crops, which are being gathered. In the Lalbag sub-division on the night of the 13th there was a slight storm, and 0·12 inches of rain fell at the head-quarters of the sub-division. In the Jangipore sub-division nearly half-an-inch of rain fell during the fortnight. The sub-divisional officer reports that the rain has done some damage to gathered crops in unsheltered spots, but this is more than counterbalanced by the immense good which it has done to the cold weather crops on the ground generally. Of barley he expects a splendid harvest; of wheat an average one; of gram one rather below the average. In the Rampore Haut sub-division there has been sufficient rainfall during the fortnight under report, and the state of the crops has much improved in consequence.

STATE OF THE CROPS.

5. The crops are still in the fields; the cultivation of boro dhan is being vigorously carried on. From information received from all the police stations regarding the cultivation of this crop, it appears that the cultivation, never very extensive in this district, is in places larger than in ordinary years, but that in others, owing to the drying up of bheels, no cultivation of it has been practicable. I have seen that advantage has been taken of all places such as the edges of extensive tanks, for the cultivation of this crop in parts in which in ordinary years such cultivation would not be thought of. The prospects of the crop are on the whole fair up to the present time, the recent rain having been of great service to the young plants, and the estimated out-turn is put down at from three to four maunds per beegah, but this is very uncertain, and depends altogether on the weather between this and the ripening of the grain. On a rough estimate it has been ascertained that about 2,965 beegahs of land have been cultivated for this crop throughout the district. The manufacture of sugar from the cane continues, and the price of molasses has fallen from Rs. 5 to Rs. 4 per maund pucca weight. The ryots are engaged in ploughing and preparing their fields for the next rice crops. The sub-divisional officer of Lalbag reports that he has just been camping over the "dearah" lands of thannah Bhadrihât, where he has seen very fine crops of wheat, gram, moshuri, and peas, and some splendid mulberry. The cold weather crops are equally good in thannah Bhugwangolah. In Bhadrihât (only the "dearah" lands of this thannah are sown with cold weather crops) the out-turn will be at least a 12-anna one. The out-turn of the cold weather crops in the rest of this sub-division will be the sub-divisional officer thinks, taking good and bad, 7 annas. I was with the sub-divisional officer part of the time, and can confirm his favorable account of the crops in the "dearah" lands.

CONDITION OF THE PEOPLE.

6. There is little change to report in the condition of the people, except that the laboring classes have been better supplied with work in cultivating the ground. The high price of rice is no doubt pressing heavily on the condition of the poor, as well as on the middle classes of people, and especially on the old, infirm, and diseased persons. In the Jungipore sub-division, the people of thannahs Sooty, Mirzapore, and part of thannah Roghunathgunge, are still continuing the consumption of maskolai and motor bread. The sub-divisional officer of Rampore Haut reports that the condition of the people is not generally good. In some parts of thannah Khargram, scarcity is said to have been felt to a certain extent. From what I have observed, however, the general condition of the people is not as yet such as to cause anxiety that the worst may befal. There is a great demand for labor in some parts of the district, and there is reason to believe that this demand will continue to increase. It is only, however, for the poorest, for professional beggars, for those incapacitated on account of infirmity or age from work, and for females and children, that any anxiety need be felt at the present juncture; and though, as I have remarked in former narratives, the private charity which in ordinary years conduces to the support of these classes is very deficient this year; the branch relief committees established in many places in the district should be able to provide relief in such cases.

7. Actual facts as to any known cases of misery and starvation.

As yet but a very few cases have come to notice, and these have related to the old, infirm, and diseased among professional beggars, who cannot go out of their hovels, and relief, as a rule, has been confined to them. The sub-divisional officer of Lalbagh reports that no cases of actual misery or starvation have come to his knowledge. While lately he was on tour through

Bhagrihât thannah he came across one man to whom he thought it necessary to give gratuitous relief. He states that relief works in hand give plenty of employment. The sub-divisional officer of Jungipore reports that a few cases of individual distress have come to his notice, and have been relieved by the sub-divisional relief committee out of the subscriptions. The sub-divisional officer of Rampore Haut reports that no case of actual starvation has yet come to his notice.

GRAIN-THEFTS OR ROBBERIES.

8. Nineteen cases of grain-theft were reported in the Sudder sub-division which is an increase of eleven over the previous fortnight; they were however all petty cases. The sub-divisional officers of Lalbagh and Jungipore report of no grain-thefts in their sub-divisions. Six cases of grain-theft have occurred in the Rampore Haut sub-division. A statement of dacoities, &c., is annexed.

CONDITION OF ANY SPECIAL TRACTS.

9. There is nothing in the condition of any special tract calling for special mention. In the Lalbagh sub-division small-pox still prevails in the city but it is not of a virulent type.

(B).—RELIEF WORKS.

Panchgram Road.—About 500 coolies have been employed on this road daily. The road across the bheel is now in twelve feet embankment, and the earth very hard to cut. The Executive Engineer found it necessary on his last inspection to raise the rate from 1-9 per 100 cubic feet to 3 annas, as about one-third of the men were unable to earn a fair day's wage. Kodalees are supplied to the men; they are generally in good condition, but complain of being unable to purchase rice at the bazar. Rice is selling at 12 seers per rupee, but it cannot be had in any quantity. The demand for labor is increasing slightly but not to any great extent. I inspected this road with the Executive Engineer on Friday last, and believe that the complaint of difficulty in procuring a sufficient quantity of rice is well founded. I shall propose storage of grain here, and have caused inquiry to be made as to a suitable place for storage.

Kandi Road.—About 120 coolies are employed daily on this road. The men work at a task-work rate of 2-6 per 100 cubic feet; they are generally in good condition; a few old men came to the work, who were unable to execute the task-work; they were allowed to dress the earth-work and paid a daily wage of 1-6. The men bring their own tools and are easily able to obtain their food. The late rains have given work to ordinary cultivators and thus stopped to a certain extent the demand for labor.

Radhaghat Road.—About 180 coolies are now employed daily on this road; the men mostly bring their own tools, are in good condition, and can obtain rice without difficulty. The number of men employed has increased a little since last report, but there does not appear to be a great demand for labor.

Jangipore to Khamra Road.—Between 20 and 30 men are now only employed on this road; the reduction is probably caused by the cultivators having found employment in ploughing their fields since the late rain; the men are in good condition, can obtain food easily, and work at the task-work rate of 2-6 per hundred cubic feet.

Dewanserai to Jeagunge Road.—About 70 men are employed daily on this road; they are in good condition, bring their own tools, work at the task-work rate of 2-6 per 100 cubic feet and can obtain food without difficulty. There does not appear to be any further demand for labor.

Kishnaghur Road.—About 80 men have been employed daily on this road; the number is decreasing slightly, probably on account of the late rains. They can obtain food easily, bring their own tools, and are in good condition.

Joroor and Nowadah Road.—From 800 to 1,000 men have been employed daily on this road; the number fell immediately after the rain, but has since risen to 1,000. There is a demand for labor in this part of the district. The men cannot obtain rice easily, it is not to be had in the villages in any quantity; they bring their own kodalies, are in good condition, and work at the task-work rate of 0-2-6 per 100 cubic feet. Recently there has been some delay in paying the men, owing to their increasing numbers, and to the fact that the sub-divisional officer of Jungipore has been unable to cash a cheque on account of want of funds, from the falling off of toll collections, by means of which his sub-treasury is chiefly replenished. Money will be specially sent ont from this treasury. It will be necessary to store rice at Nowada, as there is heavy work to be done in its vicinity, and a building is now in course of erection.

Hurriharparah Road.—Work was commenced on this road on the 12th instant, in consequence of the reported distress at Hurriharparah. From 400 to 450 men are employed daily; they are in good condition, are paid at the rate of 0-2-6 per 100 cubic feet, and bring their own tools. The demand for labor is increasing. The men are at present able to obtain rice, but it is stated that there is not more than a month's supply there.

Jellinghee Road.—About 40 coolies are employed daily on this road. There is no difficulty in procuring food. The men are in good condition; they work by task-work, and bring their own tools. The demand for labor is not increasing.

Jellinghee and Barromasia Road.—Mr. Lang reports that 42 is the average number of laborers employed. There is no difficulty in procuring food. The men are in good condition, bring their own tools, and work by task-work. The demand for labor is increasing.

Katlamaree and Akbirgunge Road.—Mr. Rogers, of the former place, reports that work has just been commenced, and that nearly 50 persons are employed on this road. There will be great demand for labor here, and in the east of the district generally.

The Executive Engineer, Northern Railway Division, has commenced the work of clearing the embankments about Bhugwangolah. Since the 7th instant about 60 men have been employed on this work.

Work is going on on the Dewanserai tank under the supervision of the Rao of Lalgolah. About 650 men are employed in repairing roads near Lalgolah and the tank. Food is easily obtainable. The men bring their own tools.

A tank is being excavated at Bhoanipore, in thannah Bhugwangolah, under the supervision of Mr. Deverell, of Akbirgunge. There was great want of water and very much demand for labor. The cost was estimated at Rs. 601, of which Mr. Deverell has promised to raise Rs. 101 by private collection and a sum Rs. 150 has been paid out of the relief fund for this work; the remaining sum will be paid partly from the relief fund, and partly by Government giving one-third of the expense. The average daily number of men employed is 56 from the 12th to the 14th instant.

Work has commenced on the Gowas tank. The Moonsiff of Gowas has promised to raise a sum of Rs. 200 by local private subscriptions. Rs. 150 have been paid out of the relief fund for this work, and the manager of the Meshipore estate has paid in Rs. 300 at present called for out of Rs. 600, to be defrayed from the funds of the estate.

Work in the excavation of a tank at Katlamaree was commenced on the 17th instant. The number of men working on this tank on the above date was 17. Rs. 100 have been paid out of the relief fund for this work, and the Maharanee of Cossimbazar has contributed the sum of Rs. 150 on my request. I have requested Mr. Rogers of Katlamaree, who is superintending the work, to raise a sum of Rs. 100 for the purpose by private subscriptions.

The Commissioner has sanctioned an expenditure of Rs. 175 from the funds of the Panchthoper estate to deepen two tanks in the villages of Dhanigram in Bhogobuttepore belonging to the above estate. The villagers are reported to be badly off for water, and are in distress for want of work. I hope these works will help to remove these difficulties. The cost for improving the tanks was estimated at Rs. 275, of which Rs. 175 have been sanctioned. The remaining sum of Rs. 100 I propose to pay out of the relief fund, and if after inspection the works appear to be of real public utility, recommendation will be made for a portion of the expense being borne by Government.

The Commissioner has also on my recommendation sanctioned the advance of Rs. 450 to the above estate for the improvement of two tanks in two villages belonging to it, and also Rs. 150 for the construction of an embankment. The improvement of the two tanks will remove the difficulty of scarcity of water at present felt by the villagers, and the intended embankment will save their mulberry lands from the annual inundation of the Mouruckhi river, and the estate will be saved from a loss of Rs. 200 per annum, which now results from the want of this embankment. As the condition of the estate is not such as to allow of the money being expended from the funds of the estate except to the detriment of the receipt of land revenue by Government during the current year, application will be made for advances under the Land Improvement Act.

The Magistrate-Collector of Beerbhoom was again addressed on the subject of the repairs of the Synthia road lying within the jurisdiction of his district, and the importance of this road was urged on account of the large amount of traffic along it, especially at the present time, and because people of his district have been seeking employment in this, whereas the number of distressed inhabitants of this district was large. In reply the Magistrate-Collector has informed me that the repairs of this road will be commenced at once, sanction having been obtained.

In the Lalbagh sub-division 97 extra coolies have been employed by the municipality during the fortnight on municipal relief works. Two tanks at Amaipara are being deepened. The excavation of the tank at Beliapukhur is just about to be begun, and the cost of excavating another tank at Ram Lall Akbara has been sanctioned. Up to the 19th Rs. 657-13 have been expended by the municipality on relief works of which Rs. 161-4-9 were expended during the fortnight under report up to the 19th instant. The municipal rate is Rs. 2 per 1,000 cubic feet of earth-work. Rs. 50 have been made over to the head constable of the Sagurdighee outpost out of the allotment from the district road fund for the village roads of this sub-division for the improvement of a tract from Sagurdighee to Maloncho. Baboo Kissen Chand Golecha of Azimgunge has started a relief work in the shape of a tank on his estate in thannah Bhudrihat. The sub-divisional officer personally saw men working on this tank.

In the Jangipore sub-division people are at work on the Mirzapore and Monigram road. The number of laborers on the 17th instant was 45, on the 18th, 136, and on the 19th, 115. The Bohotalli and Rajgaong road is nearly completed and the earth-work is being consolidated. On the 19th instant 10 laborers were at work.

The sub-divisional officer of Rampore Haut is entirely silent as to relief works in his sub-division. Many of the laborers on the Juroor and Nowada road come from villages within his jurisdiction.

C.—TRANSPORT OF FOOD.

There can be little doubt that private importation is still going on. Mr. Chardon, of Barromassia, in a letter informed that large boats had anchored at the mouth of the Jellinghee within three miles of Barromassia filled with paddy; the ryots were seen buying it at 21 seers (cutcha) per rupee, and that any quantity was available. Two special goods trains are being run on the Azimgunge and Nulhattee line to meet the increased demand of traffic on that line.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

There is nothing new to be noticed under this head during the fortnight under report, except that a place has been selected near Jellinghee for the landing of grain from steamers, and a report will be shortly submitted to the Commissioner.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

No money has yet been disbursed for the purchase of grain. In the case of the applicant wanting Rs. 10,000 for importation of grain to Azimgunge and Jeagunge and pergunnah Goree, in zillah Purneah, the Commissioner does not think it necessary that rice should be imported into the first named two places with Government assistance. Recommendation has been made to the Commissioner for the advance of Rs. 10,000, under clause *a*, paragraph 4, of Government circular No. 80, to Mr. Grahame, manager of the Aurungabad concern, who intends to purchase and store grain for the benefit of the ryots of the concern.

In one case in which the applicants wanted advance of money to carry on trade it was found that the application was made not for import, but for purchase in the district itself.

In three other cases of similar applications the applicants have been directed to execute and register bonds, and to act according to the conditions under which advances could be made.

The sub-divisional officer of Lalbag reports that some applications for advances for purchase of grain have been received, and that some of these applications were not bonâ fide. In two cases the registration of the necessary bond is being awaited,

With regard to the applications for advances for tank-digging and tank-improving, I have very little to say beyond what was stated in the last narrative. In some cases the production of registered bonds is awaited and in others inquiries are instituted.

It is my intention to utilize a portion of the relief fund money in the improvement of tanks, where such improvements are necessary, which will, in addition to supplying water, give employment to distressed people.

In the Lalbag sub-division no applications for land improvements have been made, though several zemindars have been addressed on the question of tank-digging. The sub-divisional officer intends to devote a portion of the money subscribed for relief in tank-digging, and in one case offered to help a zemindar whom he had addressed before on the subject of the excavation of a tank.

In the Jungipore sub-division advances to the amount of Rs. 1,450 have been made to five parties for the re-digging of tanks.

F.—CHARITABLE RELIEF.

Sub-committees have been formed at the following places in the sudder sub-division:—

Gokum.
Kandhi.
Bharatpore.
Talibpore.
Saktipore.
Gowas.
Jellinghee.
Nobogram.
Hurreehurparah.
Beldangah.
Barromassia.
Kattamaree.

The jurisdictions of these several sub-committees have been fixed and defined; relief operations have actually commenced; 500 maunds of rice have been stored up at Kandhi, from which the relief centres of Gokum and Bharatpore will be supplied; 100 maunds of rice will also be sent by the relief committee to Gowas. This rice has been obtained from the Berhampore co-operative store, in which association the relief committee holds 100 shares. The secretary of the sub-relief committee at Hurhurparah has been authorized to try and store 200 maunds of dhan from a local trader who is selling off his stock.

The total sum raised up to the end of the fortnight under report on account of private subscriptions is shown under:—

	RS.	A.	P.
Donations - - - - - -	20,219	0	0
Monthly subscriptions - - - - -	403	0	0

Sub-committees have been formed at the head-quarters of all the sub-divisions. The Lalbag sub-divisional officer expects to get subscriptions to the amount over Rs. 4,000 in his sub-division.

The total sum raised on account of subscriptions in the Jungipore sub-division is noted below:

	RS.	A.	P.
Donations - - - - - -	702	0	0
Subscriptions - - - - - -	54	8	0

Cases of distress have been relieved out of these subscriptions.

The sub-divisional officer of Rampore Haut has not yet called a meeting and raised subscriptions, but has been requested to do so at once. As I hope to be at Rampore Haut on Thursday next, I have directed that the meeting be held on that day. Rs. 100 have, however, been sent to him from the district relief fund. He reports that out of this sum, Rs. 60 have been sent out to the sub-inspectors of Khargram, Nulhatee, and Rampore Haut to relieve cases of distress. When at Rampore Haut I shall see about the formation of branch committees where necessary.

No. 156—S.R., dated Dinagepore, the 23rd February 1874.

From E. E. Lowis, Esq., Officiating Magistrate, Dinagepore, to the Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honor to submit my narrative for the fortnight ending 23rd February:—

A.—STATE OF COUNTRY.

Since I last wrote we have enjoyed some most acceptable showers, which came at a most opportune time, and, as a consequence, prospects appear much more hopeful than they did a short time ago. The people thoroughly appreciate the efforts being made to alleviate distress, and are more cheerful about the future, in some places even sanguine enough to hope that the prices will not rise much above present rates. The report that Government has imported some, and is importing more rice, has tended to restore confidence; it has also had the effect of inducing those who have grain to sell it, which feeling has further been strengthened by the recent fall of rain. Before the rain came, many who had rice were afraid to sell, in case another scanty Bhadoi crop should find them unprovided. Rain in the month of Magh, however, being looked on as a certain sign of a good early, as well as late, crop of rice, these men are now parting with their surplus more readily. That the report of Government importation, coupled with the expenditure of money on relief works, has had the effect of lowering prices by attracting more rice into the market cannot be disputed. In Ghoraghat thannah, when I visited it in the end of January, rice was procurable with difficulty; not a grain of new rice was in the market, the supplies being drawn from last year's stock in store at Hillee and Birampore. I wrote at once and asked for 10,000 maunds of rice, and at the same time took measures to open relief works; the result is that rates have fallen from Rs. 3–10 per maund to Rs. 3–2, and new rice has, as I hoped it would do, begun to come in from Nowabgunge, where there has been some crop; some small amount has also been brought in by boat from some neighbouring district. The good done by our expenditure on relief works is incalculable; as I pointed out in my last report, there is no lack of agency in the district for internal distribution, and the means to buy, afforded by our roads has caused the surplus of other parts of the district to flow into the distressed tract. The price of rice has fallen slightly in the town, the rate being now 12½ seers for the rupee, it continues much the same elsewhere. At Ranisonkol, Hemtabad, and Kaliagunge it is about Rs. 3-6 a maund of 80 tolahs; at Gangarampore and the hâts in that vicinity Rs. 3-2 to Rs. 3-5 per maund; at Patiram it continues steady at Rs. 3-2; and at Ghoraghat prices have fallen, as noted above to the same figure. The north-west of the district is still fed out of the surplus harvest of Thakoorgaon, Rajarampore, and Habra; Tamboobe and Gungarampore are fed from Patnitala and Chintamon; Patiram from Chintamon, Rajarampore and partly from Patnitala; Ghoraghat from Nowabgunge and the marts on the Jaboona. The above supplies are also supplemented by small supplies of local rice. Parts of Patnitala, it is true will require help, but it is a very large thannah with a large area of rice cultivation, and the southern portion having produced some rice is to a certain extent supplying other places. A brisk trade is going on to the north of the district, where good crops of oil-seed, pulses, &c., have been obtained as well as some rice. Throughout the district there is little crop on the ground except patches of wheat and barley and the bora rice; this latter crop has to a certain extent suffered from the cold weather experienced after the rain, and some of the earlier plantings are said to have died, the warm weather now setting in, however, will do good. The fact is, the ryots were so anxious to secure an early crop of bora that they commenced operations in some places rather too soon, considering that the cold this season has been unusually severe. From all I can gather, the rice brought for sale is almost entirely new; I have therefore requested my relief officers to enquire specially into this point and report to me, for with confidence restored by the existence of Government importation, and the ready sale obtained on relief works, the fear arises that those villagers who have rice may part with their stocks to such an extent as to endanger the success of next year's harvest, by reducing too far the seed reserve. In many tracts there has been no harvest at all, *i.e.* the ryots have obtained no return whatever from their fields at all, in others they have obtained very small returns which the pressure of want has probably compelled them ere this to consume. These men must obtain their supply of seed-grain from the surplus of the more favored tracts. Assuming then, as we do, that the produce of the favored tract is not sufficient to afford both food and seed for the whole population, a time must come when the market must be supplied with old rice, so that the distressed tract may not consume the whole surplus of the rest of the district, leaving no reserve for seed. Those who have surplus rice will continue to sell as long as they can find any one to buy, without troubling their heads what the purchasers do with it; and those who have no rice will, unless they are men of some substance, buy when they have the means to do so for their own daily consumption. The subject is one which appears to me of great importance, and I have drawn the attention of my relief officers to it, and will direct the attention of relief committees to the same subject. A little attention to local supplies and rates will enable the members of relief committees to ascertain if the stock of new rice for sale at the hâts is running out; when it is they should at once begin to sell from Government stores. The existence of Government stores, and the confidence inspired by their existence, may well tend to keep down prices, and unless attention is paid to the subject, the falling off of the supply may not at once be remarked. I hope the ryots will all be in a position to supply themselves with seed-grain, but the matter is not one that should be lost sight of.

B.—RELIEF WORK.

Our relief works are still progressing favorably and affording employment to thousands, and the manner in which all the officers in charge have labored to attract labor, and the tact with which they have managed their gangs, is deserving of praise. It may seem a simple thing to offer work to and to employ a distressed population on the roads, but in fact it is often a matter requiring some tact and method, as well as the expenditure of time and trouble. The men in the first place, when operations are begun, come to work under the "Sirkar" with some hesitation, and an impression that the work is very hard and the pay uncertain; then at first the men require daily, and above all things prompt payments. They soon find digging earth for roads not such very hard work and then they try to do as little as possible for their pay, and it is often difficult to say whether a man has been idling or whether he is really unable to do more; again, task-work is introduced, and much tact and patience is required to induce the coolies to undertake it. The work, it is true, requires the exercise of no great intelligence, but it does require energy, tact, and common sense to a considerable degree. Mr. Scanlan, in his roads in the vicinity of Ranisankoil, is employing about 2,000 persons a day; Mr. Jones, in and about Raigunge employs close on 7,000 a day; while Baboo Hurree Mohan, in the Gungarampore direction, had on the 15th, 8,332 persons at work. Mr. Finucane again has about 3,000 coolies under him, and the sub-inspector of Patnitola 2,558 more. In the Goraghat direction, Poorno Chunder Goopto has not long commenced relief operations, but his numbers, he reports, rose in the the course of the first week from 5 to 1,412, and had he been able to give out kodalees, he might have employed more. On all the works, with the exception of Goraghat, weekly payments have been introduced. There, as the coolies have not as yet been long enough at work to gain confidence, daily payments are at present necessary. Daily payments were at one time the rule and not the exception, but as the coolies acquired confidence, and were assured of punctual receipt of wages the practice was discontinued. The Public Works overseers are employed at three different points looking after work on three separate roads; the three employed among them about 2,000 men a day. As our coolies belong entirely to the agricultural classes and include numbers of ryots with small holdings, I have made inquiries how far the necessity of earning a livelihood by working on the public roads has debarred them from preparing their lands for the next early crop. I find that while some of them do manage to get away for a day or two to look after their cultivation, many of them cannot do so, as they cannot afford to lose the means of subsistence which the relief works afford them. It is a matter for regret that any of the area under cultivation for the next crop should be curtailed, but the loss now sustained is comparatively unimportant compared with the curtailment of the winter harvest, and the relief committees must be instructed to tender help either in money or grain to any ryot coolie who cannot otherwise leave the relief works to attend to his cultivation. This difficulty has been principally experienced in the Gungarampore circle, and the relief officer reports that there are a good many of his coolies in such a position. Care must be taken that these men get away at any rate to prepare for their winter crop. The relief operations have generally been carried on over old tracks where new land has been taken up; efforts have been made to induce the zemindars to give the land free of cost; the principal landholders have been appealed to by letter and urged, as a contribution towards the relief of their tenantry, to grant such lands free of cost. The zemindars noted in the margin have promptly responded to the call, and signified their intention of demanding no price for land required for relief purposes. I beg to bring the liberality of these gentlemen to the favorable notice of Government, and I trust that the example set by them will be followed by others. As I pointed out in my last report, the work in some divisions will soon be finished, notably in Gungarampore. When that occurs the attention of the relief officer will be turned to digging tanks or to some other useful work. With reference to the recent orders of Government on the subject, I may remark that I fear it will often be impossible to obtain help in the way of subscriptions from the villagers or zemindars, but there are many tanks that can be improved for the public benefit, being reservoirs for water that in a season like the last are useful for purposes of irrigation; in fact, many of the tanks, more especially in the Gungarampore division, were so utilised last season.

Moharanee Syam Mohinee, Baboo Radha Gobind Roy, Moonshee Mozhur Hossein Chowdry, Baboo Narayan Chunder Chowdry, Moonshee Mahomed Alee Khan, Mr. T. W. Tweedie on the part of Baboo Budhi Nath Chowdry, minor zemindar, Ameer Chand Chowdry, and Khetra Mohan Singh, and Baboo Krisna Gobind Chowdry.

C.—TRANSPORT.

Every effort is being made to secure sufficient carriage to bring in our large allotment; when I returned from tents I found efforts being made to collect carts through the police; this I at once stopped, for the employment of the police only leads to the people being needlessly harassed, without any good result accruing in the way of supplies being obtained. The village carters I know have the same unwillingness to take service under Government officials as they have to commence work on the Government roads. I therefore determined to try and get what I wanted through the zemindars. I accordingly sent letters to the principal zemindars, requesting them to use their influence in inducing their ryots to come forward, and at the same time to let it be known that I was prepared to pay liberally. I also sent a trustworthy official into the interior to try and obtain supplies through the mandals. The plan has so far answered very well, a good many carts have been collected, and but for the inopportune intervention of the Moharram festival, many more would doubtless have come in. I offered liberal rates to induce the men to come forward in numbers commensurate with my requirements, and also because I knew that to the north of the district, where distress does not prevail, there was a demand for carts; it was necessary therefore to offer liberal terms to induce those with good carts and bullocks to come forward. At the same time, I found that the rates must be uniform, so that the carriage might not be attracted from one line to another. Mr. Westmacott was the first to fix a rate at Rs. 1-6-6 per bag from Rajmehal. The Godagaree carters, again, were engaged at Rs. 7 for the trip; when they came here and found what the Rajmehal carriers were getting, they demanded to be put on that line; this of course could not be allowed, so I pacified them by allowing a rupee extra per cart for the trip, and a promise that the rate should be equalised. In order to secure uniformity, I have proposed to the Relief Commissioner that every cart carrying a ten-maund load should be paid for each trip at the rate of 20 rupees a month, a fixed average number of days being allowed for each journey. Supposing the average time occupied in traversing any one route to and fro to be twelve days, a carter bringing 10 maunds would be entitled to 8 rupees for each trip; taking a shorter time over the journey and bringing a heavier load being to their advantage, the carters will push on as fast as possible, and given the number of days required to traverse any route, it is not difficult to calculate how much each carter should be paid per trip bringing a load of 10 maunds. Carts are being, as I have said, collected and sent to different points,—about 800 have been sent to Mr. Westmacott. Trains of pack bullocks also are being organised; it is, however, difficult to estimate how much can be carried daily, for much of our carrying power is outside the district. Orders have been issued for the purchase of fodder on the different cart routes, and centres have been selected in consultation with the Relief Commissioner, where the officers lately deputed for service in this district will be posted. These gentlemen will superintend relief operations, they will also see to the supply of fodder, &c., for carts; houses for their accommodation will be put in hand at once. We have not yet established a daily service from Rajmehal, but that may partly be due to delay at Neemasarai crossing; I have, however, instructed Mr. Sneyd, who has been deputed there, to see that the number of landing stages is increased, that certain ghâts are kept for full, others for empty, carts; that separate roads are cut to the different ghâts, and that men are stationed to tell off the carts to their own ghâts and prevent confusion.

D.—STORAGE.

My maximum estimate of the requirements of the district in the way of grain has been recommended by the Relief Commissioner and accepted by the Government. The Commissioner proposed that the total amount should be allotted and brought into the district in a particular way. I had myself in the meantime considered the subject, and as I had made an allotment different from that proposed by Mr. Molony, but to my mind more suitable, I submitted my plan to the Special Commissioner with a note of the routes I proposed to follow. Mr. Robinson was pleased to approve of my scheme, and has, I believe, written to Government proposing its adoption. I have not seen Mr. Robinson's return, so I append a copy of what I propose doing. It will be observed that it has been determined to select certain centres as depôts for certain parts of the country, to mass our supplies in them, and to distribute hereafter throughout the district as occasion offers. Large golah accommodation will be provided at each depôt and sheds run up for the protection of rice which has been landed, but cannot immediately be sent off to the subsidiary golahs. Sheds at Old Maldah and Neemasarai have also been ordered, capable of containing 50,000 maunds each, for the protection of rice landed by boat for Raigunge and Dinagepore. I have had some difficulty in getting the store-keepers at those points of receipt not lying within my district to give me regular information of receipts on my account, but I hope by supplying them with printed slips, which will only necessitate the filling in of a few figures, to ensure greater punctuality for the future. I have had to draw the attention of the Special Commissioner to the enormous wastage that occurs during transit, some of the two-maund bags arriving 15 to 20 seers short. I am inclined to think that pilfering goes on at the store-houses or on board the steamer; some of the bags are so carefully done up again as to leave no sign of having been opened—such skilful manipulation could not be managed in the hurry of a cart journey. I may add that to ensure direct communication with Godagaree, I have suggested the opening of a temporary dâk line between Parsha in this district where there is a branch post office and Godagaree thannah where there must at least be a zemindari dâk extra establishment.

E.—ADVANCES.

Full publicity has been given to the offer on the part of Government to advance money to zemindars, but there seems no alacrity on the part of the latter in availing themselves of the offer. In two or three cases zemindars have expressed their willingness to take advances if a longer term be allowed for repayment; it is urged that money or grain advanced to ryots cannot be recovered under two years, the zemindars therefore ask the same grace from Government, from which it would appear that they are anxious to benefit their ryots at the least possible cost to themselves. Two zemindars, Baboos Issur Chundra Mookerjeea and Bishnu Prosad Boral, have applied for an advance of Rs. 5,000 each; their petitions have been forwarded to the Commissioners.

F.—CHARITABLE RELIEF.

An executive committee at head-quarters has been formed and a subscription list opened; the amount collected up to date amounts to Rs. 1,000. I selected certain places as relief centres, and sent the list to the Relief Commissioner, with as many names of persons willing to act on the committee as I could ascertain. Mr. Robinson returned the list for all the names to be added. I entered all I could, but with press of other work I could not ascertain all the names; the list has, I believe, since been completed as far as possible. Such a list can never be considered quite complete, for some fresh place is constantly being brought to notice where the establishment of a new relief committee seems advisable. The people in the vicinity of Tamboolee are very anxious to start relief in the shape of supplying yarn to be spun into thread by the women, &c.; they have subscribed, I believe, some Rs. 3,000, and work will soon be started. Tamboolee is a land of large mandals and well-to-do ryots where relief operations will be easily carried on. The zemindar of Joygunge, to the north of the district, fearing that his ryots would suffer distress, took the precaution of importing some 3,000 maunds of rice from Sylhet, and also a quantity of rice in the husk. There has been, as it turned out, no distress in that quarter, the grain is therefore being sold; it would have been well if some of the other zemindars had displayed like prudence and forethought.

No. 611F, dated Maldah, the 24th February 1874.

From F. J. ALEXANDER, Esq., Officiating Magistrate-Collector of Maldah, to the Officiating SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

In continuation of my No. 501F of the 10th instant, I have the honor to forward the seventh fortnightly narrative of scarcity and relief in the district of Maldah for the fortnight ending Saturday the 21st February (instant).

NARRATIVE of Scarcity and Relief in the Maldah district for the fortnight ending 21st February 1874.

A.—STATE OF THE COUNTRY.

Prices continue generally much the same as last fortnight, and there is no rise in the north-west (Khurbah) tract. Supplies also continue fairly plentiful at all of the principal markets.

At two of the chief markets on the north-western tract, I found on inquiry a few days ago, that there was rice still unsold when the market closed. This is very different to what it was there some three weeks ago, when the local supplies were reported as scarcely equal to the demand. The late rainfall has had its effect for food on the prices generally, but the Government importations, I am also informed, have tended to lower prices, and bring out local stocks. I believe this is the case to some extent.

The following are the latest prices of paddy and ordinary rice at the under-mentioned principal markets in different parts of the district, viz.:—

CENTRAL PART OF THE DISTRICT.

At Mongalbaree.

Paddy - - - - -	19 seers per rupee (80 tolahs).
Ordinary rice - - - -	13¾ seers ditto ditto.

At Ballia Nowabgunge.

Paddy - - - - -	19 seers per rupee (80 tolahs).
Ordinary rice - - - -	13¾ seers ditto ditto.

NORTH-EAST OF THE DISTRICT.

At Bamongola.

Paddy - - - - -	18 seers per rupee (80 tolahs).
Ordinary rice - - - -	12¾ seers ditto ditto.

At Gazole.

Paddy - - - - -	20 seers per rupee (80 tolahs).
Ordinary rice - - - -	10½ seers ditto ditto.

NORTH-WEST OF THE DISTRICT.

At Chanchal, Toolsigunge, Shumsi, Abadpore.

Paddy	Not given.
Ordinary rice	10 seers per rupee (80 tolahs).

At Futtehpore Hyatpore.

Paddy	18 seers per rupee (80 tolahs).
Ordinary rice	12 seers ditto ditto.

SOUTH-WEST OF THE DISTRICT.

At Kalliachak.

Paddy	18½ seers per rupee (80 tolahs).
Ordinary rice	12¼ seers ditto ditto.

SOUTH-EAST OF THE DISTRICT.

At Rohanpore and Gomastapore.

Paddy	21 seers per rupee (80 tolahs).
Ordinary rice	12¾ seers ditto ditto.

Rainfall.—There was a very slight sprinkling of rain, nothing to speak of, on the night of the 10th February, in the centre and north of the district. On the same date there was a good shower to the south of the district. Otherwise the weather has been fine, with a westerly breeze at intervals, and perceptibly getting warmer in the day time.

As I write this report the weather is again unsettled, and it has been raining slightly to-day (23rd February); threatens more rain.

State of the crops.—The cold weather crops of wheat, barley, &c., continue to look well, but what they want now is sunshine and westerly winds, and much rain is likely to do them now more harm than good. So far, however, no injury is reported, while to the lands which are being ploughed for the bhadoi rice crop, and to the boro dhan the late rain has been of great good.

The returns received from five out of nine thannah divisions of the estimated area and out-turn of the boro dhan crop now under cultivation, and which will be harvested in April and May, show 26,064 beegahs as under cultivation this year, against 21,051 of the previous year, the out-turn of which (taking 5 maunds to 8 maunds per beegah as the average) is estimated at about 175,000 maunds. For the whole district, if the weather continues favorable, the expected out-turn may be put down at 200,000 maunds.

Condition of the district.—The health of the district continues generally good, with the exception of cases of small-pox which are frequent and in many instances fatal, in the villages bordering on the Mohanuddi in the north of the district. As regards the district generally, there is no cause for immediate anxiety. No actual distress or starvation is heard of, and except in the north-west tract, rice is still obtainable without difficulty at the same price it was three months ago.

Condition of any special tract.—During the past fortnight I have been on tour through the greater part of the north-west tract (thannah Khurbah), and returned to head-quarters from there only on the evening of the 21st. A good deal of distress is apparent in the north and east of this tract on the borders of Purneah and Dinagepore, and many of the villagers are coming to the relief works, who in ordinary years would not think of doing so. The ryots, too, of the Chanchal estate are only too glad to take advances of grain from the manager to carry them through the present difficulty, and the tenants of other zemindars, who are not assisting them, are equally importunate on the manager for such help. Mr. Reily has already found it necessary in this way to advance 983¼ maunds to his own tenants to be repaid by December 1875, or January 1876, and in addition to this 224¾ maunds have been sold for cash payments to outsiders (not Court of Wards' tenants). Nothing I think could indicate clearer than this, how small the stocks of food-grain are in many villages in that quarter, and how very important it is that we should thus be in a position to assist (as fortunately we are able to do), the cultivating tenants who cannot leave their fields. I made enquiries from the headmen of a great many villages in this tract, and was glad to find that some villages were fairly well off.

B.—RELIEF WORKS.

Work is going on on the ordinary district roads. The average daily number of people employed is reported to be 502.

Relief work in the north-western tract is now going on on six different roads, and the number of laborers employed is as follows during the past fortnight:—

Name of road.	Length in miles.	Mean daily average of persons employed during the fortnight.			
		Men.	Women.	Children.	Total.
1. Chanchal to Khurbah	7	288	2	29	319
2. Chanchal to Toolsigunge	8	52	15	4	71
3. Maltipore to Hyatpore	14	149	52	17	218
4. Maltipore to Bhado, *viâ* Shumai	16	209	185	61	455
5. Soroopgunge to Chanchal	6	131	—	—	131
Total	51	829	254	111	1,194
6. Khurba and Soroopgunge	8	Returns not received, but fully 100 persons are at work.			

Besides the above roads, Mr. Reily reports that six tanks are being dug in different localities, which afford daily employment to 725 persons.

I reported last fortnight that it had been found necessary to commence sales from the Government stocks to laborers on relief works, and up to date 35½ maunds have thus been sold.

During the past fortnight I have myself seen the relief works going on on all the above roads. The laborers employed are entirely local villagers. Some very good work has been done, and a considerable tract of country already opened out and made accessible to cart and other traffic.

C.—TRANSPORT OF FOOD.

Boats daily arrive at head-quarters from Rohonpore and other river marts to the south with local grain supplies, and these are brought up and taken away to the centre and south of the district, chiefly by carts and pack-bullocks, by the resident baiparis for local use.

The transport of Government grain has been reported in the weekly reports. The Sahibgunge and Hyatpore route is working well. Mr. Reily reports that he has carriage enough to send 30,000 maunds a month by that route to Dinagepore. He has already sent on 14,227 maunds, and at the close of last week a further consignment was being worked off. On the Rajmehal route, Mr. Westmacott's arrangements will have been reported direct. On the 22nd instant I met Mr. Molony and Mr. Westmacott at Rajmehal, and transport arrangements were talked over. Mr. Westmacott proposes to relieve the pressure at the Nemasarai ferry on the Rajmehal and Dinagepore road by sending the Rajmehal despatches by cart only as far as Nemasarai, and from there by boat viâ the upper reaches of the Mahanuddi to Raigunge, &c., while the Godagaree despatches, as they arrive by boat at the opposite side of the Nemasarai crossing, will be sent on by carts by the land route to Dinagepore. The proposal seems a good one, as the ferry-crossing and the consequent delay there will thus in a great measure be avoided.

As the supply of grain to Dinagepore has been so largely increased, permanent golahs to store grain will have to be built at one or two places, from whence the grain can be distributed by the different rivers during the rainy season. Hyatpore and Nemasarai or Old Maldah will probably be the proper places for such golahs, but the question of the sites requires a little careful consideration, to avoid the possibility of injury when the Ganges and other rivers rise.

By the river route from Godagaree the supplies are coming quite as fast as we can carry away. Every effort is being made to supply the deficiency in the boat service which is not as plentiful as at first supposed. When my deputy collector, who is stationed near Godagaree, reported that "ample boat service" was always available, he was not aware that the supplies at Godagaree were likely to be so largely increased.

The total receipts of grain into the district, exclusive of the despatches which Mr. Westmacott has sent on from Rajmehal (and of which I have received no information), are stated by the deputy collector in charge at head quarters to have been 1,04,990 maunds at the close of last week, of which 15,282 maunds had been received at different golahs for this district, and the remainder 89,707 maunds despatched and in course of transit to Dinagepore.

D.—STORAGE OF GRAIN.

At the storehouses in this district the following quantities have been stored:—

	Mds.
At English Bazar	3,396
„ Old Maldah	5,000
„ Gazole	2,830
„ Khurba	2,580
„ Hyatpore	1,476
Total	15,282

Subsidiary golahs are ready at Toolsigunge, Soroopgunge, and Chanchal, and will be supplied from the main golahs as need arises, and temporary storage sheds sufficient to hold 5,000 maunds at Hyatpore, and the same quantity at Manickchuk, on the Maldah side of the two Ganges crossings, are almost completed. (Those at Hyatpore are ready.) I have stated under heading C that the question of permanent golahs to hold considerably larger quantities is under consideration.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

Sanction has been received to make a further advance of Rs. 2,000 under paragraph 4 (A) Circular No. 80, to the manager of the Chanchal estate, and the money will be given when Mr. Reily requires it.

Mr. Robinson has also sanctioned an advance of Rs. 10,000 to one Rajnath Guha. Of this I have already (as reported in last fortnight) advanced Rs. 2,000, and the balance is available when asked for. The applicant has arranged, I am told, for the purchase of grain from Calcutta or Backergunge to the extent of Rs. 10,000.

No other advances have been made. Several applications for small sums under Rs. 1,000 have been refused, as it was very questionable whether the applicants did not intend trading for their own profit on the money, and the property pledged was equally questionable.

F.—CHARITABLE RELIEF.

I held a meeting at Khurba on the 26th February, and Rs. 700 were subscribed by the local zemindars and residents. Mr. Reily was instructed to form a sub-divisional committee, and to organise relief operations throughout the north-west tracts, and to distribute funds and grain to the different relief centres.

Charitable relief has been started at the undermentioned places in the tract referred to:—

1. Chanchal.
2. Toolsigunge.
3. Sorupgunge.
4. Maltipora.
5. Debegunge.
6. Futtehpore.
7. Khurba.

The total number relieved at these places up to last week since the relief centres were opened is 5,006, at an expenditure of 100 maunds of rice and Rs. 19 in cash. The daily average attendance varied at different places; the numbers were most numerous at Chanchal and Khurba. Mr. Reily has been told to see that we are not imposed on, and that only the old, sick, and infirm, &c., are relieved.

The Secretaries of Relief Committees at other localities have been directed to start charitable relief operations if needed. At present it has not been thought necessary to do so except in the places named.

The total amount subscribed in the district up to date amounts to Rs. 4,338.

No. H, dated Beauleah, the 24th February 1874.

From W. H. D'OYLY, ESQ., Collector of Rajshahye, to the SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I HAVE the honor to forward herewith my narrative for the fortnight ending the 22nd instant.

A.—STATE OF THE COUNTRY.

Importation of rice from the eastern districts continues to increase. Paddy has been imported in much larger quantities than husked rice. The cold-weather crops are flourishing. In Pootea and Nattore a little damage has been done by hail; generally, however, a fair outturn is expected. In the western Bhurind the little rubbee cultivation that there is has been very successful. The people of that part of the district seldom sow cold-weather crops, as the supply of rice in ordinary years is more than sufficient for their wants. There have not been any cases of starvation. I believe that there will be no wide-spread distress such as to call for any very extensive charitable relief operations. There will undoubtedly be many isolated cases where food will have to be supplied gratuitously, and this only makes it all the more necessary that inquiries should be searching, so that in villages where the inhabitants are generally able to provide for themselves, no case of pressing want may be overlooked; such inquiries are being made by the sub-divisional Relief Committees. The prices of rice and paddy are falling; in several parts of the district rice is selling at 15 seers per rupee, though in the station of Beauleah the price continues steady at 13 seers 8 chittacks. The poorer classes are undoubtedly stinting themselves, and eat perhaps more kuchoo roots than they are ordinarily in the habit of doing.

The managers of Court of Wards' estates were ordered to visit every village in their respective estates. At first they gave very gloomy accounts, but I found from what I had myself seen that their estimates were much below the mark, and that matters were not so bad as they had at first been led to suppose. I have had more careful enquiries made by them since, and I have myself seen several villages belonging to the Court of Wards' estates, and where relief measures were most wanted they have been undertaken. The Commissioner has sanctioned the expenditure of a considerable sum on the excavation of new tanks, and on the deepening of several old tanks, and in clearing jungle in the Tahirpore estate. All these works will improve the estates. I have also applied for sanction for further expenditure in the improvement of the water-supply in the villages of the Bansila and Pootea estates, in which the existing tanks are either dried up or not sufficient in number.

The Tahirpore manager was sent down to Dacca to purchase rice with the Rs. 10,000 advanced, and he has just returned with large supplies of paddy. A good deal of this will be sent to the Tahirpore villages in the Malda district. I have instructed all the managers to advance money to their ryots where this can be safely done and where it is necessary.

B.—Relief Works.

It will be seen from the returns that the daily number of workmen has slightly increased during the last week of the fortnight, the daily average for the first week being 428, while that for the latter has been 465. At a meeting of the District Road Committee held yesterday several allotments were made on my recommendation for village roads which I had myself seen during my recent tour, and I hope that work on several of the proposed roads will during the next fortnight attract a large number of laborers.

C.—Transport of Food.

As above remarked, importation continues to increase. I fully believe that private enterprise will bring into the district enough rice to meet all demands, those of the railway laborers excepted, for which ample provision is being made. The Burral is the only river of any importance that has become closed, and that was closed long ago.

D.—Storage of Government Grain.

The most important work in this district with reference to the supply of Government grain is that of forwarding rice to Dinagepore. In his resolution of the 16th instant, His Honor the Lieutenant-Governor remarks on the slow progress in the transport of grain. The matter has received my most careful attention, and I have been much aided by Captain Ker and by Mr. Molony. I trust that the recent despatches from Godagaree, amounting to 46,672 maunds 35 seers in 13 days, or about 3,590 maunds per day, will be considered satisfactory. Mr. Molony has procured a number of additional carts for me from Berhampore, and after the Mohurrum I hope to be able to send over 4,000 maunds a day from Godagaree alone.

As regards despatches from Nowgong, I received no directions to despatch from that storehouse, and our supply at Nowgong has been small. Mr. Robinson is now carting away from Nowgong, but the total amount to be received there for him does not exceed 15,000 maunds, and the Bogra supply that was to have gone to Nowgong was sent up the Nagore instead, and has all passed through my district.

I hope soon to get another officer to help me in the transport viâ the Attrai and Joboona.

As regards the railway rice, I regret that I am unable to carry out the Lieutenant-Governor's orders in this narrative, as I was told that Major Lindsay would make his own arrangements, and he has done so through his subordinates, and I have received no account of his receipts and despatches.

I have, however, sent a copy of the resolution of the Lieutenant-Governor to him, and have asked him to direct his store-keepers and forwarding agents to supply me with the information up to date, and daily for the future, though I would submit that the returns should be submitted by the Railway authorities.

F.—CHARITABLE RELIEF.

A meeting was held on Friday last of the District Committee, and instructions have been issued to the several Sub-divisional Committees to form out of their number sub-committees to operate in different parts of their sub-divisions. Superintendents have been appointed to make close enquiries in every village in the parts where distress is likely to be most severe, and Chairmen of Sub-Divisional Committees have been requested in urgent cases to take measures at once, reporting what action they have taken. There have been a few cases, but very few, of weak and sickly men and women having no one to support them; and I have arranged with some zemindars whom I know and can trust to provide for them for the present.

No. 7, dated Rungpore, the 23rd February 1874.

MEMORANDUM by G. H. DAMANT, Esq., Joint-Magistrate in Charge, forwarded to the SECRETARY to the GOVERNMENT OF BENGAL.

NARRATIVE of Scarcity and Relief in Rungpore District for the Fortnight ending Saturday, the 21st February 1874.

A.—STATE OF THE COUNTRY.

The supplies of rice seem to be generally well maintained, but we are dependent to a large extent on importations, which may at any moment fail us. Rice is imported from Bograh, Dinagepore and Julpigoree freely by land, and the eastern parts are supplied by water-carriage all along the line of the Brahmaputra. Where these supplies come along the eastern river board, the rates continue comparatively low, from Rs. 3-8 to Rs. 3-12 per maund, but elsewhere all along the western part of the district following the line of road to Bograh the rates are steadily rising, Rs. 4 to Rs. 4-8, being the quotations of the markets, and between market days in the moodies' shop the price is in many places 8 pice a seer, or Rs. 5 a maund of 90 tolahs, being equivalent to Rs. 4-8 a maund of 80 tolahs.

The following are market quotations:—

	Rs.	A.	P.
Nawabgunge	4	0	0
Gaibunda	3	12	0
Borobaree	5	0	0
Chillakhal	4	8	0
Govindgunge	3	11	0

The average rate for the whole district is about Rs. 4 per maund.

No rain has fallen during the fortnight, except a few showers in Bhowanigunge, and sowings are being actively proceeded with in all directions. The winter crops are all looking well; the wheat crop will probably be a very good one; tobacco and kalai are also doing well.

In many places there is a scarcity of fodder already felt, but the late rains have caused good growth of grass, which will stave off much of the difficulty.

The condition of the people is certainly much worse, and general distress has disclosed itself in many places where my inspecting officers have gone their rounds. One of these is the south part of Mahigunge thannah, where Baboo Ram Chunder Roy, Inspector of Police, found several cases of people having sold their children, and one of a man who had sold his wife for Rs. 10. Women's ornaments were offered for sale in the markets; and several have disposed of their ploughs and bullocks. Some bearers he found who were living principally on ground kachu and plantain, but the Baboo reports that he considers some of the accounts of the people are exaggerated, as they are apt to be. There are already two annochotras opened in the neighbourhood—one at Kalligunge outpost to the north and at Sundargunge to the south. These places I visited a few days ago, and found but few applicants for relief. It was decided, however, at the relief committee held two days ago to open two new relief-houses at Alaikuri and Kandi at once; and Mr. Patten, supervisor, is already at the spot laying down a road from Chondranidighi to Sundargunge, which will run through the distressed part, and which was previously arranged in consultation with the Relief Commissioner when here. This part will be specially watched, but I consider the measures now taken will be sufficient for the purpose at present. The District Superintendent of Police also took a tour round Pergunge and Molung, and opened annochotras at Pergunge, Meetapukhar, and Molung; that at the latter place has since been closed as there are other centres of relief working near, but Meetapukhar, which was entered under class C, will be maintained. There were 43 men, 142 women, and 46 children relieved there the first day, and distress is very general; the work will be put in a regular footing and labor exacted from all who can give it. The zemindars in the neighbourhood are advancing grain and money, and I shall, under the late Government order, take measures to clear out a large tank which gives its name to the place. I am now proceeding there.

In Sadullapore, reported on in my last report as a bad tract, relief is being regularly distributed, and 107 women, 10 men, and 33 children, principally beggars, blind and lame, were in receipt of above according to last report. The roads of this quarter now open give employment to those who can work.

The Deputy Magistrate of Gyebunda has opened relief at Govindgunge.

Annochotras are opened at Naldanga and Luckhipore haut, and about 200 persons are fed daily. The Deputy Magistrate report that the people at Kamdiar, in thannah Govindgunge, are in considerable distress. He states that they are bringing their brass vessels and ornaments for sale in the hauts, and that the latter are sold at 8 or 9 annas a tolah. Cattle are being sold at about half the usual rates in the hauts in the distressed tracts.

B.—RELIEF WORKS.

Our laborers have nearly doubled within the fortnight; they reach now nearly 2,000, and in the return several new roads are not reported. I have had several charges against sub-overseers of cheating the coolies by deducting ¼ pice from their daily earnings. One of them I punished criminally when out at Kalligunge this week, and the two other cases are under inquiry by Deputy Magistrate in the neighbourhood. The men get paid at the rate of

3 annas per 100 cubic feet, and those that cannot earn 6 pice a task-work will be allowed that sum as subsistence allowance; very few of this kind of laborers have as yet come to the work, but I expect their numbers will increase. Hitherto the men have drawn their supplies from the markets and moodies' shops, to be met everywhere, but as the retail prices are in many places 8 pice a seer of 90 tolahs, we are about to open Government shops in places where this is the case, and we shall sell the rice at 6 pice a seer of 80 tolahs or Rs. 3-12 a maund. The soigun rice will have to be sold cheaper. The numbers on the various roads are as follows:—

Roads.	Coolies. Men.	Coolies. Children.
Dinagepore road	92	4
Julpigoree road from Rungpore to Kishoregunge	136	6
Ditto ditto Kishoregunge to Bhogdabree	50	
Chillakhal road	50	
Cooch Behar road	56	
Bagwah road from Rungpore to Panial ghat	71	
Ditto ditto Panial ghat to Bagwah	42	
Bhawaingunge from Rungpore to Katgorah	118	
Ditto ditto Katgorah to Kallygunge	195	
Bograh road from Rungpore to Mulapukhar	45	
Ditto ditto Mutapukar to Gozariah	86	
Kanniahghat road	32	
Naldanga to Sadullapore	145	
Nageshuri to Kooreegraun	65	
Chorialdanga to Kooreegraun	79	
Pergunge to Kallygunge viâ Sadullupore and Gyebuda	192	
Gyebuda to Govindgunge	115	
Batarhun road from Badargunge to Batashun	30	
Dum Dum to Naldanga	103	
Pergunge to Jalalgunge	50	2
Gyebunda to Palashbari	12	
Ditto Luckhipore	55	
Meergunge to Jagur haut	100	
Sundargunge road	22	1
Koolayghat road from Boriharie	22	1
Govindgunge to Rajabar	20	1
Station roads	64	
Pergunge to Gozariah	20	1
Total	2,068	16

(C.)—Transport of Food.

The Deputy Magistrate at Gyebunda reports that 2,080 maunds of rice have been imported in boats to Kallygunge ghat, and 1,200 to Kulma ghat. During the fortnight, a small importation from Cooch Behar and Dinajpore is also going on. A considerable supply of rice amounting to about 17,000 maunds has arrived for Rani Surno Moyee, and Baboo Luchmipat Dugar. A great part of it has already been stored in the interior, no block exists, and the means of transport are sufficient for the amount of grain allotted to us. 500 carts are being collected here for Dinajpore, which will be despatched shortly.

(D.)—Storage of Government Grain at Relief Works.

Advice of the storage of the several allotments of 2,00,000 has just been received. The following is the distribution list for the same.

	Mds.
Kallygunge	60,000
Kurigram	10,000
Kulaghat	5,000
Chillakhal	20,000
Durwani	5,000
Panialghat	15,000
Alaikooree	5,000
Sundergunge	3,000
Naldunga	10,000
Gyebunda	15,000
Sadullapore	5,000
Govindgunge	5,000
Kamdiar	4,000
Pergunge	10,000
Molung	5,000

	Mds.
Meetapukhar	5,000
Pyrabund	3,000
Gopalpore	5,000
Rungpore	10,000
Total	2,00,000

Storage houses for the first lot of 70,000 maunds have been ready for some time, those for the second allotment of 70,000 maunds are in rapid progress, and for the reserve lot of 60,000 maunds given in access of our demand, accommodation will be made at Kallygunge.

The following shows the amount of grain received and sent forward up to date:—

	Mds.	Mds.
Receipt		61,429
Despatched.		
Gyebunda	9,540	
Peergunge	5,581	
Naldanga	5,770	
Rungpore	3,140	
Chillakhal	21,000	
Kooreegram	5,100	
		50,041
Balance at Kallygunge		11,388

(E.)—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

	Rs.
Advances to private persons for purchase of grain	7,500
Ditto zemindars for advances to ryots	11,100
Total	18,600

Crowds of ryots attend the courts daily, presenting petitions for advances, but it appears on inquiry that many of them are persons really in good circumstances; it will be utterly impossible either for Government or the zemindars to make advances to all who present themselves; a great deal of care is required in selecting proper objects for such relief.

(F.)—CHARITABLE RELIEF.

Relief is being distributed at the following places—

	Mds.
Pyraband	400
Meetapukar	231
Pirgunge	76
Govindgunge	34
Kamdair Haut	(Unknown)
Gaibunda	39
Sundergunge	150
Kalligunge outpost	16
Naldanga	120
Luckhipore	80
Total	1,146

Uncooked food, half potatoes, half rice, is being given, but arrangements will be made to give cooked food.

At Mohigunge, two private annochatras have been opened, and relief is given to about 600 persons in cooked food, and on Sunday's Basanta Geer Sunnasi gives a dole of rice. I was present yesterday, and about 2,500 people attended for it.

In Batashun, Baboo Luchmipat Dugar gives a week's supply of rice to about 400 of his ryots. The Superintendent is going from village to village, and gives tickets to the deserving objects of charity, on the production of which a supply of rice is given at the cutchery. In Baharbund, annochatras are opened at Olipore and Lalchamara Haut, and will be opened at other places. No particulars as to numbers relieved are at hand.

No. 1054, dated Bogra, the 23rd February 1874.

From C. A. KELLY, ESQ., Officiating Magistrate-Collector, Bogra, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I HAVE the honor to report as follows:—

NARRATIVE of Scarcity and Relief of the District of Bogra for the fortnight ending 23rd February 1874.

A.—STATE OF THE COUNTRY.

No deficiency of supplies in the bazar. Ordinary rice at Bogra is selling at 13½ seers of 80 tolahs per rupee; at Sultangunge 14 seers; and at Dupchanchiya 14 seers.

2,800	maunds	at Sultangunge,
1,200	„	at Bogra,
11,000	„	at Dupchanchya,
2,900	„	at Kichak,
17,000	„	at Hili,

may be estimated in the hands of traders and petty dealers up to 21st February 1874. Rain-fall, ·26 on the night of the 14th instant; cold-weather crops doing well, they have been much benefited by the recent rain-fall. The cutting of the principal cold-weather crops, mustard and sugarcane, is being proceeded with—the expected yield of each was reported upon in my last narrative. The condition of the people is on the whole by no means critical at present, and I do not anticipate anything like famine, especially as the late rains have considerably improved our prospects; though of course more or less pressure may be expected while high prices continue, especially on the khiyar land. There are no cases of misery or starvation calling for a report; help has been given occasionally to persons who appeared to stand in need of it, and purchases of jute and cotton have been made for women and persons incapable of other work to spin. 16 grain-thefts reported during the fortnight. I have nothing particular to add to what has been formerly reported with reference to the condition of any special tracts, except that I have recently visited the east of the district, and people are going on very well there. Cold-weather crops are sown in these parts, and the river communication with outside is also a help. A map has previously been sent to the Relief Commissioner, shewing the condition of tracts in the district.

B.—RELIEF WORKS.

I annex a list of the lines of road on which laborers have been employed, with the number of laborers on the 20th on each:—

	Men.	Women.	Children.	Total.
1. Matidali road	45	116	14	
2. Shariyakandi road	106	7	9	
3. Sultangunge road	253	343	357	
4. Dinagepore road	675	—	62	
5. Dupchanchiya road	198	77	36	
6. Nator road	419	47	28	
7. Naokhila road	18	—	0	
Total	1,714	590	506	2,810

No deficiency in supply of food to them is apparent. Mode of payment, &c. have been previously reported upon. In some instances 3½ annas per 100 cubic feet were allowed by the Executive Engineer, in consequence, he has stated, of the hardness of the ground.

C.—TRANSPORT OF FOOD.

The reports received show importation of 2,300 maunds of rice from Pubna, Dacca, and Mymensingh districts by way of the Daokolea and Bangali rivers; 200 maunds rice and 100 maunds paddy from Rajshahye by carts; but much more is supposed to have come from that quarter. On a recent visit to Madhupur in the east, on the Bangali river, I found that some importation had been going on there also, and I directed weekly reports to be made on the subject. Means of transport sufficient, I am aware of no block. We are daily expecting the arrival of Government rice at Shohagipara on the Brahmaputra, and advances have been made in order to the sending out of a large number of carts to carry it away.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

Places of storage have been previously reported upon. Another depôt will be made at Shibgunge in accordance with the Relief Commissioner's recent instructions. Arrangements for guarding the store-houses previously reported. Amount of food-grain received up to date is 20,009 mds. 3 srs. 11 cks. 3 kchs., of which 5,957 maunds have been despatched to Ghorághât, district Dinagepore. We are to receive 40,000 more by way of Shohagipara, of which 10,000 is on account of Ghoraghât. This will make a total of 50,000 mds., and I am informed by the Commissioner of the Rajshahye Division that we are to have 25,000 maunds more also. As far as can be judged from the present aspect of affairs, I anticipate that we shall eventually have to sell the greater part at any rate of this rice, and I would beg to recommend that the sending of the 25,900 mds. above referred to may be held in abeyance, as it seems a pity that such enormous expense should be incurred under present circumstances. It has not been necessary to use any of the Government grain imported.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

In addition to advances previously reported, Rs. 500 has been advanced to a private person under the Land Improvement Act for digging a tank. No advances of other descriptions have been made.

F.—CHARITABLE RELIEF.

It has not yet been necessary to do more than aid cases of individual distress by means of our private subscriptions. Persons were selected some time ago to aid in the work of distribution. I am sending up a list to the Relief Commissioner (chiefly consisting of names of persons formerly chosen) of members to act in case we find it necessary to put further relief machinery into play.

Enclosure No. 6, to the Twelfth Special Narrative.

RETURN of MEN, WOMEN, and CHILDREN, employed on Relief Works in Districts of Rajshahye, Patna, and Bhaugulpore Divisions, for fortnight ending 21st February 1874.

Name of District.	Total Number of Persons employed during the 14 days.

J. E. T. NICOLLS, Col., R.E.,
Secretary to the Government of Bengal,
Public Works Department.

Enclosure No. 7.

No. 1225.

From Colonel J. E. T. Nicolls, R.E., Secretary to the Government of Bengal in the Public Works Department, to the Commissioner of the Patna Division.

P. W. Department. Establishments.

Sir, Fort William, the 27th February 1874.

I am directed to acknowledge the receipt of your letters, Nos. 115F., 133F., 135F., and 147F., dated respectively, the 11th, 17th and 19th current, regarding additional establishments for relief works for the trans-Gangetic Districts except Sarun; and, with reference to these communications and to letter No. 730S.-R. dated the 16th idem to your address from the Secretary to this Government, Financial, Scarcity and Relief Departments, on the same subject, I am to communicate the following observations and orders regarding the Public Works Establishment for the trans-Gangetic Districts.

2. The applications are—

—	Assistant Engineer.	Upper Subordinates.	Lower Subordinates.
For Northern Tirhoot, as per Sir R. Temple's telegram and your No. 115F. - - - - - -	—	25	—
For Chumparun, see your Nos. 133F. and 135F. - -	1	4	—
For South Tirhoot, see your No. 147F. - - -	—	2	8
Total - -	1	31	8

3. In some cases merely subordinates are mentioned; but it is understood that, of the numbers shown above as Upper Subordinates, a certain proportion might be Lower Subordinates.

4. The following measures have been taken to meet the above requirements:—

—	Assistant Engineers.	Upper Subordinates.	Lower Subordinate.
The Government of India are supplying for North Tirhoot	—	25	—
There have been sent to North Tirhoot in excess of requirements - - - - - - - -	2	—	—
There have been sent to Chumparun - - - -	1	2	—
In progress to Chumparun from Central Provinces -	—	2	—
Total - -	3	29	—

5. Besides the above, the Government of India has ordered down 50 Native Non-Commissioned Officers and steady privates of the Sappers and Miners. Of these, 18 are for the Irrigation Department, and there will be a balance of 32 at your disposal for general works, or to supplement the irrigation requirements, if necessary. These men ought to be quite up to perform the duties of Sub-Overseers, or even in some instances of Overseers, so far as the mere execution of works of the simple nature of the road relief works is concerned.

6. The larger and more important of the above requirements are in accordance with the views of the Honorable Sir Richard Temple, K.C.S.I., formed after personal investigation on the spot, and based, as far as the Lieutenant-Governor has the means of judging, on liberal data in regard to the professional work to be done.

7. The number of Assistant Engineers and Upper Subordinates to be supplied as noted above is more liberal than has been asked for; and considering the large native assistance available in the Sappers, His Honor is disposed to expect that the establishment now made available, and present, or in course of transit to the trans-Gangetic Districts of your Division, will be sufficient for them, including Sarun.

8. Sir George Campbell has acknowledged, on several occasions, the ready assistance, as regards relief works, afforded by the planters, and the non-official community of Tirhoot; and considering the simple nature of the works as already noticed, and the aid that should be derived in this manner, the professional establishments applied for, which appear to be calculated on the principle of the works being almost entirely carried out in the usual departmental manner, seem very liberal.

9. From the first the Lieutenant-Governor has held the view that, as regards any large proportion of these works, constant professional supervision was unnecessary, and he is apprehensive that this view has not been sufficiently realized and acted upon by the local Officers. Press of work in various ways may account for this, but a great deal of additional assistance has been given,

and the time seems to have come when this important question may receive fuller consideration than has been possible hitherto.

10. The Government of India has most liberally and unquestioningly met the requirements made on it for additional assistance, and this has been given, it is feared, at the cost of much inconvenience to other Governments and Provinces whence the supplies have been drawn. The Lieutenant-Governor will feel reluctant to make renewed applications for professional assistance without full assurance that the most is being done with local means; and he would request that, the usual routine and arrangements of the Public Works Department being considered as unnecessary for simple relief works, the question of the application and the sufficiency of the present Public Works Establishments may be carefully considered by yourself in communication with your special professional adviser just appointed, and with the Magistrates of Districts, in communication with their professional advisers, on the broad basis of restricting the employment of professional men, as far as possible, to professional questions and work, and utilizing non-professional and local means, as far as possible, for all else. A report of the result should be made.

I have the honor to be, Sir,
Your most obedient Servant,
J. E. T. Nicolls, Colonel, R.E.,
Secretary to the Government of Bengal
in the Public Works Department.

No. 1226.

Copy of the above forwarded to the Secretary to this Goverment in the Financial (Scarcity and Relief) Department, with reference to that Department's letters Nos. 730 S.-R. and 948 S.-R. of the 16th and 24th instant.

Enclosure No. 8.

No. 151F, dated Bankipore, the 19th February 1874.

From J. F. K. Hewitt, Esq., Deputy Commissioner, Patna, to the Secretary to the Government of Bengal, Relief and Scarcity Department.

I have the honor herewith to furnish the divisional report for the fortnight ending Saturday the [illegible]th February.

2. There has been no rain since the date of my last report, but the rain that fell previously has undoubtedly been of the most signal benefit to the cold weather crops, and we may, I believe, now look forward confidently to an excellent rubbee harvest throughout almost the whole of that portion of the division which lies south of the Ganges, and to an outturn varying generally from a full crop to about three-quarters of an average yield in the greater part of the districts north of the river, with the notable exception of the whole of the north-east of Tirhoot, where there is rarely any cold weather crop and where less than usual was sown this year. There are also some considerable tracts where the sowings were small owing to the dryness of the soil.

3. The condition of the people in the north-east of Tirhoot appears to be daily becoming worse. From a report received from Colonel Burn, the manager of the Durbhunga estate, it appears that people have deserted their homes in considerable numbers, and gone elsewhere to search for food. The manager has been asked to explain how it happened that people were reduced to such an extremity, as there was plenty of Government grain as well as grain imported by the Court of Wards available; and if grain had been sent to the distressed villages in time and works started, it is hardly possible that 254 families from the jurisdiction of one tehsildar, could have left their homes on a vague search for food. Orders have been given that the matter must be fully enquired into, and the people, if possible, sought out and brought back; and it has been further pointed out that tehsildars must be made personally responsible for sending timely reports of the condition of the people so as to allow of grain being sent to, and works started in, villages where signs of want are apparent.

4. In other parts of the division there does not seem to be any immediate fear of famine, though distress is everywhere intensifying; the arrangements now made and in progress are, however, I fully believe, sufficient to cope with even the very worst state of things that can arise, and we shall, I hope, be prepared, at all events in the most remote tracts, to supply sufficient food to the people during the continuance of the famine should all supplies fail and private trade do nothing to fill up the deficiency.

5. Since writing my last report the new sidings at Barrh and at Futwa or Jettalee Ghât have been opened; but though the line down to the latter ghât was ready on Wednesday, the 11th, yet owing to arrangements for office accommodation not having been made, and to the absence of properly-sloped approaches from the river bank to the line of railway for the use of the coolies carrying bags, work could not be begun till Saturday morning, the 14th, when the Barrh siding was also opened.

6. Since the opening of the Futwa siding everything there has worked smoothly, with the one exception that sufficient grain to meet the demands of our contractors on the north bank of the river has not arrived, and I am further informed that the coolies who were engaged at piece-work rates to carry a weekly quantity of grain varying from 1,50,000 to 2,00,000 maunds from *the rail to the river, have been complaining that they are not able to make enough to maintain themselves owing to the short despatches of grain. On Monday, the 16th, only 9,000 and odd bags left Howrah, and on Tuesday, the 17th, only 5,800 were sent, though we believed that we were to receive 11,800 bags daily.

*Since writing the above we have received the sanction of Government to buy grain to load on carts waiting, and 16,000 maunds have been bought.

J. F. K. H.

7. The reports from the other side of the river of the discontent of the cartmen are frequent, and I trust that measures will be taken to ensure our receiving all the grain we can arrange to take away from the railway. We can certainly now take away nearly 2,00,000 maunds a week, and if it has satisfactorily proved that steamers can work on the ferry, and we can get two steamers, we can manage to take away a great deal more.

8. At Barrh things have not worked quite so smoothly, as there has been a difficulty about getting coolie labourers; but arrangements have now been made for securing a full supply and paying them properly.

9. To relieve the Barrh station, which seemed likely to get blocked owing to the inadequacy of the arrangements made for unloading trains, 60 waggons were sent from Barrh to Futwa, so that by this means something has been done to supply the deficiency of the grain at the latter station.

10. The quantities of grain despatched to each of the districts north of the river up to the 14th instant, were as follow:—

	Rice.	Mixed Grain.	Total.
From Patna Ghat—			
Chumparun	2,56,644½	1,16,393	3,73,251½
Sarun	1,26,731½	30,686	1,57,417½
Tirhoot	1,10,772½	44,248½	1,55,011
	4,94,148½	1,91,527½	6,85,676
From Barrh up to 12th instant—			
To Tirhoot	1,19,848	12,338	1,32,186
From Monghyr up to 12th instant—			
To Tirhoot	25,066	—	25,066
	6,39,052	2,03,865½	8,42,828
Total despatched to Tirhoot	2,55,686½	56,586½	3,12,273

Besides the above there has been sent a certain quantity of grain, about 30,000 maunds in all, to Arrah for despatch to Sarun, and it is proposed to send all the Sarun grain for the future by that route as the boat carriage is found to be too tedious to be satisfactory. The arrangements for the carriage of grain from Arrah and its transport across the river seem to be very good, and to be working smoothly and without difficulty; 5,000 maunds daily are now being taken away from the Arrah station and sent across the river.

11. The great work of the fortnight has been the provision of carriage for transporting the enormous quantities required for Tirhoot from the north bank of the river to its ultimate destination in the famine-striken tracts. The subject was alluded to in the last fortnightly report, and I can now state that definite arrangements have been made for the carriage of 31,50,000 maunds from Bunkur and Chumpta Ghât opposite to Futwa Ghât and Barrh from the 15th February up to the 31st May. The carriage of the remainder of the four milllon it is proposed to put into the district has not been yet arranged for, but Major Bates, of the Quarter-Master General's Department, has been deputed to try and open out a new route from some point on the north bank of the river between Monghyr and Mokameh by which grain can be taken into the Singhya Pergunnah of Tirhoot; as the distance is short it is probable he will be successful in finding a route. Endeavours are being made to get some one willing to contract for the transport of grain along the line. I hope, in my next fortnightly narrative, to be able to report that our efforts have been successful.

12. As for the contracts which have already been made, there is every reason to believe that there will be no lack of carriage at the contractor's disposal. Tirhoot is a district where the supply of cart carriage is almost unlimited, and indigo planters, who are the principal employers of the cartmen, are able to secure every available cart when necessary, as most of the cartmen are kept under permanent advances by the different factories. Almost all the contracts have been taken by associated planters, and they anticipate no difficulty in finding carts and bullocks sufficient for the work.

13. Arrangements have been made for providing a reserve of 1,250 carts and bullocks, partly procured from the North-West and partly purchased from Nepal, the cart for the latter being made up in the division; and in addition there will be a reserve of 1,000 bullocks to supply the

places of those that may be disabled. This reserve it is proposed to employ partly in those outlying parts of the country where carriage is deficient, and partly in depôts along the roads to take loads from cartmen whose carts have broken down.

14. The real difficulty will be in keeping the roads in order, and providing a sufficient number of roads for the carts to travel on. As from Bunkur Ghât at least 1,50,000 maunds per week will be sent 1,530 carts a day, and probably more, will have to be despatched from the various landing places. Along the river bank the arrangements described in my last report, which are admirably worked by Major de Kantzow, fully admit of this, and even a larger number of carts being sent off each day; but it is when they get upon the Hajeepore roads that the difficulty begins. Hitherto the great personal energy and admirable arrangements made by Major de Kantzow have prevented the occurrence of a block; but if the work is to be increased to the extent we propose, it is absolutely necessary to increase the road accommodation or to relieve the Ghât by making other landing places. Personally, I myself incline to the maintenance of the present Ghât and the doubling or trebling if necessary the road accommodation. The country presents no difficulty to opening out any conceivable number of roads, and there is a great advantage in continuing to work from the point were our arrangements have been completed, and were there is every facility for extending them to any given extent. To remove to a new place would involve a disturbance of present arrangement, and can hardly be undertaken with our present work without a temporary suspension of activity which it is very desirable to avoid.

15. If it proves to be impossible to work steamers to Bunkur Ghât, the question assumes another aspect, for, without steamers, no conceivable amount of boats will be able to get the grain from the Futwa siding to Bunkur against wind and stream, when the strong west winds begin to blow, and in that case we shall have to abandon the Futwa siding, and open a new siding at Bankipore, from whence boats can drop down with the wind to Bunkur Ghât, or else to abandon Bunkur and go down to Jehangir Ghât, about eight miles down the river, to which boats can work with the wind in their favour from Futwa Ghât.

16. The objection to the one plan is that the river channel opposite Bankipore is impassible for steamers and doubtful even for boats; while against the other, there is the long distance to be travelled between the ghâts and the loss of time caused by boats having to beat back empty against the wind. A third plan has been proposed, to throw a bridge of boats across the Gunduck at Hajeepore and to establish our landing ghât on the bank of the Ganges opposite Bankipore; but this line could not be worked without difficulty, even with steamers, from Futwa, owing to the distance between the two points, and if worked by country boats it would require a siding at Bankipore, whence boats could be more easily taken to Bunkur than to the site proposed for the new landing. The whole question is being carefully considered, but its satisfactory solution depends very much upon whether steamers can be supplied, and whether, if sent, they can work on the present line or any of those proposed. There can, I think, be little doubt that the "Patna" can do so, as she has been several times up to Bunkur, and if another steamer of equally small draught can be supplied, I have no fear of our attempts proving unsuccessful. Captain Blood of the Sappers, an officer of great experience, who has just joined, will be requested to report upon the best arrangements to be made, and it is upon the result of his report and upon the supply of steamers at our disposal that our ultimate action must be based.

17. Up to the beginning of April we are pretty safe; but from that time our difficulties will begin and steamers will be urgently required.

18. At Barrh the navigation of the river is very easy, and I believe that by transferring the boats from Futwa Ghât to Barrh, if we are obliged to bring the two steamers we have now at Barrh to Futwa, we shall be able to supply the quantity of grain required at Chumpta and Jammattia Ghâts on the other bank of the river, by country boats as also to send across the railway material for the new line to Durbhunga. The contractor at the ghât here assures me that he can supply 500 boats of 200 maunds to Barrh if the transport from Futwa is done by steamers, and as the channel at Barrh is deep, we shall be able to use boats of much greater draught than can be used on the Futwa crossing, so that we shall be able, by taking heavy boats of 800 to 1,000 maunds, in addition to the light boats we are now using, to get almost any quantity of grain and materials carried across river if the boats only made one trip a week. As only 1,00,000 maunds are wanted to supply the contractors taking grain from Chumpta and Jammattia the 500 light boats which the Patna contractor can furnish will very nearly do the whole quantity, and there can be little difficulty in obtaining carriage for the remaining 10,000 maunds at Barrh, whence 30,000 maunds have been taken weekly up to the present time, leaving the railway material to be taken by the heavy boats which can, I am confident, be procured in sufficient numbers for the works, even if all the transport should not be completed by the 1st April.

19. The whole of the transport arrangements, from the south to the north bank of the river, have since the date of my last report been put under Colonel Mackenzie, who has a subordinate officer at each of the despatching and receiving ghâts, specially experienced officers, Major de Kantzow and Captain Renwick, having been selected for the charge of the most important ghâts at Bunkur and Chumpta.

20. The land transport arrangements are under the superintendence of Colonel Macgregor, who has already applied to the Military Department for the services of a number of officers of energy and experience, whom he proposes to place on the most important routes. To each of

these officers will be assigned a certain length of road, which he will be required to travel up and down, reporting everything that requires notice, and seeing that the coolies and overseers who are on the road are at their posts; that the line is maintained in good order; that grass and fascines for repairing it are ready stacked, and that the arrangements for providing for repairs of broken carts, and for watering the bullocks traversing the lead, are in good order. Applications have been made for steady sepoys to act as overseers; while a party of pioneers and another of sappers will be employed in erecting and maintaining bridges and for making such improvements as require skilled labor. Some of the officers applied for by Colonel Macgregor have already joined, and the remainder will be here in a few days' time. His arrangements are already rapidly getting into working order, and they promise to be most complete.

21. The principal lines of road on which they will work and the quantities to be carried on each line are as follows :—

From Bunkur Ghât to Motiharee and Bettiah, viâ Lalgunge, with a branch to Gobindgunge. 50,000 maunds a week will travel on this road—30,000 to Motiharee and 20,000 to Gobindgunge.

From Bunkur Ghât, viâ Lalgunge, to Contai. Taking 15,000 maunds a week, making 65,000 along the road as far as Lalgunge; but arrangements are being made for doubling the road if possible.

From Bunkur Ghât to Russoolpore and Sectamurhee. Along this road, which is the best in the district, from 50,000 to 70,000 maunds a week will be taken.

From Bunkur, viâ Motihari, to Ottar and Poosa. Taking 35,000 maunds a week.

From Chumpta Ghât, viâ Dulsingserai and Nagurbusti, to Durbhangah. Taking 75,000 maunds a week.

From Jummattia Ghât, viâ Dulsingserai and Rosrah, to Singhya and Hatee. Taking about 35,000 maunds a week, making a total of 2,80,000 maunds a week. We can scarcely expect to take these quantities immediately, but I believe we shall be able to work up to it within ten days or a fortnight if we can only get the grain supplied to us.

22. The above detail of the transport arrangements has extended to so great a length as to leave me little space for noticing other matters; but the Commissioner wishes me to remark upon the completeness of the arrangements made for relief works and for the storage of grain by the Collector of Sarun. He considers Mr. Drummond's arrangements to be very complete, and to be superior to those of any other district.

23. The arrangements for charitable relief were reported fully by the district officers, and I need not enlarge upon the matter here. Sir R. Temple's visit to the division has been of great advantage in enabling several important questions to be settled upon the spot which would otherwise have entailed a certain amount of correspondence and consequent delay.

No. 993—S.R., dated Calcutta, the 25th February 1874.

From A. Mackenzie, Esq., Junior Secretary to the Government of Bengal, to the Commissioner of Patna.

In acknowledging receipt of Mr. Hewitt's fortnightly report, No. 151, dated 19th February, I am to call your attention to the favorable estimate given by him of the rubbee crops in the districts north of the Ganges, as contrasted with the estimate lately submitted by you for Chumparun, when you thought there would be possibly only a quarter crop in favorable situations. I am to ask for a careful revised estimate of the probable rubbee yield of Sarun and Chumparun.

No. 15 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.

Famine.

To the Most Honorable the Marquis of Salisbury, P. C., Her Majesty's Secretary of State for India.

My Lord Marquis, Calcutta, the 13th March 1874.

We have the honor to enclose a copy of the Supplement to the "Calcutta Gazette" of the 11th instant, from which your Lordship will observe that the weekly reports from the different districts continue to contain favorable accounts of the prospects of the coming crops, and that there is no considerable change in the prices current of food-grains.

2. Sir George Campbell is still at Durbhunga, and he has visited Buheyra, where there has been a sudden and severe outbreak of distress. His time has been so fully occupied in completing the organization of transport and relief, that he has not been able to make an official report of the outbreak and the manner in which it has been met.

3. We believe that the outbreak was confined to a limited area, that is to say, to portions of the Durbhunga sub-division, the whole population of which is 868,000; that any mortality which may have occurred cannot be great; that up to the present time there has been no deficiency of supplies in the market; and that every exertion is now being made to complete the local arrangements.

4. The contract for the supply of grain to the interior of Tirhoot and Chumparun from Bunker Ghât, opposite Patna, is working exceedingly well, and about 30,000 maunds a day are carried to the interior of those districts. The contract from Chumpta Ghât, opposite Barrh, has not been so successful. Instead of 17,000 maunds a day, which should have been carried, only an average daily quantity of about 7,000 maunds was carried up to the 10th instant, and some apprehension was felt as to the sufficiency of the supplies by that route. We have, however, received information that 12,590 maunds were despatched on the 11th, and we, therefore, trust that the difficulties have been overcome. The reports of the progress of the Railway from Chumpta Ghât to Durbhunga are very satisfactory. Eight miles are already completed, and it is expected that the whole will be finished before the end of April.

5. Sir Richard Temple has visited Purneah and Dinagepore, and his reports, which will be transmitted by the next mail, are, on the whole, satisfactory.

6. We have the honor to enclose three sets of maps of the divisions in which the distressed districts are comprised, and a complete list of the relief sub-divisions,—those situated in the district of Sarun having been added.

We have the honor to be,
My Lord Marquis,
Your Lordship's most obedient, humble servants,
NORTHBROOK.

" " 12, " 20th " "
Telegrams dated 4th March 1874.
" " 12th " "
" " 13th " "

2. My predecessor has already conveyed to you his approval of some of the most important of the measures that you have adopted for mitigating the pressure of famine upon the populations affected by the recent drought. I have to express my complete satisfaction with the vigour and judgment that have marked your policy in the measures that have been reported to me. Your plans have been energetically carried out by the officers under your command, especially by the Lieutenant-Governor of Bengal, and by Sir Richard Temple. The efforts of your Government have been so far rewarded with success that up to this time no extensive increase of mortality has visited the thickly peopled districts in which scarcity prevails. You anticipate, however, that the pressure of the famine will continue to be felt till nearly the close of the year.

3. I feel great anxiety, in which you will fully share, that no precaution should be neglected, by which the danger still impending over so many millions of people may be effectually averted. You have had to make suddenly, and on an unprecedented scale, provision both for the supply and for the transport of food. The deficiencies of transport from which your present difficulties have principally arisen will scarcely be diminished as time goes on, but will, on the contrary, be rather aggravated when the rains have fallen and the roads have become less serviceable. Against this danger you have provided at least partially, by commencing a railway from the river side opposite the Barrh Station to Durbungah, and by ordering the construction in England of ten steamers with five barges attached, to be delivered in India, so as to be able to navigate the secondary rivers when the water rises. I am satisfied that you will spare neither cost or labor in carrying out any other plans for facilitating the transport of grain into the distressed districts, which the local knowledge of your Officers may suggest.

4. For the provision of grain sufficient to supply the needs of the distressed districts, you inform me by telegram (4th March) that you have secured 420,000 tons of rice. I desire to draw your especial attention to the question whether this supply will be sufficient. In the telegram I have quoted you state that "area of "probable severe distress, now well ascertained, comprises parts of districts of "Tirhoot, Sarun, Chumparun, Bhaugulpore, Purneah, Dinagepore. Expect at the "worst period, to have something under three million persons on the hands of "Government in these districts for three months from end of May to end of "August, a smaller number during April, May, and September, and still fewer in "March, October, and November. There will be distress in nine other districts, "but it will not be general. Orders of Government rice amount to 420,000 tons, "of which 350,000 from beyond sea."

5. The best authorities appear to agree with Sir Richard Temple in fixing the average ration necessary for the support of persons under relief at three-quarters of a seer of rice a day. According to the estimate contained in your telegram, you would therefore require for the three months of severest pressure a total quantity of 185,000 tons. If three-quarters of this pressure be assumed for the three months which you place next in severity, and half this pressure for the three months of lightest scarcity, the total amount of rice required, supposing that you have provided no other grain, will be 413,000 tons. Sir R. Temple in his Minute of the 31st of January, upon the distress in Tirhoot, states that in most parts of Mudhoobunee, and in some parts of Durbungah, the distress will not disappear "at the earliest till December;" and in these two districts alone he calculates that it will fall to the Government to support more than 800,000 persons. It will not be safe, therefore, to assume for the closing months of the distress less than half the pressure of the famine at its height.

6. If these conclusions are a just inference from the figures with which you have furnished me, it results that you have a supply of 420,000 tons of rice to meet a demand which you estimate at 413,000 tons. But this is the demand of the six most afflicted districts only. You observe that there will be partial distress in nine other districts. Sir Richard Temple apprehends (5th February) that half a million distressed persons from Nepal may come to the relief works and the rice stores of your Government. Moreover, 720 tons a week are destined (14th February) for Gya, Arrah, and the Soane Canal; 25,000 tons have been allotted (12th February) to the districts of Rajshahye other than Dinagepore, and the Lieutenant-Governor is anxious to retain 20,000 tons reserve to meet the probable want of Eastern Bengal. I observe also that Government grain is being stored in Chota Nagpore, and that relief works have been commenced in Burdwan, and that severe distress is reported to exist among the Sonthals. It is obvious, moreover, that, as prices advance, the distribution of Government grain cannot be confined to those who are "on our hands," that is to say, who are in the receipt of the wages or the alms of Government. There will be numbers who have money, or can procure enough to enable them to work on their own land, if only they can turn that money into grain at a reasonable rate, and against these the Government cannot safely close its stores. Already, in the beginning of February, in Tirhoot and Chumparun, public grain was being sold to the general customer, and as Government grain becomes the only grain of the district, the stores destined for the three millions who will be on your hands must be everywhere divided in some degree with a less destitute class. You evidently contemplated this method of supply, for I observe that one of the latest of your orders reported to me is a permission, under certain precautions, to sell rice whole-

sale to the local dealers, in order that in this way the grain imported into the district at public expense may be distributed by the private trade. It is obvious that, under this system, many who are now destitute will share the advantage of the importation, and must be allowed for in the provision that you make.

7. Even, therefore, if no disturbing cause should derange your calculations, and if I may assume, from your silence as to provision of any other grain, that you do not in them rely upon any such provision, it seems probable that 420,000 tons will fall considerably short of the quantity required. But, with the starvation of multitudes as the possible penalty of a mistake, I am convinced that you will not trust to any exact calculation. There are numerous contingencies which may diminish your supply, or may increase the demand upon you. A liberal allowance must be made for the possible failure of the arrivals on which you count, for the shrinkage of transport, for the chance of accident, for the loss that may result by the damage of rice by rain, for the mistakes of those who act under you. On the other hand, it may possibly be that the calculation on which you are relying will fall short of the truth. The area or the duration of the distress with which it is your duty to deal may be larger than you anticipate. Past experience will not lead you to place unbounded trust on the estimates that are supplied to you. I observe the following passage in one of your recent minutes,—

> “ These documents have been laid before the Government of India, and the
> “ Governor General in Council cannot but express the disappointment which he
> “ feels at the local officers having for so long neglected fully to appreciate the
> “ requirements of those parts of the country, and thereby occasioned the post-
> “ ponement to the present time of arrangements for transport which should have
> “ been made many weeks ago.”

These inadequate appreciations led you in November last confidently to name 2,500,000 as the number to be relieved. In March you raised that estimate, under the guidance of fuller information, to 3,000,000. It is impossible to assume with certainty that the tendency to an inadequate appreciation of the danger, which you have already noted in some of your local officers, has altogether ceased to operate.

8. These considerations lead me to apprehend that your supplies, as hitherto reported to me, are not sufficient to protect you against the possibility of a serious deficiency. They may be adequate if the most favorable anticipations should be justified by the event, but if any unforeseen aggravation of your difficulties were to occur, your Government might be involved in embarrassment of the gravest character.

9. By telegram of the 10th instant, I directed you to secure rice in the Burmese market up to 200,000 tons. In reply* you state, without indicating their nature, that you have strong objections to increase your purchases in Burmah. I have no wish to limit your discretion as to the mode of providing the requisite supplies. But I request you to take early measures for securing not only the quantity indicated by your present calculations, but also a very ample margin to meet contingencies, the exact nature of which it is impossible to foresee, but which, in an emergency of this magnitude, are in some form or other likely to occur.

I have the honor to be,
My Lord,
Your Lordship's most obedient humble Servant,
(Signed) SALISBURY.

* “40,000 tons will be placed in distressed districts above Temple's estimates of numbers, which are higher than those of local officers. Additional reserve not appropriated, 105,000 tons. Total reserve, 145,000. No probability that more can be sent up country from Calcutta before rains than ordered. If more wanted I shall draw on North-West Provinces and Punjab where supply available. I have strong reasons for not now increasing Burmese orders. More can be got from Burmah later if required; information you have received to contrary not correct. Real difficulty not supply, but local transport and distribution.”

FURTHER CORRESPONDENCE.

No. 16 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To the Most Honourable the MARQUIS OF SALISBURY, Her Majesty's Secretary of State for India.

MY LORD MARQUIS, Calcutta, the 20th March 1874.

WE have the honour to transmit the thirteenth special narrative of the drought in Behar and parts of Bengal for the fortnight ending the 19th instant.

2. We also enclose a memorandum of the 19th instant by Colonel Taylor, R.E., Consulting Engineer to the Government of India, submitting Lieutenant Bisset's report of the 12th instant, on the result of his inquiries respecting the grain traffic from the Punjab to Bengal and the present facilities offered by railway for conducting it. These papers are satisfactory inasmuch as they show the large amount of the supplies of grain available for export from the Punjab to Behar, but on the other hand it is clear that the arrangements of the East Indian and of the Sind, Punjab, and Delhi Railways have not up to the present time worked as smoothly as is desirable. The Viceroy has been in communication on the subject with Mr. Stephenson, agent of the East Indian Railway, who has assured His Excellency that for the future different arrangements will be made, and that the full amount of grain which the Government désire to send up by this line from Calcutta to the distressed districts, at the rate of 2,500 tons daily, will be despatched. Mr. Stephenson is confident of the ability of the line to convey this quantity, and he does not consider that any addition to his present rolling-stock is required; but the Viceroy has some doubts on this point, and Mr. Stephenson has agreed to make inquiries in order to ascertain whether any spare covered waggons might be hired with advantage from the Bombay and Baroda Railway; he has also arranged to have set up some additional open waggons, the materials for which are in the possession of the East Indian Railway. Mr. Stephenson, in common with the Government officers, has represented the importance of increasing the staff of engine-drivers, and a telegraphic despatch was addressed to Your Lordship on the 18th instant, requesting the earliest compliance practicable with this representation. Page 154.

3. With reference to Lieutenant Bisset's remarks upon the accumulation of grain at the Patna Station, we have requested the Lieutenant-Governor of Bengal to take special measures to prevent, as far as possible, the continuance of the block of trains at Patna loaded with grain on account of private trade, and also to improve the existing facilities for unloading at that station.

4. We deemed it desirable to request the Bengal Government to call for a report from the local officers as to the correctness of the statements made in a telegram despatched from Bankipore on the 9th ultimo, and published in the London "Daily News," which seem to have created some misapprehension in England as to the real state of things in Tirhoot. We enclose for your Lordship's information the replies of the Lieutenant-Governor of Bengal and of the Commissioner of Patna to our inquiry.

5. In another despatch of this date we have endeavoured to give a summary of the relief operations of Government up to the present time and of the existing condition of the distressed districts. This summary embraces Sir Richard Temple's estimates for the several districts of the Rajshahye Division. His reports for Purneah and Dinagepore, which we promised in the 5th para. of Page 160.

our despatch of last week, will be found in Appendix C.* to the thirteenth special narrative. Our telegram of this date contains a brief abstract of Sir Richard Temple's proceedings in this division; the details will be forwarded next mail.

* Pages 25 and 26.

We have the honour to be,
My Lord Marquis,
Your Lordship's most obedient and humble Servants,
NORTHBROOK.

No. 1588—S.R.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department, to the Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

Calcutta, dated 19th March / issued 19th March } 1874.

Sir,

In continuation of my letter No. 1250—S.R., dated the 5th March 1874, I am directed to forward herewith seven copies of the thirteenth special narrative (with appendices and enclosures enumerated below) of the drought in Behar and parts of Bengal from the 6th to 19th March 1874, inclusive.

I have the honour to be,
Sir,
Your most obedient Servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Appendices.

A. Note on movement of food-grains.
B. Return of food-grain despatched from Calcutta.
C. Sir Richard Temple's Minutes, Nos. 44 and 45, on the Purneah and Dinagepore districts, and the Bengal Government orders thereon.
D. Sir Richard Temple's Minutes, Nos. 39, 40, 41, 42, and 43, regarding the sale of Government rice, and the orders of the Bengal and India Governments thereon.
Sir Richard Temple's Minute, No. 46, on the grain requirements of the Dinagepore district, and the Bengal Government orders thereon.
E. Government of India orders and revised instructions for Relief Committees.
F. The Lieutenant-Governor's orders on the relief works system, with the Chief Engineer's note on all relief work schemes now in hand.

Enclosures.

1. Return of rainfall, weather, and prospects of crops for the two weeks ending the 7th and 14th March 1874.
2. Return of prices-current for the same weeks.
3. Patna district narratives, and resolution thereon.
4. Bhaugulpore ditto ditto ditto.
5. Rajshahye ditto ditto ditto.
6. Comparative return of crime in distressed districts for February 1874.
7. Commissioner, Patna's, letter reporting on the purchases of northern grain at Patna.
8. Circular No. 1296, dated the 7th March 1874, about all civil and relief officers looking after the payment of work-people.
*9. Return of work-people on Government relief works in the distressed districts.
10. Précis of the Central Relief Committee's proceedings up to the 4th March.

* This Return will be sent by next mail.

11. Burdwan divisional report of 11th and 12th March, and the district reports, with Government orders thereon, and the Government orders on the subject of the jute-weaving industry; together with the Lieutenant-Governor's orders about the reception of pauper immigrants in Calcutta and adjacent towns.
12. Chota Nagpore divisional report of the 3rd March, with the Palamow narrative and Government orders thereon.
13. Commissioner's report of the 11th March and district report upon the Nuddea district.
14. Lists of additional officers of different branches of the service posted to the famine districts for special duty.
15. Surgeon-General's report No. 1544, dated 18th March, with enclosures, showing how far medical requirements for the famine districts have already been met.

THIRTEENTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL FROM THE 6TH TO 19TH MARCH 1874.

THE weather of the fortnight has been variable and unusual. In Bengal more rain* has fallen than is usual at this time of the year. There have been hailstorms in parts of Hooghly, the 24-Pergunnahs, Moorshedabad, Maldah, Pubna, Furreedpore, Patna, Tirhoot, Sarun, Bhagulpore, and Purneah. But these hailstorms usually extend over very limited areas; and, so far as the reports show, the hail has done no appreciable harm to the crops, except in small tracts of Furreedpore, Bhagulpore, and Purneah. The hailstones which fell in part of Calcutta on the 8th March were of unusually large size; but so limited was the area of the storm that, though it hailed for nearly half an hour at one end of the town, at the other end there was no hail at all. The rain which has fallen over most parts of Bengal will have done good to all the crops now in the ground; and on the whole the spring crops of Behar have passed through the fortnight without any general injury from rain or hail; and these crops may be said to be now (19th March) quite safe. The weather and rainfall reports for the last two weeks will be found in enclosure No. 1. The Meteorological Reporter writes regarding the weather of the fortnight in Calcutta thus:—

Rainfall of the fortnight in inches at some of the principal district head-quarters.

Burdwan - - - -	1·81
Beerbhoom - - -	1·09
Calcutta - - - -	1·88
Maldah - - - -	2·76
Dacca - - - -	1·27
Sylhet - - - -	1·20
Tipperah - - - -	0·26
Patna - - - -	0·02
Tirhoot - - - -	0·21
Chumparun - - - -	0·50
Bhagulpore - - -	0·08
Lohardugga - - -	1·86

"During the first five days of March the weather was fine and seasonable, the wind dry and steady from between west and south. On the 6th and 7th it became cloudy and a little rain fell, and on the afternoon of the 8th a somewhat severe hailstorm passed over the southern part of Calcutta, lasting for 20 minutes. The hailstones were abundant, of spheroidal or ellipsoidal form, and of unusual size. One was measured 1½ × 1⅙ inches in diameter, and about Garden Reach some are said to have been picked up 5 inches in girth. Since this there has been rain at intervals of three or four days, making a total of 1⅓ inches since the beginning of the month. The temperature has been unusually cool for the time of year."

Price of grain.

2. Prices in Central Bengal are much the same, and in Behar are a trifle dearer than they were a fortnight ago. The only districts where there has been really great increase in price are in East Bengal, where prices have risen during the fortnight—

from 14 seers to 12 seers per rupee in Dacca.
„ 17 „ to 13 „ per „ in Mymensingh.
„ 18½ „ to 15¾ „ per „ in Sylhet.
„ 16½ „ to 13 „ per „ in Chittagong.
„ 13 „ to 12 „ per „ in Noakholly.

These high prices betoken either depleted stocks or else a very large demand for export into the famine districts throughout East Bengal. Exports of rice beyond Bengal and the Calcutta demand for exportation are much slacker than heretofore; and this slackness has been felt in the Backergunge markets, where prices have fallen during the fortnight from 15 to 16 seers per rupee. The apparent rise in the Behar quotations most probably have occurred in head-quarters towns only, for the district narratives of Behar (see enclosures Nos. 3 and 4) speak of prices being easier, and supplies being sufficient in all districts except North

Tirhoot and North Chumparun. The present quotations for some of the principal districts compare with the prices shown in preceding narratives as follows:—

	Number of seers of common rice sold for a rupee.			
	On 31st Jan.	On 14th Feb.	On 28th Feb.	On 14th March.
Burdwan - -	14	13	13½	13
Beerbhoom -	12⅜	12	12½	13½
Hooghly - -	11 to 12	10 to 10½	11½ to 12½	11½ to 12½
Calcutta - -	12½	10½	12¼	12½
Dinagepore -	13¼	14	14	12¾
Maldah - -	11¾	12½	12	12
Rungpore - -	11¼	11¼	11¼	11⅛
Dacca - -	16	16	14	12
Backergunge -	16½	13½	15	16
Chittagong -	18	17	16½	13
Noakholly -	17½	16	13	13
Patna - -	12	13	13½	13
Shahabad - -	13	11¾	12½	12¼
Tirhoot - -	10	10	10	9½
Chumparun -	11¾	11¼	11	12
Bhagulpore -	12⅝	11¼	11⅜	13¾
Lohardugga -	15½	16	16	15
Maunbhoom -	15	14½	14½	14

The price-current statements for the last two weeks will be found in enclosure No. 2.

State of the crops.

3. The lapse of another fortnight has made the prospects of the spring crop more assured, and unless there be very unusual weather, such as heavy rain or hail-storms, over large areas before harvest-time, the out-turn will be good, far better, indeed, than the people or the local officers, or the Government, had any ground for hoping six weeks ago. In the Patna, Shahabad, Bhagulpore, Monghyr, and Purneah districts, the yield of the spring crop will be equal to the out-turn of ordinary years. In Purneah the unusually large breadth of spring crops will compensate for the shortness of the out-turn in some of the northern tracts. In Gya the spring harvest will be very good, but the Collector estimates the area under crop to be only half the breadth of ordinary years; even if this estimate be somewhat within the truth, still the narrowness of the spring crop lands will greatly reduce the benefit to be conferred on Gya by the harvest which is now being reaped. In Chumparun, despite a little hail in one corner of the district, from one half to two thirds of an average harvest is expected, excepting only in the Ramnugger tract to the north, where the spring crops are very poor, and in Sarun, where the spring crop area is larger than in any other district; the yield is expected to be from two thirds to three quarters of an average spring harvest. In Tirhoot the out-turn is not expected to average more than half the usual spring crop yield for the whole district; and the cheena (a cheap and early millet), which was somewhat extensively sown in February, is not doing well. In Central and Eastern Bengal the spring crops have been and promise to be very good; the occasional showers of the last six weeks have done the greatest good to the root and vegetable crops, to the April rice (boro dhan) fields, and to the spring millets. All these miscellaneous and ordinarily insignificant food-crops have been sown this year very much more broadly than usual in every district of Bengal Proper.

In brief, it may be hoped that the rainfall of February, though it came so late that hope had almost gone, has placed several districts of Bengal and Behar beyond the reach of famine, and has contributed greatly to enable the less fortunate districts to meet, with the help of Government, the distress and famine that are now being felt in parts of the country.

Supply of grain.

4. The supply of grain is still sufficient for the demand at most of the larger markets, though at places in the north of Tirhoot and of Chumparun the supply is insufficient, and prices are very high. Sales of Government grain through the local dealers, or, failing them, through Government officers, have been sanctioned in the most distressed tracts of Bhagulpore, Dinagepore, Tirhoot, and Chumparun. In these tracts local trade is doing nothing, or next to nothing, to maintain the supply. For the Bhagulpore,

Purneah, and Dinagepore tracts, Sir Richard Temple has (see Minute No. 39 at enclosure D.) fixed 12 seers per rupee as the rate at which Government rice is to be sold to the public; this rate is for Bengal clean rice; other grains, such as the partially-husked Burmah rice, will be sold at proportionate prices. For North Chumparun the rate for the sale of Government grain to the public has been fixed at 11 seers the rupee; the rate at which the grain is given to the traders being 11½ seers, they thus make something under 5 per cent. commission on their transactions. In the Durbhunga sub-division of Tirhoot the supply of Government grain now in store is not large enough to enable the Government to sell freely to the public; moreover, the private stocks are as yet sufficient, and private grain is still being sold at a rate a little cheaper than the rate of 10 seers per rupee, which at present obtains on the Government relief works. The sale of Government grain to the public is only now beginning on any considerable scale, so that at present nothing can be said as to the results of the measure. No report whatever has been received that the Burmah or Saigon rice is not acceptable to the labourers; indeed, the several kinds of rice have become so mixed up together in the hurry of transport, that the distinction has not been very completely maintained.

Private trade in grain.

5. In South Behar, in parts of Purneah, in parts of Sarun, in Maldah, Rajshahye, and Bogra, and especially in Rungpore, private trade in grain is brisk. Rice from Eastern Bengal is being carried largely into the districts on the Brahmapooter. The Magistrate of Rungpore writes: "The rice which is brought for sale is nearly all imported; "very little of it is home produce. The southern part of the district is mainly "supplied by boats from Dacca and Serajgunge, the west from * * * * Dinage-"pore, and Bograh, and the north and east from Cooch Behar and Julpigoree." The Government possesses no statistics of the private importations which reach the distressed districts by many rivers and channels; but of the grain which is carried into Behar by private trade, the railway furnishes complete returns, which show that private traders carried by railway into Behar—

From the North-Western Provinces and Punjab	14,397	tons of grain during the last fortnight for which returns are available.
From Calcutta and places in Bengal - -	8,988	tons of grain during the last fortnight for which returns are available.
Total - -	23,385	tons during the fortnight.

This gives a total importation of 1,670 tons of private grain daily.

Supply of grain from the Punjab.

6. There is a great deal of grain still waiting to come down from the Punjab by rail into Behar, and the traders complain from time to time that the railway cannot carry all they want to send. The Government of India have been in communication with the East Indian and the Scinde, Punjab, and Delhi Railway Companies with a view of ensuring the best use of all the available means at their disposal, and the increase of their means if possible. That there must be an immense deal of grain in the Punjab which will, if it can, find its way into Behar, is apparent from many sources of information. During the present week the Lieutenant-Governor has received an offer of service from a produce-dealer in the largest mart of the Punjab, who writes, "the crops all over the Punjab are larger than "have been known for very many years;" and grain could be largely bought, he adds, "at a minimum of, say, 40 seers of wheat and 44 seers of gram" for the rupee. The price of wheat quoted for Arrah, a town on the railway, at the time this letter was written, was 13½ seers per rupee.

Disposal of grain imported into Patna.

7. In successive narratives it has been stated that private grain was flowing into Behar by railway at the rate of 1,000 to 1,500 tons a day, and that a very large proportion of these great importations were consigned to Patna city. Yet when the Commissioner of Patna set himself last week, under instructions from Government, to buy in the Patna bazar 40,000 maunds of grain, he was met by the assurance that there were no large stocks in the city, and that any large Government transaction of the kind would derange the grain trade most seriously. It may be inferred, therefore, that the grain privately imported has found, and is

finding, its way quietly and gradually into the more remote markets of South Behar, if not of North Behar. It must have been largely due to these importations, as well as to the operations of Government, that the price of grain has remained at a comparatively moderate rate over South Behar during the last four months, notwithstanding the failure of the rice crops and the high prices quoted at the beginning of the scarcity in November 1873.

Export of grain.

8. In accordance with the instructions of the Government of India, the exports of food-grains from Bengal during the five months ending on the 28th February are shown in a new shape at Appendix A.* The total exports of food-grains from all Bengal for the current and the previous year are as follow:—

	Number of tons exported in	
	1872–73.	1873–74.
For the month of February - - -	65,715	34,241
„ five months from October to February	249,900	172,907

The export returns for the first half of the month of March are not yet quite complete, and therefore no figures for the last fortnight are given; so far as returns and telegraphic advices of the exports beyond sea have been received, it is apparent that the export of rice from Bengal to Europe and the Colonies is declining. The periodical market reports received from the Chamber of Commerce show that the demand for rice in Calcutta for exportation has been slack during the fortnight, and that wholesale prices in Calcutta have fallen about 8 per cent. during the fortnight. The imports of grain from beyond sea into Bengal have been—

	1873–74.	
During the four months ending on the 28th February - -	100,064	as against for the whole year 1872–73, an import of 10½ tons.
During the month of February -	60,068	

Of this total only a very few thousand tons are on *bonâ fide* private account.

Condition of the people.

9. The only tracts in which the condition of the people is clearly getting worse, and in which there is at present actual famine, are the three north-east sub-divisions of Tirhoot (with a population of two millions), and a comparatively small tract of North Chumparun, with a population of about 300,000.

Tirhoot, the Lieutenant-Governor's visit.

The last narrative will have shown that there was cause for uneasiness about the state of parts of North Tirhoot. Immediately after the despatch of that narrative the accounts from Durbhunga became still more alarming; there seemed reason to believe that there had been a considerable outbreak of famine there. Under these circumstances the Lieutenant-Governor thought it right himself to proceed to the spot in order to satisfy himself of the state of things, and to do all that he could to assist in dealing with the calamity. He was the more anxious to do this as so much has now been trusted to local officers on the spot, and Mr. Metcalfe, the new Relief Commissioner, specially charged with the relief of North Tirhoot, was proceeding to take up his duties, while Mr. Bayley, the Commissioner of the Division, was at hand. The Lieutenant-Governor was thus able to meet these officers on the spot where the greatest want had arisen, to concert with them the necessary measures, and to see Mr. Metcalfe fairly started in his task.

Condition of affairs in Durbhunga.

10. On the Lieutenant-Governor's arrival he found there could be no doubt that famine of considerable severity had set in through the tracts about Bahira, Hathee, and Singhya in the Durbhunga sub-division, east and south-east of Durbhunga. The people were flocking to the relief works in enormous numbers. Voluntary agency was unfortunately not forthcoming so freely in Durbhungah as in most other parts, and it had not been found possible to organise local labour arrangements so rapidly. The lower classes of this part of Behar are a most miserable and timid people, most difficult to move. At first none will come to anything new. When they begin to come, they come with a rush like a great flock of sheep. It was necessary to offer work for long, and search them out before they could be got to it. A very full and complete Government organisation was being gradually elaborated, but unhappily we are always liable to surprise among

---

* Page 22.

such a people; and in a limited tract it proved that some of the poorer classes had begun to starve before that organisation was in full operation. There was no dearth of supplies in the country; they were forthcoming at a dear rate, and the population at large was not seriously affected, but many of the poorest of the labouring classes had become much pinched, and a few of the most wretched had reached the point of starvation. The character of the distress and of the population were both such that the free use of relief works is, more than anything, effective. These were very rapidly extended and very indulgently managed, all comers being admitted, even though their work was little more than nominal. It is believed that by this means widely-spreading want has been stayed. Meantime, special care is given to those who have starved or nearly starved; they are well supplied with food and necessaries. The arrangements for village-to-village relief in detail, already in progress, are pressed on as fast as possible. At this season the population who are on the works do not suffer from exposure, and all who are not much reduced seem almost happy and contented there, so much so that it may be difficult to get them home again.

Popularity of the relief works.

11. The Lieutenant-Governor went through 49,000 people employed on the largest works, extending over several miles; many of them were very miserable, but the only loud complaint and strong appeal to him which he encountered was from a large group of families collected together, who seemed the most reduced and miserable of all. When he came to inquire into their grievances, it turned out that they had been selected by Mr. Metcalfe as quite unfit for work, and were to be taken in and specially cared for. With loud wailings they protested against such treatment, and only prayed to be allowed to remain on the works. It is impossible to save the lives of many reduced children because the parents will not come to our relief-houses until sheer force is used, and that might create a panic. Except, however, these very reduced cases, the works suffice for the present.

Though wages are low and food dear, the indulgence which allows whole families to come on the works and receive payment makes them very popular, and enables the people to subsist. Women and children are much more numerous than men. It is, however, impossible to continue long to allow the numbers collected together to increase, and all efforts are now given to deal with the needy in detail. Some progress had already (17th March) been made in sifting the immense masses of people on the largest works; the able-bodied, who prefer good wages, are being kept on considerable works, where a stricter system can be enforced; the less able villagers, and those who are better at their homes, are being sent to petty village works; and those unfit for any work are being put on charitable relief. Commencement is also made of dealing with cultivators by advances.

Charitable relief organisation.

12. The Lieutenant-Governor, the Commissioners, and their officers have occupied themselves in carrying out the details of these arrangements under the general rules already laid down. A large European agency had been arranged for, but the Lieutenant-Governor found the native agency to be deficient. He has directed every effort to call out and use the village agency which the country affords to stimulate the landholders and their agents to get such paid native agency as the country affords; but superior native agency is not available. The population being Hindustanee, and more allied to the people of the North-Western Provinces than to those of Bengal, the Lieutenant-Governor appealed to the Lieutenant-Governor of the North-Western Provinces for aid. That appeal was promptly responded to, and a number of selected native officers have been sent down by Sir W. Muir; they will be of the greatest use. Some good Bengalee officers and some Bengalees selected by the Commissioners of the Presidency and Burdwan Divisions have also been sent to assist in the work. The native officers will be especially useful in many circles; and in some circles, where civil servants of limited experience of the country are in charge, native coadjutors will be invaluable, especially in dealing with that most difficult but most important part of our operations—the advance of money and grain to respectable cultivators, whom assistance may enable to tide over the period of distress.

General result of operations in Tirhoot.

13. The Lieutenant-Governor has visited both several parts of the very populous Durbhunga sub-division and parts of the two other specially distressed sub-divisions of Tirhoot, Seetamurhee, and Madhubunnee. In one part of Madhubunnee there seems to be some cause of apprehension, but the sub-divisional officer is going to the spot, and it is hoped that danger will be obviated. The Lieutenant-Governor has been happy to find a concurrence of official and non-official testimony (confirmed so far as he has seen by his own observation) that in these two sub-divisions, as well as in the greater part of the Durbhunga sub-division, the want which was certainly coming very rapidly on the people has been met and stayed. The means were found of managing relief works and giving aid in a rough way wherever it was most necessary, pending the completion of a more perfect organization. Everywhere there is great resort to the relief works. Everywhere other forms of relief are rapidly progressing, and the result has been to save the people from starvation. The Lieutenant-Governor trusts he may believe that it is only in the comparatively limited tracts above alluded to that actual starvation has been reached, and that in those tracts it is now stayed. Only three or four deaths are recorded as actually due to starvation; it may be feared that directly or indirectly a few more may have suffered, of whom we have no full information; but it is believed that everything possible has been done to arrest the evil, and that with the help of God we shall succeed.

Ramnuggur tract of Chumparun.

14. The relief officer of the northern and most distressed tract of Chumparun writes that "during the last few days there has been "a marked change for the worse in the condition of "the people throughout a large part of this sub-division." Prices have for some weeks been high in this tract, the people are for the most part poor, and the landlord does little to assist them. Regular charitable relief, village by village, began earlier in this tract than in any of the famine districts; and it appears that by such relief, and by the sale of Government grain to those who can pay, the distress will be met, and the people will be enabled to get through the hard season from March to August next. No cases of death from starvation are reported, though the village-to-village visitation has brought to light some hundreds of people who were unable to work, were much reduced in strength, and must probably have died before long if Government relief had not been given.

Other possible famine tracts.

15. The only other tracts in which the near approach of actual famine had been apprehended were parts of North Bhagulpore, part of South Monghyr, part of Sarun, part of Purneah, and parts of Dinagepore, Maldah, and Rungpore. Of North Bhagulpore the Magistrate was able to write: "I have been over a large extent "of country in all the worse tracts; * * * prices have "not only fallen, but grain is more easily procurable; * * * "should no damage be done to the spring crops by hail or rain, general distress "will certainly be averted till June." He adds: "There can be no question "that matters are more satisfactory now than they were a month or so ago." From the worst part of Monghyr the sub-divisional officer gives a favourable report of the condition of the people, and says that "he saw no signs of starva-"tion." Regarding the worst parts of Purneah the Magistrate reports that isolated cases of great distress are found, but there is no general distress. He adds that "as long as the supply of grain is kept up as it is at present, he has "no fears for the people." Regarding the worst parts of Sarun the sub-divisional and district officers report "that there is distress, but the people are "far from starvation as yet," and that "there have been no cases of starvation, "but isolated cases of distress are reported and are provided for." From Dinagepore the Magistrate reports that the people are "wonderfully cheerful "and sanguine about the future;" and Sir Richard Temple, after his tour through the Dinagepore district, writes (see Minute* No. 45, enclosure C.) "there is no marked distress yet reported, nor has any marked symptom come "under my observation." From Maldha the Magistrate writes: "No cases of "distress or starvation are reported;" and after visiting the worst part of the district, he says: "I am glad to find there is at present no cause for anxiety in "that quarter." From Rungpore it is reported that the excellent promise of

* Page 25.

the spring crops makes things look much more hopeful; but in some parts there is much distress, which is being relieved as it occurs, and at the relief houses there were a considerable number of people suffering from disease and starvation combined.

In some of the districts mentioned in this paragraph, severe distress is expected later in the year, and preparations are being made accordingly. But general distress has not yet appeared in these tracts, as it has unhappily in Tirhoot and North Chumparun. From several parts of the country, it is reported that, if it had not been for the measures taken by Government, there would have been many thousands of starvation deaths before this, and the prospect for the next four months would assuredly have been very much blacker than it now is.

Other districts classed as *distressed*.

16. Of the other districts and tracts classed *distressed* in November 1873, it may be said that the favourable rains of February and the activity of private trade have, so far as the local officers are able to judge, removed all present apprehension of general distress or famine. The condition of affairs in parts of the Burdwan, Presidency and Chota Nagpore Divisions, and in the Sonthal Pergunnahs, none of which were originally classed as *distressed*, will be noticed in subsequent paragraphs.

Sir Richard Temple's tour in the Rajshahye Division.

17. At paragraph 10 of last (the twelfth) narrative, it was stated that Sir Richard Temple was about to visit Purneah and the districts of the Rajshahye Division. At Appendix C. will be found his Minute, No. 44,* on the Purneah District. He found that the promise of a fine spring harvest had greatly improved the prospects of Purneah; he estimated that 240,000 people would be on the hands of Government for four and a half months, and that for their maintenance 6,50,000 maunds of Government grain would be required for the district. This estimate, which was somewhat in excess of that framed by the local officers and by the Bengal Government, has been accepted, and the required amount of grain will be carried into the district. Sir Richard Temple found the grain transport arrangements cheap and adequate; and he approved the circles which had been formed for the administration of charitable relief by the local officers. From Dinagepore Sir Richard Temple wrote (see Minute No. 45,† Appendix C.) that the relief circles formed were sufficient, but that native subordinates were required under the Relief Superintendents; that the grain transport arrangements were working well, and up to the requirements of the district; and that the cattle were in good condition. Sir Richard Temple noted the further requirements of the district in respect of Public Works subordinate officials and in respect of medical subordinates; these requirements are being met. The Government of India has been pleased to help Dinagepore and other districts by ordering selected native officers of the army to the famine districts for work as Assistant Superintendents of Relief Circles. At Appendix D. will be found Minute No. 46,‡ in which Sir Richard Temple puts the grain requirements of Dinagepore at 12,00,000 maunds, a quantity somewhat in excess of the estimate framed by the local officers and the Bengal Government. There is every ground for trusting that the whole of the increased allotment will be in the district by the time it is wanted; some of the grain will not be required until July and August, when, as Sir R. Temple points out, the inland waters will be navigable.

Grain from Upper India for Behar.

18. At paragraph 11 of last (the twelfth) narrative it was stated that the Government of India had authorised the purchase, through local dealers, of a quantity of northern grains, sufficient for the supply of Sarun, Shahabad, and the Soane Canal works. The weekly supply for these tracts had been 42,000 maunds, and the Commissioner of Patna has arranged (see enclosure No. 7§) for the delivery of this quantity of grain weekly by four of the chief grain dealers of Patna city; the price is to be 2¾ rupees per maund, inclusive of all charges for bags, railway freight, &c. The medical officer of Tirhoot, and also the Surgeon-General and Deputy Surgeon-General of the Indian Medical Department, had represented that it might be injurious if Government attempted to feed on rice only all the Tirhoot labourers and poor who were accustomed to mix barley and pulse or other nitrogenous food with their daily meal. The Sarun and Chumparun populations will have in the crops now reaped or ripening a very considerable

* Page 26.

† Page 25.

‡ Page 31.

§ Page 121.

proportion of nitrogenous grains; and, therefore, the Lieutenant-Governor decided to divert to Tirhoot the weekly suply of 42,000 maunds of northern grains (principally pulse) which the Government of India had permitted him to buy. This arrangement will relieve the pressure on the East Indian Railway from Howrah upwards to the amount of about 1,500 tons a week; it remains to be seen whether the Patna contractors, who will import their supplies direct from the North-Western Provinces, can obtain railway waggons to bring their grain down with sufficient regularity.

Despatches of Government grain.

19. The total despatches of Government grain from Calcutta during the fortnight under review were (see Appendix B) 9,80,090 maunds. Altogether 46,20,000 maunds (about 167,000 tons) of Government grain have been despatched to, or received in, the distressed districts up to Tuesday, the 17th March. The daily despatches by the East Indian Railway during the fortnight averaged 1,553 tons, which is considerably below the maximum which the Government of India (as stated in paragraph 12 of last narrative) fixed as the maximum daily despatch. The Government of India have been assured by Mr. Stephenson, the agent of the East Indian Railway Company, that by better traffic arrangements the full requirements of Government will in future be met. As a consequence of the limited carrying power of the railway, it has not been possible to send off daily sufficient grain to keep the local transport agencies at work; there were happily reserve stocks on the banks of the Ganges at Caragola and Jugdes Chuck, which had been collected before the local transporting power had been expanded to its present proportions; while the transport contractors on one important route broke down temporarily; and so, practically, there has been no absolute loss or grave inconvenience from the shortness of the East Indian Railway despatches. The South Behar Districts had, indeed, been unsupplied, but this was in accordance with the orders of the Government of India (see Clause I. of the second schedule in Appendix 9 to the twelfth narrative), and it may turn out to be quite safe to leave these districts without any further supply of Government grain whatever. Meanwhile, the carts which were collected for the transport of grain to Gya were diverted to Tirhoot and made useful there. The arrangements detailed at para. 11 of the twelfth narrative for relieving, to some extent, the pressure on the East Indian Railway, upwards from Howrah, are coming into effect; the 42,000 maunds a week from the North-West have been arranged for; and one steamer with flats has already carried from Kooshtea half a week's supply to Manick Chuck and Hyatpore; another steamer and pair of flats has been engaged for this line, and as soon as she is at work, the East Indian Railway will be relieved of about 70,000 maunds of upward freight per week. There will remain, however, to go daily by the East Indian Railway—

Arrah for Sarun - - - - -	5,000 maunds a day.
Arrah for Chumparun - - - - -	1,000 „
Futwah Ghaut for Tirhoot and Chumparun -	17,000 „
Barh Ghaut for Tirhoot - - -	11,000 „
Mokameh for Tirhoot - - - - -	6,000 „
Monghyr for Tirhoot - - - - -	3,000 „
Monghyr for North Bhagulpore - -	5,000 „
Sultangunge for North Bhagulpore - -	4,000 „
Colgong for Purneah - - - -	5,000 „
Caragola for Purneah - - -	5,000 „
Total - - - -	62,000 maunds, = 2,214 tons daily.

For every one of these depatches contracts or other arrangements for daily removing the grain into the interior have been made. During the last fortnight all these depôts except two (Barh Ghaut and Mokameh, which last is only newly opened) were despatching grain by cart into the interior at a rate equal to what is above given. So that even allowing for the relief given at Futwah Ghaut and Rajmehal, the East Indian Railway must carry 2,200 tons of Government grain daily from Howrah, without allowing anything for reserves at depôts across the Ganges, or for the supply of new requirements, such as Maunbhoom or the Sonthal Pergunnahs.

Mokameh siding.

20. During the fortnight under review a third siding from the East India Railway down to the Ganges at Mokameh was completed and opened. 6,000 maunds of Government grain is now going thither.

Eastern Bengal Railway.

21. The despatches of Government grain by the Eastern Bengal Railway averaged 804 tons a day; and that line can carry much more if need arises.

Ferrying grain across the Ganges.

22. All the grain received at the railway stations is now ferried over the Ganges quite as rapidly as it can be supplied from Calcutta. The only place regarding which any anxiety is at present felt is the crossing from Kooshtea to Godagaree, Manick Chuck, and Hyatpore. A good deal of this ferry duty used to be done by native boats, but now that the west winds have set in, they cannot get up the river within any reasonable time, and accordingly the Lieutenant-Governor has arranged that before the end of the month an additional steamer with two flats shall be put on the Kooshtea berth. The Lieutenant-Governor when he visited the Brah Ghaut ferry was doubtful whether all the five steamers and their flats allotted to the Patna Division crossings were really required there, and careful inquiry is being made on this point; meanwhile, until it is clear that the steamers are not or will not be required, they are not to be withdrawn.

Transport of grain from the River Ganges.

Sarun route.

Bunker Ghaut route.

23. The work of transporting the Government grain, mainly by cart, but partly also by pack-bullock and boats, from the depôts on the north bank of the river, is going on for the most part very smoothly and well. Taking the several routes in the order given at paragraph 19 above, we come first to the depôt opposite Arrah, whence every maund of grain, regularly as it comes, is removed by cart into the interior of Sarun and Chumparun. No reserve has yet been formed at this depôt. Next comes the Bunker Ghaut depôt opposite to Patna, whence from 25,000 to 28,000 maunds (about 1,000 tons) daily have been regularly carted away during the last fortnight. The pressure at Bunker Ghaut depôt has recently been slightly eased by taking some of the Chumparun grain *viâ* Arrah, but the transport contractors and officers on this route have worked most successfully hitherto. A reserve equal to about two days' supply has been collected at this depôt.

Chumpta Ghaut and other East Tirhoot routes.

North Bhagulpore routes.

24. From the Chumpta Ghaut depôt the transport contractors have not done nearly so well. They engaged to carry away 17,000 maunds of grain a day; for the first fortnight of their contract their despatches barely averaged 7,000 maunds a day, and at one time they were down to 3,000 maunds a day. During a part of the last week, however, they have worked up again to 12,000 a day; they have struck out another route from Monghyr up into South-East Durbhunga, by which they hope to carry 3,000 maunds a day. It remains to be seen whether the contractors will work up to their enagement. Grain is greatly wanted in the part of Durbhunga which they are to supply, and the Lieutenant-Governor, who was in consultation with the local officers on the spot, deemed it better to let the contractors redeem the ground they had lost rather than attempt to improvise a new agency. The contractors for North Bhaugulpore, who carry their grain from depôts opposite Monghyr and Sultangunge, have, during the fortnight, worked up to the terms of their agreement, and had carried away from the river side about 7,000 maunds a day.

Purneah route.

25. For the Purneah transport there are no large European contractors; the work is done by petty native contractors, who provide ten or twenty carts a-piece. Mr. Hankey, Transport Inspector, has given much attention to this route, and the Purneah transport agency, which at the beginning of February lifted barely 2,000 maunds a day from Caragola, has despatched, during the first ten days of March, 9,800 maunds daily.

Rajshahye Division routes.

26. The pack-bullock and cart routes from Hyatpore and Manick Chuck (opposite Rajmehal) into North Dinagepore and Maldah are already carrying between them 4,000 maunds a day, which is beyond the highest estimate previously made of their capabilities. From Godagaree and Rampore Beauleah daily despatches up to

8,000 and 9,000 maunds are being made into Dinagepore and Maldah besides about 2,000 maunds a day which the Northern Bengal Railway works are receiving *viâ* Dhaparee and the Burrul river. The Bograh District is transporting to its stores and onward into South-East Dinagepore all the grain it receives. Rungpore has hitherto sent on about 2,500 maunds a day from its depôt at Kaligunge on the Berhampooter. If the total allotment for this district should now be increased, the transporting power will no doubt be expanded.

General review of transport business.

Services of military officers.

27. The Lieutenant-Governor, when thus reviewing what is being done to transport Government grain into the interior of the most distressed districts, is glad to be able to say that the divisional and district officers of Bengal have in this matter been able to organise and to carry out all that was required, and more than was expected, of them. Sir George Campbell would add that the services of the officers of the Quarter-Master General's and Commissariat Departments have most zealously and effectively seconded the labours of the civil officers, and have, by maintaining the roads and by organising the long strings of carts, contributed most materially to the successful result which has, the Lieutenant-Governor hopes, been secured. Up to the present date the cattle which draw the grain carts are said to be generally in good condition, fodder and water has been everywhere provided, and with the exception of the Chumpta Ghaut failure, which is being remedied, there is no present sign of a break-down being probable.

Quantity of Government grain in final stores.

Out of the total of 167,000 tons of Government grain shown (at paragraph 21 above) as despatched to the distressed districts up to date, the quantities which have reached their final destination are by the latest returns,—

	Tons.
Patna Division - - -	43,808
Bhagulpore - - -	22,981
Rajshahye - - - -	14,877
Total - -	81,666

The returns on which these figures are based do not show the actual facts for some districts up to a later date than the 7th March, so that at the present time of writing there must be close upon 95,000 tons actually in store. As yet these stores have been hardly drawn upon at all, so that the relief operations will start everywhere with a considerable stock of Government grain in hand, a stock, moreover, which is being rapidly increased by the transport agencies of the several districts.

Relief works.

28. The fortnightly returns of persons employed on Government relief works will be found at enclosure No. 9.* The number of people receiving relief in this shape has increased enormously in Northern Tirhoot during the fortnight. Compared with the figures given in the last narrative (paragraph 18) the numbers employed daily stand thus:—

	Last fortnight.	Fortnight under report.
Patna Division - - -	162,267	234,249
Soane Canal Works - - -	36,000	29,589
Gunduck Embankments - -	19,240	25,615
Bhagulpore Division (inclusive of Kurrockpore works) - -	16,310	22,800
Rajshahye Division - - -	35,940	54,832
Burdwan Division, Nuddea, Chota Nagpore, and Cooch Behar -	11,754	19,219
Northern Bengal Railway - -	6,200	7,000
Total - -	287,711	393,304

At paragraphs 10 and 11 has been given a notice of what the Lieutenant-Governor himself saw on the Tirhoot works. There the people were gathered together in enormous crowds on single works; in Sarun, on the other hand, the work-people are scattered over more than a hundred and forty different works, some large and some small. In Sarun, Dinagepore, and Chumparun the works are supervised and directed mainly by civil officers, by planters, and by persons locally engaged. From Tirhoot there has been much demand for additional Public Works subordinates, and recently further indents for assistance of the same kind has been received from other districts. For the superior supervision of relief works sufficient arrangement has been made; an additional Superintending Engineer, two additional Executive Engineers, and some few more Assistants have been sent to North Behar. Two subordinates and one Assistant Engineer have been sent up to Palamow, where over 6,000 work-people are now employed daily. But other indents have not yet been complied with, because all available men are being sent to North Behar, in compliance with the requisitions of the local officers, supported by Sir R. Temple. The Government of India have most promptly complied with a request for the loan of 25 overseers from other Provinces; some of these men have already joined in North Tirhoot, and others are on their way. So far as is possible, all the demands for professional assistance will be met, even if it be necessary to take unpassed students from the Calcutta and Roorkee Engineering Colleges; but, as was explained in last narrative (see paragraph 19 and enclosure No. 7), the Lieutenant-Governor hopes that much may be done towards supervising works through the relief officers of all grades. Special orders drawing the attention of all civil officers to this part of their relief duties and to the need for seeing that the wages really reach the work-people have been issued. (See enclosure No. 8.*)

* Page 123.

Distinction between regular and merely subsistence relief works.

During the fortnight, Colonel Nicolls, the Chief Engineer, has presented a review of all the relief work schemes now in hand or projected, pointing out the weak points of each, and setting forth how far these works will suffice for the employment of all the labourers who may come upon the hands of Government. Colonel Nicolls' note has been circulated to officers in the distressed districts, together with orders directing that the labouring poor should, as soon as possible, be separated into (1) the able-bodied who can and wish to earn a full day's wage, and who should be employed on regular public works under engineer officers, and on the ordinary system; and (2) less competent work-people who can or wish to earn merely subsistence wages, and who should be employed in small numbers on petty works. These smaller works are to be under the management of civil and relief officers, and they should be, as far as possible, undertakings in which local residents take an interest, so as to secure effective supervision by local agency. These orders (see Appendix F.†) by no means imply that all people who want relief must be put on works of some kind, for the charitable relief by grants of food, by loans of money or grain, and by advances, will be outside the relief works. But inasmuch as the great pauper populations of North Behar seem very much disposed to come upon the works, and to prefer relief in that shape, it is desirable that the relief work administration should be systematised, and the previous instructions on the subject have been re-affirmed.

† Page 34.

Tools for work-people.

29. From Tirhoot also emergent indents have been recently received for a very large number (60,000) of tools for relief works. These have now all been supplied, but it has become necessary to order further supplies of tools, as the depôts in Calcutta were being cleared out. 45,000 more tools will reach Bengal from Agra during the month of March; 42,000 are at the present time being landed in Calcutta; 90,000 are still on the way out from England; these, together with such supplies as can be obtained locally during April and May, will, [illegible] believed, suffice for all demands. Up to the present date 126,000 hoes and picks have been supplied to the famine districts; 182,000 more are either in depôt or on the way from Europe and from Northern India.

Charitable relief.

30. Since the submission of the last narrative the Government of India has, in communication with the Lieutenant-Governor and the Central Relief Committee, made certain revisions in the "Instructions to Relief Committees," and has issued a very important order, dated the 6th March, reminding all local officers that "it is their duty to see that arrangements for the relief of distress are adequate within the area under their charge, and that they will be held responsible that no deaths from starvation occur which could have been avoided by any exertion or arrangements within their power and the means placed at their command." The working of relief committees and relief officers is placed under district officers and commissioners of divisions; much discretion is left to local officers, who are authorised to adopt

special measures to meet special emergencies. The invariable use of any test, either in the shape of labour or in the shape of cooked food, is not prescribed; and *the* great object set before all civil relief officers and relief officers is to search out distress and to relieve it in the best way the instructions allow or circumstances may permit. Special attention is drawn to the need for systematically and liberally making advances of grain to ryots and others who, though now in sore straits, may probably be able to make repayment in future years, and at present need food to sustain themselves and their families while the land is being prepared for the next autumn crop.

The text of the Government of India orders, with the revised "Instructions" and the Government of Bengal's Circular, will be found in Appendix E.*

* Page 33.

Organization of relief.

31. At paragraphs 22–25 of last (the twelfth narrative) was given some account of the progress made in organising charitable relief in each district. At paragraphs 10 and 11 of the present narrative have been related the arrangements making in North Tirhoot under the Lieutenant-Governor's own eyes. As yet the only tracts where there is already general distress or famine among large classes of the population are North Tirhoot and North Chumparun; and it may be well to give here, in the words of the Sub-Divisional officers in actual charge, an account of what has been, or was being, actually done up to the first week in March. The Sub-Divisional Officer of Durbhunga writes:—

"The system of relief which we are now carrying out, and which has been in its main features originated by Sir Richard Temple, differs radically from all systems which previous famines brought into operation. The key-note of our system is the prevention of the assemblage at any centre of large masses of indigent persons and the establishment in every village of relief operations, bringing to the doors of those able to work remunerative labour, and to the doors of those unable to work gratuitous relief.

"To this end Sir Richard divided the sub-division into two relief sub-divisions (allowing, however, the controlling influence of the Sub-Divisional Officer to remain), and re-divided these again into 12 Circles, and promised for each Circle a competent administrative officer; of whom, however, I with regret remark in passing, only three have arrived.

"The details of the system it was given to us to work out; for although certain rules were laid down by the Central Relief Committee at Calcutta, those rules were somewhat vague, and were burdened with returns and statements it would be impossible to submit. Those rules have since been cancelled. The system you have for this sub-division approved of is the following:—

"Premising that it was necessary to connect the Circle Superintendents or Sub-Committee Officers with the people, it was evident that the Circle should be sub-divided to such a manageable extent as to permit of the Relieving Officer being, if not in all cases, personally acquainted with the general condition of each group, at all events vicariously acquainted with the intimate state of every village. Therefore the Circle was sub-divided into as many village groups as would allow of one subordinate officer visiting daily, or at most once every two days, each village in the group. The maximum number of *whole* villages, which, with this object in view, could be safely included in a group, was fixed at ten. As Inspector and Executive Officer under the Superintendent for each group, an educated respectable resident is chosen, it being a most desirable thing that in the relief operations local knowledge should be, if possible, utilised. To aid the Inspectors so appointed in procuring information, bringing relief where wanted, and supervising village relief works, two peons (messengers) are attached to the Inspector, and the chowkidars (watchmen) in each village in the group are also to report to the Inspector the state of their villages daily. The Inspector is to submit daily to the Superintendent a statement under prescribed headings, showing the condition of the group under him. He is to see that sufficient work is provided for the storing, and that fit subjects for charitable relief are not denied it. He is to give orders on the storekeeper for raw materials, and is to see that the manufactured product is duly paid for by the storekeeper, and is to be responsible for the due expenditure of the money allotted for village relief work. This completes the intelligence and executive department, in which I have striven to utilise as much as possible local knowledge and neighbourly feeling.

"It would be manifestly useless to know where distress lay if we had not at hand the means to alleviate it. We had, therefore, to bring home to each group of villages remunerative labour for the strong and gratuitous charitable relief for the weak.

"This we did by opening, in a conveniently situated village of the group, a relief work, such as excavation of a tank, calculated to employ the people and benefit them in addition. We also established in each group of villages a local grain-store, drawing its supplies from the circle depôt at which the village labourers might procure food with the wages of their labour. Attached to this store is a depôt where cotton may be obtained by respectable females in indigent circumstances desirous of supporting themselves; and in charge of this local grain-store is a mohurir (clerk), whose duty it is to keep a few simple forms and make necessary returns to the Superintendent, see that grain is sold to the labourers and distributed to those on gratuitous relief. As a matter of detail, I may mention that this local grain-store, when established in a group in which there is a depôt, is entrusted to a bunneah (local dealer), the depôt-keeper in this case making returns. In all other cases the mohurir has a bunneah under him to sell. A peon is attached to the store.

"This is the outline of the system. Now I give you an example of its working. Being anxious to give Messrs. Marindin and Harris a clearer conception of their duty than any verbal explanation could give, I went with them to Bahera and formed a group around Bahera; on entering each village in the group we had all the poor collected. Those unable to work we at once put on gratuitous relief, subsequently forming a register of such, showing the number on the register of each, his name, residence, and quantity of gratuitous relief he was entitled to, and giving him a ticket with these particulars inscribed on it, and directing him to present it at the local store weekly, where the storekeeper having a duplicate of the register would dispense the requisite relief. Having done this we proceeded to determine what village relief works might, with due regard to the want of the people and the propinquity of imperial works, be commenced, and the village agency to work them. Having settled this point we proceeded to find out the number of females who were desirous of spinning cotton, and issued orders accordingly. Having seen all the village headmen and respectable residents, we finally appointed an Inspector, fixed on a local rice store, and in the case of this circle, appointed a bunneah to the charge of it."

The sub-divisional officer of North Chumparun writes :—

"The sub-divisional committee of Ramnuggur, with the two sub-committees at Bulthur under Colonel Boulderson and at Bagaha, are now in full working order. I visit Bagaha once a fortnight, when a meeting is held and measures for relief are discussed.

Joint-Magistrate, of Ramnuggur	*Chairman.*
Mr. Christien	*Members.*
" Moore	
" Blake	
" Brooke	
Sree Autar Missir, of Naryanpore	
Ramnarain, of Bagaha	

"The tuppah (Bulthur) has been divided into halkas (circles), and each member is to take charge of one. Lists of all the poor requiring relief are prepared by the putwarees (village accountants) and tested by the member-in-charge of the halkas, who is also responsible for the distribution of food to those in the lists whom he, after examining, finds unfit for work.

"At Bagaha we have a dispensary, hospital, and poor-house, and a native doctor from Hurnatar has arrived. Sickness at Hurnatar has, I am happy to say, decreased, so his remaining there is not necessary. The dispensary is ready, being a very conveniently situated house placed at our disposal by a native gentleman of the town. The poor-house is being built close by, and temporary relief is being administered in a shed near the thanna (police station). * * * About 200 persons unfit for work are daily fed at the poor-house, which Mr. Christien at present manages, and I am glad to say that great discrimination is used in feeding only those who really cannot work. At present the sub-committee confines its attention (in addition to managing the local poor-house) to the village-to-village relief system and to collecting statistics. I think it is better at first to do what is absolutely necessary, viz., to support those who otherwise must starve, and gradually to perfect the system in introducing the various rules laid down for committees. In my next fortnightly narrative I hope to be able to report that much progress has been made; at present I consider what has been done at Bagaha to be very satisfactory. An organised village-to-village relief system has been formed, which will effectually relieve those who most require it. A central poor-house and dispensary has been started, and the local information thus acquired, which will be placed before the committee at the next meeting, will enable us satisfactorily to enlarge our operations.

"At Ramnugger the dispensary, hospital, and poor workhouse are in full working order; the buildings are nearly complete; and, meantime, work is done in a shed and a small tent. 710 persons have received relief since the work has been started; 142 out-door patients have received medical relief, and all of these (710) were persons utterly unable to work, either from sickness, old age, or physical incapacity. In tuppah Deoraj I have under the village-to-village system 347 persons of this class who daily receive relief. These I have examined in person, and found they were utterly unfit at present even for the lightest work. Most of them have been reduced by sickness as well as want of food, and altogether the condition of these unfortunates is pitiable. I distribute food for these twice a week, and I am much assisted in this tuppah by Sheik Salamut Ally, an influential and public-spirited zemindar. In this tuppah the headmen of each village and the putwarees receive a certain amount of food sufficient to last the poor of his village of whom he receives a list (an extract from my register) and whom he is bound to supply twice a week. The greatest safeguard against abuse is the fact that the poor themselves know how much they are entitled to; and secondly, there is constant inspection both by Sheik Salamut Ally, who is a member of the committee, and myself. In this way this important tuppah is provided for, and similar steps for the others are also being taken. In my next fortnightly report I trust that generally throughout the sub-division our charitable relief system will be fully organised and in complete working order."

In the districts of Sarun, Monghyr, Bhagulpore, Purneah, Maldah and Rungpore, a good deal of charitable relief is being given at poor-houses, but the applicants (to the number of nearly 4,000 in all) are mainly beggars, sick and infirm persons, and destitute women who cannot work, and in ordinary years would be supported by private charity. In Rungpore and Sarun arrangements are being made to distribute advances of grain and sometimes of money to ryots and other residents who, in ordinary years, are well-to-do. In none of the other distressed districts is there reported to be any present need for charitable relief.

Central Relief Committee.

32. The Executive Committee of the Central Relief Fund have now at their disposal—

	Rs.
Indian Subscriptions - - -	5,08,539
English and Scotch - - -	5,20,990
Government contribution - - -	5,33,085
Total - -	15,62,614 = £156,261

They have drawn up and published a précis of their proceedings up to the 4th March (see enclosure No. 10).* As it would be costly and undesirable to maintain two establishments side by side in the famine districts, and as the responsibility for searching out and relieving distress rests upon Government and its officers, the Central Committee have withdrawn from executive control over the relief organisation; they grant funds to distressed districts on good cause being shown, and they will obtain, for the information of their subscribers and of the public, reports and accounts of all the charitable fund that may be spent. It has not been possible, without weakening responsibility and impairing the efficiency of the relief organisation, to maintain a clear distinction between the relief objects on which Government funds and those on which charitable subscriptions are to be spent.

* Page 124.

Advances. 33. According to the district reports the amount of advances made in the distressed and in other threatened districts up to the end of February was,—

	Rs.
Advances for purchase of grain - - -	10,53,185
„ for land improvements - - -	1,68,486
„ to Zemindars to help their ryots - -	2,55,359
„ to Municipalities under the Local Public Works Loans Act - - -	24,000
Total - - -	15,01,030

The fullest scope has been given to the Government orders in these matters in the Sarun District, where Mr. Drummond and his subordinates have advanced—

	Rs.
For purchase of grain - - - -	3,26,500
„ land improvements - - - -	51,853
„ advances to ryots - - - - -	1,34,789
„ Municipal improvements - - - -	10,000
Total - -	5,23,132

The latest district narratives (enclosure No. 3*) show that in Sarun advances for helping ryots are still liberally taken. Seeing that in most cases these advances will certainly be recovered, every rupee advanced is a clear saving to the public treasury and a benefit to the country, as it either secures the execution of permanent improvements, or else saves future relief expenditure which cannot be recovered. During the next few weeks one of the most difficult and important tasks which devolve on civil and relief officers will be the distribution of advances of grain to ryots in the tracts where the supply is absolutely short. * Page 75.

Burdwan Division. 34. Among the tracts which are not yet absolutely *distressed*, but regarding which the Lieutenant-Governor has had much anxiety, the Burdwan Division is the largest and most important. At enclosure No. 12† will be found the Commissioner's report, with the district narratives for that Division. † Page 144. It will be seen that prices, though high, are a little easier than they were a month ago. There is no general distress reported from any part of the Division. Supplies of food in the local markets are generally sufficient. More than 9,000 persons are employed on relief works; and a certain amount of relief labour is being given to people at their homes. The Collectors are gradually disposing of the applications for loans for land improvement; over Rs. 70,000 have already been advanced, and many private relief works are in hand. Charitable relief is being given at two places in Burdwan, at seven places in Hooghly, and at four places in Beerbhoom; at these relief-houses 252 people are being relieved, besides a number of pauper weavers who are supplied with materials, and the large number who daily attend the poor-houses maintained by the Maharajah of Burdwan. The Lieutenant-Governor has suggested (see enclosure No. 12) that one useful form of relief for the broken-down weavers of the Burdwan Division would be the introduction of the lucrative jute manufacture in place of the decaying cotton industry. The Lieutenant-Governor has also invited the attention of executive officers in Calcutta and its suburbs and in the towns on the banks of the Hooghly to the need for having works and possibly relief ready for pauper immigrants who may perhaps flock to the centres of population upon the Hooghly.

Chota Nagpore. 35. Colonel Dalton has now completed his tour throughout his division; he is satisfied that the chiefs of the Tributary States will not let their people starve; he is anxious only about Palamow, part of Maunbhoom, and perhaps a part of Hazareebaugh. The measures already taken for opening relief works and storing grain in Palamow will, the Commissioner anticipates, suffice to meet the distress; already 6,200 people are on the Government works in the sub-division, and the numbers are increasing. For

Hazareebaugh an allotment has been made to enable the Deputy Commissioner to make advances for the purchase of grain, and considerable grants have been made for public works (see enclosure No. 12).* In the parts of Maunbhoom nearest to the railway there are already threatenings of distress, the Deputy Commissioner has asked that Government grain may be imported. The question is awaiting Sir Richard Temple's decision on the spot; meanwhile the Deputy Commissioner has been directed to prepare his storage and carting arrangements. During the last fortnight the Behar demands on the railways have been so great that no grain could have been sent to Maunbhoom.

Nuddea.

36. The condition of Nuddea, as will be seen from the papers in enclosure No. 13,† is fairly satisfactory. The food supplies are sufficient, but the poorer classes are unable to buy food at present rates, unless they can earn wages on relief works. The Government and the many private relief works are supplying this requirement.

Sonthal Pergunnahs.

37. The latest narrative from the Sonthal Pergunnahs (see enclosure No. 4)‡ shows that there is no present need for anxiety in that district. Prices were at one time very high in one small tract where relief works were going on, and 10,000 maunds of government grain have been imported for the use of those labourers, but the grain has not yet been actually used, and prices have fallen. From non-official quarters reports of impending distress in the Sonthal Pergunnahs have reached the Government, but so far as can be ascertained there is no present need for special measures beyond the opening of relief works. Sir Richard Temple is at the present time meeting the Sonthal Pergunnah officers, and he will decide whether any further steps must be immediately taken.

Northern Bengal Railway.

38. On the Northern Bengal Railway works, and on the railway feeder roads, there are now about 7,000 persons employed. Labourers are abundant on the northern section of the line, but to the south in the Rajshahye district "labour is procured with difficulty." On the northern section of the line grain is obtainable by the work-people from the local markets at the price of 10 seers the rupee; on the southern section food is cheaper. Most of the labourers are paid by task-work; those who are on daily wages receive about 2½ to 3½ annas for a full day's work. As yet there is not nearly sufficient local labour available to finish the railway bank throughout its whole length.

Irrigation Department works.

39. The daily average of labourers on the Soane Canal works has fallen to 29,589. There is now much employment in the fields on the spring harvest, so that the local labourers are leaving the works. Food is supplied to the labourers from the local markets at about 12 seers per rupee. At one point on the works rice was selling at 9 seers per rupee, but wheat was at the same place obtainable at 14 seers. The number of labourers on the Sarun and Chumparun embankments has risen to 25,615 from 19,000, as shown in last narrative. The numbers are said to be still increasing; and as the embankment works will probably be completed by the middle of April, sanction has been given to excavating an irrigation channel (88 miles long) along the rear of the Chumparun embankment; this work had previously been approved by the Government of India. Details of the project for a similar channel behind the Sarun embankment are being worked up; and the Lieutenant-Governor hopes shortly to be in a position to ask sanction to the commencement of the high level canal which is to run through the north of Tirhoot and Chumparun from the Gunduck to the Koosee; the project has been completed in full detail as far as the Bagmuttee River. The reconstruction of the dam across the Damooda from which water is let into the Kana Nuddee is being pushed on.

Durbhunga Railway.

40. The State Railway from the Ganges to Durbhunga in Tirhoot is being rapidly pushed on. On the 16th March sixteen miles of line had been laid, and the material train was running up to the sixteenth mile. One engine and twenty ballast waggons constitute the whole of the present rolling stock, but parts of two more engines have arrived at Barh. The Engineer-in-Chief hopes to finish the forty-four miles into Durbhunga by the end of April; and effort will be made to get ample rolling-stock on to the road, so that large supplies of grain may be lifted directly the line is completed.

---

* Page 146.

† Page 149.

‡ Page 98.

Returns of crime.

41. At enclosure No. 6* will be found the return of crimes against property in each distressed district during the month of February, as compared with previous years. It will be seen that the total of these crimes is nearly double the total for ordinary years. But the increase is not universal over all districts; for instance, in Rungpore, where there is much distress, crime is very little above the ordinary level; in Sarun also the increase is inconsiderable over the average of past years.

* Page 121.

Extra officers employed in the famine districts.

42. At enclosure No. 14 is a table showing the number of additional Civil Military Officers already employed in famine and distressed districts. The number is not yet complete, for the Native Civil Officers (over twenty in number) coming from the North-Western Provinces, the Native Officers of the Army, and the natives of Bengal specially engaged for work as Assistant Superintendents of relief circles, are not yet included in the lists. The names at enclosure No. 14 show that—

53 Covenanted Civil Servants,
60 Military Commissioned Officers of the Army,
68 Uncovenanted Officers of the Police and Native Civil Service,
22 persons specially engaged,

203 officers,

have already gone to the distressed districts. This number is exclusive of Public Works Department officers and subordinates, of the Companies of Native troops (Sappers and Native Infantry), and of the Non-commissioned Native Officers who have been sent. It will be seen from these lists that the Government of India have fully and promptly complied with the indents and requisitions made by the Lieutenant-Governor.

Medical requirements of the famine districts.

43. Happily there has, as yet, been no outbreak of cholera or other epidemic among any of the bodies of people collected on relief works, or on any of the grain routes. Many of the people who come for relief are, however, more or less emaciated, and some are suffering from different diseases. It has been arranged therefore that a small medical establishment shall be stationed in every relief circle, on some of the larger relief works, and at some of the larger grain depôts. Large and sudden indents have been made on the Medical Department for native doctors and other medical subordinates. At enclosure No. 15† will be found a report from Dr. Campbell Brown showing how these requisitions have been and are being met. The report is not a final report, but it shows that three officers of the Indian Medical Service, one Sub-Assistant Surgeon, and about sixty native doctors, have already joined their duty in the famine districts and twenty more are on their way. The Surgeon-General has caused packages of medicines and necessaries to be made up in Calcutta and sent to each native doctor who opens a famine hospital. The full staff of compounders has not yet been made up, but it will be completed before long. Next Narrative will show precisely where each medical subordinate is stationed.

† Page 151.

Small bags for Government rice and for relief-house purposes.

44. In a previous Narrative it was stated that the two-maund bags in which Government rice is packed were inconvenient for pack-bullock carriage and also for carrying grain on men's heads to relief centres and villages in the interior. Arrangements have been made whereby some sixty or seventy thousand tons of the Government grain will be packed in one maund and thirty seers (61 lb.) bags; and grain packed in these small bags is being sent to those parts of the country where pack-bullocks and small boats are chiefly used for transporting grain. At the same time 1,57,600 empty bags, to hold 30 seers apiece, have been distributed to the different districts, and will be available at grain depôts and relief centres for sending Government grain into the interior.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Offg. Secretary to the Government of Bengal.

Calcutta,
The 19th March 1874.

APPENDIX A. to the THIRTEENTH SPECIAL NARRATIVE.

NOTE ON MOVEMENT OF FOOD-GRAINS.

Sea-borne Traffic.

DETAILED returns showing exports of food-grains during 1872-73 and 1873-74, to certain specified foreign countries, to all foreign countries, and to non-Bengal British Indian Ports, are being compiled in the form prescribed by the Government of India in the following letters: Mr. Howell's, No. 856, of the 9th March (Department Agriculture); Mr. Barbour's, No. 1749, of the 13th March (Department Finance). The headings of this return differ somewhat from those heretofore in use, and it becomes necessary to procure certain particulars *de novo*, and thereafter commute in detail and aggregate from maunds into tons. It will not be possible to submit a detailed statement with the present Narrative. Meanwhile, in regard to aggregate results, the following table, compiled from that noted in the margin, with the substitution of the actual instead of the computed entries in respect of certain minor outports for February 1874, exhibits the exportation from 1st October to 28th February in the last and the present year respectively.

Received with Mr. Howell's, No. 856, of the 9th March.

TABLE showing Exports of Food-grain from the Bengal Presidency to Foreign Countries and to British Indian Ports beyond Bengal.

From 1st October to 28th February 1872-73.	Tons.	From 1st October to 28th February 1873-74.	Tons.
Rice of all classes, also paddy -	241,618	Rice of all classes, also paddy -	150,142
Other grains - - -	8,282	Other grains - - -	22,765
Total - -	249,900	Total - -	172,907

Inland Traffic.

Food-grain conveyed into Behar by Railway since the Drought.

FROM the 1st November to the 28th February the despatches of food-grain into Behar, upwards from Lower Bengal and downwards from the Upper Provinces, have reached 232,157 tons, namely 147,729 tons from below, and 84,428 tons from above, including, in both cases, the consignments on Government account. The figures represent the aggregate of actual deliveries at 33 railway stations from Buxar as the upper limit to Rajmehal on the Loop and Jamui on the Chord Lines as the lower limit. They are commuted from the East Indian Railway maunds into tons, at the rate of 27 maunds to the ton.

The *upward* despatches of food-grain have been as follow:—

Month: The four weeks of.	Upward despatches of all kinds.	Portion thereof representing Government despatches of rice from Howrah.	Remainder representing private traffic in rice and other food-grains.
	Tons.	Tons.	Tons.
October (1st week reckoned 27th September to 3rd October) - -	17,978	—	17,978
November - - - - -	16,555	2,829	13,726
December - - - -	24,656	11,849	12,807
January - - - -	47,776	26,682	21,094
February (last week ending 28th February - - - -	58,742	47,875*	10,867
Total, including October -	165,707	89,235	76,472
Total, excluding October -	147,729	89,235	58,494

The *downward* despatches received in Behar from the 1st November to the 28th February were shown in the last Narrative as 84,428 tons, including consignments on Government account.

During March, in so far as reported, namely, from the 1st to the 7th, the *upward* despatches from Lower Bengal, including Howrah, delivered in Behar, were 18,020 tons, while the *downward* despatches from the Upper Provinces, also delivered in Behar, were 7,430 tons.

Taking railway despatches of rice to Behar from Howrah only, the progress during March, from the 3rd to the 17th, has been—total despatches, 28,925 tons, of which 23,099 tons on Government, and 5,826 tons on private account.

The inland importation of food-grain into Calcutta by the Eastern Canals, being for consumption within or for export beyond Calcutta seaward and inwards, were returned in the last

---

* The despatch of Government grain shown in last Appendix A. as 49,482 tons during February, included 1,607 tons despatched per East Indian Railway to the Rajshahye Division, as well the quantity 47,875 tons sent to Behar.

Narrative at 146,910 tons from the 1st October to the 3rd March. Since then the farther progress from 4th March to 17th March has been 14,909 tons, making a total from 1st October to 17th March of 161,819 tons.

The private traffic by river registered at certain selected stations has been as follows :—

Registering Station.	River and course of traffic.	Period.	Quantity in tons.	REMARKS.
1. Sahebgunge - -	Up the Ganges -	1st to 14th March -	1,464	This is exclusive of Government grain going to Caragola.
2. Sahebgunge - -	Down the Ganges -	1st to 14th March -	1,447	This is exclusive of Government grain going to Hyatpore.
3. Goalundo - -	Up the Ganges -	26th February to 14th March.	3,227	
4. Kooshtea - -	Down the Gorai -	26th February to 14th March.	438	

J. GEDDES,
On special duty.

APPENDIX C. to the THIRTEENTH NARRATIVE.

No. 1469—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, in the Statistical Department, to the DEPUTY SECRETARY to the GOVERNMENT of INDIA, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

Calcutta, dated 14th March 1874 / issued March 1874.

SIR,

I AM directed to submit copies of Minutes, Nos. 44 and 45, recorded by Sir Richard Temple on the Purneah and Dinagepore districts, together with copies of the orders issued thereon by this Government.

2. I am to add that the Surgeon-General assures this Government, that the required number of native doctors can, he anticipates, be supplied from the Bengal Presidency, and from locally engaged practitioners. The Public Works Department of this Government is doing its best to supply the required number of overseers, and in this matter much help is being given by the Public Works Department of the Government of India.

3. I am to solicit that 20 selected native officers of the army may be sent for famine duty, of whom 10 should report themselves to the Commissioner of Bhaugulpore, and 10 (who should be able to speak Bengalee if possible) should report themselves for orders at Rajmehal to Lieutenant Eliot, who will have orders ready for them. The officers selected should be young and active, and able to read and write vernacular fluently.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Offg. Secy. to the Govt. of Bengal.

No. 1470—S.R.

COPY, without enclosures, forwarded to the Commissioner of Bhaugulpore and to the Relief Commissioner, Rajshahye, with request that orders may be ready for these native officers when they arrive.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Offg. Secy. to the Govt. of Bengal.

Calcutta,
The 14th March 1874.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 14th March 1874.

Read—

The Honourable Sir Richard Temple's Minute, No. 45, dated 11th March, on the Dinagepore District and its requirements.

Order.—Ordered that copy of the Minute be forwarded to—

The Public Works Department, with the request that the overseers required as per paragraph 18 may be sent as soon as they can be obtained. If necessary, second and third year students from the Engineering College can be entertained, and certificates given them at the end of the famine according to the qualifications they may show on the present occasion.

To the Surgeon-General, Medical Department, with request that the native doctors required by paragraph 20 may be sent with compounders, and the needful supply of medicines, &c. It is understood that these 11 men are included in the 14 for whom the Relief Commissioner, Mr. Robinson, has separately indented.

To the Commissioner of the Division, and the Relief Commissioner, with the request that 10 native assistants may be appointed locally; and with the promise that 10 selected men from among the Native Civil Service Candidates will be despatched to Dinagepore not later than the 25th March, while the Government of India has been asked for the services of 10 officers of the Native Army.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Offg. Secy. to the Govt. of Bengal.

No. 1471—S.R.

COPY of the Minute, with copies of the foregoing orders forwarded to—
The Commissioner, Rajshahye.
" Relief Commissioner, Rajshahye.
" Magistrate, Dinagepore.
" Surgeon-General, Indian Medical Department.
" Public Works Department of this Government.
L. C. Abbott, Esq., on Special Duty.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Offg. Secy. to the Govt. of Bengal.

Calcutta,
The 14th March 1874.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 14th March 1874.

Read the Honourable Sir RICHARD TEMPLE's Minute, No. 44, dated 7th March, on the Purneah District.

COPY of this minute will be forwarded to the Commissioner of Bhaugulpore, with an intimation that the allotment of grain made by Sir Richard Temple, 6,50,000 maunds for the Purneah district, is accepted. By the latest returns, about 3,70,000 maunds of Government grain have already reached Colgong and Caragola for Purneah. It is not yet known how much grain has been, or is being given from the Kissengunge depôts for the north of Dinagepore; the previous arrangement was that 150,000 maunds should be so given, and as the route to Thakoorgaon and Raneesunkoil is quicker by the Purneah road than by the Mahanuddee, it will be best that the store-houses in north-western Dinagepore should draw 75,000 maunds from the Kissengunge and other Purneah depôts. For the rest, however, Dinagepore must now depend on its own transport resources, and the recent expansion of the Dinagepore transport quite warrants the Lieutenant-Governor in relying that the whole of the required supply will be in the interior of Dinagepore by the middle of June.

2. There will thus remain to be carried into or through Purneah 7,25,000 maunds. The rate of despatches from Caragola is now (7th March), over 8,000 maunds a day, or quite 2,50,000 maunds a month. Seeing that about 3,00,000 maunds have already been despatched from Caragola, it may be reckoned that from the 15th March to the 15th May, 4,00,000 maunds can be forwarded from Caragola. And, therefore, the Purneah district will be able to supply itself by that route. But in order that the Mahanuddee may be worked as an alternative route, the Government grain officer will be instructed to send to Kooshtea, sufficient grain to give 75,000 maunds for transport up the Mahanuddee, in boats to be collected and sent down by the magistrate-collector of Purneah. The total Purneah supplies will stand thus:—

	Mds.
To go by Caragolah - - - - - - -	6,50,000
To go by Godagaree and the Mahanuddee - - -	75,000
Total - -	7,25,000
Of which will sent over into North Dinagepore - - -	75,000
Balance, being the supply for Purneah proper - - -	6,50,000

3. With reference to paragraph 21 of the minute, the Commissioner is directed to post two circle officers to the remaining Purneah circles, from among the civil and military officers at his disposal. The Government of India have been asked to send 10 native officers of the army to Bhaugulpore for duty in Purneah, and 6 other native assistants will be sent from Calcutta not later than the 25th March, unless the Commissioner can engage local men.

4. The Public Works Department will be requested to send the five additional overseers as required at paragraph 25 of the minute.

5. The commissioner will be requested to convey the thanks of Government to the three zemindars of Rampore, Saifgunge, and Chakanee who have exerted themselves to help their ryots.

6. The surgeon-general will be moved to arrange for completing at an early date the staff of medical subordinates (paragraph 22 of the minute), and to send with each native doctor a compounder and a supply of medicines, &c.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Minute No. 45, by the Honourable Sir Richard Temple, K.C.S.I., dated Dinagepore, the 11th March 1874.

I have visited some of the worst parts of the Dinagepore Division, and conferred with the Relief Commissioner, Mr. Robinson, and the Collector, Mr. Lowis; and I have conversed with many natives of all classes. I will defer making a complete report till I have seen some places which yet remain to be visited. Meanwhile, I desire to make a preliminary report on certain things which I have ordered, or which need to be supplied by Government.

2. As regards quantity to be supplied, the collector calculates that 400,000 persons may need assistance at the worst period; and that 1,000,000 of maunds will be required, which quantity has been ordered. Whether this quantity will suffice is a question on which I will offer an opinion after completing the round of the district; meanwhile, it is certain that this quantity will partly, if not wholly, suffice.

3. The grain is sent partly by the Eastern Bengal Railway to Kooshtea, and partly by the East Indian Railway to Rajmehal and Sahebgunge; it is sent on partly by boats and partly by carts. The carts come chiefly from the north of the Dinagepore District. I have seen something of the transport arrangements, and so far as I have seen, they are efficient.

4. No contract system, large or petty, is adopted with the carts. The Government officer deals direct with the cartmen. The rate of payment is fairly liberal, tantamount to two or three pice per maund per mile. It is to be remembered that the carts have to go long distances; the cattle which I have seen are in good condition. The collector is considering the arrangements for the supply of fodder. I will examine this subject further.

5. Already 200,000 maunds have arrived at the depôts of the district, and at least 50,000 maunds per week are arriving. Thus the commissioner and the collector are justified in their confidence that the million of maunds will be stored by the rains.

6. It is to be remembered that the river navigation to the upper parts of the district, though not yet open, will be open by the rainy season. This is important, as the distress is expected to last unto the middle of August.

7. There is no marked distress yet reported, nor has any marked symptom come under my observation; yet there has been a very great loss of food supply almost all over the district, and there is probably a large deficiency of grain. The prices of grain in the distressed tracts are seldom above, and are more often below, 10 seers the rupee. Distress might, therefore, break out at any moment; the outbreak of distress and the rapid rise of prices have, probably, been retarded only by the demonstration of the preparations of Government.

8. If such distress should break out at any moment, there will be a quarter of a million of maunds or more at hand wherewith to meet it, stored in 27 depôts placed in convenient localities in the distressed tracts.

9. But 13 depôts yet remain to be supplied with grain. The commissioner and the collector have had their special attention drawn to this, inasmuch as it is so important that some supplies should be available everywhere wherewith to check distress wherever it may manifest itself.

10. The commissioner and the collector consider that there is reason to apprehend a serious deficiency of food in the following tracts (designated as thannahs):—

Raneesunkoil.
Hemtabad.
Kaliagunjge.
Gungarampore.
Ghora Ghât.

I have seen some of the places, and have no doubt of the general fact. I have therefore authorised the commissioner to cause Government grain to be sold under clause *g*, Rule 3, Part II. of the Relief Rules, at a retail rate of 12 seers the rupee; which rate I fix after conferring with the commissioner and the collector in reference to the prices at the nearest marts accessible by rail or river.

11. I find that 13 relief circles have been fixed. They seem to be appropriate and of manageable size; whether they are altogether sufficient is a question on which I will offer an opinion after completing the round of the district.

12. Officers have been appointed to all these, of whom nine have arrived, and three yet remain to arrive.

13. Two assistants (natives) are required for each of the 13 circles, making up (with 3 in reserve) 29 in all. These have not yet been appointed. I have requested the commissioner to cause as many of these to be appointed as he can find in the district, on salaries of 100 and 80 rupees per mensem. The collector states that he can find 10 such persons; the rest, 19, cannot be got on the spot, and must be found elsewhere. I have requested the commissioner of Rajshahye (Mr. Molony) to send nine on the above salaries, to arrive at Dinagepore not later than the 1st April, their travelling expenses to be paid; and I have asked that 10 selected native officers from the army may be sent as soon as possible to Dinagepore.

14. I have begged the commissioner to ensure that every village in the distressed tracts shall be visited once a week by the responsible establishments in each circle.

15. The commissioner has shown me a map of relief roads, which form a tolerably complete network throughout the distressed tracts. The total length amounts to 420 miles. Whether this arrangement will suffice I cannot say till I have seen more.

16. There are many old tanks to be excavated or new tanks to be made. By existing orders the collector has to obtain a subscription of two-thirds of the amount before commencing the work. I have requested the collector to get the subscription if he can, and to use his best endeavours; but if he cannot, and if the work be needed urgently for relief, then to execute it at Government cost.

17. At present there is an executive engineer, Mr. Mackenna, with professional assistants, employed on three trunk lines not included in the above statement of relief roads, which serve as relief works. He does not appear to be wholly under the commissioner or the collector, and his position requires further consideration.

18. Meanwhile, there are no public works establishments at all attached to the 13 relief circles. I shall, therefore, beg that Government may be pleased to cause 13 overseers to be sent as soon as possible.

19. I have seen some 7,000 relief labourers out of the 32,000 reported to be at work. The men were in good condition for the most part. They receive a liberal rate of wages, 2½ annas per diem, and the women 2 annas.

20. No subordinate medical establishments have yet arrived in the 13 circles, save two native doctors. Therefore, at least 11 more are required. I shall beg that Government may be pleased to cause these to be sent as soon as possible.

No. 98, dated Dinagepore, the 11th March 1874.

From L. C. ABBOTT, with the Honourable SIR R. TEMPLE, K.C.S.I., to C. E. BERNARD, Esq., Acting Secretary to the Government of Bengal.

I AM directed by the Honourable Sir R. Temple, K.S.C.I., to forward copy of a minute, No. 44, dated 7th March 1874, regarding the condition of the Purneah District.

I am to draw attention to paragraphs 16, 21, 22, and 25, and to suggest that the recommendations therein contained may be carried out.

MINUTE by the Honourable SIR RICHARD TEMPLE, K.C.S.I.—(No. 44, dated Dengra Ghât, the 7th March 1874.)

HAVING visited the Purneah District and travelled from Caragolah in the south to Kissengunge in the north, passing through those parts of the district where there has been the greatest failure of the crops, I have to record the following observations and directions :—

2. There was throughout the district a serious want of rain during last autumn, which caused a considerable failure of rice, the principle product. On the other hand, the rubbee or spring crops were sown more largely than usual, and owing to the recent rains the yield will be fair. To the south on the Ganges indeed there is the promise of a fine spring harvest. Thus, though there will be destitution here and there, in most parts there will not be general distress.

3. But there will be distress localized in certain parts of the district where the failure has been much worse from a particular cause, which is this: The rivers Mahanuddy and Poonar usually inundate the adjacent lands where fine rice crops are raised. On this occasion the inundation failed and the crops were lost, which form three-fourths of the sustenance of the people for a year. Here also the people have sown some spring crops, which, owing to recent rain, are doing well. Otherwise, the case seems to me to be bad, nearly as bad as in any of the places in North Behar which I have seen.

4. The tracts thus especially affected from failure of inundation and of rain, and which have the worst degree of distress, are—

	Population.
Thannah Kusba Amour - - - - - -	114,147
„ Bulrampore - - - - - -	115,961
„ Kudbah - - - - - -	134,158
Total - -	364,266

5. The tracts affected above the average by failure of rain which have the secondary degree of distress are—

	Population.
Thannah Bahadurgunge - - - - - -	173,511
„ Kissengunge - - - - - -	144,164
„ Purneah - - - - - -	148,619
One-third of „ Arrareah - - - - -	60,947
Total - -	527,241

The total of the population more or less distressed, then, amounts to 891,507 souls.

6. The question then arises as to what proportion of this population may be expected to need assistance from Government in some shape or other during the period of distress which is about to begin.

7. The Collector, Mr. Kemble, has calculated the number at 130,000, of which 45,000 pertain to parts other than the distressed tracts, leaving 85,000 for these tracts. The latter number, taken on the population of these tracts, amounts to 10 per cent. The Collector's estimate is carefully made with per-centages separately taken on each caste or class as given in the Census statements.

8. The Commissioner, Mr. Barlow, makes a similar calculation (adverted to in my Minute, No. 28, of the 19th February), whereby the number comes out at 150,000, which amounts to 17 per cent. on the population concerned.

9. Now, if a proportion were to be assumed at all similar to that taken for the distressed tracts in Northern Behar, then a much higher number would come out. On that principle 40 per cent. would be assumed for Kusba Amour, Bulrampore, and Kudbah, and 20 per cent. for Bahadurgunge, Kissengunge, Purneah, and one-third of Arrareah. According to that the total would come to 251,154, a number greatly in excess of that given by the Collector and the Commissioner. To this, too, there would have to be added proportionally 50,000 for the rest of the district, bringing up the total to 301,154.

10. On the other hand, while the distressed tracts in Northern Behar derive little or no succour from private trade, are comparatively remote and inaccessible, and are somewhat widely separated from prosperous tracts, the distressed tracts in Purneah are receiving much benefit from private trade, are easily accessible by means of a trunk road and a navigable river (Mahanuddy), and are close to tracts blessed with good harvests.

11. I should therefore consider it sufficient for safety to assume 30 per cent. for Kusba Amour, Bulrampore, and Kudbah, and 15 per cent. for Bahadurgunge, Kissengunge, Purneah, and part of Arrareah, which gives a total of 188,365 souls, to which must be added 50,000, for the rest of the district, making a total of 238,365, say 240,000.

12. The period of distress will probably commence towards the end of the current month (March), and will last till the middle of August, when the bhadoi or August rice comes in, say four and a half months on the whole.

13. The Collector's estimated number, 130,000, at three-fourth seer per head per diem, gives for four and a half months the quantity of 328,000 maunds. The Commissioner's estimated number, 150,000, gives a quantity of 380,000 maunds. In order to provide a margin for safety he has brought up the quantity to 500,000.

14. The number according to my estimate gives a quantity of 607,000 maunds, to which it may suffice to add a small margin for safety, bringing the total up to 650,000, or six and a half lakhs of maunds.

15. Already a provision of five lakhs of maunds has been made, and local transport has been arranged accordingly. Of this quantity some two and a half lakhs have already arrived, leaving two and a half remaining lakhs to be brought in.

16. According to my view an additional quantity of one and a half lakhs (to make up six and a half lakhs) will be needed. The resources of the district would certainly suffice for the transporting of this quantity were it not that a quantity of one and a half lakhs will have to be transported by the carts of this district for the service of the Dinagepore District. But as this service has been undertaken, the Purneah carts cannot do more than transport six and a half lakhs without unduly interfering with private trade.

17. How then would the additional quantity of one and a half lakhs be carried? Well, the River Mahanuddy passes by Dengra Ghât, the very centre of the distressed tract, and is navigable up to that point during even the hot months.

The Collector made special enquiries, at my request, and he appears to have a good hope of being able to transport this quantity by water carriage. I have requested him to arrange the collection of the boats as soon as possible. The grain would be brought to Kooshteah by the Eastern Bengal Railway, and would thence pass for a short way up the Ganges, and then enter the Mahanuddy.

18. I have seen the carting arrangements throughout and consider them efficient. The work is done through petty local contractors (natives), and the rate of charge is cheap, much cheaper than in the neighbouring districts. There does not seem to be any difficulty in respect to fodder.

19. The following relief circles have been arranged by the Commissioner in accordance with the principle which we settled together at Soopool in February:—

1. Purneah.
2. Dengra.
3. Kudbah.
4. Bulrampore.
5. Kusba Amour.
6. Kissengunge.
7. Bahadurgunge.
8. Arrareah.

The Collector seems confident that these circles are sufficient, and I believe that they will prove so.

20. Certainly in the worst tracts the officers will have a manageable area. There are 27 grain depôts, but this number may be added to with advantage, especially in the worst tracts, so that the depôts may not be more than five or six miles apart. I have pointed out this to the Collector.

21. Civil officers have been posted to six out of the eight circles, two circles have yet to be filled, and I have written separately on this point. In all the circles native assistants have to be supplied. This may, I hope, be managed as soon as the native officers selected from the army shall arrive.

22. A subordinate medical establishment will be required for each circle. I have applied separately for this.

23. I have examined with the Collector the map of the relief roads. The lines form a tolerably complete network throughout the distressed tracts, and have a total mileage of 505 miles. With all these, it seems to me that some road or other will be within reach of almost every village, say within a distance of two to four miles.

24. Unfortunately the soil of this district is not suitable for tanks, consequently one means of providing relief works is lost. The cattle are here watered from the rivers or rivulets, which are so abundant. The improvement of village tracks will, however, afford the minor sort of employment which may be required.

25. Fortunately the district has a more than ordinary strong staff of District Engineers, five in number. There are also five Overseers, but five more are wanted, and for these I have applied separately.

26. The labourers on the relief works, according to latest accounts, hardly exceed 7,000, a number much smaller than what we might expect to see under the existing circumstances of the district. The wages, two annas a day for the better kind of labourers, and one and a half annas for other labourers, seem fair. It may be, however, that owing to the demand for labour for waste lands the ordinary rate of wages is higher than in the Bhagulpore and Tirhoot districts. I have drawn the special attention of the Collector to this matter, and it may be expected that when the Government grain begins to be sold at 12 seers for the rupee, then the number will rapidly increase.

27. On the recommendation of the Collector, I have authorised Government grain to be sold from the depôts of the circles of Kusba Amour, Dengra, and Bulrampore at a rate of 12 seers for the rupee, that being the rate recommended by the Commissioner. Despite the exertions of private traders, there is reason to fear a deficiency of food arising at any moment in the tracts above named.

28. I learn from the Collector that more than Rs. 60,000 have been taken as advances by traders of Purneah for the importation of grain, mostly in small sums of Rs. 1,000 to 2,000 by each man. The grain is chiefly imported from Sahebgunge.

29. I have specially requested the sub-divisional officer at Kissengunge to make advances for sustenance or for the purchase of seed to the cultivators in that neighbourhood, as the need of such advances there was specially represented.

30. The Collector reported that the following native gentlemen, zemindars, had exerted themselves to help their tenantry during the trouble:—

Baboo Ram Chunder Dass, of Rampore; Meer Muhummed Kasim, of Peerhawa, Saifgunge; Doola Jat, of Chukanee.

On the other hand, I was unable to learn that either of the two Rajas of Kugra or Kissengunge had done anything on this occasion, and I had to admonish the Raja of Kugra in respect to his duties in this matter.

31. I have had the advantage of meeting Colonel Burn and Mr. McQueen, and learning from them the fortunate condition of the large pergunnah of Dhurumpore belonging to the Durbhunga Raj, which pergunnah is situate in part near the Koosee and in part near the Ganges. I myself passed through the part near the Ganges, and saw that the crops were excellent. Colonel Burn and Mr. McQueen described the autumn and winter harvest as having been good, and the promise of the spring harvest being equally good; but they doubted whether any real assistance could or would be afforded by the people there to the distressed portions of the district.

32. There were no signs of distress being imminent at the moment of my visit, but under the circumstances of the district it is impossible to say how soon distress may break out. In that event, however, the supplies at hand, 250,000 maunds, ought to enable the Collector to apply an immediate remedy.

33. I have in conclusion to state that the Collector, Mr. Kemble, appears to me to be very well fitted to cope with any difficulty which may arise, and able to construct with discretion and promptitude the operations necessary for the prevention of famine in his district.

P.S.—In accordance with the view expressed in paragraph 16 above, I have to recommend that an additional quantity of one and a half lakhs of maunds may be sent forward by the Eastern Bengal Railway to raise the total allotments for the Purneah District to six and a half lakhs of maunds.

APPENDIX D. to THIRTEENTH NARRATIVE.

No. 93., dated Dengrah Ghât, Purneah, the 7th March 1874.

From L. C. ABBOTT, Esq., with SIR RICHARD TEMPLE, to the Honourable C. E. BERNARD, Acting Secretary to the Government of Bengal.

I AM directed to forward copies of minutes Nos. 39., 40., and 41., dated 5th March 1874, regarding the sale of rice from Government depôts in certain distressed districts of the Bhaugulpore and Patna divisions and the rate of wages to be allowed to labourers on relief works in the Bhaugulpore division.

MINUTE by the Honourable SIR RICHARD TEMPLE, K.C.S.I., No. 39, dated 5th March 1874, en route to Caragolah.

THE Commissioner of Bhaugulpore has asked me for further instructions relative to the order given in my minute No. 26, of 19th ultimo, paragraph 4, regarding the sale of Government grain.

I think that throughout thannahs Soopole and Bongaon, and in the distressed half of thannah Mudehpore (Bhaugulpore division) there is such grave reason to apprehend a serious deficiency of food that grain ought at once to be sold from Government depôts.

The price should be fixed according to clause 8, rule 3, part II. of the rules for relief committees. The rate at Sahibgunge, which I have just visited, is 12 seers the rupee; the rate at Patna was the other day 13 seers. On the whole, I considered that the rate of 12 seers may be allowed in the above-mentioned tracts, and I authorised the Commissioner to proceed accordingly.

The agency of private trade should be employed as much as possible, care being taken that the grain is sold only for relief and not for trading or storing. But if the local authorities cannot find such agency, they may retail the grain in the best way they can.

Further, the Commissioner wishes the above order to apply to the following tracts in the Monghyr district:—

Buktearpore (including all villages in the police outpost of that name) is conterminous with the distressed tracts of Durbhanga and Mudhobanee, and separated from the Ganges Valley by much swampy ground.

The thannah of Sekunderpore and the southern half of the thannah of Sheikpore, excluding the town of Sheikpore.—This tract I have partly seen and knew to be distressed. I authorised the Commissioner accordingly.

In none of the tracts specified above is there any mart whatever.

The price of a rupee for 12 seers is for Bengal rice. The rates for other food-grains will be fixed by the Commissioner on the same principle.

COPY forwarded to the Commissioner of Bhaugulpore for information and guidance.

L. C. ABBOTT,
with SIR RICHARD TEMPLE, on tour.

Dated the 5th March 1874.

MINUTE by the Honourable SIR RICHARD TEMPLE, K.C.S.I., No. 40, dated 5th March 1874, en route to Caragola.

THE Commissioner of Bhaugulpore has represented to me that the sale of Government grain at ten seers the rupee is at famine price, and that help to real sufferers from scarcity is virtually denied under such terms. Mr. Barlow would suggest the sale by Government of Bengal rice at twelve seers for the rupee.

Under instructions recently issued to sub-divisional relief committees (clause 8, rule 3, part II.) the sub-divisional committee may now arrange for the sale of Government grain through the agency of local traders at the price fetched at the nearest large mart. Looking to the price at Sahibgunge and at Patna, I have authorised the sale of grain from Government depôts in certain tracts of the Bhaugulpore and Monghyr districts at the rate of twelve seers for the rupee. I consider that the same rate is applicable to the adjoining tracts of the Tirhoot district, and I accordingly request that the grain authorised to be sold by the former orders on this subject in the Mudhobanee and Durbhanga sub-divisions, and which orders are contained respectively in my minutes Nos. 29 of 21st February, and 31 of 22d February, may be sold at the rate of twelve seers for the rupee.

COPY forwarded to S. C. Bayley, Esq., Commissioner of Patna, for information and guidance.

COPIES to sub-divisional officers of Durbhanga and Mudhobanee.

L. C. ABBOTT,
with SIR R. TEMPLE.

MINUTE by the Honourable SIR RICHARD TEMPLE, K.C.S.I., No. 41, dated 5th March 1874, en route to Caragolah.

I HAVE examined, with the Commissioner, the relief labour returns for the Bhaugulpore district. They may appear small at first sight, but I find that the relief works in the Nareedigur pergunnah (Soopole sub-division) are excluded; these works are under the court of wards, and may fairly be included. I saw myself within 3,000 and 4,000 labourers on these particular works, and the addition of these would make a considerable difference in the total of the return.

I am glad, however, to find that the attention of the Commissioner is being given to the important subject of attracting labourers to the relief works as the best means of checking the beginning of distress. It seems to me that the following rates should be observed in reference to the need of preventing our relief operations from causing a permanent increase in the rate of wages.

As I understand it, the rate of 1¼ anna per diem is proper for labourers of the lowest class. To these no task-work system is applied. This rate is more than a common fixed labourer receives ordinarily (one anna), but it is admitted that 1¼ anna must be given during high prices to those who labour on relief works at even a slight distance from home. Two annas would be allowed only for a labourer who can work somewhat better than a villager, to whom some task-work system is applied. This is the rate ordinarily given to a public works labourer, and to a professional coolie.

I beg that whenever two annas are given, such system may be enforced as may ensure the rate being restricted to the better kind of workmen.

I observe that task-work means work done under the eye of a supervisor.

I hope that the rate of 12 seers for the rupee for the sale of Government grain may suffice to attract villagers to the works at 1¼ anna per diem.

The authorisation to construct or clear out village tanks as relief works will conduce, I hope, to the same result.

To the distressed poor of both sexes the task-work system cannot be applied. As much work must be obtained for them as they can fairly do, and no more. Any enforcement of a labour test may repel these people, and cause ultimate danger to life. But it is better to obtain a little, even the smallest amount of work, tkan to give gratuitous relief. The object should be to search out these poor people village by village, and to induce them to resort to such works, which ought always to be within reasonable distance. The offering of piece-work (which is really a contract without rate of wage) is very good whenever the people will accept it, and I am glad to find that the Commissioner resorts to it whenever practicable.

COPY forwarded to the Commissioner of Bhaugulpore, for information and guidance.

L. C. ABBOTT,
with SIR RICHARD TEMPLE.

The 5th March 1874.

No. 97., dated Dinagepore, the 10th March 1874.

From L. C. ABBOTT, Esq., C.S., with SIR RICHARD TEMPLE, K.C.S.I., to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I HAVE the honour to forward copies of minutes Nos. 42 and 43, dated 7th March 1874, recorded by Sir Richard Temple.

MINUTE No. 42, by the Honourable SIR RICHARD TEMPLE, K.C.S.I., dated Dengraghât, the 7th March 1874.

THE Collector of Purneah has brought to my notice that a serious deficiency of food is to be apprehended within the circles of Bulrampore and Dengra, and requests that the sale of Government grain from the depôts within those circles may be authorised. I authorise the sale accordingly, at a price of 12 seers for the rupee, which appears proper on the grounds set forth in my minute on the sale of grain in the Bhaugulpore district, which price is, I know, approved by the Collector and the Commissioner.

MINUTE No. 43, by the Honourable SIR RICHARD TEMPLE, K.C.S.I., dated Dengraghât, the 7th March 1874.

THE sub-divisional officer of Kishengunge represents that it is immediately necessary to make cash advances to the poorer classes of ryots, to enable them to purchase seed-grain from the mahajuns.

2. Here, as elsewhere, the better classes of ryots keep their own seed-grain, but the poorer classes get their seed from the mahajuns, who now refuse to give it without cash or without security.

3. The sorts of early rice (called locally juneera and bhudai) ought to be sown from now to the beginning of April. The collector thinks that the sub-divisional officer should be authorised at once to make advances to the ryots, and I request that this may be done in every case where there is a reasonable expectation of repayment.

4. Such advances may be made either for the purpose of obtaining seed or for ordinary subsistence, and they may be made either in cash or in grain, preferably in grain.

5. The sub-divisional officer ought to make such advances, with such supervision as may ensure the assistance reaching the right person.

6. I bear in mind that this ought to be done by the zemindars. But about here the two principal zemindars (Kugra and Kishengunge) do but little. The zemindar of Kishengunge is much involved. They should, however, be reminded of their duty, especially the zemindar of Kugra.

No. 1,368.—S.R., dated Calcutta, the 10th March 1874.

From the Officiating Secretary to the Government of Bengal, Statistical Department, to the Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

In anticipation of the next special narrative, I am directed to submit, for the information of the Government of India, three copies of Sir Richard Temple's minutes Nos. 39, 40, and 41, and of Mr. Abbott's covering letter thereon.

No. 873, dated Calcutta, the 11th March 1874.

From Arthur Howell, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the Officiating Secretary to the Government of Bengal.

In reply to your No. 1,368 of the 10th instant, with enclosed minutes by the Honourable Sir Richard Temple, Nos. 39, 40, and 41, of the 5th instant, regarding the sale of rice from Government depôts and the rate of wages to labourers on relief works, I am directed to express the approval of the Governor-General in Council of the proceedings reported.

No. 921, dated Calcutta, the 13th March 1874.

From Arthur Howell, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the Officiating Secretary to the Government of Bengal.

In continuation of my letter, No. 873, of the 11th instant, communicating approval of the proceedings reported in your No. 1,368 of the 11th idem, regarding the sale price of grain in certain districts, I am directed to say that this approval must, of course, be considered subject to the orders of the Lieutenant-Governor of Bengal on the spot.

No. 102, dated Dinagepore, the 12th March 1874.

From G. H. R. Hart, Esq., on special duty, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I am directed to forward, for submission to his honour the Lieutenant-Governor, copy of a minute, No. 46, dated 11th instant, containing Sir Richard Temple's estimate of the grain requirements of the Dinagepore district.

Minute No. 46, by the Honourable Sir Richard Temple, K.C.S.I., dated Dinagepore, the 11th March 1874.

After consulting the relief commissioner and the collector, and several of the best informed natives in the Dinagepore district, I estimate the amount of grain to be supplied by Government at 12 lakhs of maunds. This amount is somewhat in excess of the local estimate of 10 lakhs.

2. The worst thanas are—

	Population.
Ghoraghât	16,925
Ranee Sunkal	78,696
Pateeram	66,866
Gungarampore	75,196
Kalliagunge	94,728
Hemtabae	87,089
Total	419,500

The next worst are—

Rajarampore	197,106
Bungsharee	78,288
Putneetola	122,700
Poorsha	48,803
Nawabgunge	46,573
Peergunge	89,296
Total	582,766

3. The worst period of distress will be three months, from 15th May to 15th August. There will be two months before this period and two months after, in all four months, of more or less distress.

4. In the worst thanas I take 60 per cent. of the population as likely to need aid from Government at some period or other, and 30 per cent. in the next worst. In the remaining thanas of the district the collector does not think that any considerable supplies from Government will be needed.

5. Accordingly my estimate comes out as follows:—

Population of worst thanas	419,500 60	
	251,700	
of which 60 per cent.		= 251,700
Population of second worst thanas	582,766 30	
	174,829	
of which 30 per cent.		= 174,830
∴ Total population to be considered		= 426,530 3
		4) 1,279,590
		40) 319,897
Whose daily consumption at ¾ seers per head per diem will be maunds		7,997 30
And their monthly consumption, maunds		239,910
		Mds.
Then, two months at ½ rate		= 239,910
	239,910 2	
	4) 479,820	
	119,955	
Two months at ¼ rate		= 119,955
	239,910 3	
Three „ at full rate	719,730	= 719,730
Total for 7 months		= 1,079,595
Add allowance for wastage, 5 per cent.		53,980
		1,133,575
And allow for safety, 5 per cent.		56,679
Total		1,190,254

or say 12 lakhs of maunds.

6. Transport arrangements have been made to bring 10 lakhs into the district by June. The remaining 2 lakhs can be brought into the district by water carriage after June; but they are required at Kooshtea (Eastern Bengal Railway) by the 1st June.

No. 1,485—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department, to the SECRETARY to the GOVERNMENT of INDIA, Department of Agriculture, Revenue, and Commerce.

Calcutta, dated 14th March / issued March 1874.

Scarcity and Relief.

SIR,

I AM directed to submit copy of Minute No. 46, by the Honourable Sir Richard Temple, on the grain requirements of the Dinagepore district. The Lieutenant-Governor has now directed that the storage space at Kooshtea be expanded, so that as much as 1,00,000 of maunds may, if need arises, be there housed for despatch to Godogaree.

2. The Commissioner of Rajshahye has been asked to report, after communication with Mr. Robinson, where the additional 2,00,000 maunds should be stored; as it depends upon the locality to which the grain is to go, whether it should be sent by the Mahanuddee or by the Atrai. Mr. Molony has also been asked whether he advises the construction of any additional large storehouses besides those for—

1,00,000 maunds at Kooshtea.
1,00,000 „ „ Godagaree.
50,000 „ „ Old Maldah.

I have the honour to be,
Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 1486—S.R.

Copy, with copy of the Honourable Sir R. Temple's minute, forwarded to—

Mr. L. C. Abbott.
Mr. Toynbee,

Also to the Commissioner of Rajshahye and the relief commissioner at Dinagepore, with a request that the storage accommodation at Kooshtea may be increased, and that any further necessary storage arrangements on the rivers may be ordered at once; and that report may be made thereof, together with specification of the locality in which the extra two lakhs should be stored and the route by which it should go up.

Appendix E, to Thirteenth Narrative.

No. 1308—S.R.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department, to the Commissioners of the Patna, Bhaugulpore, and Rajshahye Divisions, and to the Magistrates and Collectors of Distressed Districts.

Scarcity and Relief.

Sir,
Calcutta, the 8th March 1874.

I am directed to forward copy of the revised instructions to relief committees as modified by the Government of India in communication with the Lieutenant-Governor and the Central Relief Committee, and at the same time to enclose for your information copy of the resolution No. 813;* dated 6th March, of the Government of India in the Agriculture, Revenue, and Commerce Department, under which the revised instructions were published in a Gazette Extraordinary, and by the light of which they should be carried into effect. These instructions supersede those of the 24th January, forwarded to you by my No. 267—S.R., dated 26th January.

*See Part II., pp. 135 and 136.

2. It has been arranged with the Central Relief Committee that the officers of Government shall have executive control over the relief operations of all the local committees, and that the functions of the central committee shall be limited to the collection and distribution of funds and the receipt of reports. This separation of functions will prevent any risk of divided responsibility in dealing with distress. Consequent on this arrangement the distinctions between *distressed* and *very distressed* districts laid down in previous orders falls to the ground, and the orders conveyed in Mr. Mackenzie's letter, *No. 1071—S.R., dated 26th February, to the secretary to the Central Relief Committee, cease to have effect.

* N.B.—This letter was not conveyed to the local officers by the Government, but has been circulated to them by the Central Committee.

3. The executive functions of the local committees will remain to them; and it is only necessary at present to express the Lieutenant-Governor's confidence that they and the Government officers working with them will fulfil, to the utmost of their power, all that the general instructions now circulated lay down. The local committees are to apply their funds to the objects enumerated in the revised instructions, or to any of them, and should apply through the divisional commissioner to the central committee for the aid they may require. Nothing necessary under the instructions is to be omitted for want of funds; and the officers of Government will give their best attention to secure that funds nowhere fall short.

4. The "additional instructions" of the Central Relief Committee, which were under consideration, but had not, it is believed, been formally promulgated, are hereby cancelled; and the Circular No. 703—S.R., dated 16th February, from this Government, in which allusion is made to those additional instructions, is hereby also cancelled, together with any other orders founded upon them. The explanations contained in the first part of paragraph 3, and again in paragraph 4 of that circular, regarding the system of relief works are still correct, and no change is intended in that respect; but the remarks regarding the supply of cooked food, as a test of distress, cease to be binding on relief committees or Government officers.

5. Should any orders in expansion of those now issued be received, they will be circulated hereafter. Meantime the Lieutenant-Governor hopes that the present letter with the revised instructions will suffice for all immediate wants. Thirty copies of this circular and of the annexures are forwarded to each of the districts of North Behar, and twenty to each of the other distressed districts. Magistrate-collectors are requested to take special care that a copy is in the hands of every relief committee and relief officer. Further copies can be supplied on indent from the secretariat.

I have the honour to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 1309—S.R.

COPY forwarded to the Commissioners of Burdwan, Chota Nagpore, and the Presidency Divisions, and to the Deputy Commission, Sonthal Pergunnahs, for information with reference to docket No. 268—S.R., dated the 26th January last.

No. 1310—S.R.

COPY of this circular and of this enclosure forwarded to the secretary to the Central Relief Committee.

No. 1311—S.R.

COPY forwarded to L. C. Abbott, Esq., on tour with the Honourable Sir R. Temple.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta, the 8th March 1874.

APPENDIX F. to THIRTEENTH NARRATIVE.

Nos. 31-32T.

From A. MACKENZIE, ESQ., Junior Secretary to the Government of Bengal, to the COMMISSIONERS of PATNA, BHAGULPORE, and RAJSHAHYE, to the ADDITIONAL COMMISSIONER of PATNA.

SCARCITY AND RELIEF.

SIR, Dated Durbhunga, the 16th March 1874.

THE Lieutenant-Governor has had before him a note by Colonel Nicolls, Secretary to Government in the Public Works Department, on the relief works in your division, of which a copy will be sent you from Calcutta. I am to request, with reference thereto, that by the aid of the public works establishments you now have, you will do your utmost to render the works both sufficient and efficient. From what the Lieutenant-Governor has himself seen, he is inclined to think that, while it is at first difficult to get the people to our works, on the other hand, in some parts of the country, when they take to them in great numbers and in so poor a state that we cannot refuse them or exact much labour from them, the rush becomes so great that we may have almost the whole population on our hands, and it may be very difficult hereafter to get them back to ordinary habits and occupation.

2. The Lieutenant-Governor thinks no time should be lost in carrying out the classification (already ordered in the Patna division, see extract annexed,) of relief works under two heads; first, those where full work is exacted under professional management and good pay given; and, second, charitable light work where small pay is given. The really able-bodied labourers should be strictly excluded from the latter and sent to works where they must actually give a proper tale of work; and every effort must be made to reduce those light labour works where the numbers are becoming enormous by employing the people in local works where individuals have an interest in making them do as much as they can. This might be managed by making it a condition of advances that the people of particular villages are taken charge of and in other ways. Everything will depend on local circumstances; but every nerve should be strained to avoid the evil of demoralising the population by paying them in large bodies for a mere pretence of work.

I have the honour to be, Sir,
Your most obedient servant,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

EXTRACT from Orders given by LIEUTENANT-GOVERNOR at DURBHUNGA regarding Division of Relief Works.

"As regards works the whole of the works are to be classified thus—

(1.) Work under public works officers on which real labour will be exacted and full wages paid.

(2.) Works under the circle officers on which the labour given is less effective and for which superior professional supervision is not required. The rates on these would be mere subsistence rates.

In regard to wages, a minute of Sir Richard Temple's for the Bhagulpore Division, dated 5th March, may be adopted in this division also; the following extracts show what is intended:

'The rate of 1½ anna per diem is proper for labourers of the lowest class. To these no task-work system is applied. This rate is more than a common hired labourer receives ordinarily (one anna), but it is admitted that 1½ anna must be given during high prices to those who labour on relief works at even a slight distance from home. Two annas would be allowed only for a labourer who can work somewhat better than a villager to whom some task-work system is applied. This is the rate ordinarily given to a public works labourer and to a professional cooly.

'To the distreased poor of both sexes the task-work system cannot be applied. As much work must be obtained from them as they can fairly do, and no more. Any enforcement of labour test may repel these people, and cause ultimate danger to life. But it is better to obtain a little, even the smallest amount of work, than to give gratuitous relief. The object should be to search out these poor people village by village and to induce them to resort to such works, which ought always to be within reasonable distance. The offering of piece-work (which is really a contract without rate of wage) is very good whenever the people will accept it, and I am glad to find that the Committees resort to it whenever practicable.'

It was subsequently agreed that all the large road-work now going on or already planned should be under the Department Public Works, and any irrigation work of an important character that may be determined upon; all other works to be under the circle officers.

Each circle officers is to have a supervisor of works of some kind attached to him.

The return of labourers on works of all kinds in each circle are to be sent up by the circle officer, the number on each class of work being distinguished. This is to be separate from the Public Works Departmental returns. The Department of Public Works' officers are to return the number of these labourers to sub-divisional officers, and to work subject to their general control as regards employment of labourers, payment, &c.

Strangers coming to village works to be registered in the village where they labour and live for the time.

More efficient sanitation where large works are going on is much required and must be given. A mehter gang should be formed to dig each night suitable trenches (chosen men and women from the labourers must see that they are used) and close these in next day after work."

(True Extract.)

A. MACKENZIE,
Secretary with the Lieutenant-Governor on tour.

NOTE by COLONEL J. E. T. NICOLLS, R.E., Secretary to the Government of Bengal, in the Public Works Department, on the Relief Works of the Distressed Districts.

I SUBMIT the following remarks in accordance with the Lieutenant-Governor's directions to prepare lists and maps of the relief works, with notes.

2. The lists have been based on those received from the scarcity and relief department, which have been amplified from various subsequent communications from that department, from the fortnightly list of labourers received from each district, &c., and from the fortnightly narratives.

3. The maps have also been compiled from those furnished by the scarcity and relief department, and received from superintending engineers; and from information in this office, and in the above-named lists and narratives. The lists and maps are connected by the district numbers on the lists being entered on the corresponding roads on the maps.

4. Many of the relief works are district roads lying between places not generally known; and notwithstanding the assistance afforded by the skeleton maps supplied by commissioners to the scarcity and relief department of this Government, it has been a matter of some little difficulty and time to find out these places, and to lay down the road correctly: even now we have not been able to find out all, but the exceptions are few, and the maps may be accepted as correct up to the 21st February as far as known in this office, except as regards 440 miles of road organized in Northern Tirhoot by the Honourable Sir R. Temple, K.C.S.I. There probably are other additional works of which no intimation has yet reached me.

5. I propose to consider the subject under the following main heads:—

I.—The nature and extent of the relief works, and the extent to which they may be expected to afford relief.

II.—The engineering aspects of the works.

6. Information is not available for a very full consideration of these questions, but it seems desirable to do the best we can with the means at command. The works under the irrigation branch of this Government are shown in the maps, but not otherwise noticed; and the works under the Durbangah Raj and other estates of the court of wards are not included, as I have no knowledge of them.

I.—The nature and extent of the Relief Works, and the extent to which they may be expected to afford relief.

7. The relief works consist principally of roads, but in some districts, principally those in the north of the Patna division, *viz.*, Sarun, Chumparun, and Tirhoot, some very heavy works are proposed in the way of improving river and drainage channels, schemes for drainage and embankments, making tanks and wells, reservoirs, &c.

8. The relief works on roads consist of—

Repairs to existing roads.
Raising and improving existing roads.
Making entirely new roads.

9. The repairs to existing roads are mainly the repairs that would be made by the district committees in the course of the ordinary operations of the year. But in some instances they appear to have been enlarged in consequence of relief funds being available for this purpose, and from the necessity of making relief embrace the whole area of a district.

10. These repairs were ready for immediate operation, and it was the policy of Government that district funds should be exhausted before the relief funds were touched. This class of work has consequently been the first to be brought into use. It is obvious from its nature that this class of work is that which will afford the most wide-spread relief, and that which will soonest come to an end. In some cases it will have ceased to afford relief before the stress begins.

11. The second class, raising and improving existing roads, covers a less area than the preceding, but it will last longer.

12. Making entirely new roads will provide large quantities of work in places, but for the most part these places seem to be comparatively few.

13. It would appear from these remarks that, as the distress becomes more severe, the means of meeting it will become less, and more contracted.

14. It seems desirable to note how how far this view of the question is borne out by the information afforded by the fortnightly narratives and returns of labourers.

PATNA DIVISION.

Shahabad District.

15. In this district the ordinary district roads do not appear to have been treated as relief works, so there is generally no information about them, nor can it be said how long they will last. The return up to the 21st February last shows only 12 relief works in progress, of which one is for ordinary repairs, eight are not on the list, and only three are regular relief works on the list. The ordinary repairs must, I conclude, be nearly exhausted. The relief works seem to have been scarcely touched.

Gya District.

16. Relief works appear to have been commenced in February; most of these are ordinary repairs, but two are regular relief works. As noted further on (paragraphs 49 to 56), five out of the nine relief works seem scarcely in a state to be commenced, but the two that have been begun are not of these. Only one work is calculated to last beyond the end of March, and that one only until the end of April.

Patna District.

17. The returns from this district are prepared with unusual clearness. No works held in reserve for special relief have been commenced; the ordinary repairs, expanded as already explained, have been carried on, and it would appear from the return to 21st February that in 11 cases only out of 21 have the district allotments been exceeded, and the cost fallen on famine funds, only two of the reserved works have been commenced.

18. In each sub-division some work is shown as likely to last until May, and none for longer. There are so many reserved works untouched, that there scarcely seems reason for apprehension of there being scarcity of work, especially when referring to the comparatively satisfactory condition of this district consequent on the late rains.

Sarum District.

19. The fortnightly list of works up to 21st February is a formidable one as regards the number of works entered, but every work, even making bricks, seems included. It is noticeable that out of the 181 works entered, only 15 will last until the end of May next and one until June; two tanks until the end of April, six tanks until the end of March. Of the remaining works, some are now finished, and none will last beyond the current month.

20. After the current month, the main reliance of the district would appear to be wells, tanks, and drainage channels. The total cost for these is entered at 6¼ lacs of rupees, but no details have been received of the works proposed to be carried out with this large sum, and it seems very doubtful whether the drainage projects are in at all a fit state to be put in hand though they seem to have been commenced.

Chumparun District.

21. The works entered in the list for this district are neither numerous nor extensive, and there are considerable doubts as regards some of the most costly of them. More works will undoubtedly be necessary, but from an application just received from the superintending engineer for additional establishment, the subject is evidently receiving attention; and from the last fortnightly list it would appear that additional works have been begun.

22. In the return of labourers the information as to the time during which the works would afford employment has not been given, except in a few instances; two works are shown as likely to last until the end of May.

Tirhoot District.

23. The latest complete return of labourers (up to the 21st February) shows that, with three exceptions only, annual repairs are in progress in this district. Several of these are entered as providing work for four, and five for seven months; but as some of these only show a few* men at work, it seems probable, that the length of time refers merely to such limited employment of labourers. If, as would appear, the regular relief works are scarcely touched, there should be a good deal of work to fall back upon, provided the works entered are such as should be carried out, of which there is some doubt.

* (Several are under 10.)

BHAUGULPORE DIVISION.

Monghyr District.

24. Numbers of people have been very steadily employed on every relief work since the commencement of December, and this, it may be supposed, has been first of all on the ordinary district roads, and then on their expansion for relief purposes. Recent correspondence has shown that in the south-east corner of this district (Jumooee sub-division) more work is wanted, and the Commissioner has been specially looking the matter up. He has provided additional work in the shape of one or two additional roads, and an extensive system of minor roads connecting the neighbouring villages with the various lines of relief roads. In the Sudder sub-division one work is entered, as providing work for about five, and one for 7½ months; in the Jumooee sub-division one for 6 months; and in the Begooserai sub-division one for 5½ months, all from the end of February. The remaining works are shown as likely to last less than a month and a half.

Bhaugulpore District.

25. In this district 13 relief works out of 21 seem to have been commenced up to the end of the month. Four roads in the northern portion of the district where distress is great appear capable of providing work for three, and in one instance four months. Those nearer the Ganges for three or four months, from 1st February.

26. Regarding those south of the Ganges very much is not known.

Purneah District.

27. In the Ararea and Kissengunge sub-divisions all relief works seem to be in hand, but not so in the Purneah and Kudbah sub-divisions. Some of the more important works seem likely to afford employment for some time.

Sonthal Pergunnahs.

28. The remarks in the last return of labourers up to the 7th February is "No real distress is felt as yet." All the works in progress are entered as likely to afford employment up to the end of September next.

29. This district has not yet been declared a distressed district, but I notice it as completing the division.

RAJSHAHYE DIVISION.

Maldah, Rungpore, Bogra, and Moorshedabad Districts.

30. The probable time for which the works would afford employment is not noticed in the returns of any of these districts.

Dinagepore District.

31. Some of the works are already reported finished. The late fortnightly returns up to the 7th February show that some works have been already completed, that two works will last until May, and one until the end of that month.

Rajshahye District.

32. Four works are shown as likely to last until July and one until August next.

33. The general indication afforded by these returns would seem to be that there is a sufficiency of work in the Patna division south of the Ganges; that there is an insufficiency in the northern districts, especially the works in Sarun, Chumparun, and northern Tirhoot, and the same

as regards northern Bhaugulpore. Elsewhere in the Bhaugulpore division they appear to be doing fairly, and, excluding railway feeders, the same in Rungpore, Bogra, and Malda, Rajshayhe and Moorshedabad, provided no great stress occurs. In Dinagepore a great deal of concentrated work is provided by the railway feeders, but it would seem as though the better part of the ordinary relief work would come to an end during next month.

34. At the same time, I must remark, that I do not consider the inferences from these returns as altogether trustworthy. When the work is small or tolerably near completion, the estimated period of lasting is probably sufficiently correct; but not so in large works, or those spread over long periods. In these cases some calculation is necessary, based on an estimate which has not been prepared in many cases. Officers, with their hands full, are also not very likely to attend to such matters, and many of these returns do not give the idea of having been carefully prepared in the point under notice.

35. There is another very important consideration in reference to the estimated time of a work lasting; viz., to what number of men do such entries refer; to the number actually at work; to an anticipated increase; or to what? It would be easy for the local officers to make these entries with very considerable accuracy, if all other considerations were cast aside; but this cannot be. The best arrangement that occurs to me is to let the entries refer to the time in which 100 men could complete the work. This would not admit of the period of lasting being ascertained at a glance at the return; but, probably, it would be advantageous that such entries should be looked into and considered, and not absolutely accepted on faith.

36. If the work were a very large work, the time might be calculated with reference to 2, 3, or 400 men, or more, as might be convenient, a note being made of the unit assumed. By this means, and by referring to the numbers actually employed, and to the increase and decrease that might be expected, a tolerable general opinion could be formed of the sufficiency of the works.

37. It may, and probably would be said, that this is taking up the time of officers already very fully employed, and this is very true; but it is of as great importance that relief works should not suddenly cease as that they should be vigorously pushed on. An overburdened officer is likely to look to the present rather than the future, and requiring these entries should ensure an amount of attention to an important point which might not otherwise be given, whilst it would then be in the power of others to remedy any local shortcomings.

II.—Engineering aspects of the Work.

38. It is not possible to say anything very special or definite about the majority of the works, regarding them as engineering projects. Some of the entries on the lists are of works that have been previously discussed and considered, and here the ground is clear. But regarding the majority of the works particulars are not known, and it seems only possible to deal with them by general remarks. Indeed, in most cases, the cost is under Rs. 10,000 for each work, and according to the rules for district works under which relief works are being carried out, all such works should be dealt with and sanctioned locally; so that, as regards the mass of work, nothing whatever would be known to Government beyond the mere fact that a certain thing had been done for a certain sum of money. These works being to relieve labour for the most part unskilled, and being almost entirely simple earthwork; the power to work up to an expenditure of Rs. 10,000 implies a power to undertake projects of a far more important character than are usually carried out within the limit.

39. There are several engineering points of importance to be considered in connexion with projects for roads running through flooded country such as exist in many parts of Bengal; these are—

1st. The safety of the road itself, the height to which it should be raised, the waterway to be given, &c.

2nd. The effect of the road on the drainage and condition of the country, as in the way of increasing and extending the floods, thereby causing loss to the landholders and cultivators, and subjecting Government to claims for compensation, or from diverting the direction of flood discharges, changing the course of rivers, &c.

3rd. The effect on the sanitary condition of the country from the obstruction and change of the drainage, with consequent increase of malaria.

40. Full attention is generally given to the first point. The second point may receive a little attention from the local officers; and the third would probably receive none, for the position is not well established. Still it is desirable in every instance, and imperative in some, that the road should obstruct the drainage as little as possible. To lay out a road properly requires time and care, enquiry, and experience. I fear that these requisites must be wanting in many instances, for the urgency of relief requires that something should be done at once, and many of the officers employed on the relief works are quite new to Bengal, and totally inexperienced as regards its floods and peculiarities.

41. My experience of cases that have occurred on the northern bank of the Ganges, no less than such general considerations as the above, together with the remarks that occur in the correspondence connected with these relief works, lead me to view with considerable apprehension the ulterior effects and results of what I may call the indiscriminate construction of roads in the trans-Gangetic districts.

42. It is true that the works are in many instances being carried out under professional advice, and I have no doubt that the local officers concerned will do their best, but from the nature of the case, it is impossible for them to do what should be done.

43. In making these remarks I must not be understood as meaning that the best that could be done has not been done in permitting these works to go on as they are going on. There was possibly no alternative. But I would wish by these observations to impress as much as possible

the necessity for care, and to direct attention to the possibility of substituting other works for roads, such as tanks, &c., an end which is also of importance in consequence of the gradual decrease of relief works as already noticed.

44. By these preliminary explanations I would also wish to indicate the principles on which the subsequent remarks will be based, and to show, that under the circumstances of the case, it is possible to do little more than give general cautions and observations.

45. Proceedings on these views I would remark as follows on the various works on the lists.

46. The only general remark that seems necessary in regard to the repairs and raising of district roads seems to be that care is necessary in the latter case. Want of funds often tends to insufficient waterway, and though this may be of little importance when a road is but slightly raised, and any excess of water can find relief by topping or breaching the road, yet it may become of great consequence, both to the road and to the country, when the former is raised so as to be safe above the floods.

Shahabad District.

47. *No.* 45, *Bhabooa to Mohuneea, Rs.* 8,666, and *No.* 47, *Chynepore to Durgoutee, Rs.* 11,851; in the western corner of the district are heavy works, apparently passing through flooded country. *No.* 51, *Soasua to Bickrumgunge, Rs.* 15,960, crosses the drainage for 42 miles. These seem to require particular attention. Nos. 47 and 51 being over Rs. 10,000, the projects should have been submitted to Government, but they have not yet been received.

48. As the Sone canal works command this district very fully, the ordinary relief works ought apparently to occupy a subordinate place.

Gya District.

49. There are four very heavy works, which being over Rs. 10,000 each, the projects should have been submitted to Government, but they have not been received yet.

50. *No.* 2.—*Baroon and Behta Road,* 70 *miles, Rs.* 50,000. In February 1869 the following orders were issued to the Commissioner of Patna:—

> "It is believed that there is no traffic on this road, and apparently little chance of any. The Sone flows close by the road on one side, and one of the main irrigation canals will do the same on the other. The Lieutenant-Governor therefore thinks that there is no necessity for making this road anything more than a good district road, and to do this no large expenditure will be necessary, as the length from Baroon to Saidabad is already completed, and a district road now exists from Saidabad* to the Dinapore Railway Station."

* Saidabad is beyond the Gya District

51. The completed portion being within the Gya District, it is incomprehensible how it is proposed to expend Rs. 50,000 on this road. Canal works are in active progress alongside the road, and afford relief. Work should not be permitted on this road without special necessity and explanation.

52. *No.* 3.—*Nowadah to Warisaligunge,* 13 *miles, Rs.* 32,000. This road crosses a country difficult from being traversed by the river Sukree and watercourses, and from the system of irrigation usual in this part of the country. It requires special consideration, and if there is any probability of work being required on this road, the project should be submitted immediately. This project appears to be connected with a proposal from the Monghyr District, on which I remarked† as follows:—

> "It will, the undersigned believes, pass through a rich part of country, and if continued to Nowadah, it would open a new route from the eastward to Gya; but to construct it thoroughly will cost a considerable sum, even if the River Sukree be left unbridged. The most expensive bridging is, however, in the Gya District, and it might be worth while to make the portion in the Monghyr District, even if the other were left untouched. The detailed estimates which are being prepared will settle this point. The Superintending Engineer (Captain Russell, R.E.) reported as follows on this road in the early part of 1868. Accordingly, last season, I reconnoitred this part of the country, and now beg to annex a rough sketch, and to report the conclusions at which I arrived with respect to the route shown in red. There are no difficulties between Nowadah and the Sukree. The Sukree crossing is about 2,000 feet wide, and every villager from whom I inquired stated that the river does not spill over its banks until some 15 miles lower down. Considering the fetch of the river, and the capacity of the channel here and lower down, I think this information is correct. From the Sukree for several miles there are no obstructions; a few small irrigation channels are crossed, and some surface drainage must be provided for. Near the village of Baghibuddiya is a nullah (originally a paen), about 50 feet across, fetching from an ahrah or tank at Murooa a few miles south. A little further on, near the village of Sumhuree, there are two small paens, also fetching from tanks near Mahibra. I am not sure that the channels are correctly shown in the sketch, for I could not follow them. The villagers had released the water in the tanks, and the fields were inundated. The route then crosses a high and level tract as far as the villages of Sumhuree and Murooa; near the former is the Kouriharee River, about 60 feet across, and near the latter a larger stream or torrent. The route then meets the Nattee River, 100 feet across, with sandy bed and shallow channel. This spills over its bank for a few yards in heavy freshes."

† Vide Memorandum from this Office, No. 468, dated the 27th January 1874.

53. If this road does not form part of the road alluded to in these remarks, the requisite alteration of alignment should be made, and the two districts should work in unison, so as to have one good road.

54. *No.* 7.—*Jehanabad to Hoolasgunge,* 18 *miles, Rs.* 30,000. This heavy work crosses very difficult country, and the project, if required, should be carefully got up at once. The work is one that should not be commenced until the project has been approved, except under urgent necessity.

55. *No.* 9.—*Bela to Kazirserai,* 10 *miles, Rs.* 23,000. The last remarks apply equally to this project.

56. *No.* 1.—*Behar and Rajowly Road.* A portion of this road has been completed. It would be well if a report were made of what is intended to be done, as assistance might be given from the reports and correspondence in this office regarding this road.

Patna District.

57. It has been necessary to obtain the details for raising the roads held in reserve from another return submitted some weeks previously, and the entries may not therefore represent exactly what is intended; but taking these entries as they stand, the following remarks are called for.

58. *Nos.* 51 *and* 55 *and* 52 *and* 56 are roads from the *Buktearpore and Futwa Railway Station to Raneebaugh* viâ *Behar and Hilsa;* and portions of these roads cross the heavily flooded land immediately south of the East Indian Railway. It appears to be only contemplated to raise them to a small extent, and there does not seem to be any objection to doing this so as not to interfere with the floods, and yet, as they subside, to have a roadway that from being slightly raised would soon dry: but anything like an attempt to carry a raised road above the level of these floods should be peremptorily forbidden until approved by Government on regular plans and estimate. It would cost an immense sum, and the most careful preliminary investigation and consideration would be necessary.

59. *Nos.* 41 *and* 59, *Mussowree to Ekangarserai, and Behar to Ekangarserai,* cross difficult flooded country, and require care as in previous cases.

60. *No.* 60, *Giriak to Nowada,* appears to belong to the Gya District, and to have been provided for in item 1 of that district.

61. *Excavation of tanks in the Sudder Sub-division* is contemplated to the extent of *Rs.* 32,000, but no details are given.

Sarun District.

62. The map shows this district to be well supplied with roads, and this would appear to be borne out by the circumstance that only two new roads are proposed. Both of these, *No.* 39, *Buragaon to Gopaulgunge,* 12 *miles, and No.* 40, *Sewan to Bussuntpore,* 20 *miles,* seem to require particular attention as they cross the drainage.

63. This district is peculiar in having brought forward proposals for a large amount of work, not mere road earthwork.

64. *No.* 2.—*Rs.* 32,055 are asked for, for the *construction of bridges, &c.* It seems doubtful whether this will be of much use for relief purposes, as carriage will be necessary for carting fuel, bricks, and lime, and it will also be required for carting rice.

65. *No.* 3.—*Sinking wells along roads, Rs.* 50,000. If these are to be pucca wells, their construction will be a great boon to the district, and a work that will be thoroughly appreciated by the people. The carriage difficulty just alluded to may, however, stop or nullify the work, which after all would only furnish employment to a limited number of special workpeople. If the wells are cutcha, the number would be great, probably 2 per mile on the average; their value would be transient.

66. *No.* 4.—*Excavation of tanks at places, Rs.* 1,50,000. This seems likely to be more profitable work than roads. There will be permanent benefit, with but little subsequent outlay; the benefit will, however, be restricted to a few people. The tanks do not appear to be very numerous according to the map. There are only 40 shown on the map which would give an average of Rs. 3,750 each. Thirty-three appear to be in progress from the fortnightly list.

67. *No.* 5.—*Improvement of different Drainage Channels, principally in Thannahs, Bussuntpore, Mushruk and Pursa, Rs.* 3,00,000. None of the promised projects have been received. Projects of this nature require very great care and inconsiderable special and professional knowledge; if they are injudiciously made, much harm may be done, or a good deal of money may be wasted, and any of these projects that it is proposed to carry out soon should be submitted without delay.

68. *No.* 6.—*Cutting of an irrigation channel along the Gunduck Embankment from Doomurrea to Hussunpoora, about* 46 *miles, Rs.* 2,00,000. This project is one that has been considered in the irrigation branch; the probable cost is understood to be about double the sum mentioned. It should not be carried out without the approval of the Government in that branch.

69. *No.* 7.—*Drainage of the Hurdea Chur, Rs.* 31,000. This project was submitted in July last in such a crude state that it had to be returned. If the work is now required as a relief work, the project should be amended and re-submitted. It is not one that should be commenced in the haphazard sort of way in which it first came up.

70. The amount of expenditure proposed is now entered as Rs. 31,000; the cost of the drainage scheme was then entered as Rs. 21,420; but there was another work along with it for extending embankments amounting to Rs. 9,682, making Rs. 31,102. It is probably now proposed to carry out both schemes; if so, the embankment portion should be forbidden, as it is a part of the Gunduck scheme now in the hands of the Irrigation Department, and should not be taken up without reference to that department.

71. The fortnightly list of workpeople, show works that are not included in the original lists, *e.g.*, an extensive tramway road is in progress employing about 8,000 workpeople per diem, and it may perhaps be noted here that the Court of Wards appears to have 114 tanks in progress, and the Chuprah manager, 11 tanks and 7 wells.

Chumparun District.

72. Ten new roads are contemplated, but the works seem to be of an unimportant character, as is the case with the repairs to be carried out; were it otherwise, considerable care would be necessary; and considering the increase of want in this district since the foregoing remarks were drafted, more work must be now contemplated than is implied in the list. The special superintending engineer should look particularly after these works.

73. Of the *other works besides roads, No.* 1.—*Embankment to protect the Segowlee end of the Segowlee to Raxoul Road,* 4 *miles, Rs.* 6,000, requires careful consideration. The amount to be spent on this earthwork implies a large and important work, which should not be left to the local authorities for disposal.

74. During last month I submitted* remarks on the undermentioned two proposals:—

No. 2.—*Repairing, deepening, and clearing out a series of large reservoirs which extend from the Nepal frontier on the north towards Dhaka, Puddumker, &c., to the Tirhoot boundary, including the clearing out of the channels or waterways connected with these series of reservoirs, and thus forming them into a chain of waterworks extending across the district, Rs.* 15,000.

No. 3.—*Connecting the Harai with the Dhanowti River by making a deep cutting of a mile in length near Barwat Seyna, south of Bettiah, and thus bringing the water of the Gunduck into the Dhanowti, Rs.* 15,000.

75. The information supplied was insufficient for any decision, and the projects were noted as being such as might prove of great importance, but requiring careful consideration and investigation, and as evidently such as should not be undertaken without great caution.

Tirhoot District.

76. The proposed relief works in this district are of the description to which the preliminary remarks apply, and in some instances very strongly.

77. The following roads run across the drainage, in some instances close to considerable rivers; the works are heavy; and if not properly done, may be productive of very bad consequences.

No. 1.—*Koolwah Ghât to Meetunserai on the Mullye Road,* 1½ *miles, Rs.* 1,000, *raising from* 2 *to* 6 *feet.*

No. 3.—*Boosrah Ghât Road,* 4 *miles, Rs.* 3,000, *raising considerably in places.*

No. 6.—*From Bajitpore Mowh to join the road between Dulsingserai and Shapore Pattaori Road at Mudhudabad,* 2 *miles, Rs.* 2,000, *to be raised about* 5 *feet.*

No. 8.—*Dulsingserai to Nurhun,* 12 *miles, Rs.* 4,000, *to be considerably raised in places, and a bund to be raised through a chowr.*

No. 14.—*Bunded road near Nundnee in the south of the district on the road from Shapore Oondee to Dulsingserai,* 2 *miles, Rs.* 6,000, *to be thoroughly repaired, raised, and strengthened.*

No. 18.—*Hatee to Singhia outpost,* 10 *miles, Rs.* 2,000, *to be raised.*

No. 19.—*Durbhungah to Baherah Thannah,* 14 *miles, Rs.* 5,000, *to be raised.*

78. The following remarks are called for in regard to *other works besides roads:—*

No. 1.—*A new embankment to be raised across the chowr from Tajpore Ghât to Phoolwaria on the Mullye Road, varying from* 8 *to* 14 *feet, length* 3 *miles, Rs.* 11,000; *this is however a road.* From every point of view, this seems to be a work of very great importance. The work apparently forms part of the main road running north from Mozufferpore to the Nepal frontier. The object appears to be to cut off the spill of the Bhagmuttee River over its left bank for a distance of three miles. If this work is merely strengthening the existing road so as to avoid all chance of ordinary breaching, then there may be no objections to it. But if it is more than this, and if it is to restrain a flood which, wholly or in part, at present finds its exit to the eastward over the road, the expediency of the work is very doubtful. It would relieve the country to the eastward, but only at the expense of some other parts of the district over which the restrained flood would be thrown.

79. *No.* 2.—*Changing the course of the Boorgunduck, opposite to Mozufferpore, by cutting a channel through the original bed of the river about* ½ *or* ¾ *of a mile, Rs.* 12,000. A special report has been made† regarding this work. If urgently required for relief purposes, it seems to be a work which might be carried out with probably only a small amount of harm, and no very great good; but the whole question, of which this is a part, is one of those requiring full investigation and consideration.

80. *No.* 3.—*Clearing out the bed of the Jogeah and Gogra Nullah for drainage purposes, length* 20 *miles, Rs.* 7,511.

No. 4.—*Repairing and strengthening of the zemindaree bund from Harouli towards Hajipore and joining it with the present Gunduck embankments, length* 4 *miles, Rs.* 3,000.—The Irrigation Department should be consulted on these projects. The latter seems intimately connected with the Gunduck embankment project, which that department has now in hand.

---

* *Vide* memorandum No. 301, dated the 16th January 1874.

† *Vide* my note dated the 16th February 1874, of which a copy was forwarded, under date the 21st idem, to the Commissioner of the Patna Division, to the Superintending Engineer of the Northern Circle, and to the Special Superintending Engineer of the Patna Division, trans-Gangetic districts, with memoranda Nos. 1073, 1075, and 1076.

81. As the embankment is zemindaree, it would appear to be more proper to treat the expenses under the usual rules for such embankments, than as a relief work.

82. *No. 5.—Clearing of old tanks and excavating new tanks.*
No further information received.

BHAUGULPORE DIVISION.

83. The lists of special relief works in this division are not in such a complete state as those received from the Commissioner of the Patna Division. The bare names of the roads are entered without general observations regarding what is to be done, and in some instances without the length. The absence of any intimation of the probable expenditure also prevents any opinion regarding the work contemplated being formed in this manner; so that I have little to go on save a general personal knowledge of the subject.

Monghyr District.

84. The roads in the south-east corner of the Monghyr district have already received a good deal of discussion* in several notes that I have submitted from time to time, so that I need not further allude to them now, nor do any of the roads in Monghyr south of the Ganges seem to require particular notice.

85. North of the Ganges there are two roads of considerable length, viz.,—

No. 9.—Bulkar to Rosrah, 50 miles.
No. 10.—Tirhoot Road, 44 miles.

86. The following order was passed from this office in February 1869 on the latter road:—

" The improvement of the main road between Monghyr and Mozufferpore was the subject of a " good deal of correspondence in 1861 and 1862, the result of which was that the road from " Mozufferpore to Dulsingserai was transferred to the officers of this department for im- " provement and maintenance. Between Dulsingserai and Monghyr it was found that the " country was subject to heavy inundation, and it was calculated that to make a good " unmetalled road without bridges would cost about five lakhs of rupees, a sum which the " Lieutenant-Governor thought quite disproportionate to the value of a road running, as this " one does, parallel to the Ganges. This length was accordingly left in the charge of the " local civil officers, the Commissioner of Patna being requested (*vide* the memorandum from " this office, No. 953 of the 28th February 1862,) to arrange for the construction of a " thoroughly good unmetalled road from Dulsingserai to the Ganges near Dhuneyspore."

87. These remarks probably apply with equal force to Road No. 9.

Bhaugulpore District.

88. Some of the roads south of the Ganges have been constructed and reported on by the Public Works Officers. Some skill is necessary in dealing with these mountain torrents, and the floods which they throw down on the plains. The river Chundun has been a source of great trouble at times.

89. North of the Ganges, No. 1N., the *Muddehpoora Road* has already been the subject of discussion,† and I believe that the Special Superintending Engineer is about to bring forward proposals regarding the lower part. I may here re-produce a paragraph of my memorandum marginally cited.

" It will be observed that in places the embankment is from 20 to 24 feet high; that at places " it runs through what may be called a sea, where it is exposed to great injury from waves; " that, even in its incomplete state, and where it had escaped from floods through breaches, " there were petitions of injury to crops. The late Commissioner, Mr. A. Money, C.B., " thought‡ that Government would be probably 'cast in " damages in suits brought by the Zemindars or Vil- " lagers' if there were not proper waterways. Raising " embankments such as seem contemplated is a matter " that appears to the undersigned to require great care and serious consideration, and it " seems to him that, before such works are allowed, the question should be brought forward " in a complete manner for consideration."

90. This extract will help to explain the large cost noted above (paragraph 86) regarding road No. 10 in the Monghyr District.

91. *Roads No. 4N., Narainpore to Sunbursa, 12 miles, and Moagama to Morkoha, length not given, and No. 5N., Milki to Gonolee, 10 miles.* These are off-shoots at the lower end of the Ganges, and Muddehpoora Road, and being under similar conditions of country, may be noted as probably heavy works, although their lengths are short.

92. I may here remark that the local authorities should be prohibited from attempting to carry out raised roads along the northern portion of the Monghyr District, and such portion of the northern portion of the Bhaugulpore District as is within the influence of the Ganges. If the

---

† *Vide* Proceedings, Local Communications A. for January 1868, Nos. 28, 30, and 33-34.
Proceedings, Communications A. for February 1868, Nos. 33-34.
Proceedings, Communications A. for March 1868, Nos. 1-3, of which a copy was forwarded with memorandum from this Office No. 5890, dated the 10th December 1873.

‡ *Vide* his letter, No. 166, dated 25th November 1865, to the Superintending Engineer, Northern Circle, (Proceedings, Local Communications A. for January 1868, Nos. 29-30).

questions were fully brought forward, the enormous expense, and the many difficulties, would probably render any prohibition unnecessary. But we have seen that, under present circumstances, such works may be hastily taken up, and that such caution is necessary.

93. The question, moreover, is not merely one of expense. Tampering with and changing the courses of such floods as arise from the large affluents of the Ganges which join this river within the distance above noted, complicated as these floods are by the floods and back-water of the Ganges, are matters not to be lightly undertaken. The effects may be momentous, both as regards the country and the Ganges itself.

94. Little is known of the northern portion of Bhaugulpore. It seems to be country more or less under water, but not presenting features of very marked difficulty.

Purneah District.

95. The district of Purneah is traversed by one large river, the Mahanuddy. Within no great number of years a larger river, the Koosey, has run through the district, changing its course from time to time until it has become for the present the western boundary of the district. In consequence of these changes the lower and western part of Purneah is traversed by depressions, and deserted beds of the river. There are also many smaller rivers, and altogether the construction of raised roads throughout this district, as seems proposed, is a matter of remarkable difficulty.

96. The Ganges and Darjeelling road has shown how expensive and difficult it is to deal effectually with these floods. The experience gained from the heavy floods of 1862 and of 1870 points this out, and shows what a delicate matter meddling with these floods is.

97. Almost every one of the proposed roads comes within the influence of extensive floods, and in regard to these proposed roads it seems only possible to say, judging from past experience, that, if they are to be properly raised roads, extensive and serious expense, difficulties, and complications, must be contemplated.

Sonthal Pergunnahs.

98. A portion of the relief works consists of railway feeders and other roads which have been reported on and discussed in this department. The executive engineer should be guided by the orders issued from time to time in each case. If he has not got them already, they can be obtained from the superintending engineer, or from the executive engineer, Bhaugulpore district.

99. The roads run through a country which our experience shows requires a good deal of investigation and consideration to determine the best and most economical road.

RAJSHAHYE DIVISION.

100. The information regarding the Rajshahye division is not in a satisfactory state. One district, Pubna, has not yet been classed as a distressed district. Of the remainder, there are lists of relief works from three,—Dinagepore, Rajshahye and Moorshedabad,—but not from the remaining districts,—Maldah, Rungpore, and Bogra. This omission has been supplied, as far as practicable, from the works entered in the fortnightly lists of laborers and from the fortnightly narratives.

Maldah District.

101. There is no regular list of roads from this district. Several new roads are projected; this seems to be a district where, in some instances, particular care is necessary as regards floods.

Dinagepore District.

102. This is a district of which we have not intimate knowledge in the office. The old Darjeeling road passed from south to north on very favourable ground. Major Lindsay remarks in his report that through the Dinagepore district "the line (of "railway) is an easy one." But in his letter* of December last the Relief Commissioner observes, "I have assumed "that the general height to which roads will have to be "made will be from three to four feet; and according to a "scale furnished me by the district engineer, the cost of "earthwork three feet high would be Rs. 770 a mile, and Rs. 1,127 for four feet. I have taken "the average of the two, and put down the estimated cost at Rs. 950 a mile on all roads, and I "do not think this will be very far from the mark either way. A record is duly kept, and has "been from the commencement, of the number of coolies employed on each line of road. You "will see from the above that I estimate the roads connecting with Purneah emigration roads "to cost Rs. 85,780, the roads on which work has been begun, or is going on, to cost Rs. 1,01,150, "and the proposed roads to be made in case of necessity to cost Rs. 2,29,900, at a uniform rate of "Rs. 950 a mile. Of course, if the roads are only made two feet high, the cost would be much "less, but they would certainly all go under water or be washed away in the rains."

* No. 73., dated the 18th December 1873, to the Commissioner of the Rajshahye Division, of which a copy was received with endorsement No. 272 S.R., dated the 26th January 1874, from the Statistical (scarcity and relief) Department of this Government.

103. This representation would seem to require some modification. A country so generally under water, as would be gathered from these extracts, would be well nigh uninhabitable, and intersecting it with roads would be a serious undertaking.

104. It would appear, however, from some of the remarks in the list of roads, that "there are "cart tracks down all the high lands which run uniformly north and south;" and on some of the cross works it is noted that bridges of considerable size, or heavy earthwork, will be required.

105. The inference to be drawn from these remarks, coupled with what has been noted in paragraph 102, and the circumstance that the district is traversed from north to south by several large rivers, seems to be, that north and south roads are comparatively easy, and require little raising, while the east and west, or the cross drainage roads, are difficult and heavy works, which require a good deal of raising, and call for particular attention to the bridging, which is likely to be unusually heavy.

106. I make these remarks partly because if this average calculation is accepted and acted upon, it may prove very deceptive. The quantity of work on difficult roads may be much more than is anticipated, or a great deal of unnecessary work may be done on easy roads. The estimate would, indeed, appear to be more than usually uncertain.

107. In his letter[*] submitting the list of works, the relief commissioner remarks, "All the "officers I am employing are unprofessional men as far as "engineering is concerned, but the work they are doing is "equally unprofessional, as it merely consists in raising or "repairing and improving existing lines of roads. We have "not attempted anything in the shape of heavy bridging, but are merely putting in small bamboos "or tâl tree bridges where we can, and leaving the larger gaps for future consideration."

[*] No. 73, dated the 13th December 1873, quoted in margin of paragraph No. 102 of this note.

108. The course pursued in regard to bridging is judicious, and if "raising or repairing and "improving" mean little more than merely filling up breaches, and restoring a road to its former and usual condition, nothing need be said; but if, under these terms, a road, which at times may be extensively topped by floods and submerged, is to be raised above all floods, then the matter is one which requires professional investigation and consideration.

109. The foregoing remarks refer to the list originally submitted by the relief commissioner. Lately, on looking over the fortnightly narratives, several additional roads are noted as having been commenced. These have been marked down, as far as possible; but we have not always been quite sure that we are correct as regards the places mentioned, and the course of the roads.

Rungpore District.

110. There is no regular list of roads from this district. The relief works seem to be little more than improvements of old tracks and roads, and the principal point for attention seems to be the extent to which the raising may interfere with the floods, as noted in paragraph 108.

Bogra District.

111. This is another district from which no regular list has been received. The best has been done to complete a list from the fortnightly narratives and returns of labourers. The new work would appear to consist of railway feeders which are, I presume, under the superintending engineer, Northern Bengal (State) Railway. Regarding the remainder information is uncertain.

Rajshahye District.

112. There is a list of roads from this district, but the work to be done on the roads is not shown. I gather from the fortnightly narratives that two feeder roads are to be under Major Lindsay, and that there are two new local roads; the remainder are ordinary district roads.

Moorshedabad District.

113. From this district also the list of roads was unclassed, but they appear to be all repairs to district roads except in two instances,[†] the projects of which are apparently to be submitted.

[†] No. XXVIII., road from Berhampore to Hureeaparah.
 „ XXVIIIA., road from Hurreeaparah to Nowada.

114. There is a scheme for draining Berhampore,[‡] which has been sanctioned, and is to be carried out by Mr. Wickes.

[‡] By a drainage out from the Station to the Gobra Nullah with a branch drain to Moydapore, *vide* letter from this office, No. 850, dated the 12th February 1873, to the Commissioner of the Rajshahye Division.

115. I had hoped to be able to present something like a general statement of the probable cost of these relief works, rough though it might be, but the idea proves to be utterly hopeless.

116. There is good information regarding probable cost from the Patna division, none whatever from the Bhaugulpore division, and the same from the Rajshahye division, except as regards the Dinagepore district, and here the calculations are based on a general average, which, I am afraid, is not of much value.

117. It may, however, be useful to throw what information there is, including the ordinary district road expenditure, into a tabular form, as follows:—

District.	Ordinary District Road Repairs.		Improving existing Roads.		New Roads.		Other Works besides Roads.	
	Length.	Cost.	Length.	Cost.	Length.	Cost.	Length.	Cost.
		Rs.		Rs.		Rs.		Rs.

* Exclusive of feeder roads to the Northern Bengal (State) Railway, about which no information has been given.

The lengths of roads are for the most part entered from measurement on the map, the information not being available from the lists.

J. E. T. Nicolls, Colonel, R.E.,
Secretary to the Government of Bengal
in the Public Works Department.

The 21st February 1874.

Enclosures 1 to 15 to Thirteenth Special Narrative of the Drought of 1873–74 in Bengal, from 6th to 19th March 1874.

Enclosure No. 3.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 17th March 1874.

READ—

THE District Narratives of the Patna Division for the fortnight ending on the 7th March.

The narratives were received punctually, the latest, those for Tirhoot, having reached Calcutta on the 13th March.

Patna.—The bazaars in the Patna district continue to be well supplied with grain of all sorts, and private import trade is active: prices would be lower but for the purchases made by Government for the Hutwa Raj and Tirhoot. The weather has been all that could be desired during the fortnight, with the exception of one local shower of rain accompanied by hail: more than double the usual amount of cheena has been sown down.

The outturn of the rubbee everywhere promises to be very satisfactory. Harvesting is being generally carried on throughout the district, and will occupy the poorer classes for three weeks or more; a twelve-anna crop is generally expected. The Magistrate has not seen a single case of distress in his visits to the local fund works, nor a single man, woman, or child employed on them who could not give a fair day's work if willing to do it. The monthly return shows 239 cases of thefts, &c., as against 167 and 183 in corresponding months of previous year, so that the increase in crimes against property is not very great in the Patna district. There was a diminution in the average daily attendance of labourers on relief works, partly to be accounted for by the harvesting of the rubbee crops. Of the 67,500 maunds of Government grain allotted to the district, about four-fifths had reached their final destination and been stored. The people are not taking advances for the purchase of grain or for agricultural improvements. The Magistrate had taken no steps to afford gratuitous relief, being of opinion that none would be necessary: he was proceeding to carry out the instructions contained in the recent Government order in regard to providing relief-houses against possible inroads of destitute people from North Behar into the Patna and Dinapore cities.

3. *Gya.*—There is no dearth of food in the Gya district, but prices continue to be exceptionally high; and though the wheat crop is excellent, only 10½ seers per rupee are obtainable, whereas the rate is 16 and 17 seers at Patna. The sub-divisional officer reports at length on the tract of the Nowada sub-division, regarding which apprehensions had been entertained. The late rains have done much good, not only saving half the rubbee crop, but also improving the grass and consequently the cattle, and enabling the people to break up their rice lands. Mr. Beames writes that the state of things is everywhere all that can be desired, and that the price of food has fallen in most places, while troops of cattle are everywhere employed in carrying grain, straw and merchandize about the country in large quantities.

All the sub-divisional officers unanimously pronounce the crops to be excellent; the road-works are deserted in order to secure the harvest; only 843 people are on the relief works; but crimes against property are more than twice as numerous as in ordinary years. Private importations of grain into Gya are increasing; the means of transport have proved sufficient. Twenty-one storage centres as previously reported have been fixed upon for the district, and above a lakh and a quarter of maunds stored; the gratuitous relief required by beggars and infirm persons appears to be judicially given. The non-arrival of Government grain at the Gya stations was due to the whole power of the railway being occupied in supplying the more emergent needs of North Behar; it is satisfactory to learn that the carts selected for the Gya grain were utilised elsewhere.

4. *Shahabad.*—The supplies in the Shahabad bazaars are reported to be still sufficient; imports of grain are still large, 1,10,000 maunds of private grain having been brought into Shahabad by rail during the fortnight. Prices of rice have fallen perceptibly in Arrah; the price of coarse rice is 12 seers a rupee, in some parts of the district 10½, and at Rughonathpore 14 seers. Favourable reports had been received of the condition of the spring crops in most sub-divisions, and no harm had been done by the heavy thunder-storm of the 5th March; in the absence of any unusual calamity the spring harvest may be regarded as safe. The condition of the labouring and agricultural classes has generally improved, though the beggars and the infirm were undoubtedly being pressed; for the able-bodied the harvesting of the crops, the canal and road-works provide plenty of employment; they are in hand at some places, and will be commenced at others. Out of 1,37,000 maunds of Government grain required for the Arrah, Buxar, Sasseram, and Bhubooah sub-divisions, 65,000 have been received. Besides the district relief committee and the committees for sub-divisions, nine sub-committees for relief centres have been selected in Arrah, and ten in Sasseram; they are under arrangement elsewhere. Fourteen places have been fixed on as work-houses or centres for the distribution of food and gratuitous relief, and committees of supervision have been appointed. Measures have been also taken to distribute to each subordinate officer sums for disbursement on charitable relief when necessary, and to provide light labour such as rope and thread-making. The average daily number of persons employed on the relief works was 1,279.

5. *Tirhoot.*—As the Lieutenant-Governor is now in the Tirhoot district, and is giving orders himself on every point, it is not necessary to remark at length on the two Tirhoot Narratives which are full and interesting.

Head Quarter relief charge.—It is satisfactory to learn that the relief officer is able, after visiting the tracts and villages where matters were worst, to report that "no deaths have occurred "attributable wholly to starvation." Relief works are open, or are being opened, in all the distressed neighbourhoods. It is well that Mr. Gordon should have been able to find local men who can efficiently man the eight relief circles in the Head-Quarters Sub-division. The condition of the people in the Hajeepore and Tajpore Sub-divisions is clearly better than at the date of last Narrative, 9,314 labourers appear to be employed on the relief works, of whom less than half are in the Head-Quarters Sub-division. Looking to what Mr. Gordon says of general distress in several parts of the Mozufferpore Sub-division, the numbers of relief works ought certainly to be increased. Private importations of grain seem to be exceedingly small; and it will be necessary to expedite the transport of the allotted quantities of Government grain to the distressed tracts of Mozufferpore Sub-division. Now that inspectors for the relief circles have joined, regular charitable relief must be systematically and extensively given in the shape of advances of grain to ryots, or of distribution through jeyt ryots to destitute women and other villagers who may be unable to work. Returns of the recipients of such relief must be given in next Narrative.

6. *Durbhungah relief charge.*—It is clear that there is real famine among the poorer classes in parts of Durbhunga and Mudhoobunnee and perhaps in the south-east corner of Seetamarhee. Three deaths from starvation are reported, all of which occurred in Durbhunga; but from several quarters severe distress and some suffering is reported. The people are coming to the relief works in immense numbers; on one work alone the daily average of labourers rose from 7,000 to 28,000 persons. Altogether 96,532 labourers are employed on Government and Court of Wards' works, besides 5,208 on private works. Some of the work done by these people is very small indeed; there had been peculation and mismanagement on the works, but this is now being remedied.

7. Mr. Macdonell's account (paragraph 29 of the Narrative) of the way in which he is administering charitable relief and bringing relief to the doors of the people is interesting; but it is not clear that he is utilising the local agency to the utmost; no mention is made in his scheme of the putwarees, who constitute the most intelligent village agency in Tirhoot. Sir George Campbell has, during the last ten days, been arranging for posting skilled native officers, borrowed from the North-Western Provinces, to the relief circles and sub-circles of Durbhunga. But it seems extraordinary that in East Tirhoot alone the local officers should have been unable more fully to utilise local agency, both for supervising relief works and for directing charitable relief. In two districts, so very differently constituted as Sarun and Dinagepore, many thousands of workmen are employed on relief works, paid regularly, and kept in comparative comfort by an agency improvised locally, and supervised mainly by the local civil officers.

8. The amount of Government grain stored in the Durbhunga Sub-division with its 867,000 persons, so many of whom are actually in distress, is as yet unhappily very small, only 50,000 maunds. The Chumpta Ghât transport agency had temporarily broken down; Sir George Campbell has made arrangements for at once hurrying up more grain by new routes, *viâ* Mokameh and Monghyr. Meanwhile, the private stocks of Durbhunga town are lasting in the most unexpected way; and the dealers, perhaps influenced by the knowledge that immense Government importations are on the road, are selling at comparatively moderate rates; and thus the people are tiding over the month of March. During the next four months, there can be hardly any fresh food-supplies, for the spring food-crops of North Tirhoot are very inconsiderable. The Government supplies, however, when they arrive and are distributed, will support, for several months, the great bulk of the population, so that the possible exhaustion (paragraph 8 of the Narrative) of the private food-stocks need cause less anxiety, provided only they last until the Government grain becomes available. In Seetamarhee, which is supplied mainly by the Bunker Ghât transport agency, the Government food-stores are already very much larger; and it may there be safe to begin making sales and advances of grain to all who are in absolute need.

9. *Sarun.*—The supplies of grain in the local markets of Sarun are still sufficient, and prices are nowhere above 10 seers per rupee; out of the quotations for thirty places, at only six marts was the price of coarse rice dearer than 11 seers per rupee. The spring crop, which in Sarun covers a large area, may now be "considered assured" with an out-turn equal to two-thirds of an average crop. The condition of the people is on the whole fairly good, though in some tracts distress is expected to occur later in the year. The average number of persons on the relief works has risen to 91,512 during the last fortnight; but owing to the spring harvest, the number fell at the end of the fortnight to 76,714. The transport and storage of Government grain continues to go on smoothly and expeditiously.

10. With regard to Mr. Hudson's remarks, paragraph 30, on the difficulties in the way of making advances, the Lieutenant-Governor would refer to the Relief Committees' instructions recently circulated, which authorize advances of grain to ryots who are absolutely in need, and to whom advances cannot be made through or on the responsibility of the zemindars. Now that there is enough grain in store in Sarun, the Magistrate-Collector can, on application, obtain from the Commissioner sanction to such additional sub-deputies or circle officers as he may require to give effect to the orders regarding grain advances to ryots.

The Lieutenant-Governor is satisfied with Mr. Drummond's assurance that there is "no "immediate necessity for any large scheme of charitable relief." But in view of what is said at paragraphs 15 to 18, of the need which Mr. Hodgkinson finds for a village-to-village inquiry in

Hutwa, and of the necessity for special officers to deal with grain advances business, the Lieutenant-Governor thinks that in the two or three worst thannahs, some additional relief organization must be required; and he begs that distinct proposals on this subject may be submitted to him during his coming visit to Bankipore.

11. *Chumparun.*—Over the greater part of the Chumparun district, prices were easier and the spring crops promised fairly well. But in the Ramnugger sub-division matters are worse, the condition of the people is less hopeful, and the prices of the coarser kinds of food had risen to 8 and 8½ seers per rupee. Private trade was almost at a stand-still, and the sub-divisional officer had begun to sell Government grain to the public through the local traders at 11 seers a rupee.

The daily average of people employed on the relief works is now 53,825, inclusive of those on the embankments. Grain transport work appears to be going on well; but now that sales to the public have begun in Ramnugger, and are likely to be considerable, the stores in all the Ramnugger depôts must be largely and promptly replenished. Mr. Howe's account of his charitable relief operations shows that Sir Richard Temple's confidence that he would prove equal to the difficult charge of Ramnugger was deserved. But the Lieutenant-Governor would wish to receive with future Narratives, more complete statistics of the persons in receipt of charitable relief.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 1556—S.R.

COPY, with copies of the District Narratives, forwarded to—

The Commissioners of Patna, Bhagulpore, and Rajshahye.
The Relief Commissioner, Rajshahye.
The Magistrate-Collectors of Patna, Gya, Shahabad, Tirhoot, Sarun, Chumparun.
The Relief Officers, Durbhunga and Ramnugger.
L. C. Abbott, with Sir Richard Temple, on tour.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Calcutta, the 17th March 1874. Officiating Secretary to the Government of Bengal.

No. A, dated Bankipore, the 8th March 1874.

From A. C. MANGLES, Esq., Collector of Patna, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I have the honour to submit herewith my narrative regarding the state of the district for the fortnight ending the 7th instant.

A.—STATE OF THE COUNTRY.

2. The several bazaars at head-quarters and in the interior of the district continue to be well supplied with grain of all sorts, and the harvesting of the rubbee crops, which is now going on generally throughout the district, has largely supplemented the supplies brought from other places. Judging from the large importations which are daily being made by private traders, I have no doubt whatever in my own mind but that the supply will be quite equal to the demand in this district, provided that trade is allowed to take its own course, and that Government does not step in and become a purchaser from our local markets. Already considerable quantities of grain have been, under the Commissioner's orders, purchased for the Hutwa Raj and for Tirhoot from the city, which has, I am convinced, tended to prevent our prices going down so much as they otherwise would have done had not these purchases been made; and it was only this morning that a large number of mahajuns came to my house of their own accord and expressed their anxiety as to what would be the consequences should Government make the large purchases in the local markets which they heard it intended doing.

3. The following were the prices of grains obtaining during the fortnight:—

Patna.

	Seers.
Rice (best)	11
Ditto (common)	13
Wheat	15
Barley	18
Jowar	19
Maize	16
Gram	18½

Barrh.

Rice	10½
Gram	16
Maize	14½
Wheat	11½

Behar.

Rice	11½ to 12
Maize	17
Gram	16
Wheat	12
Kulthi	18

Dinapore.

Rice	12 to 12½
Maize	15½ to 16½
Mussoor	18
Khesari	16 to 16⅛
Wheat	13 to 15
Gram	17 to 17½
Peas	17½ to 18½

4. In the interior of the Sudder sub-division, rice is selling at from 10 to 13 seers. Maize 15 to 17, wheat 14 to 15, barley, mixed with peas, 19. The only place where rice is selling at the highest price given, *i.e.*, 10 seers the rupee, is at Moosowri, bordering on the Gya district, where its high price is no doubt owing to the large quantities which have been exported into Gya, but I trust that we shall have no actual distress in this quarter, as the rubbee crop is most favorably reported on by Mr. Rattray, my Salt Superintendent, now employed on famine work, who writes as follows:—

"The out-turn of the rubbee is promised in all directions as very satisfactory. Gram and mussoor now nearly off the ground form the principal crops, and were planted in rubbee as well as in paddy lands. These, I was informed by those gathering them, have yielded from 12 to 15 maunds per beegah; wheat and poppy have been grown on the banks of the river Poonpoon, Marchar and Dardah, and near wells; the former is of a good height and looks promising. The crop is also being cut on the plains."

5. There was no rainfall during the early part of the fortnight sufficiently large to allow of its being measured, except at Behar, where they had ·11, and where it is reported to have done much good to the cheena lately sown, and to the backward wheat. Yesterday, in the middle of the day, there was a sharp shower of rain, mixed with hail, which seemed to follow the line of rail from Futwah to Barrh, but was of no great width. I have not heard at present how much fell, or whether any damage was caused by it or not. With this exception the weather during the fortnight has been all that could be desired for the bringing to maturity the late crops, and the harvesting of the earlier ones. In Behar the cultivators, taking advantage of the small amount of rain they had, have sown down from 45 to 50 thousand beegahs in cheena, against from 18 to 20 thousand beegahs, which are in ordinary years put under this crop. Sugar-cane has also been largely cultivated, which would lead one to suppose that the people are in no immediate want of food, as it is a crop which takes a long time coming to maturity.

6. The harvesting of the rubbee crops of almost every description is now being generally carried on throughout the district, and will afford labor to the poorer classes for another month or three weeks. In writing under this head the sub-divisional officers of Barrh reports—"yield everywhere has been good, and the cultivators seem contented." In Behar the sub-divisional officer informs that the rubbee of every kind has yielded far better than was at first expected, and goes on to say—"no one, nay even the most covetous ryots, could wish for a better crop." In Dinagepore, Captain Playfair estimates the crop at from an eight to twelve-anna one, but in this, from all that I have heard from natives, I cannot help thinking that he is under the mark. In the Sudder sub-division, with the exception of a small portion of it in the south-west corner, where, owing to want of moisture, a large quantity of land was left uncultivated, it is reckoned that we have a twelve-anna crop.

7. During the fortnight no cases of misery or starvation have been brought to light; and though I have now visited nearly all the local fund works which are in progress throughout the district, I have not seen a single case of distress nor a single man, woman, or child employed on them who could not give a fair day's work for a fair day's wages provided they were willing to do so. The cry was general on all the works for higher wages, but this I refused to comply with, as I am of opinion that those now given are quite high enough, and because those asking, from the way in which they did, it would appear to have been under the impression that they were conferring a favor on Government in coming to the works at all, and not Government on them in having works ready for them.

8. The new railway sidings at Futwah, Barrh, and Mokamah have afforded labor during the fortnight to a large number of those seeking it. Though the number of people employed on our roads is considerably in excess of what it is in ordinary years, I am not prepared to say that this is any sign of distress, for had we in other years done the same amount of work, and occupied the same time over it, thus giving the people time to collect, I think we should have had quite as many as now come to us.

9. One case of grain-robbery, or rather attempt, was reported by the police during the fortnight, resulting in the death of one of the owners of the grain who was killed by *lattee* blows. From what I can hear, however, the robbery was not intended, but the paying out of an old grudge. The case is still under enquiry. Sixteen cases of theft of grain were reported, but all of a petty nature. I annex the crime return prescribed by the Government letter, No. 4801, of the 20th December last. It shows 239 cases of theft, house-breaking, &c., during the month, against 167 in the corresponding month of 1873, and 183 of 1872.

B.—Relief Works.

10. The average daily number of laborers employed on the different roads and relief works throughout the district was 6,529 against 6,956 as given in my last narrative. The falling off may be accounted for by the laborers now finding plenty of work in the fields, and by my having stopped the work in some localities where it was evident that there was no demand for labor. The map and report called for by Government order No. 712—S.R., of the 16th ultimo, will be submitted in due course, though I do not think that I shall find it necessary to make any alterations in the proposals already submitted by me in December last.

C.—Transport of Food.

11. The subjoined statement will show the figures of import between 15th and 20th ultimo as per latest returns received:—

	Rice.	Wheat, oats, and barley.	Jenera.	Other grains.
By rail - -	294,638	31,734	41,298	165,702
By river - -	550	100	3,610	1,540
Total -	295,188	31,834	44,908	167,242

or a grand total of 539,172 maunds, whereof 162,551 maunds were Government grain, and the remaining 376,621 maunds were made up from private importations. These figures do not include the receipts at the Futwah siding, the report from which has not yet reached this office.

D.—Storage of Government Grain.

12. Out of the 67,600 maunds allotted to this district, I have up to date received 58,822 maunds, of which 53,088 have reached their final destination and been stored in golahs in the interior; the remainder could also have been sent, had it not been that I wished to interfere as little as possible with private enterprise, and that I was already using a very large number of carts in the transport of treasure, baggage of troops, &c., &c., across the Ganges.

E.—Advances to Private Parties.

13. No advances were made during the fortnight either for the purchase of grain, or for agricultural improvement. In the one case, if for no other reason, this can be accounted for from the fact of those who have already made purchases finding it difficult to sell what they have bought owing to the abundance of the rubbee harvest which is now being reaped; and in the other, to the fact of the laboring classes preferring the lighter work of cutting crops to that of making embankments.

F.—Charitable Relief.

14. Being of opinion that no gratuitous relief would be necessary in this district, I have taken no steps under this head during the fortnight, but I will now carry out the instructions contained in paragraph 2 of the Government Resolution dated the 3rd instant.

Dated Gya, the 9th March 1874.

From A. V. Palmer, Esq., Collector of Gya, to the Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honor to submit my fortnightly report on scarcity and relief in Gya district, for the fortnight ending Saturday, 7th March.

A.—State of the Country.

2. The bazars continue to be well supplied. Some of the new spring crop has already found its way into the market. There is no dearth of food, although the quoted prices still continue exceptionally high. Wheat, for instance, of which an excellent crop in the district is assured, and which is procurable at Patna at 16 and 17 seers per rupee, is obtainable here at the high rate of 10 seers 8 chittacks per rupee.

3. The annexed table will show the reported price currents during the past fortnight in the chief bazars.

Bazars.	Wheat.		Barley.		Rice, 1st sort.		Rice, 2nd sort.		Millet.		Maize.		Gram.	
	Week ending 7th March.	Week ending 21st February.	Week ending 7th March.	Week ending 21st February.	Week ending 7th March.	Week ending 21st February.	Week ending 7th March.	Week ending 21st February.	Week ending 7th March.	Week ending 21st February.	Week ending 7th March.	Week ending 21st February.	Week ending 7th March.	Week ending 21st February.
	M. S.	M. S.	M. S.	M. S.	M. S.	M. S.	M. S.	M. S.	M. S.	M. S.	M. S.	M. S.	M. S.	M. S.
Gya - - -	10 8	10 8	15 0	14 8	8 4	8 4	10 4	10 0	15 0	14 0	13 4	13 8	13 8	13 0

4. Prices have been pretty stationary, with a tendency to improve.

5. There has been no rainfall to speak of during the past fortnight, nor is any now required.

6. Since submitting the rainfall report, two days ago, I have heard that about ½ inch rain and hail fell at Aurungabad. The sub-divisional officer reports the fall to have been very partial, and to have been succeeded by bright sunshine. It is not anticipated that it will have done much harm.

7. In the Nowada sub-division, Mr. Beames has, during the last fortnight, visited the south, south-east, and west of his sub-division. As this is a tract, regarding which His Honor has expressed apprehensions, I extract this portion of his report and submit it.

1. "Since writing my last report I have visited Rujowlee, Govindpore, Nowadah, Puchumba, Kowakole, and Pukreeborwan on the east, and Nordigunje, Joongi, and Hessooa on the west."

2. "At Ruwjowlee, on the 22nd February, I found everything in a good state, the rubbee crop in first-rate condition; and with the exception of 20 beggars, all of whom were diseased and incapacitated for work, every one appeared to be well-off and far above want."

3. "On the way to Govindpore, 23rd February, I passed through the large village of Akbarpore, where a constable is stationed. He is an intelligent man, and assured me that no case of distress had come to his notice, with the exception of one professional beggar, who was in a rather emaciated condition, and who was getting food daily from the people of Akbarpore. He said that this man could not be induced to go to Rujowlee, as he preferred the people's charity to that organised by Government."

4. "I then went to Akbarpore, passing through the villages of Khaira, Korinund, Dunnear, and Kohilla, in which, as you may remember, it was reported to me that there was distress, when I first took charge of the sub-division, and in which I reported the rice crop to be so good."

"The state of the crops, of the people, of the cattle, and of everything visible, was all that could be desired and most satisfactory."

5. "We then reached Govindpore (23rd February). With the exception of a few people here, who I mention under the head of "charitable relief" everything seemed doing well; and as to the future of this place, they say that the mohwa fruit will be a great stand-by to the people in distress.

"I may here mention that wherever I have been throughout the sub-division the effect of the late rains has been not only to save half the rubbee crop, but also to bring up the grass everywhere, to which circumstance the greatly improved condition of the cattle is attributable; and to enable people to break up their dhan lands, which they would not otherwise have been able to do, and which, I am told, will be productive of great benefit to the next dhan crop.

6. "Leaving Govindpore, 24th February, we passed through the Delwar hill pass and came into the Sear plain, and passed through Sear and Rupow to Nowadih.

"The rubbee crop is somewhat scantily grown, but very good wheat there is of it; the condition of the people and also of the cattle is unexceptionally good.

"The only thing to be regretted is, that the people don't seem alive to the necessity of sowing cheena and other crops, which might be of great service to them during the time of possible scarcity; and it is now too late to impress on them the importance of this.

7. "From Nowadih I went to Kowakole and Puchumba, where there is an outpost.

"The head constable told me that everything was going on well, and that there was not one single case of distress anywhere in his ilaka at present.

"He also said that the mohwa fruit was so abundant in this part of the country that he did not think people would suffer at all.

"I told him to keep me accurately and constantly informed of whatever took place, as I was so far off that I could not know unless he informed me, and he promised to do so.

8. "I then returned to Nowadih, and next day went to Pukreeburwan (25th February). This place has been so frequently spoken of of late that it will be sufficient to say that up to the present time there has been no change in the state of things.

8. "Returned to Nowada on the 25th, where I stayed up to the 1st of March, as I had my hands completely full of work there.

9. "Sunday, 1st March, came to Nardigunge; the crop for 2 miles out of Nowada is very thick, but principally opium. Then comes a long strip of country, where there is a large and long tract of cultivation, extending all along from Giriuk on the north to Toongi on the south, and two miles broad.

"I learnt that this crop is all bhowlie; it is as fine a crop as I have seen anywhere, and mostly rubbee food-crop; not so much opium, as I noticed elsewhere. Condition of the people good.

10. "2nd March. Started for Toongi. The whole way to Toongi there was a very large amount of rubbee crop, and the people busily employed in harvesting it.

"I am told to-day by the Assistant Engineer of Gya that the contractor on the Pukreeburwan road has now only 60 men at work, and that the rest have gone to cut the crops, and that he cannot get any more till the harvesting is over. This shows, I think, that until the rubbee crop is harvested, we shall not have many people on our hands."

13. The state of things is everywhere all that can be desired. The price of food has fallen in most places.

15. "I am very glad to notice everywhere troops of cattle employed in carrying grain, straw, and merchandize about the country in large quantities. This looks as if the people were making up for lost time."

8. All my sub-divisional officers are unanimous in pronouncing the crops excellent. The harvesting of peas and mussoor is approaching completion, and of the other spring crops it has commenced. This, and the collection of the opium, gives ample and acceptable occupation to all labourers. In fact, our road works are deserted in order to secure the harvest, and this is as it should be.

9. The condition of the people still continues good, and I have no doubt that it will remain so for another month, *i.e.*, till the rubbee is harvested. The mango, which may fairly be considered as a food-crop in this district, promises very well. It has been found necessary to afford some minor relief to the class of professional beggars, who, from the high prices, are unable to get a sufficiency by begging. This will be dealt with under "charitable relief." There have been no ascertained cases of misery or starvation.

B.—RELIEF WORKS.

13. One additional work (from Gya to Puraya, distance 10 miles) the Executive Engineer has been requested to mark out. This work has not yet been reported on or sanctioned. It is necessary to inquire first whether there are engineering difficulties in the way. When the sight of the new jail is fixed on by Inspector-General, the preliminary arrangements and brick-making will give employment to large numbers.

14. I have no information of any classes other than the ordinary coolies and beldar having come on to the roads. In fact, these classes are leaving the roads now temporarily, as above observed, to gather in the harvest, The statement, which will be submitted on Wednesday to the Public Works Branch of the Bengal Secretariat, will give all detailed information of relief operations.

15. The daily average of persons at present employed on roads is only 843.

C.—TRANSPORT OF FOOD-GRAIN.

16. The annexed table will give an approximate account of private food-supplies from outside during the fortnight:—

Bazaars.	Wheat.	Barley.	Rice, 1st sort.	Rice, 2nd sort.	Maize.	Gram.	Total.
Gya - - - -	800	176	182	1,801	293	374	3,625
Nowada - - - -	—	—	—	100	14	14	128
Jehanabad - - -	26	30	18	20	27	30	151
Aurungabad - - -	30	—	8	72	—	25	135
Daoodnuggur - - -	250	60	1,200	1,800	45	230	3,585
Total -	1,106	266	1,408	3,793	379	673	7,625

17. This gives a total of 7,625 maunds against 5,105 maunds during the previous fortnight. I annex a comparative statement showing private importations into the Sudder bazar of Gya alone as compared with the previous fortnight:—

	Wheat.	Barley.	Rice, 1st sort.	Rice, 2nd sort.	Millet.	Maize.	Gram.	Total.
This fortnight - -	800	176	162	1,801	—	293	374	3,606
Past fortnight - -	457	218	184	1,648	26	412	209	3,154

Thus showing a total of 3,606 maunds as against 3,154 maunds imported last fortnight.

18. Our means of transport have been sufficient, and have answered the expectation I formed; and had our grain-supplies from Government been delivered with any sort of punctuality, our entire consignment would by this time have been received, stacked, and stored.

D.—STORAGE OF GOVERNMENT GRAIN.

19. It may be in the recollection of Government that I fixed on three classes of storage centres in this district. The last class I do not expect to have to use.

20. I annex a list, showing the several store-centres fixed upon, with the quantity of grain stored at each. The main-store will be retained at main-centres, to feed minor-centres as circumstances may require. It is not desirable to have too large a store at minor-centres, more especially when there is no difficulty in supplementing them during all seasons of the year.

Statement of Store-Centres with amount of Grain stored at each.

Storage Centres.	Quantity stored.	Total.
	Mds.	Mds.
Gya	26,248	
Bela	3,012	
Sherghotty	4,279	
Utree	3,930	
Borochutti	922	
Ticaree	2,004	
Futtehpore	991	
Imanagunge	518	
		41,974

Urwul	11,880	
Gundhar	3,073	
Kinjur	1,996	
Hoolasgunge	605	
		33,922
Nowada	21,469	
Kadirgunge	2,814	
Pukreebarwan	1,872	
Rujowlee	3,993	
		30,148
Aurungabad	13,212	
Ruffigunge	2,000	
Kootoomba	3,002	
War	2,553	
		20,767
Total		1,26,811

21. I require about 24,000 maunds to complete my allotment. No more grain is required at Buktearpore. The carts waiting there were utilised by the Deputy Magistrate of Barh in sending grain to the Tirhoot side, hence they were not detained nor was demurrage necessary.

E.—Advances to Private Parties.

22. These advances are of two descriptions—

1st.—For purchase of grain, under rule 4, Bengal Government circular, No. 80.
2nd.—For land improvement, under land improvement advance rules.

23. Under the first head, there has been only Rs. 1,200 advance made during the past fortnight in two cases.

24. Under the second head, I submit the following statement:—

Name of Applicant and Right held by him.	Nature and Locality of Work for which Advance is applied.	Amount of Advance applied for.	Period within which the Work is to be completed.
	Jehanabad Sub-Division.	Rs.	
Hemun Singh and Rewa Singh, tenants (ryots).	Embankment in Fureedpore Uswar, Pergunnah Okree.	100	4 months.
Nehal Singh, tenant (ryot)	A pucca well and embankment in Dehoori, Pergunnah Bhelawar.	205	6 do.
Mussamut Salimun, zemindar	3 pucca wells and embankment in Goureepore, Kharaj, and Chiri, Pergunnah Bhelawar.	900	5 do.
Syed Burkat Hossein himself and Kurpurdaz of Dildar Hossein, zemindars.	1 pucca well and embankment in Uttri Putty, Pergunnah Ekil.	300	4 do.
	Aurungabad Sub-Division.		
Roy Hetnarain Singh, zemindar	Repairs to an old embankment on an Ahra in Singhpore, Pergunnah Kootoomba.	200	Before 30th June 1874.
Huaunath Singh and others, zemindars.	Ahra in Mouza Manohari, Pergunnah Kootoomba.	249	July 1874.
Hurnath Singh and others, zemindars.	Pyne and Ahra in Surdiha, Pergunnah Kootoomba.	200	July 1874.
	Total	2,154	Granted.

Statement showing Applications for Advance for Land Improvement received during the Fortnight.

Sub-Division.	No. of Applications received.	No. disposed of.				Total disposed of.	Pending.
		Application granted.	Application rejected or withdrawn.	Reported to Commissioner.	Returned.		
Gya - -	20	1	12	—	—	13	7
Aurungabad -	78	26	31	2	6	65	13
Jehanabad -	35	6	2	—	2	10	25
Nowada - -	The return for this sub-division having been incorrectly prepared has been returned for revision.						

F.—Charitable Relief.

25. Matters are much as they were last fortnight. A proper distinction between those forming a light-labor gang and those gratuitously relieved does not appear to have been made.

26. Hitherto, those gratuitously relieved have been relieved by payment of pice. This will shortly be changed to cooked food.

Jehanabad - -	66
Nowada - -	56
Pukreeborwan - -	20
Bujowlee - -	15
Aurungabad - -	5

27. I annex in the margin the number of professional beggars reported as relieved.

28. Relief to such men will, during the next fortnight, have to be given from Sudder Station. I desire to see by practice what plan is best, when it will be communicated to sub-divisions for adoption. My present idea is to assist these men by giving them a cooked meal, say twice a week, but not to congregate them together and so engender disease.

29. Meetings have been held now at Gya, Jehanabad, Urwul, and Nowada, and people generally have come forward handsomely to aid relief.

No. 350 F, dated Arrah, the 10th March 1874.

From H. W. Alexander, Esq., Collector of Shahabad, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit my seventh fortnightly narrative for the period ending on the 7th of March.

A.—State of the Country.

Abundance or scarcity of supply in the bazars.

The supplies in the principal marts in the district are reported to be sufficient; grain is still being largely imported by rail. The pea and gram crops are being harvested, and this has helped to increase the local stock. The new rubbee is coming in from the North-West Provinces.

Kind and prices of grain selling at one or more special principal marts.

In Appendix A. is given the kind and prices of different grains selling at the chief marts in the district. In some few instances the price of rice has risen, in others a slight fall is noticeable; upon the whole, however, there has been a very perceptible fall in prices.

Any information in regard to the amount and stocks of grain in the hands of zemindars and others.

3. No additional information has been acquired in regard to this. The sub-divisional officer reports that "the information on this head regarding the stocks in the Bhubbooa sub-division, already furnished in former narrative, has been corroborated by police inquiries."

Rainfall, if any; state of crops, the condition of the people, actual facts as to any known cases of misery and starvation, grain thefts or robberies, and condition of any particular tracts.

4. During the last week the weather has been cloudy and unsettled; on the night of the 5th of March there was a heavy thunder-storm accompanied by slight rain. This appears to have been pretty general, although rain is not required now. No harm has been done to the crops by that which has fallen.

The condition of the rubbee in the Arrah and Buxar sub-divisions is favorably reported on; and in the Sasseram sub-division is said to be everywhere good, except on the table-land. In the Bhubbooa sub-division, excepting the small area irrigated from the Doorgaoti, the rubbee is reported as below the average; and, in particular, "surson," peas, and rahar, owing to damage from frost, are not expected to yield more than half an average harvest.

The crops generally (excluding the loss occasioned by frost) are certainly in a better condition than they were at the end of January last; and, any unusual calamity apart, they may be regarded as safe so far as they have been sown.

The condition of the laboring and agricultural classes has improved; artizans, and the very poor, may be regarded as not worse off than they were a fortnight ago; pressure is no doubt being felt by those who subsist entirely on charity and from bodily infirmities are incapable of labor; and arrangements have been made to relieve all such cases which call for succour.

For able-bodied men there is plenty of employment in cutting the crops which are being harvested, and on the canal and road works.

No known cases of starvation have been reported. There has been no remarkable increase in the number of grain thefts and robberies. In four out of twelve cases the amount said to have been stolen exceeded ten maunds.

In regard to the condition of special tracts, I have nothing to add to the information furnished in my last narrative.

Relief works are being carried on in those parts of the Arrah and Buxar sub-divisions which are considered the worst, and in the Sasseeram and Bhubbooah sub-divisions; those portions of the country, namely, Chand and Akberpore and Rohtas generally, are reported to be better off than they were, and relief works are being started in each locality.

B.—Relief Works.

Full details in regard to all such works in progress will be furnished in the statement called for in Circular No. 5,718, dated 3rd December last, due on the 11th instant.

In addition to the work alluded to in my last narrative, work has been commenced during the fortnight on the road from Gurhunee *viâ* Sikreta to Bihta, in the Arrah sub-division.

In the Buxar sub-division work is going on on the roads from Khyree to Poorunda and from Chousa to Jumoaon, as reported in the last narrative. In addition, work has been commenced on the road south from Doomraon to Nowanuggur; and the road from Rughunathpore railway station to Sarya, the levels of which are being taken, will be commenced in a day or two.

In the Sasseeram and Bhubooah sub-divisions, in addition to the roads alluded to in the last narrative, work will be at once commenced on the roads between Hatta and Doorowli and Chand and Kudjura.

C.—Transport of Food.

Grain is still being imported in considerable quantities by local merchants; full particulars in regard to such importations during the fortnight will be submitted when they are received from the Traffic Department, East Indian Railway. Government grain for Sarun is being daily conveyed to the Barabra Ghât on the Ganges from the railway station at Arrah. I hear a large quantity of grain is to be conveyed by this route for storage in the Chumparun district. I only trust that when I may receive further consignments of grain for this district, I may not, owing to the above competition, find myself without the means of transport. At present no inconvenience is being felt, and the means of transport appear sufficient for all present requirements, both of Government and of private importers. By river the importations have only amounted to 937 maunds of wheat, gram, Indian-corn, and bajra, from the districts of Ghazeepore and Goruckpore. In the Buxar sub-division grain is being steadily imported by private traders. In the Sasseram sub-division 2,508 maunds of grain are said to have been imported from outside. These figures do not include private importations by rail, which in the said sub-division amounts to 5,484 maunds and in the Bhubooah to 1,302 maunds.

D.—Storage of Government Grain.

A very small quantity of grain has been received for this district during the fortnight under report. I have on more than one occasion reported what my further requirements are, and have requested that they may be complied with, and as soon as possible.

To the Arrah sub-division, out of 716 maunds said to have been despatched 516 maunds 37 seers 8 chittacks only were received during the fortnight, making in all a total of 22,026 maunds 2 seers 8 chittacks received up to date, all of which has been stored in the central golahs.

In the Buxar sub-division 21,060 maunds of grain have been received, and the whole amount stored in the central depôts.

In the central depôts of Sasseeram,
Chennary,
Tilothoo,
Nassrigunge,
Bhubooah,
Jehanabad,
Chainpore,
Chand,
Mohunnia,
22,010 maunds have been stored. The sub-divisional officer reports that "there has been a deficiency of about 700 maunds in the grain despatched and received."

In regard to sufficiency of stocks for Government purpose I have separately reported that I require for the—

Arrah sub-division - - - - -	50,000 maunds.
Buxar ditto - - - - -	30,000 „
Sasseeram and Bhubooah - - - -	57,000 „
In all - - - - - -	1,37,000 „

I have only received up to date 65,096 maunds 12 seers 8 chittacks, so that a balance of 71,904 maunds remains to be received and stored.

E.—Advances to Private Parties and their Results.

No advances have been made during the fortnight under report. Four applications have however been received for advances for purchasing grain aggregating 4,600. In regard to these inquiries are being made, and they will be disposed of during the next fortnight.

For advances for land improvements a few applications have been made, and final orders will be passed in regard to some after due inquiry has been completed, and in other cases reported favourably on, the advances will be made after the necessary bonds have been executed.

F.—CHARITABLE RELIEF.

No actual relief operations have commenced beyond giving assistance to a few people here and there reported on as requiring aid. With reference to Circular No. 1251—S.R., dated the 5th March, I have to report that a district committee has been formed, and a sub-divisional committee for each of the sub-divisions of Arrah, Buxar, Sasseeram, and Bhubooah. In addition, for the Arrah sub-division, such committees have been selected to manage the relief centres at—

1. Bihigunge.
2. Shahpore.
3. Gurhnee.
4. Peroo and Dunwar.
5. Jugdispore.
6. Powna.
7. Sundais.
8. Sahar.
9. Sikreta.

These places are also the sites of central golahs.

In the Buxar sub-division sub-committees remain to be formed.

For the Sasseeram sub-division sub-committees have been selected for the relief centres at—

1. Akberpore.
2. Tilothoo.
3. Chennary.
4. Kurgahur.
5. Kochus.
6. Dinareh.
7. Bubnowl.
8. Dungaeen.
9. Nokha.
10. Nassrigunge.

For the Bhubooah sub-division arrangements are being made to form sub-committees.

No special relief sub-divisions have been as yet opened and officered, or regular relief circles opened and manned by special officers, planters, zemindars, and other residents.

The following places have been fixed on as workhouses or centres for the distribution of food and gratuitous relief, and committees of supervision have been appointed:—

Arrah Sub-Division.
1. Arrah.
2. Gurhnee.
3. Nonore.
4. Dunwar.

Buxar Sub-Division.
1. Buxar.
2. Chousa.
3. Saraya.

Sasseeram Sub-Division.
1. Sasseeram.
2. Nokha.
3. Kochus.
4. Akberpore.

Bhubooah Sub-Division.
1. Bhubooah.
2. Jehanabad.
3. Ramgurh.

A meeting was held of the district relief committee on the 7th instant, and it was resolved that rules should be drawn up for the guidance of the members of each sub-committee, under the instructions issued for the guidance of relief committees. A copy of these rules in English or the vernacular will be forwarded to each member. It was further resolved that a sum of Rs. 1,000, out of the amount raised by subscription on the 19th ultimo, should be sent to each subordinate officer for commencing charitable relief directly it might prove necessary to do so. Certain sums of money were further set apart for the purchase of "moonj" and "sunn" for rope-making, and for uncleaned cotton to be spun out into thread; it being resolved that light labour of this nature should be given at each and all of the relief centres wherever necessary. A copy of the proceedings of the committee held on this day have been already forwarded to the Secretary to the Central Relief Committee in Calcutta.

No. 168, dated Durbhungah, 7th March 1874.

From C. F. WORSLEY, Esq., C.S., on special duty, Tirhoot, Northern Division, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I HAVE the honour to submit my Narrative of Scarcity and Relief for the fortnight ending Saturday, 7th March 1874.

A.—STATE OF THE COUNTRY.

2. In Seetamarhee sub-division the supply of food-grains has been nowhere scarce except in Jalleh Thannah jurisdiction. Prices are stationary, but have a tendency to rise. In paragraph 11 of my last narrative I mentioned that I had authorised the sub-divisional officer to sell Government rice in small quantities at Jalleh and Cheerout. He now reports that sales were commenced at these places on the 4th instant.

3. In Madhoobanee sub-division prices have slightly fallen at some marts; rice is quoted at lower rates towards the frontier, but as the grains chiefly sold are urid and makai the fall perhaps is more nominal than real.

4. In Durbhungah sub-division the supply of food-grains still continues to be sufficient at the Durbhungah and Rowserah bazars, but elsewhere the supply has become more scarce. In Bahera and Singhiya markets rice is not procurable, and other food-grains are steadily rising in price. 'Kurthee,' a grain rarely eaten by the people in ordinary years, is now one of the commonest articles exposed for sale in Bahera. The sub-divisional officer reports that in the Bahera bazar he saw a bunneah who had just exchanged a seer of kurthee for one and a half seers of mustard-seed, or, in other words, for nearly three times its normal value. This, though an isolated case, is believed to be a fair illustration of the recklessness to which the cultivators are driven by urgent necessity of food.

5. The subjoined statement shows the kinds and prices of grain selling at some of the principal marts.

Name of Mart.	Wheat.	Barley.	Common rice.	Lesser Millet.	Maize or Indian-corn.	Gram.
Seetamarhee - - -	10½	14	10	14	14	12½
Jalleh - - - -	—	—	9½	12¾	12¾	12¾
Madhoobanee - - -	10	15	10	12	12	12
Deodha - - - -	8½	—	11¾	11¾	11¾	—
Durbhungah - - -	10	14	10	13½	13	—
Bahera - - - -	11½	—	9½	12	11½	—
Singhiya - - - -	10½	14½	8½	11½	10½	—

6. On the subject of stocks the sub-divisional officer of Madhoobanee writes:—"I apprehend that no great stock of grain is in the hands of any of the traders, but I have as yet received no reliable information on the subject. The fact, however, that places such as Junjharpur, where large relief works have been started, have been supplied from local resources shows that there is still some grain in store. The people everywhere cry out that there is none, but in the pergunnahs, where, according to Sir Richard Temple's Minute No. 29, grain is now being sold at ten seers per rupee, no buyers come forward."

7. On the same subject the Durbhungah sub-divisional officer writes:—"I may mention two interesting facts during a visit to Puhudee village. I came on a bunneah's shop in which rice was exposed for sale; the bunneah told me he was selling for 12 pucca seers the rupee; on enquiry however, into the truth of this statement, I found it to be quite incorrect. I believe it was made under a mistaken impression that a dear shop would be the object of official displeasure. I found that in this bunneah's store-rooms there was a large quantity of rice, probably 1,000 or 1,500 maunds. On another occasion I found that a bunneah, in a village where rice was not procurable at any price, had some stored in his dwelling-house. These are mere isolated facts, but they tend to show there is grain in the country."

8. But what to me seems a far more remarkable fact is the facility with which the town of Durbhungah has hitherto supplied, and continues to supply, the enormous mass of labourers congregated on the Durbhungah-Bahera road within three miles distance of the town. During the last fortnight the number of labourers on this work has increased from 7,000 to 28,000, and the average daily number for the present week must be quite 23,000. The labourers come, some from 5, some from 10, and a few from 15 and 20 miles distance; while the villagers living near the line of road flock to the works in hundreds. All tell the same story. They say there is no grain in the villages, and that their only resource is to come to our works. I have not spoken with even one labourer who will admit that there is any grain in his own village. The daily supply of grain drawn from the town by these labourers cannot be less than 300 maunds, and I can only account for the stationary condition of the market by the supposition that the bunneahs are now well aware of the immense quantity of grain that Government has determined to import, and are anxious to sell all they can at the highest possible rate, *i.e.*, at a slightly lower rate than that of Government grain. Holding this belief, I must express my firm conviction that prices can no longer be regarded as any index whatever of the amount of private stocks, and that grain will continue to be sold at nearly the existing rate until it is wholly exhausted. There will thus be a sudden, general, and complete failure of grain. How to make the failure more gradual is a very difficult question. I am inclined to think that Government stores should be laid down at once along lines of road-works in places beyond the reach of large towns and bazars, that many of the labourers should be drafted to such parts, and that they should be in a manner compelled to buy Government grain. To provide against an absolute and sudden failure of grain along any of our lines of works, I have directed the Executive Engineer to run up temporary huts for storage of grain at intervals of every three miles.

9. There were light showers of rain in Seetamurhee and Durbhungah sub-divisions on 5th instant, and last night (6th) there was a thunder-storm at Durbhungah. The rain that fell, however, has been scarcely more than sufficient to lay the dust. Up to the 5th there had been no rain in Mudhoobannee.

10. In Seetamurhee sub-division the crops have been much benefited by the rain that fell in February. Wheat, barley, gram, masoor, and karoi are reported to be doing well. Rabar, it is said, will yield a 12-anna out-turn. Cheena sowings have been completed, and moong and early dhan are being put in the ground.

11. In Mudhoobannee sub-division the crops are reported to be "as they were last week, except that moong and cheena have been to some extent sown." But the sub-divisional officer has very little hope of these sowings turning out well, as the people generally are not watering the lands.

12. In Durbhungah sub-division the continued drought has injured the cheena and moong sowings, which had been largely made. In very few fields has the cheena come up, and the people fear that it will not come to much.

13. The Seetamurhee officer mentions several cases of severe distress which have come under his notice, and which he has thought right to relieve. There is evidently great want and suffering in certain villages of the special tract of Mahind and Ranhowly, and about Ramtoul matters are becoming worse. In the southern part of Jalleh thana the labourers on relief works are described as being "all thin and half-starved." In the south-eastern part of the sub-division the people are said to be "in the worst state possible;" and the sub-divisional officer seems to think that grain should be distributed to the middle classes in charity. Sufficient employment

has been provided for the lower classes, but until our relief circles are filled, adequate arrangements cannot be made for the relief of high caste families. Mr. O'Reilly's efforts to introduce cotton spinning and other light domestic work among this class of persons have been successful. I would recommend that in all cases where high caste families accept employment, and there is reasonable prospect of eventual repayment, relief superintendents may be empowered to lend month by month small sums of money to the heads of such families for the better support of themselves and children. To lend money in lump sums for this purpose would, I think, be very injudicious, but under a system of instalments the benefit might be withdrawn or suspended as occasion required.

14. The Mudhoobunnee officer reports that "the people are much straitened and turn out now in very large numbers on the relief works," and that "although many hungry people come in, no cases of actual starvation have come under his immediate notice, except four persons sent in by the police to Mudhoobunnee dispensary at different times, all of whom are doing well."

15. The Durbhungah officer writes as follows upon this subject:—"Regarding the condition of the people, I have, with regret, now to place on record a fact which, from my previous reports, you are prepared for,—that many of the lowest castes of Hindus, Musahars, Domes, Koirees, &c. (besides low class Mussalmans), who are numerous in the eastern portions of this division, are suffering from actual famine. Want shows itself most in the young and aged, and during my late tour I have seen old men and young children in a very precarious condition indeed; of course, all such cases were at once put on gratuitous charitable relief. I have in a specimen group reduced to practice the rules you have approved of for the organisation of circles, and Mr. Harris and Mr. Marindin, for whose guidance I put the rules into practice, are engaged, the former in organising the Hathee, and the latter the Dosonta, Circle. Mr. Aikman has also joined his appointment (*i. e.,* that of 2nd sub-divisional officer at Hathee). I hope to be able in my next report to say that in the circles for which superintendents have arrived no person is in want of food who is either unable to work for it or willing and able to do so. During the fortnight three cases of famine-death have come to my notice. Two of them occurred on the Bahera relief work, the deceased being children in arms; the third was the case of a workman on the Durbhunga road relief work. In neither case did I see the bodies, but I was informed they were quite emaciated, and I think they may be fairly recorded as famine-deaths. They are the first which to my knowledge—and I have striven to put myself in the way of information of all kinds—have actually occurred; and watching, as for months I have watched—the gradual advance of starvation on the people, I do believe that till now the limit of endurance has not been crossed. I have mentioned that actual famine now prevails among certain low caste Hindoos. I am bound also to say I have seen several Brahmin villages, some of the inhabitants of which were lean; but they were not famine-stricken. It is hard to believe the reports one receives about the condition of Brahmins. As an instance of this I may mention that some days ago I received information that several Brahmins were on the point of death from starvation at a place near Chuck Mehsee on the Poosha road. Their names were given. Having been sent for, they turned out to be by no means famine-stricken, and to one only was it deemed at all necessary to afford any aid."

16. Regarding the death of a labourer on the Durbhunga-Bahera work, I may add that I saw the body on the evening after the man died. I was inspecting the road when some labourers came up and informed me that a man had died the previous day from starvation, and his corpse was lying inside a "muth," or small Hindoo temple. I went into the "muth" and saw the corpse, which was that of a man apparently about 60 years of age. It was very emaciated indeed. I ordered the body to be sent to the hospital for examination, but the next morning I learnt that my order had not been obeyed, and that the body had been burnt. I believe myself that the death was caused by starvation, and that but for the close supervision which all the civil officers of Durbhunga exercised over the work from that day (27th February) many more such deaths would have occurred before now.

17. A statement is appended showing the number of thefts, &c. committed during the past month. One theft case deserves special mention, having been committed on the Durbhunga-Bahera road work. Some coolies plundered a bunneah who was selling grain by the side of the road. The sub-divisional officer tried and convicted the prisoners, and thinking an example necessary, he sentenced them to be whipped, and caused the sentence to be executed at the scene of the offence. His action has had the desired effect, no repetition of the crime having been since attempted.

B.—Relief Works.

18. In Seetamarhee Sub-division 19 tank-works and three roads have been commenced during the last fortnight. The total number of tank-works and roads now being carried on in this sub-division with public money is 55 and 24 respectively. The average daily number of labourers on these works is 14,248. On 53 private works 5,208 persons are employed, and on Court of Wards' works, 3,000.

Total for sub-division, 22,456.

The wages on the public works have been raised by the sub-divisional committee to 2 annas per man, 1½ annas per woman, and one anna per child. On hearing of this enhancement of wages, I referred the matter to the Collector, as it appeared to me that the committee had exceeded its powers, and there was no necessity for such action while Government grain was procurable at 10 seers per rupee.

19. In Mudhoobunnee Sub-division, the Government works being executed comprise 9 roads and 2 tank-works. The number of labourers daily employed is 25,000. On one work, the Beluarrah road, there are 12,000 labourers. In this sub-division, the Court of Wards is employing 6,000 labourers.

Total for sub-division, 31,000.

20. In Durbhunga Sub-division 7 large road-works and 2 tank-works give employment to about 36,000 labourers daily; of these, 30,000 are employed on the Durbhungah-Bahera road. Under the Court of Wards, 12,284 labourers are daily employed.

Total for sub-division, 48,284.

21. The grand total of labourers for this relief district is as follows:—

Seetamarhee	22,456
Mudhoobunnee	31,000
Durbhunga	48,284
Grand total	101,740

22. Considering the large number of works and that detailed statements are submitted of all works separately through the Magistrate, I trust that the above general information will be held sufficient for the purposes of this Narrative.

23. I am happy to state that the management of the Durbhungah-Bahera road-work, which has hitherto caused me so much anxiety, has been now placed under excellent hands. With the Commissioner's approval, Mr. Stevens has lent me the services of an Engineer and a large staff, whom he had engaged in Allahabad, and this gentleman took over charge of the road on 5th instant. He is also to open work on a few other roads, pending the arrival of more Public Works' officers. The effect of regular and full payments on this work has been to attract from the eastern end of the road (12 miles distance), and from other works in the south-east, large numbers of labourers who must have shortly been reduced to a state of starvation through the large retrenchments made from their wages. I have spoken to several of these new-comers and find that they had been regularly defrauded of one-third of their subsistence wages. This fact fully explains what Mr. Macdonnell noticed a week ago at Bahera, viz., that all the labourers (some 2,000) at that end of the road were so weak and emaciated as to be almost incapable of doing work at all. On visiting the road this morning I was much pleased to observe the healthy tone and spirit of the labourers. Though there is a very great deficiency of tools, all the labourers, old and young, were working with some sort of implement, and apparently with a will. Up to a week ago, the work had been neither more nor less than charitable relief on a huge scale and in the worst form. Large sums of Government money were being embezzled by the distributing agency; wages of some sort were paid to all who asked for them, and most demoralising habits were being rapidly engendered among thousands of persons with whom we should have to deal for many months. For some days now I have not received a single complaint from any labourer on this work. I have also noticed a marked improvement in their general appearance. I fear we shall not be able to send back the weak and useless labourers to their villages so soon as expected. Relief Superintendents are still much wanted, and until the state of the villages in Mahomedpore and Hya Ghaut circles has been ascertained, and grain has been stored at some of the large villages, we must keep the people where they are certain of obtaining food.

Two Assistant Engineers have arrived, and I have received intimation of the appointment of a few Overseers and Sub-overseers.

C.—Transport of Grain.

24. With the transport arrangements on the Bunker Ghât side I have had no concern, but so far as the supplying of grain to Seetamurhee is concerned they appear to be working well.

With regard to the contracting companies on the Durbhungah side, I regret to say that the Southern Company, which had contracted for transport of 18 lakhs of maunds before 15th June, has not been able to convey one lakh in 17 days, or to secure more than 7,000 carts. The manager of this company, Mr. McIvor, does not despair of being able to fulfil the contract, and proposes to get some of the grain delivered at Monghyr for conveyance by a short route to Hatee and Hirnee circles. This proposal will be agreed to if the East Indian Railway Company can deliver the grain. On the other hand, the Northern Company has secured sufficient carriage for all the grain required to be carried into Mudhoobunnee. The Commissioner has been verbally informed of the state of things now existing; and if the number of carts worked by the Southern Company be not doubled within a week, I shall report the inability of the contractors to fulfil their contract.

In connection with transport I may mention that the sub-divisional officer of Durbhungah suggested the employment of villagers in "chilling" grass to be stocked as fodder along the lines of transport; that the suggestion was highly approved of by Sir Richard Temple, and that it is being carried out with great success in Durbhungah and Mudhoobunnee sub-divisions.

D.—Storage of Grain.

25. The Government grain stored in this relief district is as follows:—

	Mds.
Seetamurhee	152,393
Madhoobani	80,705
Durbhangah	50,940
Total	284,038

In Seetamurhee sub-division golahs have been or are being constructed at the following places, viz.:—

Kamtoul.
Jalleh.
Sibnuggur.
Raipore.
Chirout.
Soorsund.
Diggee.
Sonbursa.
Bhootahi.
Majorgunje.
Amooah.
Sheohur.
Bhagowanpore.
Belahi.
Moorsund.
Seetamurhee.
Doomra.
Morepa.

In addition to the above, storage-room has been obtained from the managers of Balooa, Doomra, Bangaon, Poopree, Dyne Chupra, and Amooah factories.

The relief circles are given below:—

Name of Thana.	Name of Circles.	Head-Quarters of Circles.	Relieving Officer.
Sheohur	1. South Sheohur	Sheohur	Special Officer.
	2. Central ditto	Amooah Factory	A. Tripe, Esq., Indigo Planter.
	3. North ditto	Dyne Chupra	J. Tripe, Esq., Indigo Planter.
	4. West ditto, west of Bagmati.	Marepa	J. Carlisle, Esq., Indigo Planter.
Seetamurhee	1. Kanhowley and Mahind.	Diggee	Special Officer.
	2. Nargaun	Nargaun	Do. under Court of Wards.
	3. Bhugwanpore	Bhugwanpore Factory	J. Shortt, Esq., Indigo Planter.
	4. Belsund	Belsund	— Manner, Esq., Indigo Planter.
	5. Moorsund	Belahi	— Morton, Esq., Indigo Planter.
	6. Seetamurhee	Seetamurhee	Additional Deputy Magistrate, Mr. Beamish.
	7. Soorsund	Soorsund	Special Officer.
	8. Bungaon	Bungaon	R. Wilson, Esq., Indigo Planter.
	9. Chirout	Chirout	Special Officer.
	10. Doomra	Doomra	W. Sharpley, Esq., Indigo Planter.
Jalleh	1. Sibnuggur	Sibnuggur	Special Officer.
	2. Kamtoul	Kamtoul	G. Anderson, Esq., Indigo Planter.
	3. Jalleh	Jalleh	Special Officer.
	4. Poopree	Poopree	R. Wilson, Esq., Indigo Planter.
	5. Nanpore	Nanpore	Chowdhry Roodur Persad.

In Mudhoobunnee and Durbhunga sub-divisions the relief circles and golahs are as follow:—

Mudhoobunnee.

Circles.	Golahs.
1. Umgaon	Harlakhee. Bheet. Deodha.
2. Kahera	Beniputtee. Palee. Wur.
3. Bela	Koroyia. Khijowlee. Ladamia. Narar.
4. Patrahee	Patrahee. Barhi Bazar. Lowkaha.
5. Pirozghur	Pirozghur. Pursahee.
6. Naraya	Naraya. Mathour.
7. Mohadeomutt	Mohadeomutt. Andhramutt.
8. Roodpore Doomra	Doomra. Basdeopore.
9. Muddehpore	Muddehpore. Bheja.
10. Junjharpore	Junjhapore. Sarsoo.
11. Mudhoobunnee	Mudhoobunnee. Pandoul. Bicahour.

Durbhunga.

Circles.	Golahs.
1. Biowarah	Biowarah. Mohamedpore.
2. Durbhunga	Durbhunga. Rusoolpore.
3. Hyaghat	Anar. Simree.
4. Warrisnuggur	Warisnuggur. Naggarbasti.
5. Banhar	Rosira. Banhar. Hatouri.
6. Lahira	Lahira. Bahera.
7. Desonta	Desonta.
8. Hattee	Hattee. Roha. Bowiam.
9. Sahoo.	Sahoo. Bagouni.
10. Singhiya	Singhiya.
11. Hionee	Hionee.
12. Hursunpore	Hursunpore.

The Mudhoobunnee golahs are reported to be in course of construction. In the Durbhunga golahs there is now room for storage of more than five lakhs of maunds, and they will be ready to hold 12 lakhs by the middle of this month.

E.—Advances.

26. On this subject the Seetamurhee officer writes:—"During the fortnight the sum of Rs. 66 " have been given in advance for wells, Rs. 3,070 for land improvements, Rs. 500 to private grain-" dealers for the purchase of grain, and Rs. 1,575 to zemindars to help their ryots. Since the " account was closed, Rs. 10,000 have been given to Baboo Kishen Gopal Narain of Soorsund to " help his ryots."

The sub-divisional officer of Mudhoobunnee reports "that Rs. 920 have been advanced to " private parties for land improvement during the last fortnight, and that the system will proceed " with considerable rapidity as soon as he has an officer for the purpose of investigating."

The Durbhunga officer writes that "during the fortnight Rs. 400 have been advanced under " Clause B, Section 4, of Government Circular No. 80, and Rs. 200 for clearing out an old village " tank. I find that, as a rule, the applicants for these advances are men of straw, and I must " place on record my belief that our efforts in inducing landholders to improve their lands or the " water supply have not been successful. I have had applications to the amount of Rs. 8,000 for " importing grain, the advisability of granting which is under consideration."

F.—Charitable Relief.

27. In Seetamarhee sub-division the number of persons receiving charitable relief is above 2,000. The sub-divisional officer has not given details of this number, but it would seem from his report that the worst cases are to be found in the north, where 300 persons are provided with food through the village bunneah, under the supervision of Mr. Tripe of Dyne Chuppra Factory. The state of these persons is reported to be so bad that " they would die if not regularly fed.'

Rice is distributed gratuitously through the Sub-Deputy Registrar of Jalleh to 32 paupers daily.

The Managers of Poopree, Mareppa, and Kamtoul Factories, are administering charitable relief.

It is not to be expected that the arrangements made up to the present time can be either well-regulated or free from extravagance, but I am assured that they have sufficed to prevent deaths from starvation.

Mr. O'Reilly has not submitted any information regarding the work done by the Relief Superintendents, Messrs. Doveton and Collis, who were posted to the Soorsund and Chirout Circles three weeks ago.

28. The particulars furnished by the sub-divisional officer of Mudhoobunnee are as follow:—

" Charitable relief at present is restricted to issuing cooked rice at head-quarters and most of " the thanas and other centres. The Court of Wards are also doing their work at Junjharpore. " The only other place where any large work is yet done in cooked rice is at Madheypore. I am, " in concert with the members of the sub-divisional committee, arranging for a more detailed " organization of relief."

Mr. Magrath only joined this sub-division on the 17th ultimo, and though his report may not show the extent of what has been done, I know that he has been doing good work, and that his time has been incessantly occupied with his duties.

The under-mentioned Relief Officers have already joined their appointments:—

Mr. A. Forbes, C.S.	Naraya Sub-division.
„ Mackeritch	Madheypore Circle.
„ J. Forbes	Mohadeomutt.
„ Rattray	Oomgon.
„ Nicolay	Kachera.
„ Williams, C.S.	Doomra.
Baboo Ishree Persad	Junjharpore.
Mr. Lorimer	Circle no specified.

I left the posting of officers to Mr. Magrath, as I considered he was best able to judge what circles should be first filled.

Baboo Ishree Persad has been working remarkably well at Junjharpore. He writes:—"There is great difference in the general aspect of the inhabitants of this place since I have arrived here. The fear of dying by starvation is removed from their minds. Those in quite emaciated state have improved now. The working men are generally of low caste, but they are not all of labouring class. Most of them are cultivators of lands, owing to the failure of crops they have submitted to come to public work. A few men of higher caste have come up to this day. To meet the wants of men of higher caste, I think that advancing grain or money on the security of jeit ryots of villages will be a very good plan." I approve of this suggestion if modified in accordance with the views which I have expressed in paragraph 13.

The number of persons to whom the Baboo is giving charitable relief is 198.

29. With regard to organization of Relief Circles in Durbhunga Sub-division, I cannot do better than quote at length the interesting accounts submitted by Mr. Macdonnell.

He writes as follows:—

"The information I have to furnish on this subject cannot, I think, be very intelligibly treated of apart from the general system of relief now inaugurated in the sub-division. You are already aware of what this system is, for in its inception and subsequent execution you have been greatly instrumental. It may, however, be well to place on record a detailed statement of its various stages.

"The system of relief which we are now carrying out and which has been in its main features originated by Sir Richard Temple differs radically from all systems which previous famines brought into operation. The key-note of our system is the prevention of the assemblage at any centre of large masses of indigent persons and the establishment in every village of relief operations, bringing to the doors of those able to work remunerative labour, and to the doors of those unable to work gratuitous relief.

"To this end Sir Richard divided the sub-division into two relief sub-divisions (allowing, however, the controlling influence of the Sub-Divisional Officer to remain) and re-divided these again into 12 Circles, and promised for each Circle a competent administrative officer; of whom, however, I with regret remark in passing, only three have arrived."

The details of the system it was given to us to work out; for, although certain rules were laid down by the central Relief Committee at Calcutta, those rules were somewhat vague, and were burdened with returns and statements it would be impossible to submit. Those rules have since been cancelled. The system you have for this sub-division approved of is the following:—

"Premising that it was necessary to connect the Circle Superintendents or Sub-Committee Officers with the people it was evident that the Circle should be sub-divided to such a manageable extent as to permit of the Relief Officer being, if not in all cases, personally acquainted with the general condition of each group, at all events vicariously acquainted with the intimate state of every village. Therefore the Circle was sub-divided into as many village groups as would allow of one subordinate officer, visiting daily, or at most once every two days, each village in the group The maximum number of *whole* villages which, with this object in view, could be safely included in a group was fixed at ten. As Inspector and Executive Officer under the Superintendent for each group an educated and respectable resident is chosen, it being a most desirable thing that in the relief operations local knowledge should be, if possible, utilised. To aid the Inspectors so appointed in procuring information, bringing relief where wanted, and supervising village relief works, two peons are attached to the Inspector, and the chowkidars in each village in the group are also to report to the Inspector the state of their villages daily. The Inspector is to submit daily to the Superintendent a statement under prescribed headings, showing the condition of the group under him. He is to see that sufficient work is provided for the storing, and that fit subjects for charitable relief are not denied it. He is to give orders on the store-keeper for raw materials, and is to see that the manufactured product is duly paid for by the store-keeper, and is to be responsible for the due expenditure of the money allotted for village relief work. This completes the intelligence and executive department in which I have striven to utilise as much as possible local knowledge and neighbourly feeling.

It would be manifestly useless to know where distress lay if we had not at hand the means to alleviate it. We had, therefore, to bring home to each group of villages remunerative labour for the strong and gratuitous charitable relief for the weak.

This we did by opening, in a conveniently situated village of the group, a relief work, such as excavation of a tank, calculated to employ the people and benefit them in addition. We also established in each group of villages a local grain-store, drawing its supplies from the Circle depôt, at which the village labourers might procure food with the wages of their labour. Attached to this store is a depôt where cotton may be obtained by respectable females in indigent circumstances desirous of supporting themselves; and in charge of this local grain-store is a mohurir, whose duty it is to keep a few simple forms and make necessary returns to the Superintendent, see that grain is sold to the labourers, and distributed to those on gratuitous relief. As a matter of detail, I may mention that this local grain-store, when established in a group in which there is a depôt, is en-

entrusted to a bunneah, the depôt-keeper in this case making returns. In all other cases the mohurir has a bunneah under him to sell. A peon is attached to the store.

This is the outline of the system. Now I give you an example of its working. Being anxious to give Messrs. Marinden and Harris a clearer conception of their duty than any verbal explanation could give, I went with them to Bahera and formed a group round Bahera; on entering each village in the group, we had all the poor collected. Those unable to work we at once put on gratuitous relief, subsequently forming a register of such, showing the number on the register of each, his name, residence, and quantity of gratuitous relief he was entitled to, and giving him a ticket with these particulars inscribed on it, and directing him to present it at the local store weekly, where the store-keeper, having a duplicate of the register, would dispense the requisite relief. Having done this, we proceeded to determine what village relief works might, with due regard to the want of the people and the propinquity of imperial works, be commenced, and the village agency to work them. Having settled this point, we proceeded to find out the number of females who were desirous of spinning cotton, and issued orders accordingly. Having seen all the village headmen and respectable residents, we finally appoint an Inspector fixed on a local rice store, and in the case of this circle, appointed a bunneah to the charge of it.

In reducing our theory in this case to action we experienced no material obstacles. But it would be unwise to conclude from this that we shall meet with none; we shall often find a group in which no resident is fit for Inspector, then we shall not hesitate to employ outsiders.

It may be objected to the scheme that we cannot under it permit persons not on the works, but having money, to buy grain, and that the Inspector cannot also be paymaster. I do not think the former objection of any weight, for those who wish to buy our grain at the fixed rates in small quantities *bonâ fide* for food should certainly be allowed to do so, for the presumption then is they cannot get food elsewhere.

On the latter point we are at present utilising the jeyt ryots, but if this does not suit, we are at liberty to employ paid agency.

I will now, having given you the system in its entirety, state more specially what has been done during the fortnight in the way of charitable relief. I have already mentioned that, in constituting the group of villages around Bahera, we put on charitable relief all we saw in need. We also visited the relief-work going on near Bahera, believing that on it might be some inhabitants of those villages and others in similar condition. We drafted all such persons and put them on charitable relief. We have commenced the same system in Durbhungah with reference to the poor on the enormous relief-work here, and have opened a relief-house for such until our measures are complete for sending them on to the homes; but it is evident that these are merely unsystematic attempts, as far as Durbhungah is concerned, to relieve a continuous and enormously increasing pressure. Without our circle superintendents being at their posts, and village works open to divert the tide, those efforts can be only very partially successful. Caste prejudice too seems, as you told me, cropping up in a way which militates against the success of those efforts.

In times like these I do not wish to record anything needlessly alarmist, but I feel bound to say, what from my previous reports may be deduced, that the superintendent's arrival has been too long protracted up to date. I have only three men at work—Mr. Henry in Durbhungah, Mr. Marindin in Desouta, Mr. Harris at Hattee. Mr. Aickman has just left for his post. Since writing the above, Mr. Paul has joined, and been sent to Mohamedpore. It is my belief that every day henceforth which sees the Singhuja and remaining Bahera circles, and the Mohamedpore, and perhaps Hyaghat, circles without their superintendents, must bring forth fatal consequences.

In concluding this portion of my report, I have only to add that the instructions given by Sir Richard Temple with reference to Durbhungah town are being systematically carried out by Mr. Henry, who is, I may be permitted to say, working very zealously and creditably.

Appended to this report is a copy of instructions I drew out for Mr. Henry's guidance. They are the same as those which guide the conduct of other superintendents, with the exception of some necessary modifications. Mr. Henry has had already made out the general register of poor, and is now engaged in testing it. I hope before next report the system will be in full operation. In Durbhungah, unlike the eastern parts of the division, we are still a-head of famine."

30. I append a copy of the rules drawn up by Mr. Macdonnell and myself. They have been approved of by the Commissioner and circulated for the guidance of Mudhoobunnee and Seetamurhee officers.

31. I must fully endorse Mr. Macdonnell's remarks regarding the extreme importance of filling up our circles without delay. I must add too that some of our superintendents appear to be too young and inexperienced for their work. I should be glad to employ them on roads, and to receive in their place civilians or experienced Deputy Magistrates. The success of our administration of relief circles will greatly depend on the efficiency, discretion, and tact of the officers selected as superintendents.

INSTRUCTIONS FOR SUB-COMMITTEE OFFICERS.

It will be the duty of each sub-divisional officer to accurately define each relief circle, and to furnish each superintendent with the names of all the villages in his circle, and with the population, as far as such can be made out from the census and thanah registers. The names of the village chowkidars are to be furnished by the police, and the proprietor's names, as far as this may be practicable.

2. The superintendent on joining his circle is to lose no time in visiting every village in it. This he should do at the rate of at least 10 villages a day.

3. He should make himself acquainted with the condition of every village and divide the villages into groups of not more than 10 each, the most distant of which should not be more than four miles from the central one.

4. In this central village he should establish a rice store for the supply of that particular group of villages. The largeness of the group should be in inverse proportion to the amount of distress prevalent in it.

5. This local grain store is to be supplied from the grain depôt of the circle on orders countersigned by the superintendent. To this grain store should be attached one mohurir on Rs. 12 a month, whose duty it will be to keep the registers prescribed below, one or two bunneahs (as the case may demand) on Rs. 4 a month and two peadahs on Rs. 4 a month.

6. It will not be often necessary to erect a store-house, many will be found ready made. If it be necessary to build any, they should not be larger than may be sufficient to contain 200 maunds, and shall consist of raised machans protected by sloped chuppers.

7. The superintendent should not wait till the completion of his tour to institute relief measurers if he find such necessary in any village. The commencement of relief operations should progress *pari passa* with the inspection.

8. These operations are to be divided into two classes—(1) relief for which a return is made in work: (2) charitable relief.

9. If there be any imperial work going on in the neighbourhood the able-bodied indigent people should be sent there; if the supply of drinking water be short in the village, some of them might be employed in deepening tanks under the supervision of village agency.

10. If the indigent people be women unable to do labour on such works or (by the customs of the country or from their social position) unwilling to do it, work should be supplied them in the way of thread spinning, &c.; much tact must be used in employing such women. The superintendent should act as much as possible through the headmen of the village in distributing such labour. But all payments are to be made regularly by the paid agency and if possible in presence of punchait of headmen.

11. The mohurir attached to each golah is to have in his charge a certain quantity of cotton, hemp, &c., for which he indents on the depôt-keeper. This he is to give out to be spun into thread by indigent though respectable women.

12. For each seer of cotton he is to get 14½ chattacks of thread (allowing 1½ chattacks for wash), and for this he is to pay 9 annas wages.

13. The thread so made should then be given out to weavers to be woven into cloth, and this cloth should be either sold or distributed to those persons who being recipients of charitable relief are also in want of clothing.

14. The superintendents should not consider themselves bound to a strict adherence to these rules. They should remember that the object is to afford adequate relief to all, and at the same time to induce people to do something for themselves. They will, therefore, never hesitate to set on foot any industry peculiar to the locality and suitable to the purpose in view, the prevention of distress.

15. The superintendent will take special care to foster the system of "chilling" grass for fodder, and will have it stocked at the places (already indicated to police) along the lines of road over which the transport passes.

16. When the superintendent is satisfied that a person or family is unable to work, or that his income from labour should be supplemented by charitable relief, he should make a village register of such.

17. This register is to be kept by the mohurir attached to the local golah.

18. To each such individual or family a ticket should be given specifying the quantity of grain and the date and the village store-house at which it is to be distributed.

19. The mohurir should check the tickets by his register before issuing the grain, and the superintendent or sub-superintendent should frequently test the conduct of the mohurir by a house-to-house inspection.

20. The quanrity of food to be given in gratuitous relief is 16 ozs. grain for each adult, 12 ozs. grain for each child above 12, and 9 for each child below. This is exclusive of dhall, fish, vegetables, and if those are supplied, 4 ozs. for each adult and two for each child should be given.

21. Under the system of village relief it will not be necessary to give cooked food.

22. Orphans are to be placed in the charge of respectable persons of their own religion. If this be impossible the sub-district committee should be consulted.

23. The following establishment should be found sufficient for each circle of 100 or 120 villages:—

Inspecting Agency.

		Rs.
1	Office clerk	25
12	Sub-Superintendents	360
24	Peadahs	120
	Stationery	25
	Total	530

Distributing Agency.

		Rs.
1	Local store mohurir	12
	Stationery	2
1	Bunniah	4
2	Peons	8
	Total	26

24. *Accounts.*—The Superintendent must keep a daily statement and a weekly cash account of all sums received and disbursed on account of famine relief, which is to include all sums expended by his subordinates. This must be submitted on 1st, 8th, 16th, and 24th of each month, and all vouchers must be furnished for each payment when possible. If this be not possible, a detailed list shewing each payment must be furnished. On the last day of each month each Superintendent must furnish a sub-divisional officer with a detailed bill of his establishment.

25. The Superintendent must furnish fortnightly statements on alternate Mondays shewing the quantity of grain received from the central depôt by his local store mohurir, (2) the portion sold, (3) the portion distributed on charitable relief. Also statements shewing the quantity of cotton received, quantity given out, and the quantity of thread received in return.

26. Also a statement shewing the number of men engaged on village work during the previous fortnight, and the number of people charitably relieved.

These statements will be compiled from the daily registers to be kept under these headings by the mohurirs. Special instructions shall be issued to central depôt keepers.

27. *Poor-houses.*—It is to be borne in mind that the object of the relief is to prevent the congregation in one place of large masses of men. Therefore poor-houses are more or less an excrescence on the system.

28. Still, it may be necessary to have a few houses of refuge where wandering indigent people may be temporarily relieved. But such relief is to be continued only till means are formed to send such people to their villages.

29. In such refuge-houses it will be necessary to provide accommodation for cooking rooms, sleeping rooms, separate for men and women; hospital wards and worksheds. But the main idea should never be lost sight of, that the houses are intended as resting houses. These houses, when erected, should always be located at the centre of a circle, and admissions into them should be regulated by the Superintendent of the circle. A register of all such admissions should be kept in the following form:—

1. Date.
2. Number.
3. Name and caste.
4. Father's name.
5. Residence.
6. Age.
7. Rate at which food is given.

This should be no more than the quantity specified above under charitable relief. Each person admitted must get a ticket with his number, and he must produce this when getting food.

30. Every chowkidar is to report daily, either personally or through the Gorait, to the sub-superintendent the state of his village.

31. Every jeyt ryot or putwari is to forward through the chowkidar all information necessary to enable the Superintendent to act.

32. The zemindars shall be held accountable for the laches of their amlah in this respect.

No. 529F, dated Muzufferpore, the 10th March 1874.

From H. W. Gordon, Esq., Covenanted Deputy Collector, on special duty, Tirhoot, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit my Narrative of Scarcity and Relief in the three sub-divisions under my charge, for the fortnight ending Saturday the 7th March.

A.—State of the Country.

2. *Prices of food and stock, Hajeepore.*—There is not much alteration in the prices of food-grains in the principal marts in the Hajeepore sub-division. At Hajeepore itself, barley is selling at 17½ seers, or at 1¼ seers cheaper; common rice is about ¼ seer dearer, while the prices of wheat, Indian-corn, and gram remain the same. At Lallgunge, wheat is selling at 13 seers, or one seer dearer; barley, rice, and maize are all about the same, and gram is slightly dearer.

At Mahna prices have generally fallen slightly. There appears to be no scarcity in any of the local marts.

3. *Mozufferpore sub-division.*—At head quarters common rice is selling at 9½, or ½ seer dearer; wheat is ½ a seer cheaper; and Indian-corn and gram are about the same. At Belsundh, some 27 miles north of Mozufferpore, I found rice selling at 10 seers; wheat at 10; mokai, gram, and massur dâl at 14; marwa at 14½, rahur dâl and barley at 15, and urid dâl at 13 seers per rupee. In the village Pettia near Conti (8 miles north-west of Mozufferpore), the deputy inspector of the circle reports the prices as under:—

	Seers.
Rice - - - - - - - -	10
Makai - - - - - - - -	13
Gram - - - - - - - -	15
Rohur dâl - - - - - - -	16
Janera - - - - - - - -	15
Urid - - - - - - - -	14

As far as I am informed, grain is still procurable in small quantities at a time in all the local marts. At Belsundh I was told no bunneah would sell as much as Rs. 5 worth of grain at one time.

4. *Tajpore.*—In the Tajpore sub-division, common rice has slightly risen in price during the fortnight. The prices of other grains have not varied much. The "Pettias" are still fairly

supplied, and there seems no scarcity yet in the bazar. Mr. Studd of Dhooly Factory wished to sell some rice he had imported at 10 seers the rupee to men in his employ; but they said they did not want it, as they could procure coarser grains in sufficient quantities at the Pettias.

5. The subjoined table gives the description and prices of food-grains at some of the principal markets in the three sub-divisions on the 21st ultimo and 7th instant:

Names of Marts.	Wheat.		Barley.		Common Rice.		Lesser Millets.		Maize or Indian-corn.		Gram.	
	7th March 1874.	21st February 1874.	7th March 1874.	21st February 1874.	7th March 1874.	21st February 1874.	7th March 1874.	21st February 1874.	7th March 1874.	21st February 1874.	7th March 1874.	21st February 1874.
Mozufferpore - - -	12	11½	—	—	9¼	10¼	—	—	12½	13¼	14	13
Hajeepore - - -	13	13	17½	16¼	11	11½	—	—	15¼	15¼	16½	16¼
Mahooa - - -	12	12	—	15	10	10½	—	8	12	13½	12	14
Lallgunge - - -	13	14	—	15	12	12	—	—	15	15¼	17	15½
Tajpore - - -	13	13	16	16	10½	11	15	15	14	14	16	15
Sarmastipore - - -	12	12½	15	15	10	10½	15	15	14	14	15	15

6. *Stock Hajeepore and Mozufferpore.*—On the subject of stocks I cannot add to what I wrote in my last narrative. The Hajeepore officer furnishes no information under this head. As regards the Sudder sub-division, I am still of opinion that some landholders have large stocks which they intend to keep, so that, practically speaking, they will be useless to the people. Should they be induced by offers of high prices to part with any grain, they will sell it secretly and in small quantities to local shopkeepers.

7. *Tajpore.*—On this subject Mr. Wace writes—"What I have seen and heard, however, confirms the opinion before expressed, that the poorer cultivators are now dependent to a great extent on the Pettias for their supply. It is wonderful to me how these Pettias keep supplied, considering how the means of carriage in this sub-division have been absorbed for the wants of the more distressed tracts."

8. *Rainfall and state of the crops.*—On the 6th there was a slight thunder-storm with a little rain at Hajeepore, and early in the morning of the 7th a thunder-storm at Muzufferpore, during which ·20 of an inch of rain fell. While I was at Belsundh during the night of the 6th, there was a strong wind accompanied by thunder and lightning, but only a few drops of rain fell. Mr. Begg of Bhikunpore told me that nearly 3–10ths of an inch fell at his Factory. No rainfall is reported from Tajpore. The rain thus appears to have been very partial and cannot be of very much good. It may slightly benefit the "cheena" and "mug," and help the cultivators to sow "dhan," and this is all.

9. The rubbee crops are now being reaped. In Hajeepore there is no change in the estimated out-turn of 10 annas. In the Sudder sub-division I have, in the course of my travels, seen some very fine plots of rubbee; but generally speaking the plants are thin and ear small, but I hope all round that we may have at least an 8 to 10 annas crop.

10. Mr. Wace adheres to his previous estimates of the out-turn in pergunnahs Surressa and Balagutch.

11. *Condition of the people, Tajpore.*—Mr. Wace writes—"Now that we have got to the rubbee harvest, with the coarser grains still procurable in the market at rates which do not put them beyond reach of the poor, the condition of the people is more encouraging. There is more hopefulness about them. They have sown, and are sowing their mung and keoni, and the mango trees hold out a promise of sustenance, dangerous though it may be; still June, July, and August must be terrible months to many. Supposing half of the dhan lands of the Surressa pergunnah are sown with mung and keoni, and that the yield is three maunds a beegah, the out-turn will represent little more than 1,50,000 maunds of grain, or sustenance for hardly a month for the population of the pergunnah."

12. *Condition of the people, Sudder sub-division.*—Distress in the Sudder sub-division is daily becoming more marked. I was informed by a member of the district relief committee, that the people of Somera, a village some five miles south-west of Mozufferpore, were in a bad way. I went to the spot and found that there was undoubtedly distress. The villagers asserted that some persons had already died of starvation; but from my own enquiries, and from those made through the District Superintendent, and from a letter received from the Manager of Doudpore Factory, to whom the village is leased, I cannot credit this statement. It was elicited that some persons had died nearly a year ago, a few very old persons one, two, and three months back of fever and debility; while one person alleged to be dead was discovered to be alive. These deaths were not the effects of actual starvation, but it may be that refusal by the villagers, who were themselves hard pushed to give arms in money or food to the poor, old, and helpless accelerated their decease. I found two or three men, five or six women, and two children

particularly thin and emaciated. The rest of the villagers were more or less able and willing to work. Meantime, until some work could be set a-going, I took immediate measures for their relief by distributing money and afterwards grain among the worst cases. On my way back I found the people of some other villages close by were also in distress, and relieved them. No relief works had been opened in this direction. We commenced repairing a road without delay, and I am informed the people flocked to the work in crowds, so much so that kodalees and baskets could not be supplied to many. I myself saw a great number collected near the road, clamouring for employment. To meet their wants, the excavation of a dry tank in Somera was commenced, and I am now told that all candidates have work. Nearly all the people here and in the neighbourhood can do something. The exceptions are five or six old women, to whom I have directed a few pice to be given daily, until arrangements for housing them in a poor-house (should this be found necessary) can be made. Two little children, who were nothing but skin and bone, have been kindly taken charge of here by the Civil Surgeon, Doctor Gayer. Works of a minor nature, such as spinning rope, and basket-making have been started in this village, I think I may say with wonderful success. Cotton, *sun*, and *patooa* and bamboos have been made over to one of the headmen for distribution, and Mr. Deputy Collector Warde Jones, who visited the village yesterday, reports most favorably of the scheme. For women debarred by caste or physical weakness, by age or infirmity, and for men hardly fitted for tank and road labour, these employments will be most useful. I forbear going into details at present; but I may mention that Mr. Warde Jones expects to have 20 to 25 baskets made a day. The makers (domes), who are very badly off, will be paid at the close of each day by the headman (to whom a small sum of money has been advanced) one "lohya" pice for each basket made. The Executive Engineer will take from us as many baskets as we can supply. Some rope has been made and sent me for inspection, and I regard it as very good. This rope can very easily be disposed of. Some specimens of thread* are expected to be ready in two or three days. The success of this scheme justifies me in extending it to similarly distressed villages, and I think it proper to have a depôt here with an establishment of a darogah, peon, and dundeedar to carry on the work and keep accounts, as was done in the Orissa famine.

13. In Chajun, I am glad to say that the distress is not so great as in Somera and the neighbourhood. The Manager of Doudpore Factory has commenced excavating a tank there; and the Executive Engineer a road from Chajun to Marwan, which will afford work to most of the inhabitants. Mr. Warde Jones has gone there to start basket, rope-making, spinning, and weaving.

14. Mr. Begg of Bhikanpore and Jhapaha Factories, five and seven miles north of the Mozufferpore, reports that distress is prevailing in his villages. I have arranged with him a scheme of tank and road work, and he informed me yesterday that some of the works had been started.

15. Mr. Brown of Contai, eight miles north-west of Mozufferpore, writes that distress is becoming very apparent out his way, and I have asked him to start relief works at once.

16. From Montipore Factory, eight and a half miles north-west of Mozufferpore, Mr. Fraser writes that relief works are now urgently required. I am sending him money to commence any work that will help the people.

17. I have just returned from Turki and Belsundh, where I went to organise a relief sub-committee and arrange about relief works. At Turki, I found matters much better than I anticipated. There is scarcity, but no marked distress there yet. The rubbee crops round about promise well. Around Belsundh the people are badly off. I visited some villages with the Manager, and found the people much reduced, and complaining that they would die unless Government helped them. We arranged tank and road work to be commenced at once. While I was there people flocked into the Factory asking for work. More grain will be required at Belsundh. There is at present barely 3,000 maunds stored; I estimate roughly that 25,000 maunds will be required. The Manager has undertaken to construct a golah. The Turki bunded road has been sanctioned, and the Executive Engineer been directed to lose no time in commencing this work. It will afford employment for many thousands; by commencing work from the Belsundh and Turki sides at the same time the distressed in both directions will, I am certain, flock to the spot.

18. Mr. Sandford Kilby writes from Teturia in Chumparun, to the north-west of Belsundh, that the villages on our side are, he hears, in a very bad way, and the Executive Engineer has been ordered to continue a road being made up to our borders in the Chumparun district into this district through Regai.

19. From Paroo, on the west, the police report distress; and Mr. O'Reilly of Seetamarhee has informed me that the people near Rajkhund, and the north of Kutra (in the north-east and east) are badly off. I alluded to Sahebgunge in my last report.

20. It thus appears that distress is pretty prevalent in most parts of the Sudder Sub-division; but, as far as we know, it is at present worst on the south-west, north, and north-west. Mr. Tweedie of Doudpore has sent me a list of 47 villages in which 3,184 persons are in distress.

Relief works are opened in the neighbourhood of these villages.

21. I have strongly advocated "village visitation" as the only way by which we can learn the real condition of the people. The Commissioner, in his minute of the 3rd instant, sanctioned the division of the sub-divisions into eight circles with head-quarters marginally noted, and the appointment of a deputy inspector of visitation and relief on Rs. 75 per mensem for each circle. Two officers, one for Mozufferpore, and the other for Sahebgunge have already been appointed, and gone into the interior to make enquiries.

1. Mozufferpore.
2. Paro.
3. Kutra.
4. Belsundh.
5. Turki.
6. Rajkhund.
7. Sahebgunge.
8. Murwan.

---

* Some since received.

They will submit daily diaries to me. The other inspectors will, I hope, be appointed in a day or two. By means of this agency I hope to accomplish a great deal, to be kept daily informed of the condition and wants of the people, and to adopt immediate measures for their relief.

Since writing this, four more deputy inspectors have been appointed.

22. *Hajeepore.*—The reports from Hajeepore are satisfactory. There are "no further signs of " distress. There is plenty of work, and wages are good. There are gangs of coolies under " Colonel Macgregor all along the roads receiving two annas a day, and the coolies at the " ghaut are able to earn from 10 to 12 annas a day. Petty thefts still continue, but chiefly at " Bankur Ghaut."

23. *Destitution and starvation.*—With the exception of the cases of destitution alluded to in paragraph 12 of this report, I know of no other in the three sub-divisions; and I believe no deaths have occurred attributable *solely* to starvation. In the Tajpore Sub-division, many are reported to be pinched and miserable. The worst villages "are on the north and east side of " the Tal Baryla and about Bahlempore; the soil being clayey the ryots have not been able to " sow mung and kowni as they have more directly north of Tajpore."

24. In the Hajeepore Sub-division there appears to be no prospect of destitution or starvation. There are no special tracts which require report.

B.—Relief Works.

25. The returns for relief works directly under the Executive Engineer are as under—

Name and nature of work.	Daily number of labourers.	Rate of wages.	Remarks.
Mozufferpore Sub-division.		Rs. A. P.

Grand total - -	4,335		

26. Independently of the above list, there are other Government relief and private works directly under sub-divisional officers, planters, and others. These are in Tajpore sub-division:—

(1) Mohwa and Dulsingserai road, under Mr. Lloyd, daily average 32 men.
(2) Road under Mr. Studd, daily average 49 men.
(3) Bahwara and Hursingpore road near the Tal Baryla under Mr. Wace, daily average 192.

West and north of Bahwara, the opium cultivation is said to be still employing much labor, and the tramway employs many hands.

27. In the Sudder sub-division:—

(1) Shapore and Bazee road under Mr. J. Smith, daily average 806.
(2) Tanks and Bridge earth-work, &c., across rivers under Mr. Begg; daily average about 1,300.
(3) Road-works at Sahebgunge under Mr. J. Macdonald; no returns received.

Since writing this Mr. Macdonald reports that he has 400 persons at work.

(4) Private tank near Jaintpore being excavated by Mr. Abbott at expense of Mohunt Rajah Ram Dass, the proprietor. I have no returns, but Mr. Abbott told me that the work gave daily employment to about 2,000 people.

(5) Private tank being excavated by Mr. Tweedie in the distressed village of Chajun. No returns received.

(6) Sukree road under Mr. Studd. No return received.

Total of persons employed on relief works, as far as known, 9,314.

28. Besides the above, road and tank-work is just being started at Belsundh under Mr. Mackenzie; the same at Conti under Mr. Brown; and road-work at Moteepore under Mr. Fraser.

29. I very much regret that these returns are not so complete as I could desire, but I hope I may be held blameless, as I have written to and asked all the planters to send me in weekly returns in a simple form. Their time is probably so much taken up in carrying out contracts that they overlook matters of this nature.

30. Under orders from the Commissioner a revised programme of relief works in the three sub-divisions is being prepared in consultation with the Executive Engineer for submission to Government. I may here mention that Heera Lall Mahta, a mahajun of Mozufferpore, has just paid in Rs. 1,000 towards excavating a dried-up tank in the Mozufferpore municipality, and another mahajun, Ram Monohur, has promised to make a new tank in the suburbs of the town at the cost of Rs. 10 or 12,000. Their liberality is deserving of commendation.

C.—TRANSPORT OF FOOD.

31. Means of transport from Bunkur Ghaut are ample. Mr. Tute writes that "1,38,523 maunds of Government grain were despatched from Bunkur for Chumparun and Tirhoot from 23rd ultimo to 4th instant. On an average 20,0000 maunds are sent daily." Major de Kantzow observes: "As to carriage, 1,494 carts came in yesterday. I believe 1,500 will come in to-day; but just now, holidays* intervening, I cannot give carts correctly. If carts sent by me are not kept, or sent on from the places I despatch them to, I have calculated accurately a regular saving of carts that can carry off two lakhs of maunds per week, &c., &c." Rates are first class, and I am told by natives that with these rates, "*carts will be born from the very ground.*"

32. Mr. Wilson is starting a donkey train at Bunkur to carry small weights up to Darbhunga.

33. Along the lines of transport in the Hajeepore sub-division dry tanks are being excavated. The planters are affording marked aid in this matter, and there is no fear of there being any deficiency of work.

34. The transport of grain from the three depôts of Conti, Russulpore, and Ather in the Sudder sub-division to depôts in Seetamarhee, is going on very satisfactorily. Sufficient carts are available. No delay occurs in unloading and loading; the bullocks at present appear strong and in good condition. The roads are kept in as fair order as is possible with the immense traffic over them. The cartmen do not keep to the *liks* as much as they might, but this will, no doubt, be remedied as soon as more thorough supervision is organised.

35. From Tajpore the reports as to the transport of Government grain are not so satisfactory. Mr. Wace writes: "There is a large quantity of Government grain lying at Chumpta, and the Alliance Transport Company are not working up to more than half their contract. It is hoped that their deficiencies will be supplied by the tramway." During the fortnight Poosah has been opened as a transport depôt, and 17,060 maunds a week are pushed on from there to Beniputtee-Kozowbee in the Madhubanee sub-division. Some 34,000 maunds a week are also to pass through Poosah from Bunkur Ghât *en route* to Durbhungah.

36. I have but little to remark about private importations. Mr. Wace observes that it is clear from the state of the market, there has been no falling off but gives no particulars; grain still continues to be imported to Aajeepore from Patna in small quantities.

37. The following importations of grain have been made into the Sudder sub-division during the fortnight by private traders from advances made to them by Government—

		Mds.	Srs.
Imported by Baboo Nundun Lall	- - - -	549	18
Ditto ditto ditto	- - - -	284	7½
Ditto Baboo Monohur Lall	- - - -	368	0
Total	-	1,201	25½

38. What other private importations have been made I cannot say, but I think they cannot be much, because now that nearly all available carriage has been appropriated for the conveyance of Government grain, traders have not the means, even if they had the will, to import grain into the interior.

D.—STORAGE OF GRAIN.

39. The quantity of grain stored is as under:—

Hajeepore sub-division.

		Mds.
Hajeepore	- - - - -	1,980
Lallgunge	- - - - - -	212
Mahnar	- - - - -	2,987
Total	- -	5,179

* Mohurrum and Hooli festivals.

Tajpore sub-division.

	Mds.
Poosah	17,575
Tajpore	892
Total	18,467

Sudder sub-division.

	Mds.
Kutra	6,548
Turki	10,459
Belsundh	2,869
Mozufferpore	18,725
	38,601
Total stored in the three sub-divisions	62,247

40. Twenty thousand maunds of grain are on their way by boat to Sahebgunge, and arrangements for storing it have been made.

E.—Advances.

41. In Hajeepore no applications for advances were made during the fortnight, and no advances were made. In Tajpore, Rs. 115 have been advanced for the construction of wells. An application for Rs. 250 has been made to excavate a tank, and the case is under enquiry. In the Sudder sub-division Rs. 8,000 have been advanced for the purchase of grain for Government, and Rs. 500 advanced on six per cent. interest. No applications have been made for advances for land improvements, but one case which was pending has been decided.

F.—Charitable Relief.

42. With reference to Government No. 1251—S.R., dated the 5th instant, I have the honor to report as follows for the Sudder sub-division:—

1. One district committee and three sub-committees, viz. at Mozufferpore, Sahebgunge, and Belsund, have been appointed. The sub-committee at Mozufferpore is a strong one under the management of the Judge, Mr. Richardson. The Chairman of the sub-committee of Sahebgunge and Belsund are resident planters.

2. No special relief sub-divisions have been opened.

3. I have stated in paragraph 21 that the sub-division has been divided into eight circles for the purposes of visitation and relief.

1. Mozufferpore.	4. Kutra.
2. Sahebgunge.	5. Belsundh.
3. Parkood.	6. Turki.

Six native Deputy Inspectors have already been appointed for the circles marginally noted.

4. This information is given under heading 1.

5. No work-houses for the distribution of food and gratuitous relief have yet been opened; but Mr. Richardson is having huts constructed near the town of Mozufferpore, and has purchased some grain with a view to commence operations when needed.

6. No daily distribution of relief has commenced.

43. I have already stated what has been and is being done towards introducing spinning, rope, and basket-making in the villages of Somera and Chajun, and in my next narrative I hope to report further progress.

44. A special meeting of the district relief committee was held on the 6th instant, and a further subscription of Rs. 900 promised. Subscriptions amounting to Rs. 305 per mensem have been contributed by European residents.

At Tajpore and Hajeepore no charitable relief has commenced.

No. 1052, dated Sarun, the 11th March 1874.

Memo. by J. Drummond, Esq., Officiating Magistrate and Collector.

Forwarded to the Secretary to the Government of Bengal, in the Statistical Department, Calcutta, for information, with reference to his Circular No. 80 of the 17th November 1873.

Narrative of Scarcity and Relief in Sarun District for the fortnight ending 7th March 1874.

A.—State of the Country.

1. *Abundance or scarcity of supply in the bazar.*—The bazars of the district are sufficiently supplied with grain, but importations have fallen off during the past fortnight.

In the Sudder sub-division the private importations were, to Revilgunge 65,225 maunds, of which 19,800 were maize, 6,400 rice, and the rest other grains; to Dooreegunge, 1,629 maunds; and at Maharajgunge, 3,571 maunds; while the imports at the Gunduck ghats from Tirhoot and Champarun were 1,349 maunds. The exports of grain to Tirhoot and Chumparun amounted to 6,000 and 1,302 maunds respectively.

2. The following is Mr. Wright's account of the Sewan sub-division:—

" The bazars continue to be abundantly supplied with grain, both by importation from other districts and by local supplies from the villages around the different markets. The supply far exceeds the demand at present, and a great deal of the grain brought to the markets is often carried away again unsold. The new pea crop, as I mentioned in my last report, is now in the market, and the other rubbee crops of wheat, barley, &c., the reaping of which has now commenced, will soon add to the supplies.

" The private importations of grain during the fortnight, as far as could be ascertained, amounted to 15,973 maunds at Darawlee, Sewan, Siswan, and Guthani. Of the above amount, 10,199½ maunds was Indian corn, 2,382½ maunds was paddy, 1,635 maunds was rice, and the rest consisted of small quantities of wheat, kodo urid, masur, and bajra. The importations were chiefly from Goruckpore, Azimgurh, and Revilgunge. A small quantity, 380 maunds, of rice came from Dacca, and 750 maunds of Indian-corn and 48 maunds of rice from Gonda.

" The above must not be taken as a correct account of the entire amount of grain imported. Owing to the absence during the Mohurrum of the kotegusht, who was ordered to keep an account of the importations at Darawlee, the returns received from the place do not show the full quantity of grain imported."

3. Of the Hutwah estate, Mr. Hodgkinson writes:—

" Supplies in the bazar still continue sufficient, and now that the spring harvest has commenced, no fears need be entertained of their running short for several weeks. In another fortnight the stock of grain will probably be higher than it has been since November. Importation from the south still continues on a small scale. The demand for the grain sold by the raj in the western zillahs may be said to have entirely ceased, although it was pretty active for the few days immediately preceding the commencement of the spring harvest. Altogether, 741 maunds were sold in February. It was not found necessary to commence sales in tuppas Afrad and Dhungarree; the prices never went up to a figure which made it profitable to the bunniah to buy raj grain at the prices fixed."

4. *The kind and price of grain.*—The kind and price of grain selling at the principal marts and at the thannahs and out-posts are given in the annexed statement.

5. *Stock of food in the hands of the people.*—I have nothing to add to what has been reported under this head.

6. The sub-divisional officer of Sewan reports as follows:—

" There is nothing to be added to the previous reports under this head beyond that the rubbee crops are beginning to be reaped, and the cultivators will now soon have the produce of those crops in their hands, but the most of it will be sold by them in the marts, and they will retain very little for their own consumption."

7. Mr. Rattray, when on tour in the Sewan thanah, has supplied the following further confirmation of previous reports on this head:—

" The bulk of the population is dependent entirely on the markets, landholders and proprietors in good circumstances have small supplies, but not more than will suffice for the wants of their families. The markets rely chiefly on importations, which still continue in moderate quantities. The importations are chiefly Indian-corn from Revelgunge. Busnowlee,* and Sewan are the two principal markets in this part of the country."

* Moharajgunge.

In a former report regarding that portion of the district, he also wrote as follows:—

" Importations still continue in small quantities. The bulk of the supplies consists of Indian-corn, which is being brought from Revelgunge. The local marts, however, depend to some extent on the surrounding villages, and probably about a third of the grain sold is from small stocks in the hands of petty proprietors. There is more grain offered for sale than is disposed of. The bulk of the population is entirely dependent on such supplies as are brought to the markets, but landholders and other well-to-do classes have stocks of grain in hand, though not more than will suffice for their household. At Danialpore a market is held twice a week, and at present about three hundred maunds of grain is for sale on market-days, about two hundred maunds of which consists of Indian-corn from Revelgunge at Basnowlee,* one of the largest marts in the district. Importations are said to be nearly six hundred cart-loads a week from Revelgunge, chiefly Indian corn, and the stocks in the hands of traders are estimated at about six thousand maunds."

* Maharajgunge.

8. Under this head Mr. Hodgkinson reports thus:—

" The stock of food in the hands of the people will, of course, be much increased by the harvest. I have no reason to think the estimate I formerly gave unfair."

9. *Rain-fall.*—In Chuprah, though we have had thunder-storms, beyond a few drops, there has been no rain-fall during the past fortnight, but elsewhere in the district slight rain has fallen. There is also said to have been hail along the Gogra to the west, but not, it is believed, to an extent sufficient to occasion other than partial damage. Full particulars, however, have not as yet been received. From Sewan the following is Mr. Wright's report:—

" On the forenoon of the 5th instant there was a rain-fall of one-tenth of an inch, and on the night of the 6th, or rather at one o'clock A.M. of the 7th, there was another fall of ·11, or, altogether, a little over two-tenths of an inch during the past fortnight."

And Mr. Hodgkinson gives the following figures:—

" Rainfall, ·04, 23rd February.
" ·02, 5th March.
" ·51, 7th "

Total ·07

"Seven-hundredths of an inch fell in the fortnight under review at Hutwah. The thunderstorms of the 5th and 7th March will have done harm to the mangoes, but it is not possible to say yet to what extent."

10. *State of the Crops.*—The crops continue good, and now that the harvest is commencing, the prospect of two-thirds of an average crop on the area sown may be considered assured. The probable yield in each thanah was recently reported as follows:—

Sudder Sub-Division.	As.
Manjhee - - -	10
Chupra - - -	8
Dighwaree - - -	12
Parsa - - -	9
Mashrakh - - -	8
Bassuntpore - -	5

Sewan Sub-Division.	As.
Burrowlee - - -	6
Burrugaon - - -	4
Sewan - - -	8
Durrowlee - - -	12

11. Regarding the Manjhee thanah, Mr. Hudson writes as follows:—

"The crops around Chainpore and Parsa, especially the former place, look very promising; but there is a great deal of rice-land. The prospect of the rubbee crop at Parsa was given at 8 annas, but that at Chainpore 12 to 14 annas; and I was informed that the people were pretty well off in neighbourhood of this latter village, as indeed they also appeared to be in the neighbourhood of the former. Baboo Roop Narain also, of Parsa, confirmed this inference.

"On the whole, I am inclined to regard the centre and south-west portions of the Sudder division as exhibiting a market contrast between themselves and the north and east portions; the former showing good crops and few signs of distress, and the latter bare and barren, with people prone to complain, and crops looking thin and sickly."

12. The following is Mr. Wright's report of the Sewan sub-division:—"The rubbee crops on the ground have improved wonderfully with the fine and seasonable weather we have had. The outturn will average rather over an 8 anna one. The rain mentioned in the preceding paragraph has not been heavy enough to do any injury to the crops on the ground, and has been most beneficial to the cheena and next year's sugar-cane, and in some measure to the indigo crops. The rain will also enable the ryots to prepare their lands for the bhadoi and aghani crops.

"The rubbee harvest has already commenced. Peas are nearly all gathered, rahur is being out, and barley and wheat have in places begun to be reaped.

"The Sub-Deputy Collector reports that the rubbee in the Burrowlee thanah will be three-fifths of an average crop. This is, I think, rather too favorable an estimate. The crops in Burrowlee thanah, excluding Gopalgunge out post, will not exceed two-fifths of an average crop, but in Gopulgunge they will average twelve to fourteen annas. A large portion of Burrowlee is rice-growing land, and the last aghani rice crop in those parts, especially along the bank of the Gunduck river, was not a complete failure. The Indian-corn also gave a fair return, and the people there are even now living on the produce of those crops. In a tract of country where rice is extensively grown rubbee takes up a very small portion of the soil, and never gives a large return.

"Of the crops in the southern part of pergunnah Bara,* Mr. Rattray writes as follows:—

'Wheat and barley have suffered a good deal from the drought. The crop looks thin and does not promise more than a six anna outturn. There are fields where the outturn will probably be eight to ten annas. Rahur is extensively cultivated, and promise an outturn of eight annas. The crop is stunted and backward, but has not suffered much from frost. The pea crop has failed to a considerable extent. Both these crops are now being gathered. I do not think the rubbee will be more than a 6 to 8-anna crop.

"In a subsequent report, in writing of the crops in the tract of country lying between Sewan and Siswan, he says—' Wheat and barley promise an outturn of eight to twelve annas, and in many of the fields there is every prospect of a full crop. The villagers are now gathering the harvest in some parts of the country. Rahur is in excellent condition, and gives every promise of a good crop; it is now being gathered. The pea crop is small. Scarcely any sugar-cane is cultivated. Indian-corn is said to have given nearly a full crop, and the poorer classes have in a great measure been living on it up till now. The rubbee, on the whole, gives a promise of an 8 to 12 annas outturn. The villagers themselves anticipate a full spring crop. Last year's spring crop is stated by the villagers to have been poor, and at the most the present harvest is considered superior to last year's outturn.

"Mr. Gregory, the Assistant Sub-Deputy Opium Agent, has kindly furnished me with the following report regarding the crops in the northern part of this sub-division. In the country east of Barragon there is a small proportion of rubbee sown, the lands being chiefly sown in rice and poppy. Wheat, barley, and rahur crops, however, are very fair, and a 10-anna yield is expected. The country along the river Tharhi, in the neighbourhood of Hussapore, Kalianpore, and west of Bhorey, is perhaps the worst off. Here, of the wheat and barley there is only a 5-anna crop, while vast tracts of rahur have been entirely destroyed by the frost.

"Where poppy and other crops failed, advantage was taken by the cultivators to re-sow these lands in cheena immediately after the rains of the last month. It is impossible to form an estimate of this crop just now, but to all appearances it has well germinated, and, where practicable, it is even being irrigated. The new peas are already in the market, and also small quantities of rahur. Wheat and barley are just being gathered in."

---

* Eastern half, Sewan thanah.

13. To the above, I may add the following further extract from Mr. Rattray's reports:—

"The whole of the eastern part of pergunnah Bara* has been visited by me during the week. To the north, most of the land is under paddy cultivation, and altogether paddy holds a large proportion of the soil. This crop is said to have been a total failure. Fields of sugar-cane are few; there are scarcely any to be seen to the north. Rahur, peas, and other pulses do not seem to be very extensively cultivated, except towards the south. Wheat and barley are looking thin and backward, and do not promise more than a 6 to 8-anna crop. Rahur will probably be an 8-anna crop. Peas have been damaged by frost, which has done some injury to the rahur also in the southern part of the pergunnah, but not to any serious extent. Indian-corn is stated to have been a total failure. The rubbee, on the whole, promises a 4 to 6-anna crop, and it is possible the outturn will be 8-annas."

* Sewan thanah.

Mr. Hodgkinson writes as follows, regarding the crops on the Hutwah estate:—

"The wheat and barley have improved very much during the last fortnight. Though the crop is thin, the ears are numerous and full. A casual observer, who was ignorant of the extent to which it has failed in poor lands, would put it down as an 8 or 10-anna crop all round. The peas have everywhere suffered much from the frost, and their improved appearance after the rain in February has proved (as I expected it would) to be a fallacious test of their probable yield. Three pucka maunds a beegha is the yield of the best fields, the average hardly exceeds 1½ maunds. The poppy is a fine crop generally, but the cultivators complain that the juice is deficient."

15. *Condition of the people.*—There has been no material change in the condition of the people. Mr. Hudson writes as follows:—

"I still fail to observe in my rides through the villages any signs of general distress or extreme scarcity of food. The people of the district are, as a rule, surly and churlish to the extreme; and if they were generally pushed for the means of sustenance, this characteristic would certainly relax. The sight of a European, even when not known to be the Government officer on tour, would appear to them as a chance of relief; and they would not, as now, let him pass unnoticed, refusing even to show the way through their villages or direct him to his camp. When recognized, I am sometimes pursued by some of the cultivators (generally of the better class, not mere laborers or very low caste men) with complaints of the hardships they endure, and petitions for advances and Government relief works. But I am sorry to say that these manifestations have to be treated with great suspicion. The rascality of the people is so mixed up with genuine distress that there is evidently no choice, except between a reckless and general distribution, and cautious and insufficient relief." And again he reports:—

"During the past week I have been encamped at the villages of Buneapore, Dhungraha, Nipuneeah, Amnour, Baghakole, and Makain.* At none of these have I been informed of any great general distress, though I have met with a number of individual cases. It is very difficult to distinguish these latter from confirmed mendicancy, which assails me everywhere. At Nipuneeah the number of beggars, most of whom appeared from inquiry to be professional beggars, was something quite remarkable. Some 20 of them belong to this single village. I relieved nine cases at this village, of what appeared to be exceptional and accidental destitution among persons who, but for the present scarcity, would be earning their own livelihood or would have been supported by their relations. At Amnour I was informed that the two resident landowners, Babu Ram Saran Singh and Babu Deo Bahadoor Singh, distribute alms and make advances to the distressed cultivators. Babu Ram Saran has received an advance of Rs. 10,000 from Government for this latter purpose. At Baghakole also the proprietor, Babu Sheo Saran Singh, assured me that he was taking active measures to relieve distress, and at this place and at Baneapore I received but few applications of any kind."

* Musrukh and Pursa thanahs.

† Pursa thanah.

16. The sub-divisional officer of Sewan reports as follows:—

"The condition of the people continues on the whole pretty good. Numbers of them are now employed in the fields in harvesting the rubbee crops. The relief works which have been set agoing throughout the district provide employment for all labourers who are not engaged in harvest work, and as the public harvest is gathered and comes into the markets, the prices of food-grains will go down, and for the next two or three months there will, I think, be no reason for anxiety. Prices are of course yet somewhat high in the bazars for food-grains, but still any one, with an ordinary day's wages, can buy sufficient to support himself."

Mr. Rattray under this head, writes that "the labouring classes are finding work on the public roads and in the excavation of tanks, and, so far as distress is said to prevail, the relief measures in hand appear to be sufficient to meet it."

And again, in a subsequent report, when writing of the people in the track of country lying between Sewan and Siswan, he says as follows:—

"Prices continue to be almost prohibitive to the poorer classes, and the mass of the people are entirely dependent on the local markets for their supplies. The better class of landholders have stocks of grain sufficient for private consumption, but petty landholders and small proprietors, a class who will not either work or beg, are looking forward with anxiety to the time when the spring crops will have been gathered and consumed. The greater proportion of landholders in this part of the country, in fact throughout the sub-division, hold their land divided into exceedingly small shares * * * * * . No serious distress prevails in this part of the country * * * * * . There is ample work to be had on the roads and in the excavating of tanks, but it is a good sign that complaints have been made to me that labourers are indifferent to obtaining work, and that the Holi and Mohurrum festivals have been held as an excuse for the want of labour in the digging of a large tank near my camp at Hussunparah."

17. The following further extracts from Mr. Rattray's reports may here be quoted regarding the Barraulee thanah. Writing from Manjee, he mentions:—

"Baboo Sridhar Sahee, zemindar of Manjee, called. He states that the people in this part of the country are in distress, and that their distress will bring starvation among the labouring classes within the next three or four months if relief is not given; that there have been no deaths from starvation yet; that the villages are depending entirely on imported food; and that the stocks in the hands of the people are insignificant."

In another report he writes:—

"The Inspector of the Barraulee police station informs me that there is distress among the labouring classes within his jurisdiction, but that the people are far from starvation yet. Anticipates no serious distress till after June or July. States there are stocks of grain in the hands of proprietors and zemindars, but only for private consumption, and that it is only the labouring classes who must have Government help. Calculates the labouring classes at half the population within his jurisdiction. States that importations have almost stopped, but that much grain was imported two or three months back. States that there are no large stocks of grain in the neighbourhood. Estimates half the produce of the land in this part of the country as paddy; this is stated as being almost a total failure this season."

And again he writes:—

"There is no serious distress, and no case of death from starvation has been brought to my notice. The labouring classes are in want, and glad to obtain work. Mr. Reid, of the Sadowa indigo factory, has laid in a stock of rice for his tenants. He has 3,000 people at work daily on the roads, paid by Government. He informs me that, in his opinion, there will be serious distress in this part of the country."

18. Of the people on the Hutwah Estate, the following is Mr. Hodgkinson's report:—

"The condition of the people has little altered for the worse. The wages which all have been able to earn, if they liked, at relief works, have been quite sufficient, even with the present high price of food, to maintain them; and although it is not everyone who will work, still cases of severe distress have been almost entirely confined to professional beggars. The higher castes, who are unaccustomed to manual labour, hold lands generally at very low rates on this estate, and their lands are above the average quality. They are thus much better off than their poorer neighbours as a rule, and have no doubt been able to get advances on their crops, as usual, from their mahajuns."

19. *Known cases of misery and starvation.*—There have been no cases of starvation; but isolated cases of distress continue to be reported, and are provided for.

20. *Grain-thefts or robberies.*—There have been 13 cases of grain-theft during the fortnight.

The accompanying comparative statement shows the total number of cases of theft and house-breaking, &c., committed during the month of February in the several years 1872, 1873, and 1874.

Statement showing the number of the true cases of Dacoity, Robbery, Theft, and House-breaking which occurred in the Sarun District during the month of February 1872, 1873, *and* 1874.

DACOITY— (Headings 30 and 31 of Crime Return A1)	Month of February 1874	3
	Corresponding month of 1873	1
ROBBERY— (Headings 32 and 33 of Crime Return A1)	Month of February 1872	1
THEFT— (Heading 43 of Crime Return A1, excluding cattle-theft)	Month of February 1874	45
	Corresponding month of 1873	50
	Ditto ditto 1872	44
HOUSE-BREAKING— (Heading 35 of Crime Return A1)	Month of February 1874	231
	Corresponding month of 1873	168
	Ditto ditto 1872	238
TOTAL OF ALL FOUR CRIMES	Month of February 1874	279
	Corresponding month of 1873	219
	Ditto ditto 1872	283

Condition of any special tracts.

21. The northern half of the district, comprising the thanahs of Burragaon, Burrowlee, Bassantpore, Mashrakh and Pursa, is the tract which occasions anxiety.

B.—RELIEF WORKS.

Progress of relief works, &c.

22. The annexed statements show the relief works in progress and the number employed thereon. The average number daily employed during the fortnight has been 91,542 and the number on the last day was 76,794. The falling off in the numbers is attributable to the harvest operations, and also to the occurrence of the Mohurrum and Hoolee festivals. About a fourth of the number employed belonged to non-laboring classes. It has hitherto been found impossible, and must continue to be impossible, to pay the laborers daily, as was erroneously inferred by Government; but endeavour is being made to ensure payments being made as speedily as possible.

State emigration to British Burmah.

23. There are now 74 emigrants in the depôt at Chuprah awaiting transmission to Calcutta. As soon as contracts are taken from them, and the small-pox, which has attacked three or four of them, disappears, they will be sent down under proper arrangements by rail.

C.—Transport of Food.

Approximate account of private food supplies.

24. All that is known under this head has been reported in paragraphs 1, 6, 7 and 8.

25. Regarding the Hutwah raj grain supplies, Mr. Hodgkinson furnishes the following information:

"Of the grain engaged for the raj, 60,000 maunds have been conveyed to golahs on the estate; and there are about 8,000 maunds at Revelgunge and in transit. The Collector has also returned to Hutwah 1,728 bags on account of the grain formerly placed at his disposal."

26. Concerning the grain required for the other wards' estates, the general manager reports thus:—

"The grain purchased from Chooni Lal has not been distributed among the several places selected for storage in consequence of certain inquiries set on foot by the Commissioner, though a greater part of it is ready for delivery at Revelgunge.

D.—Storage of Government Grain.

Places of storage and amount of grain received.

27. The accompanying statement shows the storage places, the distribution thereat of the grain allotted, and the amount of grain received at the different storage places up to the end of the fortnight. The total amount of grain received had been 273,791 maunds, of which 223,986 maunds had been finally stored, and 34,720 maunds were in transit.

28. *Construction of Golahs and arrangements for custody of grain.*—Fresh Golahs, capable of containing the increased quantities of grain now allotted, are in course of construction at nearly all the storage places.

E.—Advances to Private Parties and their Results.

29. *Advances for purchase of grain and for Land Improvement.*—Rs. 3,200 have been advanced during the fortnight for purchase of grain for sale, and Rs. 1,52,011* to zemindars for grain on money advances to their ryots, making up the total as yet advanced on these accounts to Rs. 1,29,700 and Rs. 2,86,890, respectively; and for land improvement, Rs. 5,352 have been advanced, bringing up the total on this account to Rs. 57,205. The sum of Rs. 200 has also been advanced to persons for the support of their families, giving a total of Rs. 240 under this head.

30. On the subject of advances, Mr. Hudson makes the following report, which I think it well to quote *in extenso*, as showing the difficulties we have to contend with in giving any general relief in this form:—

"Here the applications for advances for personal support seem to have reached their culminating point; I have received upwards of 150 of these within the last two days. The decision of the Government and the instructions of the Commissioner, at least as I weigh the preponderating tendency of these, for in point of fact they are self-contradictory, has just arrived in time, since it is no longer possible for a single officer to deal with such a mass of applications. I have accordingly closed the register for applications for personal support, and shall in future deal with these only by a sort of natural selection, that is to say, that out of a great number of applications sent in, I must select for consideration those cases only where the applicants seem *prima facie* to make a peremptory demand on my attention."

"Applications on account of land improvement are neither numerous nor pressing, and those from large zemindars for large sums on behalf of their ryots are at present few and far between. The Commissioner's instructions urge me to deal with these land owners, and to adopt the system of large advances to them; but he has overlooked one circumstance, which I think I dwelt on in my late communications on this subject, viz., the difficulty of finding and of bringing one's self into contact with such land-owners."

"It appears to me that over more than half this division, the proprietary tenure is so divided, that it is impossible to call on any individual proprietor to take an advance on behalf of all the ryots; while, as a body, they are too numerous and too scattered to be dealt with. Indeed, a large proportion of villages appear to be left without any superintendence whatever; and the connection between the proprietor and his estate appears to consist solely in the receipt of a certain portion of the value of the land's produce, through the agency of one of the cultivators, who acts as tax-gatherer. As an instance of the difficulty of dealing with proprietors of villages, I will quote the following circumstance:—On my way from Parsa, pergunnah Manjhee, to Buneeapore, I passed through Pateria village, and observed a child‡ of some three years' old crying; was told it was crying from hunger; enquired who were the proprietors of the village; was informed they were Ata Hussen and Zulfikar Ali, who live at Khajwa a long way off. After sending to the village, however, to make further enquiry into the case, I found that the father of the child did not belong to their Puttee, but to the Puttee of Gya Pershad and Mehendra Pershad, who live at Maharajgunge. I summoned these latter, and this is a week ago, but as yet I have not even received a reply to my summons. Indeed, as a rule, the zemindars hold aloof from me, and do not attend to my summons when issued."

"In case where they do visit me, I am generally disappointed by finding that those about whose applications I wish to consult them, are not in their Puttee, or else they plead a general ignorance of the names of their tenants. My Moonshee informs me that even in the case of resident land lords such as Baboo Ramsaran Singh, Devee Pershad and others, it is not their

J. G. D.

habit to take an active part in the management of their estates, or to interest themselves in the condition of their tenantry. They leave it all to managers and servants."

F.—CHARITABLE RELIEF.

31. The accompanying statement shows the number of relief centres, which have been selected throughout the district, and these are all in course of being opened. It is proposed to place Thannahs Sewan and Durrowlee under the sub-divisional officer of Sewan; and Thannahs Burragaon and Burrowlee partly under the Manager of the Hutwal Raj and partly under the sub-divisional officer of Sewan; while thannahs Mushrakh and Bussentpore will be formed into a separate sub-division for relief purposes under Mr. Hudson, leaving the remaining thannahs under the supervision of the district committee at Chuprah. Notifications are being issued to give general notice of all the centres where relief can be obtained, and the Factory Managers in charge of the centres will be asked to cause the preparation, by means of the putwarees and head men of villages, of lists of persons requiring charitable relief.

No other return has been received.
W.D.

32. The following account shows the extent of charitable relief afforded as far as is yet known.

By Officiating Joint-Magistrate, Mr. W. H. Hudson, in cash Rs. 25.
„ Mr. D. C. Reid of Moniarah, in grain valued at Rs. 1-9.

33. The following is Mr. Wright's report:—

"The names of the gentleman proposed to form the sub-divisional charitable relief committee have been submitted, and in the meantime Rs. 1,400 have been distributed, at the rate of Rs. 100 each, to each of the first grade relief centres, and Rs. 50 each to Messrs. Tytler and Rattray for the gratuitous support of poor persons who may be found incapable of working or gaining a livelihood. No reports have been received as yet as to any gratuitous relief having been given."

34. Hodgkinson reports as follows under this head:—

"Orders are in course of circulation regarding an enquiry to be made, village by village, to ascertain—

(1).—The names and circumstances of persons incapable of work, who will be fit recipients of charitable relief;

(2.)—The names and circumstances of *purdanasheen* women, who are likely to be without support."

In the meantime, relief centres have been opened at Autwah and Bhoney dispensaries under rules which I have already reported, and the very small number who have availed themselves of them, sufficiently shews that there is no immediate necessity for any large scheme of charitable relief. I have not had any return from Bhoney, but at Hutwa only 14 persons have been admitted, and these receive a daily ration of cooked food. Of these 14, only 3 have been admitted solely on account of weakness from privation.

Along with this Narrative is submitted the statement shewing the proposed relief circles into which the Raj will be divided; they will in every instance be placed under the care of a European gentleman, or of one of the Raj Tehsildars, superintended probably by Mr. Brown or Mr. Boileau. The relief will be carried out by the native doctors, where there are dispensaries.

Hutwa sub-committee might comprise the following:—

Hutwa Sub-Committee.

No.	Name.	Residence.	Occupation.
1	G. J. S. Hodgkinson, Esq., *Chairman*	Hatwah	Monagon Raj.
2	Maharajah of Hutwa	Ditto.	—
3	Baboo Tilluckdharee Sahee	Ditto	Relation of Raja and Zemindar.
4	„ Narendra Protap Sahee	Ditto	Ditto ditto.
5	„ Kissenpershad Singh	Ditto	Ditto ditto.
6	H. O. King, Esq.	Ditto	Executive Engineer, Raj.
7	T. A. Hickson, Esq.	Ditto	Tutor of Rajah.
8	Baboo Bhoobanessur Dutt	Ditto	Superintendent, Raj.
9	„ Shibchunder Bose	Ditto	Sub-Assistant Surgeon.
10	„ Sitta Ram Singh	Ditto	Tehsildar.
11	„ Raghoonandun Singh	Ditto	Ditto.
12	M. Macdonald, Esq.	Pertabpore	Indigo Planter.
13	M. Buskin, Esq.	Sreepore	Ditto.
14	W. Buskin, Esq.	Chuchia	Ditto.
15	T. Robertson, Esq.	Jagdispore	Ditto.
16	D. C. Reid, Esq.	Moniarah	Ditto.
17	H. Macdonald, Esq.	Kahala	Ditto.
18	W. K. Browne, Esq.	Dhobowl & Bhoreg	On special duty.
19	C. B. Boileau, Esq.	Hutwa	Ditto.
20	Baboo Moheah Dutt Sahee	Gowra	Zemindar owning villages in Koorari.
21	„ Hauman Pershad Misser	Narur	Tehsildar.
22	Nehal Khan	Kubttyah	Ditto.
23	Baboo Gangepershad Singh	Gopalgunge	Ditto.

Supplementary Narrative for the fortnight ending 7th March.

No. 697F, dated Chumparun, the 11th March 1874.

From H. KEAN, Esq., Collector of Chumparun, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

In continuation of my letter No. 693F of 9th instant, I have the honor to furnish further particulars regarding the tract of country under Mr. Howe's charge (Ramnugger), his report having just come to hand. The report will show that the condition of the people has grown very much worse within the last few days. He says:—

"During the last few days there has been a marked change for the worse in the condition of the people throughout a large part of this sub-division. This was perceptible in the broad tract stretching from the north (Hurnatar to Ramnugger), and thence eastward as far as the village of Chaukee, and including also on the south-east the populous tuppahs of Deorar, Chaukee, Gopala, Bulthur, and Buhta; in these tuppahs (and through the rest of the tract I have described) distress is terribly severe, and the change which has now taken place is, I think, the natural result of the long duration of scarcity and high prices. The privations so long endured by the people of all classes have severely tested their powers of endurance, and very large numbers now depend entirely on assistance which in some form or other they obtain from Government. The strain on our resources is consequently very great, and the additional amount of work and anxiety then thrown on me will I trust be accepted as a sufficient excuse for any shortcomings in this somewhat hastily written narrative.

"At Bagaha, tuppah Butsurah, and in the east, at Shikarpore, matters are, however, more satisfactory, this being due to the fact that the rice crop in the latter was partly saved by irrigation, while the sugar-cane in the former was excellent."

There had been slight showers of rain during the fortnight, but not sufficient to do much good. Rice had been selling at the following rates:—

Ramnugger - - -	9 seers	Obtainable with difficulty except in small quantities.
In small bazars to north -	8 to 8½ „	Obtainable with great difficulty.
„ „ in village Bazars in tuppah Deorar to south - - - -	8 to 9 seers	Ditto. ditto.
Bagaha - - -	9 „	More easily obtainable.
Shikarpore - - - -	11 „	Obtainable.
Bhowrah - - -	12½ „	Ditto.

In Bettiah rice is selling at 11 seers 8 chittacks.

This refers to coarse rice, the ordinary food of the poor, but other food grains are dear in proportion at the places where rice is now at famine prices.

In referring to the sale of Government rice to petty dealers in these tracts, a measure which it was found must be introduced in consequence of the dearth of grain in the markets, Mr. Howe says:—

"As this state of things has lasted a long time, and there has lately been a sudden and marked change for the worse in the condition of the people, I felt that the time had come to sell Government grain to the public through the trade. When the Honourable Sir R. Temple was here he made inquiries on this point, and considered that the step might be necessary, owing to the very exceptional circumstances of the sub-division.

"After careful inquiries the plan was for the time postponed, but Sir R. Temple directed me to watch carefully and to report at once to the Collector should the necessity arise.

"When, therefore, I noticed a marked change in the condition of the people (showing itself as I stated) by the large numbers now depending entirely on Government assistance, and by other unmistakeable signs, I telegraphed for sanction to sell through the local trade at 11 seers per rupee, selling wholesale to traders at 11½. Sanction was at once given, and I have now tried the experiment, upon the results of which I will report in a few days. I did not recommend this (perhaps extreme measure) till I felt perfectly convinced of its absolute necessity, and that its adoption at this juncture would do no more good than any other measure. There is no local trade of any sufficient importance to render the measure injurious, while such trade as there is has shown itself quite unequal to supply the wants of the people.

"The greatest precautions will be taken, and the experiment carefully watched and reported upon. At present it will be sufficient briefly to record the grounds upon which I took on myself the responsibility of recommending this measure, and these were—

1st.—The scarcity of rice in this tract, and the difficulty with which it can be obtained.
2nd.—The high prices prevailing.
3rd.—The long continuance of these prices.
4th.—The failure of the trade to supply this want.
5th.—The unexpected change for the worse which, in consequence of this state of things, has taken place."

B.—RELIEF WORKS.

This statement* is incomplete as all the reports, especially those from the east, had not arrived when Mr. Howe's report was ready. The statement will show, however, in a general way how much the works are benefiting the people. The number daily relieved on the works is calculated at 10,000, and Mr. Howe says, "it is not too much to say that these people depend entirely for their food on their wages." In addition to the above works, Mr. Howe has opened out a road from Lowriah to Shikarpore,

*Annexed.

which runs through some very distressed tuppahs. He is also about to clear out four tanks. With regard to payment in kind on the works. Mr. Howe reports that this has been done on two additional roads since his last report, viz., Hurnatar to Tribanee, under Mr. Joakim (who has joined at that place), and from Bagaha to Hurnatar under Mr. Moore.

D.—Storage of Grain.

The amount stored in this sub-division is shown below:—

	Mds.
Ramnugger	33,966
Chaukee	4,968
Shikarpore	4,854
Bhowrah	3,590
Bagaha	13,156
Hurnatar	7,814
Chamardeeha	4,986
Total	73,334

This had not all been weighed, so the total is approximate.

During the fortnight 3,880 maunds had been issued as "tuccavee" to the Rajah of Ramnugger's ryots under former orders. This had been distributed among 130 villages. The Rajah is willing to be security for as much as may be required. These advances have had a very beneficial effect, as the food stores of the people are nearly used up.

No applications had been made under the Land Improvement Act.

F.—Charitable Relief.

"The sub-divisional committee of Ramnugger, with the two sub-committees at Bulthur, under Colonel Boulderson, and at Bagaha, are now in full working order. I visited Bagaha once a fortnight, when a meeting is held and measures for relief are discussed.

Joint-Magistrate of Ramnuggar	*Chairman.*
Mr. Christien	*Members.*
" Moore	
" Blake	
" Brooke	
Sree Autar Missir, of Naryanpore	
Ramnarain, of Bagaha	

The tuppah (Bulthur) has been divided into halkas, and each member is to take charge of one. Lists of all the poor requiring relief are prepared by the putwarees and tested by the member in charge of the halkas, who is also responsible for the distribution of food to those in the lists whom he, after examining, finds unfit for work.

At Bagaha we have a dispensary, hospital, and poor-house, and a native doctor from Hurnatar has arrived. Sickness at Hurnatur has, I am happy to say, decreased, so his remaining there is not necessary. The dispensary is ready, being a very conveniently situated house placed at our disposal by a native gentleman of the town. The poor-house is being built close by, and temporary relief is being administered in a shed near the thana. Mr. Christien has given to the committee all the wood required to build the poor-house. Subscription lists have also been opened, and Mr. Christein has, on the part of Mr. Dear, very liberally promised to subscribe Rs. 2,000. Probably the local subscriptions will be Rs. 500; so that, with the Government subsidy, the sub-committee will have Rs. 5,000 to begin with. About 200 persons unfit for work are daily fed at the poor-house, which Mr. Christian at present manages, and I am glad to say that great discrimination is used in feeding only those who cannot work. At present the sub-committee confines its attention (in addition to managing the local poor-house) to the village-to-village relief system and to collecting statistics. I think it is better at first to do what is absolutely necessary, viz., to support those who otherwise must starve, and gradually to perfect the system in introducing the various rules laid down for committees. In my next fortnightly narrative I hope to be able to report that much progress has been made; at present I consider what has been done at Bagaha to be very satisfactory. An organised village-to-village relief system has been formed, which will effectually relieve those who most require it. A central poor-house and dispensary has been started, and the local information thus acquired, which will be placed before the committee at the next meeting, will enable us satisfactorily to enlarge our operations.

I have not yet heard from Colonel Boulderson as to what has been done in Bulthur. At Ramnuggur the dispensary hospital and poor-house are in full working order; the buildings are nearly complete, and meantime work is done in a shed and a small tent. 710 persons have received relief since the work has been started; 142 out-door patients have received medical relief, and all of these (710) were persons utterly unable to work, either from sickness, old age, or physical incapacity. In tuppah Deoraj I have under the village-to-village system 347 persons of this class who daily receive relief. These I have examined in person, and found they were utterly unfit at present even for the lightest work. Most of them have been reduced by sickness as well as want of food, and altogether the condition of these unfortunates is pitiable. I distribute food for these twice a week, and I am much assisted in this tuppah by Saik Salamut Ally, an influential and public spirited zemindar. In this tuppah the headman of each village and the putwarees receive a certain amount of food sufficient to last the poor of his village, of whom he receives a list (an extract from my register), and whom he is bound to supply twice a week. The greatest safeguard against abuse is the fact that the poor themselves know how much they are entitled to; and secondly, there is constant inspection both by Sheik Salamut Ally, who is a member of the committee, and myself. In this way this important tuppah is provided for, and similar steps for the others are also being taken. In my next fortnightly report I trust that generally throughout the sub-division our charitable relief system will be fully organized and in complete working order."

No. 693F, dated the 9th March 1874.

From H. Kean, Esq., Collector of Chumparun, to the Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honour to submit the Fortnightly Narrative of Scarcity and Relief for this district for the fortnight ending the 7th March.

A.—State of the Country.

In the Bettiah relief sub-division no scarcity of food supply is felt as yet. The tightness of the market had somewhat relaxed owing to the improved prospects of the rubbee crop. On the night of the 6th a slight fall of rain occurred, but not sufficient to be of any material benefit. The prospects of the "rubbee" in this sub-division have been especially reported on within the last few days direct to Government, so they need not be touched upon here. No cases of starvation had occurred, nor had serious cases increased, though petty thefts had become more numerous. The average price of coarse rice was about 11 seers per rupee, and that of maize 13 or 14 seers. The report of the poppy crop in this sub-division, *i.e.*, south of the Shikrana River, are very favourable. The timely fall of rain which took place in the beginning of the last month was of immense benefit, and if nothing untoward takes place, the Sub-Deputy Opium Agent anticipates that upwards of 3,000 maunds of the drug will be secured. Three thousand eight hundred kutcha wells had been dug, and Rs. 6,759 had been advanced up to the 25th February for the construction of pucca wells, and applications for Rs. 104 more had been received. A little hail fell during the fortnight, but did no injury.

In the Sudder Sub-division, except in parts of Thannah Adapore (north of Motiharee and of Modhubun south), and in Thannah Kessuria, the reports are favourable. Slight rain fell on the 5th in Thannahs Kessuria and Gobindgunge. Mr. Weekes reports that the rubbee crop is a bad one. In the first place the area sown is less than in ordinary years, and secondly, what has been sown is very poor. The average outturn he calculates will be a four anna crop. In the tracts adjacent to the Gunduk a six, seven, or even eight-anna crop may be expected, but there are many places where the outturn will be only a two or three-anna crop, viz., Sangrampoor, Bhowra, Harbans, Muth, Goburdhun, Hamirpur, Khidarpur, &c. These results, coupled with the failure of the rice crop, and with only an eight-anna bhadoi crop, gives better hope, he says, "for the future." Altogether Mr. Weekes' inquiries are not cheering, and would tend to show that the estimate made some time back, that 30 per cent. of the population would have to be relieved if the worst comes, was correct. It must be borne in mind, however, that "cheena and kodo" have been very largely sown in these thannas, and that the average outturn now given by Mr. Weekes (the result of more detailed inquiry) is more favourable than that given by him in the former fortnightly narrative. The prospect of the mango crop is said to be very promising in these thannahs. In Thannahs Modhubun and Dhaka Mr. Kilby reports as follows:—

"Around Ghorasan and further south the rubbee crop is exceedingly good, and will give probably a ten to twelve-anna outturn. Furthur south, towards Meerpore, the prospects are not so good; the yield may be about five annas from about four miles north-west of Dhaka to Seeraha in the south, and from Meerpore on the west to the Tirhoot boundary on the east the crops are scanty, especially so around Pudumkeer and Patahi, where rice is chiefly cultivated."

The crops within this boundary will not, he thinks, give an outturn of more than four annas. Around Modhubun (south of Seeraha), Tituria, Mehsi, &c. (towards Tirhoot boundary), the crops are reported (and I know them to be so personally) to be better in quantity and quality. They will yield probably an eight to ten-anna crop. In both these thannahs "cheena" has been extensively sown, and "the prospects can hardly be better," but rain is wanted for this crop. The mango crop is excellent in this quarter also.

Mr. Kilby calculates that there will be sufficient rubbee to feed the people for 2 or 2½ months, but not in the centre of his sub-division, that which extends from Dhaka to Seeraha (north and south) and Meerpore to Tirhoot boundary (west and east).

From Adapore and Motiharee Thannahs (circle No. 1) the prospects of the "rubbee" are unchanged. There is little or none around Kutkenwa: not more than a three-ana crop is expected in this neighbourhood; but in the neighbourhood of Adapore, Ramgurwa, &c., it is excellent; a 16-anna crop is expected in some places, and an average eight-anna for the circle.

I have not received latest accounts from Mr. Howe's circle (No. 5), but the state of the rubbee has been, I believe, reported direct.

Condition of the People.

In circle No. 4 (Bettiah) no material change is reported. From circle No. 3 (Gobindgunge and Kessuria thannahs) Mr. Weekes reports that the condition of the people is not improving. "The otherwise well-to-do ryots are hard pressed, and apply on all sides for loans. They refuse "to accept charity, and they will not work. They generally pledge as security cattle and trees, "half of which latter the landowner claims." This security, Mr. Weekes says, is as a rule good, though there may be difficulty in some cases in recovering advances. The landowners and mahajuns decline to stand surety, and will do nothing to assist. These cases are very numerous throughout the district, and are somewhat difficult to cope with, as it must be remembered that the mahajun and zemindar would, as a rule, not refuse to make an advance if there was a reasonable chance of recovery, and it is quite necessary that officers should be on their guard lest loans be made to persons, under cover of applications of this kind, who are not fit objects for gratuitous relief, and who have no means or intention of making repayment. These persons, on the other hand, must be relieved, and officers have been directed to treat these cases under the latter part of clause *f*, paragraph 3, Charitable Relief Rules. The smaller cultivators have the relief works to go to, and flock in large numbers to them. With regard to the further extension of relief works, and especially the relief afforded by re-digging old tanks, it has been found in practice that although many will come forward, each man to dig a separate well, not a single village will undertake to re-dig its own tank, not even when half the cost is offered to be defrayed by Government. Mr. Weekes attributes this (and probably with reason) to the large sums of money lavished on the Brahmins on the completion of a new tank, when nothing is secured to them on the mere re-digging of an old one; an old tank, moreover, secures to the donor no renown, whereas a new excavation bears his name. The best bargain will be made with the landowners, and every endeavour made to induce them to take their share of this duty. Rs. 6,985 have been advanced during the fortnight for this purpose.

In the tract bordering on the Nepal frontier between Adapore and Kutkenwa (a tract in which scarcity has all along been expected) distress is reported, and as it has been ascertained that grain is not to be had in the neighbourhood, steps have been taken under Circular No. 817, of the 8th ultimo, to sell grain to the petty dealers, &c. The grain will be sold at Rampore, three or four miles south of Kutkenwa, at 11 seers for the rupee, on condition (which will be publicly proclaimed) that the dealer retails the same to the public at 10 seers. Small quantities will be sold, not exceeding 10 maunds, in any one day to any one bania. The measure reported in my last narrative for the relief of the opium assamees, has, with the sanction of the Commissioner and the Opium Agent, been carried out, and grain amounting to 22,000 maunds has been advanced to these persons, the value of which will be deducted from the advances given to them a month hence. No cases of starvation have been reported within the fortnight. The subjoined statements show the price of food-grains and the number of dacoities and robberies.

B.—RELIEF WORKS.

The following is a list of the relief works in operation and the number of persons employed:—

Name of Work.	Men.	Women.	Children.	Total.
Motiharee Station Road	21,822	15,245	4,268	41,335
Motiharee to Kutkenwa	43,124	24,160	14,212	81,496
Ramgurwa to Adapore	7,295	5,487	5,494	18,276
Peepra to Rajpore	168	—	—	168
Peepra to Mozufferpore	28	—	—	28
Bettiah to Bugha	746	1,430	381	2,557
Motiharee to Dhaka	5,450	3,699	1,920	11,069
Dhaka to north-east	3,105	1,273	1,204	5,582
Dhaka to Pudumkeer	3,396	1,665	1,157	6,218
Jamooah to Seeraha	3,452	916	993	5,361
Tituriah to Mozufferpore boundary	9,447	1,138	2,203	12,788
Suckowan to Burhurwa Opium Factory	1,103	1,632	602	3,337
Tircoleah to Sangrampore	6,600	7,664	1,486	15,750
Motiharee to Dhaka	8,278	2,310	664	11,252
Choita Road	16,184	9,035	3,977	29,196
Mudhoobunnee to Dhaka Road	13,830	9,787	7,115	30,732
Mudhoobunnee Road	9,690	5,986	3,776	19,452
Portion of road leading to Sutterghuh and Gobindgunge	291	213	180	684
Chupra to Phoolowria	5,396	7,123	2,917	15,436
Ghorashan to Kutkenwa	22,697	7,715	4,058	34,470
Ghorashan to Tilhura	12,114	4,800	3,409	20,323
Ghorashan to Dhaka	29,714	12,547	7,823	50,084
Bettiah to Gobindgunge	25,556	25,710	15,256	66,522
Jamoonahpore tank	481	339	242	1,062
Kullianpore ditto	2,350	1,253	1,588	5,191
Soriathpore ditto	2,604	2,280	3,140	8,024

Grand Total	297,091	191,241	102,220	753,552

The daily average number of calls, 53,825. Under this head must be mentioned a very liberal undertaking set on foot on behalf of the Maharajah of Bettiah, who has liberally proposed to take in hand the construction of an embankment to protect certain villages from the encroachment of the River Gudh in Tuppeh Bohar, the whole cost to be defrayed by the Maharajah. The work has been surveyed, and sections made by the Executive Engineer, who reports favourably of the undertaking, which has lately received the Commissioner's sanction on the condition that the work be made a relief work open to all comers, and that the undertaking be supervised generally by the Executive Engineer, and be supplied with the sluice gates he proposes. The work will afford employment to a number of persons for a considerable time.

C.—Transport of Food.

The arrangements under this head continue to work satisfactorily. The amount stipulated, 50,000 maunds per week, has been duly conveyed, and another route through Sarun is in contemplation under the management of the same contractors, Messrs. Lethbridge and Gibbon.

D.—Storage of Grain.

The total amount received into the district was on the 7th March 4,29,116 maunds; of this, 2,94,000 maunds had been actually stored.

The following had been received during the fortnight:—

	Received.	Sent out.
	Mds.	Mds.
In the Bettiah Circle	63,812	277
„ Sudder „	90,068	47,262
„ Ramnuggur	Not received.	

E.—Advances to Private Persons.

The following sums were advanced during the fortnight:—

	Rs.
(1) For storage of grain	45,000
(2) Assistance to ryots	30,000
(3) Land improvement	6,985

The total amount expended up to date on these headings has been—

(1) For storage of grain	1,32,000
(2) Assistance to ryots	60,000
(3) Land improvement	15,142

F.—Charitable Relief.

The system of charitable relief sketched in my last narrative has been elaborated, and the inspectors have been at work in most of the circles for some time. Native doctors with medicines have been sent to Bugaha, Hurnataur, Ramnuggur, Ramgurwah, and Kussuria, and hospitals commenced. In circle No. 1 (Adapore and Motiharee) the number of persons gratuitously relieved during the fortnight was 300. Full particulars have been called for from the other circles, and the details will be given in my next narrative.

The Ramnuggur narrative not having been received, I am unable to give the latest accounts from that tract. The telegraph, however, has been open for some days to Ramnuggur, and Mr. Howe has not reported any very material change since his last narrative was received. As grain was obtainable with great difficulty at Ramnuggur, he was authorized with Commissioner's sanction to sell grain under the conditions laid down in Government Circular No. 817 of 18th ultimo. The results will be reported on receipt of his narrative.

Enclosure No. 4.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 14th March 1874.

Read—

The district narrative of the Bhagulpore division for the fortnight ending on the 7th March.

The narratives were received punctually, except that for the Sonthal Pergunnahs, which did not reach Government until the 13th March; the Deputy Commissioner explains the delay in its transmission.

2. *Monghyr.*—The condition of the people in the Monghyr district is, thanks to the spring crop, better and more hopeful than it was some weeks back; the local supplies of food are sufficient, and applicants for charitable relief are as yet few. On the Government relief works there are 4,088 people employed, besides about 3,000 on the Durbhanga estate works in Khurrukpore, and besides all those who are on private works, which last are, Mr. Lockwood says, becoming numerous. The present report does not say much about the activity of private trade. The transport and storage of Government grain goes on quite as quickly as grain is sent to the district. Sixteen relief centres appear to be actually open, at 13 of which 1,360 people are relieved daily. Looking at what is said about the condition of the people in Khurrukpore, the Magistrate will have to watch any signs of distress that may appear there: future narratives should state how many people are on these irrigation works, and whether any section of the work is set apart for those who cannot do a full day's labour.

Bhagulpore.—Prices have fallen even in the north or worst parts of the Bhagulpore district; supplies of food in the local markets are sufficient, and the Magistrate-Collector considers that, if no hail-storm or other untoward accident befalls, "general distress will certainly be averted till June." On the Government relief works there are 5,400 labourers, and the Magistrate-Collector says that many more are employed on the Court of Wards' and on Durbhanga works. The information regarding charitable relief operations will doubtless be more complete in next narrative. Meanwhile, the Lieutenant-Governor gathers from paragraphs 30-36 that in Muddehpoorah two relief circles, with four centres, have been started; and that in Soopole four circles besides Soopole itself, with 25 relief centres, have been formed. The number of persons receiving charitable relief is not given, but it is said that at some of the centres little relief is as yet required. It is not clear whether the Bhowanipore and Simrahi districts have yet been manned; at each of the others an officer is on the spot.

Purneah.—The fall in prices over the worst parts of the Purneah district is attributed by the Collector to the brisk private trade in grain, and it is satisfactory to learn that "there is no general distress," and that the isolated cases of great distress which are occasionally found are relieved. The number of labourers on relief works has increased to 3,874, but this total would still be small for so great a district if there were any real distress. The increase in the rate of despatches of Government grain from the Caragola depôt, from 4,000 maunds a day in the previous fortnight to 8,350 maunds a day in the fortnight under review, is decidedly satisfactory. Next fortnight's narrative should show the result of Sir Richard Temple's orders for selling Government grain at 12 seers per rupee for Bengal rice. The information given regarding the charitable relief operations is not very explicit, but the Lieutenant-Governor gathers that—

(*a*) 39 relief sub-committees have been appointed;
(*b*) That five regular relief circles have been opened under Messrs. Quillet, Bertelsen, Gouldsbury, Baboo Rajaninath Chatterjee, and Sub-Inspector Rambrahmo Sing; and that three other circles in the sudder sub-division have yet to to manned;
(*c*) That twelve relief circles under planters and other residents are at work, besides those in the Arrareah sub-division;
(*d*) That a daily average of 432 persons are being relieved, besides those of the Arrareah sub-division, where the number is uncertain;
(*e*) That cooked food is distributed at only one centre, uncooked food or wages for labour being given elsewhere.

The Lieutenant-Governor would wish to have the information regarding charitable relief sent for the future in a clearer shape.

Sonthal Pergunnahs.—The Deputy Commissioner's report shows that there is as yet no misery or starvation; prices are lower than they were; it has not been necessary to sell the Government grain urgently indented for on account of certain road-works where the price was said to be eight seers per rupee. So far as this somewhat meagre narrative shows, there is not as yet cause for anxiety regarding the condition of the people in the Sonthal Pergunnahs. The supplementary report regarding relief works and charitable relief has not yet reached the Government.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta,
The 14th March 1874.

NARRATIVE of SCARCITY and RELIEF of the DISTRICT of MONGHYR for the fortnight ending 7th March 1874.

A.—STATE OF THE COUNTRY.

THE bazaars continue to be well supplied, and although there is difficulty in getting rice in some of the petty bazaars, there is plenty of the cheaper kind of grain for all who have money to purchase it. The rubbee is being cut, but comparatively little has come into the market; what has come in has influenced prices to a considerable extent, and grain is getting cheaper. Of the six million maunds of grain which I calculate will be cut in this district, at least one-third will be exported, the remaining portion will keep the fortunate holders very well until the bhadoi harvest in August, and leave a surplus for sale in the district. There is a considerable amount of cheena and moong on the ground, and I hope this will be safely reaped, and add considerably to our food-supplies. This district is fortunate in having a succession of crops between the rubbee and bhadoi harvests. Besides cheena and moong, there are the mohwa and mango harvests, both of which afford in favourable years vast quantities of food to the people. At present the mohwa and mango prospects are very favourable, and the trees are covered with blossoms. Potatoes, vegetables, milk, ghee, and fish are cheap enough, and there are several articles of food, such as snails and roots, which do not come into the market, but which are consumed by the people with considerable relish. More than a hundred fishermen of Monghyr lately had a great feast off an alligator, fifteen feet long, which they captured during one of their fishing excursions, and which before it was finally killed was exhibited at some little profit to its owners.

The rubbee crops are in most places very good, and, if during the next eight months there is no actual famine in the district, I think we may fairly attribute the fact to the rain which fell in January. Almost everyone I speak to on the subject agrees with me in this particular, and all acknowledge that such a downfall, although most beneficial, was quite unexpected. But for the rain the state of the district must now have been most deplorable, as it is, the condition of the people has improved, at all events for the present. The wretched hamlets and hovels of the despised castes are quite deserted, their inmates having gone off *en masse* to the fields, where I hope all will find their hands full for the next month or six weeks.

I have lately paid a visit to Kharakpoor; the rice crops on the Durbhanga estate in that division almost entirely failed, but I was glad to find the condition of the people generally better than I expected, and I saw no distress except amongst the very low castes. The coolies on the irrigation works appeared well fed and contented, and Mr. Roberts, the Assistant Manager under the Court of Wards, who is continually moving about the country, has undertaken to bring to my notice any case of distress which may come to his knowledge. I opened relief centres at Kharakpoor and Gangta, but the persons relieved were chiefly old women and children; there were also a few lepers most hideously deformed, and the only wonder is that life should linger in such loathsome bodies.

Although I found the people generally in fair condition, I am inclined to agree with Mr. Roberts that many persons will probably require assistance before long. This part of the country is now engaging my particular attention, and I am in communication not only with Mr. Roberts, but with neighbouring zemindars, with a view to open as many relief works as soon as possible. Mr. Roberts has lately been taking levels towards Gangta, and he finds the land lies 75 feet higher than Kharakpoor, so that this part of the district must necessarily be badly off in years of deficient rain. All able-bodied men, however, can easily get employment on the irrigatiom works, and I think distress will only fall on those who are unable to work. Most of the distressed portion of the Kharakpoor thannah falls within the Durbhanga estate, and, although the rice crop has almost entirely failed this year, good crops have been secured during the past three years, and the manager is allowing all rents to stand over until better times arrive, and he is, moreover, prepared to make tuccavi advances to any extent wherever necessary.

The condition of the people generally throughout the district is improving, and will continue to improve so long as the grain now obtained from the rubbee crop lasts. The reapers are allowed from a tithe to one-sixteenth of the sheaves cut by them, and those who are well and strong should earn enough to keep them and their families going for a month or two at least. An English labourer armed with a scythe would make his fortune.

There are a number of paupers from Tirhoot wandering about the district. I am informed that as many as five hundred have assembled at Suraj Ghurra to cut the fine rubbee crops there. I have lately opened a relief centre at Khoyaria on purpose for these people, as many of them have arrived in a very forlorn condition.

Mr. Campbell, writing from the Gidhour pergunnah, south of Jamooe continues to give a favourable report of the condition of the people. The rubbee crops are generally very good, and he saw no signs of starvation; he mentions, however, that at Nawadah the condition of the Mushirs is wretched. As I have in former reports observed, however, the condition of these people always is wretched, and must remain wretched so long as they continue content to sell themselves in bondage for a few rupees, and in days of plenty, instead of making any provision for the future, drink away every available pice. Mr. Campbell, however, will keep his eye on this part of the country and afford relief directly it is really necessary. At Begoo Serai Mr. Wilkins says—" the condition of the people has not changed except in the " larger towns of Begoo Serai and Tegrah. In these the professional beggars are hardly put " to it. I have had a house-to-house inspection of the town of Tegrah made by the head " constable, assisted by the sub-registrar. They discovered a total of 14 professional beggars " in a state calling for relief, also 14 people unable to work, besides 4 *purdah-nishin* women " requiring relief. I am having the same plan pursued here at Begoo Serai, and intend putting

" up the result of these inquiries before the charitable relief committee on the 8th current, in " order that relief operations may be set in hand at Tegra and Begoo Serai,—in other places it " is not wanted. Large numbers of the people have gone across the river to cut the rubbee. " Besides this, I have given out money to various planters for repairing village roads all over " the sub-division; and in addition to this there are two large ghâts (Jamatya and Chumta) " where numbers of coolies are daily at work, and a third ghât will supply work (has in fact " begun to do so) at Simeria. All these works, with the addition of the Tirhoot road, supply " sufficient labour for as many as are in urgent need of it to earn a livelihood for the present. " But of course when all this grain has been carried to Tirhoot, all the rubbee has been cut, " and all the roads repaired, say two months hence, I apprehend that much more extended " measures will have to be taken than are at present found sufficient. The owners of carts " need not keep their carts idle a moment. The contractors for the transport of this immense " quantity of grain are in urgent need of as many carts as they can get, and they pay really " liberally. They have found a great difficulty in procuring carts, all the same, without official " assistance. This difficulty is owing to a generally prevalent rumour that the carts are wanted " for the Commissariat Department, in consequence of a war with Nepaul, and the owners are " afraid they will never get their carts safe home again."

Regarding the case of the two dead bodies found between Luckee Srai and Jamooee, Mr. Money writes: " The mussalman whose death I reported to you was a traveller; it has not " been ascertained where he belonged to, where he was going, or who with. The woman found " dead was by caste a Tattwa, belonging to Garua Pursunda, and, though reported as knocked " over and unable to rise owing to a storm in the early morning, must have been, and certainly " appeared to be, in the last stage of weakness from starvation.

" I started a poor-house there, appointing a mohurir, cook, and paniwalla. At the rates we " agreed on, some ten or twelve persons only entered it with tickets, those at surrounding " villages objecting to leave their houses. I looked after it myself, and so did Deputy Collector " Poorno Chunder Banerjee. Two Babhun women were sent sufficient rice on the 20 days for a " month principle to last till the end of the month, but they refused it on the ground that " (as far as I could make out) their husbands were not also given it. I refused the husbands, " as they were capable of making rope from sebi grass at their own houses, which work I offered " them.

" After four or five days all the inmates refused to continue eating cooked food, so the place " is in temporary suspension. I shall visit it again shortly and renew operations if necessary. " I got the use of a long shed and a separate building for a cook-house in a good situation, " which had been used formerly for extracting the syrup from the sugarcane. I sent a store " of dâl, &c. from Secundra to the charge of the Putwari and Jeth ryots, taking receipts, &c. " in proper form.

" The ticcadar of the village, who, however, is a non-resident, has taken an advance under " the Act to commence a relief work in the village at once, and a new road between Secundra " and Luckee Serai passes within a short distance of the village."

A letter just received from Mr. Currie, dated Camp, Nabi Nugar, near Luckee Serai, says: " We have just had here a short sharp storm of rain and hail, the latter heavy. It will, I am " afraid, have done much mischief to the mangoe blossom and mohwa, if it has been general; " also some to the wheat where ripened. If the mohwa crop be injured, it will take away one " resource for labour. I was told that in a few days the men would return from the rubbee " harvest, and would almost immediately go to the mohwa harvest, and so would find occupation " till rain should fall, and the ploughing, &c. begin again."

I have not received reports regarding the storm from other parts of the district. At Monghyr on Saturday there was a dust storm only, accompanied by light rain, which did no harm.

B.—Relief Works.

At the present moment there is plenty of work in the district for the entire labouring population, either cutting the crops, collecting opium in the poppy fields, making the Government roads, and the zemindari embankments, or preparing the fields for future crops. As I have remarked in former reports, irrigation in this district is in a very defective state, numerous successive crops might be raised where at present only one crop is reaped, and the yield increased a hundred-fold, with embankments to keep out excessive floods, and tanks to irrigate the land during the seasons of drought. The industrious race of Koirees, or market gardeners, who live in the vicinity of large towns in this district, demonstrate by their successive crops the extraordinary productive powers of the land when properly cultivated.

I think, therefore, in providing work for the people that we cannot do better than follow the directions of Government, and turn our attention particularly to zemindary village works, either in reclaiming low inundated land by embankments, or by digging out old tanks and wells where the lands are high and dry. There is generally little difficulty in arousing the zemindars to action, where the estates are held by one man only, but where the shares are numerous, there is generally so much squabbling going on that one sharer refuses to stir hand or foot for fear his obnoxious co-sharer might reap some of the fruits of his labour. The Kugra pergunnah is an instance of this obstruction, but happily it is now under butwarra, and one of the sharers a very wealthy man, told me yesterday that he is prepared to spend any amount of money directly his portion is allotted to him. I have, however, advanced about Rs. 30,000 under the Land Improvement Act for works well scattered over the most distressed pergunnahs, and this should afford a vast amount of labour at almost each man's door. These advances, coupled with tuccavi advances taken by zemindars for distressed well-to-do ryots, should, if properly applied, as I hope they will be, give great relief.

I have sent a list of advances to each relief circle officer, in order that he may visit the works in progress from time to time, and I have requested persons taking tuccavi advances to send me a list of the ryots to whom the money is distributed. I think nearly, if not quite, all the really useful roads for the districts have already been proposed and sanctioned; it will take years to bridge all the roads which we have in hand, and I think we cannot do better, as before remarked, than encourage village works through the zemindars.

The provisions of the Act for the improvement of estates are now becoming generally known throughout the districts, and numerous applications for advances are being made all over the distressed tracts.

There are three reasons why such applications should be numerous. The first is that where the applicant is respectable, and his security gdod, he finds he can get the money without delay, or having to pay gratuities of any kind. The second reason is that his estates and its rent roll will probably be greatly improved by the proposed works. The third reason, which has recently been brought to my notice by Mr. Currie, is that the ryots threaten to leave the estates if the zemindar does not provide work and food for them. Mr. Currie, who superintends the relief circles in the Jumooe sub-division remarks:—"If the zemindars go on all over these tracts taking money "in this way, there will be little need for any but light labour works from Government resources "and the demand for labour will be quite up to if not in excess of the supply."

The Bucktearpore zemindar has taken a thousand rupees for embankments and a thousand rupees for advances to ryots hereafter to be mentioned, and Mr. Christian, at Chapraun factory, a few miles distant, has taken two thousand rupees for repairing embankments in eight or ten villages. Besides the works undertaken with Government money, there are many works going on in various parts of the district, where the zemindars think it undignified to take Government money. I am doing my best to get a list of these works for general information.

I have recently sent a revised map to the Commissioner showing where roads and other works can be made, if necessary. These works include three tanks already sanctioned, and which should afford work to several thousand persons for a month a two. The relief work at Monghyr is now through the arrangements made by Colonel Murray and Dr. Purves well in hand; the beldar appear to keep well and strong on six pice a day, and the women can earn a like amount by working hard for four hours. I generally take the opportunity when visiting these relief works to advise the surplus population to emigrate to Burmah, particularly as having been there myself I can give a favourable account of the country. The extreme credulity and faint-heartedness of the people, however, are always well illustrated by the remarks made by the coolies, whilst alluding to the subject of emigration. I have, however, despatched 126 persons to Calcutta *en route* to Burmah, and I hope to send more shortly.

I annex a statement showing the number of works opened and the number of labourers working on them.

C.—TRANSPORT OF FOOD.

Rice to some extent is coming into the district, but it bears no comparison to the amount of other grain, which will shortly leave the district. Large quantities of rubbee grain of all kinds will shortly be moved up and down the river, and rail-road to every place where it can be sold at a profit. Several Mohajuns and others whom I have asked say that they can purchase large quantities of wheat, barley, peas, and grain for me in the district if I require it.

The roads of this district north of the Ganges are now being freely used by various contractors for carrying grain to North Bhaugulpore and Tirhoot, fortunately I stored large quantities of grain before the contractors came into the field, for they have scoured the country and engaged every available cart. Bridges of boats have or are being made over the rivers north of the Ganges, and the kutcha roads are really in excellent order. I have not heard of any block anywhere. I have by a recent arrangement still to store more than 30,000 maunds at Bucktearpore and Surbella, in the northern portion of Furkya towards Bhaugulpore, in order to bring the total amount in the tract of country up to 50,000 maunds. I do not anticipate much difficulty in the matter.

I shall not, however, get on very fast, as I have promised not to interfere with the contractors; but as we have 18,941 maunds at Bucktearpore to go on with, this will suffice until fresh supplies can arrive.

D.

I am of opinion that when the total amount consigned to this district, 3 lakhs of maunds, has been stored that we shall have enough. I am increasing the stores north of Furkya to a total 30,000 maunds at Bucktearpur, 10,000 maunds at Mr. Christian's factory at Chaprah, and 10,000 maunds at the Surbella indigo factory. 18,941 maunds have already been stored at Bucktearpur, which hitherto has supplied the Chaprah relief centre. I am about to move on grain as best I can; considering nearly if not all the carts in the district have been taken up to carry grain to Tirhoot and Bhaugulpur. I can, however, store all the grain in my empty golahs at Monghyr, Khagaria, and Gogree, and move it on as fast as possible.

There is, however, quite enough grain already stored at Bucktearpur to last until fresh supplies arrive. I have been moving on grain from Luckee Serai to Sondhi, a newly selected place of storage in Bisthazaree, during the fortnight, and shall have 25,000 maunds stored there before long. I propose paying this place a visit during the week. During a recent visit to the Bucktearpur golah, I observed that the maize stored there is attacked by weevils, and I am selling it to the coolies on the road, much to their satisfaction, as maize is their favourite food.

I annex statement of the golahs and the amount of grain stored in them.

E.

I have not received many applications for advances for the purchase and storage of grain during the fortnight, as everyone is waiting to see how the rubbee harvest affects prices. The prevalent opinion appears to be that gram, wheat, and barley will get cheaper, and anyone making large purchases now may lose by the transaction.

The Monghyr Municipality has received an advance of Rs. 5,000, and about 654 persons are employed daily under the cowrie system.

I annex a statement showing the amount of advances under Act XXVI. of 1871 made hitherto. Applications for advances are daily coming in, and the Relief Officers, when they have time, are employed in making the local investigations. All the advances made hitherto have been to men of known position and respectability.

F.

Committees have been appointed at the following places: Monghyr, Jamooe, and Begoo Serai. Forty-two sub-committees have been appointed in the district. The only special relief sub-division as yet opened and officered is at Jamooe under Mr. Currie.

During the past fortnight the most distressed tracts of the district have been allotted into relief circles as follows:—

1st Circle, in Jamooe sub-division, comprising all pergunnahs Bisthazaree and the northern portion of pergunnah Gidhour.

Mr. Baillie, C.S., Superintendent, Head-quarters, Sikandrah.

Relief Golahs - - -	Sikandrah.
	Jamooe.
	Chandoura.

2nd Circle, comprising all the Umerthoo pergunnah and the southern and western portion of Maldah pergunnah.

Mr. Money, C.S., Superintendent.

Relief Golahs - - -	Sheikpoorah.
	Chouara.
	Maldah.

3rd Circle, comprising all the Salimabad pergunnah and the western portion of pergunnah Chundun Bhooka.

Superintendent, Quarter-master C. Linton.

Relief Golahs - - -	Luckee Serai.
	Sondhi.

Mr. Currie, C.S., is in charge of active relief operations in the Jamooe sub-division.

4th Circle, comprising the northern part of pergunnah Farkia lying above the River Tiljuga.

Mr. Mansion, Superintendent, Head-quarters, Bucktearpur.

Relief Golahs - - -	Bucktearpur.
	Surbela.
	Chapraun.

Mr. Money for some time past has been from village to village in the Jamooee sub-division, relieving distress wherever found. Now that the other officers are at their posts Mr. Money will confine himself to his own circle.

Mr. Baillie arrived last week at his head-quarters, and has commenced operations.

Quarter-Master Linton has not yet arrived, but Mr. Currie is taking his place until his arrival.

Mr. Mansion starts to-day for Bucktearpur, where Moulvie Abdul Jubbee is at present engaged in visiting the surrounding villages.

The number of relief circles opened and managed by planters, zemindars, and other residents up to date is as follows:—

1. Monghyr.
2. Bucktearpur.
3. Chapraun.
4. Khagaria.
5. Khurrukpoor.
6. Gungta.
7. Lackee Serai.
8. Sheikpoorah.
9. Patchna.
10. Sondhi.
11. Girua Pursunda.
12. Choara.
13. Mulleypoor.
14. Jamooe.
15. Orain.
16. Obheypoor.

No. 312—S.R., dated Bhaugulpore, the 10th March 1874.

From V. T. Taylor, Esq., Collector of Bhaugulpore, to the Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honour herewith to submit the eighth fortnightly narrative.

A.—State of the Country.

2. I returned last night from the north, and since the last narrative was despatched, I have been over a large extent of country in all the worst tracts of Soopool, as well as tracts where but little distress need be apprehended. With the exception of one long and narrow tract to the

extreme west of the Soopool sub-divisien, I found nothing which would justify the assertion that *famine* was imminent. In the tract alluded to there is no rubbee, the country being solely an aghani rice-growing one; in the other portions of Soopool east of the Dhimra, the wheat, rahur, and cheena, are exceedingly good, far better than usual, and undoubtedly a large area has been sown down than in ordinary years; this is especially the case in pergunnahs Harawuth and Dhuphur and the whole of the Muddehpoora sub-division.

3. Throughout the Soopool and Muddehpoora sub-divisions ploughing is general, and not only ploughing, but fallow lands are being dug up and prepared for murwa. Moongh and lowland paddy have been sown to a fair extent already, and in many places it has germinated well; all this has tended to bring prices down, and prices have not only fallen, but grain is more easily procurable throughout the north of the district.

4. Should there be no hail or no heavy rain within the next fortnight, the rubbee, taken all in all, will be a splendid crop. It is now fast ripening, and early peas and early wheat are being harvested; should any damage be done to the rubbee crops by hail or rain, the present bright prospects will of course be very materially altered, otherwise general distress will be certainly averted till June.

5. The Muddehpoora officer writes: "Owing to the prospects of rubbee and cheena being good, the bazars are for the present *very well* supplied with the usual grains; the price of rice was at the markets in the north 14 to 15½ seers per ruppee local weight (64 tolahs), and at Kissengunge 16 to 18 seers same weight." He further adds that "the traders are now beginning to open out their stores to a certain extent; persons who stated that they had but a few maunds of grain each are now admitting that they have a great deal more."

6. I was fortunate enough in reaching some of the principal hâts on market days, one specially at Gumhuria, the boundary between Soopool and Muddehpoora, where I saw very large quantities of every kind of grain and potatoes, and a brisk sale going on. At Peepra hât in the Soopool sub-division, as well as at Bhuloa Bazar, the supplies were ample and grain of all kinds cheaper than they were at Kundowlee; north of Dugmurah the stores are plentiful, and in Soopool itself every shop had a full supply of grain. Whether this state of things will continue it is impossible to say, but there can be no question that matters are more satisfactory now than they were a month or so ago.

7. The Soopool officer writes: "Though there has not been any very great fall in prices, the " supply of food-grains in the various bazars is more free than it was. Common rice is now " obtainable at from 10 to 13 seers per rupee and murwa from 12½ to 16. Prices to the north " are easier than the south;" and this latter fact he attributes not so much to the importations from the Ganges, which are now being made to a small extent by private traders, as to the stock of grain in the large rice-producing tracts to the north being larger than had been imagined.

8. At head-quarters, where there is no distress, the prices are—common rice, 11 seers 5 chittacks; wheat, 14 seers 8 chittacks; Indian-corn, 15 seers; and gram, 16 seers 7 chittacks.

9. In the Banka sub-division prices are still rising, but "any required food in small quantities can be easily procured in every bazar and hât." Rice is selling now from 12 seers to 13 seers; gram 13½ seers to 15 seers; wheat 12 seers to 12½ seers; kurthi 12½ seers to 17½ seers; kulai 12½ seers to 17 seers; and Indian corn from 13½ seers to 15 seers.

10. The following table shows approximately, as far as can be ascertained, the difference in prices of some of the food grain *now* and at the corresponding period of 1866:—

	Rice, 1st sort.		Rice, common.		Murwa.		Indian-corn.		Wheat.	
	1866.	1874.	1866.	1874.	1866.	1874.	1866.	1874.	1866.	1874.
Soopool - - -	—	9½ to 10	—	10 to 13	—	13 to 16	—	—	—	11
Muddehpoora - -	—	8	—	11 to 12	—	13 to 15	—	—	—	10
Head-quarters - -	12-10	10-1	13-4	11-5	—	—	15-2	15-8	10-1	14-8
Banka - - -	—	12	14	12 to 13	—	—	17	15	9-8	12

11. *Rainfall, if any.*—·05 only fell on Saturday, the 7th, at Head-Quarters, and ·01 at Muddehpoora—slight showers doing neither harm nor good. At Soopool ·40 was measured; this rain will be beneficial, the rubbee not being so far advanced as further south.

12. From the remarks above made it will be seen that the condition of the people generally is not so bad as had been anticipated, and excepting some of the lowest labouring classes, there is ample work for all who wish for it in the Soopool sub-division; and during the Hooli and Mohurrun even these men left the work, on some roads every man did so, to join in the processions, &c. The cultivators as a class are fully occupied tilling their own lands, and even the labourers now on the roads may be expected to leave them for the coming harvesting operations. The Municipality have not as yet found it necessary to undertake any especial relief operations.

13. The statement of thefts for the month of February is annexed; this time it has been drawn up according to the sub-divisions.

B.—RELIEF WORKS.

14. The statement given below shows what is being done in this head.

Name of road and number on Map.	Progress in making out relief work.	Progress in opening relief work.	Number of labourers.	Supply of food thereat.	Condition of labourers.	Mode of payment.	Rate of wages.	Arrangements for tools.	Disbursement up to 7th March 1874, as far known.
Road from Soopool to Bhooteah, 19 N.	All done - -	11 miles in five different places.	1,185 coolies daily on average consisting of 70 per cent. labouring and 30 per cent. non-labouring classes.	All draw their supply from bazar. An experimental shop was opened at Bella for sale of Government rice at 10 seers per rupee, to the labourers only, but from 25th to 28th February only 1¼ maunds were sold. This small sale proves that grain of different sorts is cheaper in the bazars.	Matters are better than at last report as grain of sorts is easily had in the bazar, though their price has not fallen. Huts have been constructed for accommodation of coolies resorting to work with their families. The percentage of women is nearly. No diseases of any epidemic kind have yet appeared. Brahmins, and other respectable classes have not yet joined the work. A little rain fell on the 6th March.	By daily labour	Men 0 1 6 to 0 2 0 Women 0 1 0 to 0 1 3 Children 0 0 6 to 0 1 0	Those who have, bring their own tools; and the rest are supplied from Government store.	1,723
Road from Bella to Barroary -	3¾ miles - -	2¼ miles in five different places.	1,248 ditto - - -	Ditto - - -	Ditto ditto ditto -	Ditto -	Ditto ditto -	Ditto ditto -	1,800
Road from Singhessur to Nathpoor, 10 N.	Not necessary -	6 miles - -	854, all are labouring classes.	Ditto - - -	Condition of labourers said to be bad, but general features of the country fair. The condition of labourers I saw on the road was decidedly good.	Both by daily labour and task-work.	By task-work at Rs. 2-4 per 1,000 c. ft. By daily labour— Mates 0 2 0 to 0 2 6 Men 0 1 6 to 0 2 0 Women 0 1 0 to 0 1 3 Children 0 0 6 to 0 1 0	All supplied from Government store.	1,217
Road from Singhessur to Soopool, 16 & 17 N.	Ditto - - -	1 mile - - -	75 ditto - - -	Ditto - - -	Ditto ditto ditto -	Ditto -	Ditto ditto -	Ditto ditto -	115
Road from Soopool to Peeprah -	..	1 mile - - -	261 ditto - - -	Ditto - - -	Ditto ditto ditto -	Ditto -	Ditto ditto -	Ditto ditto -	86
Milkee Road, 5 N. - - -	..	3¼ miles - - -	642 coolies daily on average, consisting of 28¼ per cent. non-labouring, and the rest labouring classes.	From bazar - - -	Condition tolerable; reaping has commenced, and the coolies belonging to non-labouring caste are falling off.	By task-work -	From 1-12 to 2-0 per 1,000 c. ft., according to height of embankment.	Noonias and Beldars have their own tools, and the rest are supplied from Government stores.	833
Muddehpoora Road, 1st Section, 1 N.	Not necessary -	2½ miles - -	77 coolies daily on average, consisting all non-labouring, low caste people.	Ditto - - -	Condition tolerable; season for reaping corn being at hand, the people are not willing to work on the road.	By daily labour	Men 0 2 0 Women 0 1 3 Children 0 1 0	All supplied from Government store.	84
Muddehpoora and Ganges Road, 2nd Section, 1 N.	Ditto - - -	5¼ miles - -	151, all are labouring classes.	The coolies procure their food themselves.	Rice has become cheaper, and it sells at 13 seers per rupee of Calcutta weight (80 tolah).	Ditto -	Men 0 1 6 Women 0 1 0 Children 0 0 6	The coolies are compelled to bring their own tools, but those who are very poor are supplied from Government store.	Expenditure not shown by the Executive Engineer.
Muddehpoora to Sookhasun -	..	..	90 coolies on an average -	No further information.		Ditto -	Ditto ditto -	Ditto ditto -	85
Road from Pertabgunge to Beerpoor, 11 N.	Work just commenced.		125 class not known.	....	....	..	..	..	..
Road from Bungaon to Phoolont, No. 21 N.	Not commenced.		....	....	....	..	..	..	..
Narainpoor to Narkuttea and Sonebursa, No. 4 N.	..	..	104 coolies daily on average.	No further information.		..	..	..	181

Name of Road and Number on Map.	Progress in making out Relief Work.	Progress in opening Relief Work.	Number of Labourers.	Supply of Food thereat.	Condition of Labourers.	Mode of Payment.	Rate of Wages.	Arrangements for Tools.	Disbursement up to 7th March 1874, as far as known.
Bowsee Road from mile 8th to 42nd, 1 S.	Not necessary	The general repairs to this road being finished, the work is stopped.	45 persons of labouring class.	—	—	—	—	—	20
Road from Kutoriah to Semultullah, 27 S.	Completed -	3,200 Rgft. in six different places.	224, consisting two per cent. non-labouring and the rest labouring classes.	Home stock of food-grain of all the labourers have run short; they draw their supplies of food from Kutoriah to Talloah Bazars.	This part of the district is hilly, jungly and thinly peopled. The condition of the labourers working on the road is not very bad. They earn from 0-1-9 to 0-2-3 a day, and if there be good mowah crop, the scarcity will not be felt by the poor class for two or three months more. They generally live on generah and koorthee.	Both by daily labour and task work.	By daily labour— Men - 0 1 6 Women - 0 1 0 Children - 0 0 6 By task work from 1-12 to 1-14 according to soil.	The village people and some of the beldars are supplied with Government tools, and the rest use their own.	307
Banka to Kutoriah, No. 26 S.	Work not commenced yet.								
Kutoriah to Chundun, No. 28 S.									
Peerpointee to Barrahat, No. 16 S.									
Bhauguepoor to Umeerpoor, No. 2 S.									
Mudhai to Pootea, No. 12 S. -									
Umeerpoor to Banka, No. 4 S.									
Bhauguepoor to Ghorghat, No. 18 S.									
Sooltangunge to Arjusgunge, No. 19 S.									
Ghogha to Moheawan, No. 13 S.									
Road from Dhoorea to Bowsee, 9 S.	—	13,400 cubic feet of earthwork in one place.	123 coolies daily on average. All labouring classe.	Home stock of food-grains of labouring classes having run short they draw their supplies from bazar.	There is a great demand for works, so much so that on the 2nd day of commencing this road there were 200 labourers in one place only. The labourers are able-bodied men, and do not look yet famine-stricken. This part of the country is rather thinly peopled.	By task and daily labour.	By task labour 1-12 per 1,000 c. ft. By daily labour— Men - 0 1 6 Women - 0 1 0 Children - 0 0 6	The beldars and some of the labouring classes work with their own tools, and the rest are supplied from Government store.	36
Muddehpoora and Bailoo Road, 7 N.	—	—	228 Ditto - -	The coolies procure their own food.	Rice has become cheaper and is sold at 12 seers per rupee of 80 tolah weight.	By task work -	2-4 per 1,000 c. ft. including dressing and ramming.	The coolies are compelled to bring their own tools, but those who are very poor are supplied from Government store.	Not shown by Executive Engineer.

V. T. Taylor,
Collector.

15. In addition to the above there is the large road being made by the Durbhungah Court of Wards through the north of the district to Nathpore and the road from Singhessur to Keotgaon on the Purneah boundary. The Court of Wards have in hand several large new tanks in Pergunnah Narradigur and eight or nine more projected, all these will be shown on the maps shortly to be submitted. These works employ a large number of people, both of Narradigur and emigrants from Tirhoot.

16. The rate of wages on our roads has been raised, but the result does not show so great a rush to the works as might have been expected; two or three of the roads show an increase. One overseer rejoices in the rise with a remark that now we shall draw away labourers from private works and show an increase over our roads; should this really turn out to be the case it is a matter to be regretted. Mr. J. Christian is undertaking a large *bandh* some 6½ miles in length; other zemindars have, as I saw myself, started tanks and roads. Mr. Grant, District Engineer, who saw many of these minor works subsequent to my visit to them, told me he saw but very few men at work upon them and thought it probable that the men had only been employed specially for me to see; this may have been so but it is more than probable that the approaching harvest or the rise in our rates had more to do with the men leaving the works, while in the north several persons complained to me of the rise in rates as making it difficult to get coolies who now refuse work unless private parties pay higher than the Government rate; notwithstanding the rise in wages, the people still keep away from the works though there are ample works available and new works have been opened during the fortnight.

17. The experiment was tried of selling Government rice at 10 seers for the rupee on two roads: the result on one road has not been reported, but on the other a few seers only were sold in three days, other grains being cheaper in the market. As long as the coolies *get grain*, and get it cheaper than 10 seers for the rupee, it is not likely that they will buy Government rice. The zemindars cannot or will not raise their rates which are fair ordinary rates, and we shall prevent them carrying out their projected works by reducing their labourers by our higher rates.

18. We have a large *bandh* in a Government estate put in hand in Pergunnah Ootturkhund, which will afford plenty of labour for some time to come; it is in a distressed part of Soopool, and will be a most useful undertaking in every way.

C.—TRANSPORT OF GRAIN.

19. At the Bhaugulpore railway station the total exports for the fortnight have been 8,634, against imports amounting to 17,138; of the former 3,754 maunds were wheat and 3,523 gram for Howrah; nearly all the rest, excepting 185 maunds of rice up for Jamalpore, were gram for various stations *down* the line. Of the imports 1,969 were wheat, 8,718 gram, and 3,085 Indian corn; these appear to be taking the place of wheat as they have been imported from Lahore, Loodiana, Phillour, Saharunpore, Meerut, Jullunder, Umballa, Agra, Delhi, and other places.

20. The returns from the other stations are unimportant.

21. There is very little, if any, private exportation going on within the district, though occasionally a few imports are heard of.

D. STORAGE OF GOVERNMENT GRAIN.

22. The following are the places of storage now selected with the amount sanctioned for each:—

Muddehpoora Sub-division.

			Already stored.
Muddehpoora		50,000	19,666
Bhowaneepore		25,000	—
Kamp		50,000	—
Sonebursa		14,500	14,500*
Patterghat		3,500	3,500
Byjnathpore		15,000	—
Ghylar or Lalpore (as Mr. Martin tells me the place has been altered)		10,000	—
Soopool Sub-division.			
Soopool		1,30,000	90,843
Chundail		10,000	—
Rutowlee		8,000	—
Hurdee		10,000	—
Nowabakkur		30,000	3,800
Dugmurah		30,000	—
Roshwar		40,000	—
Nurgo		20,000	—
Chandpeeper	Court of Wards	12,000	—
Bhaptiahi		12,000	about 3,000
Burhurra		6,000	„ 5,000
Peepra		20,000	—
Pertabgunge		30,000	3,500

---

* Stored at Sonebursa and Phoolont. The Phoolont grain is to be taken hereafter to Sonebursa.

Soopool Sub-division—cont.

		Already stored.
Bhulooa	20,000	—
Simrahi	40,000	—
Nathpoor	10,000	—
Bheemnugur	5,000	—
Arjillee Dulgaon	8,000	—
Ekar	60,000	7,725
Putchgachia	20,000	—
Sewani	20,000	—
Nowhutta	10,000	—
Burgaon	5,000	—
Bungong	30,000	15,000
Muheshi	10,000	—
Sudder Sub-division.		
Permeshurpore	1,000	1,000
Banka Sub-division.		
Dhooryah	2,250	2,250
Kutooria	4,773	4,773

23. All the rice lying at Jugdees Chuck has been removed to Phoolont, whence it will be sent on as rapidly as possible. I having only just returned have not as yet received any information from Mr. Hankey, or Captain Grant, as to the working of the Monghyr contract for Soopool, but as far as I understand the contractors have despatched over 20,000 maunds. Mr. Smith has succeeded in procuring carts from Nepal, which are to be employed locally in removing grain from Soopool to some of the distant golahs. Nowabakkur and Ekar have been both stored *from Soopool,* but as the grain from Monghyr can go to Ekar and southern golahs, Mr. Smith will carry the Soopool grain to the northern golahs.

24. It is possible that all the grain ordered will not be required, but this will form the subject of a separate letter (if necessary) after careful consideration and consultation with the Commissioner.

25. The total quantity stored, as far as is known, amounts to (exclusive of the Court of Wards' grain) 1,66,557 maunds.

E.—Advances to Private Parties.

26. Since the last narrative was despatched, Rs. 8,000 have been paid as advances for the purchase of grain including Rs. 1,000 to petty traders; other applications have been received and the money will be paid as soon as they are sanctioned.

27. Several applications have been received for tuccavee advances for small amounts, but I am obliged to return many of them as they are incorrect.

28. Several zemindars are making small roads or *bandhs* and tanks without applying for Government assistance, and as long as they continue to do this it is really satisfactory.

29. Mr. Hennessy has applied for and obtained Rs. 5,000 to assist his ryots. Sanction has been granted for Rs. 10,000 to Mr. Christian of Bungaon, this will be paid as soon as applied for; the further sum of Rs. 1,500 has been sanctioned to a native zemindar, and an application from Mr. F. Bowers of Inamputtee for Rs. 5,000 has just been received, and will be forwarded to the Commissioner for sanction.

F.—Charitable Relief.

30. The district north of the Ganges (that of Soopool and Muddehpoora sub-divisions) has been now sub-divided into circles as under—

Muddehpoora sub-division—Kamp Circle comprising the golah stations at Kamp, Sonebursa, Phoolont, and Byjnathpore; and the Bhowanipore Circle comprising the golah stations at Bhowanipore, Muddehpoora, and Lallpore.

The Superintendent of the Kamp Circle, Mr. Inman, has already arrived at Kamp.

31. I have visited all the above places while in the north, excepting Lallpore. I was not aware that Lallpore had been selected in preference to a place already selected and visited by me until it was too late. I trust before very long all the golahs will have been erected.

32. All the relief centres for these two Circles have been given in a previous narrative; it has only been considered necessary to open four of them, but at only two of them have any applicants for relief appeared, viz., Muddehpoora and Byjnathpore; those relieved at the former place are very few, those at the latter are nearly all beggars or emigrants from the Tirhoot district on their way eastward for work.

33. The Soopool sub-division has been sub-divided into Soopool Circle, comprising the golahs at Soopool, Chundail, Rutowlee, and Hurdee.

The Naradigur Circle comprising the golahs at Nowabakur, Dugmurrah, Roshwar, Nurgo, Chundpeeper, Bhaptiahi, and Burhura.

This circle is under the direct management of the Court of Wards, being Durbhanga Raj property. Mr. Duff has already been appointed; he will have an assistant at Durbhanga.

The Simrahi Circle, comprising the golahs at Peepra, Pertabgunge, Bhulooa, Simrahi, Nathpore, Bheemnugur, and Arjillee Dulgaon.

The Superintendent for this Circle has not yet been appointed.

The Ekar Circle, comprising the golahs at Ekar, Putchgatchia, Semani, Nohutta, and Burgaon. Mr. Wilson has joined his appointment as Superintendent of this Circle.

The Bungaon Circle, comprising the golahs at Bungaon and Muheshi.

Mr. John Christian of Bungaon factory has undertaken the management of this Circle.

34. Of the above I have visited every place excepting Rutowlee, Roshwar, Nurgo, and Nathpore; the golahs are being rapidly pushed on to completion, and will, I believe, all be ready for the grain as soon as it arrives.

35. All the relief centres (previously named) have been opened, some of them, as the sub-divisional officer remarks, "more as feelers than on account of actual distress." As yet the applicants for relief consist almost entirely of the very lowest classes and of habitual beggars, blind, lame, maimed, and lepers, with a very large proportion of children. I visited many of these Soopool centres, and any thing more loathsome than many of the persons coming in for relief it is impossible to imagine. These people in ordinary years are scattered about and obtain relief from zemindars or villagers; now whenever they appear they are warned off and told to go to the thana or relief centre where they will get fed by Government. The sight is a sickening one, and these objects must not be allowed to die, but I shall make such arrangements as will ensure these people being collected together, kept together, and fed together, entirely apart and distinct from any ordinary applicant for relief whose natural prejudices would prompt him to keep away altogether, rather than sit down and eat with such company.

36. Several of the applicants are men from Tirhoot who, after a good meal, go away in search of work; these generally go to the nearest road or tank.

37. Circular No. 1251—S.R. of the 5th March, has only just reached, and it has been sent to the sub-divisional officers. I will endeavour to reply to it with more detailed information if possible than I have been able from my own knowledge and personal observation to record in this; the sub-divisional officers have been unable to get complete returns of the numbers fed daily from the village committees.

38. None of the cultivating class have at present applied for relief, they are as previously mentioned all busy ploughing.

No. 1161F, dated Purneah, the 9th March 1874.

From W. Kemble, Esq., Magistrate and Collector to the Secretary to the Government of Bengal.

I have the honour to submit my fortnightly narrative for the period ending Saturday, 7th March.

A.

The supply in the town of Purneah is still increasing daily, and petty traders come in to buy from the importers. Rice was this morning selling at Rs. 3-12, and the coarsest kind at Rs. 3-8 per maund. The traders at Dulargunge, a large mart on the Mohanuda above Dingra, from which jute, tobacco, and oil-seeds are exported, and to which salt only is ordinarily imported, are now turning their attention to rice. The state of the river does not admit of heavily laden boats coming up, but I hear that 23 half-boat-loads are on their way up, and that 300 or 400 maunds have arrived. At Dingra rice is at 10 seers per rupee. At Raneegunge dhan is being sold at 15 seers per rupee, much of it, I hear, comes from Dinagepore, and several of our eastern markets are supplied from that district. I wrote to the Collector on the subject, and was informed by him that this rice finds its way from Lahari and other marts in his district, and that much was brought through from Cooch Behar.

The importation into Kissengunge from the north seems to have fallen off of late, but the price keeps steadily at 10 seers; nearer Purneah, even in the country hâts, it has fallen to 11 seers; near Kudba it has fallen considerably, as it is selling at Chandpore hât at 13 seers, mokai 13 seers, and kahi 14 seers; this falling of prices is owing entirely to private importations, the amount of which, however, cannot be ascertained, as it is all carried on by petty traders. The quantity of mokai imported and sold has been very considerable; the condition of the people continues much the same; isolated cases of great distress are found occasionally and relieved, and in many villages a few families are found to be very badly off; but that there is no general distress, is, I think, clear from the few persons who come to work on our roads. The rubbee prospects continue excellent, and ploughing and preparation for the early rice sowings are going on actively. As long as the supply of grain is kept up as it is at present, I have no fears for the people, as the agricultural requirements of the well-to-do ryots in the villages, and the relief works as at present arranged, can afford employment to all who desire work. The rates prevailing in Dhurrumpore were reported last fortnight, and I find that plough labourers in Kusbahamour get 2 annas a day, and in the north of the district emigration into Nepal, where in addition to this a meal a day is given, is said to be going on. The reaping of the rubbee will soon commence, which will give food to a large number of labourers, as they will be paid in kind.

On Saturnay 0·93 inches of rain fell at Arrariah, and 0·36 at Kissengunge; at the latter place there was a heavy hailstorm, which must have done some damage to the mango blossom, which is, I am glad to say, very abundant this year.

Mangoes will, as they did in the last year of scarcity, provide food for some time. The sale of grain in Bulrampore and in the Dengrah relief circles has just been authorised by Sir R. Temple, whom I last week accompanied to Dingrah and Kissengunge. In these neighbourhoods there is but little rubbee, and private trade is not so active as near Kudba and Purneah. The number of grain thefts during the fortnight are 32, and the value of the other property stolen Rs. 263. A comparative statement of dacoities is annexed.

District Purneah.

Statement of Dacoities, Robberies, and Thefts for the Month of February 1874, and the corresponding months of 1872–73, as called for by Government Letter, No. 4081, dated 20th December 1873.

B.

The progress report submitted by Mr. Cordner is annexed, but this only shows ths roads under the Public Works Department. Daily payments are made and proper establishments of cashiers appointed. I have not been able to visit the north road, as I have been kept in or near the station with the Commissioner and Sir R. Temple. The returns are only brought up to the 28th of February, but, from inquiries made at Kissengunge I ascertained that there was a demand for labour in the north, and that work was opened.

The labourers on the Kudbah, Kusbah Amour, and Kissengunge roads have been visited by Mr. Wyer or by me, and all arrangements found satisfactory. Owing to the fall of prices Government grain is not largely sold. The quantities taken by the moodees are as follow:—

	Mds.
Barsoe	50
Dengrah	130
Arrareah	100
Mutiari	70
Kudbah	150
Kusbah Amur	40
Ranigunge	10
Total	550

The total number of labourers on the Department Public Works roads on 21st February was 2,516, but they have since largely increased. A recent order of Sir R. Temple, that Government rice be sold at 12 seers the rupee, will bring in many more.

On Mr. Rattray's roads by his last report there were 694 persons employed; he paid them in grain.

On the roads worked under Mr. Wyer and planters there were 448; on tanks in the Municipality there were an average of 216. This makes the total number of labourers employed daily 3,874.

Under the relief arrangements to be noticed hereafter, there will be a large increase in the number of petty works. Some roads worked by villagers, especially that through the distressed villages between Belgachi and Kudbah, are answering well the double purpose for which they are intended.

PURNEAH DISTRICT.

Progress Report of Famine Relief Works for the Week ending Saturday the 28th February 1874.

Names of roads.	Progress in marking out relief works.	Progress in opening works.	Aggregate number of labourers thereon.	Supply of food thereat.	Condition of labourers, and general feature of the country.	Mode of payment.	Rate of wages.	Arrangement of tools.	Disbursement during the week. Rs. A. P.
1 Purneah and Kosy road -	The line has been laid out from Purneah to Kealgoma, about 36 miles.	Work will shortly be started, and arrangements are in progress.	Nil.	—	—	—	—	—	—
2 Muteeari and Kolliagunge road.		Orders have been issued to start work along the line in six places, and it is probable that labourers are now under employment.							
3 Kissengunge to Titalya. -		The Sub-Engineer in charge has been directed to open out work on this line, and the ensuing week will show labourers engaged.							
4 Ditto to Neekmard -	Estimate submitted for sanction.	Three parties have been started.	616	Food is still procurable in the local hâts or fairs at 10 seers per rupee.	Generally good - -	By Sub-Engineer in charge of works.	By task from Rs. 1-14 to 2-8 per thousand, and by daily labour— Man - 0 1 6 to 0 2 0 Women - 0 1 0 to 0 1 3 Children - 0 0 6 to 0 1 0	Government tools are supplied to all who bring none of their own.	152 0 0
5 Toorkally to Dengrah Ghât	Whole line laid out -	Four parties at work -	3,734	Procurable in local markets and Government stores.	Good - - -	By cashier, 3 and 4 times a week.	Ditto ditto -	Ditto ditto -	306 13 0
6 Dengrah Ghât to Bhopla Tajpore.	Line laid out throughout -	Two ditto - -	711	Government stores of rice have been opened out for sale.	A few of the labourers coming to this work do but little work in consequence of impoverished condition, and one on subsistence allowance. The majority, however, are earning over 2 as. per diem.	In cash, 3 times a week by sub-overseer.	Ditto ditto -	Ditto ditto -	225 5 9
7 Raigunge to Balrampore -	Whole line laid out -	Three ditto started -	4,050	Government stores have been opened.	A few of the people who come in for work are weak and put on subsistence allowance.	Daily payments are generally made.	Ditto ditto -	Ditto ditto -	629 9 5
8 Maldah and Hureenkoree road.	Whole line laid out for work. Estimate submitted.			Work can be commenced as soon as it is considered advisable to do so.					
9 Kudbah to Barsoi - -	Whole line laid out -	Work has been started -	644	Government stores have been opened.	Tolerably good with exceptions.	Daily payments are generally made.	Ditto ditto -	Ditto ditto -	74 9 0
12 Purneah to Mateeari road -	Old existing road - -	One party - - -	4,619	Procurable in local marts -	Good - - -	Ditto ditto -	Ditto ditto -	Ditto ditto -	425 0 0
15 Purneah to Moniharee -	—		420			This road is being worked through Indigo planters.			50 0 0
16 Ditto to Kudba - -	—	Three parties at work -	3,251	Government stores of rice have been opened.	Fair - - - -	Three times weekly -	Ditto ditto -	Ditto ditto -	497 6 3
22 Kissengunge to Bheryadangi.	Estimate submitted and sanctioned.	One party started - -	210	Food is still procurable in local bazaars at 10 seers per rupee.	Good - - - -	By Sub-Engineer in charge of work.	Ditto ditto -	Ditto ditto -	30 0 0
23 Kissengunge to Bahadoorgunge.	Estimate submitted and sanctioned.	Two parties are at work -	592	Government stores of rice have been opened at both places.	Good - - - -	Ditto ditto -	Ditto ditto -	Ditto ditto -	100 0 0
35 Saibgunge to Mohenderpore.	Repairs to old road -	One party at work - -	508	Ditto ditto -	Good - - -	Three times weekly -	Ditto ditto -	Ditto ditto -	56 14 11
36 Bulrampore to Raneegunge.	Estimate submitted -	Two parties at work -	509	Although Government stores of rice are opened for sale, the labourers do not resort to them, as the outturn of rice from purchase of paddy is more procurable.	Good - - -	In cash 3 times a week by sub-overseer.	Ditto ditto -	Ditto ditto -	82 1 9
			20,464						2,629 12 1

W. FERNIE,
For Executive Engineer.

C.

The supply of food through private traders brought into Purneah is hard to be estimated. Every cart-bullock and pony which can be got is now employed in bringing in supplies either for mahajuns or for Government. The rates at present paid ensure a sufficiency of carts for our purposes, and are not so high as to check importation, or unduly raise prices. Mr. Mulock has given me the following memorandum regarding transport. I only add that, if necessary, we can arrange to get small boats up the Mahanuddy now, and some of larger tonnage in June.

W. Kemble,
Magistrate and Collector.

Mr. Mulock's Memorandum.

The transport power during the present fortnight has increased enormously; up to the evening of the 7th 311,933 maunds had been carted away from Caragolah. The return for Sunday (yesterday) has not been received yet of this: but we have received information that 235,493 maunds have been actually stored.

The total number of carts despatched from Caragolah during the fortnight is 10,611, carrying 58,442 bags. This makes an average of 757 carts, carrying 4,174 bags, or 8,348 maunds a day.

About 3,000 pack-bullocks and ponies are now working between Bulrampore and Barsoe, our two most inaccessible golahs. We consider it better to pack these bullocks and ponies here at Purneah, our central depôt, in order to utilize the supply of ¾ maund bags now being constructed in the jails, as also to relieve Mr. Munro of this part of the work. The system works very well indeed. I make over a certain number of weighed bags to the owners of the ponies or bullocks, they place the rice in the   , one maund on each side, take the two maund bag with them, and place the rice at the end of the journey back in the second bag, and make it over after weighment to the golahdars. This system is entirely under contract, and the contractors are substantial men, who appoint their own chalandars, and are responsible for the rice made over to them. This transport is capable of almost indefinite expansion, but it is expensive, as on an average each pony or bullock must earn 6 annas a day, and as it travels only ten miles a day and carries only two maunds, it costs 3 annas per ten miles per maund, or 3½ pies per maund per mile. The contractors would supply me with 10,000 pack bullocks or ponies if I required them, but I think it a mistake to monopolize this only means of distributing food to the hâts in the interior of the district.

H. P. Mulock.

D.

Sir R. Temple has recommended the building of store-houses at a few more sites. This will be done, and arrangements for protection against fire will be made by putting mats and earth on the roof and sides.

The following memorandum show the proposed allotment of 500,000 of maunds, if that be the quantity finally assigned to this district. Mr. Mulock's note on this subject is annexed.

W. Kemble,
Magistrate and Collector.

Mr. Mulock's Memorandum.

Storage of Government grain.

The only additional site for golah selected is Palankaf, in the distressed tracts hear Kusba Amour. The additional store-houses required for the storage of the additional grain allotted to the district are being rapidly constructed, and I hope to have them all completed before the end of the month. Chowkeedars have been appointed at all the golahs, and the best men we could get for the pay have been selected for golahdars. We have not been able to get security from all of these, as the pay is too small, but when cash sales begin to take place it must be insisted on.

H. P. Mulock, C.S.,
On Special Duty.

	Golahs.	Works.	Relief.	TOTAL.
Purneah, 83,500	Purneah	4,000	50,000	54,000

	Total	16,500	70,000	86,500

E.

THE advances to private parties this week only amount to Rs. 50, but the merchants to whom advances have before been made are all working well. I have nothing to add to my last report on this subject.

F.

Mr. Wyer's report drawn up as directed by Circular No. 1251 of 5th March is annexed.

1. The number of Committees and Sub-Committees as yet appointed is for—

The Sudder sub-division	23
Arrareah	9
Kissengunge	7
Total	39

In the Sudder sub-division there is one committee, viz., the district committee. The following is a list of the sub-committees arranged according to the thannahs in which they are situated :—

Purniah, 5, *viz* :—(1) Purneah Sub-Committee to manage the Sudder sub-division, the chairman of this committee is Mr. Wyer, joint-magistrate, it consists of 18 members and, *ex officio*, all chairmen of sub-committees in the Sudder sub-division ; (2) Bishenpur ; (3) Kaja ; (4) Mohenderpur ; (5) Mahtour.

Gondwara, 2, *viz.* :—(1) Korah, (2) Doomar.
Kasbah Amour, 7, *viz.* :—(1) Kasbah Amour, (2) Kilpara, (3) Rotahat, (4) Dengra ghât, (5) Belgachi, (6) Kanharria, (7) Dulargunge.
Kadbah, 4, *viz.* :—(1) Kadbah, (2) Beui Rossalpur, (3) Chandpur, (4) Harrinkhore.
Belrampur, 3, *viz.* :—(1) Belrampur, (2) Barsoi, (3) Ranigunge Nakah.
Monihari, 2, *viz.* :—(1) Monihari, (2) Soifgunj.

In Dhamdah there is no sub-committee, but Mr. W. Pyne, of Sirsi Factory, kindly distributes relief; his factory is on the extreme boundary of the thannah.

For Arrareah sub-division the following is a list:—
Thannah Arrareah, 4, *viz.* :—(1) Turkeli, (2) Chakae, (3) Chilhamna, (4) Rampur.
Thannah Ranigunge, 3, *viz.* :—(1) Mirzapur, (2) Ranigunj, (3) Lalpur.
Thannah Mattiari, 2, *viz.* :—Mathore and Doria.

In Kissengunge sub-division there are seven sub-committees.
Thannah Kissengunge, 2, *viz.* :—Kissengunge and Chokatea.
Thannah Bahadurgunge, 4, *viz.* :—Bahadurgunge, Katti, Gange, Tulsia.
Thannah Koliagunj, 1, *viz.* :—Belanja.

2. No special relief sub-divisions have been opened.

3. The number of relief circles opened and manned by special officers are for *Arrareah sub-division* one. Mr. Duillet, who is to have charge of this, has arrived. Besides this, Mr. Rattray, the sub-divisional officer of Arrareah, has now the aid of Deputy Magistrate Soshee Bhoson Dutt. For Kissengunge one, consisting of Bahadurgunge thannah in charge of Mr. Bertelsen.

For the Sudder sub-division Baboo Rajaninath Chatterjee, Deputy Magistrate, is at present in charge of a circle consisting of Belrumpur and Kudbah thannah, and on the 6th, finding that Mr. F. Cruise had not sufficient leisure to attend to the relief centres at Mohenderpur and Kanbarria, I appointed a sub-inspector, Rambrahmo Sing, whom I placed in charge of Mohenderpur, Kanbarria, and Belgachi centres. When Mr. Barlow, the Commissioner, was here, he arranged that the Sudder sub-division should be divided into five circles, but these have not yet been manned by special relief officers, so that I do not recapitulate them. Mr. Gouldsbury will proceed to-day from Dengra Ghât to Kusbah Amour and take charge of the 5th circle, which consists of all thannah Kusbah Amour north of the line drawn from the junction of the Kankoi with the Mahananda to the village of Bazidpur on the Pannar.

4. The number of relief circles under this head for the Sudder sub-division is seven, viz., Koja, Bishanpur, Mohenderpur, Beni Rassalpur, Chandpur. Besides this, Mr. Pyne at Sirsi and Mr. E. A. DeSouza at Dharaviah give relief to fitting objects, though there is no circle opened in their neighbourhood.

The Arrareah sub-division.—I cannot furnish the information required under this head with certainty. The chairmen of sub-committees distribute village relief at the centres of the sub-committees under the ticket system. For Kissengunge sub-division the number of relief circles under the head is five, viz., Chakalia, Kute, Gangi, Tulsia, and Belounja. These centres are supervised by the members of the sub-divisional committee.

5. The number under this head is 16 for the Sudder sub-division, viz., at Koja, Sirsi, Bishanpur, Dharrarah, two at Purneah, Mohenderpur, Kusbah Amour, Kilpara, Dengraghât Belgachi, Kadleah, Chandpur, Beni Rassalpur, Barsor, and Belrampore. A work-shed has been completed at Purneah and Bishanpur at the sub-division of Arrareah. Food is distributed by all the sub-committees enumerated under heading (11).

6. The total numbers of people relieved was for the Sudder and Kissengunge sub-divisions 4,536. I cannot show separately the number of men, women, and children, since this distinction has not been kept up in all the returns sent to me, this gave a daily average of 324.

Besides this, village relief was afforded to 108 persons at Dengraghât and Belgachi, these must be added to the daily average, since the relief thus given was from 10 to 20 days; thus the total daily average for these two sub-divisions is 432.

I have received no returns from Kilpara or Naka Raneegunge, thus the daily average is probably a little greater than shown above.

7. For Arrareah sub-division, Mr. Rattray reports that he thinks that he is engaged in affording daily gratuitous relief to 4,000 persons, men, women, and children; he has not furnished the grounds on which he has come to this conclusion, so I have not included this number with the numbers given by the other sub-divisional officers. The quantity of rice he has distributed is 847 maunds, he gives 7 seers for a 14 days' supply to women and men, and half that quantity for children.

8. The only place where cooked food has been distributed is at Kusbah Amour; at the other relief centres raw food is given at head-quarters. The number of persons for relief was so small that it was not worth while entertaining a cook to feed them. Mr. Rattray says that he is going to introduce the cooked food system at Chakai and Chilania. Forty-three seers of cotton have been distributed to be worked up into thread.

There will probably be many more applicants for this sort of relief during the next two weeks. Mr. Gouldsbery is starting basket-making at Dengraghât. Seventeen seers of *sunn* were worked up by persons relieved at Kusbah Amour. Several of the gentlemen who were managing the relief centres have been alarmed by the number of forms which have now to be kept up. It would have been better to have sent a separate book for each of the forms with the headings printed; as it is, a good deal of delay has been caused by my having to have these books prepared with manuscript headings; they have to-day been completed for the Sudder sub-division, and will be distributed at once.

I have advanced at head-quarters Rs. 1,000 in sums varying from Rs. 50 to Rs. 400 to seven persons for buying seed and helping their ryots. Mr. Craven has advanced Rs. 5,500 to zemindars to help their ryots; he has furnished no details. At the last meeting of the Sudder sub-divisional committee members agreed to take their turn at the relief-house. Since writing the above, I hear from Mirza Mohammed Hossein that he started relief with cooked food in the town yesterday, and distributed 15 seers of rice in that way.

F. WYER,
Relief Officer.

ALTHOUGH the information furnished by the above officer is not very complete, I can state that the sub-divisional officers with, in some cases, the active co-operation of members of relief committees, are searching out and bringing to light all cases of individual distress and cases where special tracts of country are in want of assistance.

The mode of assistance in which relief will be given will be as far as possible by home labour and village roads, and in some cases by making over grain to the headmen for sale to the people. Until the officers who are to be appointed relief superintendents arrive, the executive management must be weak.

The committees, though very useful as consulting bodies, cannot give that attention to details which will be required before things work smoothly.

No. 69 Ct., dated Doi, the 11th March 1874.

From the OFFICIATING DEPUTY COMMISSIONER, Sonthal Pergunnahs, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I HAVE the honour to submit a narrative for the fortnight ending Sunday, March 8th.

2. I am two days late, I beg to state the circumstances.

3. I was encamped at Barhait in the Daman; I had made arrangements to receive my sub-divisional reports there. On the evening of the 6th I got an urgent order from the Commissioner to go to Doi, a distance of about 30 miles; I started during the night and reached Doi on the 7th. At Doi I got an order to meet the Commissioner at Pointee on Monday, the 9th, the day I should have despatched my fortnightly; I did so, and was thus absent from Doi from 6 A.M. to 7 P.M.

4. My dates have now nearly all come up, and I am able to give a narrative with some completeness; the defects and the reasons for them being equally obvious.

A.

During this fortnight I have been encamped at Bario and at Barhait, and have ridden over the valley from these points. I have also ridden by a long round from Barhait to Pointee.

1. Failure of food has been nowhere reported. Mr. Stewart says it is plenty in Sahebgunge, and "very limited" in Rajmehal, Bario, and Barhait. As I have already said, the people do not go very much to the bazars in the Daman for food. All that can be said is that every day the markets are a little tighter than the day before.

2. I give below an extract from the price current of the 7th instant. I choose the places that will best represent the state of affairs in different parts of the district. Katikund and Maheshpore are not in the last return; I give the last but one. Prices have risen nowhere but at Hiranpore, where grain has gene up two seers; generally they have fallen. The cheapest rice is 15 seers at Sarawan near Deogurh. The cheapest food is bajra, 28 seers at Jamatra.

Name of Place.	Distance and Direction from Doomka.	Wheat.	Best Rice.	Common Rice.	Bajra.	Maize.	Gram.
Doomka	—	11	10	11	16	16	12
Nonihat	18 N.	—	10	12	—	15	12
* Katikund	14 N.E.	—	12	14	17	16	—
Sarayahat	25 N.W.	13	12	13	—	18	13
* Mahespore	43 N.E.	—	11	11½	20	20	14
Pakaur	55 N.E.	—	10½	12½	16½	15½	16
Deogurh	44 N.W.	12	12	13	—	—	13½
Jamtara	44 S.W.	12	—	12	28	20	12
Rajmehal	65 N.E.	12	9½	10½	14	14	12
Sahebgunge	75 N. by E.	14	12	13	16	16	13
Godda	40 N.	11	8	12	—	16½	—
Tirojpore	70 N.	13¾	10	11¼	15	19¾	12½
Hiranpore	50 N.E.	—	13	14	19	19	13

3. A Bengali village near Barhait was burnt down. Three houses escaped out of about 100. The people came to me, and I questioned about 40 of them as to what they had lost. They were under no temptation to conceal the quantity of food they had stored and lost. Six persons said they had nothing to lose; the rest had stored and lost from 3 to 12 maunds of rice or maize. There was hardly any bajra, and a little sursu. Some of them had saved some of their stores; one man lost 12 maunds and saved 12 maunds of rice.

The chances are, Sonthals would have a little less stored than these Bengalis, but would make a better fight with less.

The parganait of Barhait says he has about 300 maunds of rice, and no maize. He and his large family have just come to the end of their maize. In ordinary years he gets 1,200 maunds, and in very good years 1,500 maunds of rice from his own cultivation. This year he got 600, and I suppose when he says he has still "*man, sau tin ek,*" it may mean that he has most of his 600 maunds unconsumed.

4. A few drops of rain fell here on Saturday evening with wind, thunder, and lightning, from the west. About here the wheat and barley looks very well, and is beginning to turn. A good deal of cheena is coming up; it was supposed to be dead. People say they would like a shower of rain for it. The rahar is very good, and there is some flax, gram, and castor-oil. The best rubbee I have seen is about Tirojpore and Barahat on the Bhagulpore border. Unless I have chanced on the only strip of cultivation in North Godda, there is a fair prospect, but I believe I have seen the best of what there is.

In the Bairo and Barhait valley, which I shall in future call the North Daman valley, there is no rubbee worth speaking of; a few fields of rahar close to Barhait, and here and there a patch of new sugar-cane, are all. Mr. Stewart reports a little good rubbee from near the Ganges; and Mr. Wilmot, in a very minute and satisfactory diary, says prospects are fair all over Deogurh. Grain thefts are increasing very fast in Godda, but nowhere else. No actual misery or starvation has been reported.

In my special report of the 27th ultimo I divided North Godda and Rajmehal into five tracts, one of which is the North Daman valley.

I now have to say that this valley is larger and more thickly inhabited than I then thought. It runs for above five miles up the Gumani from Barhait, and is four or five miles wide. I now understand why the Rajmehal Daman ryots should be so much worse off this year than the Doomka men. The difference of rain-fall was not reason enough. In the South Daman the hills are high, the valleys are deep, narrow, and broken; the people are comparatively few; the rice grows in hollows under bunds. In the North Daman the hills are low, and the valleys unite in one great plain inside a surrounding range of hills. This plain in good seasons grows a great quantity of rice and little else. It encourages settlers and supports the two largest bazars in the Daman. The middle of the plain is far from higher ground. Tanks are few and shallow.

In good years the North Daman ought to produce four times as much rice as an equal extent of land in the south, and a bad year therefore does something like corresponding any mischief.

B.

I send a progress report of relief works on a separate sheet to follow.

C.

Our means of transport are quite sufficient, both our roads and our carriage. Just now we are only carrying rice from Pointee to Doi, a distance of nine miles. There is no difficulty of any kind.

D.

We have selected for Rajmehal, the railway stations Bahawa, Tinpahar, and Sahebgunge, and the rice depôts, Taljhari, Bario, and Barhait, all on, or close to works.

We have selected for Godda the railway station of Pirpointee, and the rice depôts, Doi Mahagama, Barhop, and Godda, on relief works. A golah has been constructed at Doi, and we have 3,106 maunds stored. We have sold none yet. What we have is under a guard of constables. We have been advised that more will be sent.

E.

I have made no advances for purchase of grain, nor to municipalities. The zemindar of Manihari applied yesterday for a loan of Rs. 10,000 (ten thousand) to make bunds and tanks on his estate.

F.

We have nothing under this head.

Enclosure No. 5.

RESOLUTION.

Scarcity and Relief Department.

Calcutta, the 16th March 1874.

Read—

The district narrative of the Rajshahye division for the fortnight ending on the 7th March.

Resolution.—All the narratives were received by Friday the 13th March, and the Lieutenant-Governor observes upon them, as follows:—

Moorshedabad.—The state of the crops now on the ground is wholly satisfactory; prices are still below famine rates; 2,270 people were employed on relief works, but it would seem that further relief works are required in some of the tracts described at paragraph 6. The Lieutenant-Governor begs that the applications for advances (Section E. of the narrative) may be very promptly disposed of; unless special effort is made, the money will not be given in time, excellent works for the benefit of the country will be left undone, and Government will have to open other (and possibly less useful because less carefully selected) works in the same neighbourhood. It is noted that 16 relief centres have been established; but with reference to the remark (paragraph 6) that "there are no doubt many poor persons almost everywhere who will require gratuitous relief," the Lieutenant-Governor begs that the organization of the 16 relief centres may, under the commissioner's orders, be made sufficiently complete to cope with the expected distress, which the Lieutenant-Governor hopes will be really small in Moorshedabad.

2. *Dinagepore.*—The Lieutenant-Governor fears that Mr. Lowis's view of the moot question, whether there are or are not large stocks in Dinagepore, is the correct one. The inquiries made personally by Mr. Lowis into the prices ruling at petty bazars show that, in spite of comparatively moderate quotations at larger marts, the price in the interior sometimes rises to 9½ seers per rupee, and that the supply even at that price is not always sufficient. Mr. Lowis does not say whether or no actual keen distress has been found in any part of the district. 32,000 people appear to be employed daily on road works; and it is satisfactory to find that, under Mr. Robinson's superintendence, relief work is being efficiently organized without indenting on the Public Works Department for extra establishments. More than nine-tenths of the whole of the relief labourers appear to be employed under civil officers. The steady increase in the numbers on each work is perhaps sufficient evidence that wages are regularly paid. When the road works are done the improvement of village tanks can be undertaken, and the schemes for such works must, as Mr. Lowis says, be prepared beforehand. The Lieutenant-Governor trusts that the transport of Government grain into the interior of Dinagepore is now going on satisfactorily; it is quite in accordance with the reform introduced by Mr. Hankey on other grain routes that each despatch should consist of a small and manageable number of carts. Mr. Toynbee has arranged, in communication with the Commissioners, to supply a certain number of weights and scales for the larger grain stores; ordinary country appliances must be used at the smaller stores.

3. The Lieutenant-Governor is sorry to learn from Section F. of Mr. Lowis's report that the relief centres have not yet been actually settled or opened. He hopes that by this time everything has been settled. Mr. Robinson's plans (set forth in his letter of the 25th February) were approved by the Government on the 4th March, and officers have been allotted to each of the six relief sub-divisions and of the seven relief circles. A latter report from the Commissioner, Mr. Molony, speaks of the Dinagepore relief circles being all arranged for. Sir Richard Temple has recently visited the district and has approved the relief arrangements. In regard to the source from which grain is to be procured for relief purposes, the instructions, forwarded under cover of Government Order No. 1,308 of the 7th March, make it quite clear that, when Government grain is available on the spot in sufficient quantity, the relief committees and relief officers can indent thereon; and, as there is now happily plenty of Government grain in the interior of Dinagepore, the Lieutenant-Governor considers it will be better that this course should be followed, and that the relief committees should not purchase in the depleted local markets. The Lieutenant-Governor hopes that next narrative will show that the charitable relief organization is actively at work in Dinagepore.

4. *Maldah.*—Though prices have risen slightly in the north-west of the Maldah district, yet on the whole the condition of the people is no worse; supplies are sufficient over the rest of the district, and prices are nowhere above 10 to 10½ seers per rupee. The promise of the April rice and millets is very favourable. Advances of money and grain are being made in the worst parts of the district; not more than 2,252 persons are employed on relief works. The transport of Government grain through the district appears to be going on satisfactorily. Sixteen relief centres appear to be open, but only 209 persons receive relief daily; and it is said that only "the infirm, sick, and beggars, who in any year would be on the hands of the public for support," come as yet to the Maldah relief centres.

5. *Rajshahye.*—Prices are still comparatively moderate in the Rajshahye district, and at present there appears to be no general distress, though the Magistrate has found it necessary to establish three poor-houses. The number of people on the relief works had risen during the fortnight from 990 to 2,400, and more works seem to be wanted. The Lieutenant-Governor does quite understand the Magistrate's remark, that work on the feeder road from Tannore to Malidnugger is greatly wanted, but that "as yet no engineer has been deputed to mark out the line;" the Magistrate must either have the road pegged out by his district engineer, or he must arrange forthwith for the work with any engineering staff whom Major Lindsay may tell off for feeder roads in that direction. The progress in forwarding Government grain from Godagaree is satisfactory; the shortness of the supply, which will not, it is hoped, recur, was not due to any fault of Mr. Dawson's. The Magistrate, the sub-divisional officers, and the committees will have to watch the less prosperous parts of the district for any signs of approaching distress, and to have funds deposited with trusty people for the relief of actual need. If necessity arises, which the Lieutenant-Governor trusts will not be the case in Rajshahye, more extensive measures for organizing relief must at once be taken.

6. *Rungpore.*—The accounts from Rungpore are certainly better than they were last fortnight. The spring crops of grain and roots are said to be excellent; tobacco, the most paying crop of Rungpore, is "fully up to the average;" and though prices are in many parts of the district higher than 10 seers per rupee, yet the very bad tract is said to contain only 200 villages and about 18,000 people. The Magistrate-Collector appears to anticipate that by a judicious and liberal system of advancing grain to ryots, and by giving charitable relief to the infirm and to destitute women, the people will be enabled to tide over the difficult time before them. The Lieutenant-Governor will hope to learn from future narratives that grain advances are *actually being made* to ryots in the tracts of which Mr. Glazier writes.

7. The number of labourers on the relief works, only 3,681 in all, is small for the great district of Rungpore. The Lieutenant-Governor hopes that the maladministration of works, found by Mr. Robinson on his recent tour, has been remedied. A recent report from the engineer-in-chief of the Northern Bengal Railway showed that people were asking for work in the north-west and west of the Rungpore district, and work on the railway bank is now being given them. The remarks (at end of Section B.) regarding the unsuitable shape of the kodalees will be communicated to the Public Works Department. As Sir Richard Temple is now visiting Rungpore, it is not necessary for the Lieutenant-Governor to say anything further regarding the Rungpore works. But little of the Government grain seems yet to have reached the interior of Rungpore, and the Lieutenant-Governor desires that the transport may be pushed on. The number of relief centres and of persons receiving charitable relief, 3,460 daily, including private relief-houses, is already considerable. The Lieutenant-Governor would wish to hear in next narrative whether keen distress and unrelieved want has been found at the village inspections made by relief officers. Sir Richard Temple will have decided whether a regular relief circle organization is required.

8. *Bograh.*—The Magistrate of Bograh reports that he does not anticipate famine in his district, though there may be pressure and a demand for relief works in the tracts where no cold-weather crops are grown. The number of labourers on relief works has risen from 2,810 to 3,935 persons during the fortnight; local supplies of food are sufficient on the works.

The attention of the Dinagepore authorities must be given to what Mr. Kelly says of the difficulty in locally finding carts and boats for the transport of the Ghoraghât supply through the Bograh district. No charitable relief operations appear to be as yet required.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

NARRATIVE of SCARCITY and RELIEF in the MOORSHEDABAD DISTRICT for the Fortnight ending Saturday the 7th March 1874.

(A.)—STATE OF THE COUNTRY.

1. *Abundance or scarcity of supply in the bazaar.*—The supply in the bazaars and hâts in the head-quarters sub-division is still reported as sufficient, but not quite so free as when the last narrative was submitted. In the Lalbag sub-division there is at present an abundance of supply. In the Rampore Haut sub-division the supply is abundant in Nulhattee, but scarce in the Palsa, Rampore Haut, and Khurgaon markets. The sub-divisional officer of Jungypore reports that nowhere is the supply of rice abundant in his sub-division, but in most markets there is sufficient to meet the demands of consumers.

2. *Kind and price of grain selling at one or more specified principal marts.*—The average price of common rice, taking twelve of the principal marts of the Sudder sub-division, is $12\frac{3}{8}$ seers per rupee, which is considerably cheaper than during the preceding fortnight, when the average was $11\frac{3}{4}$ seers; the highest rate is given at 12 seers, and the lowest (in Nowadah station) at 15 seers per rupee. Wheat averages $13\frac{1}{3}$ seers per rupee, and gram nearly 15 seers; the latter will probably be cheaper soon when the new crop is gathered. In the Lalbag sub-division, in the city, coarse rice is selling at $12\frac{1}{2}$ seers per rupee, and also at Bhugwangolah where aus rice is selling at 13 seers the rupee; at Bhadrihaut coarse rice is selling at $11\frac{1}{3}$ seers and aus rice at 12 seers the rupee. In the Rampore Haut sub-division the price of coarse rice ranges from $14\frac{1}{4}$ to $13\frac{3}{16}$ seers per rupee, and that of fine rice $12\frac{1}{4}$ to $11\frac{10}{16}$ per rupee. In the Jungypore sub-division the price of the new haimanto rice ranges from $10\frac{3}{4}$ seers in Sooty, to 13 seers per rupee in Shumshergunge. Bhadoi rice is selling at 12 seers at Dewanserai and Lalgola, and the price of Dacca rice is given at 11 seers per rupee at the former place. Maskolai is sold at 20 seers per rupee in the Roghoonathgunge bazaar, and 22 seers can be had if the purchases be made from the cultivators direct. This pulse is largely used in supplementing rice, and will, no doubt, materially help the people in tiding over the difficulty.

3. *Any information obtained regarding the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots, and others.*—The stock of food-grains in hand in the Sudder sub-division is estimated at about $5\frac{1}{2}$ lakhs of maunds, including the portion of the rubbee crops already cut, but this is entirely conjectural, and is not of much value. The grain-holders of Burwa, Hurreehurparah, Nowadah, and Jellinghee are reported to have advanced nearly 90,000 maunds of paddy to the ryots and others. The sub-divisional officer of Lalbag states that no further inquiries have been made on this point, and no fresh information has been obtained, and that his opinion remains the same as before. The Rampore Haut sub-divisional officer reports that there is little in store in the hands of zemindars, mahajuns, and well-to-do ryots.

4. *Rainfall, if any.*—In the head-quarters sub-division on the 24th ultimo there was a very slight fall of rain at Bharatpore. In the evening of Saturday the 7th there was at head-quarters a heavy north-wester, but not attended with much rain.

5. *State of the crops.*—The crops still in the fields, as well as the young plants of the boro dhân, are reported to be in good condition. Ploughing for the next crops is being carried on in all directions. Indigo and mulberry are promising well, and the fruit trees are fairly laden with blossoms, giving promise of a most abundant crop. The manufacture of sugar is going on, and the outturn is reported to be very fair. The sub-divisional officer of Lalbag reports that the rubbee crops—mushuri, peas, gram, keshari, wheat, &c.—in the "dearah" lands are doing very

well, and even the high lands have yielded a moderate outturn. The sub-divisional officer of Rampore Haut says that the late rain has done much good to boro paddy, wheat, and oats in Khurgram. The estimated outturn of boro, as he has been given to understand, will be $\frac{14}{16}$ of an average crop. The outturn of sugar-cane is above the average, and has greatly assisted the ryots to pay their rents. In the Jungypore sub-division the outturn of barley and linseed is likely to be very good; of wheat, good; of gram, somewhat below the average. The area under boro dhân appears to be larger than in former years, especially in the bheel lands. In the Mirzapore thannah little or no bhadoi dhân used to be grown in former years, but in the present year some patches of haimanto-rice lands have been sown with bhadoi dhân.

6. *Condition of the people.*—There is no change to be reported in the state of the poor and labouring classes. The sub-divisional officer of Rampore Haut reports that the labouring class residing in Rampore Haut, Khurgaon, and Pulsa are in want of labour. There are no doubt many poor persons almost everywhere who will require gratuitous relief, and such relief is being organised. The Lallbag sub-divisional officer states that the ryots have plenty of aus seed, and are looking forward hopefully to the aus harvest. There is every prospect of a good silk bund, a great matter for the ryots of this district, and the existing relief works give plenty of employment. The sub-divisional officer of Jungypore reports that in thannah Mirzapore he observed some poor women grubbing for the roots of a species of lotus in the dry bed of a tank. This they do every year, and he does not look upon it as a special sign of distress. Distress no doubt prevails throughout Mirzapore, and if it had not been for the relief works, matters would have assumed a serious aspect in that thannah. In most of the villages in the north-western part of thannah Sooty, distress prevails among the Mals and Krores who have no lands of their own, and can now find little work except in irrigating fields of boro dhân.

7. *Actual facts as to any known cases of misery and starvation.*—No actual cases of starvation or extreme misery have been reported; cases of distress have been relieved out of the funds set apart for charitable purposes.

8. *Grain-thefts or robberies.*—There were nine cases of grain-theft reported in the Sudder sub-division, all of a petty nature; this shows a great decrease on the previous narrative, when 19 cases were reported. In the Jungypore sub-division there were two cases of grain-theft in thannah Sooty. The sub-divisional officers of Lallbag and Rampore Haut report of no grain-thefts in their sub-divisions. A statement showing the number of dacoities, &c. is annexed.

9. *Condition of any special tracts.*—There is nothing in the condition of special tracts calling for particular mention, except that small-pox still prevails in the Lalbag sub-division, and some villages in the Rampore Haut, Khurgram, and Bharatpur thannahs, and the number of deaths is reported to be 18 per cent. of the number attacked.

(B.)—RELIEF WORKS.

Panchgaon Road.—From 700 to 750 men are employed daily on this work; the supply of food is becoming scarce; rice is selling at about 11¼ seers per rupee; the men are in good condition; cash payments at 3 annas per 100 cubic feet. The tools are supplied by Government.

Kandi Road.—About 140 men are employed daily on this road. No difficulty is experienced in obtaining a supply of food; the men are in good condition, and are paid in cash at the rate of 2 annas 6 pies per 100 cubic feet. The men provide their own tools.

Rhadaghat Road.—About 70 men are employed daily on this road; food is easily obtainable; the men are in good condition, and are paid in cash at the rate of 2 annas 6 pies per 100 cubic feet. Most of the men provide their own tools.

Nulhatee Road.—About 20 men are employed daily on this road; food is easily obtainable; the men are in good condition, and are paid in cash at the rate of 2 annas 6 pies per 100 cubic feet. The men provide their own tools.

Jungypore and Khamra Road.—About 50 men are employed daily on this road; food is easily obtainable; the men are in good condition, and are paid in cash at the rate of 2 annas 3 pies per 100 cubic feet. The men provide their own tools.

Jeagunge and Dewanserai Road.—About 70 men are employed daily on this road; food is easily obtainable; the men are in good condition; they are paid in cash at the rate of 2 annas 6 pies per 100 cubic feet. They bring their own tools.

Kishnaghur Road.—About 100 men are employed daily on this road; food is easily obtainable; the men are in good condition, and are paid in cash at the rate of 2 annas 3 pies per 100 cubic feet. They bring their own tools.

Juroor and Nowadah Road.—The number of men employed on this road rose to 666 on the 28th ultimo. On the last inspection by the executive engineer, Mr. Rice, who is in charge of the work, was requested to dress the earthwork that had been thrown up, a great length having been executed without any attempt at smoothing the surface of the road; the men objected to this work; the number fell immediately to less than 100. The number will no doubt rise again as soon as the men find that they have to execute the task given them; the supply of food is sufficient for the present; it is brought in small quantities to the villages near the work; it is however becoming scarce; the men are in good condition; are paid in cash at the rate of 2 annas 6 pies per 100 cubic feet. The men bring their own tools.

Ramnuggur and Saktipore Road.—About 300 men are now being employed daily by Mr. Malcolm on this road; the men are easily able to obtain food; they are in good condition, and paid in cash. The men bring their own tools.

Hurreepara Road.—About 400 men are employed daily on this road; food is easily obtainable at present; the men are in good condition, and are paid in cash at the rate of 2 annas 6 pies per 100 cubic feet. The men bring their own tools.

A statement showing the expenditure on relief works is annexed.

Forty-one persons on an average daily worked on the village roads which are being repaired by the Gowas relief sub-committee.

In the Lalbag sub-division 79 extra coolies have been employed by the municipality daily during the fortnight under review, at a cost of Rs. 167-14-0. The total cost of the relief works to the municipality up to the 7th instant has been Rs. 825-11-0. The principal relief works now in hand under the municipality are the road from Topkhanna to the Hemait Munzil, two tanks at Amaipara, which are being deepened, and a tank at Beliapukhur, which is being excavated, and on which 42 coolies are at present employed. The municipality supplies most of the tools.

The road on the right bank of the Bhairub will, it is hoped, be taken up as a relief work by the sub-divisional relief committee, and they have agreed to pay half the expense, Rs. 175, of deepening a tank in the village of Saralpore, Bhugwangolah.

In the Rampore Haut sub-division the making and repairing of roads by the branch road cess committee will be undertaken after the meeting of the committee on the 10th instant. The relief committee at Rampore Haut have sanctioned Rs. 100 for deepening a tank at Tantbanoli near Salhadra, and the work will be commenced almost immediately.

In the Jungypore sub-division the sub-divisional officer saw 50 labourers at work on the Mirzapore and Monigram road. The work on the Monigram tank has been resumed.

(C.)—TRANSPORT OF FOOD.

It appears that 25,588 maunds of food-grains have been exported from the Rampore Haut sub-division by the railway, and 3,180 maunds of food-grains imported. The means of transport in this district is sufficient.

(D.)—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

Recommendation has been made to the Commissioner for the importation of 500 maunds of Government grain to Jungypore *viâ* Mooraroee railway station. The sub-divisional officer asked for 1,000 maunds of grain; but until a proper golah for storage has been provided, recommendation has only been made for the importation of 500 maunds.

The Moonsif of Gowas has been requested to report as soon as possible whether there is scarcity of rice at Gowas, and whether the immediate import of Government rice, to be sold at the rate of 10 seers per rupee, is desirable. The executive engineer has similarly been requested to inquire and report whether the storage of Government grain at Nowadah or at Panchgaon is really necessary. The present orders of Government being that rice is to be sold to labourers when its price is higher than 10 seers per rupee, it seems doubtful whether importation is at present urgently necessary.

The sub-divisional officer of Rampore Haut reports that accommodation for grain is available in several places.

(E.)—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

Several applications for advances for the digging and re-digging of tanks have been made, but in most cases no advance has been made pending the production of bonds registered. In the Lalbagh sub-division one application under the land improvement rules has been made, and it has been referred to the Magistrate-Collector. In the Rámpore Haut sub-division six applications have been made for the digging of tanks. The sub-divisional officer has been supplied with funds from which money will be advanced as soon as possible. In the Jungypore sub-division advances to the amount of Rs. 1,450 have been made to five parties for the re-digging of tanks.

In the Sudder sub-division only six applications for advances to purchase grain have been received. In three cases the applicants have been directed to produce registered bonds. Necessary information has been called for in two other cases; and in the sixth case the applicant has withdrawn his application, evidently because he was informed that he could not purchase grain in the district.

(F.)—CHARITABLE RELIEF.

The following is the information obtained in compliance with Government Circular No. 1251—S.R., dated the 5th instant.

Column 1 of the accompanying statement represents the district relief committee, the district relief sub-committees at head-quarters, three sub-divisional committees, and twelve branch relief committees at the places reported in the last narrative.

Column 4 represents the number of circles under the branch committees of the Sudder sub-division.

Column 5 represents the number of centres under the charge of the relief sub-committee at head-quarters, the branch relief committees, and the three sub-divisional committees.

The sub-divisional relief committee at Rampore Haut having now been formed, the sub-divisional officer of Rampore Haut has been requested to form subordinate relief committees in the thannahs where distress is mostly apprehended.

Column 1.—Number of committees and sub-committees as yet appointed - - -	17
Column 4.—Number of relief circles opened and managed by planters, zemindars, and other resident - - - - - - -	12
Column 5.—Number of workshouses or centres for the distribution of food and gratuitous relief - - - - - - - - -	16
Column 6.—Number of men, women, and children (with total), in receipt of gratuitous relief in any shape through the charitable relief organization *daily*; this should include people employed or relieved by the relief committees or relief officers under any of the heads of the "Instructions" - -	*Nil.*[*]

---

[*] The information has been called for. In future this information will be given in the narrative.

The following materials have been placed under the disposal of some of the branch committees in the Sudder sub-division for relief purposes:—

Kandi	500 maunds	of rice.
	2 „	of cotton.
	2 „	of jute.
Bharatpore	2 „	of cotton.
	1 „	of jute.
Gokum	1 „	of cotton.
	1 „	of jute.
Gowas	100 „	of rice.
	2 „	of cotton.
	1 „	of jute.

No additional subscriptions have been raised since the last report.

In the Lalbag sub-division a meeting of the sub-divisional relief committee was held on the 4th instant, when it was found that the subscriptions promised to the sub-divisional relief fund amounted to Rs. 5,321, and it is believed that more will be received. The committee have determined to start relief rice golahs at Bhugwangolah, Rauntollah, Debipore, and Joyrampore. The relief committee have taken under consideration the question of making advances to ryots.

In the Sudder, Rampore Haut, and Jangipur sub-divisions cases of distress have been met out of the charitable funds.

In the Jungypur sub-division—

	Rs.	A.	P.
Monthly subscriptions promised up to date are	68	8	0
Donations ditto ditto	766	8	0
Total	835	0	0
Subscriptions realized up to date	45	0	0
Donations ditto ditto	277	7	0
Total	322	7	0
Spent in charitable relief up to date	55	12	9
„ in making purchases of jute up to date	9	0	0
Total sum spent	64	12	9

No. 304—S.R., dated Dinagepore, the 9th March 1874.

From E. E. Lowis, Esq., Officiating Magistrate of Dinagepore, to the Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honour to submit my district narrative for the fortnight ending March 9th.

A.—State of the Country.

The past fortnight has been marked by a rise in the price of grain, but the hopes inspired by the recent timely fall of rain do not seem to have become clouded, and the people are, considering all things, wonderfully cheerful and sanguine about the future. It is worthy of remark that considerable difference of opinion seems to exist as to the expected extent and severity of the pressure of want during the next three or four months; one section of the community, consisting of the principal traders and mahajuns, aver that prices will not rise much higher than they are at present, and that there will be scarcity indeed, but not famine, the reason assigned being that the ryots have more in stock than they admit, and that the outturn of the harvest has been more than the villagers have represented; on the other hand, the landed proprietors and respectable villagers constantly affirm that in another month or so there will be great scarcity of rice, and that by the end of April there will be considerable distress. The former party point out that since the first panic prices have maintained up to date rather a downward tendency; that the presence of old rice in the market argues the existence of stocks in hand; that as respects the future a largely increased area has been sown with bora rice, which will ripen in May; that the bhadoi has been sown very early, and to an unusual extent; and that the surplus of the rest of the district, coupled with what is finding its way in from Cooch Behar and other places, together with what the ryots have gathered from their own fields, will last, with proper care and economy, until the bora in May, the mangoes in June, and subsequently the early bhadoi in July, put an end to our difficulties. The latter party argue that the prices are kept down partly by the recent fall of rain and partly by Government importation; that well-to-do ryots have no longer any fears as to the coming bhadoi, and do not feel constrained to keep six or eight months stock in hand; their willingness to sell being further quickened by the impression that Government mean to sell rice, and to prevent prices going above Rs. 4 a maund. The Government relief operations are also held to have contributed in some measure towards facilitating the distribution of the surplus stocks from the more favoured portions of the country, for ryots in those parts finding a ready market at high rates are selling now, fearing that the sale of Government rice hereafter will prevent prices rising to any very great extent; it is further urged that there being little or no local rice in the market, there can be no local stock, and that the surplus harvest in other parts of the district cannot last much longer; further, that the bora and early bhadoi will not suffice for the requirements of the district. Both parties, I may note, anticipate no very great rise in price, but on different grounds; the traders, because they say the present supply should with care meet the demand; the landowners and others, because they hope that when prices begin to rise Government will step in and supply the market. It is a difficult matter to decide which party is in the right when both have such good opportunities of arriving at the truth, and the only possible way of solving the difficulty is to see which theory adapts itself best to existing facts. Tried in this way, the theory put forward by the villagers seems best sustained, namely, that we are on the eve of a great scarcity, and that but for Government aid great distress may be anticipated. It is certain that in many places there was no crop whatever, and though the villagers might exaggerate their losses, and represent that they had only a two-anna, when in fact they had gathered a three or four anna crop, still there was no mistaking the appearance of fields which had given no return at all, and many such I saw for myself; it is also certain that but for the existence of distress we would not be giving employment to over 20,000 men on relief works, which numbers are increasing week by week. It is also a fact, which I have verified by personal enquiries at hâts, that the supply of rice is barely sufficient for the present demand, villagers who go late being often obliged to return empty-handed. The price of unhusked new rice is also very high, in some hâts nearly as dear as cleaned rice, which all indicate pretty certainly I think that the supply of new crop, not only is limited, but is already running short; for if the supply of rice be still considerable, with so great a demand for it, I do not understand why so little is in the market. That the surplus stocks of the other parts of the district and of Cooch Behar should be attracted here is not surprising, considering that the people are in want, and that large sums of money are paid weekly as wages to relief coolies; but why, if the surplus is considerable, more is not imported, and why, if many of the ryots in the distressed tracts have stocks of last harvest, they do not sell more freely, is a matter hard to be explained, except on the supposition that there is not so much rice in the country as the traders would have us believe. I am still of opinion that seven or eight lakhs of maunds are required to meet the wants of the district; the maximum amount mentioned by me in my former narrative, and which has been allotted, will perhaps not be required, for, as I noted, the villagers are not, and have not been, living at full rates, and the harvest may have been more than I estimated; it has been judged safer, however, to provide too much than too little, the more so, that the data at our command are so little to be relied on that no calculation based thereon can be taken as accurate, and a large margin has to be left for inaccuracy. I may add that the traders have not omitted to buy and store rice, husked and unhusked, since the new crop has been in the market, which purchase, if rates continue as at present, will turn out a very bad speculation. It may be the beparies and others measure accurately the wants of their customers, but this is hardly possible, and to my mind the limited supply in the market, coupled with the high prices that new rice in the husk already fetches, seem rather to show that the supply from other parts of the district will not last long. The prices, as reported by the relief officers, do not point to any great straightness in the supply, but before accepting their figures, I would like to know how far their accuracy has been tested, for during my late visit to the interior I learnt that the prices given out by the sellers are not always correct. I have just returned from a short visit to the north-west of the district, during which I made a point of ascertaining personally the condition of the market. I found the hâts nearer the station supplied from it, the markets more distant being supplied with rice brought from Thakoorgaon, or through there from Cooch Behar; these supplies penetrating even over our border into the Purneah district. Grain, I may remark, is sold in the hâts by measure not by weight, so many kattas being sold for a rupee. A katta is in fact a small cane basket, each katta being supposed to contain so many seers of 80,96, or 105 tolahs weight. I say supposed, for in fact, so far as I can make out, they do not actually contain so much, and price lists taking for granted that the kattas are correct would be apt to mislead. I went to three hâts; the first I did not reach until nearly all the people were dispersed; I learnt, however, that the supply of rice had been small, and had been all bought up early in the day; the unhusked rice had not all been bought up. The price I was told was four kattas per rupee for husked, and six kattas unhusked, each katta being 2½ seers of 96 tolahs, equal to 12 seers per rupee of 80 tolahs. The rice sellers were not present to enable me to examine their kattas, but as the rice then sold had been purchased at another hât, which in its turn had been supplied from Dinagepore, where rice was selling at 12 to 12½ seers of 96 tolahs, it seemed to me that to leave any margin for profit rice could not have been sold at the rates represented. Next day I had an opportunity of visiting a large hât attended by numbers. The supply of cleaned rice again was small, and was when I enquired being rapidly disposed of; the price was represented to be 12 seers per rupee of 96 tolahs. I had a rupee's worth measured out by the katta, and found 11 seers of husked rice of 80 tolahs were actually being sold for a rupee, and over 21 seers of unhusked. Again, I visited another large hât where two or three thousand persons must have been collected; the supply of rice was small, and according to the reputed weight contained in a katta, was selling at 12 seers of 80 tolahs per rupee. I got a retail vendor to measure me out eight annas' worth of rice, weighed it, and found that 9¼ seers of 80 tolahs was the actual price per rupee. The examination of the measure of another vendor on a larger scale in the same market produced the same result. These kattas, it is true, differ somewhat in capacity, and I may have been unfortunate in my selection, but the result of my enquiry was to leave an impression on my mind that prices are higher even than was supposed. What struck me most was the very limited supply, and the petty channels through which it flowed; the retail vendor at the last hât alluded to above had purchased on a previous market day unhusked rice brought down from Thakoorgaon, had in the interval husked it, and taken it on the present occasion for sale at a profit. Considering the high price that grain fetches, the petty nature of the supply, judging from what I have myself seen, certainly leads me to the conclusion that the sources of supply are becoming exhausted. I have directed the attention of the relief officers to this most important subject. Prices are tending upwards; rice selling when I last wrote at 10½ seers of 96 tolahs, or about 14 seers of 80 tolahs per rupee in Dinagepore, is now selling at 10 seers of 96, or 12 of 80 tolahs per rupee; the prices from other parts of the district are as follows:—

Reduced to the standard of 80 tolahs—

	Rs.	A.	
Ranisunkoil - - - - -	4	0	per maund.
Peergunge - - - - -	3	12	„
Hemtabad - - - - -	3	13	„
Tamboolee - - - - -	3	15	„
Gungarampore - - - -	3	8	„
Pateram - - - - -	3	0	„
Patnitollah - - - -	3	5	„
Kaliagunge - - - -	3	11	„
Ghoraghat - - - - -	3	12	„

I fear, however, that the prices quoted are those of the beparies, who sell more or less wholesale, and does not represent the rates at which the poorer classes can get there three or four pice worth of rice. I may add that the prices in the north of the district are said to have risen to Rs. 4 per maund; if this is correct, a rapid rise may be expected in the distressed tract.

B.—Relief Works.

The number of labourers continues to increase at all the works, and for the first time since the scarcity began to be felt, I have to report that women are coming for employment; from this it seems clear that the pressure of want is begun to be more keenly felt, though the presence of women may also be partly due to a feeling of confidence in the individual relief officers, who have now some of them been at work in the same part of the district for some time. Mr. Jones and Baboo Hari Mohun still head the list, finding employment for some 17,000 persons, of whom a considerable proportion are women. Mr. Scanlan at present employs about 3,000 persons, but he proposes to extend his work to the north of Nekmurd, and into the south-west corner of Thakoorgaon, where the villagers are demanding work; he therefore expects his numbers to be very largely increased. Baboo Poorno Chunder Goopto, at Ghoraghat, continues to employ some 1,200 or 1,300 persons daily, including some women. Mr. Finucane and the sub-inspector of Patnitollah employ between them 6,000 persons daily, while Baboo Hara Kalee Mookerjee, who has just started work between Kaliagunge thannah and the Maldah road, has already got over 1,400 persons at work, including some 200 women; the three public works overseers employ 2,772 persons. As I have pointed out before, the works are now carried on principally over roads made years ago, but since suffered to fall out of repair from want of funds to keep them in order. Task work has been introduced in some places, but in others not, as task work necessitates the digging of trenches or pits, and it often happens that the requisite earth is obtained by taking off the surface soil to a depth of few inches from the surrounding fields, a process which the ryots not only do not object to, but in places deem an advantage; trenches dug to a depth of 3 feet, especially if cut at irregular depths, the cultivator can make nothing of, at least for a year or two. At the rate we are working now we must very soon come to an end of our roads; the relief officers however have all been directed to arrange to have other work in readiness for the labourers to be employed on; maps have been sent out to them to mark completed and proposed roads, and to note what other works they propose putting in hand when the roads are finished. I suspect that the cleaning out of tanks will be found to be the most useful work for relief labourers, though I do not think that we shall get much help from the zemindars or villagers in the way of subscription. There are plenty of old tanks in the district, now choked up, or almost choked up with vegetation, which would appear to have been originally intended for purposes of irrigation; they stand many of them out on the maidans, with no houses near them, and even those near villages were evidently at one time much larger than the present requirements of the neighbouring inhabitants demand. I saw, for instance, the Atta dighee near Birampore, marked on the old survey map as a sheet of water half a mile long, now a choked up hollow; this tank skirts a plain where this season almost the entire crop was destroyed for want of rain; had the tank been full of water, a considerable extent of cultivation might have been saved. I fear, however, that neither zemindar nor villagers will subscribe anything to have the place cleared out. I have noticed many such tanks and reservoirs, the cleaning out of which would be a work of great public utility.

C.—Transport of Food.

A small quantity of rice is being imported by the mahajuns of Ryegunge. I know of no other importations. The internal trade of the district is active enough, all trade being carried on in hâts through the agency of paikars and petty dealers; rice, husked and unhusked, is brought to Dinagepore from Hubra and the eastern parts where there has been some crop; rice so purchased being taken to and sold in the hâts to the west of Dinagepore. Paikars, again, buy rice in the hâts of Thakoorgaon, part of it local, part brought from Cooch Behar; such rice being taken for sale to Ranisunkoil and Hemtabad. Unhusked rice again is bought in the Ranisunkoil and other hâts where the supply of rice is not extensive, a maund or so at a time; it is husked at home by the females of the purchaser's family and retailed next hât in small quantities to the poorer classes. To turn to our own transport arrangements, I venture to say that everything has been done that can be done. I have been most careful to make no promises which I did not see my way to performing, and I fear our arrangements have therefore seemed behind hand. I will now explain in some detail what means are available to bring in our supplies. As I noted in my last report, every inducement has been held out to the carters to engage in Government service, liberal terms being offered them, and the co-operation of the zemindars being enlisted in our favour. The plan has succeeded admirably, and carts have come in and are coming in in numbers. Mr. Scanlan, at Ranisunkoil, has engaged 750 carts, which will suffice to carry away his 140,000 maunds from Purneah as fast as he can be supplied, the distance to Kissengunge being only a few miles. Mr. Jones has got about 300 carts, and will shortly have a fleet of 200 boats of 100 to 150 maunds each—means ample for his requirements. Dinagepore and Tamboolee are supplied from Maldah; we sent some 800 carts to Mr. Westmacott for the Manik Chuk and Dinagepore line, and some 800 more have since been sent; if the whole 1,600 can be set to work between this place and Maldah and between Tamboolee and Maldah, they will with pack bullocks more than suffice for our wants. For Neetpore we are a good deal dependent on Mr. Molony; there is a large mart at Neetpore, it is true, but the trade is entirely export, in the hands of non-residents; this year, there being no rice to export, boats have not come. I am, however, under no anxiety regarding Neetpore; there is no great distress in that quarter, and boats of 400 maunds can always get up so far. As for Patnitollah, it has been found impossible to procure any number of small boats fit for the shallow water of the Atrai; it is proposed therefore to have our supplies sent to Nowgong; that place is distant from Patnitollah only about twenty-five miles. A track has been cut between the two places 500 carts, have been secured, and another 200 or 500 are said to be procurable. For transport from Patnitollah, Mr. Finucane, at Patiram, has some 500 carts, and he says he can get more if necessary. At Ghoraghât a number of carts and boats have been collected, to what amount has not been exactly reported. Complaints as to want of fodder have not been made; the officers, however, have been directed to lay in stocks of fodder along the line for use when wanted; they have also been instructed if there is any scarcity of water to sink wells wherever needed. Some difficulty has been experienced as to the necessary escort for trains of carts; it has been the custom hitherto to send a constable in charge of some 60 or 70 or even greater number of carts; it is useless, however, expecting any one man, however energetic, to look after so many; police also are not always available, and delays take place at stations where the escort is changed. I have written, therefore, to the Relief Commissioner, and proposed that there should be a sirdar carter over every 10 or 12 carts, that no police should go with the train, but that men separately paid should be stationed at intervals along the road, whose duty it will be to see that carts do not delay, to tell the carters where to get fodder, to give assistance in case of a breakdown, &c.,—these men to be paid out of relief funds, and to be under the direction of some one of the relief officers.

D.—STORAGE OF GRAIN.

In my last narrative I pointed out the places at which we mean to collect our supplies from outside, and from whence grain will be distributed in the interior. Golahs are being run up at those places, and also at different places in the interior,—some sites being fixed on in consultation with the Relief Commissioner, others being suggested by the relief officers as convenient. I may remark that every golah is built in the vicinity of a hât, so that if it becomes necessary to sell we may have a market close at hand. Storekeepers are appointed as soon as rice is sent to a subsidiary golah, but the want of proper weights for their use is much felt. The notice of the Relief Commissioner has been drawn to this, and he has, I believe, taken measures to have our wants supplied.

E.—ADVANCES.

There have been no applications for advances since my last report.

F.—CHARITABLE RELIEF.

The question of sub-divisions for relief purposes is at present in abeyance, the whole arrangement having been reported to Government by the Relief Commissioner. I hope to see operations fairly started immediately. The need for charitable relief is not so pressing as the high price of grain would seem to warrant, for wages earned on the relief works have enabled many a man to send pice for the support of his relations, who would otherwise have been dependent on charity. The number of boys employed on works also is large, and women are now seeking employment. Over and above all these, however, there are certain classes who must be gratuitously relieved. At a meeting of the Executive Committee it was resolved that the sum of Rs. 100 should be placed at the disposal of each relief officer, and instructions issued for the distribution of gratuitous relief. I was anxious that the relief officers should be instructed to make use of the Government stores, for it seemed to me inadvisable that the relief committees should seek their supplies from the neighbouring hâts, thus raising prices which are now quite high enough; my motion, however, was overruled, and the relief officers instructed to draw their supplies from the nearest hât. The list of sub-committees has been published in the *Gazette*. Relief, however, it was determined, should only be started at the head-quarters of each relief officer, who was to report if the operations should be extended to other places. The relief officers were also empowered to afford help in the way of supplying materials for spinning, &c. Until the relief centres are finally settled much cannot be done under this head; the officers in the interior, however, have been authorized to relieve any cases of distress coming to their notice. Among the zemindars, Baboo Khetro Mohun Singha, manager of the Dinagepore Rajbaree estates, and who is also a zemindar in his own right, has been most active in his endeavours to help his tenantry; he has imported rice, which he has stored at different places; he distributes rice gratuitously to such of his ryots as are unable to work; he has granted several sunnuds for land to dig tanks, the work of digging being undertaken to afford employment; he is also making efforts to provide seed grain by offering those ryots who have surplus stocks of last years grain, old rice in exchange for new; he has also remitted rents where his tenants have lost their crops; in fact, ever since the scarcity began he has been unremitting in his efforts to mitigate its effect.

No. 768F, dated Maldah, the 10th March 1874.

From F. J. Alexander, Esq., Officiating Magistrate-Collector of Maldah to the Officiating Secretary to the Government of Bengal, Statistical Department.

In continuation of my No. 611F, dated 24th February last, I have the honour to submit herewith the Fortnightly Narrative of Scarcity and Relief in this district for the fortnight ending 7th March 1874.

Narrative of Scarcity and Relief in the Maldah District for the Fortnight ending March 7th, 1874.

A.—State of the Country.

In the central and southern markets supplies still continue plentiful, and prices are generally stationary. At Rohunpore, the largest rice mart in the south-east of the district, supplies are still abundant, 3,000 maunds of paddy and 300 maunds of rice being the quotations of the last market day, and almost half the quantity of paddy and rice thus brought for sale was reported as left unsold when the market closed. The daily arrivals of grain through private trade at English Bazar by the Mahanuddy also shows supplies to be plentiful. In the north-west tract (thanah Khurbah) prices have risen slightly, and the quantity of rice exposed for sale is diminishing. A brisk trade is being done in mustard-seed, which, however, fetches only half the price per maund it did last year.

The following are the latest prices of paddy and ordinary rice at the under-mentioned principal markets in different parts of the district:—

Central Part of the District.

At Mungulbari and Balia Nawabgunge.

Paddy - - - - -	19 seers per rupee (80 tolahs).
Ordinary rice - - - -	10½ „ „ „

North-East of the District.

At Bamungola.

Paddy - - - - -	18 seers per rupee (80 tolahs).
Ordinary rice - - - -	13 „ „ „

At Gazole.

Paddy - - - -	21 seers per rupee (80 tolahs).
Ordinary rice - - - -	12 „ „ „

North-West of the District.

At Chanchal.

Ordinary rice - - - - -	10 seers per rupee (80 tolahs).

At Toolsigunge and Abadpore.

Ordinary rice - - - - -	10½ seers per rupee (80 tolahs).

At Shumshi.

Ordinary rice - - - - -	10¼ seers per rupee (80 tolahs).

At Futtehpore Hyatpore.

Paddy - - - - -	18 seers per rupee (80 tolahs).
Ordinary rice - - - - -	12 „ „ „

South-West of the District.

At Shibgunge, Kansat, and Turtipore.

Ordinary rice - - - - -	11½ to 12 seers per rupee (80 tolahs).

South-East of the District.

At Rohunpore and Gomastapore.

Paddy - - - - -	21 seers per rupee of (80 tolahs).
Ordinary rice - - - - -	15 „ „ „

Rainfall.

The weather has been changeable: at times clear, with light westerly winds, and again cloudy and threatening. On the 23d February the weather set in stormy with every appearance of heavy rain, but it cleared off after a slight shower. On the night of March 7th there was a heavy shower of rain, 1·22 inches being recorded at the sudder station, and as I write the weather is still cloudy and unsettled, and there was a heavy shower last night (9th March) again, 0·44 inches of rain being recorded.

The season is altogether a strange one.

State of the Crops.

I have heard nothing up to date to alter the opinion I have already expressed regarding the favourable out-turn that may be expected from the cold weather crops, such as wheat, barley, cheena. The successive showers we have had have hitherto been most beneficial, and a few days of sunshine and westerly wind would now ensure the safety of these crops. They look excellent, and in many places strike me as being "heavier" crops than I have sometimes seen in other years; the natives say so themselves. If we do not get "hail" before they are harvested, above an average crop will in most places be reaped.

The "bora" dhan also promises well. A larger area than usual has been cultivated, and what has been transplanted looks excellent. This rain is all in its favour. I estimated the out-turn to be over 200,000 maunds. This is I believe under rather than over the mark.

The mango crop, judging from the blossom, will be a very good one.

Condition of the District.

The health of the people continues generally good. With the prospect of good cold weather crops, a good bora dhan crop, and a good mango crop, much cause for anxiety, so far as the condition of the district generally is concerned, is removed. All who have lands have now ample to do to plough them, or irrigate the "boro" dhan. No cases of distress or starvation are reported. I annex a comparative statement of theft cases, &c. for February 1872, 1873, and 1874; it does not call for special remark.

Condition of any Special Tract.

From the north-west tract (thannah Khurba) Mr. Reily does not report any special change. The villagers come in considerable numbers to the relief works, and grain is being distributed to the tenants of the Chanchal estate and to outsiders on credit or for cash.

To his tenants Mr. Reily, the Manager of the Chanchal estate, has up to date thus advanced 1,476½ maunds, and has sold to outsiders 819 maunds 34 seers.

Since my last report I have myself visited the north-eastern part of the district in the neighbourhood of Gazole, and after inquiries from a number of the village mundals I am glad to find there is at present no cause for anxiety in that quarter. Relief works are open for those who will come to them.

B.—RELIEF WORKS.

Mr. Reily reports that work is going on on eight roads and five tanks in the north-west tract. The total number of persons employed during the fortnight ending Saturday, the 7th March, on these relief works was 12,833 men, 3,343 women, and 635 children.

The road between Khurbah and Chanchal being finished, the labourers have been distributed to the neighbouring tanks and roads.

Shops for sale of Government rice have been opened at four of the relief works where the nearest village shops were over two miles distant. The total amount of Government rice sold up to date is 56 maunds 11 seers 3½ chittacks.

Work is also going on on the ordinary district and municipal roads, and on five other relief roads noted below.

The total daily average of persons employed on all works for the fortnight is as follows:—

———	Men.	Women.	Children.	Total.
On the ordinary district roads and municipalities -	612	145	20	777
On relief works - - - - - -	1,064	349	62	1,475
Total - - -	1,676	494	82	2,252

STATEMENT showing Total Number of Persons employed on Road and Relief Works during the Fortnight ending 7th March 1874.

No.	Roads.	Men.	Women.	Children.	Total.
1	District roads - - - - -	8,138	1,819	258	10,215
2	Municipal roads and tanks - - -	625	271	34	930
3	Relief works—				
	North-western tract—				
	On nine relief roads - - - -	8,616	1,825	448	10,889
	On six tanks - - - - -	4,456	2,518	211	7,185
	Eastern tract—				
	On two relief roads - - -	1,264	—	186	1,450
	South-eastern and Central tracts—				
	On three roads - - -	679	504	86	1,269
	Total - - -	23,778	6,937	1,223	31,938

C.—TRANSPORT OF FOOD.

The private transport of grain (paddy and rice) from the larger rice marts, such as Neetpore, Rohunpore, and also from Dacca (Naraingunge), continues fairly active.

The transport of Government grain is being pushed on, and so far the carriage (both carts and boats) has proved equal to the pressure.

The route to Dinagepore viâ Sahebgunge and Hyatpore continues to work well. Up to date 23,748 maunds for Dinagepore and 4,964 maunds for the Chanchal estate have been carried by it. The requirements of Dinagepore by this route have, however, now largely increased.

It was at first proposed to send only 10,000 maunds in all by this route. This was subsequently increased first to 5,000 maunds, and then to 10,000 maunds per week. Now it is proposed to send 3,000 maunds a day, or 1,00,000 maunds per month. More carriage will, therefore, have to be put on, and if the Manickchuck route is wholly or partially abandoned, as now proposed, I anticipate no difficulty in conveying the required quantity by the Hyatpore route to Dinagepore.

Mr. Westmacott is looking after the Manickchuck route, and reports that he is now employing from 700 to 2,000 carts. His despatches are over 1,000 maunds a day. There has been no block yet, but at the Nemaserai ferry, where the water route from Godagari and the land route from Manickchuck meet, it will require all Mr. Westmacott's efforts to prevent delays taking place.

The Dinagepore and Rajmehal road, on which much new earth has recently been thrown up, has been much cut up by the constant traffic. The executive engineer has been directed to give his constant attention to the road.

The total receipts of grain into the district up to March 7th were 2,55,235 maunds 34 chittaks, of which 29,071 maunds 29 chittacks had arrived at final destination at store-houses in this district, and 2,26,164 maunds 5 chittacks had passed through, or was in transit for Dinagepore.

Allowing for delays at changing stations, where the grain has had to be removed from boats to carts, or from large boats to smaller ones, and which it was not easy to avoid, this large quantity of grain has hitherto gone on without a single block; but additional effort must be made to keep sending it on while the weather remains tolerably cool, for each day as the weather gets hotter will tell on the carriage cattle.

D.—STORAGE OF GOVERNMENT GRAIN.

At the store-houses in the district the following quantities have been stored:—

	Mds.	Ch.
At English Bazar - - - - -	3,396	0
* „ Old Maldah - - - - -	9,200	0
„ Gazole - - - - - -	5,000	0
† „ Khurbah - - - - -	10,000	0
„ Hyatpore Futtehpore - - - -	1,474	29
Total - - -	29,071	29

At Hyatpore a receiving gola to hold 9,000 maunds is completed, and at Manickchuck a similar gola to hold 5,000 maunds. Both these golas will have to be abandoned with the setting in of the regular rains (15th June), and I do not recommend the expenditure of money to build more extensive golahs at either place.

The best place, unquestionably, for permanent golas for storage of grain through the rains is at Nemaserai and Old Maldah, and Mr. Westmacott is arranging for this. From this point it would be easy to store and distribute grain as required, as follows:—To Central Dinagepore, by the land route, as long as it is open or passable for carts ; to South-western Dinagepore, (Raigunge, Chooramun, &c.) and South-eastern Purneah (Barsoi), if need be, by the Upper Mahanuddy and the Kulick River; to Central and South-eastern Dinagepore by the Tangun and Poornababha (tributaries of the Mahanuddy), and the routes of supply would be from Godagari by the Mahanuddy, and from Sahibgunge by the Ganges and *Kalindy*.

---

* Of this quantity, 1,518 maunds have been sent to Dinagepore.

† Of this quantity it is possible that a portion has been sent on to Dinagepore.

As all these water routes will, however, be open, the smaller ones to large country boats, and the larger ones to country boats and steamers, from July to September, the permanent golahs need not, I think, be erected for a larger quantity than one or two lakhs of maunds at most.

E.—ADVANCES TO PRIVATE PARTIES, AND THEIR RESULTS.

Rupees 8,000, the balance of the sanctioned advance to Rajnath Guha of Rs. 10,000 under clause *b*, paragraph 4, circular No. 80, has been paid to him, and he has purchased grain in Calcutta, which he intends to dispose of in the distressed tract. He is ready to take the remaining Rs. 40,000 which he applied for, and I am anxious that he should have it. It has been sent to the Famine Commissioner for his sanction.

No other advances have actually been made, but several sums are available as soon as the parties appear to take the same.

Thus Rs. 20,000 has been sanctioned for Mr. Reily under clause *a*, paragraph 4, circular No. 80; Rs. 1,000 for land improvements, paragraph 23 circular No. 80, dated 17th November, for the manager of the Tahirpore estate; and Rs. 500 to Heeran Sirdar of Deopoorah, and Rs. 500 to Koshal Mundul, for excavating tanks in the eastern tract where water is likely to fail.

F.—CHARITABLE RELIEF.

For charitable relief operations I have divided the district into four sub-divisions, and placed a special officer in charge of each.

Within each circle relief centres have been selected and sub-committees organised, and more relief centres will be selected, if needed. At present, except in the north-west (Khurbah circle) there is no indication that charitable relief is yet required on any large scale in the rest of the district.

The following is the result of charitable relief operations for the past fortnight:—

(1.) *Chanchal Sub-division.*—This circle is under Mr. H. Reily, manager of the Chanchal estate, and I have now sent Lieutenant Kellie of the military department to assist him in relief and transport duties.

During the fortnight charitable relief has been given at the following places:—

At Chanchal	902	persons.
„ Maltipore	368	„
„ Khurbah	611	„
„ Futtehpore	129	„
„ Saroopgunge	169	„
„ Toolsigunge	54	„
„ Dabeegunge	104	„
„ Dabeepore	82	„
„ Arhidanga	13	„

The expenditure has been 31 maunds 17 seers 8 chittacks of rice, and Rs. 13-3-3 in cash.

(2.) *Sudder Sub-division.*—This is under one of the deputy magistrates and the medical officer.

At English Bazar 119 persons were relieved at an expenditure of 1 maund 17 seers 8 chittacks. No other relief centres in this circle have yet been opened. The sub-committees have been directed to open them when needed.

(3.) *Maldah Sub-division or Circle.*—This is under a sub-deputy collector.

At Gazole 260 persons have been relieved at an expenditure of 4 maunds 34 seers 8 chittacks of rice. No other relief centres yet opened.

(4.) *Nawabgunge Sub-division or Circle.*—This is under a sub-deputy collector. At Gomashtapore nine persons have been relieved at an expenditure of 14½ seers of rice and 1 anna 9 pie cash.

At Kansat 171 persons have been relieved at an expenditure of 2 maunds 5 seers 8 chittacks of rice. No other relief centres yet open.

The total number of persons relieved for the fortnight is thus 2,936, or an average of 209 per diem.

Except in Khurbah, all the cases relieved are those of the infirm, sick, beggars, &c., who in any year would be on the hands of the public for support.

In Khurbah, those who are not usually beggars, but who now feel distress, come for help.

The total amount subscribed up to date is Rs. 5,700-8, and I have just received a substantial grant of Rs. 10,000 for the Central Relief Committee.

The statement called for in Government Circular No. 1,251—S.R., dated 5th March, is annexed.

No. 1 M.N., dated Beauleah, the 9th March 1874.

From W. H. D'Oyly, Esq., Collector of Rajshahye, to the Secretary to the Government of Bengal, Statistical Department.

I have the honour to submit my narrative for the fortnight ending 8th instant.

A.—State of the Country.

The cold-weather crops promise to yield a far outturn. Up to Saturday last there had been no rain excepting a few drops in thanahs Bagmara, Singra, and Nattore. On Saturday night there was a sharp storm of wind, accompanied by thunder and lightning, and a little rain, and on Sunday there was also a little rain; to-day it looks threatening. The supply of rice in the several markets continues to be equal to the demand.

The price is as follows:—

	Seers.
Singra	15
Nattore	14¼
Charghat	14¼
Malunchee	14¼
Bagmara	14¼
Boraigaon	13½
Beauleah	13¾
Pooteah	13
Godagaree	12

At Madarigunge I found paddy selling at from 30 to 34 seers per rupee. Importations have not decreased. There have been no cases of actual starvation. I received some rather alarming accounts from the police at Bagmara, stating that people were suffering much, and that a woman had hanged herself, because she had nothing to eat. I immediately went out to the place, and rode about the country in the vicinity making inquiries. I find that the real cause of suicide was a quarrel.

The people in this part are generally in good condition, though in a few villages I found some looking rather pinched. I have started a poor-house at a village called Bagsole, and I persuaded a respectable farmer to take advances for two villages for digging or rather deepening tanks where they were much wanted. At the poor-house the lame, blind, and infirm from the neighbouring villages will receive food gratis, while cotton and jute will be supplied to those who can work at all to spin into thread and string. The country abounds in kunker, and I have directed the inspector of the division, whom I left there, to have kunker collected by men, women, and boys who are not fit for heavy work, and to pay them for each basketful to be collected at two or three places along the banks of a stream in the neighbourhood, from which we can bring it into Beaulah in the rains. One farmer also took an advance to buy seeds for his ryots. I received many applications for seeds, and made notes of the places where they were required, and I have written to all the zemindars and farmers of these villages, begging them either to supply the seeds or to apply for advances for the purpose. In many villages there is a want of water, and I am glad to say that I saw a good many tanks being excavated. I have written to the zemindars of all villages where the water supply is deficient, urging them to apply for loans for the purpose of deepening tanks. At Nowhatta I have started a poor-house, and the road we have commenced work on from Nowhatta direct to Saipara has attracted a very large number of workmen. I saw over 1,500 men there one day; they are all in excellent condition. Having finished the ploughing of their fields, they have come in larger numbers to work on the roads; we must expect the number to decrease when the sowing time comes. A poor-house has also been started near Beauleah.

B.—Relief Works.

It will be seen from the returns that there has been a great increase in the number of labourers during the last week of the fortnight; this is owing to the large number on the new road from Nowhatta to Saipara, which will soon be carried on to Manda thanah. Arrangements are being made to hut the workmen who came from any distance. It will be a great relief to the people of the vicinity when the feeder from Tannore *viâ* Saipara and Bagmara to Mahdnuggur station is started, but as yet no engineer has been deputed to mark out the line.

C.—TRANSPORT OF GRAIN.

There was a slight block for a day at the Nukrazee ghât, on the Baraloee, owing to the boats having been removed. This is a zemindaree ghât, and I propose to make it a public ferry. Carts go this way to Putneetolla. I engaged two boats at this ghât, and for the present must pay the boatmen monthly wages. Importations continue briskly, and quite supply the demand.

D.—STORAGE OF GOVERNMENT GRAIN.

The statement will show the progress in storing and forwarding Government grain. The despatches from Godagaree have quite come up to the estimates, and would have been far larger had it not been that for three days there was no grain to forward. By the arrangements now being made with Mr. Dawson, this is not likely again to occur. I regret to say that I have not been able to include the transport of railway rice as I have received no returns. The officer at Beauleah promises to let me have the returns for this depôt, but has not yet done so: I will endeavour to get them to-morrow. Major Lindsay was requested to direct his officers to supply me with the returns; but I have not yet received any. The steam launch *Fenny* has just arrived, and will proceed to Godagaree for the Mohanuddy. The *Star of Dacca* has gone to Kooshtea.

E.—ADVANCES TO PRIVATE PARTIES.

	Rs.
Advanced up to the date of last narrative	19,800
Advances in course of last fortnight	9,800
Total	29,600

F.—CHARITABLE RELIEF.

At the poor-house started at Bussooree, three miles west of Beauleah, a few old and infirm persons have been fed. At Nowhatta also, and at Bagsole, poor-houses have lately been started. The number fed will appear in the next narrative; but there are only a few as yet, and those mostly professional beggars who cannot now get the support they usually do. There is a dhurumsala to the north of the town of Beauleah, to which the Tahripur Wards' estate subscribes. This is an old institution, but I fear has not been properly looked after hitherto. It is managed by a committee. I have deputed a deputy collector to look into the accounts and to see that it is really made to be an useful institution for the destitute poor.

No. 8, dated Rungpore, the 9th March 1874.

Memo. by G. DAMANT, Esq., Joint Magistrate in charge.

Forwarded to the Secretary to the Government of Bengal.

Narrative of Scarcity and Relief in the Rungpore District, for the Fortnight ending 7th March 1874.

A.—STATE OF THE COUNTRY.

THE supply in the large bazaars is still well maintained, but the rice which is brought for sale is nearly all imported, very little of it is home produce. The southern part of the district is mainly supplied by boats from Dacca and Seerajgunge, the west including the Sudder station from Hubrah, Phulbari, and Burampore in Dinagepore, and Hilli in Bograh, and the north and east from Cooch Behar and Julpigoree. Prices on the whole have not risen in the fortnight under report, they range from Rs. 3-4 to Rs. 4-8 per maund of 80 tolahs; prices from all parts of the district are quoted below, in all instances the price has been calculated by 80 tolahs weight:

	Per maund. Rs.	As.	P.
Mahigunge	3	10	0
Gaibunda	3	12	0
Sadullapore	4	0	0
Govindgunge	3	5	0
Sundergunge	3	7	0
Dimlah	3	5	0
Juldaka	3	6	0
Durwani	4	0	0
Kourgunge	3	14	0
Fourunbari	3	8	0
Borobari	4	2	0
Peergunge	4	8	0
Balooa Hât	4	8	0
Molung	3	12	0
Pyrabund	4	0	0

In some of the smaller hâts the supply is said to have been deficient at times, but the deficiency seems to have been only temporary.

There has been no rainfall during the fortnight except a few very slight showers in the south, rain would do more harm than good at present. Since writing the above, we had a storm of rain and hail on the night of the 7th, about an inch of rain fell in the Sudder station.

The winter crops are all doing well, potatoes have yielded a bumper crop, tobacco has been fully up to the average, the wheat harvest has just commenced, and there is likely to be a splendid crop, the aus rice has been sown to a very large extent, probably nearly double as much as usual, it is already sprouting and looking well, China and Kaun have also been very largely grown and are flourishing. The most distressed parts of the district are the south part of thannahs Mahigunge, Sundergunge, Molung, Peergunge, the north of Sadullapore, south of Nesbutgunge, and Kairgunge, and a small tract to the west of Govindgunge, in the neighbourhood of Kamdiar Hât. As a rule, prices are highest in places where the difficulty of importation is greatest; and distress is greatest on the red-clay soil, (kiyar) where the amun crop failed, and there is scarcely any cold-weather crop. The collector is now on tour in the south and west of the district, and reports on those parts of the district, as follows:—

" During the fortnight under report, I have traversed the thannahs Molung, Peergunge, Govindgunge, and southern part of Sadullapore to Bhawanigunge. Molung continues the same, the Pyrabund zemindars are distributing advances to their ryots, a commencement has been made at giving relief on the Cooch Behar estates, and the estates of Baboo Luchmipat and Dhunpat Dugar are being systimatically cared for by their respective superintendents. Famine officer Baboo Akhy Koomar Sen, deputy magistrate, is distributing cotton for spinning, through the thannahs of Molung and Peergunge, and is, besides, distributing supplies of 14 days at a time to deserving objects of charity in their houses. He has found a large amount of distress in the west of Peergunge thannah, where the soil is the red-clay, and no rice was reaped. Grain must be advanced to the poorer cultivators in this quarter under the rules just promulgated (Circular No. 706 of 16th February 1874). Part of this land is in the zemindary of the Dinagepore Rajah, and application has been made to him to help his ryots, and the Commissioner will be asked to use his influence with the zemindar. I went through the bad tract west of Govindgunge to Kamdiar hât. The state of this quarter I consider more critical than any other portion of the district. It is not so much that actual distress is very general as yet, but the ground is for the most part red-clay and there is not a blade of cold-weather crop throughout the whole region. Road-works are in progress and a tank or tanks will probably be dug, but a large number of the people will have to be supported by loans of grain when the time comes for breaking up the ground for the spring rice. The zemindars are for the most part poor, and their further objection to give advances is, that the ryots have little attachment to their homes. There are no groves of plaintain or betel-trees, and no tobacco, or other home produce round their houses, and if the crop failed they would migrate, and leave the zemindars to whistle for their money. The bad tract may be described as that portion of the thannah lying west of the Kurataya, and contains 200 villages and 18,000 people. In about 20 villages, the distress is worst, and I calculate that we shall have to feed here from 2,000 to 5,000 people for the better part of six months, and for this purpose require from 4,000 to 12,000 maunds. The rice is ready, about 1,000 maunds have already been sent to Kamdiar Hât, and 4,000 maunds will be sent there; 5,000 maunds will be stored at Govindgunge, and there will be abundant supplies ready at Gyebunda and at Kallyagunge to be moved on as the first stocks are exhausted. The distribution will be made in the form of advances through the relief committee, but for payment of these supplies and similar grants elsewhere, our local funds will not be a tithe of what we shall require, and it would be a simple procedure that the Government rice be advanced as Government rice, and not debited to the committee. When I return to Rungpore in about a week's time, I shall enter more fully into this subject in consultation with the relief committee, and report more in detail."

"The south-eastern parts of Govindgunge and the south of Sodullapore are fairly well-off for cold-weather crops, and all about here at Kallyagunge the wheat is in splendid condition and the yearly rice sprouting."

I have myself visited Barobari thannah from which we had had reports, but I was glad to find the condition of the people not so bad as I had been led to believe, still there is no doubt considerable distress. I have opened roads in every direction through the thannah, and a good number of men and boys have come to them. I do not think there will be more than great scarcity in this thannah. Dr. Ghose, who has visited the relief-houses in Mahegunge and Sundergunge, reports of the people who come to them: "The class of people who resort to these " relief-houses are chiefly women, children, and men who have been reduced to beggary by old age " or such diseases and deformities as permanently unfit people for work. A considerable number " of people seemed starved, but none of them were free from some disease or other. I believe short " and improper food have favoured the diseases to which they were predisposed, and it appears to " me that, do what we will, a large portion of them cannot be saved from death." There were five cases of grain-theft in the Gyebunda sub-division; and eleven cases in the Sudder station about bringing up rice, for Baboo Luchmipat Dugar was attacked by thieves near Kallyagunge, but the boatmen, with the assistance of the manjhees of some Government boats which were lying near, beat them off and captured three of them.

B.—Relief Works.

Thirty-seven roads have now been opened as relief works and others are being marked out. It will be seen from the statement appended that the number of labourers has increased considerably, but still the number is surprisingly small for a district containing such a large population as Rungpore.

I attribute it to two reasons—first, their inability to do such hard work as road making, as so many of them are reduced by constant fever and spleen; and secondly, that the number of persons who earn their living as daily labourers is very small. Most of the people have a little land which they are very unwilling to leave. At Borobari, where the people seemed more anxious for road work than many other places that I have seen, I found a great many of the coolies only came to the roads on alternate days, working in the meantime on their own fields. Dr. Ghose says: "Wherever I went I found the people making all sorts of difficulties about road " work. It is true that when people are starving no work can be unacceptable, but it is difficult " to conceive the strong prejudice the people have against earth work; they would rather live on " short food than go to work on the roads;" and again he says: "At Kandi (in thannah " Mahegunge) I found a large number of weakly people who are willing to work but unfit for " the hard labour of excavation."

We have begun to sell Government rice to labourers on relief works in places where the prices had risen to seven pice a seer; we sold at six pice = Rs. 3-12 a maund. Baboo Akhoy Koomar Sen reports that he began to sell at Pyrabund, Mohung, and Jagirhat, but since the opening of the Government golahs the price has again fallen in the bazar to six and half pice a seer, so he has closed the Government shop for the present. He has now opened another shop at Peergunge at the request of the coolies; the price has not been high enough in other places to warrant us in opening Government shops. We have hitherto only allowed one seer of rice daily to each cooly, but they complain that it is not enough. As they have to provide for their families, it may hereafter be found advisable to modify this rule.

Our supplies of kodalies are rather short; more are on their way from Calcutta, but a great proportion of them are said to be the short-handled kodals which will be useless here.

C.—Transport of Food.

About 1,600 maunds of rice were brought up the Brahmaputra to Kulma and Kallegunge ghats during the fortnight, and 2,425 maunds to other ghats on the Dhurlah and Teesta, and the importation by land from the neighbouring districts still continues.

Mr. Blair has now taken charge of the transport arrangements, and matters seem to be working smoothly. We have about 450 carts working and 50 boats; this is sufficient for the present, but the numbers are being increased in anticipation of the fresh supply allotted to us.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

A complete list of golahs was submitted in the last report; storage is now ready for about a lakh or more of maunds, and the remainder will be complete in the ensuing fortnight. Golahs for 60,000 maunds have been commenced at Kallygunge, and will be ready shortly. A place has been chosen at Peergunge near Kallygunge which, it is hoped, will be safe from the incursions of the river. The following shows the amount of grain received and despatched up to 6th March.

	Mds.	Mds.
RECEIPTS	—	80,151
DESPATCHES.		
Chellakhal	21,000	
Peergunge	5,818	
Gaibunda	11,230	
Kurigram	10,010

Kamdiar Hat	700	
Sadullapore	500	
Sundergunge	520	
Panialghat	3,086	
Gobindgunge	1,660	
		67,238
Balance at Kallygunge		12,913

Of the rice sent to Chellakhal, 2,365 maunds has been sent on to Durwani.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

A great number of advances have been applied for and sanctioned during the last fortnight, as will be seen from the statement appended. The late orders on this subject are hardly known yet throughout the district; doubtless we shall receive many applications from jotedars and others shortly.

	Rs.
Statement of advances already made	23,700
For grain	7,500
For advances to ryots	16,200
Advances applied for and sanctioned, or forwarded to Relief Commissioner for sanction	47,400
Total	71,100

F.—CHARITABLE RELIEF.

Our relief operations are now fairly started in all the distressed tracts. The following statement shows the number of annochatras opened, and the number of persons relieved at each, as far as I have been able to ascertain, but as some of the places are very distant from head-quarters, and have only been lately opened, no returns have yet been received:—

Places.	Persons relieved daily.
Rungpore	134
Pyrabund	400
Kallygunge outpost	70
Alaikuri	382
Kandi	191
Naldanga	180
Boidyanath	397
Borobari	36
Meetapuker (about)	250
Peergunge "	100
Govindgunge "	50
Gaibunda	50
Kamdiar Hat	Unknown.
Kaligunge	90
Sadullapore	Unknown.
Besides these the following private annochatras are open—	
At Mahegunge, Baboo Annoda Prosad Rae's	400
Luchmiput Sing's	200
At Molung—	
Baboo Luchmiput Sing's	400
And Maharani Surnamoye's at Luckhipore	100
Ulipore	30
Panchgachhi Lalchamarah Hât	Unknown.
Total	1,130
Grand Total	3,460

At the Government annochatras ¼ seer rice and ¼ seer potatoes, cooked, is given; care has been taken to exclude all persons who are able to work. About 17 persons are living at the annochatra at Rungpore. Sheds have been erected there, and are in progress at other principal relief centres.

Besides this, Baboo Akhoy Kumar Sen has been distributing small supplies of rice to deserving ryots in thannahs Peergunge and Molung.

A system of cotton relief has also been organised; a seer of raw cotton is given with a rupee to each woman in want of work; this is returned spun into thread, and another supply is given. It is estimated that it would take nearly a fortnight to spin a seer of cotton. A considerable number of women have already been relieved in this way.

	Women who have taken cotton relief.
In Molung thannah - - - - -	194 (chiefly purdahnishins.)
Mohegunge - - - - - -	163
Sundergunge - - - - - -	24
Total - - - -	381
Bonbari - - - - - - -	55
Total - - - -	436

Besides the above, cotton is being distributed in thannahs Nesbetgunge, Kourgunge, and Peergunge, but no reports from thence have yet been received. There was some reluctance on the part of the people who take cotton, at first, as it was rumoured that the women who did the spinning best were to be taken into the jail to manufacture thread; but the system appears to be working well now, and is likely to afford relief to a large class who would otherwise have starved or come to the annochatras.

No. 1,130, dated Bogra, the 9th March 1874.

From C. A. Kelly, Esquire, Officiating Magistrate and Collector of Bogra, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honour to submit the fortnightly narrative as follows:—

Narrative of scarcity and relief of the district of Bogra for the fortnight ending the 9th March 1874.

A.—State of the Country.

No deficiency in bazar supplies at present. Ordinary rice at Bogra is selling by last accounts at 13 seers of 80 tolahs per rupee, at Sultangunge 12¾ seers, and at Dupchanchia 14¼ seers.

	Mds.
At Sultangunge - - - - - -	2,300
„ Dupchanchia - - - - -	13,000
„ Hili - - - - - - -	11,000
„ Burigunge - - - - - -	4,000
„ Kichak - - - - - - -	3,200
„ Bogra - - - - - -	10,000

has been reported as in the hands of traders and petty dealers up to about the 6th March 1874. I am aware of no appreciable rainfall this fortnight, with the exception of a slight fall, ·10 on the night of Saturday, the 7th, at Bogra. The cutting of mustard and sugarcane is not finished yet; the yield of both will be very good; and fair reports are received of matar, khesari, and other cold weather crops. There is a certain amount of pressure undergone by the people on the *khiar* land, where no cold-weather crops are grown, and this may be expected to continue, with more or less severity for some months to come, probably until about the end of July, when the aus crop on these tracts will, if it turns out fair, be a seasonable help. We shall probably have to open out several more relief works in course of time to keep pace with the demand for labour, and to give employment near to home, and I am going to hold a relief meeting on the 18th to collect subscriptions for relief to be supplemented by Government on behalf of the infirm, incapable, &c. Hitherto our aid has been as previously reported, given by private subscriptions only. With these precautions, I trust we may tide through tolerably well, and I do not anticipate famine. There are no cases of misery and starvation calling for report. We have gone on helping from our relief fund. Nine grain thefts reported during the fortnight. I have lately visited Dupchanchia in thannah Adamdighi, a great rice mart. The tract about there and in the north-east of the thannah consists of *khiar* land, and I have directed the starting of a road between Dupchanchia and Shonamukhi, which will afford seasonable help to the people, and be a useful connecting link between these two rice marts. I have also requested that the railway engineers may at once prosecute the road between Dupchanchia and the railway, which has been entrusted to their hands, commencing at the Dupchanchia end. These two works ought to give great relief to the people in the tracts referred to.

B.—Relief Works.

I annex a list of lines of road on which labourers have been employed, with the number of labourers on the 7th on each:—

		Men.	Women.	Children.
1.	Shariakandi road - - -	361	70	83

The line of the Burigunge and Sibgunge road has been laid out, and also three miles of the Sirpur and Gohail road; also a line of road between Nungola on the Dinagepore road and Darga Hat on the Dupchanchia road, which will give good relief to the people about that part of the Bogra thanna. Progress is also being made in laying out a part of the line between Dupchanchia and Shonamukhi. No deficiency in supply of food to the labourers on relief works is apparent. It is not necessary to report further now with regard to mode of payment, rate of wages, and arrangement for tools.

C.—Transport of Food.

The reports received show importation of 10,900 maunds of rice from Pubna, Dacca, and Mymensing districts by way of the Dookoba and Bengali rivers. 900 maunds of rice from Rajshahye by carts, but much more is supposed to have come from that quarter. Means of transport sufficient as far as Bogra is concerned, but we are now to send on a large quantity of rice to Ghoraghat (Dinagepore) in addition to what has already been sent, and I hope they will be able to supply us with as many carts and boats as they can for the purpose. Some carts have been sent, but more are required, and I hope that a good many boats can be sent to Shariakandi, and we shall then be able to send part of the rice by water. Using our own boats would interfere with private trade in the east, and would not be judicious. The police at Ghoraghat and Govindgunge (Rungpore) have already been addressed on the subject. No block on our transport routes.

D.—Storage of Government Grain at Relief Works.

Places of storage previously reported upon. It is not necessary to report further now on construction of storage houses or golahs. Arrangements for guarding previously reported. Amount of Government food-grain received up to 7th, 30,009 maunds, in all of which, up to 7th, 8,016 maunds have been despatched to Ghoraghat. It has not yet been necessary to use any of the Government grain imported. In addition to the 10,000 maunds received on the 24th ultimo at Sohagipara, 10,000 maunds more, I understand, ought to reach that place on about the 14th, and 10,000 maunds more at subsequent intervals of about 10 days, until the Ghoraghat and our own allotment are made up. I am informed to-day that 5,000 more bags (maundage not stated) reached Shohagipara on the 6th instant.

E.—Advances to Private Parties and their Results.

No additional advances have been made during the fortnight. In order to keep some of the poor people in and about Bogra previously employed by the municipality on work until the end of the month, when our next official year's municipal funds will again be available, I have directed the advance of Rs. 200 from our private relief fund, which I think I shall have no difficulty in soon recovering from the municipality. I have done this as the liberal expenditure by the municipality has now exhausted its available resources for this official year. An application was received for a loan of Rs. 200 for importing grain, but security has not yet been furnished. Two other applications for loans to assist tenants have also been received, and will be complied with when the necessary requirements have been fulfilled.

F.—CHARITABLE RELIEF.

The list of committee-members has already appeared in the Gazette. I have sent up a few additional names to the Relief Commissioner. With reference to circular No. 1,251—S.R., of the 5th March, it will not be necessary to give the statement this time, as we have not yet commenced operations on the Government aided system.

C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta, the 14th March 1874.

Enclosure No. 7.

No. 198F, dated Bankipore, the 10th March 1874.

From J. F. K. HEWITT, Esq., Deputy Commissioner of Patna, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

WITH reference to your No. 1307—S.R. of the 7th March and your demi-official of the 6th instant, I have the honour to report that I concluded yesterday, with four of the leading merchants of Patna, a contract to supply 42,000 maunds of grain weekly from the 14th instant to the 15th of June. The grain will be delivered at the railway stations of the North-West Provinces and Punjab on the 14th, so that it cannot be expected to be here for some days after that date. I have not yet learnt the stations from which it is to be sent, but I hope to hear to-day, and I will then telegraph to Lieutenant Bisset, who is now in the Punjab making arrangements for facilitating the despatch of grain, and will ask him to arrange for having the requisite number of waggons provided at the several stations from which the grain is to be sent.

I have not yet heard. The merchants inform me that they have telegraphed to their agents, but have not yet learnt the exact quantities they can send from each station.
11-3-74. J. F. K. H.

2. In determining the proportions of grain, I have arranged for having a supply of dhâl equal to five sixths of the whole quantity of grain now contracted for. This will be eaten with rice, as recommended by the civil surgeon of Tirhoot; and for the remainder I have got wheat and barley, which will give an occasional change in diet when desirable.

3. The whole quantity of dhâl to be sent under the present contract will, taken together with the grain sent up previously and with that ordered by the Court of Wards for Durbhunga, be about one sixth of the whole quantity of grain imported into the distressed tracts of Tirhoot, and will consequently be sufficient to supply nitrogenous food in the proportions recommended by the medical authorities, namely, one sixth of dhâl to five sixths of rice.

4. I enclose a copy of the contract for the information of Government.

We, Sookhanund, Ram Nerungun, Shewbuksh, and Goormook Roy, of City Patna, do hereby covenant with the Commissioner of Patna to supply him with 47,000 maunds of barley, 47,000 maunds of wheat, and 470,000 maunds of dhâl, consisting of grain oorud, mussoor, moong, and khassarie, amounting in all to 564,000 maunds, at the rate of Rs. 2-12 per maund all round, including cost of bags, railway freight, and all other charges, on the following conditions:—

1st.—That 6,000 maunds of the grains specified above will be supplied daily from the 14th instant to the 15th June next, in the following proportion:—

	Mds.
Of barley - - - - - - -	500
„ wheat - - - - - - -	500
„ dhâl - - - - - -	5,000

consisting of grain oorud, mussoor, moong, and khassarie, provided that of this quantity khassarie will never exceed one tenth, or 500 maunds.

2nd. That should any day's supply fall short of 6,000 maunds, the deficiency will be made up within the week, and that the weekly supply will never be less than 42,000 maunds.

3rd.—That the grains will be packed in well-sewn machine-made bags, containing two maunds each; country-made bags will be allowed for the first week, but not after the 21st instant. Five seers will be allowed on each bag, more or less, but no bags over two maunds five seers weight will be taken.

4th.—The grains will be delivered at the Fathooa railway ghât station.

5th.—That payments will be made to us on presentation of bills, accompanied with railway receipts, according to the weights entered in those receipts, at the rate of Rs. 2-12 per maund, including all charges.

6th.—Information will be given by us to the Commissioner of the stations from which the grains will be despatched, and the quantities to be despatched from each station; and the Commissioner will telegraph to those stations to give a sufficient number of waggons to our gomashtas there.

7th.—Should we fail to give satisfaction to the Commissioner in a month hence in the performance of this contract, he will be at liberty to cancel this agreement.

Ram Nerungun. | Shewbuksh.
Goormook Roy. | Sookhanund.

Bankipore, the 9th March 1874.

Enclosure No. 8.

No. 1296—S.R.

From the Acting Secretary to the Government of Bengal, in the Statistical Department, to the Commissioners of the Patna, Bhaugulpore, Rajshahye, Chota Nagpore, Burdwan, and Presidency Divisions. To the District Officers of Patna, Gya, Shahabad, Tirhoot, Sarun, Chumparun, Bhaugulpore, Purneah, Monghyr and Sonthal Pergunnahs, Dinagepore, Bogra, Rajshahye, Maldah, Rungpore, Moorshedabad, Nuddea, Burdwan, Hooghly, Beerbhoom, Bancoorah, Midnapore, Maunbhoom, Lohardugga, Hazareebaugh, and Singbhoom.

Scarcity and Relief.

Sir, Calcutta, the 7th March 1874.

During the last few weeks the Government have received from some districts indents for what the Lieutenant-Governor has considered an excessive number of Public Works Department subordinates. And from one district it was reported that because a particular overseer was transferred, 7,000 relief labourers were left for some days without pay, and were consequently reduced to great straits.

2. Subordinates of the Public Works Department are being supplied as far as possible; but meanwhile the Lieutenant-Governor desires to impress most strongly on all district and sub-divisional officers in the distressed districts, that all the civil establishments and relief officers are to be fully utilised for the superintendence and payment of relief labourers. The Lieutenant-Governor hopes it is quite unnecessary for him to say, that civil officers and relief officers should on no account excuse themselves by saying that the Public Works Department officials were absent, or that they did not give work, or that they did not pay wages. Officers of the Public Works Department, engaged in relief works, lay out the works, and superintend their execution as far as they can; but in their grades they are wholly subordinate to the civil officers of sub-divisions and circles, unless any other arrangement is specially made in any particular case. An overseer, or other Public Works Department subordinate employed on a relief work is thus under the sub-divisional officer and under the relief officers of his circle, and is not under his professional superior except for professional details, into the proper execution of which the superior engineer officers have to look. It may sometimes happen that for special works a Public Works Department official may be placed by the district officer directly under some other, his professional superior; but in ordinary cases, when no such special arrangement is made, the rule is as above stated.

3. Every sub-divisional and circle officer is responsible that the people on his relief works are properly paid, and he must not complain that it is somebody else's fault that they are not so paid; if he discovers such mistakes he must himself apply the remedy. The civil officers of different departments attached to districts and sub-divisions can be put in charge of works, not so much to make payments themselves, as to go about, hear complaints, and ascertain that people are paid, and that the numbers charged for are employed. This is simply one form in which civil officers and relief officers have superintended the giving of relief.

4. Spare copies* of this circular are forwarded, so that a copy may be in the hands of every circle officer.

I have the honour to be, Sir,
Your most obedient servant,
C. Bernard,
Acting Secretary to the Government of Bengal.

* 50 to Tirhoot.
80 to Sarun, Chumparun, Purneah, Monghyr, Bhaugulpore, Dinagepore, Maldah, Rungpore.

Enclosure No. 9.

Note.—Enclosure No. 9,—being the fortnightly Returns of Persons employed on Government Relief Works in the distressed Districts,—has not yet (27th April) reached the India Office. A summary, however, is given in the 28th paragraph of the Lieutenant-Governor's Narrative, page 14.

Enclosure No. 10.

Central Relief Fund.

Précis of the Executive Committee's Proceedings, from 4th February to 4th March.

On the 4th February a public meeting, convened by the Sheriff of Calcutta, in accordance with a requisition, was held in the Town Hall in order to adopt measures for administering charitable relief. His Excellency the Viceroy presided. A General Central Committee of 153 members having been appointed, with Sir Richard Couch, Chief Justice, as Chairman, proceeded after the public meeting to elect the following as their Executive Committee:—

(1.) The Hon'ble V. H. Schalch, Chairman.
(2.) „ J. F. Inglis.
(3.) „ R. A. Dalyell.
(4.) „ C. E. Bernard.
(5.) „ H. H. Sutherland.
(6.) „ T. M. Robinson.
(7.) J. R. Bullen-Smith, Esq.
(8.) Rajah Jotendro Mohun Tagore.
(9.) The Hon'ble Digumber Mitter.
(10.) Munshi Amir Ali, Khan Bahadur.
(11.) Babu Durga Churn Law.

2. The Executive Committee have held five meetings, namely, on the 5th, the 7th, the 19th and the 28th February, and on the 4th March. The allotment of funds to the more distressed districts, the collection and accounting for subscriptions, the various modes of relief to be afforded, the administrative details of the agency to be employed, the forms of accounts, registers, and returns to be required were considered at these meetings; as also certain questions of policy, such as the selling rate for grain on the part of the Central Committee, and the wage rate for the various modes of labour where employment would be a suitable mode of relief. On the 21st February, the Members of the Committee had the honour of personally conferring with His Excellency the Viceroy in Council on the more important of these subjects.

3. Between the second and the third meetings the Chairman, with the approval of the Executive Committee, visited Patna, Bhaugulpore and Berhampore, in order to ascertain, by personal consultation on the spot, the best means of giving effect to the Committee's wishes.

The administrative arrangements from time to time proposed, and the other proceedings of the Committee, have been duly laid before the Government. It is necessary, however, to recapitulate them here. For, in accordance with a scheme which was some little time under the Committee's consideration, and which was adopted on the 4th March, the Committee have now finally determined not to attempt to establish any separate executive agency for relief purposes. They are satisfied that it would be impossible for them to exercise any really efficient check or control over such an establishment in districts so remote as those in which the most severe distress is anticipated. They have accordingly resolved to utilise, for the purposes of the fund committed to their charge, the various local agencies already existing or about to be provided by the Government or the local residents, the services of which will be available without any charge upon the Committee's resources.

4. The Executive Committee have accordingly embodied their determination in the following notification which has been duly published:—

NOTIFICATION by the EXECUTIVE COMMITTEE on the OBJECTS of the CENTRAL RELIEF FUND.

Calcutta, the 4th March 1874.

"The Executive Committee of the Central Famine Relief Fund, believing that it will be satisfactory to the public to know on what principle the fund is to be conducted, and to what objects the subscriptions are to be applied, publish the following particulars:—

(1.) The Central Committee will from time to time make grants-in-aid through the Commissioners of Divisions in all districts where distress prevails.

(2.) The District Relief Committees will appropriate these grants, as they think best, among the Sub-Divisional Committees of each district according to their wants.

(3.) The Sub-Divisional Committees will expend the funds thus placed at their disposal upon general purposes of charitable relief work, such as—

(*a*) The distribution for relief purposes of grain received from local sources or Government depôts.

(*b*) The distribution of gratuitous relief to persons in need of it, and unable to work.

(*c*) The provision of useful employment for those people who are in need and are able to work, by instituting minor relief works and providing other employment, such as spinning, weaving, husking rice, &c.

(*d*) The provision in such manner as may be considered best in each particular locality, for the relief of persons whose caste usages and feelings preclude the application of a labour-test, women of good family, and others who may be in great distress. Relief for this class of persons may be afforded either gratuitously, or partly gratuitously, by the sale of grain under the market rates, or, with due precautions, by the advance of money or grain to be subsequently repaid.

(4.) All subscriptions collected by the Central and District Committees will be doubled by Government. In such districts as the distress may from time to time become so serious as to be beyond the means of private charity without special additional aid from the State, the District Committees will be supplied with grain for relief purposes from the Government grain depôts without charge.

(5.) All subscriptions collected by District Committees in distressed localities will be expended in those localities, but the amount subscribed will be separately noted in the Central Committee's list of subscriptions.

(6.) Arrangements will be made by the Central Committee for obtaining from the District Committees periodical reports of their operations and accounts exhibiting the details of the expenditure of the funds committed to them."

---

5. Among the communications reviewed at the meeting held on the 28th February were two telegrams from the Lord Mayor, from which the Executive Committee had the satisfaction of learning that subscriptions in England were expected to be large, and that in the meantime two remittances of £10,000 each were already made by telegram. A third remittance of £10,000 has since been advised, making the total of these £30,000.

6. The progress in subscriptions and collections during the month, up to and on the 4th March, was as follows:—

	Rs.	As.	P.
(1.) Amount subscribed by private individuals, including the exchange proceeds of the Lord Mayor's three telegraphic remittances of 10,000*l.* each - - -	7,53,846	8	6
(2.) Of the above the amount actually received from private individuals and paid into the bank of Bengal -	5,41,546	4	6
(3.) Amount hitherto assigned by Government and paid into the bank (further assignments, the equivalent of private subscriptions collected, will be received according to periodical adjustments) - - -	1,00,000	0	0

The following allotments aggregating Rs. 2,05,000 have been made as a first instalment to meet immediate distress in the several districts:—

PATNA DIVISION.

	Allotted 28th February.	Allotted 4th March.	Total.
	Rs.	Rs.	Rs.
Tirhoot - - - - -	40,000	—	40,000
Chumparun - - -	40,000	—	40,000
Sarun - - - - -	20,000	—	20,000
Patna - - - -	—	5,000	5,000
Gya - - - - -	—	5,000	5,000
Shahabad - - - -	—	5,000	5,000
Total -	1,00,000	15,000	1,15,000

BHAUGULPORE DIVISION.

	Allotted 28th February.	Allotted 4th March.	Total.
Monghyr - - - - -	10,000	—	10,000
Purneah - - - -	20,000	—	20,000
Bhaugulpore - - - -	20,000	—	20,000
Total -	50,000	—	50,000

RAJSHAHYE DIVISION.

	Allotted 28th February.	Allotted 4th March.	Total.
Dinagepore - - - -	20,000	—	20,000
Maldah - - - -	10,000	—	10,000
Rungpore - - - - -	—	5,000	5,000
Bogra - - - -	—	5,000	5,000
Total -	30,000	10,000	40,000
Total allotted -	—	—	2,05,000

7. During the month of February charitable relief operations had been started in certain districts through local subscriptions, but the particulars of these have not reached the Central Committee. They will be included in the *précis* for March. With regard to the condition of the country during February, the principal details are fully described in the fortnightly narratives which are published from time to time by the Government.

V. H. SCHALCH,
Chairman.

Calcutta, 2, Bankshall Street,
The 5th March 1874.

Forwarded to
with the compliments of the Chairman, Executive Committee.

Enclosure No. 11.

No. 233, dated Burdwan, the 11th March 1874.

From C. T. BUCKLAND, Esq., Commissioner of the Burdwan Division, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Scarcity and Relief Department.

WITH reference to your No. 1,134 of 28th February, I have the honour to forward, herewith, in original, the district fortnightly narratives received up to date. I beg to observe that, under the original orders No. 154 of 10th January, these reports are due from the district officers on every alternate Monday, and not on every alternate Saturday. As the narratives are sent in original, I beg that they may be returned, or that printed copies may be sent to me.

2. *Hooghly.*—The report of the Collector of Hooghly is generally favourable. There has been a fall in the price of rice, which Mr. Pellew considers "as beneficial as it was unexpected." There appears to be no difficulty in procuring rice in any part of the district, but, undoubtedly, the prevailing prices must induce many people to live sparingly. The measures taken for organizing charitable relief appear to be having the usual tendency of bringing the professional beggars on to the list of recipients of public charity, but the number seems small in comparison with what might have been expected. The Collector has given ample details of the road relief works, and other relief works which are spread over the district. He promised a statement regarding charitable relief as required by Government orders 1,252 of 5th instant, but it has not yet reached me.

3. I desired the district officers to send me the narratives which they receive from the sub-divisional officers, and the Collector of Hooghly has forwarded the Serampore sub-divisional narrative, which is noticed in paragraph 2 of his letter. Mr. Jeffery states that he believes that supplies of all sorts of grain have been abundant, and that the price of rice has fallen considerably during the last few days, owing, he believes, to importations from Eastern Bengal. He adds " there are, unfortunately, a great many cases in which persons weakened by prolonged fever or " dysentery, too weak either to beg or to work, are feeling the effects of want of food. I do not " think that the number of such cases is at all greater than it must have been last year; food, of " course, is less easy to obtain, but fever has not been nearly so prevalent, and these two " circumstances have nearly balanced one another. People have here and there begun to stint " themselves in their food, but not to an extent anything approaching to starvation; there have " been no grain thefts or robberies; in fact, crime has lately much decreased, except amongst " the populations of the towns along the river bank, where it is certain that scarcity will never " be felt."

4. Charitable relief sub-committees have been established in Serampore, and six other centres in the interior of the sub-division. None of them have actually commenced work, but they are engaged in reporting the number of distressed persons in their neighbourhood.

5. *Burdwan.*—The Collector of Burdwan reports a reduction in the price of rice throughout the greater part of the district. The accounts from Raneegunge are favourable. The Collector has not noticed a curious circumstance which is mentioned by the sub-divisional officer, in which a mahajan in the Kaksa thannah was robbed of some rice *twelve years' old,* of which he had some hundred maunds, "whilst several of his neighbours had various quantities of grain only a little less old." The statement of the Collector that "the labourers are reported to be losing strength owing to insufficient food" seems to be rather too strong, seeing that it is based on the following remarks in the sub-divisional report:—"The Sub-Deputy Collector reports agriculturists still " getting on tolerably well; people from the labouring classes, I think, are losing strength, *though* " *very slowly and gradually,* for I hear many complain of not getting two meals a day as they " used to take before, *and if they get sometimes, not full* (see in original)." Mr. Sharp adds "the " approach of distress is very gradual and the advance has been, I am happy to think, *almost* " *infinitesimal* during the last fortnight. There have been no known cases of real misery, certainly " not of starvation. Once and again, I have hurried off to look into a case which seemed likely " to be bad, but not one has turned out to show cause for extraordinary interference, or any " immediate anxiety."

6. With regard to the Boodbood sub-division, the Collector evidently mistrusts the Deputy Collector's reports, and I observe that the Deputy Collector again uses the phrase "remarkably bad," as descriptive of a certain portion of the sub-division. When I was recently at Boodbood, I asked the Deputy Collector what he meant by "remarkably bad," and he said that he only meant that the crops had been bad in certain villages. I wrote to the Collector and warned him not to allow his deputies to use vague expressions like "remarkably bad," but to report actual facts, and to state the remedies needed to redress any actual distress. In his present report the Deputy Collector writes, "I have also heard of starvation in Shor Belgram, Tokipore, Ashenda, and Choauri." He recommends that two food depôts should be opened, and that certain local roads should be undertaken as relief works. The Collector says that he has directed the Deputy Collector to visit the places and inquire *into the truth of the reports,* and that he will establish a food depôt if necessary. I regret that the Deputy Collector is not more active and reliable, but as he has been for several years at the sub-division he ought to have some local knowledge which should be useful. The Collector reports that he has assigned a sum of Rs. 13,000 for a relief road which runs along the east of the tract described by the Deputy Collector as remarkably bad; and, from his marginal notes on the sub-divisional report, I infer that some further sums have been assigned for the roads where relief works are needed; but the Collector's letter No. 144 of 7th instant, applying for a further grant for roads in Boodbood and Catwa has not yet reached this office.

7. With regard to charitable relief, I find from the proceedings of Burdwan Relief Committee, of which the Collector has enclosed a copy, that some further advances have been made to weavers in the Boodbood subdivision for the manufacture of tussur and other silk clothes, but no further particulars are given. The Collector has been requested to report at once the arrangements of the sub-divisional committee at Boodbood, for the purpose of charitable relief, which must be needed if even the rumours of starvation have any sort of foundation.

8. The Collector states, "applications for advances to bring in stocks of food have been made from this quarter" (north-west of Kanoo Junction). These are apparently not new applications, but some which were made about two months ago. I had already ordered the Collector

to report specially upon them, as there was no apparently sufficient reason why these people should become creditors of the State instead of having recourse to the ordinary ways of raising money.

9. There is nothing remarkable about the sudder sub-division of Burdwan; and with regard to Catwa, I am glad to state that the Collector, at my urgent request, again visited the sub-division, and his report contains the result of his own inspection. At Pultia, which had been specially mentioned as a distressed part of the district, it will be seen that fever was at the bottom of the distress, and a new dispensary and a fever food depôt have been opened there. These are supplemented by road relief and charitable relief under the sub-divisional officer. A fever food depôt has also been opened at Munglecote in connection with the dispensary at that place. In this quarter I observe that the people complain, as usual, of the chowkeedary tax, and the district officer has given orders for their relief.

10. There is not much worthy of remark in the Culna sub-division, which is practically free from anything unusual but the pressure of high prices; whilst the liberality of the Maharajah provides relief works and charitable relief at Culna for all who need it.

11. The Jehanabad sub-divisional officer, Baboo Gour Das Bysack, has not submitted any report. The Collector requests that some stringent orders may be passed to compel the punctual submission of sub-divisional reports. He has been requested to call on the Deputy Collector for an explanation, on the receipt of which suitable orders can be passed in the case.

12. The return given by the Collector shews that the daily average number of persons employed on relief works is 3,986, under the Executive Engineer of the district. Numerous other works are being carried on by the sub-divisional officers, municipalities, and private persons.

13. I notice that some further progress has been made in disposing of applications for tuccavee advances, but the amount actually paid is very small in proportion to the amount originally applied for. The officers concerned are properly anxious to be all on the safe side in obtaining sufficient security for the sums advanced by Government.

14. The Collector has by this time received the Government orders on the indent of the charitable relief committee for 4,000 maunds of rice. It will be seen that the exports of rice were 45,248 maunds during the month of February, whilst the imports were 21,666. It is therefore evident that the local grain dealers are sufficiently active.

15. I append copy of a memorandum sent to me direct by His Highness the Maharajah of Burdwan, shewing the relief works and charitable relief administered by his special department. I have advised the Collector to apply to the Maharajah for his further assistance whenever charitable relief is needed in other parts of the district, as it is obviously better for the people to accept charitable relief from the Maharajah than to come upon the public charitable relief funds.

16. *Beerbhoom.*—There is nothing very remarkable in the Collector's report. The export of rice still continues, and the price has a downward tendency. Relief works are being extended, and still more works are required. I have been in correspondence with the Collector on the subject of the pay given on relief works which was complained of as insufficient. It is most desirable to encourage task-work, and to pay its full value, so as to keep the labourers strong and contented, and not to allow them to degenerate into labourers of the *second class*, receiving subsistence wages. The rate of subsistence wages has been fixed by the Collector, and I am glad to see that there are but few labourers in this class.

17. The Collector has made all the progress in his power in dealing with the very numerous applications for advances under Act XXVI of 1871, in this district, especially as he has no very competent assistants for the discharge of his ordinary duties. If he requires a larger sum than the Rs. 40,000 which I had assigned to this district for applications under Act XXVI of 1871, he has been instructed to ask for it.

18. The Collector has submitted in a tabular form a return to Government Circular order No. 1251 of 5th instant; only 115 persons are receiving gratuitous relief, and some further advances have been made to the distressed weavers.

19. *Bankoorah.*—The Collector's report requires few remarks. The price of rice has fallen a little, and exportation to Raneegunge has diminished. The principal relief road from Gungajulghatty to Saltora, which is intended to provide relief in pergunnah Moheshara, has been begun, and 800 men are employed on it. Better progress has been made in disposing of applications for tuccavee advances. The official report contains no particulars as to the charitable relief administered, but I have heard demi-officially from the Collector that 156 persons who, he says, are "doubtless professional beggars," have come forwarded to obtain relief.

20. The fortnightly narratives from Howrah and Midnapore have not yet arrived. They will be forwarded separately as soon as they are received.

BURDWAN MAHARAJAH'S RELIEF WORKS.

Statement.

Burdwan.

The means of relief at Burdwan are—

1.—A food-dispensing house.
2.—The excavation of a tank called the "Jabdai dighee" near Dill Khosha.
3.—The excavation of a tank known as the "Nurunjun Khoond" near Krissensagor.
4.—The excavation and formation of a tank at Rooshon Bagan near the railway.

Food-dispensing House.

This establishment has been for some time in full operation, but has now undergone reform. It was found that the quantity of rice given to each person was too small and has now been increased. Indiscriminate admission had hitherto been given to all comers, numbers of whom were found to be servants and shop-keepers in the possession of ample means of livelihood. Orders have been now issued that a rigid scrutiny is to be made into the condition of the applicants, and only those in real distress are to be admitted. The Darogah in charge reports that the number of applications is gradually increasing, and the number now being daily fed is about 1,500. In ordinary years it varies from 1,000 to 1,200.

Jabdai Digghee.

On the 27th January the number of persons employed was 31. On the 18th of February this had increased to 55.

Nurunjun Khoond.

On the 27th January the number of hands was 31, and on the 18th February 65.

Rooshon Bagan.

On the 27th January the number employed was 56. On the 18th February this number had decreased to 19.

All these works are capable of employing a much larger number of people, but it was found that a system of "ticca" or piece-work had been adopted, which made the works unpopular. This has now been altered, and distressed people are to receive one rate of wages and daily payments.

On other works, not originally "relief works," but now assuming that character, the number of people employed at present is 311, of whom 231 are men, 63 are women, and 11 are boys.

The number of up-country people employed on the relief works is 30. These have applied for food at the food-dispensing house, and have been employed on the works immediately.

It is proposed, when considered necessary, to open an aunochattra in Burdwan in addition to the existing food-dispensing house.

Culna.

The means of relief at this place are—

1. A food-dispensing house similar to that at Burdwan.
2. The excavation of a large digghee in front of the Somaj Baree; the cutting of a khall to connect the same with the river Ganges; the reclamation of one of the shores of the digghee and its formation into a garden, and the building of two "ghats."

Food-dispensing House.

This establishment was found to sadly need reform. Admission was indiscriminate, and a very large number of people not eligible for relief were found to be daily receiving food. This has now been altered, and only those who really need alms are admitted. The quantity of food has been increased, and the establishment is now working satisfactorily. The number of admissions is about 1,000 daily, and to each person the amount of food is as follows:—Rice, 12 ozs.; dhall, 3 ozs.; and salt, ½ oz. The infirm and crippled receive 16 ozs. rice, and a proportionately greater quantity of dhall and salt. There is a supplementary relief-house for up-country people in which attas, sugar, ghee, and dhall are distributed. The number of applications at this house varies from 150 to 200 daily.

Somaj Baree Digghee.

This work is capable of employing from 300 to 400 people daily for four months. The number of hands employed on the 14th February was 54; this on the 18th had increased to 103, and on the 28th to 200. Ordinary daily labour and daily payments is the system pursued, and work is given to all who apply, but at present there does not seem to be any great anxiety to obtain work.

There is another work designed to give employment to women, the labour being lighter than that at the Digghee. This is the clearing away of the rubbish from the ruins of an old building attached to the Rajbari. Women employed receive 8 pice a day, and the number has fluctuated from 30 to 50, but has never yet exceeded the latter number.

On other works 270 coolies are employed, and 33 skilled workmen, exclusive of those always returned on the Maharajah's establishment. It is proposed, if necessary, to establish an annochattra in connection with the relief-house at Culna, but this will *not* be necessary probably for some weeks, as there certainly is nothing like real distress in this part of the district at present.

Chinsurah.

It is proposed to open a relief-house at Chinsurah whenever the Collector thinks it necessary, and to give to it the form which that gentleman proposes. He has been communicated with in order that his advice may be obtained on the subject.

Annochattras.

Should real distress make its appearance in any villages belonging to the raj, an annochattra will be immediately opened for the relief of those and the surrounding villages, and will be maintained as long as the distress lasts.

No. 955—S.R., dated Burdwan, the 9th March 1874.

From E. H. WHINFIELD, Esq., Officiating Collector of Burdwan, to the COMMISSIONER of the BURDWAN DIVISION.

I HAVE the honor to submit the fortnightly narrative due this day.

STATE OF THE COUNTRY.

The Raneegunge sub-divisional officer says that the supply of rice has been plentiful, that some 600 or 700 maunds are daily bought and sold at Raneegunge; that prices are lower, ranging from 12s. 5ch. of best rice (Ramshal) to 14s. 3ch. of the coarsest rice (Midnapore Sali) for the rupee; that there is a considerable stock of old rice in the hands of landowners, but not much in the hands of mahajans, except in thanah Kaksa. The total rainfall at Raneegunge in the fortnight was only ·05 inch, but that in the interior was greater, two considerable showers having fallen. More than half the rice land has been ploughed, and grass is abundant. The cultivators are reported to be getting on tolerably well, but the labourers to be losing strength owing to insufficient food. Most of the Europeans think that things are looking better than they were; the natives generally take more gloomy views of the situation. There have been no known cases of starvation; every case of misery reported has turned out on investigation to have been exaggerated. Grain thefts have not increased.

The Bood-bood Deputy Collector says that the supply of grain at the Mancoor and Gooshkara bazars is insufficient, but more abundant at Sonamookhy. The price of rice has fallen 1 seer; best rice sells at 12s. 10ch. and coarse rice at 13s. 10ch. the rupee at the chief bazars, but in the interior of the sub-division prices are higher, and poor people in some parts have great difficulty in getting rice. There are no stocks in the hands of anyone but the mahajans, and they are holding on in the hope of prices rising. (This is evidently an exaggerated statement, because, as stated above, the price of rice in the bazars has fallen 1 seer.) The condition of the rubbee crops is good in certain villages in Ausgram thanah and along the banks of the Bodai and Shali, but bad elsewhere. The condition of the people in the portion of the sub-division lying immediately north-west of Khanoo junction is "remarkably bad;" work is much wanted there.

Work is now going on on the Mancoor and Dignuggur road, just north of this part, and a grant of over Rs. 13,000 was made on the 19th February 1874, to repair the Burdwan and Sooree road, which runs along the east of this tract.

The Deputy Collector says he has heard of starvation in villages in this tract. I have directed him to visit the places and inquire into the truth of the reports, and shall establish a food depôt there if necessary. Applications for advances to buy in stocks of food have been made from this quarter.

The District Superintendent reports of the Sudder sub-division that the supply of rice is abundant in all the thanahs, that the price ranges from 16 pucca seers to 12 the rupee; that there is a considerable quantity of rice in store in all thanahs but Indoss (I have doubts about this because the crops in Indoss were particularly good, compared with those of other places); that there have been one or two showers of rain; that there have been no cases of starvation or grain thefts, but that the lower classes are obliged to stint themselves in consequence of the high prices, and in some places only eat one meal a day. The state of the crops is fair. Baboo Jogendro Nath Roy reports that there is no distress in his estates in Selimabad thanah. As detailed below, I have visited parts of Burdwan and Sahebgunge thanahs, and have failed to discover any severe distress.

The Cutwa Deputy Collector reports that the price of rice has fallen; that the boro dhan and cheena are doing well; that people in the interior still complain of inadequate supply of rice, but a large quantity is offered for sale at the large marts; that no rain fell during the fortnight; that the people are gradually becoming more straitened and distressed; that the demand for employment is increasing; that in village Ketugram he found 200 persons, mostly women and children, anxious for employment, but they declined to leave their village to work on the road running through the south of Ketugram thanah or to go to the relief centre at Cutwah; that the people in some villages in the north-west of thanah Ketugram are reported to be suffering; that he apprehends prolonged suffering and distress.

I have myself visited the three Cutwa thanahs during the fortnight. I went up by the road which traverses thanahs Burdwan, Sahebgunge, Munglecote, and Cutwah. I found a very considerable number of men at work on the road, which is being repaired in a very satisfactory manner, and the coolies I saw appeared healthy. I asked the price of rice at all the chief places along the road, and found it varied from 13 to 14 pucca seers the rupee, and the supply of rice was said to be sufficient. At Cutwah I inspected the relief centre and found about 150 persons, all (save 3) women and children, being fed and employed on light labour, such as picking up gooting and mat-making; except some of the old women, none of them appeared to be out of condition or emaciated. I next proceeded to Paltea, a village in the extreme south-west corner of thanah Ketugram, along the road now being repaired. I found no work going on; the explanation given was that it was the last day of the Mohurrum. At Paltea I had all the paupers mustered and inspected them. About 150 were assembled, mostly women and children, some of whom looked very ill and emaciated; on inquiring, it appeared that these were persons suffering from sequelæ of chronic fever, such as enlarged spleen, &c. What is wanted at Paltea is evidently a dispensary and fever food depôt, and these have accordingly been established there. The price of rice there was said to be 13 pucca seers, but the supply inadequate. I next went to the north of thanah Ketugram, i.e., to villages Berahimpore, Gwalpara, and Gangatikori, which had been reported to be distressed, and made enquiries there. I was informed the price of rice was 13 seers, or thereabouts, in all these villages, but the supply inadequate; that there were 40 or 50 families of distressed paupers, mostly Haris, Domes, and Bagdis, that these latter were much in want of work; that it would not answer for them to leave their homes and go to the road works in the south of the thanah; and that the Talookdar was offering work in digging up a jheel close by, but would not offer sufficient wages, and so few worked for him. I did not have the paupers mustered in these villages, and did not see any beggars or emaciated looking persons in the village streets. I saw some 20 or 30 men at work in the jheel above referred to, who looked well and strong. I next proceeded to Munglecote viâ Nignu, and found much the same state of things. There are undoubtedly a number of persons suffering from consequences of fever at Munglecote, and I have therefore opened a fever food depôt in connection with the dispensary at that place. The grain-dealers since the rain which fell last month, which facilitated cultivation, are said to be selling and advancing grain freely, as they now entertain hopes that their customers will have a favourable season and will be able to repay them. I returned to Burdwan by the Badshahi road and Kurjana; about half the land appears to have been ploughed. No applications were made to me, except the usual one for remission of Chowkeedary tax, which was urged by a larger assemblage than usual. I already in the cold weather directed remission in all cases of proved poverty, and have now made the direction more definite by directing remission of tax in all cases in which the assessee's income is under Rs. 5 a month.

The Culna Deputy Collector says that the price of rice in his sub-division varies from Rs. 3-3 to 2-14 a maund, and that the supply is tolerably plentiful; that ·13 inch of rain fell in the fortnight; that there has been a very good crop of potatoes; that the other cold-weather crops have not turned out so well; that the middle classes have provided themselves with stores of grain, but the poorer classes are somewhat pinched, especially in parts of thanahs Poorbustholi and Mouressur.

The Jehanabad Deputy Collector's report has not reached me, and I take this opportunity of requesting that some stringent orders may be passed to ensure the punctual submission of these reports by sub-divisional officers. I have repeatedly asked them to be punctual, but there has been scarcely any occasion on which some one or more of their reports have not arrived behind time.

My own opinion of the situation of affairs is the same as that I stated in my last narrative.

RELIEF WORKS.

3. The following relief works are now going on under the supervision of the Executive Engineer:—

NAME OF ROAD.	WORK DONE			Average daily Number of Labourers.	Rate of Wages.	Price of Rice.	REMARKS.
	Up to 21st February 1874.	During fortnight.	Total up to date.		Rs. As. P.		
Cutwa Road - -	1,650,250	1,435,750	3,086,000	857	0 2 6	15 seers kutcha -	Work nearly completed.
Culna Road - - -	2,300,000	200,000	2,500,000	750	0 2 6	Rs. 3-5 kutcha md. -	Work nearly completed.
Assensole to Domohanee Road.	115,000	310,000	425,000	643	0 2 6	Rs. 3-3 kutcha md. -	Work recommenced on 21st February only.
Bankoora Road - -	205,000	385,000	590,000	156	0 2 3	13½ seers per Re. -	Not much demand for labour.
Searsole to Domohanee Road.	500,000	375,000	875,000	700	0 2 6	Rs. 3-3 per md.	
Mancoor to Dignuggur Road.	1,370,000	741,000	2,111,000	800	0 2 0	16 seers per rupee -	Some 300 or 400 men have left work to plough in the field since the rain fell.
Buddipore Road - -	30,000	15,000	45,000	80	0 2 0	Rs. 3 per kutcha md. -	Work going on only in the portion of the Burdwan district.

Besides the above, works are going on in the Raneegunge sub-division, on the provincial road from Poorulia to Seetarampore, and on the district road from Raneegunge to Sooree; the latter is in charge of the Manager, Equitable Coal Company. The following work is going on in charge of the sub-divisional officers and Chowkeedary Union Punchayets:—

In Raneegunge - -	Raneegunge and Mungulpore Road.
In Bood-bood - -	The Bood-bood and Sonamookhee Division.
In Cutwa - - -	Dainhat tank and Nunia Division.
In Culna - - -	Town Roads.
In Jehanabad - -	Chowkeedary Union Roads.

Also tank-works are being carried on at Burdwan and Culna by the Burdwan Maharajah, and at various places by others; and ploughing is going on actively all over the district.

The Executive Engineer in charge of the Kananuddee works states that there is no local demand for employment; that the average number of coolies employed is about 160, who are all healthy; that rice sells at 13¾ seers the rupee, and vegetables are abundant; that the temporary dam in the Damoodah was carried away by the flood of the 8th ultimo, and that the water has consequently ceased to flow down the Kananuddee. More work is urgently wanted in Bood-hood and Cutwah, and I have in my No. 144, dated 7th instant, in the Road Fund Department of my office, asked for another grant for that purpose.

Movements of Grain.

4. Grain is being imported in considerable quantities into Raneegunge and Bood-hood from the districts to the south, and into Culna from the Sunderbunds. The export by rail for the month of February was 45,248 maunds, and the import 21,666.

Tuccavee Advances.

5. The following statement shows the progress hitherto made in respect of tuccavee advances:—

—	Number of Applications.	Amount applied for.	Number in which inquiries completed.	Number in which Money has been paid.	Amount advanced: Rs.	A.	P.	Locality of Work for which Advances have been taken.
Sudder sub-division ..	78	44,250	17	9	4,625	0	0	1 in Rynah, 6 in Burdwan, and 2 in Ganguriah.
Jehanabad - -	34	14,550	4	—	—			
Cutwa - - -	84	37,215	77	7	1,025	0	0	4 in Cutwa and 3 in Ketugram.
Culna - - -	34	6,500	24	4	950	0	0	4 in Culna.
Bood-bood - -	170	72,165	122	6	1,475	0	0	1 in Bood-bood and 5 in Ausgram.
Raneegunge - -	111	35,568	74	1	500	0	0	1 in Raneegunge.
					8,575	0	0	

Note.—Bills for Rs. 14,650 have been passed by this office up to 7th March 1874.

Charitable Relief.

6. In my last narrative I reported the holding of a relief meeting, at which subscriptions to the amount of Rs. 6,518-8 were collected. Since then, additional subscriptions to the amount of Rs. 1,150, as per accompanying list, have been promised, raising the total to Rs. 7,665-8. Meetings have been held at Raneegunge, at which Rs. 715 were collected; at Jehanabad, at which Rs. 1,110 were collected; and at Culna, at which Rs. 215 were collected. List of subscriptions accompanying a memorandum of the proceedings of the District Relief Committee at their last meeting is also enclosed.

The relief measures already taken are, 1st, the establishment of a relief-house at Cutwa; 2nd, the distribution of advances to weavers in the Bood-bood sub-division. With my last narrative I sent an indent for 4,000 maunds of grain, which it was proposed to store in food depôts at several centres named; but I have not up to date been favoured with a reply. I beg to request that my application may be attended to as soon as possible.

The amounts of money disbursed on charitable relief up to date are shown in the following statement:—

[*] *Statement showing the Amount of Money disbursed on Relief Works up to 9th March* 1874.

NAME OF ROAD.	Amount of Work done.	Average daily Number of Coolies employed.	Amount of Money spent up to date.	Health of Coolies.
CUTWA SUB-DIVISION.			Rs. A. P.	
Billepore Road - - - - -	—	—	490 0 0	
Shambazar Road - - -	—	—	30 0 0	
BOOD-BOOD SUB-DIVISION.				
Bood-bood to Kushba - - -	128,000 cubic feet - -	650	275 0 0	The coolies are healthy and able-bodied.
Paid to Panchayets of Pattershire and Sonamookhee Unions for road works -	—	—	900 0 0	
Paid to weavers of Mancoor and Sonamookhee for relief purchases - -	—	—	499 7 0	
RANEEGUNGE SUB-DIVISION.				
Mongulpore Road - - -	3,400 feet of earth laid, of which 1,800 has been smoothed fairly -	15·49	108 15 0	Good.
JENANABAD SUB-DIVISION.				
Bosuntopore - - - -	37,000	50	336 0 0 paid in advance	Good.
Supara - - - -	5,000	14		
Teerul Jadubpore - - -	40,000	50		
Shambazar - - - -	5,000	30	500 0 0	Good.
Sub-divisional tank - - -	Baling water, and about 25,000 cubic feet -	20	165 0 0	Good.

7. I yesterday received your Memorandum No. 214, dated 7th instant, forwarding for information and guidance two copies of the Central Relief Committee's letter No. 1, dated 5th ultimo, to the Secretary to the Government of Bengal, submitting for the approval of His Honour the Lieutenant-Governor certain instructions for the guidance of relief committees. It does not appear whether these instructions have received His Honour's approval, so I refrain from acting on them at present, but I may note that Baboo Bogolanund Mookerjee is, in fact, now doing the work of "Relief Officer," as described in the rules, and that endeavours are being made to obtain the aid of some respectable persons in every considerable village tract as corresponding member of the relief committee, and bring cases of distress into notice.

---

[*] The clerk has made a mistake here in omitting expenses of the Cutwa relief centre and including road-works.

No. 294—S.R., dated Soory, the 9th March 1874.

From R. D. HIME, Esq., Officiating Collector of Beerbhoom, to the COMMISSIONER of the BURDWAN DIVISION.

WITH reference to your Circular No. 209 of 3rd instant, I have the honour to submit to you my fourth fortnightly narrative under the usual headings.

2. No difficulty is as yet experienced in procuring retail supplies in the local marts, but in the small villages in some parts of the district there appears to be some difficulty in obtaining them at the current rates of the principal bazars, a table of which is appended. Large supplies can still be obtained on a few days' notice. Export continues, the fortnight ending 28th ultimo showing 15,199 maunds, against 12,124-30 of the preceding fortnight. Prices still show a downward tendency, but as stocks become low the labouring and cultivating classes appear to feel the pressure more and more daily.

B.—RELIEF WORKS.

A fourth relief road, that from Cynthia to Andee, has been commenced on since my last report, and others are in contemplation, of which the plans and estimates are ready prepared. The number of labourers employed on district and relief works during the fortnight ending 28th ultimo is shown in Form C. The number at present engaged on relief works is about 2,500; they are paid partly by task-work and partly by daily labour,—the old and infirm being put in the latter class, and kept on subsistence allowance, which is fixed at one anna for a man, three pice for a woman, and two pice for a child under fourteen; there are, however, but few in this class, as most can earn more by task-work.

C.—TRANSPORT OF FOOD.

—Exportation continues.

D.—STORAGE OF GRAIN.

None.

E.—ADVANCES TO PRIVATE PARTIES.

Up to date 384 applications for advances under the Land Improvement Act have been registered, the sums applied for aggregating Rs. 1,91,789; of these applications, 133 have been disposed of, representing a sum of Rs. 83,470; of which 69 have been granted, representing Rs. 33,910, and 64, representing Rs. 42,225, refused; Rs. 8,200 have been actually drawn, and 251 are pending;* of these, 30 await the return of notices issued on zemindars under Section 7 of the Act. No other advances have been made under this heading; the necessity of careful inquiry into the validity of the securities offered prevents more rapid progress in making advances, for which the Collector is personally responsible; as it is, I have nearly reached the limit of the allotment, Rs. 40,000, which you have assigned to this district.

F.—CHARITABLE RELIEF.

The total of the subscriptions up to date amounts to Rs. 12,263. A central district committee and six sub-committees have been formed, but are not yet gazetted. Four special relief circles have been opened, at Soory, Soorool, Labpore, and Mouressur, managed at the three latter places by the respective sub-registrars of the sub-divisions,—Baboo Hurry Mohun Sircar, Moonshee Golam Russool, and Mirza Abdus Sobhan, and at Soory by Baboo Kuloda Prosad Sen. I visited the latter on Sunday, the 1st instant, and saw the food, which is given out daily cooked, and, as a rule, consumed on the spot, dispensed; the arrangements were admirable, and reflect much credit on the Baboo and his family, who personally superintend the distribution of food; the recipients were all of the mendicant class, and most of them suffering from loathsome disease. At the other relief-houses rice is given out weekly uncooked; the number of persons receiving gratuitous relief daily in this shape is 115. The last return from Mr. Farquharson, of Ilambazar, who manages the advances of thread to weavers there, shows 34 weavers to whom advances of thread and money have been made. A quantity of thread was sent to Baboo Hurry Mohun Sircar, of Soorool, for the relief of the weavers there on the 6th instant, but the return of his operations has not yet been received. A statement accompanies, as prescribed by Government letter No. 1251—S.R., of 5th instant.

* *Vide* Appendix, Statement I.

No. 535, dated Hooghly, the 7th March 1874.

From F. H. PELLEW, Esq., Officiating Collector of Hooghly, to the COMMISSIONER of the BURDWAN DIVISION.

As requested in your letter No. 209, dated 3rd March 1873, I have the honor to submit the narrative for the fortnight ending 7th instant.

2. Adverting to the instructions to submit in original the narrative of the sub-divisional officer up to the latest date, I have the honor to state that the sub-divisional officer, though requested to submit his report on the sub-division three days before the dates on which the district reports are due, has not yet submitted his fortnightly report. I sent yesterday a reminder, but I fear the sub-divisional report will be too late to be sent up with this narrative.

3. I have to-day received, direct from Government, No. 1251—S.R., requiring a statement of charitable relief. I fear I cannot include a complete statement in the form required in this narrative, but, as directed at the close of the orders, I will send it up as a supplement.

A.—STATE OF THE COUNTRY.

Abundance or scarcity of supply in the bazar.

4. In thannah Balagurh there are hâts and bazars at Govindgunge, Somra, Bankipore, Gooptiparah, Seja, and Balagurh. In Bansbaria there are hâts at Bansbaria, Tribany, Mugrah, and Mahanad, of which Mugrah is a large and rising gunge, or wholesale market. In Chunditolah are Borye Hât, Sheakhala, Jonye, and other places. In Pundooah are Boinchee and Pundooah. In Krishtonagore bi-weekly hâts are held at Krishtonagore, Atpore, Kurkoori, Chejoori, Phoorfoora, Moondolika, Seetapore, and Rajbulhat; also daily hâts at Tora Atpore, Mathoorabati, Prasadpore, Goota, and Rusidpore. In Boidyabatty are Bhudresshur, Boidyabatty, Chatoogunge, Khulsinee, Singoor, and Boro. In Hurripal bi-weekly hâts are held at Dipa, Huripal, Dwarhata, Paharpore, Pyasara, Gobedanga, Koikola, Parara, and Pratiharpore. In Hooghly thannah are Rajhat, Malpara, and Oomarpore to the west of the railway. In Dhuniakhali are Khanpore, Gooroop, Bhastarah, Dhuniakhali, Mallikpore, Bhandarhati, Kalikapore, Sreekistopore, Shahbazar, and Jeara. At none of these is there any scarcity of supply except occasionally in Balagurh hât; but in reference to this the district superintendent remarks—"The alleged scarcity is not such as to cause any great inconvenience, as there is "plenty of rice at Govindgunge, half a mile off."

5. I give below the price at which grain is selling at the different marts in this district:—

Price-current of Food-grains.

8	Bhuddresshur - - -	13	12½	16	16	12	11½	13½	13	13	12½

NOTE.—It will be observed that the price of common rice has considerably decreased since the date of submission of the last fortnightly return. I believe that this diminution has been merely a reflection of the condition of the Calcutta market. Up to the middle of February prices had been slowly but steadily rising; they then received a check and began to fall. This fall of price is as beneficial as it was unexpected.

6. With regard to the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots, and others, I have the honor to state as follows:—

7. As before reported, there is but little grain stored in the hands of zemindars, traders, ryots, and others, but people have lately purchased and stored rice for consumption in future months to some extent. Baboo Juggdishur Bhattacherjee informs me that people have even pawned their jewels to purchase rice for storing in thannah Bansbarya, and the police reports from that thannah are to the effect that rice is being purchased from French Chandernagore, and stored.

8. In the town of Serampore it is said that 500 maunds of paddy and 800 maunds of rice are in the hands of mahajuns, and 1,730 maunds of paddy and 2,240 maunds of rice in the hands of retail dealers. In Bansbarya there is plenty of rice at Muggrah, on the Koontee river, and 5,000 maunds a week of imported rice sent up-country from this place. In Balagurh, Gobindgunge on the river, is a large storing-place for rice. In Chunditollah a zemindar has 1,595 maunds of rice. In Baidabatty there appears to be no stores of rice, as the shops are so easily supplied from Baidabatty hât, which again gets its stores rapidly renovated from French Chandernagore. The rice to be found in bazars in this part of the district is chiefly imported rice; but in Pundooah, parts of Balagurh, Dhanyakhally, the larger cultivators still send supplies of locally grown rice to the bazars. In Hurripal, two rich zemindars have respectively 5,000 and 7,000 maunds of rice, and one Ram Komul Mookerjee lately brought 400 maunds for sale at Hurripal. Many of the ryots here have a year's supply. In Pundooah the number of persons who have rice in store to last them till the next crop is estimated at one-third of the population. Generally, it may be said that whilst stores in the hands of traders are not large, there is no fear of scarcity of rice either locally grown or imported; rice is always to be obtained, and when one kind runs short the deficiency is supplied by the other.

9. Rainfall. *Nil.*

The principal crop on the ground is boro dhan and jola dhan; the former is to be found in the Chunditollah thannah, and the latter is grown on churs in the Hooghly. There are large quantities of boro dhan in Khanakul under the Magistrate of Howrah; onion and til is still growing; the sugar-cane is cut and sugar manufacture going on. Potatoes are also gathered; both these crops were fair. The kolye crop was a failure.

CONDITION OF THE PEOPLE.

10. In Bansbarya about 364 persons; in Serampore 473, of whom about 158 are professional beggars. In Balagurh about 100. In Chunditollah about 70, mostly professional beggars; in Pandooah five or six people in every village. In Krishtonagore 458 persons. In Baidabatty 30 or 35 persons, chiefly professional beggars; in Hurripal about 510 persons; in Hooghly (excluding municipality) about 200 persons, and in Dhanyakhally two or three persons in each village are stated to be suffering from want, and more or less in receipt of support from private charity or from the hands of the police or relief committees. During the fortnight the district superintendent of police visited Dhanyakhally, the Assistant Magistrate visited Balagurh. The sub-divisional officer of Serampore was in camp during the whole of the fortnight in thannahs

Hurripal and Chunditollah until the 5th, when at my request he came in to Serampore. On Sunday the 22nd ultimo, I inspected the district on the line from Hooghly, *viâ* Muggrah to Bhastarrah, passing through the middle of Bansbarya thannah and the north of Dhanyakhally and south of Pundooah. On Sunday the 28th, I went to Serampore, and from thence to Borra in the south-west of Baidyabatty thannah.

11. The following is the result of these inquiries.

12. In Balagurh there were on the 27th February about 2,000 persons, chiefly occupiers of land, ready to work on earth-works. For these I have, since that date, set on foot relief works.

13. In Pundooah there are numbers of villagers ready to work on relief works; this part of the district had been visited by me in the previous fortnight. I have ordered the necessary works. In Dhanyakhally I found the north-western portion in the same condition. The east and south are at present in a better condition, *i.e.*, villagers owning land are not ready or willing to work on roads. In Bansbarya all who want employment are employed. In Hooghly also the few who wanted employment are provided for. In the south-west of Hurripal and north of Khristonagore the people are ready to work, as also in the west of Baidyabatty and Chunditollah.

14. It appears to me whilst the Dhangars and other labouring classes, whether settled in Hooghly or merely annual visitors, are, as a rule, obtaining subsistence by labour on the numerous private works of which I submit returns below, as well as regular Government works, and works executed on Government loans, and only a few stragglers require to be provided for, as they are thrown out of work by completion of some tank or road; that in certain parts of the district the smaller cultivators, though they have not consumed their stores of grain, are becoming anxious to save enough to carry them through the aus planting season, and are consequently ready to work on relief works for the next six weeks.

15. After the aus is sown I think they will again come for labour.

16. The infirms are a somewhat numerous class in this district owing to the effects of fever. These with widows, &c. are being thrown somewhat in larger numbers than usual on local charity; until relief committees can be established all over the district, I depend for the relief of these on a few relief committees established in the worst places and on the police. All post-masters have promised to relieve urgent cases subject to a promise of refund from me. The cases are scattered through all the villages, and are not as yet at all beyond the capabilities of private charity. In the course of the next fortnight arrangements will, I believe, be completed for the inspection and relief of the poor in every village.

17. A considerable number of people are always travelling on the old Benares and Grand Trunk Road; some of these are men who have come down for work and have failed to obtain it, or have fallen sick and become destitute. There is already one serai where rice is distributed by Baboo Behary Laul Mookerjee at Boinchee. I have ordered two more on the Grand Trunk Road, one at Serampore, and two on the old Benares Road.

18. One case of a person found in a destitute condition, of the classes of travellers mentioned in the last paragraph, occurred in the fortnight; the man was sent into the hospital at Hooghly, he was very weak from starvation; he was returning from Calcutta.

19. One case of grain-theft by a woman also occurred which the trying officer attributed to destitution; she is in jail; orders have been given to look after her mother who is destitute.

20. As regards the condition of the people the following police report is apposite:—" The " attendance of chowkidars is very irregular at this thannah (Chunditolla); they get no pay, " and those that have chakeran lands have received but small yield this year, and they care " nothing about their appointments; they come to the outpost and beg the head constable to " accept their resignation."

B.—Relief Works.

21. The following works are in progress in Hooghly, excluding Howrah:—

Thannahs Balagurh and Pandooah.

Name of Road.	Number of Coolies.	Supply of Food.	Condition of Labourers.	Mode of Payment and Rate of Wages.	Arrangement of Tools.	REMARKS.
Pandooah to Culna Road	240 men, women, and children.	Purchase in bazar when any difficulty is experienced with contractor's supplies.	Good	3 to 4 annas per 100 cubic feet, 2 annas khorakee given daily; some get 3 annas 3 pie daily wages; masons get Rs. 10 to 13 monthly.	Some supplied by contractors, some by workmen, some from store.	Chiefly local; more coolies to be had from the villages.
Tribuny to Gooptiparah Road	150 ditto	Ditto ditto	Ditto	Ditto ditto	Ditto ditto	Ditto ditto ditto road nearly finished.
Inchora to Balagurh	5	From Balagurh Bazar	Ditto	Ditto ditto	Ditto ditto	10 per cent. of the villages want labour.
Inchora to Dwarpara	5	From Inchura rice now can be got; see note.*	Ditto	Ditto ditto	Contractor supplies	Ditto ditto ditto.
Koolupara to Nischindpore	40	Rice from Inchura or Balagurh	Ditto	Ditto ditto	Ditto ditto	This work taken up on 23rd to give labour. All the workmen are villagers, and numbers increasing daily; 200 men are now employed.
Dukchara to Balagurh	30	Rice from Balagurh	Ditto	Ditto ditto	Ditto ditto	Commenced as a relief work on the 23rd; all local labour; numbers increasing daily.
Sookiya to Digra	30	Ditto	Ditto	Ditto ditto	Ditto ditto	All local; 10 per cent. of the villagers in all the villages round reported in want of work.
Boinchee Station to Bazar	15	Rice from Boinchee Bazar	Ditto	Ditto ditto	Ditto ditto	Ditto.

* NOTE.—To supply the want of labour, the Kooluparah, Nischindpore, and Balagurh to Dukchara roads were commenced on the 23rd; the numbers of coolies on them increasing daily since the date of this report. Baboo Beharylall Mookerjee, Road Cess Commissioner, has also taken up two roads, Tinna to Boinchee, and Boinchee to Bhapore, but no return of labourers has been received; the orders were sent him on the 6th instant. Orders issue to-day to take up the Moolyie and Jamgram road. These works will give sufficient employment for the present if pushed on vigorously. There are one or two more small roads and some works in the unions. The latter have been estimated for, and will be at once commenced. After that I must take up the Bogakhall.

Bansbarya.

Name of Road.	No. of Coolies.	Supply of Food.	Condition of Labourers.	Mode of Payment and Rate of work.	Arrangement for Tools.	Remarks.
Shahgunge to Tribeny	12	Rice from bazar	Good	3 to 4 annas per 100 cubic feet, 2 annas khorakee given daily; some get 3 annas 3 pie daily wages; masons get Rs. 10 to 13 monthly.	Some supplied by contractors, some by workmen, some from store.	Local.
Muggrah to Tribeny	18	Ditto ditto	Ditto	Ditto	Ditto	Bancoora coolies at Muggrah employed.
Grand Trunk Road. In Hooghly, Bansbarya, and Pandooah.	25	Rice from Pandooah, Muggrah, &c.	Ditto	Ditto	Ditto	All local laborers available in Pandooah.
Dhanyakhalee.						
Dhanyakhalee road	242	Ditto	Ditto	Ditto	Ditto	Mostly from Bankoora and Burdwan; 25 villagers; local villagers will not as yet condescend to work on roads here.
Bhastara to Boinchee	20	Ditto	Ditto	Ditto	Ditto	*10 per cent. of villagers available.
Muggrah to Bhastara	100	Ditto	Ditto	Ditto	Ditto	On Muggrah side, village labor not available; towards Bhastara all village labor, mostly holders of lands; many were ready to work. I visited the roads marked* on the Sunday the 21st instant. I have ordered repairs of Bhastara to Gooroop, and Bhastera to Dhanyakhalee roads; also of Mahanad to Gopeenathpore road to give labour. Baboo Juggeshur Singh, Road Cess Commissioner of Bhastara, and Reverend Juggodish Chunder Bhattacharjee, are superintending. No returns yet received; instructions and money sent on the 5th.
Serampore.						
Branch Grand Trunk Road	15	Ditto	Reported bad*	Ditto	Ditto	No local coolies available.
Bydebatty Stand Road	10	Ditto	Ditto	Ditto	-	Ditto ditto.
Chandernagore to Bhola	74	Ditto	Ditto	Ditto	-	Mostly local, villagers not willing to work on the road.
Bydebatty feeder road	35	Ditto	Ditto	Ditto	-	All brick-making; mostly by local labor.
Sheakhalla road	25	Ditto	Ditto	Ditto	-	All west-country coolies, many local village laborers to be had, but contractor cannot give them work.
Chunditolla	43	Ditto	Ditto	Ditto	-	Half local, half west-country labor; work nearly complete.
Connagore to Jonye	39	Ditto	Ditto	Ditto	-	Ditto Ditto.
Old Benares road	48	Ditto	Ditto	Ditto	-	Local laborers not willing to work on the road.
Tarkesshur road	24	Ditto	Ditto	Ditto	-	Local and foreign coolies; villagers not willing to work.

---

* This is the overseer's remark. I inspected one of these roads, the Sheakhallah road on Sunday last; the coolies were in perfectly good condition. The remark is nonsense. He reported no local labor available on this and the other roads, but I found large numbers of local laborers, small cultivators &c., willing to work around Jonye, Singoor and Bora in Chunditolla and Baidabatty. I have therefore ordered the Jonye and Bora road to be commenced at once. Baboo Anerup Mookerjee zemindar, will superintend. Arrangements are being made for successively taking up three more roads about here.

Name of Road.	Number of Coolies.	Supply of food.	Condition of Labourers.	Mode of payment and rate of work.	REMARKS.
Howrah.					
Benares road	92	Rice from Pandooah, Muggrah, &c.	Good	3 to 4 annas per 100 cubic feet, 2 annas khorakee given daily; some get 3 annas 3 pie daily wages; masons get Rs. 10 to 13 monthly.	Remarks as to whether local or not, not given.
Domjoor road	250	Ditto	Ditto	Ditto	
Makorda road	13	Ditto	Ditto	Ditto	
Branch Grand Trunk road	32	Ditto	Ditto	Ditto	
*Mohesh**raka** sub-division.*					
Ampta road	20	Ditto	Ditto	Ditto	Local.
Road	41	Ditto	Ditto	Ditto	33 Local.
Juggutbullubpore road	50	Ditto	Ditto	Ditto	Local.
Andool road	10	Ditto	Ditto	Ditto	Ditto.

The works newly ordered as relief works have been mentioned in the foot notes. I have not received any returns of labourers employed, though a return is due in regard to the Bhastara Gooroop; and Bhastara Dhanyakhalee roads from the zemindar; he has, however, informed me that he is pushing on the works.

The following statement shows the amount of labour entertained in the district by private individuals without assistance from Government; every kind of labour is herein included. This is not required by the orders, but I have the information, and it is, I think, useful.

THANNAH.	Work.	Number of Labourers at end of last fortnight.	Present number of Labourers.
Bansbarya	12 tanks and sand-pits	393	370
Serampore	17 ditto and brick-making	1,525	1,036
Balagurh	8 ditto	397	268
Chunditolla	17 ditto	751	1,119
Pandooah	8 ditto	645	645
Connagore	5 ditto	147	117
Baidabatty	16 ditto	544	964
Hurripal	5 ditto	40	371
Hooghly	3 ditto	27	27

22. In Hooghly and Chinsurah municipality, twenty-two tanks are being re-dug, under the provisions of the Municipal Act, at the expense of the owners; of these, five are almost completed, six are half done, two three fourth's done, two one-fourth done and seven begun; employment is given to 381 labourers paid at the ordinary market rate, or 12 pice daily. The coolies are paid in money.

23. In Serampore municipality, 108 labourers are employed in excavating four tanks after issue of notice on the owners.

24. The following works are in progress under the Executive Engineer, Northern Drainage and Embankment division.

25. The number of coolies at work on the embankment across the mouth of the Kana nuddee is 125; their condition is good; rice and vegetables can be easily obtained.

26. A channel for leading the water from the Kana nuddee at Gopalnagore, to the Sorrussutty at its crossing of the Baidabatty and Hurripal road is also laid out, and work has already been commenced upon it. Some of the landholders will give the land gratis, others demand compensation.

27. 5,300 maunds of rice, 2,200 of paddy, 73 maunds of dâl, and 35 maunds of gram are reported as imported into Serampore thannah during the fortnight. 2,000 maunds of rice and 150 maunds of dâl, are reported as imported into thannah Balagurh; 9,319 maunds of rice, paddy and kolye, are reported as imported into Chunditollah; 500 maunds of grain into Kristonagore; 1,700 maunds of rice and 800 of other grains into Baidabatty; 2,000 maunds of rice and 200 of dâl into Hurripal, figures for other thânnahs are not received, but in Dhanyakhalee, importations were made from Roynah; means of transport are sufficient for the present, but are being improved before the rains; the worst parts of all the principal roads are being metalled. Nothing further need be said under this head.

E.—ADVANCES TO PRIVATE PARTIES.

28. Rs. 5,000 more have been advanced during the fortnight to Baboo Joykissen Mookerjee for digging five tanks in several villages in the jurisdiction of thannah Dhunyakhalee; Rs. 400

to Peary Mohun Banerjee, Radhica Mohun Banerjee, and Kisna Mohun Banerjee for re-digging a tank in village Borizhatee, thanah Chunditolla; and Rs. 240 to Jebunkristo Bose for re-digging a tank at village Molhi, thannah Pandooah; and Rs. 18,000 to Baboo Joykissen Mookerjee for purchasing rice under special orders of Government. Rs. 240 were advanced to-day to Baboo Rajkisto Mookerjee and Behary Lall Mookerjee for a tank in the village of Beloor, thannah Balagurh, and orders have been issued to submit weekly statements of progress made in the tank works.

F.—Charitable Relief.

29. A Hooghly district committee was formed on the 20th February, and since then 56 sub-committees have been formed, *i.e.*, the members have given consent and been appointed. The whole district has been mapped out into sections, thannah by thannah, and the committee for each section will soon be appointed. Five of these sub-committees have applied for and received funds and commenced work. From their returns it appears that 29 men, 74 women, and 30 children are in receipt of relief; of these 17 men, 68 women, and 30 children receive gratuitous relief, the rest labor at their own homes. There are no returns of people relieved by the police. I have ordered their submission at once and regularly in future.

No. 298 T, dated Camp Khamarberriah, the 8th March 1874.

From W. R. Larminie, Esq., Officiating Magistrate of Bancoorah, to the Commissioner for the Division of Burdwan.

I have the honor to submit my fortnightly report on the state of the district of Bankoorah for the fortnight ending 8th March 1874.

State of the Country.

2. There is still sufficient rice to be had in the bazars and prices have fallen a little coarse rice selling at 14 seers 8 chittacks per rupee; ordinary at 13 seers 12 chittacks, and the best sort at 12 seers 8 chittacks; *dâl* is selling at 12 seers 8 chittacks. Prices are now very much the same all over the district, and the slight fall is, I think, due to the fact that exportation to Raneegunge has greatly diminished within the last few days.

3. I have now visited every part of the district, and am, as far as one can venture to be on such a point, satisfied that there is a good deal of rice stocked with some of the chief *mahajuns*, but many of these at present refuse to sell at any price. I have heard some bitter complaints on this score, and it is difficult to persuade people that the course pursued by the mahajuns is for their ultimate benefit. It is unfortunate that there are so few men of capital in Moheshra pergunnah.

4. There is no observable change in the condition of the people since last report. They have been much occupied in manufacturing sugar from the crop that is being cut, and preliminary ploughings have been finished, or nearly so. The rubbee crops are approaching maturity, and are generally doing well. The mango trees have blossomed most luxuriantly and the fruit is beginning to set. There was a little rain during the fortnight, but it did neither good nor harm. No cases of misery or starvation have been brought to notice, nor have there been any serious grain thefts.

Relief Works.

5. The works mentioned in my last report are still in progress, and the other roads of the district are being repaired. The total number of men, women, and children daily employed is about 2,000. Of this number, more than 800 are employed on the Saltora and Gangajalghate road, and from the demand for labor in that part of the country, it is evident that it will be absolutely necessary to take in hand the road from Moraloo to Mejea. Rates of wages are not higher than ordinary, being from three to four pice per diem for children, four to five pice for women, and seven pice for men. This seems very low, but labor has always been cheap in this district. Tools are procurable in the bazar to an almost unlimited extent.

Advances to Private Parties.

6. The number of applications for tuccavi advances up to date is 298; of these it has been impossible to dispose of 154 because the month required by law for giving notice to zemindars, &c. has not yet expired. Of the remaining 144, seven are pending from special causes for which the applicants are responsible, 97 have been disposed of, and the remainder are under inquiry by the two sub-deputy collectors and two canoongoes. Since the date of last report you will see that no less than 44 cases have been disposed of, being an average of three per diem. I trust this will be considered satisfactory progress. The total amount up to date would have been greater, were it not, as I have already observed, for the necessity of giving a month's notice in almost every case. The total amount applied for is Rs. 92,432; applications for sums amounting to Rs. 14,406 have been refused, and to Rs. 21,917 allowed. I have thus only about Rs. 18,000 remaining at my disposal.

Charitable Relief.

7. I annex a statement showing progress made under this head. But little relief is yet required.

STATEMENT OF CHARITABLE RELIEF.

1. One Committee and 11 Sub-committees.
2. None.
3. None.
4. None.
5. None.
6. Returns not received.

No. 237, dated Burdwan, the 12th March 1874.

From C. T. BUCKLAND, Esq., Commissioner of the Burdwan Division, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

In continuation of my No. 233 of yesterday I have the honor to submit, in original, the fortnightly narrative dated 9th March, submitted by the Collector of Midnapore.

2. The Collector mentions that he has made a short tour in thanahs Chunderkona and Ghatal, according to my instructions, but he has omitted to give any account of the condition of the people there; nor does it appear in the proceedings of the Committee to which the Collector refers, except that provision is to be made to supply some of the weavers with work.

3. The price of rice has fallen considerably, and grain is reported to be abundant in the bazars.

4. In paragraph 7 the Collector states that he heard at Ghatal "of one women who died, in a great measure, from starvation; it was, however, a case that might have occurred any year." A special report will be called for on the particulars of the case, which is much to be regretted, considering the great anxiety manifested by Mr. Harrison to avert any such catastrophe.

5. The number of persons engaged on relief works throughout the whole district appears to be 2,550, but on some of the roads the numbers are only estimated, and there seems to be demand generally for relief work on the terms offered by the Collector.

6. No applications have been yet received from the Collector for advances under Act XXVI. of 1871. He was directed to send in each application separately in the form prescribed by the rules.

7. A charitable relief meeting was held on the 7th instant. A separate report of the proceedings is being submitted.

8. The sub-divisional narratives from Contai, Tumlook, and Ghurbetta contain no information of special interest. In Tumlook the Deputy Collector writes thus:—

"The Sub-Inspector of Kasijora states that from want of sufficient food the people are getting thin and pale. He does not say where this has happened, and I am calling for a detailed report, as to the locality, the resources of the men, and whether the mulberry land, teel, mug, and boro crops are not likely to be of use to them."

9. In Ghurbetta the Deputy Magistrate writes:—"No case of actual misery and starvation " has come to notice, although there can be little doubt that the lower orders have already " commenced to stint themselves in their meals. Grain thefts are occurring, although just now " only a few cases are reported. I am afraid all the cases do not come to notice."

No. 531, dated Midnapore, the 9th March 1874.

From H. L. HARRISON, Esq., Collector of Midnapore, to the COMMISSIONER of REVENUE, Burdwan Division.

In reply to your Circular No. 209 of the 3rd instant, I have the honor to submit the fortnightly narrative for the period ending 7th March.

2. I have also the honor to enclose the narratives in original received from the sub-divisional officers. All these narratives are carried up to the 4th March.

3. Since the last report I have made a short tour in the thanahs of Chunderkona and Ghatal, under your instructions, where I met, according to arrangement, the sub-divisional officer. Immediately on my return I called a meeting to arrange for the formation of a relief committee. A full report of the proceedings of the committee and of those of the executive committee the following day has been forwarded to you by to-day's post under the signature of the Secretary to the Committee. This report contains so complete an account of the intended action of the committee, and its views are so entirely in accord with my own, that a brief report will, I hope, suffice as a supplement to it.

A.

4. Grain is abundant in the bazars. The proximity of the March kist forces it into the market with the usual result of a marked decline in prices. Common rice, which was for a long time obtainable at only 16 seers to the rupee and touched as high as 14 for a few days, is now easily procurable at 18. A similar fall in price has occurred over the whole district, except in the jungle mehals, where the price has remained almost stationary.

5. According to the latest returns the prevailing prices in these tracts were:—

	Price per rupee.	Amount brought to hât: maunds.
Bheempore.		
	Seers.	
Daleegoree hât	16	20
Sildah do.	18	9
Ramghur do.	18	5
Jhargram Thanah.		
Ghutea hât	20	5
Jhargram do.	18	3
Jambonee do.	18	supply plentiful.
Gopeebulludpore.		
Gopeebulludpore hât	20	not reported.

6. Through the supply at Jhargram is so small, I have been assured from independent sources that rice is still freely procurable at 18 seers per rupee.

7. There has been a seasonable and useful rain-fall during the last 3 days. No known cases of starvation, though I heard at Ghatal of one woman who died, in great measure, from starvation; it was however, a case that might have occurred any year.

B.

8. There has been a great influx of labor at subsistence rates during the past fortnight.

9. The works open are as follows:—

Thanah Jhargram.—Rate 6 pice per diem for men.

Jambonee estate.—About 100 workmen are engaged every day on petty works at Jambonee. Mr. Ap. John's estimates are just ready for larger works; they have been somewhat delayed, and meanwhile most of the petty works are approaching completion.

Bombay Road.—Four gangs at work; average daily attendance 200. The local report is—"people are willing to work at the rates proposed (6 pice) if they are employed near their homes."

Thannah Sheenpore.—Rate, 6 pice.

Pooreebatee Road.—About 150 coolies engaged in 3 or 4 places.

Bheenpore Road.—Heavy works on this road; estimated daily laborers, 500.

Dabijuri Road.— Ditto. ditto. estimated ditto. 700.

New Roads.	Beenpore to Silldah	Works have been commenced on each of these roads, one gang being formed on each road, averaging 50 to 70 laborers.
	Beenpore to Ramghur	
	Ramghur to Dabijuri, *via* Lallghur	

The local report is—"people can be obtained in abundance at subsistence rates."

Midnapore Town.—Rate 8 pice; scarcely 50 labourers can be obtained for the Municipal special works,—the high prices paid by the Public Works Department draw them away.

Keshpore Thanah.—7 pice.

Burdwan Road.—300 coolies engaged in four gangs; number increasing daily. A new road, Keshpore to Narajole, is under consideration to meet the want. I have visited all these gangs; they prefer to work in the neighbourhood of their homes at 7 pice, to going away for 9 and 10 pice.

The local report is—"laborers freely offer their services at the proposed rates for work near their houses. The people also of Kewapore and the neighbourhood offer their services freely for employment at subsistence rates near their houses. Distress is imminent in these villages, and relief works will probably be much resorted to."

Town Chundercona is close to these villages, and you have been asked in the budget estimates of the town to sanction Rs. 2,000 for road works. These works, if sanctioned, will be available for the relief of this distress.

Thanna Ghattal.—Rate 7 pice.

Ghattal and Chunderkona Road.—Heavy earth and brick-works under District-Engineer going on on this road. 400 coolies employed; double the number could be taken on if they presented themselves. They are *not* paid by daily rates, but by contract and earn 9 to 10 pice.

Local report—"Some people are willing to work on the terms offered, but not many."

Dasspore.—Rate 7 pice.

Local report—"No demand for employment at subsistence rates."

In Ghatal and Dasspore embankment works are proceeding, and the supply of labour exceeds the demand. An excellent silk bund is just reaching maturity, and a crop of boro dhan, always a large crop, and sown this year over double the usual area, is ripening. If these turn out as well as is now expected (and the weather is all in their favour) there will be an end of all apprehension of distress in these thanahs, except among certain limited classes and in isolated cases.

I am in hopes that the same may be said of Kassijora (*vide* Tumlook report) the state of which will be carefully watched. All the above laborers paid daily, partly supplied by us with tools, partly they supply their own.

It is proposed to allow *laborers* to buy rice at 4 pice the seer at the rate of a seer a day as soon as the bazar rate exceeds that amount.

C.

10. Nothing of any importance under this head except the remark of the sub-divisional officer of Gharbetta regarding the masonry parapets of the bridges. This is contrary to the information I have received, and as Mr. Stevenson was in the station yesterday and returned to Gharbetta this morning, I have asked him kindly to examine all bridges showing signs of wear and tear and let me know the result. The road is a provincial one, repaired by the Executive Engineer.

D.

11. Government grain is stored nowhere except for the use of the Central and District Jails.

12. The Jambonee estate is gradually purchasing and storing rice. A golah has been constructed, and small quantities are also stored at out factories. Total amount purchased up to date, 461 maunds.

13. The Relief Committee have authorised the purchase of 5,000 maunds while prices are so easy. About 250 maunds had been purchased up to Saturday night. Places of storage in the mofussil will be finally selected at next weekly meeting. Purchases are being made in the town, where rice is plentiful and cheap.

E.

14. You have announced your intention of making all advances for land improvements yourself. The list drawn up in the manner prescribed by you is under preparation, and will be submitted immediately.

F.

15. (1) A District Committee was organized on the 6th instant, and the Executive Committee under it held their first meeting on the 7th. The formation of 4 Sub-Committees was resolved upon and they will be at once formed.

Vide Government letter, No. 1251—S.R., of 1st March.

16. (2) to (6) at present blank.

RESOLUTION.

Scarcity and Relief Department.

Calcutta, the 14*th March* 1874.

Read—

The fortnightly narratives of Hooghly, Burdwan, Beerbhoom and Bankhoorah, for the period ending Saturday 7th March; also the Commissioner's review of the same.

1. *Prices.*—The fortnight witnessed a fall in prices over nearly the whole of the division. The Hooghly Collector observes that up to the middle of February, prices had been slowly, but steadily rising; that they then received a check and began to fall, a change as beneficial as it had been unexpected. Considering the advance of the season, the ease in prices is decidedly gratifying. The following quotations are noted—

	On 31st January.	On 14th February.	On 28th February.	On 7th March.
	Seers.	Seers.	Seers.	Seers.
Burdwan - - -	14	13	13½	14
Beerbhoom - -	12⅜	12	12½	12¾
Hooghly - - -	11 to 12	10 to 10½	11½ to 12½	11½ to 12½

Rice is reported to be procurable readily in all the marts, but in Beerbhoom there is said to be some difficulty in procuring supplies at the smaller villages.

2. *Condition of the population.*—Notwithstanding the ease in prices, it is evident that high rates have been telling on the poorer classes. In the Sudder sub-division of Burdwan, it is stated that the lower classes are obliged to stint themselves in consequence of high prices. At Raneegunge it is stated that Europeans are become more hopeful, whereas natives take a more gloomy view of the situation. In Hooghly it is observed, that what with the fever and the high prices, infirm people and widows are coming on local charity in greater numbers. Happily there has been no serious increase of crime noted in the division. With the exception of one or two cases of destitute travellers on the Grand Trunk Road, there is no case of extreme misery. The assurances, repeated in several of the district narratives, that there has been no death by starvation is satisfactory.

3. *Employment.*—The Collectors of Burdwan and Hooghly have omitted to render totals for the number of persons on relief works, an omission which must be avoided in future. About 9,000 persons are returned as having been working on the various road works in the division, but the returns are evidently imperfect. In some parts of Hooghly, the smaller cultivators, though they have not consumed their stores of grain, are resorting to the relief works until the aus seed time. As a rule, however, cultivating occupants of land have not been figuring much among the labourers in the division.

4. *Charitable Relief.*—It is noted that Rs. 12,653 has been subscribed in the Beerbhoom district, and Rs. 7,655 in the Burdwan district, exclusive, it would appear, of the Government equivalent. The returns for other districts are imperfect or omitted. These are exclusive of His Highness the Maharajah's organisation for employment and for charitable relief, which evidently continues to be well managed. If the accounts of Cutwa are correct, relief centres as well as additional relief works must be required there. The Commissioner's attention has been specially drawn by the Lieutenant-Governor to the need for providing work and relief for pauper immigrants into Howrah, Serampore, and other towns on the banks of the Hooghly. It is observed that some of the weaver class in Bood Bood are being provided with employment through advances repayable in cloth. In connection with this subject, attention is called to the recent resolution of Government recommending encouragement to weavers in changing from cloth-work to gunny-work. The Burdwan Collector speaks of an indent for 4,000 maunds for some relief centres, but it is not stated whether the rice has been bought. In districts where there are no Government stores, Committee must buy what they require or must ask the Central Committee to buy for them.

Exclusive of the weaver-class above referred to, the numbers reported to be in receipt of charitable relief during the fortnight were—

Hooghly Committee - - - - - - -	133
Burdwan „ - - - - - - -	115
Total - -	248
Add in receipt of charitable relief at the Maharajah's poor-house -	1,000
Total - -	1,248

5. *Advances to private parties.*—The following progress up to date in sanctions, is reported in the narratives. On this, as on some other points, the Hooghly narrative is imperfect.

	Rs.
Burdwan - - - - - - - - -	14,650
Bankoora - - - - - - - -	21,917
Beerbhoom - - - - - - - -	33,910
Hooghly - - - - - - -	Not reported.
Total - -	70,477

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 1,476—S.R.

Copy of this resolution, together with a set of printed copies of the district and divisional narratives, forwarded to the Commissioner, with the request that he will call attention to the imperfect character of some of the narratives. With regard to the opening paragraph of the Commissioner's review, it is observed that the fortnightly narratives of the districts ought to be despatched on every alternate.

Calcutta, the 14th March 1874.

RESOLUTION.

Scarcity and Relief.

Calcutta, the 10*th March* 1874.

The Lieutenant-Governor fears that during the present scarcity the condition of the cotton-weavers may require to be watched carefully in certain parts of the country, such as Bood-Bood and Jehanabad in the Burdwan division. Unfortunately this industry is so much on the decline, that it becomes a more and more difficult matter to help them effectually at their old craft, and especially so during the present depression of the market for piece-goods, whether indigenous or imported. The same remark applies to the subsidiary employments connected with cotton, such as spinning and colour-dyeing.

2. The case is quite otherwise with the manufacture of jute stuff, whether for gunny sacking, for sail-cloth, or, as in certain parts of North-Eastern Bengal, for clothing. The manufacture is

of old standing and yet is a rising one. The subsidiary forms of manufacture, *e.g.*, for cordage, &c., also find a ready and increasing sale. The production of the raw staple, even allowing for all fluctuations, is on an assured footing. Though power-looms are increasing, still the field for hand-looms is none the less wide. It takes a long time for power-looms to supersede the humbler hand-loom industry; even in Lancashire the hand-looms have hardly yet been completely superseded. Lastly, the staple is grown near at hand, and by a population already in close commercial connection with the districts where the weaver-class may be in difficulties.

3. Under these circumstances, the Lieutenant-Governor thinks that where the weaver-class may need relief, they might, with great advantage to themselves, be encouraged to change their looms, so as to suit the more gainful, the more hopeful, and the more easy manufacture. He wishes that local committees and officers having to administer relief should give their best attention to the subject. Sir George Campbell has not overlooked the reluctance to change or adapt tools and processes; but he thinks that with considerate treatment the change may be managed in many cases, and he is assured that in all such cases it will be beneficial. Where charitable relief in the way of subsidiary employment has to be given to the weaver-class, it might in many cases be usefully given in the shape of advances, repayable in gunny bags. At first, also, advances might be made to provide the apparatus for jute weaving (it is very simple and cheap), and to obtain instruction in the new process.

The Lieutenant-Governor of course does not wish advances to be made merely to obtain this change, however desirable. Still less would he wish charitable relief for weavers to be given exclusively in this form. What he wishes is, that where weavers can be persuaded to try the change, the relief should take this form, but not so as to cease being relief.

4. In any case, the relief measures to be provided for this class of the population ought to receive timely consideration on the part of the local officers. It will not do to wait, as at Jehanabad in 1866, till the weaver class migrate wholesale.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 1496 S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL in the Statistical Department, to the COMMISSIONER of the PRESIDENCY DIVISION.

Scarcity and Relief.

SIR, Calcutta, the 16th March 1874.

I AM directed to acknowledge the receipt of your letter No. 30—M.A., dated the 11th March 1874, and in reply to inform you that the Lieutenant-Governor approves of the orders you have issued for providing against any outbreak of distress in the 24-Pergunnahs.

2. The Lieutenant-Governor fears that a considerable influx of persons in search of work may be expected in Calcutta, the Suburbs, Howrah, Serampore, and some of the larger towns on the Hooghly. I am accordingly to request that you will be good enough at once to settle with the Calcutta and suburban Municipalities, and the District Road Committee for the commencement of works sufficiently near and accessible, at which such persons might get employment directly they come. You should communicate with the Commissioner of Police, Calcutta, and inform him where such works are to be found, so that the police may be able to tell work-people where to go. You should also arrange through municipal or other agency for providing relief-houses to receive such people, in case they come, or become after arrival unfit to support themselves. The Central Committee, if applied to, would probably make a grant-in-aid of any such relief-houses.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Enclosure No 12.

No. 297½T, dated Camp Gumla, the 3rd March 1874.

From COLONEL E. T. DALTON, C.S.I., Commissioner of Chota Nagpore, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

My last report on scarcity and relief was despatched from Bisrampore, a place in the centre of Sergoojah, on the 18th ultimo. In a postcript, I mentioned that at a meeting held that day, the gentlemen of Sergoojah had not only all given assurances that the poor of their own estates should not be in want, but made a liberal contribution to the general relief fund. The Sergooja subscriptions amounted to Rs. 2,013, and those subsequently obtained in Jashpur to Rs. 687. I afterwards passed through the southern part of Sergooja accompanied by the manager and several zemindars; the tuppehs I traversed, appeared all fairly well off, except one, Mudgoori; there the harvest had yielded not more than one-third of an average crop. It was arranged that some reservoirs should be constructed which were much wanted and which the people greatly desired to have made, to give employment to the poor classes and improve their cultivation, and the money or its equivalent in rice to be advanced from the assets of the estate, and the Rajah promised to supply as much rice as was required from a bhandar of his in the neighbourhood.

2. On taking leave of the Sergooja Sirdars, they all solemnly assured me again that they would act up to their promises, and I need be under no apprehension in regard to their people.

3. I passed through Burway, a pergunnah of the Loharduggah district, and joined by the Rajah of Jashpur and his *suite*, entered the Jashpur territory. Of this I have little to say. It was evident that there was plenty of food in the land and that the people were in a high state of prosperity. They had reaped a crop which, if not a full average, was sufficient to leave them a surplus to dispose of, and they had not far to go for a good market; the traders were at their door.

4. I am now writing from a noted mart in the Lohardugga district and the weekly market is being held this day; I was told it would not be so full as usual as it was the great festival of the "Hooli." Nevertheless there are many thousands of people who have brought their own produce to market, chiefly rice, and it is being rapidly bought up by traders, mostly from Palamow at a little over 18 seers for the rupee. I questioned the sellers as to their stock, and they all replied that they had plenty left for the support of themselves and their families, and had not the remotest intention of disposing of more than they could afford to sell without pinching themselves. This was cheering, as I know that Palamow and Hazareebaugh are depending greatly on the Lohardugga supplies. The state of the rice market in Burway was not so flourishing. The people there declared that they had not harvested more than an eight to a ten-anna crop, but they had enough to eat, and apparently something over, as they readily sold to the camp at 18 seers. In Mudgoori in Sergooja, the price at which common rice was sold to the camp was 16 seers, in Jashpur 22½; an anna a seer in Sergooja is quite prohibitive, 22 seers for Jashpur and 18 seers for Gumla is about equivalent to traders considering the extra cost of carriage from Jashpur.

5. I have very little to add to the information already in the hands of Government regarding the districts.

6. *Hazareebaugh.*—In Hazareebaugh, the Deputy Commissioner has opened out works in the western portion of his district, the only part of his jurisdiction which, in regard to food-supply, appeared to him in a precarious state. He has expressed confidence that if we can only supply employment to a sufficient extent there will always be food sufficient to supply the laborers. He has obtained a promise from the zemindar of Koondah to import and store a small quantity of rice, but I have requested him to take further action in this direction. There should certainly be a good reserve in that part of his district, and unless he can feel confidence in the Chattra merchants having such a reserve, other measures should be taken to provide it. I would suggest that a grant for making advances for the purchase of grain be made to Hazareebaugh to the extent of half a lakh, and that the provisions of circular No. 175—S.R. of the 17th January, be extended to the district. I am not so confident as Mr. Beadon is, that the importation now going on from the southern districts to Chattra will continue through the rains without check.

7. I am glad to find that the managers of the Dhamvar and Gowan estates have a considerable store of rice in their bhandars aggregating more than 30,000 maunds. This will be a great help to the people employed on relief works in Kharakdiha.

8. *Lohardugga.*—In the Lohardugga district I have only Palamow to notice. The people have shown a disposition to flock to the works for assistance sooner, and for this time of the year, in greater numbers than I had anticipated. The number employed, 6,219, appears to have already exceeded the maximum of 1869. We have, I believe, work enough, and all useful work, ready, but the great desideratum is supervising establishment. It is impossible for Mr. Forbes without further assistance to superintend all that has been projected. This has lately been brought to the notice of Government in my letter No. 258T of the 27th ultimo. My arrangements, which Government approved, contemplated the transfer of Mr. Supervisor Brooke to Palamow, but on Mr. Oliphant's protest this is deferred. In regard to the supply of rice, I have recently seen so many proofs of the activity of the Palamow importers, that I feel pretty confident in the sufficiency of the measures adopted and sanctioned in Government orders No. 534—S.R. of the 7th ultimo.

9. Mr. Webster, manager of the Chota Nagpore estate, has been projecting some small irrigation works in pergunnah Toree of that zemindari; I have had no details as yet. It is on the same level and under the same climatic influences as Palamow, and, as represented in my letter No. 49T of the 16th January last, paragraph 5, it behoves the Court of Wards to assist any sufferers there. The Deputy Commissioner has, I notice, made provision for works to relieve the people in a portion of the Tamar pergunnah. A few hill-locked villages were reported to be in some distress, and all that is required, has, I think been done.

10. *Singbhoom.*—As the Deputy Commissioner of Singbhoom can only take account of work done, it is not very easy for him to give any definite notion of the number of people he has in employ, but the number must be considerable, and he is himself indefatigable in his movements, endeavouring to give as much supervision to cart-road, or reservoir, as it is possible for one man to give. He has not applied for assistance, but he certainly requires it. From his last letter to me, I fear there is a prospect of relief being required in Boharagra, a portion of the Dhalbhoom estate, adjoining or rather abutting into Midnapore, and therefore likely to be subjected to all difficulties which have been felt in that district. Whatever may be necessary in the way of relief the Court of Wards have the means of affording.

11. *Maunbhoom.*—For the Maunbhoom district I have nothing to add to the last half monthly report of the Deputy Commissioner, dated the 23rd ultimo. I have no later information, but I hardly think Colonel Rowlatt will obtain the rice we have consid[illegible] it necessary that he should have in reserve by advances to zemindars. The Paudra R[illegible]ly influential person who

has evinced any disposition to take an advance, and the money she takes would suffice for little more than 2,000 maunds. I have just received a petition from Paudra, purporting to have been sent by a number of ryots who call themselves people of the respectable non-working classes, asking for advances to supply themselves. It would be consonant with the policy enunciated in the Government order No. 703—S.R. of the 16th ultimo, to comply with this, and I have sent the petition to Colonel Rowlatt to enquire into, and where expedient, act on the resolution and orders referred to. The only difficulty in dealing with zemindari ryots in such matters is to provide the necessary agency. In this instance I am sure the zemindar, the Paudra Rani, would willingly act as our agent through her Dewan, Kesub Missir, who is thoroughly trustworthy.

12. During the fortnight under review, I encountered some very heavy rain in Sergooja. It commenced on Sunday evening the 22nd ultimo, and lasted all night and best part of the following day; since then, there has, up to the present date, been an alternation of sunshine and cloud, but though cloudy weather if continued, is said to affect the mowoha crop most injuriously, we have still full promise of unusual yield from that nutritious flower and from the mango, which is in magnificent blossom both here and in Sergooja, but the clouds are still about and another heavy fall of rain would probably ruin our prospects of a good mowoha season. In Sergoojah and Jashpur, the rain on the 22nd and 23rd does not appear to have injured the rubbee crops. What there is on the ground looks well, and the pulse-crops of the hill-tribes, the Korwas and others, are reported to be very fine.

No. 1379.—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, in the Statistical Department, to the COMMISSIONER of CHOTAH NAGPORE.

Scarcity and Relief.

SIR,

Calcutta, the 10th March 1874.

I AM directed to thank you for your satisfactory report (No. 297½, dated 3rd March) upon the condition of your division, and the arrangements made to meet distress.

2. The Lieutenant-Governor has every confidence that the Chiefs and Sirdars of the Tributary Estates will, under your influence, do their duty by their people.

3. The Lieutenant-Governor is pleased, in conformity with your application, to make an allotment of Rs. 50,000 to the Hazareebaugh division to cover advances to zemindars for purchase of grain. The rules as to the security for, and the due application of such advances (see Circular No. 80 of 17th November) must be carefully observed by the Deputy Commissioner.

4. If the number of workmen named by you (16,326) means the total employed daily, it is very large for the small population of Palamow. An overseer from Dehree is on his way to Palamow, to advise upon the petty irrigation works, and the Public Works Department has agreed to make another subordinate available for duty under Mr. Forbes.

5. In regard to Maunbhoom, I am to say that the Lieutenant-Governor has not yet decided whether Government grain should not be sent to that district. But I have to-day invited Colonel Rowlatt to state whether he is ready to receive at Barrakur, cart away, and store twenty thousand maunds of grain at three days' notice.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 110T, dated Camp Khamdih, the 22nd February 1874.

From L. R. FORBES, Esq., Officiating Assistant Commissioner, Palamow, to H. L. OLIPHANT, Esq., Deputy Commissioner, Lohardugga.

I HAVE the honour to forward herewith my fortnightly narrative of scarcity and relief in the Palamow sub-district, for the fortnight ending Saturday the 21st instant.

First Narrative of Scarcity and Relief in the Palamow sub-district for the fortnight ending Saturday the 21st February 1874, submitted in accordance with orders contained in Government Circular No. 80, of 17th November 1873.

A.—STATE OF THE COUNTRY.

Abundance or scarcity of supply in the bazars.—Up to date I believe the supply of rice in the bazars is fully equal to the daily requirements of the people, but the abundance or scarcity in the bazars on market days depends greatly on the arrival in time of the beparies. If these latter manage to hit off the market day, and they generally do so, the people are put to no inconvenience: but it sometimes does happen that the importation is short, and purchasers have then either to wait the next market day, or to go to some other bazar in the neighbourhood.

Frequent complaints have reached me from the people to the effect that the local traders and shopkeepers forestall them in the purchase of rice by buying up the whole of the day's importation, frequently going miles out to meet the beparies and giving them earnest-money, thereby prohibiting the people from becoming purchasers at first hand, and driving them to buy at retail rates from themselves. I have of course not attempted to interfere in any way.

Kind and price of grain selling at one or more specified principal marts.—Coarse rice imported from the Lohurdugga district, from Sirgoojah, and Jushpore, forms the chief staple food to be found in the bazars. Dals of different kinds, such as rahur, khessari, and oorid are also exposed for sale, but I have not observed that these are exhibited in very large quantities; there is, however, a reason for this: the greater portion of the dal stocks are converted by holders into "sathoo," a staple food with the people, and more profitable when sold in this shape. Oorid forms the greater bulk of the dal stocks; next to that, rahur, large quantities of which are imported from Sirgoojah. The stock of Makai (maize) is very short; the only bazar where it is to be found in any quantity is Garhwa, and the sub-district has this year almost entirely depended upon Sirgoojah stocks; present prices range from 13 to 15 seers per rupee, and for makai this may be called a famine rate. Gram is hardly to be obtained in the markets; there was a small import from Delhi a short time ago, but it was quickly bought up. The following will show the kind and price of grain selling in five principal marts as per price current of 17th February 1874:—

MARTS.	Present Price of Wheat.	Present Price of Common Rice.	Present Price of Maize.	Present Price of Gram.
Daltongunge - -	10·12	11·68	13·50	11·25
Garhwa - - -	11·25	12·36	14·62	13·50
Husainabad - -	11·80	12·	15·	14·62
Sutburwa - - -	11·25	13·50	15·	11·81
Manka - -	10·75	13·75	15·25	10·

With the exception of some 20 or 30 individuals, a few of whom are specified in the margin, I do not believe that any of the zemindars possess stocks of grain of any kind in excess of their actual requirements, for (1) food, (2) harvest operations, (3) seed. A large number are daily purchasing the first, and hoarding the two last, while a still larger number are not only purchasing food, but when the time comes will have to borrow what they require for agricultural labour (No. 2), and have very short stocks of seed.

Information regarding the amount and kind of grain believed to be in stock in the hands of zemindars, &c.

Bhya Bhagwan Deo of Untari has about—
3,000 mds. rice.
4,000 ,, dhan.
2,000 ,, pulses and coarse grains.

Babu Nand Lal Sing, of Surky, has the credit of having about double the above quantity, but I do not believe he possesses more than 12,000 maunds of grain of all kinds.

Babu Deo Narayan Sing possesses about 8,000 maunds of grain of all kinds, all retained for seed and harvest operations.

Sunkar Ram Tewari, of Haramand, possesses about 5,000 maunds, all told.

Traders.—It is impossible to arrive at any conclusion as to stocks in the hands of traders, but as the importation of rice has been steadily going on for the last four months and daily and hourly increasing in magnitude, and is not being sent out of the sub-district, but retained, as far as we know at present, for local consumption, we can only assume that stocks must largely exceed present demands, though they are not nearly so large as they would have been had they not been so low at the outset.

Ryots.—I should say that three-fourths of the ryot class are buying their daily food, and certainly not more than one-third are in possession of seed and grain for the ensuing sowing and cultivating season.

Rainfall.—There has been no rainfall during the fortnight.

State of crops.—The heavy rain which fell on the 4th and 5th instant did immense good to the growing crops. Slight damage was done to the small area of the more advanced of the dal crop; more than one half of the lands required for the ensuing rainy crop and rice crop have been ploughed up, so that the seed will be able to be sown at the very earliest opportunity.

Condition of the people.—Up to date the condition of the great mass of the people is not much changed. The agricultural classes have a little food on hand, and are looking forward to the ensuing mowha harvest and rubbee crops. They are tied down to the care of the latter for the present, and engaged in ploughing. Those who have jungle produce near their homes are helping out their small stocks of food with these, and those who have not, are doing so by the consumption of oil-cake. The heavy rain in the early part of the month caused the grain of such of the rubbee crops as had never germinated to do so, and this has given them some green food.

Actual facts as to any known cases of misery and starvation.—No cases of actual misery and starvation have as yet been reported.

Grain-theft and robberies.—No grain-thefts or robberies have occurred during the fortnight under report.

Condition of any special tracts.—The tract lying west of the town of Garhwa, and within the jurisdiction of the thannah of that name, is in a worse condition than any other part of the sub-district; when I was there, about a fortnight ago, I found the people looking somewhat thin and pinched. The poorer classes are pouring on to the works (relief work No. 6) in large numbers.

B.—RELIEF WORKS.

The progress hitherto made in marking out or opening relief works has been confined to roads. Money was paid out on the 19th instant for the purpose of commencing the petty repairs to embankments in Government farms, but these works have not yet been commenced.

Works specified.—The relief works that have been opened are therefore—

No. 1, Daltongunge Station road.
„ 2, Chandwa road.
„ 3, Behar road.
„ 4, Maharajgunge road.
„ 5, Garhwa road.
„ 6, Untari road.
„ 7, Manjhiawan road.
„ 8, Jupla road.

Number of labourers.—The numbers of labourers thereon according to latest information are, No. 1, 236; No. 2, 702; No. 3, 756; No. 4, 876; No. 5, 322; No. 6, 1,686; No. 7, 495, No. 8, 304—grand total—5,377.

Supply of food thereat.—The labourers obtain their daily supplies from the bunneahs in the bazars and villages along the routes. They are experiencing no difficulties at present, but the having to go to the bazars to purchase food is a common excuse for arriving on the works late. On work No. 6 only are the bunneahs exposing food for sale on the spot; this is from a recent report.

Condition of the labourers.—The greater portion of the labourers now on the works are of the very poorest classes. I cannot say that any of them are in what may be called good condition, but then, in the best of times this class of people are not fully fed. The labourers on work No. 6, however, are decidedly ill-conditioned.

Mode of payments.—The labourers are paid daily by moonshees appointed for the purpose; strict orders have been given on this head, and the arrangements made will be fully detailed in a separate report.

Rates of wages.—The rates of wages are as follows:—

To an able-bodied man doing full work -	7	Goruckpori pice = 1½ annas.
„ a man not able to do a fair day's work -	6	„
„ a lad of 15 to 16 years - - -	5	„
„ a boy of 10 to 14 years - -	4	„
„ a boy above 6 and under 10 years -	3	„
„ a strong able-bodied woman - -	5	„
„ a weakly woman or girl of 12 to 16 years	4	„
„ a girl above 6 and under 12 years -	3	„

The market rate of pice varies; copper money is now cheap. 20 gundas or 80 pice at the present rates, equals one rupee.

Arrangements for tools.—The whole of the available tools have been distributed. On the 30th November last an indent was submitted for 1,000 tools (kodalies and picks), and on the 8th instant a further indent for 4,000 more was sent, but nothing has as yet been heard of them. Small sums have been advanced to native blacksmiths, but the number to be obtained from this source is very limited; besides these, Ganga Sahu, a wealthy mahajun of Koney has offered to provide from his private purse 100 kodalies.

C.—TRANSPORT OF FOOD.

Approximate amount of private food supplies into the district from outside during the week.—It is quite impossible to give any information on this head; all I can state is that a very large number of agriculturists owning pack-bullocks are engaged in importing rice on their own account.

Sufficiency or otherwise of means of transport.—I apprehend no difficulty on this head. There are thousands of bullocks belonging to cultivators available for transport. See heading E. The remaining questions under this heading require no remark.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

The following are the places of storage selected:—

No. 1, Daltongunge Serai.
„ 2, Parasia.
„ 3, Panki.
„ 4, Nawah.
„ 5, Budooma.
„ 6, Surki.
„ 7, Nuggur Untari.
„ 8, Sillidag.

Construction of storage-houses or golahs.—The golah at No. 1, formerly the Government distillery, is now being rapidly put into a proper state of repair for the reception of rice. The other golahs, Nos. 2 to 8, are all granaries belonging to private parties, and are in excellent repair. The manner in which these golahs are to be administered has been already fully set forth by the Commissioner of the division in his No. 86T, dated 22nd ultimo.

Amount of food-grain received.—No grain has as yet reached any of the golahs, the remaining clauses under this heading therefore need no remark.

E.—Advances to Private Parties and their Results.

Advance for purchases and storage.—The Commissioner in his letter quoted above to the Government of Bengal, reported having arranged for the purchase by certain zemindars of 20,000 maunds of rice, which arrangement was sanctioned by Government letter No. 534—S.R., dated 7th February. The Commissioner in his No. 87T, dated 22nd ultimo, to this office, sanctioned my advancing to the zemindars in question for the above purpose, but prohibiting my giving more than Rs. 5,000 to any one zemindar without special sanction. Under these orders Rs. 8,000 were distributed previously, and a further Rs. 8,000 during the fortnight under report to the gentlemen named in the margin; none of them have as yet reported the purchase of any rice, but I am aware that they have sent beparies to Lohardugga and elsewhere beyond the sub-district to purchase rice on behalf of Government, and it is probable that before the 15th proximo the first instalments will have reached the golahs.

	Rs.
Rai Kissen Doyal, Bahadoor - -	1,000
Thakurait Jagger Nath Doyal Sing -	1,000
Raja Ridhnath Sahi - - -	1,000
Bhya Bhagwan Deo - - -	2,000
Baboo Deo Narain Sing - - -	1,000
Baboo Nand Lall Sing - - -	1,000
Baboo Lachmi Bux Rai - - -	1,000

Advances to municipalities, and description thereof.—No such advances have been made or are contemplated at present.

Advances to private parties for land improvements, and description thereof.—No such advances have as yet been made. Upwards of 70 applications have been made for advances under the Land Improvement Act, but owing to want of proper agency to conduct the local enquiry enjoined by the rules, no action has as yet been taken on them; this matter was brought to the notice of the Deputy Commissioner now in camp here, and I am aware that he has applied for a staff of officers to assist me in this and other relief works.

F.—Charitable Relief.

Nothing has as yet been done under this head. The only arrangements made in preparation of the machinery of charitable relief by way of precaution has been the appointment of a Central Relief Committee at the head-quarter station Daltongunge, and of a sub-committee in each thannah and outpost, who will work under the orders of the Central Committee. I do not anticipate any necessity for relief-houses, nor do I see how they would answer in a sparsely inhabited country like this, especially as that indigent and homeless class, to be found in all densely populated districts, is not to be found here. I feel confident that, supervised by the Central Committee, the sub-committees will be able to do all that is necessary to ensure the timely distribution of charitable relief when and wherever needed.

Enclosure No. 13.

No. 29M.A., dated Calcutta, the 11th March 1874.

From Lord H. Ulick Browne, Commissioner of the Presidency Division to the Officiating Secretary to the Government of Bengal, Statistical Department.

In continuation of my last fortnightly report No. 24M.A., dated March 2nd 1874, and that of the Collector of Nuddea No. 66—S.R., dated February 23rd 1874, I have the honor to submit the Collector's report for the fortnight ending on the 9th instant, No. 153—S.R. of that date, received this day.

2. Under the Government order No. 1,135—S.R., dated February 28th, 1874, the Collector's report is submitted through my office within a week of the submission of my last report, and I have little to add to what I said in that, and what the Collector says now.

3. *Headings firstly and thirdly.*—No remark.

4. *Heading secondly.*—I can confidently say that the arrangements made when I was at Kishnagur will, together with tuccavi loan works, give the people employment as fast as they seek it.

5. *Heading fourthly.*—The Collector has been called on to submit lists of members of relief committees that they may be appointed and gazetted, and worked as an intelligence dep ment until charitable relief is required. The district committee can also at once take up art-question of establishing agency in Calcutta for the sale of the cloth made by the weavers (see paragraph 6 of my last report).

6. *Fifthly.*—Applications for tuccavi loans for the execution of works to provide drinking-water continue to come in, and serve the purposes of relief works.

7. *Paragraph 7 of the Collector's report "Condition of the people."*—With reference to what Mr. Stevens says about the weavers and gunny-making, I will press on him my suggestion referred to in paragraph 6 of my last report about establishing an agency in Calcutta for the sale of the cloth the weavers are accustomed to make.

8. *The Collector's paragraph 15A. report.*—Showing what has been done to increase the cultivation of the earliest, or boro rice crop in this division will shortly be submitted.

No. 153.—S.R., dated Kishnaghur, the 9th March 1874.

From C. C. STEVENS, Esq., Collector of Nuddea, to the COMMISSIONER of the PRESIDENCY DIVISION.

IN submitting my narrative of distress embracing the fortnight ending this day, I have the honor to observe that there is not much alteration in the complexion of affairs since my last report.

2. In parts of Kooshtea sub-division, and in a few villages in the Kalantar, and in the extreme north, the supplies of grain are rather scanty, but generally the paddy in store is said to be sufficient to enable the people to pass over the crisis. The opening of mahajun's stores, and the import during the period under review from the Sunderbuns and from other districts, have caused a slight downward tendency in the price of coarse rice.

3. The prevailing rates for coarse rice at the following marts may be thus quoted:—

	Per maund. Rs.	As.	P.		Per maund. Rs.	As.	P.
Santipore	3	0	0	Bongong	2	8	0
Ranaghat	2	12	0	Kooshtea	2	14	0
Chagda	2	13	0	Chupra	2	8	0
Haringhati in Jaguli	3	2	0	Kishnaghur	2	13	0
Meherpore	2	10	0	Kaligunge	3	3	0

4. The stocks in hand are reported to have been supplemented by supplies from other places, and it is believed that they will be found to be usually sufficient to meet the demands of the people. As stated in my last report, they are almost entirely of aus rice. In Chooadanga sub-division, no stock of fine rice (purubi chaul) is said to exist, and the respectable classes are compelled to comsume the coarse amun and aus of last year's harvest, all purubi rice being bought up by Government for despatch to the Rajshahye division.

5. There were partial and slight showers of rain during the fortnight, and the state of the weather indicates symptons of more rain falling.

6. *State of the Crops.*—An improvement in the condition of the cold weather crops is reported from Chooadanga.' Boro dhan is thriving. The tobacco crop in Bongong sustained injury through being saturated by the late rains, but sugar-cane has turned out very well. The rains have enabled the ryots to cultivate their fields and to prepare them for the coming crops. The indigo has derived much benefit from the rain.

7. *The Condition of the People.*—I do not think that the people generally are at all more anxious about the future than they were. Indeed, I have been informed by the Public Works supervisor who has charge of the works in the distressed tracts that the inhabitants of those parts seem to be much easier in their minds than they were. The Government works and those taken on tuccavi loans are providing them with employment, and I am keeping back road-work enough, I hope, to carry the through the trying months of June and July. We cannot entirely depend upon the prices as showing us the condition of the country. To a man who has nothing, any price at all is a famine price. In those tracts in which the great mass of the people is very poor, the famine rate is soon reached. I am strongly of opinion that in the distressed part of this district, want of money is the difficulty more than absence of food-supplies, and therefore that abundant employment at fair rates of wages is the remedy. For this reason had the applications for tuccavi loans been double in number and amount of what they now are, I should still have been most anxious to keep work going in Government tanks so as indirectly to regulate the price of labor, and to keep it up to a fair level. I am still trying to ascertain whether the weavers can be employed profitably in gunny-making; the results so far are not satisfactory; but as I have at present only the estimates made at the jail to guide me, I am not content to let the matter drop, since the conditions of free and convict labor vary very greatly, and the latter is notoriously very dear.

9. *Actual facts—as any known cases of misery and starvation, grain-thefts and robberies.*—The case mentioned by Mr. Cornish was inquired into by him, and he seems to be of opinion that other causes had more to do with it than want of food, since the brother of the boy, of about the same age and under the same circumstances, was supported by the charity of the neighbours, and not apparently in greater distress. No new cases have come to my notice during the fortnight. During the period under review, 10 cases of theft of grain have been reported by the police.

9. *Condition of any special Tract.*—I have nothing to add to the preceding remarks.

10. *Relief Works.*—The works mentioned in my last report have been continued. But all work on the roads has been stopped for the present, except in the case of the few old or otherwise feeble persons who are getting daily wages only. Work has been given for such people also at the tank at Chandghar, the most distressed part of the district. The tanks proposed to be excavated along the two roads from Kishnaghur to Berhampore and from Mira to Plassypara, have been undertaken, and about 1,800 persons in all are daily employed in the distressed parts.

11. *Transport of Food.*—In Kooshtea from 15,000 to 20,000 maunds of food-grain are estimated to have been imported during the fortnight from Dacca, Sylhet, and Backergunge, Jessore, and the Sunderbuns, and from 10 to 12,000 maunds of the same commodity are reported to have passed during that period through the sub-division from the above-mentioned places principally to Moorshedabad; the exports are estimated at 12 to 15,000 maunds,

principally to Calcutta and Moorshedabad. In Chooadanga imports are made from Jessore and Sunderbuns; but as the imported grain is not often stored, but generally sold off at hâts it has been found difficult to estimate the amount. In Ranaghat the imports are estimated at 1,565 maunds of rice, 206 maunds of paddy, and 3,171 maunds of other grain. These supplies, especially rice, come in from Kooshtea, Bongong, 24-Pergunnahs, and Culna; the exports of rice are estimated at 386 maunds—this to Hooghly and 24-Pergunnahs—and of other grain at 2,244 maunds. In Bongong the imported grain is estimated at 17 or 18,000 maunds, and in addition to this about 2,000 maunds of paddy have been brought during the fortnight by the labourers who have returned from the Sunderbuns as remuneration for their labor. The decrease in the imported grain is said to be owing to there being no large stock in the market, as well as to the rise in the price of paddy in the Sunderbuns, from which the sub-division is chiefly supplied; about three-fourths of the above quantity is estimated to have been exported. For the reasons given in my last report, I do not rely on these figures much as guides. My impression is that trade has been somewhat less active than it had been when I last reported.

12. Storage of Government grain is not required.

13. *Advance to private persons and their results.*—About 18,000 rupees have already been given to private persons as tuccavi loans for digging tanks during the fortnight; applications have already been received in all for upwards of Rs. 40,000. In many cases works have been started.

14. Charitable relief has not commenced, but committees are being arranged in case necessity arises.

Enclosure No. 15 to the Thirteenth Special Narrative.

No. 1544, dated Fort William, the 18th March 1874.

From J. C. Brown, Esq., M.D. Surgeon-General, Indian Medical Department, to the Officiating Secretary to the Government of Bengal, Statistical Department.

In continuation of this office letter No. 1485 of the 4th instant, I have the honour to report, for the information of His Honor the Lieutenant-Governor, that the following further medical arrangements have been made in connection with famine relief works in Bengal.

(*a.*) Surgeons D. Wilkie and W. E. Battersby joined their appointments in the Tirhoot and Chumparun districts respectively on the 26th and 27th ultimo.

(*b.*) On the 9th instant, a letter was received from the Famine Relief Commissioner of the Rajshaye Division, stating that twenty additional native doctors are required for duty in his division.

(*c.*) On the 7th instant, the Deputy Surgeons-General of the Dinapore and Presidency Circles were requested to submit, as early as practicable, a complete report of the medical arrangements for the famine districts in their divisions.

(*d.*) On the 8th instant, Dr. Francis reported that he had entertained three compounders in his circle, and that twelve more were about to be sent from the Agra and Meerut Circles.

(*e.*) It will be seen from the annexed copies of memoranda Nos. 2240, 2253 and 2289, dated respectively the 4th, 7th, and 12th instant, from the Deputy Surgeon-General of the Dinapore Circle, that up to the 12th current one Sub-Assistant Surgeon and fifty-two native medical subordinates have been appointed by him for duty in the famine districts of Tirhoot, Chumparun, and Bhagulpore.

(*f.*) On the 10th instant, the Deputy Surgeon-General of the Dinapore Circle was requested to state the number of local native doctors that can be spared out of the fifteen men ordered from the Upper Provinces for duty under the orders of the Famine Commissioner of the Rajshahye Division.

(*g.*) On the same date Dr. Buckle was requested to state the number of medical subordinates that can be spared for duty in the Rajshahye Division.

(*h.*) On the 11th instant, Dr. Buckle stated that four men are available for duty in the Rajshahye Division.

(*i.*) Under instructions from the Government of India in the Public Works Department, Dr. Francis was requested, on the 11th instant, to place the services of an experienced hospital assistant at the disposal of the Engineer-in-Chief, Tirhoot Railway, and to arrange for the supply of suitable medical stores.

(*j.*) On the 10th instant, Surgeon Birch was, in compliance with a telegram received direct from His Honor the Lieutenant-Governor, directed to proceed to Durbhunga.

(*k.*) On the 13th instant, the Deputy Surgeon-General of the Dinapore Circle was requested to place the services of eight local native doctors and eight compounders at the disposal of the Magistrate of Purneah for employment in connection with the famine relief works in that district, and the Principal Medical Store-keeper was instructed to send eight packages of medical stores to the Magistrate of Purneah for delivery to the native doctors.

(*l.*) On the same day the Deputy Surgeons-General of the Umballa and Lahore Circles were
Umballa - 8 directed to arrange for placing the services of fifteen additional native medical
Lahore - 7 subordinates at the disposal of the Deputy Surgeon-General of the Dinapore
Circle for employment in the famine districts in Bengal.

(*m.*) On that date (14th), a telegram was sent to Dr. Francis, asking for the report called for on the 7th instant.

(*n.*) On the same date (14th), the Deputy Surgeon-General of the Presidency Circle was requested to state the number of persons available in his division for employment as compounders in the famine districts in Bengal.

(*o.*) Dr. Buckle reports, in his memorandum of the 14th instant, that eleven candidates have registered their names in his office for employment as compounders in famine districts.

(*p.*) On the 16th instant, the Deputy Surgeons-General of the Agra and Umballa Circles have been requested to report the number of additional hospital assistants and local native doctors that can be deputed from their divisions for employment in the distressed districts.

(*q.*) On the same date Dr. Francis was informed that fifteen native medical subordinates have been ordered from Umballa and Lahore Circles for duty in the famine districts, and told that the necessary orders will be issued hereafter for their disposal.

(*r.*) On that date, Dr. Buckle reports that, as soon as the services of local Native Doctor Abdool Majeed are dispensed with from the Sealdah Hospital, he will be provided with an appointment in the famine districts.

(*s.*) On the 16th current, Surgeon Callagan was directed to join his appointment in the North Bengal State Railway.

(*t.*) On the 16th instant, Dr. Francis was requested to state whether he required the services of 11 compounders (now in the Presidency Circle) for employment in the famine districts in his division.

(*u.*) I beg to append for His Honor's information a memorandum from the Officiating Principal Medical Store-keeper to Government shewing the number of indents for medical stores for famine districts received in his office and the dates on which the majority of them were supplied.

(*v.*) The Deputy Surgeon-General of the Presidency Circle has this day been requested to send as many native medical subordinates as can be spared for duty under the orders of the Famine Relief Commissioners of the Rajshahye Division.

(*x.*) In compliance with a telegram received this morning from His Honor the Lieutenant-Governor, the Deputy Surgeon-General of the Dinapore Circle has been instructed by telegram to send two active native doctors to Durbhunga, and the Principal Medical Store-keeper has been instructed to send the medicines asked for.

(*y.*) In conclusion I would state that, as soon as a reply is received from Dr. Francis, a complete report of the medical arrangements for the famine districts will be submitted for His Honor's information.

No. 2240, dated Dinapore, the 4th March 1874.

Memorandum from C. R. FRANCIS, Esq., M.B., Deputy Surgeon-General, Dinapore Circle, to the SECRETARY to the SURGEON-GENERAL, Indian Medical Department.

THE undersigned has the honour to report, for the information of the Surgeon-General, that the number of native doctors noted in the margin has been placed at his disposal for duty in the famine districts up to date. Advice has been received this morning of the intended departure of four more (locally entertained) from Agra. These native doctors are expected to-morrow. This will make a total of *thirty-six*, besides one Sub-Assistant Surgeon.

Whence—	No.	How disposed of—	No.
Jubbulpore	4	Tirhoot	14+1*=15
Meerut	7	Chumparun	4+3*= 7
Umballa	3	Bhagulpore	4
Lucknow	5	Gunduck Embankment	2
Agra	2	Commissioner of Patna	4†
Dinapore	11		
Total	32	Total	32

Eight native Doctors have been placed at the disposal of the Commissioner of Patna: of these he has distributed 1 to Tirhoot and 3 to Chumparun as seen at *. No intimation has been received of the distribution of the remaining 4, which are therefore retained as at his disposal. See †. Intimation has been solicited.

No. 2253, dated Dinapore, the 7th March 1874.

Memorandum from C. R. FRANCIS, Esq., M.B., Deputy Surgeon-General, Dinapore Circle, to the SECRETARY to the SURGEON-GENERAL, Indian Medical Department.

IN continuation of this office No 2240 of the 4th instant, and the telegram of the 5th instant, the undersigned has the honor to state, for the information of the Surgeon-General, that he has received intimation of the proposed departure of the hospital assistants and native doctors noted in the margin. These, added to the number already reported, complete the total to 53 native doctors who have been disposed of by this office: of these 29 have arrived from other circles, and 13 are expected in a day or two.

Besides these above	10	Surgeon-General's scale No. 1 double supplies.	-	Ready if required for any other famine district.

MEMORANDUM.

I submit herewith the result of Lieutenant Bisset's inquiries respecting the Punjab grain traffic. He has exerted himself to the utmost, and his report is most valuable and opportune.

2. It appears that there has until recently been a want of concerted action between the Traffic Departments of the two lines, though I make no doubt that every one has done his best in his own sphere.

3. Lieutenant Bisset has accordingly sketched out a working scheme for the through service between the Punjab and the famine districts which is calculated to economise the carrying power of the Sindh, Punjab and Delhi and East Indian Railway Companies, and at the same time facilitate the grain trade.

4. This scheme was laid by Lieutenant Bisset before a meeting of the Government Controlling and Railway Officers at Lahore, and received their entire concurrence.

5. I have now discussed the subject with Mr. Stephenson and find him ready to co-operate heartily. He states, as a matter of fact, that of the wagons necessary to make up the East Indian Railway quota, 480 have already been placed on the "through service," and that the balance of 120 shall be at once arranged for, so that by the end of the current week a fixed and uniform dispatch from the Punjab to the famine districts of 1,250 tons of grain ought to be considered a certainty.

6. In addition to the above "through service" which depends on the concerted action of the Sindh, Punjab and Delhi, and East Indian Railways, the latter Company has engine power to lead a daily average of 200 tons of grain from Delhi, in addition to the ordinary traffic, making a total from the Punjab of 1,400 tons.

7. The dispatches of grain from Cawnpore and other stations in the North-Western Provinces may be expected to maintain their present averages, which are about 150 tons per diem, and about 100 tons per diem is now coming in from the Central Provinces *viâ* the Jubbulpore line, making a total daily "downwards" dispatch to the famine districts of 1,700 tons.

8. It was a part of Lieutenant Bisset's instructions to arrange, while at Allahabad, for the submission by the Traffic Manager of daily approximate telegraphic reports of downwards dispatches of grain, distinguishing the chief stations of destination, in order that His Excellency might every day receive information respecting the movement of grain towards the famine districts from both extremities of the Railway. The traffic Manager undertook to compile and forward this information direct to me, but he seems not to have realized the importance of the subject. I accordingly instructed Lieutenant Bisset to see him again, and I hope there will be no further delay.

9. I consider these daily reports essentially necessary as a guarantee that all concerned are exerting themselves in a methodical and energetic way, and I will urge the Agency to see that the desire of His Excellency to be furnished with this information is complied with.

10. Lieutenant Bisset reports that the present accumulations of grain at the Sindh, Punjab and Delhi Railway stations amount to about 23,000 tons or 118 train loads, and it seems quite clear that, as long as the present margin of profit can be obtained (stated by Lieutenant Bisset at from Rs. 20 to Rs. 30 per 100 maunds), the supply will continue to exceed the available carrying power of the two Railways.

11. I therefore submit, for the consideration of His Excellency, whether the present exceptionally low rate of carriage ought to be continued, say beyond the 1st April or after present accumulations have been worked off, for it seems to me that traders are acting on an erroneous belief that the Railway can carry all the grain offered at the rates now quoted.

12. It should further be noticed that of the various descriptions of grain, as given in the margin, now forwarded to the famine districts, about one-half are such as are usually considered food for cattle, and I am not aware that there is any scarcity of this description of grain in the districts this side the Ganges, while, as far as I can learn, a little or none of the grain imported by traders into Patna from the Punjab is finding its way across the Ganges into Tirhoot.

Grain from the Punjab according to most recent statements.

Wheat - - - - - -	9 per cent.

Barley - - - - - -	15 „

13. Another point for very serious consideration is the capacity of Patna and other cities on the line of Railway to absorb the supplies of grain with sufficient rapidity. Whatever is done by Government must, I think, take the shape of co-operation with the merchants in their efforts to remove the grain clear of the Railway, and I submit, for the consideration of His Excellency, that a civil officer of local influence might be very usefully employed in reducing the efforts of merchants to a system, so that by advice and material assistance (when needed) the most might be made of the available carriage.

Confusion and wasted energy at Patna must be at least as prejudicial as it would be at one of the Government depôts, and it seems to me essential that the operations at Patna should be brought under proper control.

14. In the present crowded state of Patna Railway Station, no engineering improvements, such as those suggested by Lieutenant Bisset, can be safely undertaken. (I satisfied myself on this point when I visited Patna, in January,) but I submit that the Bengal Government might be moved to place further pecuniary aid within reach of the Patna municipality if they are prepared to open out the new road from the ghât station to the city, recommended by Lieutenant Bisset.

15. Lastly, it remains for me to notice the carrying power of the East Indian Railway; and as I had the advantage of explaining my views on this head to His Excellency in person yesterday, it may be sufficient for me to record that to the best of my judgment the East Indian Railway Company ought to obtain a reserve supply of wagons so as to furnish a margin for days when the dispatches are impeded by bad weather, or accidental delays in unloading.

16. Under ordinary conditions, traders are allowed 48 hours to clear their goods, but in the present times of pressure wagons are discharged on the spot under special arrangements, and Government has been regardless of expense in facilitating the Railway operations; so that it seems to me but fair that the Railway Company should meet the crisis to the extent of having sufficient covered rolling-stock to place a reserve of 150 wagons on the upper division of the line, and 140 wagons (or sufficient for one daily train of 35 wagons between Howrah and the famine districts) on the lower division, for the grain traffic solely.

17. The former quantity can be obtained from the B. B. and C. I. Company, and the latter from the Calcutta and South-Eastern State Railway, on terms which I have communicated to the Agency.

18. The engine power is, as far as I can judge, sufficient to meet present requirements; but the provision of a reserve of engine-drivers before the commencement of the hot season ought to be urged on the serious consideration of the Agency.

F. S. TAYLOR, Colonel,
Consulting Engineer to the Government of India.

Calcutta,
The 19th March 1874.

MEMORANDUM.

Grain traffic from the Punjab, dated in Mail Train, 12th March.

I arrived at Loodiana on the 9th and saw the station there, visited the Deputy Commisioner, and had a long conversation with as many of the chief traders as could be collected.

I went on to Lahore on the 10th, and on that day and the 11th, I consulted with Colonel Pollard, who kindly arranged a meeting with Mr. Harrison, the Agent, Mr. Ross, the Traffic Manager, and Mr. Bocquet, the Locomotive Superintendent of the Sindh, Punjab and Delhi Railway. On the information thus arrived at, I am able to base this memorandum.

Quantity of grain accumulated.

The last complete statement of the accumulations, dated the 28th February, shows that there were awaiting despatch—

		Mds.
To foreign line (chiefly for Patna)	- - -	4,28,000
To local eastward (chiefly for Khuttowlee and Gazeeabad)	-	2,14,000

Total 6,42,000 maunds or 23,580 tons, or 118 train loads on the Sindh, Punjab and Delhi line.

The grain that is above entered as local is nearly all intended, eventually, for the famine districts, and would, if facilities were given, be offered for "through" carriage.

It has hitherto been offered as "local" to secure early despatch (for Khuttowlee, where it takes the Ganges Canal to Cawnpore, and for Gazeeabad, where it has to be re-booked by the East Indian line) which has been more easily got for "local" than for "through" goods.

The reason of this is briefly that the Sindh, Punjab and Delhi Railway have employed on "local" traffic all sorts of vehicles, open waggons, timber trucks, and even passenger carriages, while they have been obliged to confine the through traffic to covered wagons, of which their own line has been starved by the extensive use of Sindh, Punjab and Delhi Railway covered wagons on the East Indian Railway. So the through traffic has been hampered, while the local traffic has been free.

And here it may be noted that, with a limited amount of stock and locomotive power, the employment of it to the fullest possible extent on the short lead from Howrah to the famine districts gives twice the amount of grain landed there, that would be possible with the same stock and power employed on the longer journey from the Punjab.

It may safely then be said the whole of the 118 train loads would be booked through to the famine districts if the traders saw any hope of getting it despatched within a reasonable time.

This accumulation is within the station premises only, and I am assured that it may be taken as representing with sufficient accuracy the present state of the station yards.

And it is believed that the stocks lying in the bazars or serais adjoining the Railway stations are more than equal[*] to the accumulations inside the station yards, while it is certain that the supplies in the country (independent of the present abundant crop) are scarcely yet affected by the heavy despatches that have been made both to Bengal and to the sea board *via* Mooltan.

So long, then, as the profits of trading remain such as they are at present, it is absolutely certain that the supply of private grain to the Railway will continue fully equal to its carrying power, even if this be expanded.

The enquiry of the Government of Bengal whether any room can be found for Government grain transport without interfering with private trade may thus be answered at once in the negative.

The profits are very large, and there is no want of enterprise among the native traders who are ready at Loodiana, for instance, to contract to fill 100 wagons a day with through grain, principally for Patna, and this too, all through the period of harvesting during which the influx of grain from the districts will be small on account of difficulty about local carriage.

Average of jowar, bajra, gram and maize.†

Clearing off present accumulations.

The clearing off of the present accumulation would, in the present brisk state of trade, only make room for another similar one, unless the carrying power of both lines were very largely increased, both in wagons and engines. Wagons and engines can be got, but engine drivers are not to be found in the country, and it is impossible to train raw men to this work.

If, then, the increase of power is demanded by the emergency, drivers must be telegraphed for at once, in order that they may arrive in time to supplement and relieve the present staff during the hot weather. Indeed, from all I have learnt, this relief will be required even if no more than the present traffic has to be maintained.

Apart from the question of increasing the stock to carry all the grain that offers, which appears quite impossible, there is doubtless much to be done by the more harmonious working of the two lines which has lately been initiated.

If the number of grain wagons that can be worked away daily from Gazeeabad by the East Indian Railway Company be distinctly stated, and this can be ascertained from the total of

[*] Colonel Pollard says they are four times as great.

(1st), the present through wagons taken over at Gazeeabad, (2), the wagons now despatched with grain, re-booked at Gazeeabad, and (3), a portion of the Delhi and Cawnpore (*viâ* Khuttowlee and Ganges Canal) grain traffic which can only be estimated at, say, one-third of the whole, then the total of these three reduced to the equivalent working power from Gazeeabad may be taken as the number desired.

This number, when ascertained and multiplied by 8 (the number of days occupied in the double through journey), gives the total number of wagons required for the through service will be obtained.

My estimate of the total that the East Indian Railway can safely work along with their local traffic, is over 180 wagons a day, but I take this as the required number, and the stock of wagons required as 1,440, or to allow for a small margin, say 1,500 covered vehicles. Of this number, the Agent, Sindh, Punjab and Delhi Railway, expressed his readiness and ability to supply 900, the number of his covered wagons now available for and engaged on this service, and about 200 open wagons in addition. I think it desirable to exclude the open wagons from the calculation, because the Punjab traders are very unwilling to book their grain "through" in open wagons, and have lately refused to do so.

If, then, the East Indian Railway can place the balance of 600 wagons on this service, and maintain a regular supply, the through traffic will be served as well as the present joint stock of vehicles and locomotives of both lines will admit. If the East Indian Railway cannot meet this want in addition to the demand for vehicles on the lower part of the line, I think then, if the maximum that can be got down from the Punjab is to be got down, the Government should ask the Agency to increase their number by hiring more.

This is all that can, in my opinion, be done, and this programme, if carried out, will soon produce a regular stream of traffic, which will, with a well-regulated system of despatch, tend very much to put a stop to any further great accumulations.

With reference to the enquiry made by the Deputy Secretary, Government of India, Department of Agriculture, Revenue and Commerce, as to the existence of any block on the stations of the Sindh, Punjab and Delhi Railway or of the East Indian Railway, I have ascertained that the stations on the Sindh, Punjab and Delhi Railway are working perfectly freely, but that their despatching powers are unequal to the traffic offered. This is not from their own want of stock or power, but from the limit that has to be imposed on the through traffic. One improvement might be suggested, *viz.*, that the trains should be made up so as to leave less marshalling to be done at Gazeeabad, where delay is certain to arise from this cause.

On my way up the East Indian Railway, I found the stations working well and without any block, but when at Loodiana on the 9th, I saw a telegram requesting that booking to Patna City should be stopped for two or three days.

The present block is due to causes entirely outside the Railway control, but its removal is very much delayed by the well-known difficulties of working Patna Station. These are so well known, that it seems almost unnecessary to recapitulate them, but I shall do so in the hope that no further unnecessary delay may take place in doing what is necessary both at the city and the ghât stations.

The difficulties arise from—

1st.—The want of a cross over road from the Patna ghât Branch, and the delay in other rearrangements of the yard, which have been so persistently urged by the traffic officers.

2nd.—The want of room for carts all round the goods sheds, and the platforms of the city station.

3rd.—The want of any road from the station into the city or chowk, a want which has been urged by the Consulting Engineer's Office since 1871, and which has been unfortunately recognized too late for the present emergency.

The improvement called for to meet want 1 would put a stop to the frequent detentions that at present occur to trains at Patna.

The improvement pointed at in want 2 and 3 work into each other to some extent. If there were more room round the city station, there would be less need of the road from the ghât station into the city, and if there were any cart road from the ghât station into the city, the grain going into the city itself could seek either route, and the city station would be less crowded.

I have hastily summarized the result of my enquiries, and I have thus had the advantage of submitting my notes on the questions affecting the through traffic to Colonel Pollard, who accompanies me down the line. Colonel Pollard expresses his concurrence in what I have written, but says that he himself would probably have written more strongly on the want of harmony in the earlier working of the through traffic.

I send this on by the mail train in which I have written it, but I halt at Gazeeabad and Delhi to collect further information there.

Umballa, W. S. S. BISSET, Lieut., R.E.,
The 12th March 1874. Offg. Depy. Consg. Engr. to the Govt. of India.

P.S.—At Rajpoora, which I have just passed, where the grain from Puttiala comes in, the rates of all grain stuff except wheat are 34 seers per rupee. The cry is for wagons to send it in.

W. S. S. B.

No. 890.

From Arthur Howell, Esq., Deputy Secretary to the Government of India, to the Secretary to the Government of Bengal.

Dept. of Agriculture,
Revenue and Commerce.
Agriculture & Horticulture.
Famine.

Sir, Dated Calcutta, the 12th March 1874.

I am directed to request that, under the orders of the Government of Bengal, the annexed copy* of a telegram from Bankipore of the 9th of February, addressed to the *London Daily News*, may be transmitted to the Commissioner of Patna, with instructions for him to report:

1*st*. Whether any deaths had occurred from starvation at that time in the Patna division, and if any have since occurred; if so, how many, where they occurred, and when they were reported by the local officers.

2*ndly*. Whether women of high caste have been obliged, as a condition of obtaining relief, to work on the Government relief works with common coolies; and if so, by whose directions and under what circumstances.

I have the honour to be, Sir,
Your most obedient Servant,
Arthur Howell,
Deputy Secretary to the Government of India.

* "The condition of Northern Tirhoot and Chumparun is growing worse. Distress is intensifying, and becoming actual famine. Several deaths have occurred from starvation. *Hundreds of high-caste women are to be seen labouring on the Government relief works with common coolies.* * *"

No. 1578—S.R.

From the Officiating Secretary to the Government of Bengal, Statistical Department, to the Deputy Secretary to the Government of India, Department of Agriculture, Revenue and Commerce.

Scarcity and Relief.

Calcutta, dated 18th March, issued March 1874.

Sir,

With reference to your letter No. 890, dated the 12th instant, requesting the submission of a report regarding the alleged deaths from starvation in the Patna division, and the statement that high caste women have been employed on relief works with common coolies, I am directed to forward copy of a communication, dated Durbhunga, the 15th March, from the Commissioner of Patna on the subject.

2. The Lieutenant-Governor concurs in the account furnished by Mr. Bayley, and can testify from observation of the facts, as *vividly* evident in the conduct of the people, that it is almost impossible to save the lives of many children, because nothing will induce their parents to take them to our relief houses. This can only be done by sheer force, and that would probably create a panic. His Honour would observe that it is not caste-prejudice that influences these people in the matter, but the timidity of a miserable and abject people most difficult to move out of their accustomed grooves.

3. With regard to caste-feeling, I am to say that His Honour has lately passed through crowds of tens of thousands of women employed on relief works without a complaint being made on the score of caste. His Honour believes that there are very few people of high caste in the Tirhoot district, and it must be remembered that people of the same caste vary greatly in their habits. The Lieutenant-Governor would observe that in many parts of India, Brahmin women, wives of respectable cultivators, work quite freely in the fields. The Tirhoot Brahmins do not work, but there are other Brahmins who do. Good caste Rajpoot women are more particular, Rajpoots having adopted the Mahomedan habit of secluding

their women; but there are Rajpoots and Rajpoots, and many people calling themselves by that name are really of very inferior caste.

4. I am to add that probably, as Mr. Bayley remarks, it is a proof of hard times that these women come on the works; but the Lieutenant-Governor has as yet seen no symptoms that want has driven the better classes to great extremities.

I have the honour to be, Sir,
Your most obedient Servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Dated Durbhunga, the 15th March 1874.

From S. C. BAYLEY, Esq., Commissioner of Patna, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I HAVE the honour to reply, as completely as I can, from memory, and without reference to all the narratives, to the call made by the Government of India in their letter No. 890 of 12th March 1874.

Before the 9th of February there had been reported three deaths from starvation in Sarun, all of which on enquiry turned out to be deaths from natural causes, and quite unconnected with famine.

In his narrative of 15th January, Mr. Worsley reported five persons as having died of fever brought on by want of food. The case was enquired into by Mr. Llewhellin, assistant manager, Court of Wards, and though these persons had not died directly of starvation as at first reported, it seemed certain that their deaths were attributable to insufficient food.

In his narrative of 26th January, Mr. Worsley reported one death by starvation, well substantiated, at Jhunjarpore; and again, in his last narrative, he has reported three deaths, all caused by insufficient food on the Durbhunga and Buheyra road.

These are all the cases that have been reported to me so far as I can recollect; but it is impossible to say of many deaths whether they occur from immediate starvation or from disease brought on by insufficient or improper food. In the case of children, I am sure that there must be many deaths from the latter cause. I have seen myself, and the Lieutenant-Governor has, I know, observed also, numerous cases of children in an advanced stage of emaciation whose parents were in good condition and earning wages on the works.

In reply to the question about women of high caste being employed on relief works, I can say that I have myself seen on the road between Ramgurwa and Adapore in Chumparun, where 3,800 labourers were congregated, a number of Brahmin and Rajputni women; the hazree or roll showed, I think, 120 women and children altogether of castes unaccustomed to labour on roads.

These women had come with their husbands and other members of their family for relief. They had come of their own accord, and were not applicants, so far as I could learn, for gratuitous relief. I may mention, however, that I inspected this road on the 24th January, before gratuitous relief centres had been organized, and while it was distributed only to a small extent through planters and at police offices. I questioned a few of the women, but there was nothing about their appearance showing them at all driven to extremities. They were of high caste, but not of a high class in society, and though certainly not accustomed to labour on public roads, were not such women probably as would object to going about their villages publicly. I mentioned the matter in one of my demi-official reports as showing to my mind the existence of severe distress in the neighbourhood. The work was under charge of Mr. Lethbridge, and I visited it in company with Mr. T. Gibbon of Bettiah.

No. 17 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.

Famine.

To the Most Honourable the MARQUIS of SALISBURY, P.C., Her Majesty's Secretary of State for India.

MY LORD MARQUIS, Calcutta, the 20th March 1874.

WE have the honour to acknowledge the receipt of Despatch No. 2 of the 23rd January* from your Lordship's predecessor. We are gratified to learn that the measures and the policy which we have adopted with respect to the present scarcity in parts of Bengal and Behar have met with the approval of Her Majesty's Government.

* Copy in Command Paper, 933, of 1874, page 52.

2. The weekly despatches and telegrams, and the fortnightly special narratives from the Lieutenant-Governor of Bengal, which we have periodically forwarded, have kept Her Majesty's Government fully informed of the progress of events. This information has been furnished as it arrived; it is voluminous, and we recognise the fact that it would be difficult for any one at a distance, who has not carefully watched the current of events in each separate locality, to appreciate accurately the general situation of affairs. Moreover, the anticipated yield of the spring crops is now pretty well known, and we are, therefore, in a position to define with greater accuracy than heretofore the prospects of the year; while the measures which we have adopted for the relief of distress are in a forward condition. We think, therefore, that the moment is opportune for a brief review of the general position of affairs in respect to the policy of Government, the amount of distress which is to be anticipated and the steps which have been taken to relieve it, and lastly, to the actual condition of the people in the famine-stricken districts. Her Majesty's Government will thus be able to judge of the adequacy of the measures which we have adopted.

I.—GENERAL POLICY OF GOVERNMENT.

(1.)—Policy in respect to private Trade.

3. It was necessary at the outset to define broadly the duties which Government was prepared to take upon itself and to decide how far reliance should be placed upon the operations of trade to supply the anticipated deficiency of food in the affected districts. We have from the first considered that any general deficiency in the food supply of a large continent like India, containing a population of some two hundred millions who live chiefly by agriculture, and comprising within its limits extensive tracts of country subject to very different climatic influences, is in the highest degree improbable. We looked, therefore, to the grain-producing districts of Bengal which had not been affected by the drought, and to the rest of India, to supply the deficiency where the rice crop of 1873 had failed. It appeared to us that it was essential to assure traders that Government did not intend to interfere with their operations. The importance of this point has throughout been frequently pressed upon the Government. In the early part of November exaggerated rumours as to our intentions were current, and received a certain amount of credence. An impression was getting abroad that Government intended to take upon itself the food-supply of a great portion of the population of Bengal. Any such impression would have been disastrous, because the operations of dealers in grain, upon whom we had mainly to rely, would thereby have been paralysed.

4. A Resolution was published on November 7th, in which the general policy of Government was declared in the following terms:—

> "The Governor General has full confidence that the energy and enterprise of those engaged in the internal trade of British India will prove equal to the occasion, and that supplies (excepting under the conditions to be noticed hereafter) will generally be at hand to meet any deficiencies of grain in different parts of the country.

"It has been officially reported that on the very first appearance of the prospect of a short autumn harvest large quantities of grain were imported into the trade centres of Behar, and much evidence has since been received to the effect that grain is being despatched by the merchants without any delay or hesitation to the principal marts in the districts likely to be affected by scarcity. The Governor-General is sanguine that the same commercial activity will prevail wherever it is needed, and that it will become greater and greater according as the demand for it may be intensified.

"It has, however, been proved, by the sad experience of famines in India, that exceptional circumstances may arise whereby numbers of persons may be exposed to danger of starvation, or to disease arising from want of food. In all such cases, where human life may be at stake, the Government and its officers will do their utmost to apply the most effectual remedy that may be practicable, and will strive, by forethought and management, to prevent the occurrence of any such misfortunes."

We designedly announced the principle which we had determined to adopt before alluding to the exceptions which we anticipated would arise to its application, and we think that the result of the publication of this Resolution, together with the encouragement given to local traders by local officers, who in this respect received precise instructions, has been so far satisfactory that the intentions of Government became gradually well understood, and that trade, save in exceptionally situated localities, has been extraordinarily active.

5. We are anxious that our views upon this important subject should be clearly understood. The ordinary motives which induce a trader to send his grain to the market in which the highest price is to be obtained hold good in India as elsewhere; in fact, the native traders are peculiarly alive to their own interests in this respect, carefully watch the fluctuations of the local markets, and send supplies to those marts in which they can realise the highest profits. We have from the first believed, and we are still of opinion, that in respect to most parts of the country reliance may safely be placed upon dealers in grain to distribute the supplies of food according to the wants of the community, leaving to Government in those parts the task of providing, by means of relief works and gratuitous relief, for those who are too poor to buy food at the high prices which must be expected. At the same time we came to the conclusion that in some parts of the country, which are remote from the great lines of communication, it was necessary for Government, owing to the inactivity of trade, to take upon itself the task of sending in supplies of food. This had to be done early, because traffic is to a great extent interrupted during the rainy months, and the deficiency cannot then be made good.

6. It is in the highest degree desirable that the area in which the Government is obliged to take upon itself the onerous duty of providing food for the whole or the greater part of the population should be as circumscribed as possible. The attempt to feed the whole population of all the districts affected by the drought through Government agency is not only unnecessary, but we believe it to be impossible, and that the attempt would terminate in disaster. For these reasons we have from the commencement done all in our power to encourage trade. Our endeavours have been so far successful that we have reason to hope that the task which we have to perform, although one of great difficulty, is now reduced to manageable dimensions.

7. Another and quite separate branch of this subject relates to the exportation of food-grains. Our reasons for not prohibiting that exportation have been expressed in the Viceroy's Minute of January 30th, and we need not allude to the matter further. We will only add that, so far as we can yet see, there will be no difficulty in procuring a sufficiency of food. The difficulties consist in its conveyance to the distressed districts, and its distribution there, and would not have been alleviated by any prohibition of exportation.

See Command Paper, 933 of 1874, page 54.

(2.)—Measures taken to alleviate Distress.

8. We pass on to the chief methods upon which Government rely for the relief of distress. These are—1st, the employment of labourers on public works, their wages being paid in money or grain; 2nd, the distribution of gratuitous or partly gratuitous relief.

(a.)—*Relief works.*

9. We look upon the provision of employment upon public works at the outset of a period of scarcity as a valuable preliminary and precautionary measure,

whereby the means of providing themselves with subsistence are afforded to the labouring population and to the smaller cultivators, who are not unaccustomed to labour for hire. This application of public works has been proved to be sound by the experience of former periods of scarcity in India. We, therefore, directed our attention in the first instance to the provision of public works in all those parts of the country which were affected by the drought. Works on a large scale were provided by the Government of India, whilst instructions were issued to local officers by the Lieutenant-Governor of Bengal to provide an adequate number of local relief works within easy reach of all portions of the districts in which severe distress was anticipated.

(b.)—*Gratuitous relief.*

10. We have from the first recognised the fact that, besides those whom it is possible to relieve by employment on public works, there are considerable numbers who from age, sickness, caste usages, or other causes will have to receive relief either wholly or partly gratuitous. This relief is given through the agency of Relief Committees acting in communication with, and under the general instructions of, the officers of Government, whom we hold directly responsible that no deaths from starvation shall occur which can be avoided by any exertion or arrangement within their power and the means placed at their command.

Enclosure No. 1. See Part II., pages 135 and 136.

11. We have already forwarded to your Lordship a copy of the instructions which we have issued to Relief Committees, but for easy reference we append another copy to this despatch. Briefly, it may be said that the duties of these committees are to distribute gratuitous relief to persons unable to work; to provide employment at or near the homes of persons who are capable of performing light labour, such as spinning, weaving, &c.; to provide in such a manner as from local experience they may consider best for the relief of women and of persons whose caste usages preclude the application of a labour test; to sell grain under conditions to which we shall presently allude more particularly; and, where distress is general, to adopt a system of village relief. To this latter point we attach great importance, because the congregation of large masses of people away from their homes leads to much mischief. In framing the above instructions we have endeavoured to provide for all contingencies which we can at present foresee; but in order that no inconvenience should arise from too rigid an adherence in all cases to the precise terms of the instructions, we have impressed upon Relief Committees and on all Government officers that should any unforeseen circumstances arise they are to act promptly on their own responsibility and to the best of their discretion.

12. It is not, and it never has been, the intention of Government to require work as an invariable condition to the grant of relief, or when work is required to be rigid as to its precise amount. Neither do we desire to use the issue of cooked food as a test by which to gauge the necessity of giving relief to all applicants. In order that there should be no possible misapprehension on this subject the Resolution of Government of March 6th contained the following passage:—

> "The Government has not prescribed the invariable use of any test, either by labour or by the distribution of cooked food, for the purpose of determining who are fit objects for relief. Such tests are desirable and necessary under certain circumstances. It is right that able-bodied men, accustomed to labour, should, as a general rule, be required to work in return for the food or money supplied to them. It is desirable that light work should be found for others where this can be arranged profitably and without obliging large numbers of people to leave their homes. In dealing with certain classes of distress, especially in towns, the issue of relief in cooked food may be useful as a test. But stringent tests are inapplicable to those limited tracts of country where, owing to the great failure of the crops and the absence of private trade, the Government have, in accordance with their Resolution of the 7th of November last, assumed the task of importing grain for sale and distribution to the people. In such tracts the difficulty will be, not to prevent undeserving applicants from being relieved, but to ensure that sufficient supplies reach those who require them."

(3.)—Sale of Grain by Government.

13. Where large numbers of people have been collected together upon public works provision has been made for the issue of part of their wages in food, or, what amounts to the same thing, for the sale of food to them at a rate which has been fixed by the Government of Bengal at 10 seers for the rupee. But, besides

the provision thus made, it has become necessary, for reasons which have been stated before, to make arrangements in some parts of the country for the supply of food to large masses of the general population. This is a most difficult and delicate task. After careful consideration we adopted the course which was successfully pursued in dealing with the Irish famine. We have directed the collectors of certain districts to make arrangements, if possible through the agency of traders, for the sale of grain from Government stores, if a serious deficiency of grain in any part of their districts is apprehended. The selling price is fixed at that of the nearest large mart where supplies are readily brought in by railroad or river, together with such addition representing the cost of transport as may be considered proper. Sales will be stopped as soon as the local trade receives sufficient supplies, and any competition with the local trade will be carefully avoided. It is to be observed that the instructions which we have issued on this subject allow of the sale of food below market rates as a means of relief to persons whose cases have been inquired into by Relief Committees or Government officers. In addition to the sale of grain upon the principles above explained, we have directed local officers to make use very largely of the system (well known in India) of making advances to cultivators on repayment after the next harvest. Zemindars will in many cases become security for their tenants; but where this arrangement is impracticable advances will still be made to cultivators of the soil if there is a reasonable probability of repayment. We rely very much upon this system for the distribution of food among a large and important class of the population, who should be mainly engaged upon preparing their land for future crops, and, therefore, could not be continuously employed with advantage upon public works.

(4.)—Measures of secondary importance adopted for the Alleviation of Distress.

14. In addition to the measures which we have already described, some others of secondary importance have been adopted.

(*a.*)—*Remission of Land Revenue.*

15. The first of these has reference to a remission of the land revenue. We are of opinion that the occurrence of scarcity is not of itself a sufficient reason for the postponement of revenue instalments in Bengal and Behar, where the land revenue has been permanently settled. In Regulation I. of 1793 (the Permanent Settlement), section 7, article 6, it was distinctly stated that—

> "in future no claims or applications for suspensions or remissions on account of drought, inundation, or other calamity of season, will be attended to."

We wish to adhere rigidly to the principles laid down in 1793 by Lord Cornwallis, but we do not consider that it is inconsistent with those principles that the State should deal liberally with those zemindars who may distinguish themselves by employing labour on works of permanent improvement, or importing grain for distribution, or sustaining their ryots in a season of difficulty, or by any act of munificence towards their tenantry, or of charity towards the people in reference to the scarcity, which may be shown to the satisfaction of the local officers. We accordingly instructed the Bengal Government* that in such cases the collector should refrain from the application of any coercive process in respect to unpaid arrears of the instalments due on the 12th January, and may postpone part or whole of the coming instalments of the 28th March and the 28th June. The payment of arrears may be distributed over a term not exceeding two years from the date of the original postponement.

* Letter to the Government of Bengal, No. 112, of the 15th January. (See Part I., page 154.)

(*b.*)—*Other minor measures.*

16. With respect to other minor measures, Government has freely granted loans to corporations, municipalities, and trusts, as well as advances of money for agricultural improvements, and to non-official gentlemen and traders who have undertaken to import grain. Authority has been given to make advances for the purpose of purchasing seed-grain. The railway rates of freight have been reduced to one-half their ordinary amount. Aid from the army, commissariat, and other public departments has been freely afforded. Lastly, facilities have been given to unemployed labourers to emigrate.

II.—AMOUNT OF ANTICIPATED DISTRESS AND MEASURES ADOPTED TO RELIEVE IT.

17. The absence of any trustworthy statistics as to the area under cultivation in each district* and the out-turn of each crop has throughout rendered it a matter of extreme difficulty for us to estimate the extent of the danger with which we have to cope. Even at this late period, although the utmost attention has been given to the subject, our estimates are necessarily somewhat conjectural; but, in order to be upon the safe side, we have always accepted the highest estimate which has been made by any responsible authority.

18. The tract of country in which distress will be more or less aggravated comprises portions of the Patna, Bhaugulpore, and Rajshahye divisions. The population of the whole of those divisions amounts to about 25 millions. The rough estimate formed by us last November of the number of persons who, judging from the experience of former times, would be likely to come upon the hands of Government, was about 2½ millions, or 10 per cent. of the whole population† for a period of seven months. We are now able to form a more detailed estimate of our wants.

19. The amount of distress to be anticipated varies very much in each district, and, indeed, sometimes in each sub-division. In those parts in which a considerable portion of the cultivated land is irrigated, or in which the failure of the rice crop was not very extensive, or in which the spring crops promise a good yield, there is a comparative abundance of food. In others every degree of deficiency exists. In the worst districts, where the rice crop has completely failed, and the spring crops are so small that no material aid can be derived from them, the deficiency of food-supply may be said to be almost absolute.

Enclosure No. 2. See page 167.

20. The detailed calculations of the requirements of the affected districts are appended to this despatch. We anticipate that the area of severe distress will be confined to a tract of country having a population of about 15,000,000; of these we estimate that at the worst period Government will have to provide food for about 2,663,000 people, or about 18 per cent. of the whole population. The total allotment of grain to these districts is about 327,500 tons. In the remaining districts, containing a population of about 10,000,000, detailed calculations have not been made, but for the most part the percentage of persons who will have to be fed is expected to be comparatively trifling. Allotments of grain amounting to about 60,000 tons have been made to these districts.

21. Our original calculations were based upon an average daily consumption of half a seer‡ per head per diem. Sir R. Temple's recent calculations have, however, been based on a daily consumption of three-fourths of a seer per head, and we have thought it safer to adopt the higher estimate. The total amount of grain required according to the best estimate which we can frame is about 338,000 tons. We have arranged for a supply of about 465,000 tons, which will leave a reserve of about 127,000 tons. Of this about 385,500 tons will come from beyond sea. About 160,000 tons have already arrived, and ships are daily arriving as fast or even faster than the railways can convey the rice up-country. We do not anticipate any difficulty in making further purchases, should they be required. We have from the first been of opinion that the greatest difficulty would be experienced, not in obtaining supplies, but in the proper organization of the land transport and the detailed arrangements for rendering food available at the right places to those who might be in want of it. The number of people for whom it is possible to provide by grain imported from without is limited by the carrying power of the railways, and, again, the amount which can profitably be sent by rail to the famine-stricken districts is limited by the number of carts which can be procured, and which, when procured, can be loaded and despatched daily from the railway stations.

22. Although some grain both on account of Government and private traders reaches the distressed districts by water-carriage, the chief reliance both of Government and the trade must be placed upon the railways. The East Indian Railway traverses Behar, and is throwing grain into that province both upwards from Calcutta and downwards from the North-Western Provinces and the Punjab. The Eastern Bengal Railway takes supplies up from Calcutta to

* Bengal is divided for administrative purposes into, 1st, Divisions; 2nd, Districts; 3rd, Sub-divisions; 4th, Thannahs.

† Despatch to Secretary of State, No. 8 of 30th January 1874. (See Part I., page 185.

‡ 1 Seer = 2 lbs.

Kooshtea and Goalundo, from whence they are distributed in the Rajshahye division by means of steamers, boats, and carts. The amount of Government grain already sent up the East Indian Railway is about 117,000 tons, and the amount sent up the Eastern Bengal Railway is about 33,000 tons. The East Indian Railway are now taking daily an average of 2,000 tons of Government grain and 400 tons of private grain up-country, and the Eastern Bengal Railway are taking an average of 800 tons of Government grain up to Kooshtea and Goalundo. At the same time the trade is sending large quantities of grain down from the North-Western Provinces and the Punjab into the famine districts. We are informed that 23,580 tons of grain, or sufficient to load 118 trains, are awaiting despatch at stations on the Scinde, Punjab, and Delhi Railway. This accumulation is within the station premises only, and it is believed that the stocks lying in the bazars adjoining the railway stations are more than equal (they are said to be four times as great) to the accumulations inside the station yards, while it is certain that the supplies in the country (independent of the present abundant crop) are scarcely yet affected by the heavy despatches that have been made to Bengal. The daily average amount of grain which is now being brought from the north and west into the famine districts is 1,700 tons, of which some portion is fodder for cattle. Your Lordship will, therefore, observe that, including what is being done by Government and what is being imported by grain-dealers, grain to the amount of about 5,000 tons per diem, or sufficient to provide a daily ration for nearly 8,000,000 people, is converging on the famine districts.

23. Under these circumstances, should it become necessary to make further purchases on Government account, we propose to draw upon the abundant markets of the Punjab and the North-Western Provinces, which, in so far as Government is concerned, are as yet almost untouched.

24. The difficulties connected with the transport of grain by rail are, however, slight as compared to those to be encountered in removing the grain from the railway stations to depôts in the interior of the distressed districts. At the beginning of January we were led to believe, from a careful consideration of the reports submitted by the Government of Bengal, that the arrangements for local transport and the organization for distributing relief were not progressing so quickly as could be wished, and accordingly a Conference was held on the 8th of January, the proceedings of which were submitted to your Lordship's predecessor in our Despatch No. 5 of the 16th January, when the subject was fully discussed. A little later it became evident that, in spite of the endeavours of Sir George Campbell, the arrangements for local transport were insufficient, and that this and other matters demanded earnest attention and prompt action. We considered it indispensable that an officer of high rank, possessing our fullest confidence, should be at once deputed to visit the distressed districts in person, with full powers delegated to him to act according to his discretion. At that time Sir G. Campbell's health unfortunately prevented him from going. His Excellency the Viceroy, therefore, with the full concurrence of Sir G. Campbell, deputed our honourable colleague Sir R. Temple to perform this duty. Sir R. Temple's appointment was accordingly notified in a Gazette Extraordinary of the 21st of January, which was sent home to your Lordship's predecessor in our Despatch No. 6 of the 23rd of January.

25. The exertions made by Sir Richard Temple deserve our warmest thanks. In a very short space of time a transport service on an enormous scale has been organized. On the 26th February Sir Richard Temple reported that arrangements had been made to employ 70,000 carts and over 150,000 bullocks north of the Ganges, and that about 50,000 carts were already at work. Although the number which it has been found possible to obtain has in some parts fallen short of what was expected, at the same time these figures will be sufficient to show your Lordship the scale on which operations have been undertaken. The supplies for Tirhoot and Chumparun, in which districts the worst distress is anticipated, are mainly drawn from the Patna and Barrh stations. From Bunker Ghât, which is a depôt on the north bank of the Ganges near Patna, three million maunds of grain are to be despatched before the commencement of the rains. We are glad to state that the contract for supplying the requisite amount of transport is working very well, and much credit is due both to the contractors and to the Government officers who are superintending the arrangements. About 20,000 maunds a day are being despatched from Bunker Ghât to Chumparun and Western Tirhoot.

26. We regret to say that the contract for sending 1,800,000 maunds of grain from Chumpta Ghât, which is the depôt on the river opposite Barrh station, into Western Tirhoot is not working so satisfactorily, but every effort is being made by Sir George Campbell, who is on the spot, to provide adequate means of transport. In the meanwhile the Railway from Chumpta Ghât to Durbhunga is progressing rapidly towards completion.

III.—Actual Condition of the People.

Enclosure No. 3. See page 170.

27. The narrative of the Lieutenant-Governor of Bengal and the district reports give full information as to the actual condition of the people and the progress of the measures which have been adopted to alleviate distress. For convenience of reference we append to this despatch a summary of the last district reports. From a careful perusal of these reports we gather that the condition of affairs is this: In South Behar, about which some anxiety was originally felt, it is now clear that distress will not be nearly so great as was at first anticipated. Actual distress, more or less severe, exists in parts of North Behar. For instance, in the Ramnugger tract of Chumparun it is reported that—

> " during the last few days there is a marked change for the worse in the condition of the people throughout a large part of the sub-division."

Generally speaking, it may be said that distress where it has arisen has been relieved. There is, however, one exception to this generally satisfactory condition of things. Shortly after the publication of the last narrative, accounts from Durbhunga became alarming, and Sir George Campbell thought it best to proceed at once to the spot himself. From the report contained in his special narrative which we forward to your Lordship to-day, it appears that, on His Honour's arrival, he found that famine of considerable severity had set in through the tracts about Bahera, Hatee, and Singhya in the Durbhunga sub-division. The people were flocking to the relief works in enormous numbers. The organization for the relief of distress was not in a sufficiently forward condition. Many of the poorest labouring classes had become pinched, and a few of the most wretched had reached the point of starvation. Only three or four actual deaths are recorded, but it is feared that directly or indirectly more may have occurred, of which we have no full information. Since His Honour's arrival he has been most active; the local organization has been much improved; village-to-village relief in detail is being arranged; every endeavour is being made to draft off to their homes the large numbers who have congregated on the relief works, and, as far as we can judge, we think that His Honour is justified in reporting that " widely-spreading want has been stayed."

28. While we must repeat the expression of our disappointment * that the preparations in this limited tract were not earlier completed, we fully appreciate the great difficulties with which the Lieutenant-Governor of Bengal and the local officers have had to contend. We feel certain that all are now exerting themselves to the utmost, and it would be unreasonable to expect complete success everywhere in an undertaking of such great difficulty and magnitude.

*Despatch No. 11 of February 13th, 1874. (See Part I., page 209.)

29. It will be our duty, as soon as the measures immediately necessary for transport and relief have been completed, to obtain full and accurate information as to the means of communication which will remain open during the rainy season to those parts of the country where there may be a deficiency in the supply of food, in order that we may be prepared, if necessary, to increase the supplies. We shall also shortly endeavour to communicate to your Lordship the best comparative statement that we can compile to show the general prospects of the country in respect to food-supplies in this year and in the year 1866.

We have the honour to be,
My Lord Marquis,
Your Lordship's most obedient humble Servants,
(Signed) NORTHBROOK.
" NAPIER OF MAGDALA.
" B. H. ELLIS.
" H. W. NORMAN.
" A. HOBHOUSE.
" E. C. BAYLEY.

Enclosure No. 2.

Memorandum showing the estimated number of persons likely to require relief and the provision which has been made for them.

I.—DISTRICTS IN WHICH THE MOST SEVERE DISTRESS IS ANTICIPATED.

1.—*Tirhoot.*

The number of persons who will require relief from Government is estimated to be—

1,000,000 for 120 days.
500,000 „ 60 „
250,000 „ 90 „

These will require 3,234,375 maunds. Provision has been made for 4,200,000 maunds.

2.—*Sarun.*

It is estimated that 200,000 persons may come upon the hands of Government for from 3½ to 7 months. 500,000 maunds have been allotted to the district, which is a full supply for 4½ months. In addition to the above, the Manager of the Hutwa estates has arranged for 180,000 maunds, being a full supply for the population on those estates (80,000 persons) for four months.

3.—*Chumparun.*

The estimate for the number of persons who will be upon the hands of Government is as follows:—

316,000 for 90 days.
237,000 „ 60 „
158,000 „ 30 „
79,000 „ 60 „

For these 977,625 maunds will be required. Provision has been made for 1,000,000 maunds. The Manager of the Bettiah estates has, in addition, arranged to import 150,000 maunds.

4.—*Bhaugulpore.*

The estimate for Bhaugulpore is as follows:—

274,650 for 105 days.
137,325 „ 60 „
68,612 „ 30 „

These would require 733,829 maunds. The estimate of Mr. Barlow, the Commissioner, is considerably less than this. Sir R. Temple thinks that it will be sufficient to make provision for 730,000 maunds.

5.—*Purneah.*

The number of persons who it is estimated will require relief in Purneah is shown in the following table:—

Thannahs.	Total Population.	Estimated percentage of population who will require relief.	Estimated numbers who will have to be relieved.
Kusbah Amour - -	114,177	30 per cent. -	34,242
Bulrampoor - - -	115,961	Ditto -	34,788
Kudbah - - -	134,158	Ditto -	40,245
Bahadurgunge - - -	173,511	15 per cent. -	26,026
Kissengunge - - -	144,164	Ditto -	21,624
Purneah - - - -	148,619	Ditto -	22,292
⅓rd of Arrareah - -	60,947	Ditto -	9,142
Total - -	891,507		188,359
Remainder of District -	- - -	- - -	50,000
			238,359

It is estimated that the above numbers will require food for 4½ months. This would amount to 603,361 maunds. Provision has been made for 650,000 maunds.

6.—*Dinagepore.*

The following table shows the estimate of the number of persons who will require to be relieved in Dinagepore:—

Thaunahs.	Population.	Estimated number of persons who will require relief.
Ghoraghat - - -	16,925	251,700 or 60 per cent. of the total population.
Ranee Sunkal - -	78,696	
Pateeram - - -	66,866	
Gungarampore - - -	75,196	
Kalliagunge - - -	94,728	
Hemtabad - - -	87,089	
Rajarampore - - -	197,106	174,830 or 30 per cent. of the total population.
Bungsihari - - -	78,288	
Putneetola - - -	122,700	
Porsha - - -	48,803	
Nawabgunge - - -	46,573	
Peergunge - - -	89,296	
Total - -	1,002,200	426,530

It is estimated that—

				Maunds.
All of these will require to be fed for		3 months	- - -	=719,730
One-half or 213,265	ditto	2 „	- - - - -	=239,910
One-quarter or 106,632	ditto	2 „	- - -	=119,955
		Total	- - -	1,079,595

Provision has been made for 1,200,000, leaving a margin of 120,405 maunds.

7.—*Rungpore.*

The following table shows the estimate for Rungpore:—

Names of Thaunahs.	Population.	Proportion expected to need assistance from Government.	Number of persons to be provided for.
Mygunge - - - - -	123,000	20 per cent. - -	24,600
Molunga - - - -	255,000	15 „ - - -	38,250
Peergunge - - - - -			
Chilmaree - - - -			
Sadoollapore - - - - -	120,000	10 „ - -	12,000
Gobindgunge - - -	163,000	50 „ of 18,000 - 5 „ of remainder	9,000 8,150
Burobaree - - - - -	508,000	5 „ - - -	25,400
Nisbutgunge - - -			
Koergunge - - - -			
Durwanee - - - -			
Oleepore - - - - -	425,000	No per-centage calculated, as only a small number are likely to be affected.	10,000
Nagessuree - - - -			
Total - - -	1,594,000	—	127,400

It is estimated that the whole of the above number will be required to be supplied for two months; one-half or 63,700 for two months, and one-fourth or 31,850 for two months; 268,664 maunds of grain will therefore be required. Provision has been made for 300,000 maunds.

SUMMARY OF THE FOREGOING.

District.	Total population of District.	Estimated number of persons who will require relief at the worst period.	Time in months.	Food required.	Food for which provision has been made.
				Maunds.	Maunds.
Tirhoot - -	4,400,000	1,000,000	All for 4 ½ „ 2 ¼ „ 3	3,234,375	4,200,000
Sarun - - -	2,064,000	280,000	3½ to 7	680,000	680,000
Chumparun - -	1,441,000	316,000	All for 3 ¾ „ 2 ½ „ 1 ¼ „ 2	977,625	1,150,000
Bhaugulpore - -	1,826,000	274,650	All for 3½ ½ „ 2 ¼ „ 1.	733,829	730,000
Purneah - -	1,715,000	238,359	All for 4½	603,361	650,000
Dinagepore - -	1,502,000	426,530	All for 3 ½ „ 2 ¼ „ 2	1,079,595	1,200,000
Rungpore - -	2,150,000	127,400	All for 2 ½ „ 2 ¼ „ 2	268,664	300,000
Total -	15,098,000	2,662,939	—	7,577,449	8,910,000

II.—DISTRICTS IN WHICH DISTRESS OF A LESS SEVERE NATURE IS ANTICIPATED.

1.—*Bogra.*

The following table shows the estimate for Bogra:—

Thannah.	Population.	Estimated numbers who will require relief at the worst period.
Khettal Bogra - - -	258,123	77,500
Seebgunj Badalgachee Panchbeebee Sherepore - - - -	175,243	35,000
Total - -	433,366	112,500

Of these it is estimated that—

	Maunds.
The whole (112,500) will require food for 2 months - -	126,562
One-half or 56,250 „ 2 „ - - - -	63,281
One-fourth or 28,125 „ 3 „ - - -	47,461
	337,304
Provision has been made for - - - - - -	240,000

2.—*Remaining districts.*

For the remaining districts detailed estimates have not been received, but the following allotments have been made:—

	Maunds.
Patna - - - - - - - -	60,000
Gya - - - - - - - - -	200,000
Shahabad - - - - - - - -	70,000
Soane Canal Works - - - - - -	170,000
Monghyr - - - - - - - - -	300,000
Rajshahye - - - - - - - -	100,000
Maldah - - - - - - - - -	150,000
Northern Bengal Railway - - - - -	200,000
Sonthal Pergunnahs - - - - - - -	135,000
Total - - -	1,385,000

III.—TOTAL AMOUNT OF GRAIN FOR WHICH PROVISION HAS BEEN MADE.

The total quantity of grain required is therefore—

	Maunds.
For the very distressed districts - - - - - -	7,577,449
For the remaining districts - - - - - - -	1,622,304
Total - - -	9,199,753
Or Tons - - -	338,226

The amount of grain allotted is as follows—

	Maunds.
To the very distressed districts - - - - - -	8,910,000
To the remaining districts - - - - - - -	1,625,000
Total - - -	10,535,000
Or Tons - - -	387,316

The reserve allotted amounts, therefore, to 387,316—338,226=49,090 tons.

The total amount of Government grain ordered is 465,255 tons, including 12,355 tons which is to be imported by the Rajah of Bettiah into Chumparun and by the Manager of the Hutwa Estates into Sarun.

The unallotted reserve is, therefore, 465,255—387,316=77,939 tons, and the total reserve is—

	Tons.
Allotted to distressed districts - - - - - -	49,090
Unallotted - - - - - - - -	77,939
	127,029

It is to be observed (1) that all the above calculations are based upon a daily ration of ¾ of a seer, or 1½ lb. of grain, all round, men, women, and children, which is a high average; and (2) that no credit has been taken for any grain imported by private persons who have received advances from Government for that purpose, with the exception of the Hutwa and Bettiah Rajahs.

A. HOWELL,
Depy. Secy. to the Govt. of India,
Department of Revenue, Agriculture, and Commerce.

March 20th, 1874.

Enclosure No. 3.

SUMMARY OF DISTRICT NARRATIVES FOR THE FORTNIGHT ENDING MARCH 19TH, 1874.

PATNA DIVISION.

1.—PATNA DISTRICT.

(Report, dated March 8th).

A.—State of the country.

THE several bazaars at head-quarters and in the interior of the district continue to be well supplied with grain of all sorts, and the harvesting of the spring crops, which is now going on generally throughout the district, has largely supplemented the supplies brought from other places. Judging from the large importations daily being made by private traders, the Collector has no doubt whatever that the supply will be quite equal to the demand, provided that trade is allowed to take its own course, and that Government does not step in and become a purchaser from the local markets.

The reports of the spring crops are very good.

No cases of misery or starvation have been brought to light. After visiting nearly all the local works in progress, the Collector reports that he has not seen a single case of distress or a single man, woman, or child employed on them who could not give a fair day's work for a fair day's wages, provided they were willing to do so.

The number of cases of robbery, theft, and house-breaking last February was 239 as against 167 in February 1873.

B.—Relief works.

The average daily number of labourers employed on relief works throughout the district in the past fortnight was 6,529 as against 6,956 in the previous fortnight. The Collector accounts for this falling off from the fact that the labourers are now finding plenty of work in the fields, and that he has stopped work in some of the localities where it was evident that there was no demand for labour.

C.—Transport of food.

A large amount of grain has been transported into the Patna district, but as the greater portion of it is in transit to other districts it will be accounted for hereafter.

D.—Storage of Government grain.

Out of 60,000 maunds allotted to the Patna district, 58,822 maunds have been received, and 53,088 have reached their final destination.

E.—Advances to private parties.

No advances have been made during the past fortnight either for the purchase of grain or for agricultural improvements. Rs. 30,000 were advanced to three leading zemindars in the previous fortnight. The Collector accounts for the cessation of applications for advances from the fact that those who have already made purchases find it difficult to sell what they have got owing to the abundance of the spring crop which is now being reaped.

F.—Charitable relief.

No gratuitous relief has as yet been found necessary in this district.

2.—GYA DISTRICT.

(Report dated March 9th.)

A.—State of the country.

THE bazaars continue to be well supplied. There is no dearth of food, although quoted prices are exceptionally high.

The late rains have done much good to the spring crops. All the sub-divisional officers are unanimous in pronouncing the crops excellent. The road works are deserted in order to secure the harvest. The Collector reports that "the state of things is everything that can be desired. "The price of food has fallen in most places. * * * The condition of the people still "continues good, and may be expected to remain so for another month, that is until the rubbee "is harvested."

It has been found necessary to afford some minor relief to the class of professional beggars, who, from high prices, are unable to get sufficient from begging.

There have been no cases of ascertained misery or starvation.

There were 504 cases of robbery, thefts, and house-breaking, and 95 cases of grain-thefts last February as against 209 cases of robbery, &c., and 25 cases of grain-thefts in February 1873.

B.—Relief works.

The daily average of persons employed on the roads in the past fortnight was 843.

C.—Transport of food.

Private importations in the past fortnight amounted to 7,625 maunds as against 5,105 maunds in the previous fortnight. The means of transport are reported to be sufficient.

D.—Storage of Government grain.

21 store centres have been selected and 126,811 maunds stored, leaving about 73,000 maunds to complete the full allotment of 200,000 maunds for the district.

E.—Advances to private parties.

In the past fortnight about Rs. 1,200 were advanced for the purchase of grain; Rs. 2,154 were advanced for land improvements as against Rs. 3,776 in the previous fortnight.

F.—Charitable relief.

162 professional beggars have received charitable relief.

3.—SHAHABAD DISTRICT.

(Report dated March 10th.)

A.—State of the country.

THE supplies in the principal marts are reported to be sufficient. Grain is being largely imported by rail. There has been a very perceptible fall in prices.

Favourable reports have been received of the spring crops in the Arrah, Buxar, and Sasseram sub-divisions. In the Bhubhooa sub-division, except in a small portion which is irrigated, the crop is below the average. Frost has done some harm to peas and pulse.

The condition of the labouring and agricultural classes is improved. Pressure is being felt by those who subsist entirely on charity, and who from bodily infirmity are incapable of labour. Arrangements have been made to relieve all such cases. No known cases of starvation have been reported.

There has been no remarkable increase in the number of grain-thefts and robberies.

B.—Relief works.

The average daily number of persons employed on relief works was 1,279, of whom 483 were women and children.

C.—Transport of food.

Grain has been imported in considerable quantities by local traders. No inconvenience is at present experienced in finding transport, which is said to be sufficient for all present requirements, both of the Government and private importers. The Collector expresses some anxiety lest the transport available in the district should be drawn off to the tracts north of the Ganges.

D.—Storage of Government grain.

There are 9 central depôts for the storage of grain. In these depôts 22,010 maunds have been stored.

E.—Advances to private parties.

No advances were made for the purchase of grain during the past fortnight. Applications aggregating Rs. 4,600 were received and are under consideration. A few applications for advances for land improvements were also made.

F.—Charitable relief.

No actual relief operations have commenced beyond giving assistance to a few people here and there who were reported as requiring aid. A District Committee has been formed and a Sub-divisional Committee for each of the sub-divisions of Arrah, Sasseram, Buxar, and Bhubhooa. Nine Sub-Committees have been appointed in the Arrah sub-division and 10 in the Sasseram sub-division. Arrangements are being made to form Sub-Committees in the other two sub-divisions.

4.—TIRHOOT DISTRICT, NORTHERN DIVISION.

(Report, dated March 7th.)

A.—State of the country.

IN the Seetamurhee sub-division the supply of food-grains has been nowhere scarce except in one thannah. Prices have a tendency to rise. The sale of Government grain has commenced.

In the Modhubunee sub-division prices have slightly fallen at some of the marts. In the Durbhunga sub-division the supply of food-grains still continues to be sufficient, but in Bahera and Singhya rice is not procurable, and other food-grains are steadily increasing in price. *Kurthee*, a grain rarely eaten by the people in ordinary years, is now one of the commonest articles exposed for sale in Bahera. The sub-divisional officer reports that in the Bahera bazar he saw a bunniah who had just exchanged a seer of kurthee for 1½ seers of mustard seed, or, in other words, for nearly three times its value. This, though an isolated case, is believed to be a fair illustration of the recklessness to which cultivators are driven for the want of food.

On the subject of stocks, the sub-divisional officer of Modhubunee is of opinion that no great stock of grain is in the hands of the traders. In Durbhunga the sub-divisional officer thinks that there is still grain in the country, but the Collector, Mr. Worsley, reports that the people are flocking to the relief works, and that they all say that there is no grain in the villages. At the same time a large number of labourers employed on the Durbhunga an Bahera road have hitherto been supplied with facility from the stores in Durbhunga, and the Collector accounts for this by supposing that the bunniahs, being aware of the immense quantity of grain that Government is importing, are anxious to sell all they can at the highest possible rate, that is to say, at a slightly lower rate than that of Government grain.

In the Seetamurhee sub-division the reports of the spring crops are fairly good. Reports from Modhubunee and Durbhunga as to the yield of the spring crops are bad.

The Seetamurhee sub-divisional officer mentions several cases of severe distress which have come under his notice, and which have been relieved. In the southern portion of Jalleh thannah the labourers on the relief works are described as being "all thin and half-starved." In the south-eastern part of the sub-division the people are said to be "in the worst state possible." Sufficient employment has been provided for the lower classes, but until relief circles are formed, adequate arrangement cannot be made for the relief of high-caste families. Successful efforts have been made to introduce cotton spinning and other light domestic work against this class of persons.

The Modhubunee officer reports that the people are much straitened, and have turned out in very large numbers on the relief works, but no cases of actual starvation had come under his notice.

The Durbhunga officer reports that "many of the lowest castes are suffering from actual "famine. Want shows itself most in the young and aged, and during my late tour I have seen "old men and young children in a very precarious condition indeed. Of course all such cases "were at once put under gratuitous charitable relief." Three cases of starvation have occurred viz., two on the Bahera relief works, the deceased being children in arms, and the third of a man of about 60 years of age on the Durbhunga road relief work.

The number of cases of dacoity, &c. in last February was 212 as against 68 in the corresponding month of last year.

B.—Relief works.

The total number of labourers employed daily on relief works in the three sub-divisions is as follows:—

Seetamurhee - - - - - -	22,456
Modhubunee - - - - -	31,000
Durbhunga - - - - - -	48,284
Total - -	101,740

The arrangements for paying the large number of labourers on the Durbhunga-Bahera road were at first very defective. The Collector reports as follows:—"The effect of regular and full "payments on this work has been to attract from the eastern end of the road (12 miles distance) "and from other works in the south-east, large numbers of labourers who must have shortly "been reduced to a state of starvation through the large retrenchments made from their wages. "I have spoken to several of these new comers, and find that they had been regularly defrauded "of one-third of their subsistence wages. This fact fully explains what Mr. Macdonnell noticed "a week ago at Bahera, viz., that all the labourers (some 2,000) at the end of the road were so "weak and emaciated as to be almost incapable of doing work at all. On visiting the road this "morning I was much pleased to observe the healthy tone and spirit of the labourers. Though "there is a very great deficiency of tools, all the labourers, old and young, were working with "some sort of implement, and apparently with a will. Up to a week ago the work has been "neither more nor less than charitable relief on a huge scale and in the worst form. Large "sums of Government money were being embezzled by the distributing agency; wages of some "sort were paid to all who asked for them, and most demoralizing habits were being rapidly "engendered amongst thousands of persons with whom we should have to deal for many months. "For some days now I have not received a single complaint from any labourer on this work. I "have also noticed a marked improvement in their general appearance." Regular payment of the labourers on this road has now been secured. An English engineer and a large staff took over charge of the road on the 5th of March.

C.—Transport of food.

The details in connection with the transport of food to this sub-division will be found in Sir Richard Temple's Minute, No. 35, of the 26th February* appended to the twelfth Special Narrative. The large contract for supplying the Durbhunga and Modhubunee sub-divisions with 18 lakhs of maunds from Barrh has not been working well. The Company which undertook the work were not able to convey one lakh in 17 days, or to secure more than 17,000 carts.

The Railway from Chumpta Ghât opposite Barrh to Durbhunga is progressing rapidly.

Large quantities of fodder have been stacked along the lines of transport.

D.—Storage of grain.

The quantity of Government grain stored is as follows:—

	Maunds.
Seetamurhee - - - - - - - -	152,393
Modhubunee - - - - - - - - - -	80,705
Durbhunga - - - - - - - - -	50,940
Total - - -	284,038

Nineteen relief circles have been established in Seetamurhee, 11 in Modhubunee, and 12 in Durbhunga. Each circle contains several places where grain is stored.

E.—Advances to private parties.

In Seetamurhee during the past fortnight Rs. 3,166 have been advanced for land improvements and for the construction of wells; Rs. 500 to grain-dealers for the purchase of grain, and Rs. 11,575 to zemindars to help their ryots.

In Modhubunee Rs. 920 have been advanced for land improvements.

In Durbhunga applications have been received for advances for importing grain to the amount of Rs. 8,000, which are under consideration.

F.—Charitable relief.

In the Seetamurhee sub-division the number of persons receiving charitable relief at the date of the last report was about 2,000. The state of these persons is reported to be so bad that "they would die if not regularly fed."

The sub-divisional officer at Modhubunee reports that "charitable relief at present is "restricted to issuing cooked rice at head-quarters and most of the thannahs and other "centres."

---

* See Part II., page 164.

The sub-divisional officer of Durbhunga writes—"The system of relief which we are now carrying out, and which has been in its main features originated by Sir Richard Temple, differs radically from all systems which previous famines brought into operation. The key-note of our system is the prevention of the assemblage at any centre of large masses of indigent persons, and the establishment in every village of relief operations, bringing to the doors of those able to work remunerative labour, and to the doors of those unable to work gratuitous relief.

"To this end Sir Richard divided the sub-division into two relief sub-divisions (allowing, however, the controlling influence of the sub-divisional officer to remain), and re-divided these again into 12 circles, and promised for each circle a competent administrative officer, of whom, however, I with regret remark in passing, only three have arrived.

"The system you have for this sub-division approved of is the following:—

'Premising that it was necessary to connect the Circle Superintendents or sub-committee officers with the people, it was evident that the circle should be sub-divided to such a manageable extent as to permit of the relief officer being, if not in all cases personally acquainted with the general condition of each group, at all events vicariously acquainted with the intimate state of every village. Therefore the circle was sub-divided into as many village groups as would allow of one subordinate officer visiting daily, or at most once every two days, each village in the group. The maximum number of *whole* villages, which with this object in view could be safely included in a group, was fixed at ten. As inspector and executive officer under the Superintendent for each group, an educated respectable resident is chosen, it being a most desirable thing that in the relief operations local knowledge should be, if possible, utilised. To aid the Inspectors so appointed in procuring information, bringing relief where wanted, and supervising village relief works, two peons are attached to the Inspector, and the chowkidars in each village in the group are also to report to the Inspector the state of their villages daily. The Inspector is to submit daily to the Superintendent a statement under prescribed headings, showing the condition of the group under him. He is to see that sufficient work is provided for the storing, and that fit subjects for charitable relief are not denied it. He is to give orders on the storekeeper for raw materials, and is to see that the manufactured product is duly paid for by the storekeeper, and is to be responsible for the due expenditure of the money allotted for village relief work. This completes the intelligence and executive department in which I have striven to utilise as much as possible local knowledge and neighbourly feeling.'

"It would be manifestly useless to know where distress lay, if we had not at hand the means to alleviate it. We had, therefore, to bring home to each group of villages remunerative labour for the strong, and gratuitous charitable relief for the weak.

"This we did by opening, in a conveniently situated village of the group, a relief work, such as excavation of a tank, calculated to employ the people and benefit them in addition. We also established in each group of villages a local grain store, drawing its supplies from the circle depôt, at which the village labourers might procure food with the wages of their labour. Attached to this store is a depôt where cotton may be obtained by respectable females in indigent circumstances desirous of supporting themselves; and in charge of this local grain store is a mohurir, whose duty it is to keep a few simple forms and make necessary returns to the Superintendent, see that grain is sold to labourers and distributed to those on gratuitous relief. As a matter of detail, I may mention that this local grain store, when established in a group in which there is a depôt, is entrusted to a bunniah, the depôt-keeper in this case making returns. In all other cases the mohurir has a bunniah under him to sell. A peon is attached to the store.

"This is the outline of the system. Now I give you an example of its working. Being anxious to give Messrs. Marindin and Harris a clearer conception of their duty than any verbal explanation could give, I went with them to Bahera and formed a group round Bahera. On entering each village in the group we had all the poor collected. Those unable to work we at once put on gratuitous relief, subsequently forming a register of such, showing the number on the register of each, his name, residence, and quantity of gratuitous relief he was entitled to. and giving him a ticket with these particulars inscribed on it, and directing him to present it at the local store weekly, where the storekeeper, having a duplicate of the register, would dispense the requisite relief. Having done this, we proceeded to determine what village relief works might, with due regard to the wants of the people and the propinquity of imperial works, be commenced, and the village agency to work them. Having settled this point we proceeded to find out the number of females who were desirous of spinning cotton and issued orders accordingly. Having seen all the village headmen and respectable residents, we finally appointed an Inspector, fixed on a local rice store, and, in the case of this circle, appointed a bunniah to the charge of it.

"In reducing our theory in this case to action, we experienced no material obstacles, but it would be unwise to conclude from this that we shall meet with none; we shall often find a group in which no resident is fit for Inspector; then we shall not hesitate to employ outsiders.

"It may be objected to the scheme that we cannot under it permit persons not on the works, but having money, to buy grain, and that the Inspector cannot also be paymaster. I do not think the former objection of any weight, for those who wish to buy our grain at the fixed rates in small quantities *bonâ fide* for food should certainly be allowed to do so, for the presumption then is they cannot get food elsewhere.

"On the latter point we are at present utilising the Jeyt ryots; but if this does not suit, we are at liberty to employ paid agency.

"I will now, having given you the system in its entirety, state more specially what has been done during the fortnight in the way of charitable relief. I have already mentioned that, in constituting the group of villages around Bahera, we put on charitable relief all we saw in need.

We also visited the relief work going on near Bahera, believing that on it might be some inhabitants of those villages and others in similar condition. We drafted all such persons, and put them on charitable relief. We have commenced the same system in Durbhunga with reference to the poor on the enormous relief work here, and have opened a relief house for such until our measures are complete for sending them on to their homes. But it is evident that these are merely unsystematic attempts, as far as Durbhunga is concerned, to relieve a continuous and enormously increasing pressure. Without our Circle Superintendents being at their posts, and village works open to divert the tide, those efforts can be only very partially successful. Caste prejudice, too, seems, as you told me, cropping up in a way which militates against the success of those efforts.

"In times like these I do not wish to record anything needlessly alarmist, but I feel bound to say, what from my previous reports may be deduced, that the Superintendents' arrival has been too long protracted up to date. I have only three men at work—Mr. Henry in Durbhunga, Mr. Marindin in Desouta, Mr. Harris at Hattee. Mr. Aickman has just left for his post. Since writing the above, Mr. Paul has joined and been sent to Mahomedpore. It is my belief that every day henceforth which sees the Singhya and remaining Bahera circles, and the Mahomedpore and, perhaps, Hyaghat circles without their Superintendents, must bring forth fatal consequences.

"In concluding this portion of my report I have only to add that the instructions given by Sir Richard Temple with reference to Durbhunga town are being systematically carried out by Mr. Henry, who is, I may be permitted to say, working very zealously and creditably.

"Appended to this report is a copy of instructions I drew out for Mr. Henry's guidance. They are the same as those which guide the conduct of other Superintendents, with the exception of some necessary modifications. Mr. Henry has had already made out the general register of poor, and is now engaged in testing it. I hope before next report the system will be in full operation. In Durbhunga, unlike the eastern parts of the division, we are still a-head of famine."

Sir George Campbell has visited Northern Tirhoot in person. His report is as follows:—

Condition of the people.

"The only tracts in which the condition of the people is clearly getting worse, and in which there is at present actual famine, are the three north-east sub-divisions of Tirhoot (with a population of two millions), and a comparatively small tract of North Chumparun, with a population of about 300,000.

Tirhoot, the Lieutenant-Governor's visit.

"The last Narrative will have shown that there was cause for uneasiness about the state of parts of North Tirhoot. Immediately after the despatch of that Narrative the accounts from Durbhunga became still more alarming; there seemed reason to believe that there had been a considerable outbreak of famine there. Under these circumstonces the Lieutenant-Governor thought it right himself to proceed to the spot in order to satisfy himself of the state of things, and to do all that he could to assist in dealing with the calamity. He was the more anxious to do this as so much has now been trusted to local officers on the spot, and Mr. Metcalfe, the new Relief Commissioner, specially charged with the relief of North Tirhoot, was proceeding to take up his duties, while Mr. Bayley, the Commissioner of the Division, was at hand. The Lieutenant-Governor was thus able to meet these officers on the spot where the greatest want had arisen to concert with them the necessary measures, and to see Mr. Metcalfe fairly started in his task.

Condition of affairs in Durbhunga.

"On the Lieutenant-Governor's arrival he found there could be no doubt that famine of considerable severity had set in through the tracts about Bahera, Hathee, and Singhya in the Durbhunga sub-division, east and south-east of Durbhunga. The people were flocking to the relief works in enormous numbers. Voluntary agency was unfortunately not forthcoming so freely in Durbhunga as in most other parts, and it had not been found possible to organise local labour arrangements so rapidly. The lower classes of this part of Behar are a most miserable and timid people, most difficult to move. At first none will come to anything new. When they begin to come they come with a rush like a great flock of sheep. It was necessary to offer work for long, and search them out before they could be got to it. A very full and complete Government organization was being gradually elaborated, but unhappily we are always liable to surprise among such a people, and in a limited tract it proved that some of the poorer classes had begun to starve before that organization was in full operation. There was no dearth of supplies in the country; they were forthcoming at a dear rate, and the population at large was was not seriously affected, but many of the poorest of the labouring classes had become much pinched, and a few of the most wretched had reached the point of starvation. The character of the distress and of the population were both such that the free use of relief works is, more than anything, effective. These were very rapidly extended and very indulgently managed, all comers being admitted, even though their work was little more than nominal. It is believed that by this means widely-spreading want has been stayed. Meantime, special care is given to those who have starved or nearly starved; they are well supplied with food and necessaries. The arrangements for village-to-village relief in detail, already in progress, are pressed on as fast as possible. At this season the population who are on the works do not suffer from exposure, and all who are not much reduced seem almost happy and contented there, so much so that it may be difficult to get them home again.

Popularity of the relief works.

"The Lieutenant-Governor went through 49,000 people employed on the largest works extending over several miles; many of them were very miserable; but the only loud complaint and strong appeal to him which he encountered was from a large group of families collected together, who seemed the most reduced and miserable of all. When he came to inquire into their grievances it turned out that they had been selected by Mr. Metcalfe as quite unfit for work, and were to be taken in and specially cared for. With loud wailings they protested against such treatment, and only prayed to be allowed to remain on the works. It is impossible to save the lives of many reduced children, because the parents will not come to our relief-houses until sheer force is used, and that might create a panic. Except, however, these very reduced cases the works suffice for the present.

"Though wages are low and food dear, the indulgence which allows whole families to come on the works and receive payment makes them very popular and enables the people to subsist. Women and children are much more numerous than men. It is, however, impossible to continue long to allow the numbers collected together to increase, and all efforts are now given to deal with the needy in detail. Some progress had already (17th March) been made in sifting the immense masses of people on the largest works; the able-bodied, who prefer good wages, are being kept on considerable works where a stricter system can be enforced; the less able villagers, and those who are better at their homes, are being sent to petty village works, and those unfit for any work are being put on charitable relief. Commencement is also made of dealing with cultivators by advances.

Charitable relief organization.

"The Lieutenant-Governor, the Commissioners and their officers, have occupied themselves in carrying out the details of these arrangements under the general rules already laid down. A large European agency had been arranged for, but the Lieutenant-Governor found the native agency to be deficient. He has directed every effort to call out and use the village agency which the country affords, to stimulate the landholders and their agents to get such paid native agency as the country affords. But superior native agency is not available. The population being Hindustanee, and more allied to the people of the North-Western Provinces than to those of Bengal, the Lieutenant-Governor appealed to the Lieutenant-Governor of the North-Western Provinces for aid. That appeal was promptly responded to, and a number of selected native officers have been sent down by Sir W. Muir; they will be of the greatest use. Some good Bengalee officers and some Bengalees selected by the Commissioners of the Presidency and Burdwan Divisions have also been sent to assist in the work. The native officers will be especially useful in many circles; and in some circles where civil servants of limited experience of the country are in charge native coadjutors will be invaluable, especially in dealing with that most difficult but most important part of our operations—the advance of money and grain to respectable cultivators, whom assistance may enable to tide over the period of distress.

General result of operations in Tirhoot.

"The Lieutenant-Governor has visited both several parts of the very populous Durbhunga sub-division and parts of the two other specially distressed sub-divisions of Tirhoot, Seetamurhee, and Modhubunee. In one part of Modhubunee there seems to be some cause of apprehension, but the sub-divisional officer is going to the spot, and it is hoped that danger will be obviated. The Lieutenant-Governor has been happy to find a concurrence of official and non-official testimony (confirmed so far as he has seen by his own observation) that in these two sub-divisions, as well as in the greater part of the Durbhunga sub-division, the want which was certainly coming very rapidly on the people has been met and stayed. The means were found of managing relief works and giving aid in a rough way wherever it was most necessary, pending the completion of a more perfect organisation. Everywhere there is a great resort to the relief works. Everywhere other forms of relief are rapidly progressing, and the result has been to save the people from starvation. The Lieutenant-Governor trusts he may believe that it is only in the comparatively limited tracts above alluded to that actual starvation has been reached, and that in those tracts it is now stayed. Only three or four deaths are recorded as actually due to starvation: it may be feared that directly or indirectly a few more may have suffered, of whom we have no full information; but it is believed that everything possible has been done to arrest the evil, and that with the help of God we shall succeed."

TIRHOOT DISTRICT (SOUTHERN DIVISION.)

(Report, dated March 10th.)

A.—State of the country.

In the Hajeepore sub-division it is reported that no scarcity exists in any of the local marts.

In the Mozufferpore sub-division the price of rice is from 9½ to 10 seers the rupee. Grain is said to be still procurable in small quantities at a time in all the local marts. In the Tajpore sub-division common rice has slightly risen in price during the fortnight, but there is no scarcity yet in the bazar.

The spring crops are estimated to give a fair yield. The report from Tajpore says, "Now " that we have got the rubbee harvest, with a coarser grain still procurable in the market at " rates which do not put them beyond reach of the poor, the condition of the people is more " encouraging; still June, July, and August must be terrible months to many."

In the Mozufferpore sub-division it is said that "distress is daily becoming more marked." Arrangements for village relief and inspection are in progress, and the sub-division has been divided into eight circles. The Deputy Collector believes that "no deaths have occurred " attributable *solely* to starvation."

In the Tajpore sub-division many are reported to be dependent and miserable. In the Hajeepore sub-division "there appears to be no prospect of destitution or starvation."

The number of cases of dacoity, &c., in the month of February 1874 was 166 as compared to 85 in the corresponding month of last year.

B.—Relief works.

The average daily number of persons employed on relief works, as far as known, was, according to the last returns, 9,314, but, owing to many relief works being under planters and others, who have not sent in returns, this figure is probably considerably below the truth.

C.—Transport of food.

The large contract for supplying food to Northern and Western Tirhoot from Bunker Ghât, opposite Hajeepore, is working very well. In the week ending the 4th March, 138,523 maunds of Government grain were sent away for Chumparun and Tirhoot. On an average 20,000 maunds are sent daily. The Deputy Collector reports, "the transport of grain from the three " depôts of Conti, Russulpore, and Ather in the Sudder (Mozufferpore) sub-division to depôts in " Seetamurhee is going on very satisfactorily. Sufficient carts are available; no delay occurs " in loading or unloading; the bullocks appear strong and in good condition; the roads are kept " in as fair order as is possible for the immense traffic upon them." Private importations are still continuing into Hajeepore from Patna in small quantities; but now that almost all the local means of transport have been absorbed by Government, it is not to be expected that any large quantity of private importations can be made.

D.—Storage of Government grain.

The quantity of Government grain stored is as follows:—

	Maunds.
Hajeepore - - - -	5,179
Tajpore - - - -	18,467
Sudder - - - -	38,601
Total - -	62,247

E.—Advances to private parties.

In the Sudder sub-division 8,000 rupees have been advanced for the purchase of grain, besides some small advances in the other sub-divisions.

F.—Charitable relief.

In the Sudder sub-division one district committee and three sub-committees have been appointed. No special relief sub-divisions have been opened. The sub-division has been divided into eight circles for the purpose of visitation and relief. Native Deputy Inspectors have already been appointed to six of these.

In Tajpore and Hajeepore no charitable relief has been commenced.

SARUN DISTRICT.

(Report dated March 11th.)

A.—State of the country.

The bazars of the district are sufficiently supplied with grain, but importations have fallen off during the past fortnight. In the Sewan sub-division it is reported "that the bazars continue to " be abundantly supplied with grain both by importations from other districts and by local " supplies from the villages round the different markets. The supplies far exceed the demands " at present, and a great deal of the grain brought to the markets is often carried away unsold." Government stores for the sale of grain have been opened on the Hutwa estate, and Mr. Hodgkinson writes that "the demand for grain sold by the managers of the estate in the western zillahs " may be said to have entirely ceased, although it was pretty active for the few days immediately " preceding the commencement of the spring harvest."

The state of the crops continues good, and two thirds of an average crop on the area sown may be considered as sure.

No cases of starvation have yet occurred, but isolated cases of distress are reported and are provided for. The northern half of the district, comprising the thannahs of Burragaon, Burrowlee, Bassantpore, Mashrakh, and Pursa, is the tract which occasions anxiety.

The total number of cases of dacoity, robbery, &c. in February last was 279 as compared to 219 in the corresponding month of last year.

B.—Relief works.

The average daily number employed on relief works during the fortnight was 91,542, and the number on the last day was 76,794. The falling off in the numbers is attributable to the harvest operations and to the occurrence of the Mohurrum and Hoolee festivals. About a fourth of the number employed belonged to the non-labouring classes. The Collector reports that "it has " throughout been found impossible to pay the labourers daily, as was erroneously inferred by " Government. The endeavour is being made to ensure payments being made as speedily as " possible."

C.—Transport of food.

Sir Richard Temple visited the Sarun district early in last month, and reported that the district authorities appeared confident regarding the resources of the district as to the supply of bullocks and the transport of grain. Their view was confirmed by what Sir Richard learnt from indigo planters and others.

D.—Storage of Government grain.

Thirty-three store-houses have been selected, in which 223,985 maunds have been stored; 34,720 maunds were in transit.

E.—Advances to private parties.

Rs. 129,700 have been advanced for the purchese of grain for sale; Rs. 286,890 to zemindars for grain and money advances to their ryots; and Rs. 57,205 for land improvements.

F.—Charitable relief.

The district has been divided into 62 relief circles; relief centres have been opened at two places, but the Collector reports that "the very small number who have availed themselves of " these sufficiently shows that there is no immediate necessity for any large scheme of charitable " relief. I have not had any return from Bhoney, but in Hutwa only 14 persons have been " admitted, aud they receive a daily ration of cooked food; of these 14, only 3 have been " admitted solely on account of weakness from privation."

CHUMPARUN DISTRICT.

(Report dated March 9th.)

A.—State of the country.

In the Gobindgunj and Kessuria thannahs it is reported that the condition of the people is not improving. "Otherwise well-to-do ryots are hard pressed and apply on all sides for loans. " They refuse to accept charity, and they will not work; they generally pledge as security " cattle and trees, half of which latter the landowner claims." Officers hove been directed to treat these cases under the latter part of clause *f*, paragraph 3, of the Instructions to Relief Committees. The smaller cultivators have the relief works to go to and flock in large numbers to them.

In the tract bordering on the Nepal frontier between Adapore and Kutkenwa (a tract in which scarcity has all along been expected) distress is reported, and it has been ascertained that grain is not to be had in the neighbourhood. Steps have been accordingly taken to sell grain to the petty dealers. The grain will be sold at Rampore, three or four miles south of Kutkenwa, at 11 seers the rupee, on condition (which will be publicly proclaimed) that the dealer retails the same to the public at 10 seers.

No cases of starvation have been reported.

B.—Relief works.

Numerous relief works have been started in the district. The average daily number of persons employed is 53,825.

C.—Transport of food.

The arrangements under this head continue to work satisfactorily. The amount stipulated (50,000 maunds a week) has been duly conveyed.

D.—Storage of grain.

Of a million maunds, which is the total allotment for this district, 429,116 maunds had been received on the 7th March and 294,000 actually stored.

E.—Advances to private parties.

The total amount expended in advances is as follows:—

	Rs.
For storage of grain - - -	1,32,000
Assistance to ryots - - -	60,000
Land improvements - - -	15,112

F.—Charitable relief.

The district has been divided into five circles, in most of which there will be sub-committees. The average number of villages in each circle is 459, and the average population 286,500. In most of the circles Inspectors have been at work for some time. Native doctors with medicines have been sent to five places, and hospitals commenced. In one circle the number of persons gratuitously relieved dnring the fortnight was 300. Details as to the relief given in the other circles have not yet been received.

The sale of Government grain at Ramnuggur has commenced.

2.—RAJSHAHYE DIVISION.

1.—Moorshedabad District.

(Report dated March 7th.)

A.—State of the country.

In most parts of the district the supplies in the bazars are sufficient.

The reports of the crops are good; a larger area than usual has been sown with boro dhân (early rice), and $\frac{14}{16}$ths of an average crop is expected.

The Collector reports that many poor persons almost everywhere will require gratuitous relief, and that such relief is being organized.

The sub-divisional officer of Jungypore reports that in thannah Mirzapore be observed some poor women grubbing for the roots of a species of lotus in the dry bed of a tank. This they do every year, and he does not look on it as a special sign of distress. Distress, hewever, prevails throughout Mirzapore, and, if it had not been for relief works, matters would have assumed a serious aspect in that thannah.

No actual cases of starvation or extreme misery have been reported.

Cases of distress have been relieved out of the funds set apart for charitable purposes.

There have been 91 cases cases of theft, &c. in February and March of this year as compared to 50 in the corresponding period of last year.

B.—Relief works.

About 2,200 people are on an average employed daily on relief works.

C.—Transport of food.

The means of transport in the district are reported to be sufficient.

D.—Storage of Government grain.

No allotment has yet been made to this district, but the Collector has recommended that 500 maunds should be sent to Jungypore.

E.—Advances to private parties.

Several small advances have been made for digging tanks.

F.—Charitable relief.

Seventeen Committees and Sub-Committees have been appointed. Twelve relief circles have been opened, managed by planters, zemindars, and other residents; 16 workhouses or centres for the distribution of food and gratuitous relief have been organised. The last report does not contain detailed information as to the number of persons who have received gratuitous relief.

---

2. Dinagepore District.

(Report dated March 9th.)

A.—State of the country.

The principal traders say that prices will not rise much higher thah they are at present, and that there will be scarcity, but not famine. On the other hand, the landed proprietors and respectable villagers think that in a month there will be great scarcity, and by the end of April considerable distress. The Collector thinks that the villagers are in the main right, and that we are on the eve of a great scarcity, and that but for Government aid great distress may be anticipated. Sir Richard Temple reported on 11th March that no marked distress yet existed, nor had any marked symptom come under his observation, but that "distress might break out at " any moment. The outbreak of distress and the rapid rise of prices have been retarded only " by the demonstration of the preparations of Government."

The number of criminal cases in connexion with scarcity during last February was 119 as compared to 58 in the corresponding month of last year.

B.—Relief works.

The number of labourers continues to increase on all the works, and women are coming for employment. Some 30,000 persons are being employed.

C.—Transport of food.

Sir Richard Temple, who recently visited the district, reported on the 12th March that transport arrangements had been made to bring 10 lakhs into the district by June. The remaining two lakhs necessary to complete the total allotment can be brought into the district by watter-carriage after June. About 50,000 maunds a week are coming in. The cattle are in good condition.

D.—*Storage of grain.*

200,000 maunds have been already stored, and Sir Richard Temple is of opinion that the remainder of the full allotment for the district (1,200,000 maunds) can be stored before the rains commence. It is to be borne in mind that the river navigation of the upper parts of the district will be open during the rainy season.

E.—*Advances to private parties.*

No advances were made in the past fortnight to private persons. Two zemindars applied for an advance of Rs. 5,000 each in the previous fortnight.

F.—*Charitable relief.*

27 depôts have been supplied with grain; 13 remain to be supplied. It has been arranged to divide the district into 13 relief circles. There are at present no Public Works establishments attached to these circles, but overseers will be sent as soon as possible.

3.—RAJSHAHYE DISTRICT.

(Report dated March 9th.)

A.—*State of the country.*

The cold-weather crops promise to yield a fair out-turn.

There have been no cases of actual starvation. The people are reported to be in good condition, although in some villages which the Collector visited he found some looking rather pinched.

The number of cases of theft, &c. in February 1874 was 229 as compared to 109 in the corresponding month of last year.

B.—*Relief works.*

The average daily number of persons employed on relief works during the week ending the 7th March was 10,714, of whom 461 were women and children. This is a great increase on the previous week, in which only 5,260 persons were employed.

C.—*Transport of grain.*

Full returns are given by the Collector as to the transport of grain. A large quantity has been received and despatched; but as a very great portion of it does not remain in the district, but only passes through in transit to other districts, the amount imported is accounted for elsewhere. The despatches from Godagari, which is one of the great depôts on the Ganges, have not come up to the estimates, and would have been larger had it not been that for three days there was no grain to forward. The Collector thinks that by arrangements which he has now made this is not likely to occur again.

D.—*Storage of Government grain.*

The amount of grain stored in the district is not given in the last return.

E.—*Advances to private parties.*

Rs. 29,600 have been advanced for the purchase of grain, &c.

F.—*Charitable relief.*

Some poor-houses have been started, and a few persons, mostly professional beggars, have been relieved.

3.—MALDAH DISTRICT.

(Report dated March 10th.)

A.—*State of the country.*

In the central and southern markets supplies are plentiful, and prices are generally stationary. At Rohunpore, the largest rice mart in the south-eastern district, supplies are abundant, and on the last market day half the quantity of rice and paddy brought in for sale was reported as left unsold when the market closed. Private trade is active.

In the north-west tract (thannah Kurbah) prices have risen slightly, and the quantity of rice exposed for sale is diminishing. The villagers come in considerable numbers to the relief works, and grain is being distributed to ryots on credit or for cash.

The reports on the cold-weather crops are very good. The Collector says—" They look " excellent, and in many places strike me as being 'heavier' crops than I have sometimes seen " in other years. The natives say so themselves."

The boro dhân (early rice) promises well; a larger area than usual has been cultivated, and the out-turn is estimated to be over 200,000 maunds.

No cases of distress or starvation had been reported.

There were 45 cases of theft, &c. last February as compared to 11 in the corresponding period of last year.

B.—Relief works.

The average number of persons daily employed on relief works is 2,252, of whom 576 were women and children.

Shops for the sale of Government rice have been opened at four relief works, where the nearest village shops were more than two miles distant. The total amount of Government rice sold at them up to the date of the last report was 56 maunds.

C.—Transport of food.

The transport arrangements are working satisfactorily. The total receipts in the district up to March 7th were 255,235 maunds, of which 29,071 maunds had arrived at their final destination at store-houses in the district, and 226,164 maunds had passed through or were in transmit for Dinagepore. The Collector says that " this large quantity of grain has hitherto " gone on without a single block, but additional effort will be made to keep sending it on while " the weather is tolerably cool, for each day as the weather gets hotter will tell on the carriage " cattle." Several water routes will be opened after the rains commence.

D.—Storage of Government grain.

29,071 maunds of grain have been stored, leaving about 70,000 maunds to complete the full allotment of 100,000 maunds.

E.—Advances to private parties.

Rs. 10,000 have been advanced to one Rajnath Guha to enable him to purchase grain in Calcutta. He has applied for another Rs. 40,000, which the Collector recommends should be granted to him.

Rs. 20,000 have been advanced for land improvements, excavating tanks, &c.

F.—Charitable relief.

The district has been divided into four circles, and a special officer placed in charged of each. Within each circle relief centres have been selected and sub-committees organized; 2,936 persons have received charitable relief during the fortnight. Excepting in thannah Kurbah all the cases relieved were those of the infirm, sick, beggars, &c., who in every year would be on the hands of the public for support. In Kurbah those who are not usually beggars, but who now feel distress, come for help.

4.—RUNGPORE DISTRICT.

(Report dated March 9th.)

A.—State of the country.

The supply in the large bazars is still well maintained, but the rice which is brought for sale is nearly all imported. Very little of it is home produce. In some of the smaller bazars the supply is said to have been deficient at times, but the deficiency seems to have been only temporary.

The winter crops are all doing well. Potatoes have yielded a bumper crop. The wheat harvest has just commenced, and there is likely to be a splendid crop. The âus rice has been sown to a very large extent, probably to nearly double as much as usual. It is already sprouting and looking well.

The Collector has been on tour in the south-west of the district. He reports a large amount of distress to the west of Peergunj thannah. Grain will be advanced to the poorer cultivators in this quarter under the rules already promulgated.

The Collector has visited Barobaree thannah, from which the reports were bad, but he found the condition of the people not so bad as he had been led to believe, though there is considerable distress. He does not think that there will be more than great scarcity in this thannah. The Native Doctor, who visited the relief houses at Maheegunj and Sundergunj, reports that the class of people who come to the relief houses are chiefly women, children, and men who have been reduced to beggary by old age, and were so diseased and deformed as to be permanently unfit for work.

B.—*Relief works.*

37 roads have been opened as relief works, and others have been marked out.

The number of persons employed upon relief works on the 7th March was 3,995 men and 86 women, showing a considerable increase on the last returns, but the Collector considers the number is surprisingly small for a district containing such a large population as Rungpore. He attributes this to two reasons—1st, their inability to do such hard work as road-making, as many of them are reduced by constant fever and spleen; and, 2ndly, that the number of persons who earn their living by daily labour is very small. Government shops for the sale of rice to labourers employed on relief works have been opened.

C.—*Transport of grain.*

The transport arrangements are working smoothly.

D.—*Storage of Government grain.*

Nineteen places have been selected as store centres for Government grain; 80,151 maunds had been received in the district, of which 67,238 maunds had reached their final destination.

E.—*Advances to private parties.*

Rs. 71,000 have been advanced to help ryots or to purchase grain or for land improvements.

F.—*Charitable relief.*

Relief operations are now fairly started in all the distressed tracts. The returns showing the number of persons relieved are incomplete, but, as far as the Collector has been able to give figures, the probable number is 3,460. A considerable number of women have been given cotton to spin.

5.—BOGRA DISTRICT.

(Report dated March 9th.)

A.—*State of the country.*

There is no deficiency in bazar supplies at present.

Fair reports are received of the cold-weather crops. A certain amount of pressure is felt by the people on the land where no cold-weather crops are grown, and this, the Collector thinks, will spread with more or less severity for some months to come, probably to the end of July, when the âus crop on these tracts will be a seasonable help. With the precautions which have been taken, the Collector does not anticipate famine. There have been no cases of misery and starvation.

There were 123 cases of theft last month as compared to 62 in February 1873.

B.—*Relief works.*

The number of persons employed on relief works on the 7th instant was as follows:—

Men - - - - - - -	1,971
Women - - - - - -	1,161
Children - - - - - -	803

C.—*Transport of food.*

Grain-dealers are importing food into the district from Pubna, Dacca, and Mymensing. The means of transport are sufficient. There has been no block on the transport routes.

D.—*Storage of Government grain.*

30,009 maunds of Government grain had been received up to the 7th instant. It had not as yet been found necessary to use any of the Government grain imported.

E.—*Advances to private parties.*

Some small advances have been made.

F.—*Charitable relief.*

Committees have been appointed, but operations do not as yet appear to have been found necessary.

3.—BHAUGULPORE DIVISION.

1.—MONGHYR DISTRICT.

(Report dated March 7th.)

A.—State of the country.

The bazars continue to be well supplied. Although there is difficulty in getting rice in some petty bazars, there is plenty of the cheaper kind of grain for all who have money to purchase it.

The spring crops are in most places very good; they have been much benefitted by the rain, which fell in January, but for which the Collector thinks the state of the district must now have been most deplorable.

The Collector has been travelling about the district, and found the people generally in fair condition, but he thinks that many persons will probably require assistance before long. A number of paupers from Tirhoot were recently wandering about the district, many of whom were in a very forlorn condition. Three deaths from starvation were reported in the last narrative; none have occurred since.

There were 38 cases of theft, &c. between the 12th February and the 5th March as compared with 55 in the corresponding period of last year.

B.—Relief works.

At present there is plenty of work in the district for the entire labouring population either at cutting the crops, collecting opium in the poppy-fields, making Government roads and zemindaree embankments, or preparing fields for future crops.

The number of labourers employed on relief works on March 7th was 4,088.

C.—Transport of grain.

The district has been largely denuded of transport by the contractors, who have engaged every available cart for work north of the Ganges, but the Collector does not anticipate any difficulty in providing transport for the Government grain which has been allotted to him.

D.—Storage of Government grain.

190,323 maunds of Government grain have been stored in 25 selected spots.

E.—Advances to private parties.

The provisions of the Land Improvement Act are now becoming generally known, and numerous applications for advances are being made all over the distressed tracts. About Rs. 30,000 have been advanced under this Act.

F.—Charitable Relief.

Sixteen relief circles have been opened; 42 sub-committees have been appointed. In Jamoee sub-division, where the distress is worst, the Superintendent has for some time past been from village to village relieving distress wherever it existed.

2.—BHAUGULPORE DISTRICT.

(Report dated March 10th.)

A.—State of the country.

The Collector reports that since the last narrative he has been over a large extent of country in all the worst tracts of Soopool, as well as tracts where but little distress need be apprehended. He says—"With the exception of one long and narrow tract to the extreme north-" west of the Soopool sub-division I find nothing which would justify the assertion that *famine* " is imminent." Prices have fallen, and grain is more easily procurable throughout the north of the district.

A splendid rubbee crop is expected, and should it not be damaged by rain or hail, the Collector thinks that general distress will be averted till June.

The condition of the people generally is not so bad as had been anticipated, and excepting some of the lowest labouring classes, there is ample work for all who wish it in the Soopool sub-division; during the Hoolee and Mohurrum festivals even these men left the works. On some of the roads every man did so to join in the processions. The cultivators as a class are fairly occupied tilling their own lands, and even the labourers on the roads may be expected to leave them for the coming harvesting operations.

B.—Relief works.

The daily average number of coolies employed on relief works was 5,427. The experiment was tried of selling Government rice at 10 seers the rupee at two relief works, but it does not appear to have been brought, as other grains were cheaper in the market.

There were 96 cases of theft, &c. during last February.

C.—Transport of grain.

A contract has been made for six lakhs of maunds to be carried from Monghyr to Soopool in four months. The last report does not contain detailed information as to how this contract is working. Considerable difficulty was at first experienced by reason of so many carts having been drawn off towards Tirhoot. Private accounts state that the contract is working satisfactorily.

D.—Storage of Government grain.

Thirty-five places have been selected in which to store Government grain. The amount already stored is 166,557 maunds, exclusive of grain brought in by the Court of Wards.

E.—Advances to private parties.

During the last fortnight Rs. 8,000 have been paid as advances for the purchase of grain; Rs. 15,000 have been advanced to zemindars to help their ryots, and applications for a further advance of Rs. 6,500 have been received.

F.—Charitable relief.

All the relief centres have been opened, some of them "more as feeders than on account of actual distress."

The Collector reports that as yet the applicants for relief consist almost entirely of the lowest class of habitual beggars.

3.—PURNEAH DISTRICT.

(Report dated March 9th.)

A.—State of the country.

The supply in the town of Purneah is still increasing, and petty dealers come in to buy from the importers.

Isolated cases of great distress are found occasionally and relieved, and in many villages a few families are found to be very badly off; but the Collector thinks that "it is clear that there is no general distress from the few persons who come to work on our roads."

The prospects of the spring crops continue excellent. As long as the supply of grain is kept up as it is at present the Collector says he has no fears for the people, as the agricultural requirements of well-to-do ryots and villagers, and the relief works as at present arranged, can afford employment to all who desire to work.

The total number of thefts, &c. last February was 97 as compared to 36 in the same month of last year.

B.—Relief works.

The average daily number of persons employed on relief works was 2,923. Government rice has been sold to the labourers at 12 seers the rupee.

C.—Transport of grain.

The transport power during the past fortnight has increased enormously. Up to the evening of the 7th, 311,933 maunds had been carted away from Caragola, the average daily number of carts leaving being 757. About 3,000 pack-bullocks and ponies are working between Bulrampore and Barsoe, which are two of the most inaccessible places. This mode of transport is reported to be capable of almost indefinite expansion.

D.—Storage of Government grain.

Twenty-seven centres for the storage of grain have been selected, but the last reports do not state how much grain was actually stored in them.

E.—Advances to private parties.

During the last fortnight the advances to private parties were inconsiderable, but in the preceding fortnight Rs. 25,200 were advanced for the purchase of grain, and the Collector thinks that these advances kept down prices.

F.—Charitable relief.

The number of committees and sub-committees appointed is 39. The number of persons relieved in the Sudder and Kishengunj sub-divisions was 4,536. In the Arrareah sub-division it is reported that 4,000 persons are daily receiving gratuitous relief.

A system of village relief has been adopted. In one place only has cooked food been distributed. At the other relief centres raw food was given.

4.—SONTHAL PERGUNNAHS.

(Report dated March 11th.)

A.—State of the country.

FAILURE of food has been nowhere reported, although in some parts supplies are said to be very limited. No known cases of starvation and misery have been reported.

B.—Relief works.

The report on this head has not been received.

C.—Transport of food.

The means of transport are said to be quite sufficient.

D.—Storage of Government grain.

3,106 maunds of rice have been stored, but none has yet been sold. The total allotment of grain to the district is 135,000 maunds.

E.—Advances to private parties.

No advances have yet been made, but a zemindar has applied for a loan of Rs. 10,000 to improve his estate.

F.—Charitable relief.

The Collector says "We have nothing under this head."

A. HOWELL,
Depy. Secy. to the Govt. of India,
Dept. of Revenue, Agriculture, and Commerce.

March 20th, 1874.

MINUTE by Honourable Sir R. TEMPLE, K.C.S.I.

No. 52.

Malda, dated 18th March 1874.

1. I have now completed my journey through the worst portions of the four districts of the Rajshahye Division, where severe distress is expected, viz., the districts of Dinagepore, Rungpore, Bogra, and Malda, which have been formed by the Local Government into a separate Relief Division under Mr. W. Le F. Robinson as Commissioner. The observations and proposals which I have made regarding each of the districts will be found in the Minutes, Nos. 45, 46, 47, and 48, dated 11th, 14th, and 16th March. It now remains briefly to summarise the main points under one view.

2. The area and population of the four districts may be stated as follows:—

District.	Area in Square Miles.	Population.	Number per Square Mile.
Dinagepore	4,126	1,501,924	364
Rungpore	3,476	2,149,972	619
Bogra	1,501	689,467	459
Malda	1,813	676,426	373
	10,916	5,017,789	459

3. The number of persons which I have estimated, in consultation with the local authorities, as likely to need aid from Government during the worst months of the distress, together with the per-centages of such numbers on the population, may be stated thus:—

	Nos. at worst from 2 to 4 Months.	Per-centage on Population.
Dinagepore	426,530	60 per cent., on 419,500
		30 " " 582,766
Rungpore	127,400	20 " " 123,000
		15 " " 255,000
		10 " " 120,000
		50 " " 18,000
		5 " " 145,000
Bogra	112,500	30 " " 258,123
		20 " " 175,243
Malda	62,433	30 " " 92,011
		25 " " 55,316
		15 " " 48,999
		10 " " 103,758
		5 " " 65,548
Total	728,863	

4. The provision of Government grain, as already ordered by the Local Government, or as now proposed by me, may be thus stated in maunds:—

—	Already ordered by Local Government.	Additional proposed by me.	Total.	Already advised in District up to 7th March.
Dinagepore	1,000,000	200,000	1,200,000	200,000
Rungpore	200,000	100,000	300,000	120,000
Bogra	50,000	190,000	240,000	20,000
Malda	100,000	50,000	150,000	29,000
Totals	1,350,000	540,000	1,890,000	369,000

5. I was particularly requested by the Government of Bengal to revise the relief arrangements in the districts, and to settle them wherever they remained to be settled. I found that this business was to some considerable extent done in Dinagepore and partly in Rungpore. I have now, in consultation with the local officers, fixed all the circles. Their numbers are as follows:—

—	Number of Circles.	European Officers.	Native Officers.	Subordinate Officials.		
				Civil.	D.P.W.	Medical.
Dinagepore	13	9	4	29	13	13
Rungpore	9	4	5	9	6	9
Bogra	7	3	4	3	6	6
Malda	3	3	2	5	3	3
Totals	32	19	15	46	28	31

6. All the officers (Native and European) have been appointed; most, though not all of them, have joined. Of the subordinate officials most of the civil have been appointed, but many have not yet joined. Few only of the medical or public works subordinate officials have been appointed, but I have made urgent application for them.

7. The relief works consist chiefly of roads and of tanks. The total length of the roads in miles I give below. The tanks are numerous, but the number

cannot be given. The number of labourers as known up to the latest report is also given, but it is increasing daily.

	No. of labourers as known up to second week of March.	Total length of relief roads of district in miles.
Dinagepore	43,500	420
Rungpore	7,000	723
Bogra	3,935	160
Malda	2,252	187
Totals	56,687	1,490

8. The rate of wages for an adult male is 2¼ annas in the Dinagepore, Rungpore, and Bogra districts per diem, task-work not being undertaken under 3 annas. The same rates prevail in Malda.

9. The number of circles in which I have authorised the sale of Government grain under the rules is—

Dinagepore	4
Rungpore	3
Bogra	None.
Malda	1

10. The number of grain depôts in the several districts, nearly all of which depôts contain stores, is as follows :—

Dinagepore	30
Rungpore	15
Bogra	8
Malda	8
Total	61

11. The number of carts employed in the transport of grain in the several districts is as follows; if this number appears small as compared with other divisions, we must remember that in all the districts water-carriage is largely used, sometimes by country boats and sometimes by steamers :—

	Carts with pair of bullocks.	Country boats.	Steamers.
Dinagepore	5,000	250	—
Rungpore	450	50	1
Bogra	250	20	1
Malda	2,000	400	1
Totals	7,700	720	3
Add carts from Purneah District employed in Dinagepore District	1,500		
Total	9,200		

Pack bullocks not having as yet been employed. A reserve of 1,500 carts has been ordered, 500 for each of the districts of Dinagepore, Rungpore, and Malda.

12. The amount of advances as yet taken by zemindars for the assistance of their tenantry, and the money advanced to traders for the importation of grain from a distance, may be thus approximately given, though it is hoped the amount will be largely increased. In round numbers zemindars have taken 90,000 rs., traders 40,000 rs.

13. The number of persons at present receiving charitable relief may be thus stated for the present, though it is to be feared that the number will now increase:—

	Daily.
Dinagepore	None.
Rungpore	3,460
Bogra	None.
Malda	2,936
Total	6,396

In Bogra some relief is given by private subscriptions.

14. No death from want, or from disease caused immediately by want, has as yet been reported from any district.

15. The cause of the distress in all the districts is the partial failure of the summer or Aus rice crop, and the still greater failure of the winter (Hemantee) rice crop, from scantiness of rain in the summer and autumn of 1873; together with the absence of any considerable cultivation, in the distressed tracts, of spring crops, wheat, and pulses to make up for loss of rice.

16. The worst period of distress in all the four districts is expected to set in during May, and to last to the middle of August; but the distress will last in some degree till December.

17. Private import trade is tolerably active in the Rungpore, Bogra, and Malda Districts, but not at all in Dinagepore. Again, the situation of the Dinagepore District is much more difficult than that of the other three districts, because it is isolated at all times, land-locked in the hot season, though enjoying some facilities of water-carriage in the rains; whereas the other three are on the banks of the large rivers, navigable by boats or steamers all the year round.

18. Lastly, I desire to speak in high commendation of the Relief Commissioner, Mr. W. Le F. Robinson. His extensive local knowledge, his promptitude in action, and his thoughtful care for the people entitle him to the confidence of Government in the execution of his very important duty.

FURTHER CORRESPONDENCE.

No. 18 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To the Most Honourable the MARQUIS OF SALISBURY, Her Majesty's Secretary of State for India.

MY LORD MARQUIS, Calcutta, the 27th March 1874.

IN continuation of our despatches on the subject of the drought in Behar and parts of Bengal we have the honor to enclose the Supplement of the *Calcutta Gazette* of the 25th instant, containing the latest statements of prices current and of the condition and prospects of the crops. There is little to remark in either statement beyond the anticipated failure of the mohwa crop in the Sonthal Pergunnahs. In other respects the reports are satisfactory, the prospect of the cold weather crops generally being very good; in prices there is no great change.

2. We have received Your Lordship's telegram of the 24th instant (marginally annexed), requesting that a weekly report of the aggregate of known famine deaths from the first may be included in our usual weekly telegram. We enclose our correspondence with the Government of Bengal on this subject, from which it will be seen that the Lieutenant-Governor has undertaken to furnish the required information in future. From the same correspondence His Honor's opinion will be gathered as to the number of deaths that have occurred in addition to those officially reported. As regards the additional telegrams, we have to observe that where the figures in two consecutive weekly telegrams have been identical, it is owing to the fact that from the more distant districts the Bengal Government had only fortnightly reports; but the Lieutenant-Governor has now arranged to obtain weekly returns from all districts, and the latest statistics will be duly communicated to you. Your Lordship may rely on our vigilant attention being maintained on those districts where distress may be expected to arise, but which are not yet classed among the most distressed districts.

Telegram from Secretary of State, London, to Viceroy, Calcutta,—Dated 24th March 1874.

Yours 21—Report with weekly telegram aggregate of known famine deaths from first; figures in additional telegram accidentally copied from last; keep attention upon half famine districts.

3. We have made frequent mention in our telegrams and despatches of the condition and prospects of the crops in the North-Western Provinces, and we now enclose the Supplement to the last *Allahabad Gazette* of the 21st instant, containing detailed information of the state of things in each district of those provinces. We consider the report on the whole to be very satisfactory.

4. We have expressed our general approval of the measures undertaken by the Chief Commissioner of Oudh to prevent famine in some of the northerly districts of that province, and we have every reason to hope that these measures are adequate for the relief of the distress that may be there anticipated. Our correspondence with the Chief Commissioner will be found enclosed.*

Adverting to the 28th and 29th paragraphs of our despatch No. 17 of the 20th instant, we enclose a copy of our letter† to the Government of Bengal, in which, besides other observations which appeared to be called for by the last special narrative, Your Lordship will observe that we have requested the Lieutenant-Governor to supply us with full information as to the means that will exist during the rainy season, both for employing the people and for importing and distributing any additional supplies of food that may be required in excess of our present estimates.

* Pages 5 to 10.

† Page 10.

5. Lastly, with reference to paragraph 13 of our despatch No. 11 of the 13th ultimo, we forward a Note,* prepared in the Public Works Department, showing that we have sanctioned the Lieutenant-Governor's proposals for the immediate commencement of the project for the extension of irrigation in North Behar throughout the tracts bordering on the Nepal Frontier, where the distress is most severe.

* Page 11.

We have the honor to be,
My Lord Marquis,
Your Lordship's most obedient and humble Servants,
NORTHBROOK.

ENCLOSURES.

No. 1021, dated the 25th March 1874.

From A. P. **Howell**, Esq., Deputy Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce, to the **Secretary** to the **Government** of **Bengal**.

The Right Honourable the Secretary of State has requested that the aggregate of known famine deaths from the first may be reported to him by the Government of India with the weekly telegram which is usually despatched upon Friday of each week.

2. I am therefore directed to request that the Government of Bengal will furnish a statement giving this information on Thursday next and on each succeeding Thursday. As the Lieutenant-Governor has personally visited the worst part of Tirhoot, and communicated recently with the local officers, I am further to request that His Honor will be good enough to state his opinion whether the reports received from private sources, that many deaths of adults have occurred at or near Buhera and Jinghya, besides those officially reported, are correct or exaggerated.

3. The Government of India understand, from the letter of the Government of Bengal, No. 1578 S.R., of 18th instant, that His Honor fears that many deaths of children must have occurred in Tirhoot in consequence of the scarcity, besides those which have been officially reported.

Paragraph 2.

No. 1835 S.R., dated the 26th March 1874.

From C. **Bernard**, Esq., Officiating Secretary to the Government of Bengal, to the **Deputy Secretary** to the **Government** of **India**, Department of Revenue, Agriculture, and Commerce.

I am directed to acknowledge the receipt of your letter, No. 1021, dated 25th March, and in reply to submit that the number of "known famine deaths" up to the present date, as reported to Government, is as follows:—

Tirhoot District.—Four cases, as per Mr. Bayley's letter of the 15th, submitted under cover of my letter, No. 1578, of 18th March.

Monghyr District.—Two cases, as per enclosure No. 4, of the Twelfth Special Narrative.

Total, six cases.

The Lieutenant-Governor has arranged to obtain weekly reports from the worse districts regarding occurrence of famine deaths and on other points required for the weekly telegram to Her Majesty's Secretary of State.

2. In my letter* of to-day's date has been submitted a report of three deaths at Serampore, near Calcutta; but, as has been submitted in my letter, the Lieutenant-Governor does not reckon these cases as "famine deaths."

* No. 1834 S.R.

3. With reference to paragraph 3 of your letter, the Lieutenant-Governor is not sure to what private reports reference is made, as he does not remember particular specific assertions in any definite form to the effect stated. He must submit that, in times of scarcity and the early stages of famine, it is totally impossible to distinguish deaths accelerated by scarcity and bad food from natural deaths. He has not the least doubt that among a very poor and helpless population, such as exists in North Tirhoot, many people die when food is dear who would not die, or would not die so soon, if it were cheap. He believes that there have not been deaths

from direct starvation among healthy adults; but from what he saw of the people about Baheria and some of those on the works near Durbhanga, he fears that among such a population a good many old, weakly, and sick people must have succumbed to insufficient nourishment. Similarly, as before mentioned, many young children are much emaciated, even when their parents are not so. The Lieutenant-Governor does not believe that the parents starve the children to feed themselves, but only that the children are first affected by scanty and bad fare. This result is much aggravated by the native habit of nursing children for two or three years. A child so nursed suffers much when the mother fares indifferently and the food for the child fails. The Lieutenant-Governor has already explained the extreme difficulty of saving such children, owing to the unwillingness of the parents to bring them to our hospitals and poor-houses. He himself saw the emaciated children carefully fed with milk at the temporary hospital which he arranged at Baheria, but the mothers strongly resisted staying there in spite of every concession and arrangement that could be made. Under such circumstances, the Lieutenant-Governor cannot but fear that many children of a weak and sickly character die. Similarly, he believes that some old and infirm people die on account of scanty food. He is happy, however, to say that, so far as he saw and can learn, it is only in the part near Behar that want has reached the point that many people are emaciated, and the weakly must in some numbers die. Every attention is now being given to improve matters there.

No. 1158, dated Lucknow, the 3rd March 1874.

From H. J. SPARKS, Esq., Officiating Secretary to the Chief Commissioner of Oudh, to the SECRETARY to the GOVERNMENT of INDIA.

I am directed to submit, for the consideration and orders of the Government of India, the following report on the measures of relief which the Chief Commissioner finds will be necessary to prevent famine in this province.

2. Sir George Couper has just returned to Lucknow from a tour through the distressed districts, and the steps which he has already taken, as well as the further proposals contained in this letter, have been adopted for the most part on the spot, and all after the most anxious consideration of the circumstances, and in constant communication with Mr. Copper, the Commissioner, the Deputy Commissioner, the Superintendents of Encumbered Estates, the Maharajah of Bulrampore, and his most trusted lieutenants, especially his diwan, Lalla Ram Shunker, who virtually manages his estates, the Agents of His Highness the Rajah, Kapurthala, and the talukdars generally whose estates are situated in the places where distress prevails or is to be apprehended.

3. The districts in which it was feared that the failure of the winter rains would cause an amount of distress, which would require the aid of Government to relieve, were Sultanpore, Faizabad, Gonda, and Bharaich.

The Chief Commissioner, therefore, proceeded from Lucknow to Sultanpore, and passed through that district, and also through Faizabad, Gonda, Bharaich, and Seetapore.

Sultanpore.

4. In Sultanpore some lands were out of cultivation, owing to the too early cessation of the rains, but those which had been sown were in excellent condition, and have been greatly improved by the rain which fell at the beginning of last month. Therefore, although a very severe frost has caused some injury to arhur, peas, and gram, the local officers are confident that, unless the spring crops when about to be cut are destroyed by hail, no relief will be necessary.

Faizabad.

5. The appearance of the crops north of the Gomti was not so satisfactory as of those on the other side of the river. This was in part owing to the frost which had in the meanwhile befallen the peas and arhur, but also because the insufficiency of the rains had interfered more materially with agricultural operations, and a less breadth of land than usual was under crop; in addition to this, the rains in the early part of January had failed us.

6. Under the circumstances, the Commissioner wisely, as the Chief Commissioner thinks, directed the commencement of some desirable local works, in order to feel the pulse of the distress. Notwithstanding, the Deputy Commissioner, Mr. King, was very confident that relief works would nowhere be required, though he thought there might be partial distress in portions of the Birhar pergunnah, which lies in the north-east portion of the district, on the banks of the Gogra. The labor rates were so fixed as not to attract professional labor from a distance or interfere with the ordinary demand for agricultural services.

7. Work was commenced at Baskari on the 19th January. Comparatively few people came, and on the 27th January there were for the first time over 100. Between that date and the 1st February the numbers fluctuated, the fewest being 155, the largest number 469. On this the Deputy Commissioner reported that the people who came were the ordinary laboring class; that they showed no signs of starvation or extraordinary distress; that men would not work for small wages, the great mass of the laborers being women and children. Considering that the test had proved that relief works were not required, he proposed to close the works. Mr. King was requested to keep the works open for another fortnight and report the result.

8. The Superintendent, Encumbered Estates, Mr. Harington, started some small works calculated to relieve his distressed tenantry, but he now thinks they were hardly necessary, though desirable as keeping on the safe side.

9. By the latest accounts the bulk of the crop has escaped the frost and is exceptionally good. The greatest benefit has resulted from the rain at the beginning of February, which fell in time not only to save the unirrigated rabi crops without injuring those on the irrigated land, but to set the ploughs going, and thus offered agricultural employment at a time when it was really required. The remissions and suspensions of revenue, which the Chief Commissioner will propose in a separate communication, will, it is believed, afford material relief to all classes of agriculturists, and the Chief Commissioner accepts the opinion of the Commissioner that, if these be accorded, there is not, and will not be, so far as can be foreseen, any necessity for relief works in the Faizabad district.

Gonda.

10. In the three northern pergunnahs of Gonda matters look serious. In Tulsipur $\frac{8}{9}$ths of the total crop of the year is kharif, and of this again $\frac{3}{8}$th (or $\frac{1}{3}$rd of the whole) is the jarhun, or late rice. The whole of this has been destroyed. In Bulrampore, 47 per cent. of the crop is kharif, and of this 51 per cent, (or $\frac{1}{4}$th of the whole) is "jarhun;" all this is gone. In Utrawla 63 per cent. is kharif, and of this 30 per cent. (or about $\frac{1}{5}$th of the whole) is jarhun, which has completely failed. The arhur crop throughout this district suffered severely from the intense frosts in the middle of January.

11. It was evident, therefore, that measures must be taken to start relief works and to store food grains in that part of the country which is not easily accessible during the rainy season. In so far as relates to operations in the Tulsipur and Bulrampore pergunnahs, the Chief Commissioner can confidently rely on the officers of Government receiving valuable assistance from the sole proprietor, the Maharajah of Bulrampore, and his employés. It is not alone to the generosity of this nobleman that the Chief Commissioner would trust, for in this instance both he and his farmers and subordinate holders will be impelled to strain every nerve to protect their own interests, which are most seriously at stake.

12. In the north-eastern corner of Tulsipore and in the immediate neighbourhood of Bulrampore the people will not require much assistance, but elsewhere, where the rice crop, on which the people mainly depend, has largely failed, and the stocks of grain are small, there is reason to apprehend that without being pressed by actual famine many agriculturists will abandon their homes, unless they can obtain employment on which to support themselves. From such a disaster the estate would not recover for years, and it would take long to induce a class of people to return, who are always prone on the least provocation to cross our border into Nepal, where it is the policy to encourage settlers by allowing them to cultivate on most favourable terms. Happily the Bulrampore estate is thoroughly well managed, the duties of administration are judiciously and methodically distributed, and thus the condition of the people can be known, and aid can be afforded them with comparative ease through the tehsildars of circles and the substantial village farmers.

13. At present it appears that it will be unnecessary to find labour except in the three northern pergunnahs, Tulsipore, Bulrampore, and Utrawla, and perhaps in the north part of the Gonda pergunnah. Further relief works in various directions are, however, being projected, and preliminary surveys made, and all will be in readiness to open works if they are required.

14. Roads to open out the district and connect or act as feeders to existing lines of communication are the most suitable undertakings, and those most likely to be of use hereafter.

These are shown in the accompanying sketch map, and are as follow:—

(1.) Earthwork on road from Utrawla to Bulrampore, and on towards Ekona, 30 miles, calculated to employ 1,500 persons for, say, three months, at a cost of Rs. 13,952.

This work has been opened. On the 5th February, 976 people were employed. On the 8th, the number had risen to 1,800, on the 12th to 2,962, and on the 22nd to 3,100.

(2.) New line from Utrawla to Tulsipur, 16 miles, calculated to employ 1,700 persons for three months, cost Rs. 18,000. This was opened on the 6th February with 94 people. By the 12th (when the last return was despatched) the number was 474.

(3.) Collecting metal for 8 miles of the road from Utrawla towards Gonda, providing for some 500 persons for three months, at a cost of Rs. 9,000.

(4.) Repair of the old Military frontier road from Pachperiea on the east through Tulsipur to Gubbapur on the west, towards Nepalgung, being about 45 miles. A section of this was opened on the 12th of February, with 71 people; on the 14th the number had trebled.

(5.) Road from Tulsipur to Bulrampore, 16 miles.

(6.) New road from Chandlira dip on the Military road to Muttra, a grain mart in the Bulrampore pergunnah, on the frontier of Gonda and Bharaich, across the Rapti river, through part of the Bharaich district to Khargupur, a flourishing bazaar, thence to join the Bulrampore and Colonelgunge road (this would give some employment in the north-west part of the Gonda tehsil; and the road, which would open out a district where there is ordinarily a considerable grain trade, would be of real benefit hereafter).

(7.) Road from Rehra on the Nawabgunge and Utrawla road through Sadulanugger to Chandradip Ghât on the Kuana (18 miles).

(8.) Diversion from Sadulanugger *viâ* Mankapore to Khorasa on the Faizabad and Gonda road, 22 miles. These two last (7 and 8) are only to be undertaken should a necessity arise, which is not at present anticipated, for relief works in pergunnah Sadulanugger.

(9.) From Gumri Ghât on the Utrawla Gonda road to Hiathoke on the Gonda Bulrampore road (this will give employment in the north of the Gonda pergunnah, if it becomes necessary to supply it).

15. It is estimated that the projected works in the Bulrampore, Tulsipur, and Utrawla pergunnahs will provide employment for six months to an average of 15,000 persons per diem; and this is the outside number which it is expected may require work in order to maintain themselves until the next rice crop is reaped.

16. The principle on which the rates of wages are to be fixed is that they shall not attract professional labor from a distance, or interfere with the existing demand for agricultural services. They will be adjusted from time to time with reference to these considerations.

17. A provision of two lacks of rupees for the execution of the works (one to six) is required; other funds must be obtained for the other works should it be necessary to proceed with them.

18. The people on the works will be paid daily by munshis appointed by the Deputy Commissioner, in order to save the Public Works Department unusual trouble in the Account Department; but the executive engineers assisted by overseers, and sub-overseers, put in charge of convenient sections of the works, will have charge of the construction, and will exercise general control over all operations, under the direction of the Deputy Commissioner, and arrange the rates of payment to be made to individuals or classes of labourers.

19. The funds necessary for carrying out the works will be furnished to the Department Public Works, and the Divisional Engineer should from this source supply the Deputy Commissioner from time to time with cheques for such sums as are required. Accounts will be furnished to the Department Public Works, by whom the bills will be prepared and submitted in due course to the Controller for audit.

20. At present it is not found necessary to provide shelter or grain-shops for the people employed on the works, as they live in their immediate vicinity; but the Deputy Commissioner has arranged that when the numbers increase those laborers who come from too great a distance to return to their homes shall be provided with rough hutting, and that shops for supplying them with grain shall be established.

21. The Deputy Commissioner has drawn up a scheme for a central relief committee at Gonda, with branches to afford sustenance at poor-houses in the vicinity of the relief works to those sufferers who, by reason of age, infancy, or physical infirmity, are unable to do manual labour. He apprehends that the subscriptions from natives of the district will be very small. But a meeting is about to be held at Lucknow in connection with the general Famine Relief Fund, and it is hoped that from that source some assistance will, if necessary, be available.

22. In Tulsipur and Bulrampore, where the most universal practise is to receive cultivators' rents in kind, and to remunerate agricultural and farm labor by payment in grain, the people are accustomed to retain considerable grain supplies; but owing to the failure, which has been referred to, of the rice crop in all but a small tract in the north-east of Tulsipur, and the fact that owing to the drought no second (rabi) crop has as usual been sown on the early rice lands, and to the irresistible temptation to sell, to which high prices have subjected the holders of grain, the present stock of grain is believed to be unusually low. After the commencement of the rains the country north of the Rapti will be almost entirely dependent on internal resources, for movements of grain across the Rapti in the ordinary course of trade will cease, the passage of the river being difficult. Doubtless the farmers have stores enough to maintain themselves, their families, and a considerable number of their laborers, and at present the demand is sufficiently met by the supply from existing stores and importations; but the Chief Commissioner entirely agrees with Mr. Capper that it is advisable to supplement the stocks collected by private individuals, so as to ensure that throughout the rainy season there will be food available for those who desire to purchase it, and it is estimated that for this purpose a stock of some 70,000 maunds of the course food-grains will fully suffice.

23. The grain will not be stored in large depôts, but the country divided into six circles, within each of which a certain amount of grain will be laid up in various places by selected trustworthy thekadars of the Maharaja, under the supervision of his officials and our own. The stores will be kept untouched until the commencement of the rains, when the grain will be available for sale, but be always open to inspection by the officials, in order that their existence be ascertained.

24. Of the purchase money, Rs. 75,000 cash will be advanced by the Government to the Maharaja at Gonda, the remainder he will himself provide, the Deputy Commissioner allowing such suspension of his revenue payments as may be found necessary. The advance will be recovered in 1282 Fusli, or as may be otherwise arranged hereafter.

25. The purchases will, it is hoped, be made by the Maharaja through his farmers and tehsildars without any hindrance to supplies coming daily to market, and, in addition to the farmer's private stocks, each farmer required to keep part of the surplus stock will make up the quota prescribed for him by the Superintendant of his circle. Purchases made in this way by persons accustomed to the business, possessed of carts and bullocks acclimatised to the Terai, and well acquainted with its wants and capabilities, and further deeply interested in the success of the measure, will be properly effected more cheaply than if made direct by the Government officials, and will not be so likely to cause the rise in prices which might in that case be expected. The expense of storage will be saved, the cost of purchase will be merely the interest on the advance made to the Maharaja, and the distribution of the grain stored will be more effective than any we can make.

26. Of course it will be necessary for the district officer closely to supervise the arrangements and completely satisfy himself that the store is being really got together; and it has also been arranged that the Maharaja should at once apply to the Deputy Commissioner to assist him in making purchases from a distance if difficulty is experienced in effecting them locally.

27. Still further to provide against the results of any failure of the rabi crops more severe than there is now much reason to anticipate; but to be on the safe side it is thought advisable to arrange for a grain depôt of 50,000 maunds at Gonda. The result of such a failure might be a shortness in the food supply in parts of the Utrawla pergunnah and the north-east part of the Gonda pergunnah; and a store at Gonda would be invaluable. The store would consist of the cheaper rabi grains, and would be got together when these come into the market, and from a sufficient distance not to effect local trade. The Deputy Commissioner should be empowered to spend Rs. 1,00,000 on this account. The Commissioner writes—"This store would not be necessary were it not for the very large exportation of grain of all sorts, which has been continuous, and seems likely to last. Speaking generally as to this district, with the remissions given, the arrangements for food which have been sanctioned, and the relief works as above, I do not anticipate any unmanageable distress; but had nothing been done, it would now seem that to avoid famine the inhabitants of the Terai pergunnahs must have left their homes at the cost of infinite misery to themselves and of ruin to the revenue and agricultural prospects of that country.

"I do not see cause to increase my estimate of the number of people for whom work will have to be provided. Owing to the rain and bright sun, the prospects of the rabi harvest have greatly improved; and had it not been for the serious loss of a large "arhar" crop, the distressed area would have been much circumscribed. As it is, the harvesting of the rabi and the regular ploughings will soon commence, and furnish regular employment to many thousands."

28. The Chief Commissioner fears that Colonel Shaw, the Deputy Commissioner of Bharaich, in the first instance somewhat under estimated the probability of distress in his district. There is now no doubt that in parts along the north of the district there is, and will be, considerable suffering. In the neighbourhood of Gabbapur and in the Bhingai terai, Mr. Capper found the people as badly off as in the adjoining pergunnah (Tulsipur) of Gonda. The rice crop had entirely failed, and in many villages there was no rabi. Again, near Kakardari on the frontier there was a small but scattered group of villages where famine was imminent. Near Nanpara, also, there was some apparent distress; but the result of opening work in that neighbourhood has been to show that aid is not so much required as in other places.

29. The Chief Commissioner, whilst yet in the district, gave general sanction to the commencement, as occasion might require, of the following works:—

(1.) Earthwork on the road from Nanpara to Bhinga, a line which will be extended from Bhinga to Ekona. Total distance, about 45 miles.

(2.) Raising the road from Nanpara to Motipur, 15 miles.

(3.) From Lakahi on the Nipal frontier to Manghat, and thence through Churda, Malhipur, and Bangaha to the Bhinga road at, say, Pipraghat, about 41 miles.

(Along this route there is now a considerable fair weather traffic in grain under difficulties.)

(4.) Road from Charda to Nanpara.

(5.) Road from Bhinga to Gubbapur to join the Military road, 11 miles.

(6.) Continuation of the Military road from the Gonda Bharaich border, through Gubbapur to Baghora Tal on the Nepal frontier, 13 miles.

(7.) Opening out, where necessary, and so far as necessary, country village roads.

30. The surveys are being pressed on, and work has been commenced in various places. On the Military road (No. 6) there were on the 10th February 350 persons employed; on the 19th the number was 3,000; and the Deputy Commissioner writing on the 25th says that by the latest accounts it was 2,500. It is not improbable that many Nepalese may flock to these works; and should this prove to be the case, the influx of these people must be carefully watched, as if it proceeds to a great extent the arrangements, made only with reference to the wants of our own suffering people, may be seriously affected. Should this be the case further communication will be addressed to the Government of India.

31. At Motipur, Charda, and Kakardari, the officers of the Forest Department are loyally assisting the district authorities, and have been able to afford useful employment for those in want of it. At Kakardari they commenced operations with about 200 people; on the 25th February the number employed was 1,700.

32. On a section of the road between Nanpara and Bhinga (No. 1) near Nanpara, there were employed on the 12th 422, on the 13th 510, and by the latest accounts, dated 25th February, 600 persons. But these were chiefly labourers of the ordinary class, not one-sixth being agriculturists.

33. Employment has also been given on the road between Charda and Malhipur (No. 3). The number of persons at work is reported by the Deputy Commissioner on the 25th to be 1,200.

34. Thus there are at present some 6,000 persons employed. An estimate of what may be required can be but a rough one; but the Chief Commissioner thinks that it will be sufficient if work is found for an average of 5,000 persons per diem for six months; and for this Rs. 65,000 are necessary. The works will be carried out, the payments made, the accounts kept, and the rate of wages determined in the same manner as in Gonda.

35. The Commissioner would like to have 10,000 maunds of grain stored at Nanpara in case of need, and for this purpose he asks for an advance of Rs. 22,500. Gubbapur will be the

centre of one of the grain circles provided for from Gonda. No further supply is thought necessary.

36. The expenditure on famine relief work to be provided for in Gonda and Bharaich is:—

Gonda.		
Works in the three Northern Pergunnahs - -	2,00,000	
Advance for grain (all, or nearly all, recoverable) -	1,75,000	
		3,75,000
Bharaich.		
Works - - - - - - -	65,000	
Advance for grain (all, or nearly all, recoverable) -	22,500	
		87,500
Grand total Rs. -		4,62,500

Of this sum of Rs. 4,62,500, however, Rs. 1,97,500 are for the purchase of grain to be held in readiness for the people to buy; and this will in all probability be recovered. There remain Rs. 2,65,000 to be spent on relief works.

37. The expenditure detailed in the last paragraph can, doubtless, be met from Provincial funds; but I am to submit that the works it is proposed to set on foot are purely local, and of little or no provincial importance. They have been devised simply to bring work within the reach of people who would otherwise die for the want of it, and to utilize that work as far as possible. Under these circumstances, the Chief Commissioner trusts that the Government of India will not think that the Provincial funds should be sacrificed to these measures, and that he may hope for aid from the Imperial Exchequer.

38. It may possibly be found necessary to provide a substitute for the Commissioner to carry on his judicial work, should he be called on to prolong for some time his stay in the distressed districts. In the same way, it may be necessary to relieve the tehsildars of the distressed districts of their ordinary duties, and to appoint substitutes for them. These arrangements will cost money; but as Sir George Couper will only adopt them where and when he feels that they are required by the circumstances of the case, he is confident that he may rely on their being approved by His Excellency in Council.

39. The energy, judgment, and resources of Mr. Capper, the Commissioner of the Faizabad Division, merit the warm acknowledgments of Sir George Couper; and he also desires to say that he relies greatly on the activity and perseverance shown by the Officiating Deputy Commissioner of Gonda, Mr. Maconochie.

No. 1024.

From Arthur Howell, Esq., Deputy Secretary to the Government of India, to the Chief Commissioner of Oudh.

Dept. of Revenue,
Agriculture, and Commerce.
Agriculture and Horticulture.
Famine.

Sir, Dated Calcutta, the 25th March 1874.

I am directed to acknowledge your letter No. 1158 of the 3rd instant, submitting a report on the measures of relief which you have set on foot and propose in order to prevent famine in the Province of Oudh.

2. The Governor-General in Council has read your careful and complete account with much interest, and I am desired to express his full approval of the measures adopted. In carrying out these measures, you have received valuable assistance from Mr. Capper, the Commissioner of Fyzabad, and from Mr. Maconochie, the Deputy Commissioner of Gonda, and I am to request that you will inform these gentlemen that their services are appreciated by the Government of India. The acknowledgments of Government are also due to the Maharajah of Bulrampore for his cordial co-operation in the work of relief.

3. In order to indicate fully to you the general policy to be followed on an occasion of this kind, I am to forward herewith the Resolutions of the Government of India of the 7th November last and of the 6th instant. This policy was explained to you in personal communication by the Viceroy at Lucknow. But where any modification of these general instructions may be required by local circumstances in Oudh, you are authorised to act on your own discretion. The Governor-General in Council relies upon you to take care that relief works are provided near villages, so as to prevent undue concentration of labour, and that relief circles are organised in time, under proper supervision.

4. Your arrangements, described in paragraph 25, for the purchase of grain, have been wisely designed, and the issue of the advances required for the purpose in each district is approved. With regard to your proposal in paragraph 38, for the appointment of additional officers, the Governor-General in Council will consider favourably any application you may wish to bring forward when circumstances require it.

5. In other Provinces, the operation of Act XXIV. of 1871, the local public works loan Act, and of Act XXVI. of 1871, the land improvement Act, has been very beneficial under similar

circumstances; and I am to enquire whether either enactment could not be usefully applied in Oudh.

6. The Governor-General in Council will give full consideration to any definite proposal which you may make as to the share of expenditure to be borne by the Provincial and Imperial Exchequers respectively in the work of relief. The principle of the allotment of charge is that measures for the relief of distress in such extraordinary cases as famine are borne by the Imperial Exchequer, but in the case of relief works the expenditure is charged to local funds, so far as such expenditure is in return for work done; and the balance of charge, that is, the extra cost of the works consequent on the employment of persons for the purposes of relief, is borne by imperial funds.

I have the honour to be, Sir,
Your most obedient Servant,
ARTHUR HOWELL,
Deputy Secretary to the Government of India.

No. 1025.

Copy of correspondence is forwarded to the Financial Department for information.

No. 1026.

Copy of correspondence is forwarded to the Department of Public Works with reference to paragraphs 19 and 34 of the Chief Commissioner's letter.

No. 1027.

Copy of correspondence is forwarded to the Calcutta Central Relief Committee for information.

From ARTHUR HOWELL, Esq., Deputy Secretary to the Government of India, to the SECRETARY to the GOVERNMENT of BENGAL.

Dept. of Agriculture,
Revenue, and Commerce.
Agriculture and Horticulture.
Famine.

SIR, Dated Calcutta, the 21st March 1874.

I AM directed to acknowledge receipt of letter No. 1588 S.R. of the 19th instant, forwarding the thirteenth Special Narrative of the drought in Behar and parts of Bengal from the 6th to the 19th instant inclusive.

2. The Governor-General in Council observes with satisfaction the efforts which have been made during the last fortnight, under the direction of the Government of Bengal, by the local officers in those parts of the province which are affected by the scarcity, to complete the preparations both for the transport and storage of grain and for the distribution of relief.

3. But it is with much concern that the Governor-General in Council has learnt that the alarming reports which induced the Lieutenant-Governor to visit Durbhunga have been to a very considerable extent borne out by the facts. His Excellency in Council desires to express his thanks to His Honour for the active measures which, during his visit, he has taken to complete the organization for the relief of distress and to instruct the local officers in the difficult task which they will have to perform.

4. The Governor-General in Council is glad to hear that the Lieutenant-Governor believes that "widely spreading want has been stayed," and while he must repeat the expression of his disappointment that the preparations in that part of North Tirhoot were not earlier completed, he fully appreciates the difficulties with which the Government of Bengal and the local officers have had to contend. He feels certain that all are now exerting themselves to the utmost, and it would be unreasonable to expect complete success everywhere in an undertaking of such great difficulty and magnitude.

5. Now that it may be hoped that the necessary organization for the relief of distress has been completed, the Government of India desire to direct the attention of the Government of Bengal to the collection of full information of the means that will exist during the rainy season both for employing the people and for importing and distributing supplies of food should it become necessary to increase the supplies already allotted to the distressed districts, especially in North Chumparum and North Tirhoot.

6. These investigations should be in sufficient detail to enable preparations to be made so that action may be taken without further enquiry should the necessity arise. If it be thought desirable to depute special officers to make the enquiry respecting the power of transport

during the rains, the Government of India will be happy to provide the assistance of such officers.

7. The Governor-General has noticed the careful report prepared by Colonel Nicolls, and included as Appendix F. in the thirteenth Special Narrative, on the public works opened in the distressed districts. Doubtless, in providing for the employment of masses of people, great difficulties must have arisen, and I am to suggest the propriety of deputing Colonel Nicolls, or some superior officer of the Bengal Public Works Department, to inspect the public works that are now in progress in Behar, and to give his advice and assistance to the local officers upon the subject.

8. The Government of India feel some anxiety with regard to the provision of seed grain in those parts where failure of the winter rice crop has been very great, and I am to request that the particular attention of local officers may be drawn to this subject. Authority has already been given to make advances freely for the purpose of providing seed grain.

9. The sanitary arrangements in those places where large numbers of people are or may be collected together upon public works have very properly been the subject of constant attention on the part of the Government of Bengal. I am to suggest that here again, as in the case of public works, some inspection on the part of a superior officer might be desirable, with a view of assisting and advising the medical officers who may be in local charge.

I have the honour to be, Sir,
Your most obedient Servant,
ARTHUR HOWELL,
Deputy Secretary to the Government of India.

No. 161 I., dated the 24th March 1874.

Endorsement by the Government of India, Public Works Department.

Forwarded to the Department of Agriculture, Revenue, and Commerce, for information and inclusion in the weekly despatch to Secretary of State, at the request of His Excellency the Governor-General.

NOTE.

In the resolution lately published by the Government of India, Public Works, Nos. 78–82 I. of 12th February last,* and duly forwarded to Her Majesty's Government for information, the wants in respect to irrigation of Tirhoot, Chumparun, and the neighbouring districts in Bengal suffering from scarcity were reviewed and certain schemes indicated for investigation. Of these, one of the principal ones was a high-level canal from the River Gandak, projected in 1871 by Mr. Stoney, Executive Engineer for the Chumparun District, which it was considered might perhaps be advantageously extended beyond the Bagmuttee River to provide irrigation in the neighbourhood of Northern Tirhoot.

The Local Government has now, after a partial inspection of the localities by the Chief Engineer for Irrigation, urged the desirability of commencing work on this line, to afford employment to the people in the north of the districts bordering on the Nepal Frontier, which is one of the most distressed tracts, and the Lieutenant Governor's proposals have been sanctioned in this department. The detailed project has not yet been received, but it is under preparation and is expected shortly.

The operations to be carried out at present consist in:—

(1) Lining out the canal, and
(2) Constructing a road along one bank of the line, which will be used for the carriage of materials.

If further work should be required to give full employment to the people, the excavation is to be commenced in such a manner as to leave room for any subsequent widening which may prove necessary.

No. 20 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To the Most Honourable the MARQUIS OF SALISBURY, Her Majesty's Secretary of State for India.

MY LORD MARQUIS, Calcutta, the 3rd April 1874.

WE have the honour to transmit the fourteenth Special Narrative of the drought in Behar and parts of Bengal from the 20th March to the 2nd current inclusive.

2. We believe that the present position of affairs in the distressed tracts and in the country generally is satisfactory, that although the number of persons seeking relief is high (not less than 800,000) and more than double that of the previous fortnight, still the relief is being efficiently dispensed. We consider that the proceedings of the Bengal Government and its officers are worthy of commendation.

Page 27. 3. We forward copy of a letter from the Government of Bengal transmitting an elaborate and complete note by His Honour the Lieutenant-Governor of Bengal narrating the result of his recent visit to Eastern Tirhoot. His Honour's views so ably expressed in this note on a great variety of points relating to the scarcity have our general concurrence.

4. A copy is forwarded herewith of the *Allahabad Gazette* of Saturday the 28th ultimo, giving the latest particulars of the scarcity in the south and south-eastern districts of the North-Western Provinces.

5. We trust that the relief establishments of both the superior and the subordinate grades have been formed of sufficient strength to meet the present and also the probable demands upon their services. But it is further necessary to prepare beforehand a reserve of trained officers of all grades ready on the spot to fill the places of those who may be incapacitated by any of the many misfortunes incidental to operations of this description, and to supply any deficiency which may hereafter become apparent as the work developes itself. In order to commence the formation of such a reserve, we have, on the recommendation of the Bengal Government, ordered eight experienced Civil Officers from the Punjab and the Central Provinces for service in Behar, in addition to the very large staff already sent there, and 30 additional Medical Officers of the subordinate grades from the Presidencies of Madras and Bombay.

6. We hope very shortly to submit to your Lordship some despatches from the Government of Bengal summarizing the transport arrangements by rail, by river, and by inland carriage in the distressed districts.

7. Although we regard the situation of the distressed districts to be for the moment satisfactory, we bear in mind that the abundant harvest now being reaped in the valley of the Ganges not only improves the condition of the people generally, but also affords employment to very large numbers from those tracts where the crops have failed altogether. When this advantage shall cease, as may probably be the case before the end of April, a further accession, perhaps in very large numbers, to our relief works may be apprehended.

8. Whether such augmentation of our operations shall occur sooner or later, we must remember that the large number now employed forms but a part of the number whom we expect eventually to be called upon to assist, and for whom we have made due provision. But inasmuch as the actual number on or about the 1st April is rather below the number estimated to be on our hands by that date, we derive some hope from this circumstance that the estimates for the ultimate requirements and the provision based thereon will prove adequate.

We have the honour to be,
My Lord Marquis,
Your Lordship's most obedient and humble Servants,
NORTHBROOK.
NAPIER OF MAGDALA.
R. TEMPLE.
B. H. ELLIS.
H. W. NORMAN.
A. HOBHOUSE.
E. C. BAYLEY.

FOURTEENTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL FROM THE 20TH MARCH TO THE 2ND APRIL 1874.

THE weather of the fortnight has been singularly favourable. There has been rain[*] over a great part of Bengal Proper, where it was wanted for the early rice and for other early crops, and where it has enabled the people to occupy themselves in preparing the ground for the later crops. If, as is often the case in seasons like the present, rain continues to fall in Bengal from time to time during the next three months, all these early crops will do very well, and the early rice (September crop) will make a fair start. In Behar, where heavy rain would have done harm to the spring crops, very little has fallen, and the hail which fell in certain limited tracts did but little damage. The spring crops have thus been for the most part successfully harvested, and the little rain that fell did some good to the cheena (early millet) now in the ground. Now that the wheat, barley, and other spring crops have been nearly reaped, much will depend in Behar on whether we get good rain during April. The unfortunate tracts in Tirhoot which most suffered from the failure of the rice crops, having little other crops to reap, still suffer from the continued want of rain, and their water-supply is beginning to fail. The people are now anxiously looking out for rain, not only for the petty crops on the ground, but also for a supply of water and grass, and to enable them to plough the land and sow indigo and some other crops. In Tirhoot the land has been so parched by continuous drought that without copious rain during the next few weeks preparations for the next crop will be difficult and early sowings impossible.

Price of grain.

2. In Western Bengal there has been little change of prices during the fortnight; in Calcutta, and over the greater part of Eastern Bengal, prices are somewhat easier than they were at the time of last narrative; but there has been a general rise of prices over the Rajshahye Division; in North Behar also common rice has become somewhat dearer during the fortnight. In Monghyr an abundant spring crop has brought prices down. The price of wheat, barley, maize, and other staples has not grown dearer during the fortnight, and the comparative steadiness of the price of these grains is some makeweight against the rise in the price of rice. The returns furnished by the Chamber of Commerce show that, on the 27th March, the price of rice had fallen about 3 per cent. in Calcutta; but for the rest of the fortnight prices were steady though the demand was limited. The price-currents for the two weeks will be found at enclosure No. 2. The present

[*] *Rainfall of the fortnight in inches at some of the principal district head-quarters.*

Burdwan	1·14
Beerbhoom	0·38
Calcutta	0·0
Nuddea	0·87
Maldah	0·0
Dinagepore	0·0
Dacca	3·43
Sylhet	4·51
Tipperah	2·84
Patna	0·32
Tirhoot	0·0
Chumparun	0·10
Bhagulpore	0·0
Lohardugga	0·65

quotations for some of the principal districts compare with the prices of rice shown in preceding narratives as follows:—

	Number of seers of common rice sold for a rupee.			
	On 31st Jan.	On 28th Feb.	On 14th March.	On 28th March.
Burdwan - -	14	13½	13	13¼
Beerbhoom -	12⅜	12½	13½	13½
Hooghly - -	11 to 12	11½ to 12½	11½ to 12½	12 to 13
Calcutta - -	12½	12¼	12½	13
Dinagepore -	13¼	14	12¾	10¾
Maldah - -	11¾	12	12	9½
Rungpore - -	11¼	11¼	11⅛	11½
Dacca - -	16	14	12	13
Backergunge -	16½	15	16	16
Chittagong -	18	16½	13	16½
Noakhally - -	17½	13	13	15
Patna - -	12	13½	13	12
Shahabad - -	13	12½	12¼	12¾
Tirhoot - -	10	10	9½	8½
Chumparun -	11¾	11	12	10¼
Bhagulpore -	12⅝	11⅜	13¾	11¼
Lohardugga -	15½	16	15	14
Maunbhoom -	15	14½	14	14½

Other grains, maize, pulses, commonly used in Behar, were selling by the latest returns at from 13 to 14 seers per rupee in Tirhoot, 13 seers in Chumparun, 16 to 17 seers in Sarun, and 18 to 20 seers in Patna.

State of the crops.

3. There is little to add to what was said in last narrative regarding the outturn of the spring crops. The harvest has been very good so far as it goes, and from more than one district it has been reported that the ears of wheat and barley are fuller than was expected. The early spring rice is doing well, and so also is the early millet (cheena) up to the present date. The reports of the last fortnight unfortunately give no ground for hoping that the spring crops of North Tirhoot will be fuller than was expected at the time of the last narrative. North Tirhoot and a small strip of North Chumparun are the only Behar tracts wherein the spring crops have not contributed largely to help the people through the difficulties of the present season. From two districts of East Bengal report was received that the heavy rain of the 23rd March had to some extent retarded agriculture. But subsequent open weather has remedied any temporary difficulty of this kind, and the early crops all promise well. The April crop of mulberry leaves and the outturn of silk during that month promise to be unusually good. In parts of Midnapore, Rajshahye, Moorshedabad, Beerbhoom, and some other districts the April silk crop is of much importance to the ryots. The crop of mhowa flower, which in the wilder parts of the country to the west forms a large part of the food of the poor during April and May, promises to be good everywhere except in a part of the Sonthal Pergunnahs.

Supply of grain.

4. The supply of grain in the principal local markets at the prices quoted is sufficient, except in parts of Tirhoot, Chumparun, Purneah, Rungpore, and Palamow; from one or two places it is reported that people who went to buy their weekly supply of rice at the nearest bazaar had to come back without it. But, on the whole, the local supplies of grain are maintained wonderfully well. Even in part of Tirhoot, where there was not more than one-eighth of an average autumn crop, and where there had been hardly any spring harvest at all, the chief entrepôts had plenty of grain, and the local markets are fairly well supplied, an active petty trade having been hitherto maintained, and supplies brought up from the Ganges and the railway. In several places, where the Government grain stores were opened to the workpeople or to the public comparatively little of the Government grain was purchased; indeed, it is only in North Chumparun and a part of Purneah and in Tirhoot on the works that any considerable quantities of Government grain are being sold either to workpeople or to the public, through the local dealers.. From some of the tracts in Tirhoot through which Govern-

ment grain is being most largely carried fears have been expressed lest the private supplies in the bazaars should run short, because dealers are unable to replenish their stores from outside owing to want of carriage. The Sub-divisional Officer of Tajpore, through whose jurisdiction are carried the supplies of grain for North Tirhoot, writes:—"I am anxious about the bazaar supplies; the "contractors from Chumpta Ghat have lately taken to using pack animals. " * * * I do not know how this great importing sub-division has been "hitherto supplied, with nearly all its carts drawn off to feed those tracts which "usually export to it; but of this I am certain, that if pack-bullocks are also "taken up the bazaar supplies must fail." Results like this cannot, in view of the great operations Government have undertaken, be altogether avoided; but the local officers have been desired to do all they can to mitigate the evil, and they have been especially prohibited from using any sort of compulsion to bring into Government service the pack animals employed on the private trade.

Private importations of grain.

5. There is still no considerable import of grain on private account from beyond sea. But into some of the distressed districts grain still flows briskly from other parts of India. The Sarun district continues to receive supplies from outside, much of which comes down the Ghogra river from Oudh. Rungpore, Bogra, Rajshahye, and Maldah are supplied to a considerable extent from East Bengal, but of the amount of these supplies Government has no precise statistics. The import of private grain by railway into Behar was—

From the North-Western Provinces and Punjab - - -	17,928	tons for the fortnight ending the 21st March.
From Calcutta and places in Bengal	7,737	ditto ditto.
Total -	25,665	tons during the fortnight, or a

daily importation of 1,833 tons of private grain into Behar. The greater part of this large quantity is consigned to Patna Station, where there was a considerable block of the traffic during the fortnight, the railway stations being insufficiently provided with the necessary facilities for so large a traffic. Active steps have been taken to remedy this difficulty, and it is hoped that it has been met.

The grain thus imported has hitherto found its way by various petty channels into many parts of Behar both north and south of the river.

Grain trade from the Punjab.

6. In last narrative it was stated that there was much grain waiting in the Punjab to come down into the famine districts. During the fortnight under report the railway officer deputed to inquire into the matter by the Government of India has furnished his report. He finds that 23,580 tons of grain are waiting on the station premises of the Punjab Railway for means of transport to Benares and Behar. The chief adviser of the Punjab Government in railway matters believes that four times as much more grain is stored in bazars and serais, waiting for waggons, to carry it down to the distressed tracts. The Consulting Engineer to the Government of India reports that, before the end of March, a fixed and uniform despatch of 1,250 tons of grain from the Punjab to the famine districts ought to be considered a certainty. The difference between the prices of grain in the Punjab and Behar is so great that the profits on the traffic are large; and the railway officer who conducted the enquiry reports that, under present circumstances, "it is absolutely certain that the supply of private grain to the railway "will continue fully equal to its carrying power;" while it is clear that no "room "can be found for Government grain transport without interfering with private "trade."

Export of grain by sea.

7. The usual note on the movement of food-grains will be found at Appendix A., Pages 25 & 26. in which will be found a statement furnished by the Collector of Customs putting—

the total export of food-grain from Bengal by sea for the five months from October to end of February (and this figure may be finally accepted as correct) } at 173,161 tons.

The authorised figures for the exports of the month of March have not yet been received. But it is certain that the exports from Calcutta and Chittagong have much diminished. From the Orissa ports the exports continue to be moderate. So far as advices have been received, the exports of food-grains from Bengal for the month of March amount in round numbers to about 16,500 tons; so that the total export of food from Bengal during the six months ending on the 31st March will be about 190,000 tons. The Lieutenant-Governor some time back expressed his belief that the exports up to April would be from 150,000 to 200,000 tons. A recent report states that a fresh demand for the Mauritius is shortly expected in Calcutta, while something more may go from Orissa, so that it is not unlikely that the total will not fall far short of the larger figure named by the Lieutenant-Governor.

Condition of the people.

8. The district narratives (enclosures Nos. 3, 4, 5, 6, 7, and 8) show that, with the one exception of Tirhoot, to be noticed more fully below, the condition of the people is decidedly good and hopeful, indeed this feature is so prominent in the narratives that it may well be the subject of much thankfulness. The accounts of North Chumparun, where, next after North Tirhoot, the famine is worst, show that by relief works, by selling Government grain, by advancing grain, and by means of a thorough system of charitable and medical relief, distress is being arrested and relieved; and, for the present at any rate, the Lieutenant-Governor feels confident that the Government agency and means on the spot will suffice to meet the famine. In other districts where distress had threatened actual famine has not yet appeared, and the local officers seem quite confident that their preparations are sufficiently advanced to meet distress when it comes; and it seems also that the people, though they expect scarcity and very high prices, believe that with the help of Government they will get through their difficulties. From Dinagepore the Magistrate writes that "prices are rising," and "the supply of grain is " becoming exhausted;" but "there is wonderfully little distress among the " people," * * * "and it is beyond question that the commencement of " relief operations and consequent diffusion of money throughout the country, as " soon as there was any apprehension of scarcity, has enabled the people to " meet it with confidence and vigour." From Maldah and Bogra it is reported that the condition of the people has not changed for the worse. From all parts of Sarun it is reported that there is no general distress, as all the poorer classes are on the relief works, while professional beggars and persons unable to work are receiving charitable relief. From Monghyr it is reported "that the condition of the people has improved since the rubbee harvest commenced." No general distress has been reported from North Bhagulpore; and the latest telegraphic report from that tract is, "Condition of general population satisfactory." The Purneah Magistrate writes:—"I have not seen or heard of any cases of actual " starvation, but the number of cases of distress is increasing, and would have " been much larger but for the relief afforded by the Government road and by " relief committees." In South Behar there is at present no distress. The latest report from the Sonthal Pergunnahs is that "the people look well everywhere," though in parts the supply of grain is expected soon to fall short. Some days back alarming reports were received about a small tract in Hazareebagh; but subsequent reports written after the District Officer had visited the spot are reassuring, and it is stated that the local distress which had appeared has been met. In West Bengal, regarding which densely-peopled and to some extent poverty-stricken tract the Lieutenant-Governor has all along been anxious, there are no present signs of probable general distress.

Tirhoot.

9. There is one large exception to the general condition of affairs described in the next foregoing paragraph, and that is the north-eastern portion of the Tirhoot district, where the poorer classes have, in the last month, come upon the relief works in enormous numbers, now, it is believed, approaching to half a million in all, who are receiving relief in some shape.

At the time when the last narrative was despatched, the Lieutenant-Governor was in Tirhoot personally superintending the organization of relief measures there. He subsequently visited some more of the distressed circles, and saw the circle officers posted and at work personally instructing them. He then crossed to Patna, where he again consulted with the Commissioner and settled some points with Sir Richard Temple, whom he had asked to meet him there. He saw and instructed some more of the officers sent down from the North-Western Provinces, and completed the arrangements for officering the distressed circles of North Behar, after which he returned to Calcutta.

Position of affairs when the Lieutenant-Governor left Tirhoot.

10. The result of the Lieutenant-Governor's further inquiries in Tirhoot do not materially differ from those stated in the last narrative. As there stated, it is feared that some cases of starvation to a greater or less degree have occurred among a few old people who did not come to relief works or relief centres in time, and perhaps in greater numbers among young children who have suffered from bad and deficient nourishment, while the parents were living on scanty food though not starving. But all accounts agree that nowhere has distress been so great as in the Bahera thana of Durbhunga, to which allusion has already been made—there only have the symptoms of severe distress been prominent, elsewhere the cases have been very rare and isolated. The Lieutenant-Governor repeats his hope and belief that the progress of distress has now been stayed. Very few deaths have been reported as directly due to starvation, not more than ten or twelve in all. The Government of India having asked the Lieutenant-Governor's personal opinion on this point, it was given as follows :—

Deaths from starvation.

"In times of scarcity and the early stages of famine it is totally impossible to distinguish deaths accelerated by scarcity and bad food from natural deaths. He has not the least doubt that among a very poor and helpless population, such as exists in North Tirhoot, many people die when food is dear, who would not die, or would not die so soon, if it were cheap. He believes that there have not been deaths from direct starvation among healthy adults; but, from what he saw of the people about Bahera and some of those on the works near Durbhunga, he fears that among such a population a good many old, weakly, and sick people must have succumbed to insufficient nourishment. Similarly, as before mentioned, many young children are much emaciated, even when their parents are not so. The Lieutenant-Governor does not believe that the parents starve the children to feed themselves, but only that the children are first affected by scanty and bad fare. This result is much aggravated by the native habit of nursing children for two or three years. A child so nursed suffers much when the mother fares indifferently, and the food for the child fails. The Lieutenant-Governor has already explained the extreme difficulty of saving such children, owing to the unwillingness of the parents to bring them to our hospitals and poor-houses. He himself saw the emaciated children carefully fed with milk at the temporary hospital which he arranged at Bahera, but the mothers strongly resisted staying there in spite of every concession and arrangement that could be made. Under such circumstances the Lieutenant-Governor cannot but fear that many children of a weak and sickly character die. Similarly, he believes that some old and infirm people die on account of scanty food. He is happy, however, to say that, so far as he saw and can learn, it is only in the part near Bahera that want has reached the point that many people are emaciated and the weakly must in some numbers die. Every attention is now being given to improve matters there."

Recent reports of deaths.

11. The view expressed in the foregoing extract is much borne out by the narratives received since his expression of opinion was submitted. In the Tirhoot narrative (enclosure No. 3)* will be found mention of reported cases of starvation, into which inquiry was made by European officers, *e.g.*, the body of an old man in the Hatti relief circle of Durbhunga, who was said to have died from starvation, "was in a state of extreme emaciation;" yet "the son of the deceased did not show any signs of suffering from want of food." In a village of Mudhoobunnee three males were reported to have died from starvation, but inquiry on the spot showed that two of the deceased "were children of a widower who was himself in a state of rude and well-nourished health." In the Rungpore narrative (enclosure No. 5) the Magistrate writes :—"There was a report received of a death from starvation "in one part of this thannah, and I went to the spot two days ago, but the case "was that of an old woman of 80 years of age who died from disease." It is, the Lieutenant-Governor fears, a fact that occasionally poor creatures come on to the relief works in Tirhoot in a very reduced state; but on all the works except perhaps in Bahera the great majority of the people are in tolerably good condition; and when deaths occur it is not possible always to say whether they are due, in whole or in part, to starvation. It may be confidently stated as a fact that up to this time the mortality from any causes among the great number of

* Page 89.

people collected on the roads, &c. in Tirhoot is singularly small. Indeed, seeing the great numbers and the wretched physical character of many of the old and weakly collected together, the wonder is that there are not more deaths. Among such a population in the best of times there must be deaths of old and reduced people. The district narratives (enclosures Nos. 3–8) sufficiently show that all Government officers in the distressed districts are very keenly alive to the obligation which lies upon them to save life and to arrest famine however and whenever they can.

Measures taken in North Tirhoot.

12. While it is hoped that actual starvation has been stayed (unless it be in rare instances which escape all our care), our difficulties in regard to the employment of the people have been much increased in Tirhoot since the last narrative, that is to say, there has been a rush of people to the works in the Mudhoobunnee sub-division in enormous numbers, still greater than that which the Lieutenant-Governor found in Durbhunga; so much so, that the total numbers have approached a quarter of a million in the Mudhoobunnee sub-division according to the last statements received. It is feared, however, that there has been a good deal of peculation and misstatement in regard to the numbers, which are certainly so large that, coming so suddenly, it is most difficult to deal with them. Mr. Metcalfe has energetically undertaken this task, and it is believed succesfully. A large addition has been made to the Public Works staff of the locality,—the very best officers being selected and taken from other duties. While the people who come to the works in Mudhoobunnee are so numerous, they are not at all so reduced as some of those who come to Durbhunga from the neighbourhood of Bahera, but are generally still strong and healthy, cases of great want and emaciation being very exceptional indeed. It appears that while the population now in the northern tracts of the sub-division are comparatively well off, the whole of the poorer population of those tracts have left their homes and flocked, together with those of the southern portion, to the network of roads near Mudhoobunnee, so that some 130,000 are collected in a small circumference. Mr. Metcalfe found some of them who were in perfectly good condition, but who had tasted of the lax state of things, inevitable when a few among them were in great want, were somewhat inclined to resist any strict counting and due apportionment of work. But he has brought them to order, and done all that can be done meantime. When the Public Works staff is complete, as it will be immediately, and the able-bodied are put on great works under proper discipline, while the weaker are provided for in their own villages, it is hoped that things will settle down into good shape.

Latest intelligence from the spot.

13. Having made immediate arrangements for Mudhoobunnee, Mr. Metcalfe has returned to the Durbhunga sub-division, where he reports that the southern relief circles are now working well and in good order, while the other circles are also being put in good order. Mr. Metcalfe telegraphs on the 31st March thus:—"In a ride " from Bahera through the worst parts, and in a circuit of twenty miles, I did not " find a person without a ticket for relief or uncared for." In a letter just received, Mr. Metcalfe says:—" Lists of all persons on charity have been made out, and as " far as I can judge most honestly, by the village Putwarries. Grain has been " placed in the hands of the Jeyt ryots, and in the scores of villages where I went, " the most wretched are being fed at their homes by their headmen. We have also " hit off a solution of the labour difficulty, *viz.*, that the weak and incapable have " been formed into small gangs, and each gang is required to do the same amount " as one able-bodied man. The villagers have taken to this piece-work arrange- " ment, and it will save Government much loss from cheating. I am working " almost entirely through local men, with here and there an exception. The " Bahera road is still the difficulty. Many of the villagers have returned to their " homes, of the others some are going; others adhere to the earth-work on the " roads. The gangs have been organised into numbers of 1,200, and several gangs " placed under a Jemadar of one of the Cavalry Regiments, and this arrangement " enables us to count the men with little or no difficulty. There is a great " improvement in the appearance of the classes, and I can see nowhere famished " persons who are not in some way receiving charitable relief. As regards food " the villagers now have no fear; water is their chief anxiety. I see but little " water in the wells. The tanks are dry save the very largest, and unless we have

" rain there will be a great scarcity of water. Your instructions regarding relief " in the town through native residents have been carried out."

The Lieutenant-Governor trusts he may believe that the difficulties in Durbhunga and Mudhoobunnee have been met, and that we are now well ahead of the famine there as elsewhere. Already upwards of 12,000 persons are returned as receiving charitable relief in the Durbhunga sub-division.

Mrs. Metcalfe has taken charge of the poor people and orphans in a large enclosure fitted up for them at Durbhunga, and most of these poor people are said to be getting quite fat.

In Seetamurhee things continue to be more favourably situated, and the numbers on our hands are not excessive, about 40,000 in all.

In the three northern sub-divisions, Mr. Metcalfe states that the whole number on the works, or otherwise receiving relief, is about 400,000, and he hopes that we have reached nearly the maximum that we may expect on our hands in that part of the country. It seems hardly possible that the number in Mudhoobunnee can be very greatly increased (one-third of the population are already on the roads), but it is impossible to be confident that in other sub-divisions the number may not much increase. In tracts where the spring harvest now occupies the people, we must expect, not improbably, a large addition to the number on the works between the completion of the harvest and the commencement of the rains.

The Tirhoot narrative (enclosure No. 3)* speaks as if general distress might be imminent in parts of the head-quarter sub-division of Tirhoot. A subsequent letter, however, from the Magistrate of the district, written after visiting the villages named in the narrative, says that the description there given was "exaggerated, and no extreme distress is apparent or expected."

* Page 86.

Orders issued by the Lieutenant-Governor on Tirhoot affairs.

14. The Lieutenant-Governor issued various orders in brief form during his visit to Tirhoot. Since his return to Calcutta he has embodied these in a Note, setting forth the order which he gave and the views which he formed during his visit. This Note is attached (Appendix C.),† and to it the Lieutenant-Governor begs to refer for an explanation of his proceedings and the measures which he has adopted.

† Page 27.

Sir Richard Temple's tour.

15. At paragraph 17 of the last narrative it was mentioned that Sir Richard Temple had visited the Purneah and Dinagepore districts, and his report on Purneah was then submitted, as also his estimate of the grain requirements of Dinagepore. His final Minute No. 50 regarding Dinagepore was not received till after the despatch of the last narrative. It is now appended (Appendix D.).‡ The Lieutenant-Governor is happy to find that Sir Richard Temple's report, after inspecting the local arrangements, is altogether favourable, and justifies the belief that the arrangements, both to transport the grain and to give relief wherever it may appear, are very good and satisfactory. Sir Richard Temple has done all that was necessary to complete and systematise these arrangements, both for the Dinagepore district and for the Rajshahye Division generally. In company with the Relief Commissioner and the local officers, he marched through the districts of Rungpore and Bogra; he again visited Dinagepore; he has been to Maldah; and, before concluding his review of affairs in the Rajshahye Division, he conferred with the Commissioner, Mr. Molony, at Rajmehal. His minutes regarding Rungpore, Bogra, and Maldah, and the Rajshahye Division generally, Nos. 47, 48, 51, 53, 54, and 52,* with his second letter on the subject, and the Government orders issued thereupon, will be found in Appendix E.§ Sir Richard recommended some additions to the grain allotments of these districts, but it may be said that in regard to the Rajshahye Division as a whole, his reports are very favourable and creditable to the Commissioner and Additional Commissioner, to Mr. Lowis, Magistrate of Dinagepore, and to the local officers generally. It is matter for congratulation that Sir Richard was able to express himself as thoroughly satisfied with the conduct of the Rajshahye officers and with the forwardness of their preparations.

‡ Page 41.

* See Part III., p. 185.

§ Pages 43 to 49.

Sir Richard Temple, after meeting the Lieutenant-Governor at Patna and visiting Allahabad to arrange further about reserve carriage, conferred with the Commissioner and the Magistrates of Shahabad and Gya, and settled the allotment of grain for those districts. On his way down he again visited Bhagulpore and settled the grain allotment for the Sonthal Pergunnahs and Monghyr. Sir Richard Temple's Minutes on these subjects, and also those regarding the organization of a reserve transport train, will be found in Appendices F. and G.*

* Pages 58 to 65.

It will have been seen from previous narratives that the Lieutenant-Governor has warmly acknowledged the good service which Sir R. Temple has done for the Government of Bengal by visiting the distressed districts, by conferring with local officers of all grades, by ascertaining what was required, by informing the Local Government, by giving the necessary orders, and by seeing that both his orders and those of Government were obeyed. Sir George Campbell would again repeat his most cordial acknowledgments of Sir Richard Temple's services.

Transport arrangements.

16. Sir Richard Temple has now submitted minutes clearly summarising the present transport and relief arrangements in the three distressed divisions, Patna, Bhagulpore, and Rajshahye. These will be separately submitted to the Government of India, with a note showing the whole of the allotments of grain, and giving a general review of the transport arrangements and their working. Here it will suffice to say that the total allotment of grain to the distressed districts amount up to date to 381,819 tons. It only remains to consider whether any further allotments must be made to the western districts of the Burdwan and Chota Nagpore Divisions, but it is not expected that the demands for these districts will be very large. The distressed parts of Chota Nagpore are those which are most accessible, and Burdwan is very accessible. Seeing how favourably the season promises so far, the Lieutenant-Governor has no doubt that with these large allotments, and a certain reserve in case of surprise in any quarter, a very ample provision has been made.

The carriage arrangements are now, as a whole, working very well indeed, and there is every prospect that the full quantities allotted will be conveyed to and stored in the distressed districts in very good time. It was at one time feared that the local carriage would scarcely keep pace with the supply sent up by the railway. Now the difficulty is the other way, *i.e.*, we can hardly send by railway enough to supply the local carriage. It is hoped, however, that arrangements now made will suffice to get up the whole supply in time. The only serious difficulty is in regard to the supply of North-Eastern Tirhoot, to which so much as 32 lakhs of maunds, or 117,000 tons, have been allotted, and where the carriage has, so far, fallen short of our expectations. But the Durbungah Railway is progressing admirably, and most opportunely comes to aid us in carrying grain to Durbungah, to which a temporary line of rail will be open this month. The Government is now sanguine that if the traffic lines are not interrupted before 15th June the supply for Tirhoot will be completed by that time. If the rains come in prematurely the distress will, it may be hoped, be so much curtailed, and the water routes will be opened. The latest figures and facts regarding grain transport seem to make it certain that if no very unforseen mischance occur the allotments to all the other districts will be stored some time before the dates mentioned for the completion of the Tirhoot allotment, many of them long before. Only a portion of the additional allotment lately made to the Rajshahye Division may be stored in the waterside depôts for distribution when the rains clear the channels.

† Pages 72 and 73.

At Appendix I.† will be found copies of the Lieutenant-Governor's instructions to Commissioners regarding the distribution of grain during the rains, and his orders, deputing a special officer, Mr. Wickes, C.E., to enquire into the best means of utilising the water-ways of the distressed districts from the 1st July.

‡ Page 68.

The transport arrangements of Purneah and North Bhagulpore have been organised by Mr. Hankey with remarkable ability and success, and are working exceedingly well. In Appendix H.‡ will be found two reports showing what Mr. Hankey has done.

Despatches of Government grain.

17. The despatches of Government grain from Calcutta to the famine districts amounted (see Appendix B.) during the fortnight under review to 10,80,936 maunds (38,705 tons). The total despatches of Government grain to and receipts in the distressed districts up to the 31st March amount to 209,913 tons, out of which 131,765 tons

had reached their final destination up to the date of the latest returns. The daily despatches by the East Indian Railway fell, owing to the insufficiency of railway waggons, as low as 1,437 tons and 1,185 tons during the beginning of the fortnight. In consequence of these short despatches inconvenience was caused at the Purneah and North Bhagulpore river-side depôts, where a powerful stream of carts had been arranged, and where the reserves of grain were very soon exhausted. Since the 26th March, however, the average rate of despatches has been kept as high as 2,479 tons per day, a quantity very little below the maximum which the Government of India desires should be sent daily. The Railway Company have allotted a sufficient number of waggons to work the Government grain traffic only; these waggons, if unloaded promptly at the Behar stations, will come back empty, and thus maintain a constant steady traffic of Government grain. The East Indian Railway have also promised to give the Government grain at Howrah priority of despatch over ordinary goods; the ground for such a concession is that a regular stream of Government grain to Behar is necessary to enable the Government to transport its full allotment into the interior before the rainy season, and to be in a position to save the lives of the people who may be expected to be on its hands. The Lieutenant-Governor only trusts that these arrangements will not interfere with the despatch of private grain, remembering as he does that after all that Government has done for the worst districts there still remain many districts where there has been much failure of crops which must greatly rely on private importation.

The Eastern Bengal Railway has been able to send away daily to Kooshtea and Goalundo all the grain which the Government required to send; the average despatches by that line during the fortnight have been somewhat over 1,000 tons per day.

Relief works.

18. The fortnightly returns of persons employed on relief works under officers of the Public Works Department will be found at enclosure No. 10. But this return does not always show the numbers employed on works under the Court of Wards or on works under local agency of many kinds. As has been already said, the number of people employed, or perhaps, more strictly, relieved, on the works in North Tirhoot has increased enormously. Compared with the figures given in last narrative (paragraph 28) the figures stand thus, and even the figures given had been somewhat exceeded by the last accounts:—

	Last fortnight.	Fortnight under report.
Patna Division - - -	234,249	539,353
Soane Canal works - -	29,589	31,289
Gunduk embankments - -	25,615	28,834
Bhagulpore Division (inclusive of Kurruckpore works) - -	22,800	51,430
Rajshahye Division - -	54,832	82,586
Burdwan Division, Nuddea, Chota Nagpore, and Cooch Behar -	19,219	22,000
Northern Bengal Railway - -	7,000	12,000
Total - -	393,304	767,492

It will be seen that the numbers employed have increased considerably in other parts of the country besides Tirhoot. In regard to the management of these enormous numbers of workpeople, the utilization of their labour, and in regard to their punctual payment, the Lieutenant-Governor would invite attention to paragraphs 11–24 of his Note on Tirhoot affairs (Appendix C.). Effort has been made, and will still be made, to disperse them to their homes as soon as possible, and to relieve them there. Meanwhile, every nerve is strained to supply professional supervision of all grades, to send up competent clerks of works, to educe local agency for supervision, and to manage the pay-disbursement business to the best interests both of the Government and of the workpeople. Since the last narrative was submitted four additional Engineer Officers, and as many as forty additional subordinates, have been ordered to, or have arrived in, the famine districts. Major Trevor, R.E., has been deputed as Additional Chief Engineer to inspect, direct, and advise upon relief works, in concert with local engineers and civil officers, with instructions, for which see Appendix K.*

* Page 74.

19. In the Mudhoobunnee Division, where nearly a quarter of a million were on the works by last accounts, the present relief works can hardly last more than four weeks, for the people seem to dislike tank work and to rush upon the road works. In this direction the Railway Engineers were already prospecting for the best alignment for a North Behar Railway, to run from Durbhunga eastwards; and the Government of India, in view of the enormous quantity of available labour, has been pleased to sanction the Engineers' beginning the railway on the best line which they can, in communication with the local civil officers, finally agree upon. If the survey or reconnoisance is far enough advanced to make such beginning practicable, very excellent and useful work will have been provided for the famine-stricken labourers of Mudhoobunnee. Happily, Mr. Stevens, the Superintending Engineer of the Durbhunga Raj property, knows the country well, and has surveyed most of it for the roads now under construction. The selection of a line for a railway in a hurry will therefore be less hazardous than it might otherwise be in a country where the maps are nearly thirty years old.

North Behar Railway works.

20. The average daily number of labourers on the Soane Canal works has risen during the fortnight to 31,282, as compared with 29,589, as shown in last narrative. The Executive Engineers report that, at the present season, they cannot procure as many local labourers as they require, inasmuch as people can earn from 3½ to 4 annas day in harvesting. People on the works consume, for the most, the cheaper grains, which they buy locally. Coarse rice can be had from local dealers on the works at 12 seers per rupee. At one place only was there a demand for Government grain, and there one bag of Burmah rice was issued and was taken readily. The number of workpeople on the Gunduk Embankments has risen to 28,834, as against 25,615 shown in the last narrative. Most of the people are doing petty task-work; they draw their supplies of maize mainly from the local markets. The people are strong and able to work; only a few come to the works in a reduced state, and receive gratuitous relief for a time from the Engineers.

Irrigation Department relief works.

21. The numbers of workpeople on the Northern Bengal Railway are increasing; about the 15th March there were 9,000 labourers on the railway bank, besides about 3,000 on the feeder roads. The earth-work completed was equal to a bank 24 miles long and 4 feet high. On the southern section, where the bank is heaviest, but few labourers had yet applied for work, but they were beginning to come in larger numbers. The Engineer-in-Chief is very anxious to complete the railway bank from Julpigoree down to the Ganges this season, and he is arranging to import labourers from other distressed districts. The Magistrate of Bogra also has been instructed to send over for work upon the railway any distressed people of his district who may be willing to take work away from their homes.

Northern Bengal Railway.

22. The railway from Chumpta Ghat, on the Ganges, to Durbhunga is not exactly a relief work, but it was undertaken, and is being rapidly pressed through, in order to carry grain into the most distressed tracts of North Tirhoot. The length of the line at present sanctioned from the Ganges to Durbhunga is 44 miles; on 28½ miles of this length the rails had been laid, and the principal bridge was expected to be completed at once. The Engineer-in-Chief expected to lay two miles of rails a day, to complete the remaining bridges, and to be able to run an engine into Durbhunga by the middle of April. From the 1st of the present month the railway was to carry a certain amount of grain daily as far as Nagurbustee, two-thirds of the distance from the Ganges to Durbhunga, and soon after the 15th the railway will, it is expected, carry 800 tons of grain daily into Durbhunga. The Government of India has provided that rolling stock shall be ready on the new line in sufficient quantity to carry 800 tons a day, and arrangements are in train for unloading the wagons at stations and starting it off to the depôts on carts.

Durbhunga Railway.

23. It has been explained in previous narratives that, in order to carry out the relief system contemplated by the "instructions" issued by the Government of India, the larger sub-divisions have been subdivided, and each relief sub-division is parcelled out into circles. Over each circle is

Charitable relief.

placed a competent officer who has to direct and control charitable relief at each village of his circle. The circle officer is aided by one, two, or more assistants. Attached to each circle is a famine hospital and a native doctor; and it is the duty of the circle officer and his assistant to visit every village in the circle at least once a week, to prepare lists of the people who require relief in every village, and to see that relief is given in one form or another to every person who requires it. The worst districts, Tirhoot, Chumparun, Dinagepore, Maldah, and Rungpore; and parts of Bhagulpore, Purneah, and Monghyr, have been thus parcelled out into circles; and every circle in each of these districts is manned, and the relief system has been thoroughly and systematically begun. Below the circle officers are employed the indigenous village agency of village headmen, village accountants, and village police, as explained in the Lieutenant-Governor's Note (Appendix C., paragraphs 2–7.*) As has been stated in a previous paragraph (13), the Additional Commissioner of North Behar, writing from the worst part of Durbhunga, says that in a circuit of twenty miles he did not find a person unrelieved or uncared for. Mr. Howe's account (see the last paper in enclosure No. 3†) of the relief arrangements in North Chumparun shows that throughout Ramnuggur the administration of charitable relief in the relief circles is now in good working order, and the people are kept from starving.

* Page 27.

Numbers in receipt of charitable relief.

24. The numbers of people in receipt of daily charitable relief in one form or another are, according to the latest information,—

Name of District.	Name of Sub-division.	Numbers receiving Relief.
Chumparun	Bettiah	4,350
	Ramnuggur	1,400
	Head-quarters	333
Tirhoot	Durbhunga	12,082
	Seetamurhee	5,221
	Mudhoobunnee	570
	Head-quarters	265
Sarun	-	36
Gya	-	192
Shahabad	-	13
Bhagulpore	Soopool	1,300
	Muddehpoora	-
Monghyr	-	1,603
Purneah	-	2,554 (besides 1,500 privately relieved).
Maldah	-	240
Bogra	-	660
Rungpore	-	4,000
Dinagepore	-	458
	Total	35,345

Sales of Government grain.

25. In North Chumparun, Dinagepore, and parts of Purneah only has Government grain been sold to the public to any considerable extent. To the people on the works the grain has been sold in Tirhoot and also in parts of Bhagulpore. From Ramnuggur, in North Chumparun, only have full accounts of these sales and their results been received. Mr. Howe, the Sub-Divisional Officer, writes thus:—"Since the 12th March " sales of Government grain to the public have commenced, and by " the 21st, the date up to which this report extends, 365 maunds, 25 seers, " 12 chittacks had been disposed of, and Rs. 1,269-10 realized. The precautions " taken to prevent its getting into the hands of monopolists were these: 1st, the " rice was sold in small quantities, the smallest that could be considered whole- " sale, generally 3 bags, and to as many petty traders as possible. A few of the " more substantial dealers, four in number, received 7 bags (about 14 maunds " each). A proclamation was issued several times (especially on market days) " informing the public that Government rice would be retailed by certain dealers " at 11½ seers per rupee, and every opportunity of making this widely known was " taken. I also took an agreement from each dealer in writing to the effect that " he should only sell retail in the town of and at the bazars round Ramnuggur at " 11½ seers per rupee, and in not larger quantities than 5 seers to any one person.

"A few also agreed to retail on our roads around Ramnuggur to our coolies. "Finally, I took the greatest care, through my establishment and in person, to "watch the working of the measure and prevent abuses. I feel convinced that "the grain thus sold has circulated freely among the people in the manner "intended by Government. Every shop where Government rice is sold is sur-"rounded by eager purchasers, and no measure we have taken (not even the "advances to ryots, which was very popular) has tended so completely to restore "the confidence of the people. Villagers from 8 to 10 miles come in on bazar "days and the rice is rapidly sold."' Sales conducted after this fashion through the local dealers will, it is hoped, not restrain trade or prevent such private importations as may be coming in. In the Lieutenant-Governor's Note (Appendix C.*) it is sufficiently explained that private trade was active and private supplies were tolerably abundant even in the worst parts of Tirhoot.

* Page 39.

Advances to ryots.

26. In the Chumparun and Purneah districts advances of money and grain to substantial ryots have been begun. In Sarun, Tirhoot, Rungpore, Maldah, Bhagulpore, and Monghyr very considerable sums have been advanced to zemindars in order that they may help their ryots. The advances of grain made direct to ryots have been made by the relief circle officers on the security of the ryot's holding or other security. At paragraphs 41–46 of the Lieutenant-Governor's Note on Tirhoot affairs (Appendix C.†) the subject of advances to ryots is discussed, and it is pointed out that there are considerable classes of ryots who will not work on roads, and who yet will require advances of grain to carry them through the coming season. Sir George Campbell has desired all officers to make advances to ryots as far as possible on the security of zemindars, middlemen, or head ryots; and, looking to the very great importance of this advance question, he has suggested that villages in the worst tracts be classified according to the manner in which it will be necessary to make advances to ryots. Now that the Relief Circle Agency is getting into full working order, the Lieutenant-Governor has good hope that this business of advancing grain to ryots on the best available security will be properly dealt with during the next two months.

† Page 36.

Medical staff for the famine districts.

27. During his recent tour Sir Richard Temple had recommended that application be made to the Madras and Bombay Governments for twenty additional native doctors to help in the medical relief required in the famine districts. The orders of the Bengal Government on that Minute show that, up to the present date, 102 native doctors have been indented for on behalf of the famine districts; and the Surgeon-General has made available 105 native doctors for the duty from the Bengal Presidency. Out of this number from 50 to 70 native doctors had reached the famine districts before the end of March, and the rest were on their way. Sufficient stocks of medicines and other necessaries packed in small boxes have been sent to each famine district, so that the Relief Circle hospitals may be found with all fitting drugs and appliances. In case further indents should be made for medical aid, the offer of the Government of India to send for additional native doctors from Madras and Bombay has been accepted. For the supervision of the relief hospitals an additional European medical officer has been sent to each of the sub-divisions in North Tirhoot, and another for North Chumparun. Preparations are thus being made to meet and relieve disease among the famine-stricken people. Up to the present date there has most providentially been no epidemic among the people on the relief works, or at the chief grain routes, or at the great depôts. There was a little cholera at one time on the grain route to Ghoraghat in Dinagepore through Bogra; but it lasted only for a few days and has disappeared. Diarrhœa is said to be prevalent among the people on one length of the Chumparun embankment. If immunity from epidemic continues among the enormous crowds on the relief works till they are dispersed it will be a very great blessing.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, the 2nd April 1874.

APPENDIX A. to FOURTEENTH SPECIAL NARRATIVE of the DROUGHT of 1873-74 in BENGAL from 20th March to 2nd April 1874.

APPENDIX A.

MOVEMENT OF FOOD-GRAINS.

IN Schedule A. below is the return drawn up by the Collector of Customs, Calcutta, in the form recently laid down by the Government of India, showing the export of food-grains to places beyond Bengal from all ports in the Bengal Presidency from 1st October up to the end of February. The total export is shown to have been—

173,161 tons, and of this
117,860 tons were exported from Calcutta,
43,473 „ „ Chittagong, and
11,828 „ „ Orissa.

The returns for March are not yet to hand, but a statement in the same form has been received for the first fifteen days of March, which shows the export for all Bengal for that period to be 8,561 tons:—

i.e. From Calcutta - - - - - - -	2,538
„ Chittagong - - - - - -	2,354
„ Orissa - - - - - - - -	3,669

According to the returns and telegrams submitted to this Government by the Collectors of Customs the export for the whole month of March has been as follows:—

From Calcutta - - - - - -	7,757 tons.
„ Chittagong - - - - - - -	4,285 „
„ Orissa - - - - - -	4,466 „
Total - -	16,508 „

According to this the total export of food-grains beyond Bengal for the six months ending 31st March was 189,669 tons, and from 1st November to 31st March 172,156 tons.

The imports of food-grains to Calcutta from the 1st October to the end of February were returned at 27,01,781 maunds, or 99,330 tons, of which 1,00,521 maunds, or 3,695 tons, were on private account. The imports during March were 99,540 tons, of which 1,339 tons were on private account. The total imports to the end of March is therefore shown to be 198,870 tons, of which 5,034 tons only were on private account.

2. From the 8th to 28th March 49,421 tons of food-grains have been sent into Behar from stations below Rajmehal and Jamui, making 233,148 tons since the 1st October that have gone up, including Government grain. From the 8th to 28th March 25,610 tons have entered Behar from the North-Western Provinces, making 117,468 tons since 1st November.

3. The importation of food-grains to Calcutta by the Eastern Canals has been from 18th to 31st March 10,014 tons, making 171,833 tons since the 1st October.

4. The private traffic registered at the river stations during the fortnight ending 28th March has been:—

Station.	Direction.	Quantity in Tons.
Sahebgunge - -	Up the Ganges - -	3,540
Ditto - - -	Down „ „ - - -	438
Goalundo - -	Up „ „ - -	1,049
Kooshtea - -	Down „ Gorai - - -	1,380

A. MACKENZIE,
Junior Secretary to the Government of Bengal.

Calcutta, the 1st April 1874.

SCHEDULE A.

Statement showing the quantity of Rice (distinguishing table and other kinds), Paddy, Wheat, Gram, and other Food-grains exported from the Presidency of Bengal in the five months from 1st October to 28th February in each of the official years 1872–73 and 1873–74.

NOTE.—The figures for table rice represent those for the Port of Calcutta only, as those for the minor ports cannot be distinguished.

Calcutta Custom House,
The 21st March 1874.

J. A. CRAWFORD,
Collector of Customs.

APPENDIX C. to FOURTEENTH SPECIAL NARRATIVE of the DROUGHT of 1873–74 in BENGAL from 20th March to 2nd April 1874.

No. 1988—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL to the DEPUTY SECRETARY to the GOVERNMENT of INDIA, Department of Revenue, Agriculture, and Commerce.

SCARCITY AND RELIEF.

SIR,

Calcutta, dated 1st April 1874.

I AM directed to acknowledge the receipt of your letter No. 998, dated the 21st March 1874, conveying the observations and orders of the Government of India on the thirteenth Special Narrative of the drought and scarcity in Behar and parts of Bengal.

2. In reply, I am to convey an expression of the Lieutenant-Governor's satisfaction that the Government of India should think His Honour's active measures in Tirhoot useful.

3. I am to submit a copy of a Note, in which the Lieutenant-Governor gives a summary of the views which he formed and the orders which he issued during that visit.

4. This Note, I am to observe, will explain some of the causes to which are due the difficulty which was experienced in keeping pace with the approach of famine in Tirhoot, the enormous size and population of that district, and the extreme deficiency of its executive machinery as compared with the population, the character of that population, the want of an educated native middle class, the nature of the holdings, and the difficulty experienced by officers unaccustomed to such a crisis in obtaining adequate aid from the native proprietors and others whose duty it is to assist the people.

5. The Government of India is also aware of some inevitable circumstances which contributed to render the arrangements of the Tirhoot district more backward in proportion than those of some other districts of the Patna Division, while the strain upon it has been much greater.

6. This is, the Lieutenant-Governor at least thinks he may say, matter of congratulation, that in all the other districts of the Patna Division, and of these provinces generally without exception, the preparations have kept pace with the famine, and although in limited parts of Tirhoot famine has to some extent gained on the preparations to meet it, the Lieutenant-Governor is still sanguine that it has been stayed; and he believes that if we have succeeded in meeting the great wave of necessity that is now rising so high in that part of the country the result will be very creditable to the Tirhoot officers.

7. With reference to your 5th paragraph, I am directed to refer to paragraphs 40 to 47 of the Lieutenant-Governor's Note, which deals with the phase of the subject to which you refer. The local officers are also asked carefully to consider the question of employing or disposing of the people who may remain on their hands during the rains. I am desired to append copy of a letter No. 33 T., dated the 16th March 1874, issued by the Lieutenant-Governor during his visit to Tirhoot, and to refer to paragraph 56 of the enclosed Note, also to the annexed copy of instructions given to Mr. Wickes, C.E., an officer who has had much experience of Bengal rivers.

No. 1800 A., dated 30th March 1874; copy annexed.

8. With reference to your paragraph 7, I am to refer to the letter noted on the margin, applying for the services of Major Trevor, and to paragraph 23 of the Lieutenant-Governor's Note, and to enclose a copy of the instructions dated 31st March 1874, given to Major Trevor, who left Calcutta for Tirhoot yesterday evening.

9. With reference to your 8th paragraph, I am to solicit a reference to paragraph 47 of the Lieutenant-Governor's Note; and regarding your 9th paragraph, I am to refer to paragraphs 38 and 39 of the same Note.

I have the honour to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

NOTE of the RESULT of the LIEUTENANT-GOVERNOR'S VISIT to TIRHOOT.

SINCE I have visited the country about Durbhunga where distress has first assumed a severe type, have discussed matters thoroughly with the local officers, and have instructed them both verbally and by rough notes, I think it well to summarise the views which I have formed and the instructions which I have given on this occasion. In case, unhappily, distress should at any time gain on us in other quarters we must profit by the experience of the places where it has first appeared.

Distress cannot be met without using indigenous and voluntary agency.

2. It is unnecessary to repeat the advantage of being prepared in time, and meeting the influx of distress in such a way as to avoid confusion and abuse when it comes on us with a rush. I trust that this is everywhere felt, and that, whether serious distress already exists or not, no officers of districts where it may be reasonably apprehended are wanting in zealous preparations. But I am farther much impressed, by what I have seen in Durbhunga, with this, that distress on a large scale may, and often or generally does, come at last somewhat suddenly, and that the Government organization which we can supply will not suffice to meet it in this state unless we also avail ourselves to the utmost of all the indigenous and voluntary agency which the country affords. Our executive machinery is still very deficient in these provinces, the beginning of such machinery which has been recently made being quite unequal

to bear in its very infancy the strain of a great crisis such as this which has arrived. The assistance which we obtain from other provinces is not in a moment adapted to a country and a system entirely different. Our anxieties have been spread over so wide a surface that it has not been possible to concentrate all our power on the points where the worst distress has actually occurred till the facts have solved all doubt. Moreover, there is this special difficulty, that we have the smallest machinery in the tracts inhabited by a quiet, poor, long-suffering race who give little trouble in ordinary times. North Behar is probably the most under-governed country in India; one young man as sub-divisional officer has there ruled and judged a population which would elsewhere have been provided with a full district machinery. (Of the Durbhunga Sub-division, for instance, the population is 867,409.) Yet here is the very population which comes on us in a body in the most helpless state. I am not surprised, then, that in such a sub-division as Durbhunga, notwithstanding the official aid which we have sent, there should have been some failure to meet the rush of the famine when reliance was placed too exclusivsly on official agency, and there was delay in attempting to work roughly with indigenous agency till the Government agency should be complete. I must strongly impress on all officers that whenever and however distress may come upon them, and to whatever extent they may and do properly apply for Government aid, they must not omit to do the very utmost that is possible by the means which their districts afford.

3. It has been already arranged to portion each sub-division into relief circles under competent Government officers; what is most wanting is inferior machinery reaching down to each village.

Village agency required.

It is certainly true that indigenous agency of one kind is very much wanting in North Behar. The active and intelligent middle class found in many districts of Bengal is scarce. Many zemindars have been too much in the habit of letting their villages to mere rent-farmers, and there is often difficulty in getting efficient aid from either zemindars or farmers. But on the other hand, when we go lower down, there is more of the old village machinery than in Bengal. Almost every village has its headman or jeyt ryot, and putwari, and there are a good many—Brahmins, Mahomedans, and others—who have a certain amount of native education. The census of Behar was almost entirely taken, and well taken, by the putwaris and headmen, and it seems to me that the machinery which could take the general census may well be used to census the poverty-stricken in each village, make lists of them, keep relief accounts, and work the village system of relief which the Government desires to adopt.

Headmen and putwaris.

Zemindars and their agents, and European planters.

4. The utmost use must be made of the zemindars and their agents and dependents. Every possible pressure must be put on those who are at all backward to induce and compel them to do their duty. In North Behar we have the very great advantage of the assistance of a very active and energetic body of European indigo planters. The aid which they have most willingly given has been almost everywhere fully used, and should be so everywhere.

Local committees and individual members of such should undertake specific duties.

5. The orders for local committees must be carried out in good faith. It may be true, as some officers assert, that committees are sometimes a sham; but either acting in committee or, still more, acting separately as individuals, every good resident should be utilised. The best way of beginning is to bring them together in committees, to portion off duties, and let it be settled in the presence of the body of the committee that each man capable of aiding is to undertake some specific function in a specific place or in a specific area.

Superintendents of groups of villages.

6. A very good plan had been formed of appointing to the charge of groups of villages paid superintendents, selected from the people of the country; the only drawback was the delay in effecting this, pending the completion of a large superior establishment for which European officers were thought to be indispensable. In Mudhubunnee and Hattee about Rs. 15 per mensem or less was allowed to these group superintendents. The Durbhunga plan which was circulated contemplated a uniform rate of Rs. 30 per mensem. I do not know that paying high and uniformly secures efficiency, and sometimes volunteers will do the work better than paid men. I would allow a discretion in regard to pay according to the circumstances and the class of people obtainable in each locality; but, subject to this caution, I entirely approve of carrying out the system of group superintendents. I trust it has now been nearly completed in North Tirhoot.

Village organization.

7. But beyond this, the point on which I have most dwelt is that we must not stop short with the group superintendents, paid or unpaid. We must have a proper organization in each village. The moment we go beyond the stage of great public works it is totally impossible to deal with the people in detail unless we have them localised and individualised, village by village and name by name. We cannot send them away from the roads till the village machinery is ready to receive them; we cannot distinguish people receiving relief by labour, charitable relief, and relief by advances, or prevent the same persons from receiving relief in different shapes till we have all those receiving relief registered, name by name, according to their villages, by some person who knows them, and who can be made responsible for their coming and going. Above all, it will be totally impossible to deal with the people on our hands and wean them eventually from dependence on Government unless we have an individual knowledge of them in their villages. I have occupied myself then in impressing on the local officers the necessity of carrying out a village organization. This should be done as much as possible through the zemindars. No man in the position of a landholder should be absolved from his duties and responsibilities if it be possible to obtain assistance from him. Finally, the headmen and putwari must be utilised in each village. They will keep a nominal roll of all persons in the village receiving relief either on works or gratuitously. Through them the village management may be conducted, and they will be responsible to check abuses. Small rewards according to work done may be promised and given to such headmen and putwaris. I authorise the Commissioner to arrange details of their remuneration.

Sirdars and mates of labourers.

8. It is generally desirable to allow the labourers to choose their own headmen, through whom they are paid, and through whom they deal with Government officers.

The circle officers may, however, both make use of and give relief to a certain number of persons unaccustomed to manual labour by appointing them to be petty overseers of charitable relief, watchmen over the grain stores, and so on.

Utilization of local police.

9. All the local police are to be subordinate to the circle officers for relief purposes, and may be utilized freely.

Famine of money and famine of food. Effect of the former.

10. The above arrangements are best carried out before severe distress has actually come on us; but in Durbhunga (partly on account of insufficient action in the direction above indicated) and in Madhubunnee we have experience of another and farther phase of the subject, viz., that in which very large numbers of people come on our hands for relief in great masses congregated together. I myself saw vast assemblages of this kind near Durbhunga, and by the last accounts still greater numbers were on relief works in the Madhubunnee sub-division, though not so much reduced in condition as the Durbhunga people. It may be said that famines are of two kinds, or at least there are two stages of famine—famine of money or labour famine, and famine of food-supply. It may, in rare cases of isolated districts, happen, as it did in Orissa, that the two stages become one, or that the famine is from the beginning an absolute deficiency of food-supply, the case being, as was stated in regard to Orissa, like that of a ship at sea which is suddenly found to be short of provisions. But with rare exceptions a money or labour famine precedes a food-famine, that is, food is to be had for money but it is dear, and the poorer classes, being thrown out of work, have no money to buy it. Very often the famine never goes beyond this stage; it has almost always been so in the North-Western Provinces, where there are abundant means of communication. Some of our stricken districts being very isolated we have feared and guarded against a food famine. But so far this has not come upon us. I have seen that even in North Tirhoot the bazars are still supplied; an active private import (by driblets in bullock-loads) is still going on, and food though dear has not reached what can be called extreme famine prices. Notwithstanding, however, the existence of supplies in the bazars[*] up to date, there is certainly what we must consider wide-spread famine; in some limited tracts some people have suffered from want of food before coming to our relief works, and in very considerable tracts the people have come to the relief works with a rush in very large numbers. Although these simple people very much follow one another like a flock of sheep, they are at first slow to move; and, even when they have not actually starved, I do think that when they very suddenly come to us in this unusual way in very large numbers it is a sure indication that what must be called famine is on them, that is, that they have reached the point when they would starve if not relieved.

Provision of work.

11. The first mode of relief for the Government to undertake is clearly (and this has always been recognised) giving work to the poorer classes who are without work and without means. The better classes who do not work on the roads generally do not starve till a later stage; they have some credit if not some property. While the producing and wages-earning classes maintain themselves, most of those dependent on them, even the beggars, are for the most part in some sort maintained also. Rich natives do a good deal in this way, and I saw two or three faqueers living on a gang of relief labourers in Tirhoot. At any rate, the beggars and helpless people who come on mere charity, and are not supported by private liberality, may well be provided for in the early stages of scarcity by the relief committees without a very large Government organisation.

In the present stage then the public works have been our most active care. Under previous instructions a good deal had been done in most districts to prepare plans of such works for emergencies, and more has been done since the present famine threatened. In those districts where the numbers seeking relief are not very excessive, I believe that our preparations have been sufficient; but in some districts where no very large special works are available, and enormous numbers have suddenly come on us, it cannot be said that either the plans of our works or our establishments are sufficient to enable us to obtain full money's worth from the labour of a needy multitude, among whom little organisation is, in the first instance, possible. In fact, there is no denying that in some of these cases our organisation has not been such as to prevent the occurrence of what must be called great abuses, judged by the standard of ordinary times.

Mode of dealing with a sudden rush of population to works.

12. In Behar, at any rate, women and children come on the works quite as readily as men; and it is because the whole family works, or pretends to work, that somewhat low wages with dear food are not incompatible with an almost liberal measure of relief, measured by the fare to which these poor people are accustomed—a very low one. Wherever some of the people have begun to starve, or nearly to starve, it is impossible to refuse work to all applicants, whether really capable of real work or not. The result of the suddenness of the rush upon us in some places, and the necessity of being on the safe side where famine has threatened, has been that we certainly have, and to some extent must still have, great multitudes on our works doing very little real work and very imperfectly supervised. But I have felt that this is better than letting the people starve, and that it must continue till we can sift them out and deal with them in detail: we cannot send them away till this is done. At the same time, I am clear that this cannot continue, and the first work which I have set Mr. Metcalfe (the Additional Commissioner) and the local officers to do is to make arrangements for dispersing these multitudes. Fortunately, the climate at this season is favourable; the people seem not to dislike the assemblages in which they are gathered, and I hope no great harm beyond a somewhat prodigal expenditure of money

---

[*] From what I saw of the activity of petty private trade, my impression is that for some time to come the bazars would be supplied in this way if it were not that the pressure on carriage for the transport of Government grain is beginning to interfere very seriously with the means of private traffic. Much complaint is now made that private people cannot obtain carriage, and that the bullocks and donkeys which hitherto supplied the bazars are taken up by the contractors. This is no doubt a great evil, and the local officers should do all that is possible to avoid it.

will result for a short time. But beyond this it must not go. To begin with, although, as I have said, I believe that these sudden rushes indicate real want and rapidly-approaching famine, still, when under pressure of such necessity a lax system is established, and everyone, down to the smallest child, gets paid for the merest pretence of work (with probably a good many abuses besides), the thing becomes too attractive, the whole country tends to come on the works, the numbers threaten to be *absolutely* overwhelming. The people, too, become demoralised; works where real work is exacted are deserted, and many evils follow. If disease or climate do not disperse such multitudes with possible calamitous results, the case might be still more impossible to deal with when the rains and cultivating season approach. It would be very difficult to get back to their homes and to regular labour people accustomed to such a system, while it would be impossible to continue it in the rainy season.

Arrangements for distributing labouring masses.

13. A vast multitude, treated in the gross, through mates and other headmen, cannot be individualised and dealt with according to their position and needs: we cannot deal with them till we know who they are. In all such cases of unmanageable multitudes on the roads the first thing to do is what I have ordered to be done in Durbhunga and Madhubunnee, viz., to sift them out according to their families, villages, and tracts of country; to separate those who wish to do and are capable of doing real work on the large works from those who wish to go home or are not fit for work; to put the former on regular works on a regular system, where good wages are paid but a reasonable tale of work is exacted (less than in ordinary times, but still a fair quantity), and to put the latter either on light work or on charitable relief.

Division of works into two classes.

14. The better to carry out this system I have directed that the works should be divided into two classes; thus—

(1.) Works under Public Works or other competent officers, on which real labour shall be exacted and full wages paid.

(2.) Works under circle officers, on which the labour given is less effective, and for which superior professional supervision is not required. The rates of wages on these would be mere subsistence rates, unless easy piece-work is given for liberal terms.

The large roads now going on under Public Works officers, and other large works, irrigation works and the like, should be put under the first head.

Even on the regular works it is right that, besides the hard work for the able-bodied men, work of a lighter character, but still real, should be provided, so that the families of the labourers and others who wish for regular work should be provided for. This is generally done, and I rely on the Public Works and other officers to arrange it discreetly.

Proper registry of labourers on large works.

15. Although on the regular works we cannot prevent a considerable fluctuation and coming and going, it will be desirable, as much as possible, to note the names and residences of the labourers, and to classify them under fixed and recognised headmen as persons regularly employed and paid. Besides making it much more easy to deal with them and prevent abuses in the present, this will greatly facilitate our operations when we come to send home at the proper season, with a sufficient store, those who have well worked on the roads at the season when there is nothing else to be done.

Mode of payment on large works.

16. The mode of payment to be adopted is a matter of extreme difficulty, regarding which much local latitude must be allowed. Various modes have been tried with varying success. *Primâ facie*, in the case of very poor people, it seems most desirable to pay daily; but when the multitude is very large it is physically impossible to pay, by trustworthy agency, each individual daily—either the labourers are grouped in gangs, and payment made to each gang, or payment is really made to the headmen of large numbers of mates, who distribute to the mates, and the mates to the labourers, in a way which admits of little check. As soon as the people are regularly classified and put into permanen gangs it will not be so difficult to pay each gang daily; and when they have worked some time and are not living quite from hand-to-mouth, it will much facilitate matters if they are found to be well content with payment every two or three days. One great and increasing difficulty about daily payments to each individual labourer is the enormous number of copper pice required. Where these run short it may be permitted to pay in grain; but from all I have seen, I have no doubt that, as long as money can be had, it is far best for all parties to pay in money, and let the labourers buy either from the Government shops or privately as they prefer.

Care should be taken that payment is not made in such a manner as to make it the interest of mates and headmen to tout for and bring together an unnecessary multitude. I fear that when we are oppressed by too great numbers the tendency of such a system is to increase the numbers and bring the whole population on our hands. When we are not able to reject people or to exact real work, every creature that can be mustered passes for so much profit to the mate and headmen, and if they can pass muster two or three times over so much the better for these men. Effort should be made to pay if not individually at least in small squads, and not to distribute money in a wholesale way.

Responsibility of civil officers in connexion with large works.

17. It is to be thoroughly understood that not only are the officers of the Public Works Department (employed in districts where scarcity prevails) wholly and absolutely under the Commissioners and superior civil officers of districts on all points in which they may think it desirable to interfere, but that everywhere the local sub-divisional officers and their assistants are directly responsible to see that payments are properly made and work given in the manner most conducive to relief. It is expected that in this respect they and the Public Works officers will work in thorough accord. The Commissioner or Additional Commissioner on the spot will lay down general rules on which the Public Works officers will act subject to the orders of the Magistrate of the district. The Public Works officers will ordinarily arrange for payment of the men employed under them; but the local civil officers will inspect the works, test the payments of the Public Works subordinates, and see that all is right. If not right they will at once com-

municate with the Public Works officers, and, if necessary, with their own official superiors. I have given full authority to the Commissioners to authorise the entertainment of any local establishments for the proper management and payment of the labourers that may be necessary to supplement the Public Works establishments.

Sanitary arrangements.

18. It is most necessary that efficient sanitary arrangements should be made on all large works; and particular attention should be given to this.

Village and minor works under circle officers.

19. The village works under circle officers must necessarily be conducted, for the most part, by non-professional people; but I have arranged that in each relief circle an officer should be specially charged to look after the works in the circle. There has been much correspondence regarding these village works. The result is that, by aiding zemindars and otherwise, we must promote the employment of the people to the very utmost, but that in the last resort in very distressed tracts, where the people are likely to starve and no one can be induced to undertake works for his own benefit or from public spirit, the Government must employ the people by undertaking such works (excavating tanks and the like) as are most beneficial to the general community. I rely much on the tact and energy of the local officers to make these arrangements for the best. Even when Government pays for the works they may advantageously be placed under village headmen and others locally interested; we want to give the people work near their homes, and, if the headmen are interested, they will carry the work out all the more readily.

Strangers coming to village works are to be registered in the village where they labour and live for the time.

Limitations on task-work system.

20. To the distressed poor of both sexes the task-work system cannot be generally applied. As much work must be obtained for them as they can fairly do, and no more. Any stringent enforcement of a labour test may repel these people and cause ultimate danger to life. But it is better to obtain a little, even the smallest amount of work from those who can work, than to give gratuitous relief. The offering of piece-work is very good whenever the people will accept it, the terms offered being, as has been said, liberal.

Returns of labourers.

21. Returns of labourers on works in each circle are to be made by the circle officer; the number on each class of work being distinguished. This is to be separate from the Public Works Department returns. The Public Works officers are to return the number of their labourers to sub-divisional officers, who will combine the whole in one return.

Public Works establishments.

22. With respect to Public Works establishments, it is evident that, with the enormous number of people now coming on the roads and other works, even after a large proportion of them have been sifted out and put to the village works under the civil officers, the labour and responsibilities of the Public Works officers must be very great, and the staff of officers must be increased as much as possible. I have arranged that a separate Executive Engineer is to be provided for each of the sub-divisions in Tirhoot in which distress is very great, especially that Durbhunga and Madhubunnee should each have an officer of the rank and powers of Executive Engineer, the very best available. As many Assistant Engineers as possible have been, and are being, supplied; also a number of subordinate officers; but I agree with an opinion which I have seen expressed that the famine country is hardly the place for a European overseer with a large family and imperfect acquaintance with the language. We are sending all the fit men we can, and they should be sent as unincumbered as possible, but for the rest I continue to repeat what I have all along said, that much inferior agency must be extemporised in the country itself, and made the best of by the utmost tact and discretion in selecting and using it. There is one kind of subordinate agency which is much wanted, clerks of the works, that is, intelligent men acquainted with accounts, who can make up and check the returns. For this purpose Bengallees are very well suited. I have instructed the Chief Engineer to do his utmost to send up good men of this class. I fear that there must be much laxness and peculation in many places, and as we get things into order and establish some system, it is of the first importance that the executive officer should be assisted by competent men capable of keeping their offices and testing statements of numbers, payments, &c.

Deputation of Major Trevor.

23. Superintending Engineers have been appointed to the several districts in which large relief work is going on, but they are comparatively new to the duty, and in order to advise and assist them, to see that the utmost that is possible is done to render the great amount of labour now in our hands as beneficial as possible by selecting the best large works, and to introduce on the works the best system possible under the circumstances, it has been arranged, in communication with the Government of India, that (since the Chief Engineer of this Government, Colonel Nicolls, has his hands more than full) an Engineer Officer of experience and tact, Major W. B. Trevor, should be deputed for the general inspection and regulation of the various relief works. He will proceed to the different distressed divisions with the powers of a Chief Engineer, to be exercised in communication with Colonel Nicolls, will confer with the Commissioners and Superintending Engineers, will give them the best advice and assistance he can, and will direct operations in concurrence with the Commissioners.

The difficulty of finding sufficient work for the enormous number of labourers in Tirhoot and some other districts is much pressing on us. It turns out that in many places the labourers dislike tank-work and insist on flocking to the roads. We must reduce them to order and discipline, and make them do the work most fitting for them to do; but still it is a great object to maintain large works sufficient for the employment of all the labourers who legitimately seek regular work and submit to regular discipline, while at the same time the opportunity of permanently benefiting the country should not be neglected. A chief duty of Major Trevor will be to inquire whether any additional great works can be undertaken with advantage in the districts where we have hundreds of thousands of labourers.

Railway extension.

24. It has been suggested that as a continuation of the railway from Champta Ghât to Durbhunga will certainly be much wanted to the north-east through the great rice-countries where famine is now so severe, and to the north-west through North-western Tirhoot into Chumparun, it would be most desirable if these lines could be settled and the earth-work executed now. This is under consideration, and immediate steps are being taken to lay out the line, if it be possible, in time to employ the famine labourers upon it.

Irrigation works.

25. The best attention is also given to irrigation works, those connected with the Gunduk embankments and others. One canal behind the embankment has been begun, and the Government of India has determined to begin the line of the proposed large Gunduk canal through the Chumparun district as far as the Bagmattee river. Further inquiries are being made to ascertain whether some further local irrigation channels can be undertaken in Western Tirhoot, Sarun, and Chumparun.

Individualisation essential to management of charitable relief and advances to ryots.

26. While I believe that our employment of the people on works of various kinds, to the extent that they are now coming upon us, will lead to embarrassing results in the end unless we individualise them, I am sure that the two other main forms of relief—charitable allowances and advances to enable cultivators to maintain themselves—are impossible to carry out as it is intended without a good system of dealing with individuals through responsible village heads.

The only form of gratuitous relief which can be given somewhat indiscriminately, without leading to great abuse and future difficulty, is cooked-food. It is clear that the people of Behar will not accept this form of relief in any numbers till they are very much straitened. It is not that the lower orders have much caste—many of them will eat almost anything; but they are curiously timid, afraid that we will ship them off beyond seas and what not, and very averse to altering their habits. At any rate, the Government has resolved that the cooked-food test shall not be very largely applied; that assistance shall be given in other shapes, for which a great organization is necessary. Before going further then, I revert to the arrangements made for organizing relief down to the village and the individual.

Agency available.

Covenanted Civil Servants	39
Military officers	44
Uncovenanted officers	59
Officers locally engaged	39
Total	181

27. Sir Richard Temple, when he visited Behar, arranged the circles into which the sub-divisions were to be divided, and the Behar officers have been since engaged in manning these circles. But it seems to me that there is among some of the local officers in Behar a somewhat unreasoning prejudice in favour of European, and against native, agency; and that the harm which has resulted from delay in Durbhunga, and perhaps some other places, has been caused by too much keeping everything waiting for European officers, both as regards general relief arrangements and public works. It is really quite impossible that a properly efficient European Superintendent can be supplied for each circle and each work—I mean efficient at all points; combining sufficient experience, knowledge of the country, tact, and judgment. So many of our Bengal districts are more or less pressed or threatened that we cannot supply very large numbers of competent European officers. We sent to the famine districts all we could, and I believe as many as the local officers asked for. We have denuded all our districts not threatened to I may almost say the last man. The note in the margin shows the number of officers of different classes sent to Behar for relief work. The Government of India most readily acceded to all that we asked in the way of assistance. A large number of military officers was placed at our disposal for both transport and relief work; and, in addition to some competent civil officers previously obtained from the North-Western Provinces, some civil officers were ordered from the Punjab, the Central Provinces, and Bombay. Authority was also given to the local officers to engage all the competent Europeans to be obtained among the resident European community of planters and others, and several gentlemen who offered themselves in Calcutta were engaged and sent up. The total number of superior officers specially employed on relief is as follows:—

Covenanted Civil Servants	54
Military officers	60
Uncovenanted officers	92
Officers specially engaged	54
Total	260

Necessity of revenue and other experience among relief officers.

Many of the officers assigned had, however, a long way to come; and when they arrived it cannot be said that all the circles were efficiently filled. The fact is that, for such a system as is proposed, we want not only energetic and painstaking officers, but also an intimate knowledge of the people and of agrarian affairs, land tenures, rent, and revenue. It is only exceptional military officers and experienced civil officers who are well fitted to deal with such matters. In Behar the grain transport operations are of enormous magnitude and importance. These operations, including the putting and maintaining in order the roads used for the grain traffic, are in charge of a staff of officers under Colonel MacGregor, a most excellent and energetic officer; and to complete his arrangements about all the most effective military officers who arrived were required and absorbed. Some of these officers are rendering extraordinary service, Major de Kantzow for instance. Some of the unemployed officers of superior rank proved to be hardly well fitted for duties of a civil character, and have charge of the less important ghats and changing stations. Altogether, it happened that though this Government had, in its distribution list, assigned a good many military officers for relief work, I found not one so employed in Tirhoot, and I believe only one in the whole Patna Division; while only one more seemed to be available. Of the gentlemen casually entertained, some proved well qualified in their degree, others not so well. The civil officers from the Punjab, Central Provinces, and Bombay, proved to be generally very young men, and they had much to learn of a new country and language. In fact, I may almost say that the only officers of sufficient experience and knowledge available in Behar were the civil servants belonging to Bengal and the North-Western Provinces, and a few uncovenanted sub-divisional officers. I have placed in charge of circles all civil servants who are more than a few months' standing; but I very soon felt strongly that a good and efficient native officer would be far more fitted for our purposes than a very inexperienced European, and that both to fill circles not provided for and to assist the European officers, we must get as many good natives as possible. I am sure the Commissioner of Patna does not share the prejudice I have alluded to regarding the exclusive employment of European agency in places of trust; but all the districts of his division having suffered, few of the existing officials could be spared for extra and special work; and the tehsildaree system not being in vogue, it is very difficult to extemporise an efficient native agency. The Bengallees are very different in language and habits from the Hindustanees of Behar.

Aid given by Sir W. Muir.

28. In the dilemma in which I was placed, besides ordering up a few selected Bengallee Deputy Collectors and authorising the Commissioners of the Presidency and Burdwan divisions to entertain and send up a few temporary men for famine service, I appealed to Sir William Muir for the loan of some native officers fitted for the work. Sir William responded most promptly and handsomely. Sixteen selected men were at once placed at my disposal, more than half of whom arrived and were posted by myself while I was on the spot.

Assistants to circle officers.

29. I was thus enabled to complete or nearly to complete the circle officers required for Northern Behar. Under them assistance was necessary, especially under the less experienced European officers. Some of the native officers from the North-Western Provinces, some temporary Bengallee assistants, and others, were posted for this purpose, and Sir Richard Temple, who was going to Allahabad about the reserve carriage, promised to try to get a few more men from thence. A selection is being made from the ranks of candidates for the Native Civil Service at Hooghly and Calcutta. A number of native officers of the army had been promised by the Commander-in-Chief, and their despatch arranged in communication with Sir Richard Temple. Though not ordinarily fitted for independent civil duties, these officers may be most useful assistants, and they are being distributed accordingly.

Above all, full authority has been given to entertain every man capable of rendering good service whom the country itself affords. Without a good proportion of men possessed of local knowledge, foreigners must be at a great disadvantage.

Agency in each circle.

30. By means of these arrangements it is my desire that in each important circle the officer in charge should have (1) a capable assistant, generally a good native or occasionally a junior European officer; (2) an officer specially charged with those local works which are not put under the Public Works Department, and whose duty it will be to see that the jeyt ryots and others in charge of these carry them out honestly; that people are paid regularly; that they do not get relief twice over, and generally to see that the system works; and (3) an inferior native assistant.

Deputy Collectors and full tehsildars from the North-Western Provinces should generally be put at the head of circles. Where experienced officers become available, they may be placed over junior officers hitherto in charge without any disparagement to the latter.

Group Superintendents.

31. Under the circle officers come the Superintendents of village groups already alluded to, that is to say, over each group of villages there will be some one in charge to look after the relief operations generally in the group, to manage the operations at the grain stores, and to keep the circle officer informed of what goes on. Where a local man, a zemindar, or planter, or zemindar's tehsildar, will undertake this personally, or through his agents, such may be employed, but it must be clearly understood what each undertakes to do.

Village organisation.

32. Finally, each village will have its own organisation. Lists of zemindars, headmen, and patwarees of each village are to be prepared; it is to be ascertained whether each will do something, and each is to be pressed to do so either personally or through agents. I cannot too much impress on all officers, as I have impressed on those at Durbhunga, the necessity of attending to this, of not acting as if they were in a strange or hostile country, but of utilising those whose duty it is to assist the people, and finally through them, or in the last resort without them, to get at the headmen and representatives of the people themselves.

I am very glad to see that Mr. Howe, a very efficient North-Western Provinces' officer, in charge of the worst part of Chumparun, has already organised this system without waiting for the completion of a large paid establishment. He says: "The sub-divisional committee of " Ramnuggur, with the two sub-committees at Bulthur under Colonel Boulderson and at Bagaha, " are now in full working order. The tuppah (Bulthur) has been divided into halkas (circles), " and each member is to take charge of one. Lists of all the poor requiring relief are prepared " by the putwarees (village accountants) and tested by the member-in-charge of the halkas, who is " also responsible for the distribution of food to those in the lists, whom he, after examining, " finds unfit for work. I think it is better at first to do what is absolutely necessary, viz. to " support those who otherwise must starve, and gradually to perfect the system in introducing " the various rules laid down for committees. An organized village-to-village relief system has " been formed, which will effectually relieve those who most require it. I am much assisted in “this tuppah by Sheik Salamut Ally, an influential and public-spirited zemindar. In this tuppah the headmen of each village and the putwarees receive a certain amount of food sufficient to last the poor of his village of whom he receives a list (an extract from my register), and whom he is bound to supply twice a week. The greatest safeguard against abuse is the fact that the poor themselves know how much they are entitled to; and secondly, there is constant inspection both by Sheik Salamut Ally, who is a member of the Committee, and myself. In this way this important tuppah is provided for, and similar steps for the others are also being taken.” Mr. Howe seems really to be meeting the famine under very difficult circumstances. In Seetamurhee also, the sub-divisional officer, Mr. O'Reilly, by availing himself of the help of indigo planters, zemindars, and others, seems to have done very much, and to have kept pace with famine. But in Durbhunga, under a very energetic and meritorious sub-divisional officer—but where committees and committeemen and indigenous agency were practically not used—while European officers were expected in order to start a system admirable in theory, the famine got ahead of us. I am sure that voluntary and indigenous agency may and should be drawn out. The efficiency of an officer in a difficult position, especially under such circumstances as those which now surround us, depends quite as much on tact in drawing out assistance as on individual effort.

Aid given to Patna Commissioner.

33. No one could and would more efficiently superintend the relief operations than Mr. Bayley, the Commissioner of the Patna Division; but his charge is an enormous one. He has upwards of 13 millions of people under him, some suffering from famine and all from scarcity. He is responsible for all the enormous transport and other operations. Clearly he requires assistance. The Tirhoot district, too, is quite unmanageably large, and the mass of office detail thrown on the Magistrate-Collector makes it impossible to look to him for a sufficient active superintendence all over his district in times like these. I have then appointed Mr. C. Metcalfe, an officer in whose great energy and executive efficiency I have much confidence, to be Additional Commissioner of the Patna Division under Mr. Bayley, who will delegate to him any portion of the Commissioner's duties from time to time. It is arranged that Mr. Metcalfe is for the present to devote all his energies to getting into order the northern sub-divisions of Tirhoot, where wide famine most threatens us and hundreds of thousands of people are already on our hands. Mr. Bayley met me and thoroughly discussed with me the state of affairs. I entirely rely on his judgment and knowledge. Mr. Metcalfe went with me to Durbhunga and through the worst circles. I have explained to him my views and wishes, and left him to carry them out. While the circle establishments are being completed and getting into order, he is dealing with the multitudes collected on the roads. As soon as they are sifted and classed, and the circle establishments are ready to receive them, all, except the able-bodied fit to earn good wages on the roads, will be drafted to their villages, and there the scheme of relief, prescribed by the Government of India and this Government, will be worked out. For all famine and executive matters the sub-divisional officers of the distressed sub-divisions of North Tirhoot will be directly under Mr. Metcalfe. Their formal reports and returns will be sent to the Magistrate of Tirhoot for embodiment in the district returns (so long as Durbhunga remains a part of Tirhoot,) but the whole active control will rest with Mr. Metcalfe, exercising the full powers of a Commissioner, but subject to the general control of the Commissioner of the division, who will be fully informed of his proceedings. Mr. Metcalfe will ordinarily report to the Commissioner;—to Government direct on emergencies only.

Mr. Metcalfe's duties.

Aim of the organisation as a whole.

34. When the arrangements we are now making in the most distressed districts are complete, I trust that we shall be able to lay our hand on each person requiring relief according to his residence and circumstances. We shall be able to say in each village—here are so many persons found to be fit objects for relief; so many are doing work of some sort; so many are receiving a charitable allowance of food; so many have received or will received advances to enable them to continue their cultivation; so many residents of this village are absent working on such a public work. On the public works again, I hope we shall be able to say—here is a gang from such a pergunnah and a gang from such another pergunnah; so many (name by name) from such a village, and so many from such another. It is only when things are so arranged that we shall be able to deal with the needs of the people in detail, and to supply their wants without the great abuses which must attend indiscriminate liberality to great multitudes whom we cannot distinguish.

Mode of working charitable relief.

35. Supposing then the system to be fully carried out, the various forms of charitable relief are indicated in the relief rules published by the Government of India. Employment on works I have already dealt with. Employment in the way of spinning, weaving, &c., is as before arranged to be given as much as possible to those who cannot go on the roads. If we have sufficient information and sufficient machinery, charitable relief is only a question of discretion and honesty. Cooked food being reserved for special cases, it remains to give a fair allowance of food gratuitously or at a reduced price, and so much money as may be necessary to supplement it, to those really in need of such assistance. This will be done through the local committees as much as possible, every possible use being made of individual knowledge and public spirit. As I said to the Durbhunga Committee, “The Lieutenant-Governor wished to urge on them the propriety of their taking an active share in the relief measures now in operation. He did not want them to give money merely, but to undertake, each according to his ability, the specific duty of looking after a certain defined portion of the town, and managing the distribution of the Government relief, so that no poor person should perish for want. He wished this not only for the direct good, but as an example to others. Those who could not themselves personally supervise could appoint responsible relatives or subordinates to work for them, and could see that these did the work efficiently. If each member undertook the charge of a muhulla of the town

Uses of committee men.

it would be a great relief to the Government officers, and would, he felt sure, secure an efficient and adequate administration of the funds and stores. Those of the committee who had lands in the interior would, he hoped, also heartily assist the circle officers by themselves acting and giving instructions to their gomastahs, patwarees, head ryots, &c., so that they might help by every means in their power. The committee should be made really and practically operative—the town divided among working members, and the distribution of town relief undertaken by them, with any necessary subordinate agency working under their supervision."

Cooked food and special diet.

36. Although the use of cooked food is no longer prescribed as a general test of necessity, it is still an important thing to have food in this shape ready for those who are actually starving, especially on their first arrival at the depôts.

And it is especially necessary to nurse and feed on careful and nutritious diet people who are already reduced by scanty food. Many children have so suffered, and every inducement should be offered to their parents to bring them to be tended in comfortable poor-houses, where every concession is made to them. With respect to the food, I gave the following directions at Durbhunga:

(*a.*) Cooked food is always to be given *at once* to all starving people who desire to have it, till at least other arrangements can be made for them. This to be done without waiting for inquiries.

(*b.*) Special food is to be given, under superintendence of the native doctor, to starved infants and other persons in a very reduced stage. Milk and other luxuries to be provided for such cases.

(*c.*) In case of people much reduced, it is not enough to keep body and soul together. For the next two months arrangements must be made to issue to the more feeble once a week, or occasionally, a little ghee, or, failing that, oil and such like strengthening luxuries.

(*d.*) One pice per diem for salt, &c., is to be given with the allowance of grain to very poor people who receive uncooked food to take home.

Proportion of Nitrogenous grain essential.

37. I may add that the cooked food given should not be rice only; a fair proportion of dhal or similar nitrogenous food should be given, and salt of course.

To the very poor, who depend solely on public charity, a proportion of nitrogenous grain, *i.e.*, pulses, &c., should as much as possible be given with three parts of rice. But as regards the population not reduced to the lowest stage of pauperism, I found so comparative an abundance of the nitrogenous grains in the bazars, the famine is so much, as regards food, a rice famine (the little rice produced being probably reserved for seed), that I hope if Government supplies rice the people will find the rest for themselves.

Feeding Hospitals.

38. Reverting to the feeding hospitals for the reduced and weakly I was much impressed with the necessity of organising these efficiently wherever there is actual starvation, or something approaching to it; and quite as much for this purpose as for sanitary supervision I telegraphed emergently for a very efficient Civil Surgeon to be sent to Durbhunga. The Surgeon-General very promptly arranged to send Dr. Birch. That officer arrived without delay, took up his duties most zealously, and I believe that much will be effected by his active devotion to the subject. At every circle where the distress is severe, feeding hospitals should be established under a good native doctor, and his proceedings should be well watched. Dr. Birch quite understands my views, and I hope he will make arrangements which will serve as a model. He will also of course much look to sanitary arrangements.

Sanitary inspections.

39. The Government of India has suggested that a superior officer should be deputed for sanitary inspection of the various distressed districts. At this moment a change is taking place in the office of Sanitary Commissioner for Bengal, but as soon as the new Sanitary Commissioner, Dr. Coates, arrives, he will be deputed on this duty.

Difficulties when the rains set in.

40. If our arrangements as above described are effective, we may hope to carry the people over the dry season. But in case they remain on our hands after the rains commence, it may be much more difficult to deal with them. In a moderate famine, when according to former practice, Government has given moderate relief hedged in by tolerably severe tests, it has usually happened that as soon as the active agricultural season commences, most of the able-bodied laborers disperse of their own accord, and only the helpless paupers are left on our hands. But I believe that on this occasion, in the pure rice countries north of the Ganges, the failure of the crops has been complete to a degree very seldom equalled. We are now undertaking relief on a much more liberal scale, and on much more indulgent principles, less hedged in by strict tests, than ever was attempted before. There seems much reason to expect that, in North Tirhoot at any rate, a very large proportion of the population will come (I may say have already come) on our hands, and the difficulty of returning them to self-support will no doubt be proportionately greater than on former occasions. It will certainly be quite impossible to continue in the rains large public works capable of employing vast numbers and it would be most inexpedient if it were possible. Above all things, we must not wean the people from self-supporting agricultural labour. In truth, for the labour we now employ we get a very insufficient money's worth; and from a financial point of view it would be no very overwhelming addition to our burdens if for a portion of the time that we must support the people who come to our works we get no return at all. It is the demoralisation of the people likely to result from supporting them without work that is to be feared. I still hope that very many will go off when the rain falls and they can cultivate, but it is impossible precisely to predict what will happen in a phase of things which is new. It is some consolation for any abuses (receipt of relief twice over and the like) which may occur that it is so much money thrown among the poorer

classes and may the better enable them to support themselves when the time for self-support comes.

Suggestions as to advances of money or food.

41. To establish a system of advances to ryots sufficient to ensure their both supporting themselves and employing the labouring population would be a work attended with very great difficulties. To some extent this must and will be attempted; but we are only at the beginning of our difficulties in that respect. I am inclined to think that a suggestion on this subject of Mr. Lowis of Dinagepore, adopted by Sir Richard Temple, contains the germ of a plan which may be applied not only to some ryots, but to all other labourers. Mr. Lowis says, in effect, "make advances to those ryots who, by "labouring on our roads show their necessity. When they have thus worked for us, advance "them wages for the time they must be absent carrying on their cultivation." I would not confine this to ryots. If the individualizing system is carried out fully, and if we know who our labourers are, where they reside, and where they work, we may be able to say to a poor man when the rains commence, we now know that you are no impostor, but a person willing to work for your bread; we can't employ you longer, it would ruin the country if we could; here is a couple of months' supply of food; we give you that, take it home, but now you must support yourself; we have done with you. Seeing the amount of grain we are storing, and the scale on which our establishments are now being formed, I think this might be done in some parts of the country. In fact, all our proceedings for the next few months would be not only to give immediate relief, but a sifting and sorting of the people with a view to a final distribution of assistance and concluding with them at the commencement of the rains. In the eastern districts, where cultivation commences early, the system of advancing wages to ryots who have been working for a time, to enable them to go home and start their cultivation, should be tried at once as Sir Richard Temple has authorised. In the case of substantial ryots so receiving advances, it may be stipulated, as Mr. Lowis proposes, that the advances are to be repaid when the recipients get a crop. From the poorer labourers repayment cannot be expected.

Advances to ryots who will not work on roads.

42. In North Behar, at any rate, it appears that there are many of the higher caste ryots too proud to work, and too poor to carry on efficiently the work of another season without assistance and to employ the laborers who ordinarily work for them and who can only be absorbed by such employment. The subject of advances to ryots of the higher class who are, it is hoped, likely to repay, has been very prominent in all our famine discussions. For these classes of ryots Mr. Lowis' labour-test will not suffice; and something more is required, not only for their own sake, but for that of the poor labouring population dependent on them. I am much inclined to agree with the officers of the Durbhunga Raj, who say that it is better not to call an advance what we are not likely to get back. A laxness in regard to promised repayments would have a most demoralising effect on the country, and would shake the whole credit system on which so much depends. I, therefore, strongly think that where there is not good and reasonable prospect of repayment, it is far better avowedly to give something than nominally to advance what will probably not be repaid. Government will be at a great disadvantage in such transactions, it will not have the many means of enforcing repayment, that private persons accustomed to such transactions, have, and borrowers will much more readily make excuses to a Government whose resources they think unlimited. People who can give really good security may get the advances they require from private sources, and will generally prefer so to get loans in this way, if they really mean to repay. In spite of all that is said of exorbitant interest, &c., I have found that natives generally prefer their own mahajuns to Government. If this be so, Government will have for the most part as applicants for advances only those who offer bad security or no security.

43. With the best and largest Government machinery a great system of advances by Government to the ryots would be difficult in the extreme; with our want of revenue machinery, I fear that on a large scale it would really be impossible to conduct such operations in any way that would not entail very serious evils.

Advances through Zemindars and Mahajuns.

I have, therefore, strongly urged on all officers that advances should by made by or through Zemindars and Mahajuns to the utmost possible extent, and only by Government direct in the very last resort. As I have said, I believe that, if the money is really to be repaid, the people themselves would rather get it in their own way than come to us, and so long as those who usually lend to them do not themselves run dry, it is better that it should be so. I have directed that every possible pressure should be put on the zemindars to induce them to do their duty. Their estates are good security, and we may well advance to them the money they require to keep their ryots afloat, care being taken, through the large establishments we are forming, that the money is really devoted to the purpose for which it is intended.

44. I am also inclined to think that there is much in a plan which Mr. Metcalfe greatly urges, viz., that Government should make advances to mahajuns whose capital may be unequal to all that falls on them in a year when no one repays and every one is ready to borrow, but who are trustworthy and reliable men and are willing, on receiving Government advances on reasonable terms, to engage to carry their clients, through this bad year. If this is discreetly and well done, I think it may be of very great advantage and involve little or no loss to Government, and I have authorized Mr. Metcalfe to try it. For the ryot it is sometimes better that he should owe money to his banker than be too much in the power of his zemindar. If the zemindar does his duty, nothing can be better, but it may not in all cases be desirable that a harsh landlord should have very large famine debts standing on his books when Government really gives the money.

It is when we go into the question of security, on which the Government has so much dwelt, that the real difficulty of dealing otherwise than through those whose business it is to conduct the money dealings of the country becomes apparent. There are few under-tenures in Behar; occupancy rights are ill-defined; the titles to trees and tanks and such like, and to rent-free lands which ryots proffer as security, are very liable to be called in question. On going into the matter narrowly I find it to be the general opinion that the real security most largely available consists chiefly of the silver ornaments, &c., in which natives so much indulge. Would it be possible for Government to open a vast pawnbroker's shop to lend on ornaments? I hardly think so. But if the mahajun's funds are maintained they will very readily do so.

45. The instructions which I issued at Durbhungah were then as follows:—

Classification of villages, for purpose of advances.

Every starving village or estate should be classed as one in which—

(1.) The zemindar has the means to assist his ryots, and must by every means be induced to do so; or

(2.) In which he has not the means, but has or can be induced to develop the will to do so, and in which he is to have tuccavee advances for the purpose, to the proper use of which our officers must see; or

(3.) In which it is found absolutely impossible to work through the zemindars, and to save the people alive, Government must undertake the work, trusting to recover the amount by legislation or otherwise.

But I trust that if our officers work with the natives—as I think they may—the villages of this last class will be comparatively few.

To this should be added, with reference to what has been said above, that when a village must come under class 3. it will be better that the work should be done through a good mahajun, to whom the people of the village have always looked, than directly by Government, and that advances may be made to the mahajun for the purpose.

To arrange all that is required with zemindars and mahajuns, and finally to deal direct with the residue, which may be left directly in our hands, very great skill and knowledge of the people and their affairs will be required. For this work the experienced native officers now lent us from the North-Western Provinces will be of infinite use, and I trust our officers will not be above learning from them. I have throughout had it much in view that as soon as we can disperse to village works the masses of people collected and still collecting on our roads, the knowledge of the native officers, should be specially utilised for the purpose of managing advances to ryots through zemindars or otherwise.

Joint security for advances.

46. As regards security for the advances, I am inclined to think, after much discussion, that in the absence of real material security a good deal may be done in the way of personal security by getting the people who know one another to stand security one for the other. Where the zemindar cannot or will not do his duty, perhaps a substantial jeyt ryot may stand security for those whom he represents, or a body of good ryots may take a loan going security for one another, which would be far better than dealing with each individual. The indigenous patwarees should be used to the utmost in these transactions.

Seed-grain.

47. A good deal of anxiety has lately been expressed regarding the supply of unhusked rice for seed. I did not press this matter prominently in the first instance, because I think historical experience shows that in no known Indian famine has seed ever run short. It is a fact shown by official records that the year after the great Bengal famine of 1769–70, the revenue rose higher than ever, showing that the fields had not been left uncultivated for want of seed. In Orissa, in the very height of the famine, the fields were fully sown. Cultivators keep their seed-grain with a tenacity which we cannot call superstitious; and for the principal rice-sowings, on account of the practice of planting out by hand from seed-beds, instead of sowing broadcast, I believe comparatively little seed is required. I am in hopes that in our worst districts it will prove that much seed has been retained.

I do not know if the unhusked grains scattered among the Burmah and Saigon rice would germinate when separated, and whether the cultivators would be satisfied to use a seed so different from their own. If they want this in the unhusked state, it will be available. But for Government to undertake to import a supply of seed, would involve a fresh operation in addition to the great burdens which we have undertaken. I am not prepared to recommend this. Of course, if seed is to be had for money, the advance of money to ryots includes the purchase of seed as a primary object.

Arrangements of Wards' Estates.

48. In regard to estates managed by the Court of Wards, it was necessary to decide the question what is to be done by Government at its own charge, and what charged to the estates, of which the great Durbhungah estate extending over so much of the famine country, is the most conspicuous instance. In the case of a very rich and solvent estate, such as that of Durbhungah, there can be no question that the manager should do all that we can fairly urge the best zemindars to do, and I am happy to say that this has been aranged throughout the Durbhungah Raj. I think it fair, however, that when Government does so much elsewhere, we should not throw absolutely the whole burden on the Raj. The following are the arrangements which I made at Durbhungah regarding the Durbhungah Raj Estate:—

"The Lieutenant-Governor pressed on the manager the importance of taking early steps to give effect to the orders regarding advances to ryots. It was admitted that in villages at present let in farm where the farms are shortly to expire, the question was involved in some difficulty, but the Raj officers were urged not to let minor difficulties stand in the way of making this species of aid really general and effective. Sanction has been given to expending a lakh of rupees in advances, but the Lieutenant-Governor, referring to the Viceroy's reiterated desire to assist good ryots as much as possible, said that Colonel Burn was not to consider himself tied down to that sum. Caution was of course to be exercised in a reasonable way, but a certain margin of ultimate loss must be accepted as probable, and the Raj agency was such as to make it quite feasible to institute inquiry in every village belonging to the estate. The Lieutenant-

Governor did not wish advances to be made to ryots who were absolutely insolvent; *they* must be treated as fit subjects for charitable relief; but it was better to err on the side of doing too much than too little.

"It was arranged that the Government circle officers should be relieved of all responsibility for making advances to ryots in Raj villages. That duty would be left entirely to the Raj officers.

"Colonel Burn and Mr. Llewhellin undertook to do their very utmost to give immediate effect to the above."

The relative position of the Raj and the Government agency was also discussed and settled as follows:—

"The Raj pays for and manages all works on the property, also all advances to ryots. The Government agency will relieve the Raj officers of the cost of charitable relief as soon as the agency is in sufficient working order, the Raj officers rendering all the assistance they can. Till the Government officers can take over the charitable relief, the Raj officers will continue it.

"When the charitable relief operations are amalgamated, any Raj grain not needed for Raj works will be made over to the Government, who will supply grain for the needy from the common stock.

"The Raj officers in their degree will, as much as possible, undertake the duties of group Superintendents in villages belonging to them, and arrange effectively for the village headmen and putwaries to make lists of the needy and carry out the details. Where of sufficient standing, they will be active members of committees and sub-committees.

"If the manager finds that the circle officer's calls leave no time to the Raj establishment for their regular work, they can either be seconded and taken over by Government, or some other arrangements can be made to suit the particular case. Care must be taken that no charitable relief now being given by the Raj is stopped until the circle officer orders it, after making other arrangements as above indicated.

"The *large Raj works* under the charge of the Executive Engineer will be dealt with in the same way as works under the Department of Public Works, where real labour is exacted and full wages paid.

"The village Raj works will be managed by the ordinary Raj establishment, as the minor relief works elsewhere are managed by the relief officers."

Case of insolvent Wards' Estates.

49. In regard to all other solvent Wards' Estates, similar principles should be followed as nearly as possible. In one district a question has been raised regarding Wards' Estates which are embarrassed and without ready money. The *primâ facie* view is, that the money necessary to do what is the duty of the estate should be advanced and charged as a debt against it; but one officer has urged that, as practically we cannot do this in all other estates, we should not charge advances against Wards' Estates, but do what is necessary at Government expense, and leave the Wards' Estates in the same position as others who fail to do their duty, subject to the question whether Government will, by legislation, recoup itself for expenditure which ought properly to have been borne by the landholders. I think that, for the present at any rate, necessary advances must be charged against the estates. The merits of the matter may be re-opened hereafter, if circumstances seem to give equitable grounds for re-opening the question.

Transport of Government grain.

50. All our arrangements depend on our possessing a sufficient supply of grain to feed the people where it is necessary to do so, and in case of what I have called a food-famine, as distinguished from a money-famine, we contemplate largely supplementing mere charitable relief by selling grain to those who have money to buy in the places which private trade does not reach. The quantity of grain to be provided for each district has been, for the most part, settled by the Government of India on the reports of Sir Richard Temple's local inquiries submitted by this Government. The supply thus provided is a very liberal one, and its transport is a great operation. The transport arrangements of the Patna Division were finally arranged by Sir Richard Temple (principally on a large contract system), and those made by the local officers under the instructions of this Government in the Bhagulpore and Rajshahye Divisions have since been seen and approved by him. The Patna carriage contracts having been so completely arranged, I have wished to interfere with them as little as possible, and have avoided all disturbance of existing arrangements. The only pressing difficulty was the failure of the contract for the supply of Eastern Tirhoot from Barh and Chumpta Ghat, where I found that the southern contractors had not carried half what they engaged to carry, while the northern contractors, who were to receive it and carry it on, had carts standing unsupplied. The consequence of this state of things was that almost everything that arrived was sent on to the Madhoobunnee sub-division, and hardly any addition was made to the small supply stored in the very populous and necessitous sub-division of Durbhunga. There is also this difficulty about the contract arrangements, that the carters are not wholly under the control of the contractors; they go very willingly to places where forage abounds, but very unwillingly to places where it is scarce; and while the despatches from the western side of Tirhoot were very large (even more, I believe, than was contracted for) there was a tendency to send too much to Seetamurhee, where it was least wanted, and none to Durbhunga, where it was much wanted. It has been arranged that for the Eastern Tirhoot contracts, two new lines of transport are opened out, where a fresh supply of carts will be available, by Mokameh and by Monghyr, while the changing stations have been shifted so as to give the southern carts a shorter lead and the northern carts a longer lead than before. Major de Kantzow has arranged that the promised despatches to Durbhunga from the western ghat are really carried out. I have directed that grain in excess of the proportional requirements of the western portion of the district (according to contract) shall not be despatched; the contractors must be restricted to the fair weekly allotment for that line, and the rest must be sent the other way in the proportion in which the contracts stipulated.

§ Orders given as to Eastern Tirhoot contracts.

The Durbhunga Railway.

51. The most important supplement to our carrying powers is the railway from Chumpta to Durbhunga, which is fortunately just in the transport line where the failure occurs, and where it is most wanted. It is progressing admirably without interfering in any way with the other traffic. It is carried at present across the fields as a temporary line, but in this way it gets on very rapidly, and there seems to be no doubt that it will be ready to carry much grain before the rainy season, after which it will be lifted and put on a more permanent line. But this latter, I fear, will hardly be maintained in working order through the rains. Under the circumstances, then, it is clear that all our efforts must be directed to use the rail as much as possible before the rains disturb it. All depends on a sufficient supply of rolling stock. I have represented this strongly to the Government of India, who have at once taken means to supply stock to the very utmost. It is expected that some 200 tons of grain may be carried daily half way to Durbhunga in April, and that from the middle or latter part of April, 800 tons a day will be carried into Durbhunga. Instructions have been issued to make the necessary arrangements for the receipt and despatch of this grain.

I believe that this line of railway from opposite Barh to Durbhunga is an admirable one, eminently suited for a permanent line,—that it will not be expensive, and that it should pay well.

Definition of Col. Macgregor's functions.

52. It seemed to me that it was not sufficiently understood who was to direct all the various despatches and deliveries of grain, to arrange with the various contractors the questions in which one depends on the other, and so on. I therefore arranged clearly what I understood to be intended from the first, that Colonel Macgregor and his staff should undertake all these functions. Mr. Metcalfe should (subject to the Commissioner's general direction) keep Colonel Macgregor informed in what parts of the stricken sub-divisions grain is most wanted, and should be in constant communication and understanding with Colonel Macgregor. Colonel Macgregor, understanding what is wanted, will arrange with the contractors and others accordingly; that will be in his hands, and there will not be risk of contradictory orders by various local officers, each acting for himself. Mr. Metcalfe should see that this is thoroughly understood. He should come to a clear understanding with his sub-divisional officers as to the relative urgency of their requirements. Seeing that the Durbhunga Sub-division is nearer to the base, and that it will be supplied by the railway and by North-West Provinces reserved carriage, it is settled that for the present, only enough to secure us against a sudden surprise is to be kept in Durbhunga, all the rest will be allowed to go into the Madhubani sub-division till that is quite secured. Colonel Macgregor is to arrange a good system, by which full information of the despatches from one end of a line is punctually and promptly conveyed to those who are to take up or receive the grain at the other end.

The reserve carriage as it arrives will also be put under Colonel Macgregor's directions.

53. It is proposed to prepare a note showing the whole of our transport arrangements as now matured, and I do not here touch on more than those partial re-arrangements made during my visit to Tirhoot.

Sale of Government grain.

54. I have remarked that, up to the time of my visit, the bazars seemed to be generally well supplied with grain, principally pulses, &c., rice being comparatively scarce and dear. The time for general sales to the public had evidently not come, though I was satisfied that it would be a great convenience and aid to our labourers to sell rice on the works to those who wanted rice. I directed that this should be generally done; these instructions should be carefully carried out. With respect to price, it had been proposed to sell at 12 seers per rupee, but I found that while the price of rice is not cheaper than 12 seers in the great marts on the line of rail, and in the Tirhoot bazars is from 9 to 10 seers or less, to sell at 12 would have an embarrassing effect. The instructions which I issued on this subject for North Tirhoot were, then, as follows:—

"I am satisfied that good rice cannot at present be sold at 12 seers, as was at one time proposed, without greatly deranging a still active private trade. We must, in the present circumstances, continue to encourage that trade to the utmost, and I trust I shall not hear again of the seizure by the police of the bullocks engaged in it, as I have to-day found to have been done. It is remarkable that, while other grains are still very plentiful in the bazar, selling at 11 to 13 seers of 88 tolahs, say, 12 to 14¼ Government seers, rice is extremely scarce and very little to be seen. In ordinary times, rice is the main food of the people in this part of the country, and the coolies now much run upon our rice stocks. I therefore think that rice should be offered on all our works at 10 Government seers per rupee for ordinary cleaned rice, other rice being sold cheaper in proportion. If at any time, in any of the bazars, rice is selling cheaper than the above, the Government rice may also be sold on the works as cheap as private rice in the bazars.

"As regards the price of inferior or uncleaned rice, the qualities vary so much, that it is impossible to lay-down a rule, I must leave this to the discretion of the local officers. They are to sell all kinds of rice at the rate which they find in practice makes each kind as popular with the people as cleaned country rice at 10 seers. I believe there is no objection on the part of the people to clean Burmah rice; if so, it should be sold at the same rate as country rice. If it is found that the people avoid it by comparison, it may be made a little cheaper. I have found here that the people crowded very much to get uncleaned Burmah or Saigon rice (good of its kind) at 13 seers.

"As rice is sold retail by pice per seer, and not by seers per rupee, I authorise officers to adopt for sale on the works, the nearest rate in pice to the seer rates above ordered, although there may be some fractional differences.

"When our rice is stored in large quantities, I shall be glad to sell it on our works at a somewhat cheaper rate, say 12 seers for ordinary rice if this can be done without inconvenience and disturbance.

"To the general public, rice must only be sold at present where there really an absence of the article in the bazars. The sales to the people will much depend on the quantity of rice we have in store. While we have little and private trade is active, we must not interfere; when we have abundance, and private trade ceases to operate, we may sell freely, using the bunneahs, and village traders, and giving them a small margin of profit.

"Seeing the abundance of other grains in the bazars and scarcity of rice, I think it better that all the mixed grains, wheat, &c., should be kept till later, so long as they are sound and good to keep. Even Indian-corn, properly kept, shows no tendency to spoil so far. But whenever weevils appear, or other injury is commencing, the grain should be used.

"Much of the grain has come up unclassed, and spare labour might be used at the granaries to sift it, mark it, and place it where it can be most conveniently got out as it is wanted. This should certainly be done as far as possible. Sufficient doors and other arrangements should be provided in the golahs: great care must be taken to provide against fire; and people who have reasonable objection to hard road-work may be employed to guard and look after the granaries."

When the time comes for selling rice to the public, the price will, as directed in Government orders, be regulated by the price in the nearest large marts where food is abundant; but I hope that we shall be able to sell at not less than 10 seers per rupee. Eventually, if it proves that we have larger stocks than we require for relief purposes and for necessary sales, at a season when private trade is almost stopped, it may be both a great relief to the people and a legitimate mode of disposing of our stocks to sell at a cheaper rate; but this must depend on subsequent orders.

In any case when we come to sell to the public, I am sure that we shall do so most conveniently and effect the minor distribution throughout the country far better than we could do it ourselves by selling in a small wholesale way, at a somewhat profitable rate, to the petty traders who abound and carry grain about the country in bullock-loads in every direction. Even in the rains, I hope that a good deal may be done by these petty traders in this way, whether they use pack-bullocks, small boats, or head-loads.

Distribution of food in the rains.

55. This question of distribution in the rains is one to which the Government of India have recently drawn our special attention. I had already attended to the matter in Tirhoot, and issued instructions to the Commissioner to do all that is possible towards clearing and opening out the internal water channels and securing both regular boats for the rivers and canoes for the watery tracts where land carriage becomes almost impossible during the rains. I trust that full attention will be paid to these points.

Arrangements have also been made for a comprehensive inquiry into the whole subject of the means of communication during the rains to be made beforehand, so as to secure us against doubt and difficulty when the time comes. I had previously for other purposes obtained full reports of the water communications of the two parts of the country most affected, North Bengal and Tirhoot; these will be collated by a selected officer who has special knowledge of the subject, and any additional information necessary will be locally obtained. Major Trevor may well give attention to this among other subjects.

56. The following orders on matters of secondary importance were issued during my visit to Tirhoot, and are generally applicable to distressed districts—

Miscellaneous subsidiary orders.

"All circle officers should have magisterial powers if they are fit for it. It will be desirable that all fit for summary powers should have such. It will be understood that relief officers need not devote themselves to investigating difficult cases, but it will be convenient that petty and clear cases, or cases connected with their work, should be disposed of promptly on the spot. A large supply of the forms used for record of summary trial should be sent up at once to all the districts.

"While bungalows have been built for European officers, nothing has been done for native officers; arrangements should be made to protect them as well as possible. The Lieutenant-Governor has promised Sir W. Muir to take care of those sent down from the North-Western Provinces, and wishes to have this done. If good native buildings can be had on hire or made, they may be hired or put up. If not, proper allowances must be given to enable these officers to house themselves with the least possible delay."

And the following, which, though specially issued for one line only, is in principle applicable to all cases in which land is taken up for roads or other purposes, as is so often the case in connection with our relief works:—

"The Lieutenant-Governor has observed with regret that where the Durbhunga State Railway runs through standing crops, compensation has not yet been given to the ryots. This must be done at once. The Commissioners of Patna and Bhagulpore are desired to issue immediate orders that the sub-divisional officers, through whose jurisdiction the line passes, shall at once, without any very formal proceedings, assess on the spot the value of crops destroyed, giving the cultivators the benefit of any doubt. As the lands are at present only temporarily occupied, no question of compensation for the land need be taken up. Only payment for crops to the ryots concerned must be settled, and paid forthwith by a summary and rule-of-thumb enquiry."

57. Whether the land is occupied permanently or temporarily, compensation for loss of crop should be given summarily and liberally on the spot without any delay, leaving the value of the land permanently taken to be settled separately. But this also should be done as soon as possible, unless, as has happened in many cases, the zemindars give the land for relief purposes free of cost, an example which it is hoped many others will follow.

58. While things are in so critical a position it seems most necessary that Government should have more speedy information than that which it obtains by the roundabout official channels. Orders have been issued for a brief weekly return to Government direct from every distressed sub-division, showing numbers of persons on works and otherwise receiving relief, and grain stored, with an explanation of any remarkable changes. And such information is to be tele-

graphed from the most important sub-divisions both weekly and whenever there is anything specially remarkable to report.

Calcutta, the 28th March 1874. G. CAMPBELL.

APPENDIX D. to FOURTEENTH SPECIAL NARRATIVE of the DROUGHT of 1873-74 in BENGAL, from 20th March to 2nd April 1874.

No. 108, dated Maldà, the 18th March 1874.

From G. H. R. HART, Esq., on Special Duty with Sir R. TEMPLE, to the Honourable C. E. BERNARD, C.S., OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL.

I AM directed to forward, for submission to His Honour the Lieutenant-Governor, copy of a minute by Sir Richard Temple, No. 50, dated 17th instant, which supplements Sir Richard's minutes Nos. 45 and 46, dated 11th idem, relating to the Dinagepore district.

MINUTE No. 50, by the Honourable Sir RICHARD TEMPLE, K.C.S.I., dated Dowlutpore, the 17th March 1874.

1. BEFORE quitting the Dinagepore district, I deem it proper to record some observations in addition to those already recorded in my minutes Nos. 45 and 46 of the 11th of March.

2. The situation of the district, in respect of inland carriage, is more isolated perhaps than that of any of the distressed districts in all Bengal: as it is separated from the Ganges, the base of operations, by the districts of Pubna, Rajshahye, and Malda.

3. The furthest grain depôts of Dinagepore are distant 120 miles from the Ganges: the average distance of the depôts from the great river is about 70 miles: two depôts only, Churamun and Raigunj, are within 80 miles of the river. This circumstance has, from the first, *i.e.*, from December last, caused anxiety regarding the inland transport.

4. The carts of the district are numerous (though not nearly so numerous as in the Behar districts). They are kept by the people for the purposes of the export trade of rice and of jute. But the jute cultivation exists not at all in the central or southern parts of the district where the distress exists, but in the northern or portion near Cooch Behar. Consequently, the district carts, if employed to bring in Government rice from the south, would have to go down to the Ganges, a distance of 150 miles from their homes, which rendered the cartmen unwilling to undertake the service.

5. It therefore became important to make use of the several rivers, affluents of the Ganges, which traverse the district in a general direction from north to south. These rivers are the Koolik, the Tangun, the Poorna-Bhaba, the Attrai, the Juboona, and the Koroteea. These are navigable through all parts of the Dinagepore district during the rainy season, and afford abundant water communication. But during the other months they are navigable as far only as the southern parts of the district. The local authorities then determined to make use of these rivers so far as the navigation might be practicable during the dry months in connection with the navigation of the Ganges.

6. Another subject of consideration was this, that the distress was not confined to certain main tracts, but was scattered over widely-distant parts of the district. For example, there is distress north of Nekmurd, the western corner of the district, and at Ghoraghaut, the south-eastern corner, a distance of 110 miles. There was distress in Bhadureea on the east side to Churamun on the south-west corner, 95 miles. It therefore was impossible to confine the transport to a few main lines, and the selection of many and divers routes became necessary.

7. At the time of my visit I found that the local authorities, under the general direction of the local Government, had organised the following lines of transport by land and water, the greater part of which lines I have seen, being thus able to bear witness to their efficiency. The lines or routes are eleven in number.

I. Railway, Eastern Bengal. Terminus *Goalundo*.

By country boats across the Ganges to junction of its affluent the Oorasagur; then through the Chullun Bheel Lake into the Attrai; passing through the Pubna and Rajshahye districts to Nowgong, a depôt on the Dinagepore frontier; thence through southern part of the Dinagepore district to Putneetola on the Attrai, a distressed locality; distance entirely by water 70 miles.

II. By steamer up the Brahmapootra to Noakeela opposite Bogra, thence by carts through Bogra district to Ghoraghaut and Bhadureea, distressed localities in south-eastern corner of the Dinagepore district; distance by water 120 miles, by land 50 miles.

III. Eastern Bengal Railway. Terminus *Kooshtea*.

By steamer and country boats up the Ganges to Rampore Beauleah, on north bank; thence by carts through Rajshahye district to Putneetola, already mentioned; distance by water 40 miles, by land 50 miles.

IV. By steamer and country boats up the Ganges to Godagaree, at junction of the Mahanuddee; thence by carts through parts of the Rajshahye and Malda districts straight on to Dinagepore. This is the first of the two main routes for the centre of the Dinagepore district; distance by water 60 miles, by land 90 miles.

V. By steamer and boats to Godagaree; thence entirely by boats up the Mahanuddee to Rohimpore, junction of the Poorna-Bhaba in the Malda district; thence up the Poorna-Bhaha past Neetpore to Gungarampore, distressed localities in the Dinagepore district; distance entirely by water 140 miles.

VI. By steamer and country boats to Godagaree; thence entirely by boats up the Mahanuddee to Malda; thence by carts through Malda district to Tumboolee, distressed portion of Dinagepore district, and on to Dinagepore. This is the second of the two main routes to Dinagepore; distance by water 110 miles, by land 60 miles.

VII. By steamer and boats to Godagaree, to Malda, where transhipped into smaller boats and carried up the Mahanuddee to Churamun (Dinagepore district), junction of the Koolik; thence up the Koolik to Raigunj; thence by carts to Hemtabad and its neighbourhood; distance by water 150 miles; by land 20 miles.

VIII. By steamer up the Ganges to Manick Chuck, opposite Rajmehal, on north bank; thence by cart to Neema Serai on the Mahanuddee in district of Rajmehal; thence by boats up the Mahanuddee to Churamun (Dinagepore district), and Raigunj; distance by water 150 miles, by land 20 miles.

IX. Station East Indian Railway, *Rajmehal.* Cross Ganges by boats to Manick Chuck; thence by carts to Neema Serai; thence by boats to Churamun. Also by carts past Neema Serai to Dinagepore; distance by water 40 miles, by land 20 miles in the first case and 60 in the second.

X. Station East Indian Railway, *Sahebgunj.* Down Ganges by boats to Hyatpore, north bank; thence by carts through Malda district to Churamun and Raigunj; distance by water 20 miles, by land 25.

XI. *Sahebgunj.*—Across river by steamer to Caragolah; thence by carts through Purneah district to Dengra Ghaut; thence to Hemtabad (Dinagepore district) and to Kishengunj (Purneah); thence to Nekmurd (Dinagepore); distance by water   miles, and by land 90 miles, in the first case and 120 miles in the second case.

8. In other districts the transport routes are intricate; but in no district are they so unavoidably complicated as in the Dinagepore district, and the management of all these routes, each one supporting and aiding the other, shews a degree of skill and combination which is creditable to the officers concerned. The credit is mainly due to Mr. E Molony, the Divisional Commissioner, and Mr. W. LeF. Robinson the Relief Commissioner.

9. The number of boats, large and small, employed in the Dinagepore transport service is not less than 500, and of carts not less than 5,000.

10. It may perhaps be said that the better plan would be to concentrate the transport on fewer routes. But on consideration I do not think that any such plan would be preferable.

11. By the selection of so many divers routes the following advantages have been secured:—

First.—The several rivers have been made use of, whereby the sending of the carts to great distances from their homes has been avoided.

Second.—The carts have been sent to only one distant point, namely, Godagaree on the Ganges, and that by a well-known trade route.

Third.—The difficulty of collecting fodder for all the cattle on one or two main routes has been avoided.

Fourth.—There is less chance of failure and disaster when many alternative routes are available.

12. I have thought over the matter carefully together with the Relief Commissioner, and I believe that in regard to the contour of the country, to the course of the rivers, to the lines of road, and to the position of the depôts, the routes, as above explained, have been well chosen by the authorities concerned.

13. I have requested the Relief Commissioner to obtain a reserve of at least 500 carts (each with a pair of bullocks), as the number of carts now employed is not more than sufficient for the service.

14. There appears, however, to be considerable difficulty in largely augmenting the number of carts, and the question suggests itself as to what large reserve of carriage is there in event of requirement increasing? In such event the reserve consists of pack-bullocks, which are obtainable in some thousands in the district itself, and upon which the Commissioner assures me that he could lay his hand at any moment. Further pack-bullocks could be obtained in Cooch Behar in still greater numbers.

15. It is always to be remembered that during the rainy mouths there is abundant water carriage available.

16. Passing from the subject of transport, I have still a few points to touch upon.

17. Though much more is yet to be expected from the zemindars before the present trouble is over, still several of them in this district have already distinguished themselves by assisting their tenantry with advances, or by importing grain. I may now mention:—

Khetter Mohun Singh, manager of the Rajbaree estates in Dinagepore.
Radha Gobind Rai of Dinagepore.
Jankea Geer Gosahaon of Raigunj.
Shama Soondrea Dibya of Neetpore.
Luchmeeput and Dhunput.
Seetal Chund Lahary of Bochagunj.

The Churamun zemindar has begun to do well, and I trust that his name may soon be added to the above list.

18. I have explained to the Relief Commissioner that there can be no difficulty in granting advances to ryots who may be in distress at present but may yet have some sort of property to pledge. Those ryots who can offer nothing to pledge are generally able to attend the relief works; and I have proposed by a separate minute (No. 49) that they shall receive subsistence allowance, to be recovered hereafter, for the period during which they are obliged to absent themselves from the works.

19. Regarding seed-grain, a subject which attracts much attention, I have not been able, after much deliberation with the best authorities, European and native, to propose that anything be

done at present by Government. The bhadai, or early rice crop, is now being sown over a full average area, so nothing need be done as regards that. The hemuntee or winter rice will not be sown for some little time yet. According to the best-informed opinions the mahajuns hold this seed-grain in sufficient quantities in the expectation of high prices, and it is believed that they must and will sell it to the ryots as soon as they see that the people are sustained by the importation of rice by Government. If any thing should have to be done by Government it may be in the shape of exchanging food-rice for seed-grain to be retailed by the ryots.

20. I will conclude my remarks on this very important district by stating that the Collector, Mr. E. E. Lowis, is in all matters relating to the scarcity and distress a thoughtful and well-informed officer, fully capable of suggesting whatever may be required, and of executing thoroughly the instructions which he may receive.

APPENDIX E. to FOURTEENTH SPECIAL NARRATIVE of the DROUGHT of 1873–74 in BENGAL, from 20th March to 2nd April 1874.

No. 105, dated Dinagepore, the 16th March 1874.

From G. H. R. HART, Esq., on Special Duty with Sir R. TEMPLE, K.C.S.I., to the Honourable C. BERNARD, C.S., Officiating Secretary to the Government of Bengal.

I AM directed to forward, for submission to His Honour the Lieutenant-Governor, copy of a minute by Sir Richard Temple, No. 47, dated 14th instant, reporting on the prospect and progress of affairs in the Rungpore district, and detailing the instructions issued and the recommendations made by Sir Richard with respect to famine relieve operations there.

2. With reference to paragraphs 21 and 22 of the minute, I am to express Sir Richard's that the required number of overseers and native doctors may be sanctioned as soon as possible.

MINUTE No. 47 by the Honourable Sir RICHARD TEMPLE, K.C.S.I., dated Bogra, the 14th March 1874.

HAVING visited Rungpore, marched through the most distressed parts of the district, and conferred with the local authorities, I have to record the following observations.

2. The cause of the scarcity is as follows: The rice crop is the food-staple of the district, occupying full three-fourths of the cultivated area. The remaining one-fourth is principally occupied by other products, such as jute (fibre), tobacco, mustard, sugarcane, betelnuts, and indigo (native industry); a small fraction only is occupied by spring crops, wheat, and potatos. The rains of 1873 were fairly good towards the northern part of the district adjoining Cooch Behar, and towards the eastern part in the basin of the Brahmapootra near the confluence of the Teesta. In these parts the rice crop was moderately fair, with a yield of 8 to 10 annas. Elsewhere, in the central, the western, and the southern parts of the district, the rains were scanty and partial: consequently the rice crop failed to a large extent, affording a yield of from 2 to 3 annas.

3. Taking the district as a whole, the Collector (Mr. Glazier) informed me that the yield of the rice crop hardly exceeded 4 annas. The Relief Commissioner (Mr. Robinson) thinks that the yield must have been from 5 to 6 annas. In other words, full two-thirds, or at least more than one-half, of the principal food-staple has failed.

4. It is difficult to obtain a statistical calculation from native authority for the whole district. But all the native gentlemen whom I met declared that a very extensive failure of rice had occurred. Numbers of the cultivator class reported local failure in various directions.

5. The prices of rice are very high—10 seers to the rupee at Rungpore, and in the central and western parts; 12 to 13 seers in the eastern parts; and 11 seers in the northern parts.

6. Though Rungpore is not a great rice-exporting district, still there is some exportation of this product in ordinary years, amounting perhaps, to one-third of the whole crop. As is well known, the wealth of the district arises from the exportation of the jute fibre and also of tobacco. It is stated by European officers, and admitted by natives, that most of the ryots are comparatively well off. Indeed, there is a certain sort of wealth diffused among them—they can bear up for some time against high prices. Still the lower classes of the ryots are poor. These and the lowest classes below them are already suffering from the effects of the scarcity. Gratuitous relief is already being afforded in several places by native gentlemen, and in Maheegunge (or Rungpore city) by Government.

7. It is to be borne in mind that the jute, perhaps the greatest source of wealth to the cultivating classes, is grown in the northern and the eastern parts of the district, where the rice crop was fair, and not at all in the central and western parts, where the rice crop was bad. Consequently, the ryots of the distressed tracts do not participate in the profits of the jute cultivation.

8. There has been of late a considerable importation of rice into the district on the east side from the districts beyond the Brahmapootra, Mymemsingh and Dacca; by the Brahmapootra itself and then by its affluents, the Teesta and the Durla; also on the north-west side from the adjacent tracts of the Dinagepore district. I have not been able to obtain from the Collector the statistics of this importation, but I have instructed him to arrange for registering the statistics of this trade from the present time. The importance of this information for determining the supplies to be provided by Government is manifest. I understand, however, that the amount received from the Dinagepore district is about six lakhs of maunds; and that the imports by river may be from 30,000 to 50,000 maunds a week. The Collector seems to place much reliance on this trade. It is probable, however, that the imports from Dinagepore will cease, and it is

certain that the river imports do not reach the distressed tracts on the south-west. On the whole those distressed tracts near Rungpore will be benefited by trade, while the other distressed tracts will probably not.

9. The recent rains (end of January and beginning of February), amounting to at least 3 or 4 inches in most parts of the district, and in some parts to more, afforded but very little relief as regards the scarcity of food. The rice crop had already gone, and there was no growing crop in the ground to be benefited, save wheat and potatos.

10. But the prospective benefit of this most seasonable rainfall was very great, for the fresh moisture enabled the people to prepare the land and sow the seed for the "aoos," or early rice crop, which will be repeated at various dates from the middle of June to the middle of August. An unusually large area has been thus sown, and so propitious is the moisture that the crop is regarded as nearly secure. If its present promise shall be fulfilled, then its yield is expected to amount to one quarter of the average total rice yield of the district. In that case it would cause a diminution of the distress to begin after the 15th June, and a cessation for the most part after the 15th August. Entire cessation is hardly to be hoped for until the next winter rice crop shall be reaped in December.

11. The distress already setting in will go on increasing till perhaps the middle of April. In that case it will continue at its height till the middle of June; it would become moderate till the middle of August, from which time it would be further diminished and would go on decreasing. Such in brief is the opinion of the local officers concurred in by the Commissioner.

12. I should therefore estimate the maximum number of persons likely to need assistance from Government for two months, half that number for two months more, and one quarter of the number for three months.

13. After conferring with the Collector I requested him to render his estimate of the rice required from Government for this district according to information up to date (12th March). He gives the following estimate in which the Relief Commissioner concurs:—

Name of Thannah.	Population.	Proportion expected to need assistance from Government.	Persons to be provided for.
Maheegunj - - - - -	123,000	20 per cent. - - -	24,600
Molung - - - - - - Peergunj - - - - - Chilmaree - - - - - -	255,000	15 „ - -	38,250
Sudoollapore - - - -	120,000	10 „ - - - -	12,000
Gobindgunj - - - - -	163,000	50 per cent. of 18,000 : 5 per cent. the remainder.	9,000 8,150
Borobaree - - - - - Nisbetgunj - - - - - Koourgunj - - - - - Durwanee - - - - - -	508,000	5 per cent. - - -	25,400
Ooleepore - - - - - Nagaseree - - - - -	425,000	No percentage calculated, as only a small number are likely to be affected.	10,000
Total -	1,594,000		127,400

This gives a total number of 127,400 persons expected to need assistance from Government; and, calculating that it will be necessary to supply the whole number for two months, half the number for two months, and a quarter of the number for three months (taking ¾ of a seer per head per diem), the total amount of grain required will amount to 2,68,664 maunds. To this must be added 5 per cent. for wastage and 5 per cent. for safety, which will bring the total amount required up to 3,00,000 maunds.

14. This quantity is, I think, the least that ought to be provided. I am not without misgiving that it may be less than enough. But looking to the chances of private importation being maintained, and to the facilities for communication by river, and the comparatively short distance for conveyance by carts from the landing places to the distressed tracts, I would accept the estimate for the present.

15. Two lakhs of maunds have been already ordered (of which 1,20,000 maunds have already arrived) leaving one lakh more to be ordered to make up the three lakhs. The grain is brought by the Eastern Bengal Railway to Goalundo and thence by steamer to Kaleegunge, just below the junction of the Teesta with the Brahmapootra. That part which is destined for Rungpore itself is carried from Kaleegunge up the Teesta; that which is destined for the other parts of the district is sent by carts. There are about five hundred carts employed in the service. I have instructed the Collector to make the numbers up to one thousand as soon as possible.

16. On the recommendation of the Relief Commissioner and the Collector I have determined the following relief circles, of which the areas have been arranged in order to admit of the various villages being inspected once a week according to the rules:—

West.

1. { Nisbetgunj.
   Koourgunj.
2. Molung.

South-West.

3. Peergunj.

South and South-East.

4. Sadoollapore.
5. Gobindgunj.

Centre.

6. Maheegunj.
7. Soondergunj.

North-East.

8. Borobaree.

North-West.

9. Durwanee.

Nine officers, who are already on the spot, have been nominated to fill these circles, and the assistants necessary for them will be immediately obtained in the districts by the Collector.

17. On the recommendation of the Collector, I have sanctioned the withdrawal from the district police force of three selected officers for relief work. To these men extra pay will be given during the time they are so employed, the pay to be fixed by the Relief Commissioner to cover all travelling expenses. The District Superintendent of Police has stated himself to be able to fill up their places temporarily from among the men of his force.

18. I have arranged therefore that there shall be nine sub-committees constituted under the rules; and that three of these, Sadoollapore, Soondergunj and Govindgunj, shall be placed under Mr. Damant, C.S., who will have the powers of a sub-divisional committee.

19. On the urgent representation of the Relief Commissioner, I have authorized the sale of Government grain under Clause G., Rule III., Part II. of the rules, at 12 seers to the rupee at the depôts of Peergunj, Sadoollapore and Soondergunj. There is reason to apprehend a serious deficiency of food at these places, which the trade is not supplying, and occasional symptoms of distress are apparent.

20. The total length of the relief roads projected amounts to 723 miles. The number of labourers is under 7,000. The rate of wages allowed is high, 3 annas per diem for men; no women have yet come to the works. Looking to the circumstances of the district, I should expect a much larger number. The Commissioner seems to think that the local management may be improved. The labourers will now be paid in grain.

21. Not more than one, or perhaps two, overseers are available for the supervision of these works. At least four more are required.

22. For the circles as above explained, seven native doctors are required, two only being now available.

23. Large numbers of ryots assembled to complain to me of distress, and I understand that for many days equally large numbers have been daily at the head quarters of the district with the same complaint. The statements made by many of them seemed to be exaggerated. Many of them on the other hand appeared to be really in need and distress. Some large zemindars of the district, such as the Ranee Surnomoyee, the zemindar of Kakina, Luchmeeput, Dhunput, Baboo Anunda Prashad, and others have set a good example in assisting their tenantry. Others have taken advances from Government for this purpose, some forty in number, the total of the advances being nearly one lakh of rupees. Again, there are many substantial ryots, more perhaps than in any of the neighbouring districts, though it is to be remembered that most of these live *out* of the distressed tracts. After making all allowances I cannot doubt that there is a fast increasing distress among large classes of the ryots in this district. Their request is for advances of cash or of grain to enable them to live until the next harvest comes in. I will endeavour to deal with this somewhat difficult subject in a separate paper.

No. 106, dated Dinagepore, the 16th March 1874.

From L. C. Abbott, Esq., on Special Duty with the Honourable Sir Richard Temple, to the Honourable C. E. Bernard, C.S., Officiating Secretary to the Government of Bengal.

I am directed to forward copy of Minute No. 48, dated 16th March, regarding the condition of the Bogra district, recorded by the Honourable Sir Richard Temple.

I am to request that the suggestions contained in paragraphs 28 and 29 may receive the attention of the Lieutenant-Governor.

Minute No. 48, by the Honourable Sir Richard Temple, K.C.S.I., dated Dinagepore, the 16th March 1874.

Having visited the Bogra district, and marched through some of the worst parts of it, I have to record the following observations:—

2. The soil of the district is divided (like the district of Dinagepore or Rungpore) into two main categories—*polee*, light or sandy, and *khiar*, or clay. The district is divided into two parts by the River Korateya (an affluent of the Brahmapooter).

3. The *khiar* soil prevails on the western side of the Korateya River, and the *polee* on the eastern side.

The crops on the *polee* soil are, rice chiefly, and other products—sugarcane, wheat, and pulses.

4. The crops on the *khiar* soil are almost entirely rice; there is also the well-known mulberry cultivation, but that is limited to the vicinity of the town of Bogra.

5. The deficiency of rain affected the *khiar* much more than the *polee* soil.

6. The rice failed more completely on the *khiar*, and that having failed hardly anything else remained; whereas on the *polee* soil the rice failed to a much less extent, and there were other crops which have turned out well.

7. In the *khiar* the yield of rice was from 2 to 4 annas; in the *polee* some 6 to 8.

8. The consequence is, that about half the district is distressed while the other half is fairly well off.

9. The distressed parts consist mainly of the thannahs of Bogra and Khetlal, with portions of thannahs Panchbeebee, Seebgunge, Sherepore and Adumdigi.

10. I have had the advantage of consulting Baboo Madhub Chunder Mitra, the Deputy Magistrate-Collector, who has long experience of the district, and is highly recommended to me by the Relief Commissioner and the Collector as a valuable witness. He thinks that there will be much distress until the middle of August next. As it is important to record the views of a well-informed native gentleman, who maintains his opinion on cross-examination, I will give the substance of the Baboo's opinion. He would estimate the number of persons who would need assistance from Government in some shape or another as follows:—

Thannah.	Proportion of Population needing Relief.	Number of People.
Khetlal	75 per cent.	28,974
Bogra	75 „	164,619
Seebgunge	30 „	17,714
Panchbeebee	30 „	20,142
Badalgachee	25 „	9,185
Sherepore	25 „	18,509
	Total	259,143

11. He thinks that the full number should be taken from 15th April to 15th July, half the number from 15th March to 15th April and from 15th July to 15th August, whilst a quarter should be taken for the four months from 15th August to 15th December.

12. If the assistance of Government were given in the shape of rice, then at the rate of ¾ seer per head per diem, the total would come to 7,28,790 maunds. But he considers that for the most part the assistance need not be given in rice but rather in money, either as wages on public works or as advances. The reason is, that though there is a serious deficiency of grain in the district, still supplies are drawn from the districts of Pubna and Rajshahye on the south, and Mymensingh (across the Brahmapooter) on the east.

13. The large traders are not importing from distant districts because the high prices prevailing elsewhere preclude the hope of profit; but petty dealers and other persons are continually obtaining supplies in small quantities.

14. The stocks of the district itself, known as white rice, are probably approaching exhaustion; but the rice of neighbouring districts, known as red rice, is seen in the market. Such is the Baboo's opinion; he was not at all shaken on cross-examination.

15. Looking to all these considerations, the Baboo thinks that 1,50,000 maunds, to be imported by Government, will suffice, but that nothing short of this will be adequate.

16. The Collector, Mr. Kelly, would admit the value of the Baboo's opinion; but looking to all the circumstances of the district,—to its facilities for communication, to its prosperity in ordinary years, and to its probable means of bearing up against scarcity, he seemed to be strongly of opinion that the 50,000 maunds already provided by Government would suffice.

17. The Relief Commissioner, Mr. Robinson, thinks that the percentages of persons who may need assistance, as taken in the Baboo's estimate, are too high. He would make the following estimate as regards the number:—

Thannah.	Population.	Proportion to be relieved at worst.
Khetlal	258,123	77,500
Bogra		
Seebgunge	175,243	35,000
Badalgachee		
Panchbeebee		
Sherepore		

or a total population of 112,500 to be relieved at the worst.

Of these he calculates that—

	Maunds.
¼th, *i.e.*, 28,125 persons, will require food for 3 months, which, at ½ a seer per head per diem, amounts to	31,590
½, *i.e.*, 56,250 persons, for 2 months, at above rate	42,240
Whole for 2 months, at the same rate	84,360
Total	1,58,190
Or round numbers	1,60,000
Or taking ¾ seer	2,40,000

18. His recommendation is, that Government should provide 1,60,000 maunds.

19. He considers that the circumstances of the district have grown worse since his last visit; that due allowance has been made for facilities of communication and other favourable circumstances in his determination of the percentage of persons who may need help; and that the quantity as shown in his estimate ought to be supplied.

20. He considers that money aid, on a very large scale, would cause an excessive rise of prices, and so cause fresh complications, therefore he is for affording aid largely in the shape of food.

21. I consider, having regard to all the circumstances, that 2,40,000 maunds ought to be provided for this district, of which 50,000 maunds have been already ordered, leaving 1,90,000 maunds remaining to be ordered. Out of the 50,000 maunds ordered 20,000 maunds have arrived; no time should be lost in bringing up fresh supplies, as the amount in hand is small as compared with the extent of possible distress.

The grain is brought by steamer on the Brahmapooter to a point near Nokeele, east of Bogra; it is thence conveyed by carts into the interior of the district.

22. The carts now employed are few—under 300. I have asked the Relief Commissioner to instruct the Collector to collect additional carriage, inasmuch as carts are available in numbers in the Bogra district.

23. The prices in the district are not dear comparatively—12 and 13 seers for the rupee. The people seem to complain very much of the range of prices; the reason assigned is that they are accustomed to very cheap prices in ordinary years.

24. During my visit the following seven relief circles were determined to be administered by sub-committees:—

Bogra.
Khetlal.
Seebgunge.
Doopchanchea.
Booreegunge.
Gohail.
Hillee.

For these circles the following officers are available:—Mr. Nugent and Baboo Oomesh Chunder Ghose joined; and not joined but on their way, Messrs. Atkinson, Collier, P. C. Gupta; leaving two more to be sent. Of assistants two are already appointed, and the Relief Commissioner meditates appointing the remaining five, and putting them in their places within a week.

25. I found a large relief road under construction through the heart of the distressed tracts. Several branch roads have been projected.

26. The number of relief labourers is upwards of 5,000, the rate of wages 8 annas per diem. These people are at present paid in cash. I have requested the Relief Commissioner to have them paid in grain wherever he may think fit.

27. The Collector was in doubt whether the construction of tanks could be regarded as a relief work. I told him that it certainly could; that he should raise as much of subscription as possible, but that in every case of urgency he should commence the work at once. There are many places suitable for the commencement of such useful works.

28. There is besides an Executive Engineer a Superintendent of Roads, and two Overseers. I recommend that three more Overseers be sent.

29. Besides the Civil Surgeon, there are two Native Doctors appointed for relief purposes. These have not yet joined. I recommend that four more be sent.

30. I have not thought it necessary as yet to authorize the sale of Government grain (under the rules) at any of the depôts of this district.

31. A large multitude of ryots came into the station of Bogra on the day of my visit and clamoured for relief or advances. I was informed that this agitation had been going on for some days. Some of the complaints were doubtless exaggerated, but many of the men seemed to be really in need. I will try to deal with the subject of advances to ryots in a separate paper.

32. The grain merchants of the district have not applied for advances from Government for the purpose of obtaining rice from a distance; nor was I able to hear of any zemindars who had done anything noteworthy for the assistance of their tenantry.

MINUTE No. 51, by the Honourable Sir RICHARD TEMPLE, K.C.S.I., dated Malda, the 18th March 1874.

HAVING marched through the Malda district and conferred with the Relief Commissioner, Mr. Robinson, and the Collector, Mr. Alexander, regarding the relief operations, I have to record the following observations.

2. As regards the crops, the district may be divided into three parts—

First, the part between the Mahanuddee, with its affluent the Kalindree and the Ganges, generally excellent, growing wheat, barley, indigo, mulberry and mangos;

Second, the part between the Mahanuddee and the borders of the districts of Dinagepore and of Rajshahye (locally called "the Borind") generally indifferent, growing rice as a staple, and sparsely populated;

Third, the part between the Mahanuddee and the Kalindree, partly good but mostly bad; thickly populated.

3. In general terms it may be said that those parts of the district which are within the "spill" of the Ganges, and have spring crops, wheat, &c., are in good condition; while those parts of the district which have rice crops dependent on rains, or on inundations which failed, are in bad condition.

4. The yield of the rice crop (little or no *bhadoi* and chiefly *amun*) in the Borind did not exceed four annas; in the part between the Kalindree and Mahanuddee, the bhadoi was a six-anna crop, and the amun, the principal crop, did not exceed four annas.

5. The worst period of the distress will be from 15th June to 15th August, after which time the bhadai rice crop will come in: but even then there will be some distress till the winter rice crop is reaped in December. The boro rice crop will afford an intermediate and supplementary supply to some extent during May and June.

6. I asked the Relief Commissioner and the Collector to give me their estimate of the grain requirements of the districts according to the latest data. They give me the following calculation:—

Population of thannah Kurbah	92,011	
of which 30 per cent. =		27,603
Population of thannah Gajole	55,316	
of which 25 per cent. =		13,829
Population of thannah Gomasthapore	48,999	
of which 15 per cent. =		7,349
Population of thannahs Malda and Nawabgunj	103,758	
of which 10 per cent. =		10,375
Population of thannah Gorgoriba	65,548	
of which 5 per cent. =		3,277
Total population to be considered =		62,433
		3
Whose daily consumption at		4)187,299
¾ seer per head per diem		40)46,825 seers.
		1,170 maunds,
		30
and their monthly consumption		35,100

Then the requirement will be—

For full number	for 2 months	70,200 maunds
„ half „	for 2 „	35,100 „
„ quarter „	for 4 „	35,100 „
		1,40,400 „
Add allowance for wastage, 5 per cent.		7,020 „
Total requirement		1,47,420 „

Or say 1,50,000 maunds.

7. After going through with Mr. Robinson and Mr. Alexander all the points, I would accept their estimate in the main, and would propose 1,50,000 maunds. I think that this amount will suffice for safety, considering the position of the district in regard to the rivers Ganges and Mahanuddee.

8. One lakh, or 1,00,000 maunds, have been already ordered by the local Government (of which 29,000 have arrived), leaving 50,000 maunds to be ordered.

9. If the quantity already arrived shall seem small, then it is to be remembered that a large part of the grain for the Dinagepore district passes through Malda, and that the authorities have been anxious that all the grain should be pushed on to the more distant localities.

10. The grain for the Malda district will come by three routes:—

First, to the Rajmehal Station, East Indian Railway; thence across the Ganges by boats to Manickchuk; thence by carts to Neema Serai on the Mahanuddee opposite Malda city, and across the river to the Borind tracts.

Second, to Sahebgunge station, East Indian Railway; thence down the Ganges to Hyatpore; and thence by cart to the tracts between the Kalindree and the Mahanuddee.

Third, to Kooshtea station, Eastern Bengal Railway; thence by steamer up the Ganges to Godagaree, junction of the Mahanuddee; thence by boats up the Mahanuddee to Malda, and by carts into the Borind tract.

11. The number of carts at present employed amounts to 2,000; but of these the greater part is engaged in the service of the Dinagepore district. It should not be difficult to procure additional carts in the district for the increased allotment of grain which I now propose; and I have drawn the Collector's attention to the subject. Pack-bullocks could, if required, be procured in large numbers in the district. On the whole there ought to be no difficulty, as the distance for carting is comparatively short.

12. In consultation with the Relief Commissioner and the Collector, I have fixed the following relief circles, in each of which there will be a sub-committee under the rules:

Chanchal, for the tract between the Kalindree and the Mahanuddee.

Malda City, for the tract on the left, or north bank of the Mahanuddee up to the Poorwa belt of jungle.

Gajole, for the tract north of the jungle to the Dinagepore frontier.

The circles have been so arranged as to admit of every village being inspected once a week under the rules. For these circles officers have been appointed and have joined, all save one. In the Chanchal circle it has been found necessary to appoint two officers. Of the native assistants required, the Collector has appointed one and undertakes to appoint three more.

13. In order to complete the complement of subordinate establishments, I have to ask that two native doctors and one overseer may be despatched to this district.

14. Various relief roads have been projected, the total length of which amounts to 187 miles. It is somewhat unfortunate in this district that in those parts where road-work is most wanted, there are comparatively few labourers to seek relief, and that in those parts where relief labourers are most numerous, there is the least scope for road-making.

15. On the east side of the district there are very many tanks to be excavated or repaired, but very few on the west side.

16. The wages for an adult male on the relief works amounts to 2½ annas per diem, with a proportionably less amount for women and children. At the present time there are 2,250 persons employed on the various relief works.

17. I have authorised the Collector to sell rice to these labourers at the rate of 12 seers to the rupee; but it is not thought necessary as yet to sell Government grain to the public anywhere except in the Chanchal circle.

18. There is some activity of private trade by the water route of the Mahanuddee. The Malda city on left or north bank of that river is fairly well supplied, and rice sells at 12 to 13 seers the rupee. But the principal mahajuns of the place distinctly told me that people would not import rice largely, because it would not pay them to do so while prices remained so high in the southern and the eastern districts. But in the tracts to the north, near the Dinagepore border, the rate is 10 seers the rupee.

MINUTE No. 54—by the Honourable SIR RICHARD TEMPLE, K.C.S.I., dated Bankipore, the 20th March 1874.

IN reference to the accompanying copy of a letter from the Commissioner of Rajshahye, Mr. Molony, I have to state that I am prepared to concur in his view that one lakh of maunds of grain, out of the two lakhs allotted, will suffice for the Nerthern Bengal State Railway, and that the other lakh may be made over by Major Lindsay to the Relief Department at such places as Mr. Molony may direct.

2. The lakh thus made over may be considered as a set-off *pro tanto* against the additional provision which I have recommended for the relief division under Mr. Robinson.

No. 1 Ct.—S.R., dated Camp Rajmehal, the 19th March 1874.

From E. W. MOLONY, Esq., Commissioner of the Rajshahye Division, to L. C. ABBOTT, Esq., on special duty with SIR RICHARD TEMPLE, K.C.S.I.

I HAVE the honour to note, with reference to the increased allotment made on the estimates of the requirements of the Dinagepore, Rungpore, and Bogra districts, that the amount of grain allotted to the Northern Bengal State Railway, viz., 2,00,000 maunds, has been excluded from the calculation. My opinion is that the railway officials will not be able to distribute more than 1,00,000, and that the second lakh may safely be held as a portion of the several district allotments to be indented for if required by the district officers. I would, at the same time, recommend that the whole of the 2,00,000 maunds for the railway be stored along the line as arranged for by Major Lindsay in a recent memorandum sent to the Government of Bengal.

No. 1665—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL in the Statistical Department, to the COMMISSIONER of RAJSHAHYE.

Scarcity and Relief.

SIR, Calcutta, the 21st March 1874.

I AM directed to forward copies of Sir Richard Temple's minutes, Nos. 47, 48, 49, 50, and 52, on the districts of Dinagepore, Rungpore, and Bogra. The minute on Malda has not yet been received; but the Malda requirements are summarised in minute No. 52, and copies of the Malda orders will be forwarded to you as soon as they are received.

2. Copies of these minutes have been given by Sir Richard Temple to the Relief Commissioner and to the Magistrate-Collectors of the districts concerned; and they are no doubt acting upon the orders conveyed. A sufficient number of copies will now be sent with this letter to each district officer, so that the minutes may be in the hands of each district and sub-divisional officer. To the orders regarding advances to ryots, regarding the sale of Government grain, and regarding the collection of a reserve of carts, immediate attention must be very carefully given.

3. There remain for disposal the additional requirements decided upon by Sir Richard Temple in respect of—

(*a*.) Allotments of Government grain;
(*b*.) Public Works Department subordinates;
(*c*.) Native doctors, &c.;
(*d*.) Civil subordinate officers for circles.

4. In regard to the additional allotments of grain, the Government orders conveyed under endorsement No. 1472, dated 14th March, referred the question how and where the extra Dinagepore allotment should be carried and stored. Your letter No. 580, dated 16th March, reports that no additional storage room will be required at Kooshtea; that you will arrange to store the extra 2,00,000 maunds of the Dinagepore allotment at old Malda, Godagaree and Saktigachia on the Atrai.

It appears also from your letter that, with the steamers* now at his disposal, and with the help of native boats, Mr. Dawson can keep up a sufficient supply of grain at Godagaree, Rampore Bauleah, Dhaparee, Manick Chuck and Hyatpore, provided he receives sufficient Government rice from Calcutta. The extra 50,000 maunds for Malda will have to be supplied from Kooshtea in the same way as the Dinagepore supplies.

There is one point on which revised orders are required. Sir Richard Temple, in his minute No. 45 (paragraphs 16-17), contemplated 1,50,000 maunds of the Dinagepore supply being obtained *viâ* Purneah, and 1,50,000 maunds of the Purneah supply being obtained *viâ* the Mahanuddee. Paragraph 1 of Government order of the 14th March, contemplates 75,000 maunds only being sent to Dinagepore *viâ* Purneah, and the same amount being got from Purneah *viâ* the Mahanuddee. On further consideration of the matter, the Lieutenant-Governor thinks it will be better to adhere to Sir Richard Temple's sketch of the original plan, and to have 1½ lakhs of the Dinagepore supply carried through Purneah; a corresponding quantity of the Purneah supply being procured if necessary *viâ* the Mahanuddee. The orders of the 14th March will therefore be so far modified, and the Commissioner of Bhagulpore will be informed accordingly.

5. There remain the extra allotments to Rungpore and Bogra to be provided. The Lieutenant-Governor leaves it to you to instruct Mr Toynbee, Mr. Dawson, and the district officers as to the places to which, and the quantities in which, the grain should be sent. So far as information is available here in Calcutta, the case stands thus:—

RUNGPORE—	Mds.
The Hon'ble Sir Richard Temple's allotment - - - - -	3,00,000
Already gone to or received in the district - - -	1,20,000
Remaining to be sent - - - - - - -	1,80,000

Under present arrangements, the Eastern Bengal Railway steamer *Prince of Wales*, with flats, takes 2½ trips a month from Goalundo to Kaligunge, and lands 25,000 maunds each trip, Mr. Davies is also sending a certain quantity away in native boats. This would give us 1,25,000 maunds landed at Kaligunge from now to the 20th May. For the remaining 80,000 maunds, we must take the steamer which is offered in Mr. Prestage's letter No. 1085, dated 20th March; she will be ready with one flat by the 28th March; another flat will be ready for her by the 8th April; and a third flat by the 18th April. Mr. Prestage offers to carry Government grain from Goalundo at six annas per maund; and the remaining 80,000 maunds for Rungpore must be carried up as promptly as possible by that route. If you find that some part of the Rungpore supply had better be landed elsewhere than Kaligunge, you can report and advise Messrs. Toynbee and Davies accordingly.

BOGRA—	Mds.
Allotment by the Honourable Sir Richard Temple - - -	2,40,000
Already received in the district - - -	20,000
Remaining to be sent - - - - - -	2,20,000

Under present arrangements, the regular steamer of the India Steam Navigation Company carries 30,000 maunds a month to Shahajeepara; and the steamer recently hired from the New River Steamer Company will carry 60,000 maunds a month from Goalundo to the same station This would give us from now to the 15th May 1,60,000 or 1,70,000 landed at Shahajeepara. The remaining 60,000 or 70,000 for Bogra, plus as much as may be required for South-East Dinagepore by that route, must be arranged for by additional steamers. Mr. Toynbee will be instructed to ascertain whether the India General Steam Navigation Company can give another steamer; and if not, in communication with Captain Baker, to take the *Sultan* and her flats which have been offered to Government. The *Sultan* should not be engaged for more than a month in the first instance, until it is seen whether she can stem the Berhampooter, and whether a steamer cannot be spared from the Patna Division complement.

If you require any of the Bogra supply to be landed at any other place than Shahajeepara, you should advise Mr. Toynbee and Mr. Davies accordingly.

6. Colonel Nicolls has already ordered sixteen (on the 20th March) Pubic Works Department subordinates to the districts of Rajshahye Division; the Government of India have been good enough to order down 25 additional subordinates from other provinces, and the full number required by Sir Richard Temple's minutes (28 in all) will shortly be made up.

With reference to paragraph 17 of Sir Richard Temple's minute No. 45, I am to explain that Mr. McKenna and his staff are to be wholly under the Relief Commissioner, as regards the mode of of employing the people, as regards rate of wages, as regards the works to be done, and as regards everything but professional details. The circle overseers also will be wholly subordinate to the circle officers.

7. The Surgeon-General of the Indian Medical Department is collecting medical subordinates as fast as he can; he has already been informed of Sir Richard Temple's indent (paragraph 20 of minute No. 45) for eleven more native doctors for Dinagepore. He will now be asked to supply—

To Malda -	3 Native Doctors in all.
To Bogra -	4 Additional Native Doctors, besides the two already joined (paragraph 29 of minute No. 48).
To Rungpore	7 Additional Native Doctors, besides the two already available (paragraph 23 of minute No. 47).

---

* *Peel* and two flats.
Bombay and two flats.
Lucknow and two flats.
Koladyne and one flat and a cargo boat.
Star of Dacca and a hired flat.

Each of these native doctors will be supplied with a compounder and with a store of medicines, &c., sufficient for a circle dispensary and hospital.

8. In regard to the civil officers and subordinates for circles, it would appear (paragraph 6 of minute No. 52) that you and the Relief Commissioner already have sufficient officers, and that you can appoint subordinates locally. It therefore remains for this Government only to send you the six native assistants promised for Dinagepore in paragraph 3 of the orders of the 14th March. The officers of the Native Army are on their way to Rajmehal, where orders should await them under the care of Lieutenant Eliot.

9. You are requested to convey the thanks of Government for their exertions in the present crisis to—

Ranee Surnomoyee, whose charity and liberality is so well-known;
Rai Luchmiput Sing Bahadoor;
Rai Dhunput Sing, Bahadoor;
Baboo Anuda Persad;
„ Khetter Mohun Sing of Dinagepore;
Radha Govind Rai of Dinagepore;
Jankea Geer Gosain of Raigunge;
Shama Soondree Debya of Neetpore;
Seetal Chand Lahary of Bochagunge;

also to the Deputy Collector, Baboo Madhub Chunder Mitter, of Bogra.

10. I am to ask you to be so good as to consider and report at once whether any further orders are required in regard to the grain-supply and transport questions. Copies of all the endorsements on this letter are shown on the copies forwarded to yourself and to your officers, that you may see what Government has done, and may issue your supplementary orders accordingly.

I have the honour to be,
Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 1671.

Copy, with copy of minute No. 52, forwarded to Messrs. Toynbee, Dawson and Davies, whose special attention is drawn to paragraphs 4 and 5 of the Government orders. Mr. Toynbee is requested to notice that the Rajshahye Divisional allotment now stands thus:—

	Mds.
Dinagepore	12,00,000
Rungpore	3,00,000
Bogra	2,40,000
Malda	1,00,000
Rajshahye	1,00,000
Northern Bengal Railway Works	2,00,000
Total	21,40,000

The whole of this has to go by the Eastern Bengal Railway, excepting the small quantities already sent *vià* Rajmehal and Hyatpore and the local purchases; the total of these excepted items comes to—

	Mds.
Commissioner's local purchases	80,000
Sent to Rajmehal and Hyatpore up to 17th March	1,24,000
Total	2,04,000
Up to the 17th March there had been sent *vià* the Eastern Bengal Railway	8,90,000
Total	10,94,000
Balance to be sent by the Eastern Bengal Railway	10,46,000
Total	21,40,000

There are thus, in round numbers, 10½ lakhs of maunds to be sent by the Eastern Bengal Railway, of which, unless Mr. Molony sends instructions to the contrary, there must go—

		Mds.
Vià Goalundo	For the Burrul route 10,000 maunds a week for 8 weeks	80,000
	Rungpore balance as steamers are ready	1,80,000
	Bogra balance as steamers are ready	2,20,000
	Total	4,80,000
Vià Kooshtea		5,66,000

This gives for eight weeks a weekly despatch of—

	Mds.	Tons.
To Kooshtea	70,000	2,500
To Goalundo	60,000	2,143
Total	1,30,000	4,643

Mr. Toynbee will be good enough to warn the Eastern Bengal Railway accordingly; he will take care that grain is always ready at Goalundo and Kooshtea for the hired steamers; and until the whole supply is worked off. If Mr. Dawson can work the grain off faster from Kooshtea, and if stocks are available in Calcutta, the weekly despatches to Kooshtea may exceed the total of 2,500 tons; but they must on no account fall below that total. Messrs. Toynbee, Davies, and Dawson will be careful not to let the reserve in the Kooshtea store-house fall below 25,000 maunds, and the reserve at Goalundo fall below 15,000 maunds.

No. 1735.—S.R.

From the Officiating Secretary to the Government of Bengal in the Statistical Department, to the Commissioner of Rajshahye.

Scarcity and Relief.

Sir, Calcutta, the 24th March 1874.

In continuation of my letter No. 1,665, dated 21st March, I am directed to forward copies of Sir Richard Temple's minutes Nos. 51, 53, and 54, together with Mr. Hart's letter No. 110, dated 20th March, all of which papers relate to the districts of your division and the grain-supply therefore.

2. Minute No. 51 raises the Malda district grain allotment to 1,50,000 maunds; but minute No. 54 decides that 1,00,000 maunds out of the Northern Bengal Railway allotment may be taken as part of the allotment for the districts of Dinagepore, Rungpore, Malda and Bogra. Major Lindsay and his officers will arrange for receiving, carting, and storing the extra lakh of maunds; but you will have to instruct him and the several district officers as to the places at which and the quantities in which the share of this surplus lakh of railway rice is to be made over to the relief department of each district. A copy of your instructions on this point should be forwarded to Government. In fact the Lieutenant-Governor thinks it probable that Major Lindsay will not use 1,00,000 maunds, and that he will have more to spare than the amount above stated.

3. The total allotment to your division will now stand thus:—*

	Mds.
Dinagepore	12,00,000
Rungpore	3,00,000
Bogra	2,40,000
Malda	1,50,000
Rajshahye	1,00,000
Northern Bengal Railway works	1,00,000
Total	20,90,000

It will be for you to instruct Messrs. Toynbee, Dawson, and Davies, informing Government at the same time whether the excess of 50,000 maunds, shown in endorsement No. 1671, should be deducted from the amount to be sent by the Burral route (80,000 maunds), or from the amount to go by Kooshtea and Godagaree, or from both.

4. The necessary orders for the additional Public Works Department and Medical Subordinates for the Malda district have already been given in paragraphs 6 and 7 of my letter No. 1665, dated 21st March. The complement of civil and circle officers in Malda appears (paragraph 12 of minute No. 51) to be either complete, or to be in process of being made complete by locally-made appointments.

5. Copies of all the endorsements issued on this letter are shown on the copies sent to you, in order that you may be able to issue supplementary orders accordingly.

I have the honour to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

---

* *N.B.*—These figures must be adopted in place of those given in the endorsement No. 1671 on Bengal Government letter of the 21st March.

APPENDIX F. to FOURTEENTH SPECIAL NARRATIVE of the DROUGHT of 1873–74 in BENGAL, from 20th March to 2nd April 1874.

MINUTE by the Honourable SIR RICHARD TEMPLE, K.C.S.I., No. 60, dated Bankipore, the 25th March 1874.

DOUBTS having been expressed by the Bengal Government as to the safety of the Gya district in respect to the scarcity, I sent, about the middle of February last, for the Collector, Mr. Palmer, and carefully considered with him the records of the outturn of the winter crop, and the prospects of the spring crop: also the particular parts of the district where distress might be expected to first occur: and the position of the various grain depôts. I also had the advantage of conferring with several native gentlemen, zemindars and others, who possess lands in that district.

2. The result was that I considered that the grain then stored, under orders of the local Government at the various depôts of the district, was sufficient to enable the district authorities to deal effectively with any distress that could reasonably be expected; and that nothing more need be done until the spring harvest should be secured, and the final estimate for the requirements of grain for the district could be framed.

3. The time has now come when, the spring harvest having been either reaped or assured, the final estimate can be no longer delayed. I have therefore, together with the Commissioner (Mr. Bayley) and the Collector, reconsidered the position of the district, and I beg to record the following observations:—

4. The tracts which produce the winter crops (rice) and those which produce the spring crops (wheat, &c.) are interspersed all over the district. The Indian-corn autumn crop, is not of considerable importance. The rice crop was indifferent in the upper portion of the district, having a four-annas yield; worst towards the centre, 2 to 3-annas yield; better towards the south-east and south-west with a yield of 12 annas. The spring crop has turned out well, especially towards the western boundary of the district on the banks of the Sone, having derived much benefit from the late rains, and will afford a full average yield. But, then, owing to the area sown having been less than usual (from want of autumnal rains) the yield of what may be called the total rubbee area is from 8 to 10 annas. Some of the works on the Sone Canal are being carried out in this district along the right bank of the Sone, but the principal works are on the left bank in the Shahabad district.

5. The district adjoins that of Patna where the crops are good. On its western boundary is the Sone, the canals from which water considerable tracts. The facilities for trade are fairly good, and the district is permeated by two trunk roads. The worst part of the district in respect to crops has facilities for supervision, being situated close to the civil station of Gya itself.

6. The Commissioner and the Collector consider that the distress will begin in April and will reach its maximum between the beginning of May and the end of June. It will be mitigated in July, and gradually diminish from the end of September till the end of November when it will cease.

7. The Collector having been requested by me to offer a final estimate of the requirements of grain according to the same principle as that adopted for the other districts, offers the following estimate of the number which may be expected to need Government assistance at the worst season:—

Thana.	Persons who may need assistance from Government.
Urwal	5,000
Daoodnuggur	3,000
Aurungabad	10,000
Nubeenuggur	5,000
Shergotty	7,000
Gya	11,000
Barahchutty	4,300
Uttrie	7,000
Tikaree	8,000
Jehanabad	12,000
Nowada	17,000
Rajowlee	4,000
Total	93,300

which number represents between 4 and 5 per cent. of the total population of the district.

8. In this estimate the Commissioner concurs, except that he considers it somewhat high. The numbers are obtained by calculating the percentages of persons who will need assistance on the population of each thana division of the district; the percentage varying according to the circumstances of each thana.

9. I calculate that the whole of this number (say 93,000) will have to be assisted for two months, half the number for three months, one-quarter for one month, and one-eighth for two

months. Thus we should have, at three-quarter seer per head per diem, the requirement of the district in maunds of grain as follows:—

	Maunds.
Two months, at full rates	1,04,624
Three months, at half rates	78,468
One month, at one-fourth rates	13,078
Two months, at one-eighth rates	13,078
	2,09,248
Add—5 per cent. for wastage	10,462
Total	2,19,710

or, roundly, a total of 2,20,000 maunds for the whole district.

10. Upon the estimate as above set forth I recommend that the amount of 2,20,000 maunds be provided by Government for the Gya district. There are 1,50,000 maunds already ordered by the Local Government (of which 1,40,000 maunds have been stored) leaving 70,000 maunds yet to be ordered.

11. It is desired that, of the additional quantity of 70,000 maunds, one-third should consist of mixed grains and two-thirds of rice. I have accordingly to ask that 45,000 maunds of rice (in addition to previous orders) be despatched to the Bukhtearpore and Bankipore Stations for the service of the Gya District. The remainder, or 25,000 maunds mixed grains, will be purchased through the Government of the North-Western Provinces, and I have directed the Commissioner accordingly.

12. The Collector reports that there will be no difficulty in obtaining carts for the conveyance of the additional 70,000 maunds.

13. The are four main depôts for grain in the district, and 17 subordinate depôts.

14. Though there will be distress in some slight degree scattered over the district, still the Collector and the Commissioner consider that there is not any tract in any part of the district which could be marked down as uniformly or generally distressed. I, therefore, do not see the necessity for marking off relief circles such as those fixed for the distressed districts.

15. But every part of the district will need to be frequently visited by responsible native officials, to bring forward incidental cases of distress, and to see that relief works are placed within reach of all those who may be seeking employment, and to take the necessary measures in any emergent cases which may come before them. For this important purpose the Commissioner and the Collector consider that four supervisors (one for each main sub-division of the district) should be appointed, and four deputies. As the Commissioner and Collector report that they cannot obtain locally the men required, I have asked the Government of the North-Western Provinces for the services of four tehsildars, leaving the Collector to appoint the four deputies on salaries not exceeding Rs. 50 per mensem.

16. I find that various relief roads have been projected, the total length of which amounts to 185 miles. Our main reliance must be placed on these, inasmuch as some of the district is not suited for the excavation of tanks.

17. The relief labourers are as yet few, less than 1,000. Some of them accept piece work at the somewhat favourable rate of Rs. 1-12 for 1,000 cubic feet. The rest are regarded as an invalid gang which can do but little work, and receive one anna per diem for a man and three-quarters of an anna for a woman.

18. If able-bodied persons come to the work and do not piece work, the rate will be 2 annas a day for a man, 1¾ annas for a woman, and ½ anna for a child.

19. The Collector seems to be convinced that there is no symptom as yet of any distress. Still, considering the circumstances of the district, I am not without apprehension that the number of relief labourers may begin to increase rapidly as soon as the harvest work is over, and I have requested the special vigilance of the Commissioner to this subject.

20. The Collector requires the services of four overseers for his relief works. I have accordingly to ask that these officers may be supplied.

21. I do not find that any additional subordinate medical establishment is needed.

22. The figures given in this Minute are irrespective of the labourers from this district employed on the Sone Canal works. Those are included in the statement given for the canal works as a whole, in my Minute No. 61 of to-day's date, on the Shahabad district. It will be seen that the Gya District furnishes at least 8,000 men to these works.

23. The following are the prices now quoted in the district. They do not indicate severe scarcity as yet. They were at one time dearer at Gya itself, but that circumstance was locally attributed to special circumstances.

DISTRICT OF GYA.

Up to 21st March.

	S.	C.
Common rice	11	3
Wheat	12	7
Barley	17	3
Jowar	15	2
Cheena	15	8
Indian corn	14	3
Gram	15	13

R. TEMPLE.

MINUTE by the Honourable SIR RICHARD TEMPLE, K.C.S.I., No. 61, dated Bankipore, the 26th March 1874.

I HAVE had the advantage of carefully discussing at Patna the affairs of the Shahabad district (in relation to scarcity) with the Commissioner, Mr. S. Bayley; the Collector, Mr. Alexander; and Mr. Levinge, the Superintending Engineer of the Soane Canal Works; and as there are certain points requiring immediate decision, I beg to record the following observations.

2. The district is described by the Collector to have an area interspersed with patches of rubbee (wheat, &c.) and rice crops, so that there is a difficulty in giving a brief and general description. It may be said, however, that the rubbee prevails on the banks of the Ganges and the Soane, which rivers enclose the triangle of the district on two sides. In the centre of the district there is partly rubbee and partly rice. Towards the base of the triangle forming the western parts of the district, there is more rice near the basin of the Kurumnasa, and some low hills spreading over a considerable tract. In this part the principal place is Sasseram.

3. There are three principal crops:—

The bhadoi (Indian-corn)	Autumn.
„ rice	Winter.
„ wheat, &c.	Spring.

The autumn crop had a yield of eight annas; the winter crop a yield of two; the spring crop a yield of ten.

4. The distressed parts of the district will consist mainly of a tract near the centre, south-west of Arrah, the tract around Sasseram, and the tract near the Kurumnasa. These tracts and some other tracts in detail, depending chiefly on rice, have lost nearly all of their year's harvest. But they are situated close to tracts which have good spring crops, and can obtain help from their neighbours. The majority of the people of the district have no reason to feel any distress save that which may rise from the high prices which prevail everywhere.

5. The worst period will be from the 15th April to 15th July, when the distress will become mitigated. After the 15th September the Indian-corn will come into market, when there will be further diminution to the end of November, about which time cessation may be hoped for.

6. As is well known the Soane Canal has its head works in this district. Its two main lines and their branches have already afforded much irrigation during the present year. Much has in this way been done to avert distress.

7. I requested the Collector to give me an estimate of the numbers who may be expected to need assistance from Government at the worst season. He gives the following numbers, which are obtained by calculating the percentage (of persons who may need assistance) on the population of each thana in the district, the percentages varying according to the circumstances in each thana—

Thana.	Number of Persons who may need Assistance.
Peeroo	7,000
Chowsa	8,000
Arrah	8,000
Sasseram	22,000
Bhubbooa	30,000
Total	75,000

Out of this total it is estimated that 30,000 persons will be employed on the canal, leaving 45,000 to be provided for the districts.

8. I calculate that the full number will be needing assistance for three months, half the number for two months, and a quarter for three months. This will give, at ¾ seers per head per diem, a total grain requirement for the district of 120,232 maunds, to which I add 5 per cent. for wastage, or 6,011 maunds, bringing up the total to 126,243 maunds.

9. I accordingly recommend that 127,000 maunds be provided. Already 65,000 maunds have been ordered by the local Government, leaving 62,000 maunds to be ordered.

10. Mr. Levinge considers that upwards of 60,000 persons will be employed on his canal works at the most active season, and he estimates that 190,000 maunds in all should be provided. He is of opinion that, as many of these people will be able-bodied and working hard, one seer a day should be allowed. Already 114,000 maunds have been ordered by the local Government, leaving 76,000 maunds to be ordered.

11. There would thus remain to be ordered—

	Mds.
District	62,000
Canal	76,000
Total	138,000

The total number of persons would be—

District	45,000
Canal	60,000
Total	105,000

This would bring up the total provision to—

	Mds.
District	127,000
Canal	190,000
Total	317,000

12. It is desired that out of the additional amount to be ordered, the following should consist of rice:—

	Mds.
District	35,000
Canal	40,000
Total	75,000

I have accordingly to ask that 75,000 maunds rice may be sent to the railway stations between Arrah and Mogulserai.

13. It is desired that the remainder, or 63,000 maunds, should consist of mixed grains, wheat, millet, &c., and I will request the Commissioner to cause this to be purchased through the Government of the North-Western Provinces.

14. It is to be borne in mind that the quantity above set forth for the canal includes some provision for labourers from other districts besides Shahabad. Mr. Levinge gives me the following approximate statement of labourers employed on the 380 miles of canal, 300 miles being in Shahabad and 80 in Patna and Gya:—

In what District.	Number of Persons.
Gya and Patna	8,000
Shahabad	24,000
Total	32,000

Of the 24,000 persons employed in the Shahabad district, about 14,000 are local and 10,000 have come from other districts.

15. A good scheme of roads for the employment of relief labour has been proposed. The total length of the roads ordered amounts to 415 miles, besides which 72 miles more have been proposed. There will be also some tanks to be excavated.

16. The number of persons employed on relief works at present may be stated at—

17. The rates of wages on relief works are—

Man	As. 2 a day.
Woman	„ 1-8 „
Child	„ 0-9 „

For these rates a fair amount of work is exacted. If the persons are unable to do more than a very light or nominal amount of work, they receive a less rate.

18. The Commissioner and Collector consider that the distress will be scattered over the district; that no particular tract or tracts will be distressed throughout, those villages which have lost some of their crops will generally be found either to have some other crops as a resource, or to be close to neighbours who possess stores or who have good crops; and that consequently there are no tracts which could properly be marked off as relief circles like those which have been established in other districts. And I concur in this view.

19. But we all consider that there should be a well-paid and trustworthy native official and a deputy employed in each of the four main sub-divisions of the district to go the round of all the villages, to see that relief works are opened within easy reach of all who need employment, to search out individual cases of peculiar distress, to take any measures that may be emergently necessary, and to report constantly to the district. For this very important purpose I have authorised the Collector to entertain at once four native officials on salaries from Rs. 80 to 100 per mensem, and four deputies on salaries of Rs. 40 to 50.

20. The Collector desires to have the services of two overseers in addition to his present small establishment. I have to ask that these officers may be supplied.

21. I find that additional subordinate medical establishments are not required in this district.

22. I would urge on the attention of Government the expediency of establishing telegraphic communication with Dehree, the head point of the Sone canal works.

23. The following are the prices in the district. They do not indicate any severe scarcity as yet:—

Up to 21*st March* 1874.

	S.	C.
Common rice	11	6
Wheat	14	1
Barley	18	10
Jowar	19	0
Cheena	—	—
Indian-corn	16	11
Gram	18	7

R. Temple.

RESOLUTION.

Scarcity and Relief Department.

Calcutta, the 30th March 1874.

Read—

Minutes Nos. 60 and 61, dated the 25th March 1874, recorded by the Honourable Sir Richard Temple, on the requirements of grain and supervising establishments for the districts of Gya and Shahabad.

The grain allotted to the district of Gya by the Bengal Government is 150,000 maunds, of which 140,000 have already been stored. Sir Richard Temple recommends that the allotment be increased by 70,000 maunds, of which 45,000 maunds should be rice and 25,000 mixed grain from the North-Western Provinces. Sir Richard Temple has directed the Commissioner to procure the mixed grain from the North-Western Provinces, and orders will this day be issued to Mr. G. Toynbee, the grain officer at Calcutta, to despatch the increased allotment of 45,000 maunds of rice to the Gya district. It was remarked in the annexure of this office letter No. 1,451, dated the 13th instant, that the supplies for Gya were not very emergent, and were not to be attempted while the railway was working short; and this fact should be borne in mind now, especially as the Collector of Gya says that there will be no difficulty in obtaining carts for the conveyance of the additional assignment.

2. Sir Richard Temple has asked the Government of the North-Western Provinces for the services of four relief supervisors, has authorised the Collector to appoint four deputies on salaries not exceeding Rs. 50 per mensem, and asks that four overseers for relief works may be appointed to Gya. The Public Works Department of this Government will be requested to arrange for supplying these latter.

3. The grain allotted by the Bengal Government for the Shahabad district was—

	Mds.
District	65,000
Soane Canal	114,000

Sir Richard Temple recommends that these allotments may be increased by—

	Mds.
For the district	62,000
„ canal	76,000
Total	138,000

Of the total increased allotments, Sir Richard Temple has directed the Commissioner to buy 63,000 maunds of mixed grain, wheat, millet, &c., through the Government of the North-Western Provinces, leaving the balance of 75,000 maunds to be supplied from Calcutta. Mr. Toynbee will accordingly be requested to arrange for the supply of the additional allotments for the Shahabad district and Soane Canal.

4. Sir Richard Temple has authorised the Collector to entertain at once four native relief officers on salaries of Rs. 80 to 100 per mensem for the four main sub-divisions of the district, and asks for the services of two overseers in addition. The Secretary in the Public Works Department will be asked to make arrangements for sending up the two overseers.

5. Sir Richard Temple urges the expediency of establishing telegraphic communication with Dehree, the head point of the Soane Canal Works, and the Lieutenant-Governor will cause the Government of India to be moved to sanction the measure.

No. 1930—S.R.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department, to the Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

Calcutta, dated 30th March / issued March 1874.

Sir,

I am directed to submit herewith copies of Minutes Nos. 60 and 61, recorded by the Honourable Sir Richard Temple, on the requirements of the Gya and Shahabad districts, together with copy of the orders of the Bengal Government thereon.

2. In paragraph 22 of his Minute No. 61 on the Shahabad district, Sir Richard Temple urges the expediency of establishing telegraphic communication with Dehree, the head point of the Soane Canal Works, and the Lieutenant-Governor desires me to solicit that His Excellency the Viceroy in Council may be pleased to sanction the undertaking.

I have the honour to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 119, dated Bhagulpore, the 28th March 1874.

From L. C. Abbott, Esq., on duty with Sir Richard Temple, K.C.S.I., to the Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

I am directed to forward copy of a Minute No. 64, of 28th March, recorded by Sir Richard Temple, regarding the requirements of the Monghyr district.

Minute by Honourable Sir Richard Temple, K.C.S.I., No. 64, dated Bhagulpore, the 28th March 1874.

Having visited the Monghyr district and discussed its affairs relating to scarcity with the Commissioner, Mr. Barlow, and the Collector, Mr. Lockwood, and the principal relief officer, Mr. Currie, I have to record the following observations.

2. The district is divided by the Ganges into two parts, northern and southern. On both banks of the river, especially the northern, there are spring crops which have turned out excellently well, and thus a large portion of the district is placed beyond the reach of apprehension.

3. But in the northern part of the district there is a tract named Bukhtearpore, included in the thannah of Gogree, which is separated from the basin of the Ganges by a belt of swamp, and in which the main staple, rice, has failed, having produced a one-anna to two-annas yield. In the southern part is also a broad tract comprising the thannahs of Sheikhpoora and Secundra, dependent mainly on the rice crop, which for the most part failed, having a yield of only 3 annas. There is also a hilly tract (around a branch of the Vindhyas jutting out against the Ganges) within which the rice crop has failed, especially near Khurruckpore, belonging to the Durbhungah raj. Throughout the district there are autumn crops, Indian-corn, and the like, which last proved indifferent, with a yield of only 6 annas.

4. The general situation may be summarised thus. Several tracts of the district have lost the greater part of its food-supply for nearly a year. But in juxtaposition with these there are tracts with excellent crops. These are as good facilities for trade and communication as could reasonably be expected in any district. At present the poorer classes in the distressed districts are engaged in cutting the harvest in the flourishing tracts, and when this employment ceases (in a few days more), they will probably come in great numbers suddenly on the hands of Government for relief. Thus the period of distress will be probably at its worst from the 15th April till the 15th June, when, if the rains fall favourably, there will be again employment obtainable. But the distress, though mitigated, will last till the produce of the autumn crop comes in by the beginning of September, after which time the distress will cease.

5. I requested the Collector to estimate the numbers of persons whom he expects will need assistance from Government, and he would take 40 per cent. on the population of the Bukhtearpore portion of the Gogree thannah, on the population of the Sheikhpoora and Sekundra thannahs, and on the population round Khurrukpore, which calculation gives this result:—

In what Thannah.	Persons who will need assistance from Government.
Gogree	42,000
Secundra	44,000
Sheikhpoora	79,000
Khurrukpore	7,000
Total	172,000

I would accept this part of the estimate.

6. It is further agreed that we must provide for the whole number for two months (from 15th April to 15th June).

7. The Collector thinks that from 15th June to 1st October we should provide for a quarter of the number. The Commissioner thinks that it would not be safe to take less than a half.

8. The result of the two calculations may be seen thus—

Estimate by Commissioner.

	Mds.
172,000 for 2 months, at ¾ seer per day	193,500
86,000 for 3½ months, at ¾ seer per day	169,312
Total	362,812

Estimate by Collector.

172,000 for 2 months, at ¾ seer per day	193,500
43,000 for 3½ months, at ¾ seer per day	84,656
Total	278,156

9. I concur in the Commissioner's estimate, and consider that 360,000 maunds, plus 5 per cent. for wastage (180,000 maunds), making 378,000 maunds in all, should be provided for the Monghyr district.

10. Already 300,000 maunds have been ordered by the local Government, of which 192,000 maunds have been stored. Besides this there are 20,000 maunds stored by the Court of Wards

(Durbhunga) at Khurrukpore, which, added to the 192,000, makes up 212,000 maunds, leaving 166,000 maunds yet to be sent. But as the grain sent as yet consists of rice, the remainder can conveniently be supplied, if the Government sees fit, by mixed grain obtained in the North-Western Provinces.

11. After communicating with me on the occasion of my visit to Soopole, the Commissioner has fixed the following relief circles, which appear to be quite appropriate:—

1. Bukhtearpore	North of Ganges.
2. Luckee Serai	South of Ganges.
3. Secundra	
4. Sheikhpoora	

The three last named circles form a group, and have been constituted a relief sub-division under Mr. Currie, C.S.

12. The local Government has already appointed European officers to each of these circles. I had previously authorised the Commissioner to appoint one native officer to each circle. I have now requested him to appoint a second native officer to each circle, which he will be able to do immediately. There is at least one overseer for public works in each circle; a native doctor has also been appointed to each.

13. I have the pleasure to state that the Commissioner and the Collector speak in high terms of the conduct of the zemindars in the distressed tracts, who are keeping their tenantry from their own resources, taking advances from Government for this purpose, and constructing tanks and such like works in the villages. The number of such tanks is reported to be at least 34. The Durbhunga Court of Wards also, through Mr. Roberts, the local manager, is setting the best example to neighbouring zemindars by storing grain, constructing works, and assisting ryots.

14. The amount of cash advances obtained from Government is shown in the subjoined table; the amount is creditable to the district authorities:—

Monghyr District.

	Rs.
Advances for purchases of grain, under paragraph 4 of Circular No. 80 of 17th November 1873	56,800
For land improvement, under paragraph 21 of Circular No. 80 of 17th November 1874	33,790
Generally for helping ryots, under Government orders No. 4004 of 18th December 1874	11,300
Total	101,890

15. The length of relief roads amounts to 254 miles.

16. The number of relief labourers, including those employed by zemindars on their tanks and those employed by the Court of Wards, may be stated for the present time at 12,000.

17. This is less than the numbers for some of the previous periods. But, as already explained, the people have gone off to the harvesting. It is to be feared that they will soon return to the relief works in much larger numbers than ever.

18. In this district, however, relief circles are in working order, and adequate quantities of grain are stored at all the points of probable requirement. And I have seen no district better prepared than Monghyr to meet an emergency of this kind. The Collector, Mr. Lockwood, and the principal relief officer, Mr. Currie, merit the confidence of Government.

R. Temple.

No. 2353—S.R., dated Bhagulpore, the 23rd March 1874.

From G. N. Barlow, Esq., C.S.I., Officiating Commissioner of the Bhagulpore Division, to the Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

With reference to Government orders No. 1236—S.R., dated 4th instant, I have the honour to submit copy of Sir Richard Temple's Minute of the 20th instant, determining the arrangements to be made for the relief and security of Godda and Rajmehal sub-divisions of the Sonthal Pergunnahs. I append also copies of Mr. Baker's Report, No. 2, dated 3rd instant, and my Note of the 16th idem, which were laid before Sir Richard. The Government are already in possession of other reports upon the subject, referred to in the marginal entry at the head of my note.

2. Since Sir Richard's departure, I have again met the Officiating Deputy Commissioner and sub-divisional officers of Godda and Rajmehal, from whom I learn that the conditions of carriage are so far good for the transport of grain from all railway stations as to make it unnecessary to store immediately a two months' supply even in the golah sites on the Godda side, which are the furthest removed from the rail. We can begin with a provision for one month all round and watch the progress of events. Should the consumption of our stocks prove unexpectedly rapid, we must of course supplement them from time to time; but we calculate that working full strength from the beginning of May, we could, if need be, place a full four months' supply, calculated at the rates fixed upon by Sir Richard Temple, within the tracts before the setting in of the rains. Moreover, looking at the short distances of most of the store-houses from the railway, it seems probable that during the rains supplies could continue to be thrown in through the agency of a coolie corps. We thus have two strings to our bow, and can afford to act deliberately and await the turn of events. Upon the point as to the practicability of raising a coolie corps inquiry will at once be made.

3. I beg that orders may be given to despatch grain according to the arrangement proposed in the annexed table.

4. The present idea is that the necessities of the Sonthal Pergunnahs will be met by a free distribution of works to afford the people employment, and the sale of grain for food to the people on the works. The conditions of the case ascertained up to date encourage this view. Mr. Grant, the sub-divisional officer of Godda, told me yesterday that he had already nearly 10,000 people upon the new road in his charge, and that the Government grain was readily purchased by the labourers, nearly 1,000 maunds having been taken up to date. We have not seen as yet elsewhere in the division similar eagerness to work, or desire to purchase Government grain. Under the circumstances of the case, I have directed other roads running through Godda and Rajmehal, which were sanctioned by the Lieutenant-Governor as long ago as October last, but the commencement of which was kept back by me, to be proceeded with; and I have, as the Government are aware, authorised the local officers to execute bund and tank works in the Damin-i-koh wherever necessary to give employment.

5. Should the necessity for giving charitable relief arise, the local officers are instructed to do what is needful.

6. Under an arrangement approved by the Lieutenant-Governor and Sir Richard Temple, Colonel Moore takes charge of relief operations in Godda and Rajmehal, subject to the general supervision of the Deputy Commissioner, and joins his appointment to-morrow. I have furnished him with establishment noted in the margin, to which I solicit sanction. I have thought it well to supply Colonel Moore with a really good man who would assist him.

	Rs.	A.	P.

	Banjhee 10 miles -	1,000			
	Taljharee - -	3,000	Instructions will follow.		

* A consignment of 5,000 maunds was sent here under Lieutenant-Governor's orders No. 1344—S.R., dated 9th instant; a second consignment is said to be under dispatch, of which I have no intimation. Whatever may have been sent, the difference between such amount and 20,000 maunds should now be forwarded in two instalments.

G. N. Barlow,
Officiating Commissioner.

No. 2, dated Camp Sahebgunge, the 3rd March 1874.

From E. B. Baker, Esq., Officiating Deputy Inspector-General of Police on special duty, to G. N. Barlow, Esq., C.S.I., Commissioner of Bhagulpore.

On the 14th ultimo I had the honour to send you, under cover of a demi-official letter, a note on the state of the Rajmehal sub-division, in respect of its food-supplies, means of communication with the interior, and the general condition of its population.

2. The above note was written after personal communication with Mr. Stewart, the officer in charge of the Rajmehal sub-division, and inspection of the country lying at the eastern base of the hills about Taljharee, where there are a good many Sonthal villages, and of portions of pergunnahs Jumonee and Chetalea, in which distress was apprehended.

3. Subsequently I visited villages lying at the foot of the hills on the north, making myself acquainted with the condition of the people and with the best means of providing relief; then joining the Deputy Commissioner of the Sonthal Pergunnahs, who had arrived from Doomka, we went up together from Teenpahar to Burio, and thence northwards towards Banjhee, along the road now being made to Sahebgunge. Leaving Mr. Boxwell at Burio, I next went westward to Boarijore, and then turning to the north I met Mr. Grant (the officer in charge of the Godda sub-division) at Moraroe, and intended afterwards to visit the neighbourhood of Godda itself; but the

accounts furnished by Mr. Grant of the condition of the people in portions of his jurisdiction were so serious, and my own observations so convincing of the necessity for immediate action, that I thought it prudent to change my route, and to proceed to Bhagulpore to inform you personally of the state of things.

4. Having yesterday laid before you all the information I had gathered, and having with you gone through the latest reports from the district and sub-divisional officers, I believe it will be sufficient if I now repeat briefly in writing the results of my inquiries and the suggestions which present themselves to my mind as best suited to meet the necessities of the tracts threatened with famine.

5. The opinion expressed by me in my communication of the 14th ultimo, as to the certainty of distress arising from scarcity of food in the Rajmehal sub-division, has been confirmed by further observations, and I now believe that the distress will be greater than I was then prepared to admit. The Godda Damin-i-koh is in a similar condition to that of the Rajmehal sub-division, while portions of the open country at the foot of the hills is in a worse state in Godda than in Rajmehal.

6. The Sonthals are, up to the present, in good case, looking sleek and well-fed. Their villages swarm with children, there is no want of cattle, and poultry about the fields and homesteads, and the signs of the threatened famine are in the appearance of the rice fields, the almost total absence of green crops and straw stocks, the anxiety of the people regarding food for the next six months, and the high price of grain, where it is ordinarily cheap. A bad crop of rice in 1872, followed by a much worse in 1873, would cause distress among a comparatively well-to-do and thrifty race; the Sonthals, however, are the contrary, and few among them look much beyond the present day. Even now, though they declare they have only food for a very little while longer, they are quiet and resigned, and appear to rely with unbounded faith upon the Government and its officers.

Fortunately there was an excellent harvest of maize last August, which has mainly provided them with food up to date, and some may still be in store in the houses of the better sort.

The reported exportation of this grain seems to me a matter quite apart from the question of the existence of a sufficient stock of food in hand. Some grain, whatever it may chance to be, must be sold to provide clothing, implements, salt, and other necessaries of life, and some is the property of the merchant, who has made advances for it as soon as it is cut. Rice not being forthcoming this season, a part of the maize has perforce been sold and reported.

There is every promise of an abundant mango crop, which, with roots, wild sag, and mowa, will help the people through the hot season.

7. Hitherto I have referred only to the Sonthals, because the Pahareeas keep altogether aloof from us, and show no signs of distress, present or prospective. I have conversed with a few, who spoke rather coolly of their prospects, and I saw but one on road work; I suspect therefore that they have in store a sufficient supply of maize and are independent of our assistance.

8. Besides Sonthals and Pahareeas, there are only about 2,000 other people, Bengalees, Beharees, &c., in the Godda and Rajmehal Domin-i-koh, such as shopkeepers, money-lenders, and traders in general.

9. The tract of country which I believe to be threatened with famine is that between the Ganges on the north, the railway on the east, and line drawn a little south of Bohowa, to a little south of Godda on the south, and a line from Godda to Peerpointee on the west. The whole of the country between these lines will, I fear, be in distress from the beginning of April to middle of August, more or less; more in the north and west, less in the south and east.

In some parts, such as Muniharee and the villages along the foot and outside the hills, the distress is already commencing.

I have read Mr. Boxwell's reports to you, and I agree with him generally, but I believe he takes too sanguine a view of the condition of the Damin-i-koh; and my estimate coincides more closely with those of the sub-divisional officers, Messrs. Stewart, Bedford, and Grant.

10. The entire population of the above tract of country is, according to the census, 246,122, as shown in the margin; adding a few villages lying outside the Rajmehal Damin, and within pergunnahs Jumonee and Chetalea, we may accept 250,000 as representing the total population affected by the present scarcity.

Rajmehal	- - -	99,462
Godda in the Damin-i-koh	-	86,660
„ outside „	about -	60,000
Total	- -	246,122

11. In my first note I calculated on 15 per cent. as likely to require relief, but I am now satisfied that I was then much below the mark. It is very difficult to form a correct idea of the proportion likely to be on our hands—it may be 30 per cent. or it may be 60 per cent. Unlike the rural population of Bengal and Behar, where various degrees of wealth and poverty co-exist, the Sonthals are, I think, much more on a par generally, there being among them few men of superior possessions and few altogether indigent. The estimate of the actual numbers requiring help I would prefer to leave with the sub-divisional officers, who are better able to calculate them, but I cannot think it will fall much short of half the population, say, in round numbers, 100,000, after deducting the Pahareeas, who may amount to between 20,000 and 30,000. The census returns do not distinguish between them and the Sonthals, but they cannot be more than 10 or 15 per cent. of the latter people.

12. The number to be fed being then 100,000, the period, 150 days (from middle of March to middle of August), and the daily ration half a seer, we obtain 187,500 as the quantity of grain in maunds, for which there may be a demand between date and July; or, allowing for wastage and losses, say two lakhs of maunds, half of which may be rice and half mukai and janera.

13. The roads into the Damin-i-koh are (1) from Bahwa to Burhait, (2) from Teenpahar to Borio, (3) from Sahebgunge to Banjhee. The first is a good cart road, the second is nearly ready for carts, but the third I fear will be only open for pack-bullocks.

The Godda Damin and distressed tracts can be easily penetrated by the road now being made from Godda to Peerpointee. That portion of the road lying in the Bhagulpore district, viz., the last 3 or 4 miles to the railway station, is in a very backward state.

A good cart-tract lies between Burhait and Banjhee which may be converted into a good road all the year round.

14. Such being the condition of things, there need be no difficulty in feeding the distressed population if grain be put down at the railway stations above indicated. The sub-divisional officers state that there will be sufficiency of carriage at all those points.

15. I need not enter now upon the relief works to be undertaken, as they have been already decided upon and some are in progress; but I strongly advocate the construction of water reservoirs and digging out of old and new tanks as likely to be of the most permanent benefit to the people, and in fact to the Government in future.

16. The first supply of grain should be forwarded to Peerpointee, say 5,000 maunds immediately, to be followed by 5,000 more very soon; also 5,000 maunds to each of the other stations at Sahebgunge, Teenpahar, and Bahawa, in all 25,000 maunds, before the middle of this month. Perhaps it will be best to send up only 1,000 maunds at a time to the last three railway stations.

17. I think it will be desirable to divide the distressed tract into four divisions, and to appoint an active European officer to each to superintend both food-supply and relief works, the latter under the general direction of the Executive Engineer. The centres of these divisions might be (1) Doee or Mahgama on the Godda road, (2) Sahebgunge, (3) Boris, and (4) Barhait.

18. Golahs will be needed at all these places except Peerpointee, where there is a large railway shed, and at Sahebgunge, where there is a pucca serai available. Golahs will also be required at Barkop and Mohagawan after that at Doee has been established.

19. Something may be done through the bazaar chowdhries for the sale of grain at distances from the central depôts, either by supplying them with Government grain at a fixed rate to be retailed also at fixed prices, allowing a fair sum for carriage and profit, or by selling through them as paid agents, and Government defraying the cost of transport. As before remarked, if we get the grain, I think there will be no difficulty in dealing with its distribution and sale, always premising that the retail price fixed be not beyond the means of the people working as labourers at the daily rates now allowed. Perhaps 13 seers for the rupee, or Rs. 3 per maund, may be suitable, or not less than 12 seers for the rupee retail.

20. It is probable that relief committees will shortly be needed at Rajmehal, Sahebgunge, and Godda to deal with stray cases of poverty and distress.

21. If any non-commissioned officers and sepoys can be spared from the regiment at Bhagulpore, they can be usefully employed in protecting the transport of grain; otherwise additional police must be enlisted.

22. The highest price of grain heard of by me was at Moraroe and "hâts" adjacent, where rice was offered for sale at 8 seers for the rupee, and few or no buyers. The price generally in the Damin-i-koh appeared to be 10 seers for the rupee, and the stocks extremely small.

23. I believe I have now touched upon all the subjects to which my attention was directed in your letter No. 818—S.R., dated 10th ultimo, and that it will be better not to encumber this report with matters of pure detail, which can be dealt with separately.

24. I proceed to-day to Peerpointee as requested by you, where I shall await further instructions relative to my future movements.

Sonthal Pergunnahs.

1. Report upon Rajmehal sub-division by Mr. E. B. Baker, Deputy Inspector-General of Police, dated 14th February 1874. Copy received with Government order No. 920—S.R. of 21st ultimo.

2. Report upon part of Godda sub-division by Mr. F. Grant, Sub-divisional Officer, dated 22nd idem (copy annexed).

3. Report upon both sub-divisions by Officiating Deputy Commissioner, dated 27th idem (copy received with Government No. 1220—S.R. of 4th instant).

4. Report upon part of Godda sub-division by Mr. Baker, dated 3rd instant (copy annexed).

Notes of personal communications made by Messrs. Boxwell, Grant, and Stewart, the Deputy Commissioner and Sub-divisional Officers.

In connection with the papers noted in the margin, the question has now to be decided whether any, and if so what, measures have to be taken to secure certain portions of the sub-divisions of Godda and Rajmehal in the Sonthal Pergunnahs from the effects of scarcity.

Vide statements of Messrs. Grant and Stewart.

2. Speaking in general terms, it may be said that the tract regarding which fears are entertained comprises the entire tract of the Government estate Damin-i-koh, situate in the sub-divisions of Godda and Rajmehal, and the plain country below the hills in the former sub-division, which is included in a line drawn from Gobindpore (marked in the map north, near the East Indian Railway), south through Godda, and thence direct eastward to the hills.

Vide paragraph 9 of Mr. Baker's report of 3rd instant.

The strip of lands between the hills and the river on the north is also considered to be in danger by Mr. Baker.

3. It is known that the aughanee rice crop within this area suffered seriously from drought during the past year, and was to a great extent a failure. The bhadoie crop was a good one. The reports of the officers who inspected the country during October and November, while the crops were on the ground, are to hand, and they state as follows:—

In his No. 1304 of 17th October 1873, Mr. Stewart, Sub-divisional Officer of Rajmehal, stated—

"Bhadoie dhan is produced in the low country bordering the Ganges and in the dearas.
" This was about a 10 to 12 anna crop. Indian-corn is also a bhadoie crop; this was a 16-anna
" crop both in and outside the Damin. These crops have been gathered, and I should say on

" the whole the bhadoie crop has been a 14-anna one." Reporting on the 7th November following, the same officer estimated the aughanee rice crop at about 3-annas yield. The highest estimate reached for one out of six pergunnahs being 6 annas; and a further report dated 14th idem gave the same result for two other pergunnahs. In the sub-division the food consumed by the people is thus described. The people outside the Damin eat rice; the Sonthals, rice and greens of various kinds; they, however, eat also the flesh of almost any animal. The Pahareas ordinarily consume maize, and only take to rice when this is expended. The October report for Godda was made by the sub-deputy and endorsed by Mr. Bedford, the sub-divisional officer, who had just rejoined. It is stated that of bhadoi crops the principal one was janera, which had "abundantly grown" during the year, and was calculated at 14 annas in the rupee. The rice crop was estimated at not more than a 4-anna outturn.

A further detailed report was received on 7th November. In this the rice crop in all pergunnah Godda was stated to be "fair;" in Bellathan, as only likely to yield 1 anna (this pergunnah at the best of seasons only yields little rice); in Passai, favourable; and over the Damin, as more or less unfavourable, according to the situation, the crop being preserved here and there by irrigation. It was specially noticed in this report that the pergunnah of Muniharee (for which some importation has just been made by Government) was likely to suffer more than others, the entire rice crop having withered and being grazed off by the cattle. The outturn was put down at *nil.*

On the 20th November the sub-divisional officer, having carefully marched through the northern part of his district, reported that the crops in tuppas Berkop and Patsunda (to the west of the line representing the line of present anticipated distress) would be 7 to 6 annas respectively, while the prospects of Muniharee were "most gloomy." Again, on 30th November, he added: " The more I see of the dhan crop the more I come to the conclusion that the average rice crop " expected as shown in my report to the Commissioner in the early part of November was under- " estimated."

4. It is stated in the annual report for 1872 that the rice crop of that year did not exceed a 10 to 12-anna crop.

5. The part of the country concerned is not to any extent a *rubbee*-producing country. The investigations of the local officers show that there is very little cold-weather crop now in the ground.

Vide statements of Messrs. Grant and Stewart, and paragraph 12 of Deputy Commissioner's No. 38 Ct., dated 27th ultimo; also paragraph 4 of Deputy Commissioner's No. 69 Ct. of 11th instant.

6. As to present conditions, the people are said to be growing anxious for work. Upon two roads which have been lately open throughout the length of Godda and Rajmehal, the numbers of labourers are counted at close upon 4,800 and 800 respectively; in the former case the increase has been rapid, but the people are said to be well fed, and there is no appearance of want visible. Prices of food are at present generally cheaper throughout the pergunnahs than in the other districts of the division, and, as compared with what prevailed in these localities in 1866, a year of scarcity, results appear in the margin.

7. Opinions as to the measures necessary to be taken differ. Mr. Baker, an officer of experience, who was specially deputed to visit the pergunnahs, in his report of the 3rd instant, declares that it is absolutely necessary to import and store grain to meet the distress amongst the people, which he believes to be imminent. The sub-divisional officers of Rajmehal and Godda both strongly concur in this opinion (*vide* their statement and Mr. Grant's report of the 22nd ultimo). Mr. Boxwell, the Officiating Deputy Commissioner, does not consider that the importation of food need form part of the system of relief. He wishes indeed to have a store of some 50,000 maunds placed in the district, to be available in case of a sudden deficiency of supplies occurring; but he would not offer food upon the works, as he is of opinion that the people have grain of their own sufficient to last them at least for a period of six weeks!

8. In reply to inquiry from me, the missionary of Taljharee, Mr. Brown, writes* of the whole country of Godda and Rajmehal, with which he declares himself to be acquainted, that as compared with ordinary years and with regard to food-supply, the condition of the people is now what it usually is in the month of July, "when they are wanting or waiting for the maize crop;" in other words, there is a clear deficiency of four months' supply of food for the people, and he advocates a liberal recourse to works to assist the population and importation of food for them to buy, as there is no trade.

9. The population of the tract under consideration may be taken at about 240,000. It is observed that the expectation that there will be a short food-supply, which is entertained by those who, as being on the spot, are best qualified to judge, is based upon the fact that one of the main crops of the year was bad; a second, the *rubbee* (which, however, is not a crop of first importance) being also deficient. I cannot, however, forget that the bhadoi crop, which is a great one in the Sonthal Pergunnahs, was good, and the people are a hardy race, able to supplement their food supplies by recourse to animal food and jungle produce. As an example of this, the year 1866 may be pointed to, when they passed through a crisis with but little assistance, and without any importation of food on the part of Government.

---

* Extract of letter attached.

10. For such reasons I consider the calculation that 50 to 60 per cent. of the population may require food-supply at the hands of Government far too high, and I should doubt if the number will be found to come to 30 per cent. Taking, however, this last figure for the purpose of estimate, the total food-supply for the population concerned would be 162,000 maunds for four months at ¾ seer a head.

11. Acting upon this estimate, I would proceed in the following manner. In the case of golahs numbered 2, 3, and 4, I would place now a two months' supply, and in every other instance a one month's supply, calculated on the above basis. From the 1st of May onwards to the commencement of the rains, the grain expended from the stores should be recouped and additions to the stock then made until at golahs numbers 2, 3, and 4 there should be a four months' stock, and at the other golahs a three months' stock, available for consumption from the 1st of June, calculated at such new rates as the condition of affairs then ascertained may lead us to decide upon. In the case of the golahs 2, 3, and 4, as the communication will be difficult during the rains, the stores should be completed during the dry weather; in the other cases a month's supply or more, if it be found necessary, could be conveyed even during the rains.

1. Doe, 10 miles from Peerpointee Station.	Storage places for Godda sub-division.
2. Mohagaon, 21 ditto ditto	
3. Borkope,	
4. Godda, 40 ditto ditto	
5. Burhait, 12 miles from Bahawa Station.	Storage places for Rajmehal sub-division.
6. Borio, 12 ditto Teenpahar.	
7. Taljhoree on the Railway, but no Station. Yet an arrangement to deposit grain can be made with East Indian Railway.	
8. Banjhee, 10 miles from Sahebgunge.	
Note.—In Godda the bulk of supplies is expected to be required at Doe and Mohagaon.	

G. N. Barlow,
Officiating Commissioner.

Bhagulpore, the 16th March 1874.

Minute by the Honourable Sir Richard Temple, K.C.S.I., dated Bhagulpore, the 20th March 1874.

At Bhagulpore the Commissioner of the division laid before me certain papers connected with the probable scarcity in the sub-divisions of Godda and Rajmehal in the district of the Sonthal Pergunnahs. Having conferred with the Commissioner, I have to record the following observation:—

Population 240,000. I would take 25 per cent. for 4 months, equal to 60,000 persons expected to need assistance, which gives (¾ seer per head per diem)—

135,000 maunds in all, or
33,750 „ per mensem.

The Commissioner concurs in the above estimate.

I would ask that provision be made of 135,000 maunds; arrange that one month's supply be sent quickly to Rajmehal side, and two months' to the Godda side.

The proportion for the remnant of the period to be kept in reserve.

The sub-divisional officers ask for provision for 50 per cent., but then the bhadoi maize was good, equal to half the food-supply of the year; the rice was bad (2 to 4 annas). According to per-centages taken in other districts provision for 25 per cent. should suffice.

No. 1810—S.R.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department, to the Commissioner of Bhagulpore.

Scarcity and Relief.

Calcutta, the 26th March 1874.

Sir,

I am directed to acknowledge the receipt of your letter No. 2353, dated 23rd March, forwarding Sir Richard Temple's minute of the 20th idem, together with certain other papers regarding the condition of the Sonthal Pergunnahs.

Ten printed copies of your letter and its enclosures are forwarded.

2. The Lieutenant-Governor accepts Sir Richard Temple's estimate that 1,35,000 maunds of Government grain should be stored in the Sonthal Pergunnahs, of which 34,000 maunds are to be sent at once. Out of this quantity, 10,000 maunds have already been sent to Peerpointee, and the rest shall reach the stations named before the 10th April if possible. Subsequent despatches shall be sent off as the Sonthal officers are ready to carry it away and the needs of other districts admit.

3. The Lieutenant-Governor looks to you and to Mr. Boxwell to see that ample relief works are actually opened and are well managed throughout all the bad tracts. The influx of 10,000 workpeople on to one road, and the sale of 1,000 maunds of Government grain thereon, seem to show that relief was much wanted. It must be fully understood that the public work officials are to work under the sub-divisional and the relief officers. The establishment you have sanctioned for Colonel Moore is approved.

4. If things in any part of the Pergunnah get suddenly worse, you will have to do something beyond giving a general order such as is summarised in your 5th paragraph. Meanwhile, it will

be necessary for you to take care that there is no clashing of orders or authority between Colonel Moore and the subdivisional officers of Godda and Rajmehal.

I have the honour to be, sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 1811—S.R.

Extract copy of paragraph 3, with copy of Mr. Barlow's statement of grain requirements, forwarded to Mr. Toynbee for compliance.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, the 26th March 1874.

Appendix G. to Fourteenth Special Narrative of the Drought of 1873–74 in Bengal, from 20th March to 2nd April 1874.

No. 111, dated Allahabad, the 23rd March 1874.

From L. C. Abbott, Esq., on duty with Sir Richard Temple, K.C.S.I., to the Assistant Secretary to the Government of Bengal.

I am directed by the Honourable Sir Richard Temple to forward copies of Minutes Nos. 55 and 56 of 23rd March, regarding the organisation of the reserve transport train and the supply of native doctors.

I am to solicit the early attention of His Honour the Lieutenant-Governor to Sir Richard Temple's remarks regarding the supply of native doctors.

Minute by Honourable Sir Richard Temple, K.C.S.I., No. 55, dated Allahabad, the 23rd March 1874.

Having inspected the head-quarters of the reserve transport train in company with Mr. H. Rivett-Carnac (the Commissioner) and his two staff officers, Captain Apperley and Lieutenant Vivian, and having carefully considered the best means of efficiently organising the train for service in the distressed tracts of Behar, I have to prescribe the following organisation, which has been, to some extent, tried already, and is proved by this experience to work well.

2. The reserve transport train, consisting of carriage and cattle purchased for Government in the districts of the North-West Provinces, is to consist of at least 2,000 carts with full complement of bullocks. It seems probable that the local orders in the districts may raise the number somewhat above the 2,000.

3. The train is to be divided into detachments. Each detachment is to be made up of 250 carts with their complement of one driver and two to four bullocks for each cart; and is to be directed by the following officers and men:—

European officer in command of detachment - -	1
Duffadars (native officers) - - - - -	5
Sepoys - - - - - -	25

Thus there will be one native officer to every 50 carts, and one sepoy to every 10 carts.

4. Thus, also, the 2,000 carts will be divided into eight detachments. If the purchases shall exceed 2,000 carts, then the surplus is to be formed into, and made up to, a ninth detachment.

5. I consider that nothing short of the above establishment will suffice to ensure the good working of the train on service. The amount of work obtainable from the carts depends greatly on the strength and efficiency of the organisation.

6. The Commissioner is authorised to apply to the head-quarters of the army, for the sanction of His Excellency the Commander-in-Chief, for the services of such officers and men as may be required for the establishment to be constituted as above.

7. The Commissioner's staff for the management of the train should continue to consist, as at present, of two officers, together with one sergeant and such small temporary ministerial establishment as the Commissioner may find necessary.

8. With each train there will be despatched—

Native carpenters	2
„ blacksmiths	2
„ farriers	2
„ orderlies for the officer commanding	2
Total	8

These men will be appointed by the Commissioner.

9. Together with each detachment, spare wheels, axles, shoes for bullocks, rope and some stores, gear, &c., also two sets of scales to weigh the fodder provided for the cattle on the road, a supply of medicines for the men and also for the cattle, will be sent. There will also be a treasure chest for paying for supplies on the road, with four native constables in charge.

10. The carts of the several detachments are to start from Allahabad fully laden with the reserve fodder for the general transport service in Behar. This fodder, having been selected and purchased in the North-Western Provinces, is never to be expended (save under urgent necessity) on the road; but it is to be carried intact to Patna. The fodder for the convoy to Patna is to be indented for and supplied by the district authorities in the usual manner.

11. On arrival at Bankipore (Patna) the officer commanding each detachment will place himself under the orders of Colonel Macgregor, who (under the general direction of the Commissioner, Mr. Bayley) directs the transport service in Behar north of the Ganges.

12. I particularly desire that the organisation as established at Allahabad be permanently maintained by Colonel Macgregor for each detachment after its arrival at Patna, and that no general alteration be made without previous reference to me. If in any case it be found necessary to employ the carts in separate parties, still the organisation should be preserved as much as possible. If, for instance, 50 carts have to be sent on a particular duty their duffadar and their (5) sepoys would go with them.

13. The detachments are to be designated by letters A, B, C, and so on consecutively according to the dates on which they started from Allahabad, and each detachment will bear its distinctive letter throughout the service. Similarly, the carts and cartmen are to be numbered 1, 2, 3, and so on consecutively; and each cart will keep its number throughout the service.

14. I am glad to find that already four detachments have left Allahabad; the sooner the remaining detachments follow the better.

15. The accounts of each detachment are kept by the European officer and submitted to the Commissioner. They are then audited by the Accountant-General (Allahabad). But after placing himself under Colonel Macgregor the officer in charge of a detachment will submit his account through Colonel Macgregor.

16. In conclusion, it seems to me that the interests of the service in North Behar have been greatly promoted by the prompt orders given by His Honour the Lieutenant-Governor of the North-Western Provinces for meeting our requisition for reserve carriage, and by the vigorous co-operation of the Honourable J. D. Inglis in giving effect to these orders.

17. Mr. Inglis informs me that the manner in which this important business has been executed by the Commissioner, Mr. H. Rivett-Carnac, has given entire satisfaction to the authorities of the North-Western Provinces, and all that I have seen of the working of the affair leads me to the same opinion.

MINUTE by Honourable Sir RICHARD TEMPLE, K.C.S.I., No. 56, dated Allahabad, the 23rd March 1874.

THE experience now being gained day by day shows me that the subordinate medical establishment in the distressed districts, despite recent augmentations, is hardly strong enough, and that we have already obtained all or nearly all the men that are obtainable in the Bengal Presidency.

2. But it seems to me that some men of this class might be obtained from the Madras and Bombay Presidencies; say 20 from Madras and 10 from Bombay. The Madras medical subordinates are (as I well know from experience in the Central Provinces) very well trained men.

3. Besides the medical establishments for the relief circles, there will be subsidiary departments formed from time to time to which it might be very desirable to attach medical subordinates.

4. For instance, the reserve transport train would be all the better for the aid of such men. But unless we can obtain some men from the other Presidencies, I know not how any such need can be supplied.

No. 116, dated Bankipore, the 26th March 1874.

From L. C. ABBOTT, Esq., on special duty with Sir RICHARD TEMPLE, K.C.S.I., to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I AM directed to forward copy of a minute, No. 58, of 25th March, recorded by Sir Richard Temple, regarding the organisation of the Arrah reserve train.

2. It will be seen that, though some alteration has been made in the kind of animal to be employed for transport work, the total carrying power remains as before.

MINUTE by the Honourable Sir RICHARD TEMPLE, K.C.S.I., No. 58, dated Bankipore, the 25th March 1874.

AFTER considering the progress made with the collection of reserve carriage from the Shahabad district through the agency of Mr. Fox, I find that about 500 carts are ready, and that about 250 will be very shortly ready, in all 750.

2. Mr. Fox has collected 1,000 cart bullocks, and Colonel Mackenzie 600, in all 1,600. Thus there are enough bullocks for 750 carts, which are made to be drawn by pairs of bullocks.

3. I desire these be organised in the same manner as that prescribed in my minute No. 55, of 23rd March, regarding the North-West reserve transport, and that the organisation be entrusted to Mr. Rivett Carnac and his staff, through whom the work has been done so successfully at Allahabad. This part of the work will be done at Dinapore or Arrah. Mr. Carnac is aware of the necessity for the utmost expedition possible.

4. There will be three (3) detachments lettered and numbered consecutively with the Allahabad detachment.

5. These detachments, as well as the Allahabad detachments, will be handed over by Mr. Carnac to Colonel Macgregor on the north or left bank of the Ganges in complete order.

6. Colonel Mackenzie and Mr. Fox should be instructed to make over the carts and cattle to such person as Mr. Carnac may appoint at Dinapore or Arrah.

7. Mr. Carnac is authorised to apply to the Adjutant-General for the sanction of His Excellency the Commander-in-Chief for such officers and men as may be necessary under the above orders.

8. There would still remain 250 carts with bullocks to make up the complement of 1,000 to be obtained from the Shahabad District; that is, the difference between 750 and 1,000.

9. Out of the 750 carts with bullocks to be hired from the North-Western Provinces, about 550 have been hired, leaving a balance of 200 carts with bullocks.

10. Adverting to the reserve of pack-bullocks, I find that out of the 6,000 total ordered, only 750 have actually been purchased. I am separately considering the reasons why the supply is so short at this date.

11. However, looking to the extremely large number of bullocks already employed in Tirhoot and in other districts, and after consulting the Commissioner, Mr. Bayley, and his officers, I consider it preferable to make up our remaining numbers by animals other than bullocks.

12. As the season will not be suitable for camels, we must look to the ponies and the pack-donkeys which are procurable in large numbers in the North-Western Provinces. The ponies are specially serviceable.

13. The collection of the animals will be entrusted to Mr. Carnac. He will be good enough to obtain, with the utmost possible expedition, such numbers as he may find on precise calculation to be needed, to make up the balance as above set forth.

1st.—Of the Shahabad carts with bullocks.
2nd.—Of the hired North-West carts.
3rd.—Of the pack-bullocks.

14. Mr. Carnac is requested to arrange at once with Colonel Macgregor as to the organisation of these large numbers of ponies and pack-donkeys. If possible, I desire that the two officers should arrive at an agreement as to the organisation. Any arrangement in which they shall concur is to be carried out by Mr. Carnac without further reference to me, and he is authorised to apply to the Adjutant-General for such officers and men as may be needed.

15. If there should be difference of opinion between the two officers as to the best mode of organisation, then reference must be immediately made to me. But I hope that this will not be necessary.

16. Mr. Carnac has been duly impressed with the importance of using all practicable expedition.

17. The Government of the North-Western Provinces will be addressed to the effect of the minute.

18. The Commissioner of Patna has been requested to cease purchasing bullocks.

APPENDIX H. to Fourteenth Special Narrative of the Drought of 1873–74 in Bengal, from 20th March to 2nd April 1874.

Dated Purneah, the 12th March 1874.

From H. HANKEY, Esq., Additional Commissioner, Bhagulpore Division, to the Secretary to the Government of Bengal, Statistical Department.

IN continuation of my letter dated 31st January, I have the honour to submit the following report of the state of transport in the Purneah district.

2. In my letter above referred to, I reported that there was abundant carriage in the district, and that the offer of liberal rates would be sure to draw it out. This opinion has been amply verified.

3. During my last visit of inspection, I made, as already reported, a slight increase in the rates, but the rise was insufficient to produce any marked effect, and the means of transport showed for some time a downward instead of an upward tendency.

4. From a report of the week ending 11th February, it appeared that only 22,990 maunds of grain had left Caragola, making a daily average of 2,090 maunds. This was sufficient proof of the inadequacy of the rise previously given, and as about this time the total assignment of grain allotted to the district was materially increased, I considered it high time to make a large bid for cartage.

5. I accordingly instructed the Collector to raise the rates by 50 per cent., and to give the utmost publicity to the change. This he did, and the effect has been almost marvellous. Everybody who could has provided himself with a cart. An active cart-wheel trade has sprung up; wheels are sought for with the greatest avidity; and a class of men who call themselves thikadars have been called into existence. They are a kind of petty contractors, or, more properly, cart-suppliers, who collect carts in batches of 20, 30, and greater numbers, and are remunerated by a per-centage on the earnings of the cart.

6. The unusual number of prancing, rearing, and kicking bullocks that meets one's eyes on the road argues the unusual number of new arrivals that have suddenly been pressed into the service. Transport has received the most astonishing impetus, and I believe no one was more astonished at the cartage power of the district than the local officers and local residents.

7. Some two months ago, the Collector rather surprised the Commissioner by an estimate of 3,000 carts, and I believe the latter subsequently rather questioned the accuracy of his own figures. The actual number of carts now employed has never been counted, but it certainly exceeds 8,000.

8. On the 31st January last, I reported the daily average of carts for week ending 1st February to have been 335 carts. The average from 1st to 14th February was 253 carts, from the 14th to 28th it was 466, whilst for the 10 days ending March the daily average has been 830 carts. Up to February 1st the aggregate quantity despatched was 1,27,412 maunds. Up to March 10th it was 3,63,551 maunds. Between 1st and 10th March 98,594 maunds has left Caragola, making a daily average for this period of 9,859 maunds.

9. The cartage has therefore been considerably more than doubled, and in the place of a lac, estimated in my previous report, I am now able to report that the Collector can with the *greatest ease* remove 2,00,000 per mensem from Caragola. I might easily increase the estimate, but it appears to me unnecessary to do so, and it is better to err on the right side.

10. We can, therefore, manage to transport the required quantity of grain, by means of local carriage, without any assistance from without in the shape of imported carriage. A Benares contractor, named Sargut Bux, presented himself two days ago and offered to take a contract at Tirhoot rates to remove 40,000 a month. There appears to be no necessity for concluding any such contract.

10½. In addition to the cart service, we have a service of pack-bullocks and ponies, which number at present 1,894. I found these working from Purneah to Bulrampore and Barsoe. The road to these places follows the Grand Trunk Road as far as Dengra, and I have therefore ordered this to be made the starting point in lieu of Purneah. Pack-bullocks should never work on the same road as carts, unless, of course, in case of necessity to supplement a deficiency of cart carriage. Here no such necessity exists. They are a more expensive mode of transport, and block up the road to a terrible extent, not to speak of thus making it nearly impassable for travellers owing to the clouds of dust they raise. The cost of a pack-bullock carrying two maunds from Purneah to Bulrampore is Re. 1 . 8; the distance is 36 miles. The rate is therefore 4 pice per maund per mile.

11. So far thus, and *quoad* means of transport only, the progress made and the *status quo* is eminently satisfactory. The gross result is decidedly good. In matter of detail, however, such, for instance, as organisation and method, there are still many defects. There are still many causes of delay which are very easily removable.

12. The ferry service at Dengra Ghât has been improved to a certain extent by the employment of a large boat and the erection of another landing stage on the Kissengunge side. The accommodation is, however, not nearly sufficient, and the service is not nearly as good as circumstances admit of. I have called the Collector's attention to the fact.

13. The adoption of the small chalan system is admittedly an improvement, and has worked beneficially. It would, however, work better still, if only a better class of men could be got to serve as chalandars. As already reported, the Purneah material is bad; as a rule the chalandars are lazy, apathetic, careless, and inefficient. I hope to abolish them altogether and introduce a new organisation in the manner detailed below.

14. One of the chief causes of delay now existing appears to me the system of payment and its distribution over so many places. The cartmen get an advance at Caragola, another at Purneah, and their hire is finally adjusted at the receiving golahs. It is obviously clear that if payment could be made once for all, a great deal of valuable time would be saved. Mr. Mulock does his best, he works hard, and I have not a word to say to his demerit; but, for all this, it is not too much to say that a clear day is usually lost in Purneah by thousands of carts.

15. This seems to me altogether unnecessary. No reason exists, so far as I can see, for any stoppage at Purneah at all; indeed for many places; Arrareah for example; the coming through Purneah is out of the way and involves a detour. I have therefore abolished Purneah as a regular stopping place altogether.

16. The system at present is for all carts to halt at Purneah. On arrival, Mr. Mulock distributes them to the several golahs for storage. It is my opinion, however, that this work of distribution could be equally well discharged by the despatching officer at Caragola, who should be supplied for the purpose with weekly distribution lists showing the names of the golahs and the quantity required in each in order of urgency.

17. I am convinced, also, that payment should be made from below, *i.e.*, at Caragola, once for all, in advance. This plan has several reasons to recommend it. First, a payment of some kind must be made; a complete payment could be made in nearly the same time. Secondly, frequent remittances to all parts of the district, involving numerous escorts and police guards, would be saved, and the transport required for this constant remittance rendered available for grain. The Collector says he could arrange to keep Caragola supplied from treasure *en route* from Calcutta direct, thus saving all expense of its despatch to and from Purneah.

18. The disadvantage, *pro contra*, to be set against this proposal consists of a certain amount of risk, the risk of advancing to cartmen and the difficulty of recovery in case of failure to deliver the rice at the proper golah; thus, supposing a break-down to occur in a chalan for Dengra Ghât, and the rice of one cart to have been taken off at Purneah, the cost of transport between Purneah and Dengra would have to be recovered.

19. Under any circumstances I believe this risk would be very trifling, but under the thikadar system which I am now introducing it will be little more than nominal. Even were the risk greater it would be worth accepting in view of the enormous saving of time, and consequently money, that must arise from a system of single payment.

20. In paragraph 4 of this report I have alluded to a class of men called thikadars, who have recently sprung into existence. In the early days of transport it was found advisable to offer encouragement for the collection of carts, and the thikadars were allowed a per-centage of 2 annas in the rupee. In enhancing the cartage rate it was never intended to increase the allowance given to contractors, and considering the allowance of 2 annas in the rupee excessive and unnecessary, I stopped it.

21. It occurred to me, however, that the existence of this class of men might be made the basis of a capital organisation, and I accordingly made the thikadars the following offer: an allowance of one anna in the rupee in exchange for three duties,—1st, collection of carts; 2nd, entertainment of their own chalandars, one to every chalan of 25 or lesser number of carts; 3rd, excess payment for carriage referred to in paragraph 6 to be deducted from their earnings in the event of non-recovery from cartmen. These proposals have been accepted by as many thikadars as I have seen.

22. It further occurred to me that whilst on the one hand it would be unadvisable to interfere at present with the high rates given, yet they had done their duty in attracting carriage, and that it was only reasonable that Government should be relieved of the cost of the large establishment which a transport service under *khas* management necessitates. I thought that cartmen would readily pay a sort of registration fee of 4 annas a load to be allowed the privilege of taking it at such abnormally high rates. I sounded a large body of cartmen whom I met at Dengra, and they readily assented. I believe we shall not lose a cart by the arrangement, and it will at once relieve Government of the entire cost of establishment charges for transport of every sort and nature.

23. The Collector has concurred in the desirableness of the above changes, and they will therefore come into effect in a day or two, as soon as the arrangements for increasing the pay establishments can be made.

24. The net result is that we shall have what I believe to be the most perfect system of transport possible,—a system possessing the advantages of the contract system without its drawbacks. We have a body of men who are enormously interested in procuring transport and in accelerating it when procured. At the same time we have a direct control over the whole arrangements, which continue simply at our will and pleasure. The cost of transport under this system is .

25. I have referred in paragraph 11 to certain defects of organisation and absence of method observable at several places. This specially occurred at Caragola, and was noticed by Sir Richard Temple. Mr. Munro has certainly not made his arrangements so neat and so business-

like as he might have done. He has had no previous experience in such matters, and lacks special knowledge, and there is therefore an appearance of confusion about the ghât which ought to be avoided. I went to Caragola two days ago and saw to these defects, and have every reason to believe that there will be a great improvement in future. Notwithstanding this, Mr. Munro is a most indefatigable young officer, and deserves great credit for the good work he has done.

26. On the subject of fodder, I append the subjoined note by Mr. Mulock, merely adding that I do not apprehend the slightest difficulty on this score during the period our transport lasts. There seems to be good grazing all along the road-side, and empty gharries bring sufficient dry straw for the return journey back. When the rubbee is cut the supply will be still further increased.

Fodder.—A very large quantity of fodder has been collected at Caragola, but I cannot state with any accuracy how much. It has been drawn from Arrareah and from a distance from the high road so as not to interfere with the stocks stored by private agency for sale to carters, and two boats full came from the banks of the Coosee from Mr. McQueen. Mr. Gouldsbury has also collected about Rs. 250 worth at Dengra, and is fast collecting more; Mr. Rattray is buying up at Arrareah, and Mr. Craven at Kissengunge. At Purneah we have collected Rs. 200 worth, and have sold most of it at the rate of four annas for as much as one man can carry on his head. I remark, however, that large quantities are brought into the bazar in head-loads and sold to the cartmen.

27. In addition to the brisk wheel trade which has been referred to above as having received so great an impetus, the local authorities have also been collecting wheels for sale. Mr. Mulock has sold 50 pairs out of 54 purchased, and believes he could sell 500 pairs if he had them. The best wheels appear to come from a place called Chukla, near Kissengunge, and 150 pairs have been ordered from thence. The prices range from Rs. 10 to 15 or 16 a pair.

28. The total allotment of grain to Purneah is 5,00,000 maunds, and in addition we have to transport 1,40,000 for Dinagepore, making a total of 6,40,000 maunds. We ought to complete the entire quantity by the end of next month, or, allowing for an unexpected slackness, whether occasioned by the coming harvest or accident, say by the 15th of June. We are giving Dinagepore 50,000 maunds a month, and could increase this rate of supply if necessary.

My dear Bernard, Bhagulpore, the 15th March 1874.

The figures in paragraph 8 of my Purneah report, posted to-day, are incorrect as regards gross amount despatched from Caragola. Munro gave me different figures, which, if possible, I will telegraph to-morrow. Those given in report are Mulock's, but I don't think the difference is large. The report is very badly copied, for which I apologise. I will get a better clerk if possible.

Yours sincerely,
H. Hankey.

Dated Bhagulpore, the 31st March 1874.

From H. Hankey, Esq., Additional Commissioner, Bhagulpore, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honour to submit the following progress report regarding the state of Bhagulpore transport.

2. The most important fact in connection with the transport service, viz., the conclusion of the two contracts, has already been communicated to the Government. I was able to announce the negotiation of Mr. Thomas' contract during Sir Richard Temple's visit to Soopool, and the other contract (Mr. Hennessy's) was arranged on the 26th ultimo, and work under it commenced on the 28th ultimo.

3. A short description of either route may perhaps be useful. Mr. Thomas, with whom are associated two natives, Shaikh Ruhmut Ally and Byrub Churn Dutt, has contracted for the Khaguria route. The rice is crossed at Monghyr, and then taken up cart to Soopool or other golah within the Soopool or Mudehpoora jurisdictions. There are two breaks in this route, one at Khaguria over the Gunduck, the other at Surubjeeta on the Tiljoga. The latter is bridged, and the former will be bridged immediately; meanwhile good ferry arrangements have been made. The road, or more properly the cart track, may be described as capital throughout.

4. There is another route from Khaguria, a little to the east, crossing by Muttiana Ghât instead of Surubjeeta, but I have ridden both ways, and am decidedly of opinion that the Surubjeeta route is preferable; it is more direct and the track is better; it is in fact the track most used and best known. We may, however, possibly use this route for empty return carts to prevent crowding on one walk.

5. Besides this, however, there is an alternative route which we do make use of; this is called the Gogree route. Grain is shipped at Monghyr, taken down the river in boats to Gogree, and thence by cart to Soopool and elsewhere, *viâ* Choutum Ghât. By this route, therefore, there is only one break, and this has been bridged. The track by this route is also a very good one. The distance by these routes from Monghyr to Soopool is 56 miles, and one mile has been given in for the river; total 57 miles in lieu of 75 miles, the distance by the old Philout route.

6. Mr. Hennessy's contract starts from Jugdishchuk, opposite the East Indian Railway Station, Sultangunge, and has, as at first arranged, terminated at Muttiana Ghât, close to Pachadee village. Until, however, the bridge at Itmadee could be completed it was verbally arranged that he should work up to Philout, and subsequently, on the completion of the bridge, it has been arranged that he should take longer distances and fill the golahs of Mudehpoora, Kamp, and Bijnathpoor, 50, 44, and (not fixed) miles respectively from Jugdishchuk.

7. I rode to Itmadee last Saturday, the 21st instant, and saw the first cart over the bridge which has just been completed. Mr. Hennessy is therefore now carting to Kamp direct.

8. The advantages of this route over the Philout route are in my opinion great and manifold. It is a saving in distance; it has only one* break instead of two; it is further westward, and therefore not flooded so early by the rising of the Koosee; it passes through the heart of the country of the anticipated distress, and the track affords better going than the made road.

9. Now that Mr. Hennessy is taking the long distance, the Collector will have enormous cartage power for the work of distribution amongst the minor golahs. The distances are all shortened, and this of course is tantamount to doubling or tripling the number of carts hitherto employed for the long distances from Philout.

10. Both the contracts are working as well as could be desired, and may fairly be described as successful in every respect. The contractors are giving us no trouble, and are exceeding the daily rate contracted for. In fact, our single anxiety in respect to the contracts is the fear that Calcutta supplies may not come up to our transporting power; for some time past there have been numerous complaints of deficiency in the daily supply from Calcutta.

11. The total amount of grain carried under either contract is as follows:—

Up to 30th March, 1,40,000 (approximately) by Thomas and Company;
By Mr. Hennessy, 1,29,680 maunds up to 28th March,

giving a daily average of in Thomas's contract, and of in Hennessy's.

12. For the reasons given above, however, viz., the falling off in the Calcutta supply, these figures are useless as a criterion of what can be done. To this end a shorter period must be taken when stocks were abundant, and this has only been the case at Jugdishchuck. Under this contract I find that 85,509 maunds were taken away during the first 11 days of the working of this contract, giving a daily average of 7,682 maunds.

13. The failure in the Calcutta supply is much to be regretted, inasmuch as it has in a measure disorganised our transport. We have to re-do work which we had already looked upon as complete. It will tend, moreover, to discredit the Transport Department, for a success with a cloud in it is not so good as a complete success, and but for this falling off in the supply I think we should have nothing to explain.

14. The expenditure which has been incurred by the Transport Department in the construction of the bridges on several lines of route has been creditably small. Economy has been strictly studied. The bills for the several works have not yet been submitted, but the following figures are approximate, and will give a general idea.

Khaguria bridge, about Rs. 1,200, and Rs. 600 a month for the hire of 12 boats forming the bridge. Half of this expenditure is borne by the contractor.
Surubjeeta bridge about Rs. 400, and hire of two boats, about Rs. 64 per mensem.
Choutum Ghât about Rs. 350, and Rs. 50 per mensem for boats.
Philout bridge about Rs. 280, plus the hire of the boats.

15. Tarpaulins must also come under the head of transport. Of these I purchased 50 in Calcutta, and Captain Grant speaks of them as having been of the greatest use and saved a large outlay in golahs. In addition to these, Mr. Toynbee sent up 100 for the use of the division. The total amount of expenditure under the head amounts to Rs. 7,825.

16. As the transport throughout the whole division has now in a measure settled itself and is working in what may be called a groove, and as therefore this is probably the last special report that will be submitted, I must not omit to make prominent mention of the excellent services of Captain Grant and the other military officers employed in this department. Captain Grant has been in executive charge of the Khaguria route, and has had the disposal of the subordinate officers. Captain Grant is a most thoroughly efficient officer, and it is almost a matter of regret that the Transport Department had not to encounter obstacles and difficulties than it has. Captain Grant speaks in high terms of Mr. Carnac, who has been employed on the Khaguria route. Great credit is also due to Captain Connolly for his exertions in constructing the Itmadee bridge almost unaided and alone. Mr. Gaislee has been employed along the banks of the Koosee in collecting useful information.

17. In conclusion, I may be permitted to note that whilst the 1st March found the division transporting at the rate of 1,60,000 per mensem, the last of March leaves it despatching upwards of 5,00,000 with ease and without the aid of imported carriage.

18. The maximum transporting power of the division has never been fairly gauged owing to the unfortunate failure of the Calcutta supply above referred to, but it has at all events shown itself equal to more than five lakhs, and I should be within the mark in stating that there are 19,000 carts employed.

---

* There is an insignificant little nullah besides, cheaply bridged by canoes.

19. Fears have been entertained in some quarters, especially by the press, that our transport is likely to suffer in strength and efficiency during the hot months. I have no fear whatever on this score. My opinion is, in fact, directly to the contrary. Our transport is daily increasing, and has not even yet attained its maximum strength, and the bullocks are looking better and stronger than when we first commenced operations. I should be afraid to guess how many carts we might soon put on our lines. New carts are coming in from every quarter; the possession of a cart is now a principal object of ambition amongst all the poorer classes, and I hear frequently of native women pawning their jewels to purchase a cart.

APPENDIX I. to Fourteenth Special Narrative of the Drought of 1873-74 in Bengal, from 20th March to 2nd April 1874.

No. 33 T, dated Calcutta, the 16th March 1874. From A. MACKENZIE, Esq., Junior Secretary to the Government of Bengal, to the Commissioner of Patna.

THE Lieutenant-Governor has discussed with Mr. Stevens, the Superintending Engineer of the Durbhunga Raj, the question of internal navigation during the rains on the rivers north of the Ganges in your division. Mr. Stevens reports that many of these will be navigable to boats of considerable burden for at least two or three months in the rains, some for a longer period. He suggests, however, that steps should be taken at once for clearing away the bunds which are commonly thrown across many of the smaller streams, and which, though cut by the rising of the waters in the rains, are still at that time obstructions to free and safe navigation. Work of this kind would, he says, be admirable relief work (as almost every village along the course of such rivers has its bund, which is now quite useless owing to the general drying up of the waters, and as the removal could be effected without any professional supervision). The Lieutenant-Governor leaves it to you to settle whether it would be desirable to order the removal of these bunds generally, or in particular streams. If you find it to be desirable you may order it. The circle officers could take charge of such operations as village relief works.

2. Mr. Stevens further points out that early arrangements should be made, say in June, for securing not only boats for the navigation of the larger rivers, should it still be necessary at that period to continue grain transport, but also canoes or dug-outs for distributing grain from the golahs in those parts of the country where land carriage becomes almost impracticable, for instance, near Alapore. The Lieutenant-Governor brings these facts to your notice, leaving you to arrange at the proper time as may be most expedient. He believes that when we have large quantities of grain stocked, the distribution will be best effected through the petty local traders, but they must use dug-outs or any carriage suitable to the season. Everything possible should be done to facilitate communications."

No. 1838—S.R.

From A. MACKENZIE, Esq., Junior Secretary to the Government of Bengal, to the Commissioner of Patna, Additional Commissioner of Patna, Commissioners of Bhagulpore, Rajshahye, and Relief Commissioner, Rajshahye.

Scarcity and Relief.

SIR, Calcutta, the 26th March 1874.

WITH reference to the accompanying marginal extract from a letter No. 998, dated the 21st March 1874, from the Government of India, I am to request that you will very carefully consider and report at an early date how grain can best be locally distributed in your division in the rains to such parts as may then need it.

"The Government of India desire to direct the attention of the Government of Bengal to the collection of full information of the means that will exist during the rainy season for importing and distributing supplies of food, should it become necessary to increase the supplies already allotted to the distressed districts, especially in North Chumparun and North Tirhoot. These investigations should be in sufficient detail to enable preparations to be made, so that action may be taken without further inquiry should the necessity arise."

2. What you have to consider is how far land-carriage will then be still possible; the extent to which it is likely that the grain already allotted to each district will have been finally stored before the rains, and the amount that will then remain to be stored; the various routes, minor rivers and so on, by which grain could then be conveyed from the large receiving depôts on the main streams to the working golahs; the navigability of those routes, whether available for small steamers, or for country boats only; the best mode of arranging for working the various routes; the plan of distribution from the minor golahs to villages or works, and, in short, all points that may enable Government to determine on a plan of operations in the manner contemplated by the Government of India.

I have, &c.,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

No. 2001—S.R.

From the Officiating Secretary to the Government of Bengal to T. H. Wickes, Esq., C.E.,
Executive Engineer, Moorshedabad.

Scarcity and Relief.

Calcutta, the 1st April 1874.

Sir,

With reference to the extract from orders of the Government of India quoted in the margin, I am directed to inform you that the Lieutenant-Governor has selected you for the duty of inquiring into the best way of utilising the water routes in the famine districts during the rainy season. The Lieutenant-Governor would wish you to digest all available information; you should also visit the principal famine districts within the next six weeks, to discuss with the local officers the preparations which should now be made for making full use of the river routes when the waters rise on or about the 1st July next.

5. Now that it may be hoped the necessary organisation for the relief of distress has been completed, the Government of India desire to direct the attention of the Government of Bengal to the collection of full information of the means that will exist during the rainy season for importing and distributing supplies of food, should it become necessary to increase the supplies already allotted to the distressed districts, especially in North Chumparun and North Tirhoot.

6. These investigations should be in sufficient detail to enable preparations to be made, so that action may be taken without further inquiry should the necessity arise. If it be thought desirable to depute special officers to make the inquiry respecting the power of transport during the rains, the Government of India will be happy to provide the assistance of such officers.

2. The most recent papers upon the subject of the navigability of the rivers in Northern Bengal and Northern Behar are Mr. Robinson's Report of April 1872 and Mr. Stevens' Reports of December 1871; copies of those papers are forwarded herewith. Copy is forwarded also of Bengal Government orders, No. 429—S.R., dated 4th February 1874, regarding the prospecting of water routes by officers of the Quarter-Master-General's Department, and a suggestion that occasionally short land tramways may be very useful in linking one water route to another, or in getting round any special obstacles in rivers that are otherwise navigable. Copy is also forwarded of Major Lindsay's report upon the upper Attrai, and of Mr. Luff's report upon the Oorasagor and Burrul route.

3. The steamers and other appliances which the Government possess or hereafter will possess for working the grain transport on rivers are—

(*a.*) Ordinary river steamers and flats drawing from 3½ to 4½ feet.

(*b.*) Four smaller steamers of the *Flame*, *Shamrock*, *Frank and Ada*, and *Ganges* type, from 60 to 80 feet long and drawing from 2½ to 3 feet of water. None of these steamers possess barges or flats except the *Flame*, which has two small barges.

(*c.*) Fourteen small steamers from 80 to 90 feet long, with one flat apiece. These steamers and barges are either making in the dockyard or coming out from England. None of them can, it is feared, be ready for work in the famine districts before the middle of July.

Précis of the letters specifying the length and draught of the steamers already available, and of those which are making, are enclosed.

4. The Lieutenant-Governor considers it will be best for you first to consider the circumstances of the Rajshahye division,—because you are now employed there, you know its rivers best, and because the rivers generally rise earlier than do those of North Behar. When you have made out, in concert with Mr. Robinson and the district officers, your scheme for utilising the water routes of the Rajshahye division, you should at once move on to North Behar, and investigate the river routes into and throughout North Tirhoot and North Chumparun in concert with the district civil and Public Works Department officers and with Mr. Metcalfe, the Additional Commissioner. When you have disposed of these districts you can take up the north of the Bhagulpore division, and investigate the water routes to Bhaktiarpore, Soopole, and into Eastern Purneah above Dingraghat. The Mahanuddee route up almost to Barsoee will be considered by you in connection with the water routes into Western and North-Western Dinagepore.

Rajshahye, Maldah, Rungpore, Dinagepore, Bograh, Tirhoot, Chumparun, Monghyr, Bhagulpore, Purneah.

5. You are authorised to send to the Magistrate-Collector of each of the districts noted in the margin a memorandum showing the points on which you require local information to be collected, and the Commissioner will be asked to tell off a competent officer, if possible, to prepare for you the information you require. But in case there should be delay in obtaining such information, you will proceed to each district in the order above given, and will make your investigations and submit your report to the Commissioner, sending copy direct to Government as soon as you can.

6. Each Commissioner and Relief Commissioner will be invited to send you memoranda and suggestions as to the river routes you should investigate, and the special points you should take up.

Meanwhile I am to note here generally the course which your inquiries may perhaps take, though of course the present instructions will not limit your field of inquiry so long as you succeed in considering and reporting upon all the districts above named before the 1st June.

Having provided yourself with maps, you would ascertain from the district officer in what tracts of his district distress is likely to be worst, how much of the present allotment of Government grain will be ready stored in those tracts before the rivers rise, and approximately how much grain out of the present allotment, or out of possible future reserves, can require to be carried by water into the worst or into any other tract from the 15th June to the 15th September. From the district officers you would also ascertain how far distribution of small quantities by boat from large store-houses to smaller depôts would be required.

You would ascertain the depth of water for each month from July to September in the larger streams which traverse the tracts to be supplied; and you would make out a scheme for supplying by water the quantity required, showing how far away from the depôts on the railway or on the great rivers (Ganges and Berhampooter) the large river steamers could be usefully employed; how far smaller steamers could be employed, where coal ought to be stacked for steamers, and by what agency. You would then show how far each kind of native boat, from the large 4,000 maund craft down to a small dug-out, could be used; whether there were sufficient boats of each kind available, and, if not, whence they should be obtained. You would consider what operations ought to be at once undertaken to improve river beds or landing places; for constructing rafts out of dug-outs, for collecting boats and dug-outs; for organising, if need be, reserves of boats or dug-outs from the 1st of June, or for making additional golahs on the rivers. You will have to remember that the 14 small steamers coming from England or making in Calcutta cannot be in position much before the 15th July, and therefore your schemes must be for utilizing the rivers with native boats and the craft described at clauses (*a*) and (*b*) of paragraph 3, up till the middle of July; and for having at obligatory points enough grain and enough coal to make immediate use of the new steamers when they come. The small steamers now available may be allotted mainly to the Rajshahye Division.

7. While you are employed on this special duty you will be allowed a deputation allowance of Rs. 200 a month, and will be allowed to draw *bonâ fide* expenses incurred in travelling by rail, steamer, carriage, or palanquin for yourself, for two servants, and for two horses if you take horses with you.

I have, &c.,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

APPENDIX K. to Fourteenth Special Narrative of the Drought of 1873–74 in Bengal, from 20th March to 2nd April 1874.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 31st March 1874.

Instructions for Major Trevor, R.E., on his appointment to be Additional Chief Engineer to inspect and direct relief works in the famine districts.

Copies of the Lieutenant-Governor's letter to the Government of India, No. 1800 A, dated the 30th March 1874, and of the reply of that Government, No. 533 E G, dated 30th idem, on the subject of Major Trevor's appointment, are appended.

2. Major Trevor will have the powers of a Chief Engineer; and when he and the Commissioner or Additional Commissioner agree on any question of opening an emergent relief work they may do so in anticipation of the orders of the Government, subject to the general control reserved to the Commissioner. Major Trevor may issue orders verbally or in writing in respect of the conduct of relief works; he may call for such information or returns as he requires; but the ordinary reports and returns will continue to be submitted to the Public Works Department in Calcutta. Major Trevor will send copies of any important orders or sanctions he may issue, and also will submit short weekly memoranda of his proceedings to the Famine Secretary in Calcutta, who will forward all such papers to the Public Works Department for information and record. The Public Works Department in Calcutta will, if Colonel Nicolls thinks necessary, submit to the Lieutenant-Governor any remarks or suggestions that Major Trevor's proceedings may call for.

Major Trevor will provide himself with such small office establishment and camp equipage as he may deem absolutely necessary, reporting its cost to the famine department.

3. In regard to the subjects which must first of all engage Major Trevor's attention, the following passages from a note * recorded by the Lieutenant-Governor on Tirhoot affairs are extracted:—

* Copy of the note is appended.

Deputation of Major Trevor.

"Superintending Engineers have been appointed to the several districts in which large relief work is going on, but they are comparatively new to the duty, and in order to advise and assist them, to see that the utmost that is possible is done to render the great amount of labour now in our hands as beneficial as possible by selecting the best large works, and to introduce on the works the best system possible under the circumstances, it has been arranged, in communication with the Government of India, that (since the Chief Engineer of this Government, Colonel Nicolls, has his hands more than full) an Engineer Officer of experience and tact, Major W. B. Trevor, should be deputed for the general inspection and regulation of the various relief works. He will proceed to the different distressed divisions with the powers of a Chief Engineer, to be exercised in communication with Colonel Nicolls, will confer with the Commissioners and Superintending Engineers, will give them the best advice and assistance he can, and will direct operations in concurrence with the Commissioners.

"The difficulty of finding sufficient work for the enormous number of labourers in Tirhoot and some other districts, is much pressing on us. It turns out that in many places the labourers dislike tank-work and insist on flocking to the roads. We must reduce them to order and discipline, and make them do the work most fitting for them to do; but still it is a great object to maintain large works sufficient for the employment of all the labourers who legitimately seek regular work and submit to regular discipline, while at the same time the opportunity of permanently benefiting the country should not be neglected. A chief duty of Major Trevor will be to inquire whether any additional great works can be undertaken with advantage in the districts where we have hundreds of thousands of labourers."

4. Looking to the enormous numbers of people on the roads in North Tirhoot the arrangements there are at present most pressing. The Lieutenant-Governor thinks Major Trevor had better go there at once and try to arrange matters for the best, in communication with the Additional Commissioner, Mr. Metcalfe, and Mr. Pothecary.

The system in Sarun is no doubt lax, and both there and in Chumparun, and in parts of South Tirhoot and the Bhagulpore Division, the numbers may not improbably greatly increase after the rubbee harvest is over and until the rains begin. The Lieutenant-Governor considers Major Trevor should look up the management of the works in Sarun and Chumparun also, so as to put the establishments there on as good a system as possible, and one calculated to receive and employ large bodies of labourers. Major Trevor will confer with the Commissioners of Patna and Bhagulpore, and with the Superintending Engineers, regarding their divisions as a whele. He will judge by what he learns on the spot whether he must a[illegible] go much into detail in any other districts of Behar than those above specially named, o[illegible]ether he had better go on to Dinagepore, where much important work is being done, and where, as the rains may begin earlier than further west, and there is little rubbee, there is less time to be lost than in some of the rubbee districts.

5. The Lieutenant-Governor is inclined to think that Mr. Robinson, the Relief Commissioner of Rajshahye, has not had so much or so good engineering assistance as some other Commissioners, and he would be glad if, after looking into North Behar affairs and settling the lines of west to east roads from the Behar side, Major Trevor could visit soon the districts of the Rajshahye Division beyond the Ganges, and look into this and other matters there.

6. In connection with this last subject of west to east roads, there must probably be an extension of the Tirhoot Railway by prolongation of the Durbhunga line in two directions, one to the north-east by the Alapore country in the direction of Nathpore, and the other to the north-west. Mr. Crawford Campbell, Superintending Engineer under the Government of India, has been deputed to inquire into these projects, and will render any assistance he can. Major Trevor should form his plans in concert with Mr. Campbell, and in such a way that road and railway plans may not clash. It would be most desirable if the lines for the Railway Company be settled and the earthwork executed now.

7. As to irrigation works, the regular irrigation works are under that department; but if any separate local irrigation plan for immediate utilisation of labour is started, Major Trevor may deal with it on the spot, informing the Irrigation Department and arranging in concord with them.

By order of the Lieutenant-Governor of Bengal,

C. Bernard,

Officiating Secretary to the Government of Bengal.

Enclosure No. 3.

Resolution.

Scarcity and Relief Department.

Read— Calcutta, the 30th March 1874.

The district narratives of the Patna Division for the fortnight ending on the 21st March.

The Sarun narrative did not arrive until Saturday, the 28th; the Tirhoot narrative was received on Friday, the 27th; the rest came in punctually.

2. *Patna.*—There is little calling for remark in the Patna narrative. Steps are being taken to apply a remedy to the block of private grain at the Patna Railway Station; and the Lieutenant-Governor is obliged to Mr. Mangles for the personal efforts he has made to facilitate the unloading and removal of the grain.

3. *Gya.*—The price of common rice remains very high (10 seers a rupee) in parts of the Gya district, yet the absence of people from the relief works, and the fewness of applicants for charitable relief, appear to warrant the Magistrate-Collector's confidence that "the condition of the people is still generally good." The statement regarding the unsuitability of the tools will be communicated to the Public Works Department. The arrangements for giving employment and wages to an "invalid gang" on every relief work appear to be judicious; 192 persons, chiefly lepers and professional beggars, receive charitable relief, a little work being exacted from every person so relieved.

4. *Shahabad.*—In parts of Bhubooah and Sasseram prices are high, common rice being dearer than eleven seers per rupee; still, as the number of people on the relief works has decreased, no general distress is reported, and private trade in grain is said to be brisk, there is perhaps no need for immediate anxiety. In Sasseram and Bhubooah, where the people are poor and the land is comparatively unproductive, it will be necessary to have relief works kept thoroughly ready to be opened. The account of the inquiries preparatory to organising charitable relief in the head-quarter sub-division is satisfactory. Mr. Eyre's arrangements for giving home work and for searching out distressed people in the Sasseram sub-division seem to be effective. The Lieutenant-Governor presumes that similar steps are being taken in Bhubooah.

5. *Tirhoot.*—In parts of Seetamarhee, Tajpore, and the head-quarter sub-division of Tirhoot, the supply in the bazars is said to be short in consequence of the Government grain contractors having taken up a very great deal of the available carriage of the district, and having thereby raised the price of what remains. In view of what the Government has undertaken, this result cannot be altogether avoided; still the Lieutenant-Governor shares the anticipations of evil results if all the local pack-bullocks are taken up for Government grain. There can be no doubt of the propriety of Mr. Wace's action in declining to interfere to seize these animals. For the support of the Tajpore sub-division we must very largely look to the flow of private grain from the supplies constantly flowing into Patna.

6. The small assignment of Government grain made to Tajpore must, under Sir Richard Temple's Minute, No. 57 of 27th March, come out of the supply to one or other of the northern sub-divisions, and the supply needed for the head-quarter sub-division must for the present come out of the Seetamarhee allotment.

7. The accounts from Hajeepore and Seetamarhee are as yet satisfactory. The large number of works over which the 27,000 labourers in Seetamarhee are spread is ground for satisfaction, provided the supervision is tolerable. There is said to be much distress in Tajpore. In parts of the head-quarter sub-division there seems already to be much distress; but the arrangements to meet it seem to be adequate.

In Durbhunga and Mudhoobunnee there is some famine and much distress among the poorer classes. Some of the deaths adverted to in Mr. Gordon's 19th and 20th paragraphs were, it must be feared, due, in part at least, to insufficient nourishment; but the details given show how very difficult it is to say whether a specific death was from starvation only, or from disease. But if no more such deaths than those mentioned in these paragraphs occurred among the hundreds of thousands of famine-stricken people on the relief works in these two sub-divisions, the famine may be said to have been arrested.

8. The number of work-people returned as being employed on the Mudhoobunnee and Durbhunga roads is enormous. The Lieutenant-Governor himself saw that there were very many thousands on the Bahera and Durbhunga road, but the number that have suddenly appeared on the Mudhoobunnee road must, if they are really all there, be at the outset almost unmanageable. Large arrangements have been made to add to the Public Works establishments in these sub-divisions. The Lieutenant-Governor hopes that tampering with the labour returns, and peculation, if there be any, will be stopped; and he is aware that the very best attention of Mr. Metcalfe, the Additional Commissioner, and of Lieutenant Wright, the Executive Engineer, are being given to the matter. Every possible effort must be made to disperse these large crowds, get them back to their houses, and relieve them there. Even if there is some inaccuracy about the returns of labourers, still the number must be very large, for Mr. Metcalfe, after visiting the northern tracts, writes that the whole of the poorer population of the north of the sub-division have come down to the Government roads in the south. The best way of dispersing and relieving these crowds will occupy the close attention of all the Mudhoobunnee officers during the next few weeks.

It is satisfactory that Government had over 200,000 maunds of grain stored in the Mudhoobunnee Sub-division before the rush began; and the absence of epidemic, owing to the excellence of the climate, is subject for much thankfulness.

9. The Lieutenant-Governor learns from Mr. Worsley's covering letter that the difference between the two companies which work the transport from Bunker Ghat to Seetamarhee have been settled, and that the working is now smooth again. Hitherto the despatches from Bunker Ghat for Tirhoot alone have ranged close upon 25,000 maunds a day; though for a few days of last week the despatches fell to 15,000. The breakdown of the Chumpta Ghat transport contractors seem to have been very serious; and it is not yet clear whether they have redeemed any of their lost ground by successfully working a new route from Monghyr. The narrative does not say anything of the Mokameh route, from which both the North-Western Provinces' contractors and a part of the Chumpta Ghat transport were to have begun working more than a week ago. Future narratives should state the progress in distribution of grain to the outlying golahs from the central depôts at which the large transport contractors deliver the bags. The Lieutenant-Governor has asked that Colonel McGregor may furnish a fortnightly memorandum on the working of the transport under him to the Commissioner, for submission to Government, with the divisional narrative.

10. The charitable relief organisation appears to be fairly at work in Durbhunga and Mudhoobunnee, but the numbers receiving relief are not given for Durbhunga, and the number for Mudhoobunnee (only 570 in all) appears small in the face of distress such as is evidenced by the rush of the labourers to the works. The Lieutenant-Governor observes that no mention is made of any arrangements for making advances of money or grain to ryots; he is aware that this is a very difficult matter, but, being so, it should be grappled with at once, so that some solution of the difficulty may be attained before it is too late. Sir George Campbell notices that in the head-quarters and Seetamarhee sub-divisions arrangements for giving out village and household work are well in hand. Now that basket-making has been fairly set going, he hopes that further indents for baskets for relief works will not be sent to Calcutta from Mudhoobunnee.

11. *Sarun.*—The account of the sufficiency of the supplies in the Sarun markets, and of the information coming in from so many sides, is satisfactory. Though coarse rice is at several marts dearer than 11 seers per rupee, still maize is nowhere dearer than 13¾, and if the supply at that price is sufficient, the people can pull through. The damage done by hail in certain limited tracts just north of Chuprah seems to have been more serious than was at first supposed. If the rubbee yield is to be half an average crop, the Lieutenant-Governor would hope that Mr. Drummond's estimate of 4½ to 5 maunds an acre may be below the truth; for in a fertile district like

Sarun the average yield of wheat and barley must surely be above 10 maunds per acre. It is observed that Messrs. Hudson, Wright, and Rattray's estimates would put the rubbee outturn at something above half of an average crop.

12. The extracts given at paragraphs 14-21 of Mr. Drummond's narrative amount to very sufficient evidence that as yet there is no general distress among the people, that isolated cases of distress are relieved, and that by a very liberal system of relief works famine has been kept off. Many of the people who are paid on the relief works do very little good work for their wages; still they are thus kept from starving, and they would not come on the works at all if they could earn a living elsewhere. The question whether more work could not be got out of the more able-bodied, and whether additional safeguards are possible against peculation of wages, is being separately considered. There are now about 100,000 people on the Sarun works, inclusive of 3,600 on the Gunduk embankment; and the Lieutenant-Governor, as he has before said, believed that much effective relief has been given through the medium of these works for the last ten weeks; and, with reference to Mr. Drummond's 27th paragraph, he would say that he would not wish to have the present Sarun system suddenly and inconsiderately changed so as to insist upon a full day's work from each labourer without discrimination. He is aware that with a people unaccustomed to work, and threatened by famine, any such insisting might in some cases be injurious, but he trusts to see a discrimination exercised between the able-bodied who can do full work and those who cannot.

13. There is ample store of Government grain already in the district to meet any sudden demand. 308,000 maunds of Government grain and 88,000 maunds of Court of Wards' grain have already reached their final destination.

14. It seems that as yet general charitable relief is happily little required in Sarun; such relief is, however, either given or made available at many centres. The indigenous village and other local agency is fully utilised to search out, relieve, and report cases of distress; and for the present there is no necessity to do more.

15. *Chumparun.*—The accounts from the Bettiah and head-quarter sub-divisions are good so far as they go. Grain is not dearer, and the markets are fairly well supplied; and though very large numbers come upon the relief works, and many apply for charitable advances and loans, still there is no starvation, and distress is being relieved. 56,102 people are employed daily on 15 tanks and 36 roads, besides 2,139 on the Gunduk embankments.

The grain transport continues to work thoroughly well; 547,000 maunds of Government grain have been received into the district, and 394,000 maunds have reached their final destination, so that there is ample grain already available to meet present emergencies.

16. The charitable relief arrangements appear to be complete. The Lieutenant-Governor is much satisfied with Mr. Howe's Ramnugger report, which was received as this Resolution was passing through the press. It certainly appears that the officers in North Chumparun have, by relief works, by selling Government grain, by distributing food, by giving advances of money and grain, relieved distress wherever it has occurred, and are keeping the population from general distress, and from the other consequences of the famine that had come upon them. The account given by Mr. Howe of his sales of Government grain are satisfactory; there is still, however, much less to do in completing the home relief in villages and making advances of grain to ryots. The Lieutenant-Governor is, however, satisfied that matters are well in train for administering all the authorised forms of relief.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. A, dated Bankipore, the 22nd March 1874.

From A. C. Mangles, Esq., Collector of Patna, to the Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honour to submit the following Narrative for the fortnight ending Saturday, the 21st instant:—

A.—State of the Country.

2. The several bazars of the Sudder Station and the interior continue to be well supplied with grains of all sorts. No deficiency of supply has been reported from any part of the district. On the contrary, owing to the harvesting of the rubbee crops, the local markets have been less resorted to by the cultivating and labouring classes, who either subsist on the produce of their own fields or on what is given to them as wages for cutting the crops of others; and even some of our advance-holders who have started grain shops in the interior of the Sudder Sub-division, and who can afford to sell at reduced rates, have done little business during the last four weeks. Notwithstanding this, however, I am glad to say that the amount of grain imported by private individuals is still very great; so much so, that on my return from camp on the 7th instant, it was brought to my notice that there was a heavy block at the Patna City, the merchants not being able to remove the grain as fast as it came in. This, no doubt, was in a great measure owing to the heavy strain which had been placed on our transport resources in the conveyance of treasure, tools, and baggage of troops to other districts, and to the panic which had taken place among the remaining cartmen that they would be taken away from their homes for similar purposes. I at once let it be generally known that Government had no further demand for carts in large quantities, and would make its own arrangements for those it did want; at the same time

deputing one of my municipal officers to render all the assistance in his power to the traders,—firstly, in obtaining delivery of their goods, and, secondly, in obtaining carriage for their removal. My endeavours have been so far successful that, from the 9th up to date, we have been able to remove some 10,000 bags from the Patna City Station in excess of what has been received, but still I am sorry to say that, taking both the Patna City and the Patna Ghat Stations together, the receipts have been slightly in excess of what has been taken away. This, the Station-master tells me, however, is not so much owing to want of carriage, which, with the exception of only two days, has been quite sufficient to meet all requirements, but to the difficulty experienced in giving delivery owing to the unsuitableness of the Patna Station for carrying on such a large traffic, and to the neglect of the mahajuns themselves, who do not come to the station till late in the day, and then, before trying to remove their consignments, see what they can do towards selling it on the spot. It is now my intention to depute Mr. Allen, Assistant Magistrate, to look after this work at both the Patna City and Ghat Stations; and I trust that before long I shall be able to report a complete clearance; that is to say, if the mahajuns have room in their golahs, which I am afraid they have not.

3. The following were the prices of grains obtaining during the fortnight:—

Patna.

	Seers.
Rice (best)	11
Rice (common)	12
Wheat	16
Barley	19
Jowar	19
Maize	17
Gram	19

Barrh.

Rice	10½
Maize	14
Gram	17
Wheat	12

Behar.

Rice	12½
Maize	16
Gram	18
Wheat	14
Barley	14

Dinapore.

Rice	12
Maize	17
Gram	18½
Wheat	15½

In the interior of the Sudder and Dinapore Sub-divisions the prices were as follow:—

Thannah.	Rice.	Maize.	Wheat.	Barley.	Gram.
Bankipore	11	16	14	16	18
Bickrum	12	16	15	—	18
Nowbatpore	12	16	15	—	18
Mussowreh	11	15	14	—	15
Monair	11	17	15	—	18

4. On the night of the 16th instant we had a shower of rain amounting to ·37 at head-quarters, and during the fortnight Behar had ·27, Barrh 1·07, and Dinapore 1·50. In some places it was accompanied by hail, but fortunately no material injury was done to the crops anywhere. On the contrary, cheena, sugarcane, cotton, and castor crops were much benefited.

5. About half the rubbee crops are still on the ground, but they are now fast being reaped, and in the course of the next three or four weeks we may expect to see them all harvested, especially if the weather continues as favourable as it is at present. My expectations regarding the outturn of the crops have, I am glad to say, been fully realized, so much so, that the Deputy Collector of Behar, writing on this subject, says: "No one has any reason to complain; without exception, the unanimous testimony of the people is that the rubbee crop is one of the best they have ever seen." In by far the greater portions of the district we have had from a twelve to a sixteen anna crop, and in the less fortunate tracts, consisting of the high lands, where rubbee was but sparsely grown, not less than an eight-anna crop has been gathered; so that, taking the whole district together, I may safely say that we have had a twelve-anna crop. In Barrh and Behar the crops have been especially good, and in the Sudder and Dinapore Sub-divisions they have not been bad, except in Mussowreh and parts of the Bullia and Monair pergunnahs, which were but thinly sown with spring crops owing to want of moisture, but even in these parts much has since been done by means of irrigation and with the help of the slight showers we have had from time to time, and both cheena and Indian-corn have been and are still being sown.

6. In paragraph 5 of my last Narrative I informed that about 50,000 beeghas of land had been sown with cheena in the Behar Sub-division. The Deputy Collector now informs that this area

of cultivation has since been increased, and that some of the cultivators have sown the crop on fields where they have already had a good poppy crop. In the Sudder sub-division a village-to-village inquiry was ordered by me with the view of ascertaining to what extent the recent rains had been taken advantage of by the people in sowing their lands with maize and cheena, but as yet I am sorry to say the returns submitted are too incomplete to allow of my forming any opinion as to whether the lands so sown are more or less than in ordinary years; this, however, I hope to be able to say in my next narrative.

7. A large tract of country, measuring some 5,000 beeghas, lying between Mussowreh and Nowbutpore, and in the heart of that portion of the country concerning which I had the greatest fear, has, I am glad to say, owing to the exertions of the Zemindar, Baboo Nowrung Behari, yielded a capital rubbee crop, and the Baboo has expressed his intention of keeping his share of it for the benefit of his ryots.

8. No case of misery or starvation has been brought to notice during the fortnight, and with regard to the condition of the people I have little to add to what I said in paragraph 17 of my last Narrative, except it be that from inquiries made it would appear to be generally understood that in ordinary years an able-bodied workman can earn sufficient during the harvesting of the rubbee crop to keep him in grain till the harvesting of the bhadoi, or, at any rate, till he can obtain labour in the fields again in weeding or otherwise looking after it; and I do not see why this year should be any exception to the general rule, except in those limited portions of the district above referred to. Rice, no doubt, is the favourite food among the people, but is by no means so generally used among the lower classes as most people think, the coarser grains being more satisfying and taking longer to digest; rice is looked upon by them as a sort of luxury, to be used when there is an abundance.

9. During the fortnight I have started a depôt at Bankipore for recruiting coolies for British Burmah, and have been so far successful that up to date 134 persons have signed the necessary contract, of which number 113 have already been despatched to Dr. Payne at Calcutta. Of these I have heard of the arrival of the first batch, consisting of 56 men, women, and children; and it was satisfactory to learn from Dr. Payne that he looked upon them as a very promising lot. Of the 134 registering, 62 were residents of this district, 21 of Gya, 12 of Chumparun, 2 of Tirhoot, 15 of Shahabad, and the remainder had come from the North-West. In addition to these, 36 persons, residents of Patna and Gya, were recruited during the fortnight for Cachar under Act VII. of 1873, and I was glad to notice that out of the whole number of 170 there were none who showed by their personal appearance, at any rate, that it was famine or distress which had driven them to emigrate.

10. There was no case of grain robbery reported during the fortnight. Eleven cases of theft were reported, whereof there was one, a heavy one, at Futwah, in which a number of thieves entered the station premises and carried off 10 bags of Government rice. Four bags were recovered at the time, the thieves having dropped them on an alarm being raised, and a portion of the stolen grain has since been recovered from the houses of a number of mushars, who were brought to justice and sentenced to six months' rigorous imprisonment each.

B.—RELIEF WORKS.

11. An advance of Rs. 8,000 was applied for during the fortnight for relief work No. 31 (Buktearpore and Koneebagh road). The average daily number of labourers employed on our local fund roads and relief works during the week ending the 14th instant was 9,079, showing an increase as compared with the figures given in the last Narrative; but I am sorry to say that I cannot look upon these figures as being altogether trustworthy, and I certainly do not consider them so. As regards the classes of people employed, for it is a remarkable fact that, in that part of the country where we have had both good rice and rubbee crops, the per-centage of the non-labouring classes said to be employed on the roads is considerably higher than in those parts where we had next to no rice crop and a very insufficient rubbee.

C.—TRANSPORT OF FOOD.

12. During the fortnight ending the 14th instant the following quantities of grain were imported into the district :—

	Rice.	Wheat, Oats, and Barley.	Jowara.	Other Grains.
By rail - - -	209,147	40,037	66,375	176,445
By river - - -	1,150	100	200	1,112
	210,297	40,137	66,575	177,557

or a grand total of 494,566 maunds, but these figures do not include what has been received at the Futwah Ghat. The returns for that station not having as yet been received, I have not been able to get accurate figures as to what quantity out of the above was on account of Government, but, roughly speaking, it did not exceed 12,000 maunds; so that the remaining 374,566 maunds were private importation. The export of all kinds of grain during the same period was only 15,926.

13. Up to the week ending the 14th instant, the removal of Government golahs from Patna to Futwah Ghat had not, as I anticipated, been of much benefit to the traders, who still had by far

the greater part of their grain consigned to the Patna City Station, as will be seen from the figures supplied by the Railway Company for the Patna City and Ghat Stations for the weeks ending the 7th and 14th respectively; and which show that whilst during that time 213,911 maunds had been delivered at the Patna City Station, only 66,068 had been received at the Patna Ghat. To remedy this the Station-master informs me that the Traffic Superintendent at Dinapore proposed sending on the surplus grain from the City to the Ghat Station, but this was objected to on the grounds that it was likely to cause confusion, and a remedy has been found by telegraphing up the line advising consignors to send to the Ghat, and I am given to understand that during the last week, for which no official return has yet been received, the consignments to the Ghat Station have much increased in number.

14. Our means of transport have, as I have already stated, been taxed to the utmost during the fortnight, for, in addition to 26 lakhs of rupees which have been despatched to their destinations in Tirhoot and Chumparun, we were required to make arrangements for sending another 14 lakhs to other districts, of which only 2 lakhs could be met by rail. These have been sent. Fortunately Sarun was able to make its own arrangements with regard to 5 lakhs, and Gya has been written to to do the same with regard to its 7 lakhs. Besides this, the despatch of a very large number of tools for relief works had to be sent, and large quantities of baggage for troops and private individuals crossed the river. It is my intention, if possible, to obtain the Commissioner's consent to my keeping a certain number of the carts coming from the north-west on this side of the river for this special work. The intimation given to us of treasure coming is so short, and the necessity of its immediate despatch on arrival so great, that it is absolutely neeessary for us to keep a number of carts in constant readiness, which is a great drain on the resources of the country.

15. During the fortnight a telegram was received from His Honour the Lieutenant-Governor asking me to make arrangements for one lakh maunds of rubbee fodder. I have already taken agreements for the supply of 85,000 maunds to be sent to Bunker Ghat and Chumpta, and the Behar sub-divisional officer informs that he could with difficulty make arrangements for another 25,000, but that he hopes other districts, such as Arrah and Sarun, where they have also had good rubbee crops, may be indented on first. Behar is also sending at once Rs. 1,250 worth of rice straw to Chumpta which had been stored in case we might require it later on in the year for our transport cattle. In the Sudder sub-division I am also calling in what I had collected at the different golahs for a similar purpose for the use of the up-country cattle passing through to Tirhoot. Other offers for the supply of rubbee fodder have been made in the Sudder sub-division; but I have not closed with them as yet, as even in ordinary years this is not a fodder exporting district, and I am waiting to see what effect the parting with this one lakh will have, and to learn what the other districts can supply.

D.—STORAGE OF GOVERNMENT GRAIN.

16. No progress has been made in the transport of grain into the interior of the district since the submission of my last report; first, because no grain was received at any station for this district; and second, because all the available carriage was employed in the service of other districts and in removing the block at the Patna Station.

E.—ADVANCES TO PRIVATE PARTIES.

17. The whole of the amount which was allotted to me for making advances for purchase of grain has been given out. The Patna zemindars, who got the last advance of Rs. 30,000, have begun to get their grain from the Upper Provinces, and will shortly be ready to sell it in the manner described in one of my former narratives.

18. No one received an advance for agricultural improvement during the fortnight, but some petitions which have been received are under consideration; those who had to stop their village works on account of the present harvest will shortly be able to resume them.

F.—CHARITABLE RELIEF.

19. I have selected the market place built at Sadikpore on the Wahabee ground, but which has never filled as a charitable relief house in the Patna City; and the pucka lines near the Bankipore police station have been set apart for the same purpose. I have appointed sub-committees to superintend these relief houses, and similar preparations have been made at Dinapore, so that these can be started at a moment's notice. I have also sent an order to the sub-divisional officer of Barrh to make all the necessary preparations for relief houses at Barrh and Mokameh to meet any exit of famine-stricken people from Tirhoot crossing the river at those points.

No. 425 F, dated Gya, the 23rd March 1874.

From A. V. PALMER, Esq., Collector of Gya, to the Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honour to submit my fortnightly report on scarcity and relief in Gya District for the fortnight ending Saturday, 21st March.

A.—State of the Country.

2. There is no lack of food-grain in the bazars. The annexed table will show the reported prices-current during the past fortnight. I believe these prices-current not to be altogether reliable, and that they err on the side of high prices:—

Bazars.	Wheat.		Barley.		Rice, 1st sort.		Rice, 2nd sort.		Millet.		Maize.		Gram.	
	Week ending 21st March.	Week ending 7th March.	Week ending 21st March.	Week ending 7th March.	Week ending 21st March.	Week ending 7th March.	Week ending 21st March.	Week ending 7th March.	Week ending 21st March.	Week ending 7th March.	Week ending 21st March.	Week ending 7th March.	Week ending 21st March.	Week ending 7th March.
	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.
Gya - -	10 4	10 8	17 4	15 0	8 0	8 4	10 0	10 4	15 0	15 0	14 0	13 4	14 8	13 8
Nowada - -	11 8	11 8	16 0	16 0	—	—	11 12	11 12	14 0	14 0	13 0	13 0	15 8	14 8
Jehanabad - -	13 0	13 0	15 0	15 0	9 0	9 0	10 0	10 0	—	—	13 12	13 12	16 0	15 0
Aurungabad -	12 8	12 0	15 0	14 8	9 12	9 12	10 12	10 12	14 8	14 0	14 8	14 8	15 0	14 8
Daoodnugger -	12 0	14 0	16 0	16 0	10 0	10 8	10 8	10 12	—	—	15 0	14 0	16 0	15 0

3. There has been, during the past fortnight, showers with hail. In no place has this been very severe or sufficient to interfere with the harvesting of the crops. At Jehanabad half an inch was reported, and in Aurungabad flying showers.

4. The crops promise a full yield. Peas and mussoor have now been gathered, and wheat is being cut.

5. The condition of the people is still generally good. In all large villages there are a certain number of lepers and incapables whom the high prices must affect. To assist these, measures have been adopted at the head-quarters of each sub-division, and at Kootoomba in Aurungabad.

6. There is also a class with whom it will be difficult to deal, viz., those who are capable of working, but who, from caste prejudices, are unwilling to give a *quid pro quo*, or in any way earn anything in the shape of wage.

7. Grain thefts have not noticeably increased, but offences against property have very steadily been increasing for some months past.

8. There are no special tracts calling for special mention.

B.—Relief Works.

9. The marking out of the work (Gya to Puraya, 10 miles), which has been sanctioned, has, I regret to say, not yet been reported done by Executive Engineer.

10. The statement to be submitted on Wednesday next to the Public Works Department of the Bengal Secretariat will, at a glance, give all detailed information.

11. There is a supply of food in the vicinity of all the works; the labourers are still in good condition, and are paid by a fixed rate for the quantity of work done.

12. Tools have, in some instances, been supplied, but they are almost useless. The picks are far too heavy and cumbrous, and totally unfitted for earth-work, and the kodalies are so flimsy and light that they make little or no impression on the hard ground.

13. None but professional workmen are reported to have come to the district works, with the exception of 74 at Aurungabad, employed in excavating a tank, and 152 at Jehanabad employed in levelling the ground for a dispensary. A third relief gang is now being started in Nowada.

14. It has been found that the rule heretofore adopted, that contractors were to give work to all who applied for it and to make over to the duffadar those who were weakly, though plausible theoretically, did not answer in practice.

15. It was incredible, with such high prices of food grain as obtained here, that persons other than professional beldars should not have wanted work. The contractors, duffadars, and supervising officers all averred that no outsider came for work.

16. This has now been altered in consultation with my sub-divisional officers, and thus the work under contract will be quite separate from other relief work, which will be placed immediately under a different officer, viz., sub-divisional officer. Two gangs will be started on each work; one, payment-by-result gang, the other invalid gang.

17. The rates fixed for the first-named will be remunerative and attractive—Re. 1-12 per 1,000 cubic feet. From this professionals and beldars will be excluded.

18. This gang will have their work measured up by the duffadar every other day, and for the amount completed payment will every other day be made, the amount due being divided equally amongst the gang. It is hoped that this will induce a healthy competition to earn a full wage, and it is the best possible check for detecting the drones and those who, though capable, are unwilling to do more than a show of work.

19. The invalid gang will be employed on light labour, and will be paid daily according to the established rates, viz., 5 Goruckpooree pice per man, 4 pice a woman, and 2½ a child.

20. Experience shows that this last description is popular. In the first place the daily payment, however small, is satisfactory. Secondly, employment is thus given to children, and they can earn their livelihood instead of remaining dependent on what their parents can spare.

21. It is no uncommon thing for the father to work at the harvest or earthwork, and for the mother and children to flock to the invalid gang relief.

C.—TRANSPORT OF FOOD GRAINS.

22. The annexed table will give, in compact and condensed form, an approximate account of private food-supplies imported during the fortnight.

Bazars.	Wheat.	Barley.	Rice, 1st sort.	Rice, 2nd sort.	Millet.	Maize.	Gram.	Total.
	Maunds.	Maunds.	Maunds.	Maunds.	Maunds.	Maunds.	Maunds.	Maunds.
Gya - - - -	477	137	65	1,212	22	367	217	2,497
Nowada - - -	—	—	—	—	—	—	4	4
Jehanabad - -	146	138	32	130	—	105	202	753
Aurungabad - -	111	—	8	381	—	—	90	590
Daoodnugger - -	1,250	225	1,100	1,400	—	105	1,675	5,755
Total -	1,984	500	1,205	3,123	22	5,767	2,188	9,599

23. This gives a total of 9,599 maunds against 7,625 maunds imported during previous fortnight. It is satisfactory to see that these private importations as the year goes on are increasing.

24. I annex a comparative statement showing private importations into Sudder Bazar of Gya this fortnight and last fortnight:—

	Wheat.	Barley.	Rice, 1st sort.	Rice, 2nd sort.	Millet.	Maize.	Gram.	Total.
	Maunds.	Maunds.	Maunds.	Maunds.	Maunds.	Maunds.	Maunds.	Maunds.
This fortnight - -	477	137	65	1,212	22	367	217	2,497
Last fortnight - -	800	176	162	1,801	—	293	374	3,606

25. When the harvest is over and grain threshed the importation will doubtless increase.

D.—STORAGE OF GOVERNMENT GRAIN.

26. In my last report I annexed a statement of store centres with amount of grain stored at each. During the past fortnight very little grain has been received from Government. I have now about 140,000 maunds stored as against 127,000 maunds last fortnight.

27. I require about 5,000 maunds at Bihta and 8,000 at Bankipore to complete my consignment.

28. The distribution of grain over the district in these store centres will enable me to meet any sudden or emergent call from any part of the district. The main store I have kept at sub-divisional head-quarters, as there it is best looked after.

29. It has not been found necessary to sell the Government grain, nor do I apprehend that any such course will have to be adopted for the next two months.

E.—ADVANCES TO PRIVATE PARTIES.

30. These advances are—

1st, for purchase of grain.
2nd, for land improvement.

31. *For purchase of grain.*—There have been five applications (three Jehanabad, two Arrungabad) during the past fortnight. Of these one has been rejected and four are under inquiry.

32. *For land improvement.*—The following statement will show the transactions of the past fortnight:—

Advance for Land Improvement.

Name of Applicant and Right held by him.	Nature and Locality of Work for which Advance is applied for.	Amount of Advance applied for.	Period within which the Work is to be completed.
	JEHANABAD SUB-DIVISION.	Rs. As. P.	
Mook Lall Singh, Malik - -	1 pucca well in Dedhsia - - -	125 0 0	3 months.
Ruttoo Mahto, Tenant - -	1 pucca well and repairing of another in Kooraree, pergunnah Ekil.	125 0 0	4 ditto.
Chooramun Singh and Biswanath Singh, Zemindars.	1 pucca well and embankment in Babhunpoora, pergunnah Okree.	125 0 0	6 ditto.
	NOWADA SUB-DIVISION.		
Meera Lall, Mokurredar - -	1 pucca well in mouza Hurdya appertaining to Mehal Singhur Narain, pergunnah Jurra.	200 0 0	30th June 1874.
	Total -	575 0 0	

33. I further submit a statement of applications for advances for land improvement, and how dealt with:

Sub-divisions.	Number of Applications received during the fortnight.	Number of Applications received previously.	Total Number of Applications received.	Number disposed of.					Pending.
				Applications granted.	Applications rejected or withdrawn.	Applications reported to Commissioner.	Returned.	Total disposed of.	
Gya - - - - -	2	20	22	2	12	1	—	15	7
Aurungabad - - -	—	78	78	27	34	2	6	69	9
Jehanabad - - - - -	13	35	48	16	11	—	4	31	17
Nowada - - -	2	3	5	2	—	1	—	3	2
Total - -	17	136	153	47	57	4	10	118	35

F.—Charitable Relief.

34. Apart from the ordinary district road works (which are supposed to be relief works) each sub-division has opened a small relief work as a tentative measure. At *Aurungabad* a tank is being dug in the town; at *Jehanabad* the site for a hospital is being cleared and levelled; at *Nowada* the collection of kunker and hill-gravel for road repairs has been commenced; at *Gya* the realignment of a small portion of road, about two miles in length, has been commenced.

35. Hitherto those working on these works have been paid 5, 4, and 2½ pice respectively. For cutting earth payment by results is being introduced.

36. Relief has been given to professional beggars in the shape of cooked food as per margin. An average of 42 persons in Aurungabad and of 142 persons in Jehanabad have been relieved by pice. In Jehanabad some work has been extracted from each person relieved.

	Daily Average.
Gya - - - - -	98
Nowada - - -	32
Pukreebarwan - - -	21
Rujowlee - - -	41

37. In these two places cooked food will be substituted for pice, except where the parties work at the invalid gang.

38. Meetings have now been held at each sub-divisional head-quarters when Rs. 24,464 was subscribed, of which Rs. 11,121 has been paid. The marginal statement will show these results at a glance.

Sub-division.	Date of Meeting.	Amount Subscribed.			Amount Paid.		
		Rs.	A.	P.	Rs.	A.	P.
Gya - -	7th March -	17,499	0	0	5,590	0	0
Nowada - -	10th February	5,250	0	0	5,181	0	0
Jehanabad -	7th March -	575	0	0	350	0	0
Aurungabad -	18th " -	1,140	0	0	Not reported.		
	Total -	24,464	0	0	11,121	0	0

39. I annex statement called for in Bengal Government, No. 1,251, dated 5th instant:—

Number of Committees and Sub-Committees as yet appointed.	Number of Special Relief Sub-divisions opened and officered.	Number of regular Relief Circles opened and manned by Special Officers.	Number of Relief Circles opened and managed by Planters, Zemindars, and other Residents.	Number of Workhouses or Centres for the Distribution of Food and Gratuitous Relief.	Number in Receipt of Gratuitous Relief.		
					Men.	Women.	Children.
At Gya. 1 District Relief Committee - 1 Sub-Committee.	—	—	—	—	44	40	19
At Jehanabad. 1 Sub-divisional Committee - 1 Sub-Committee at Urwal.	—	—	—	23	—	—	—
At Nowada. 1 Sub-divisional Committee -	—	—		—	94	Detail not given.	
At Aurungabad. 1 Sub-divisional Committee.							

No. 452F, dated Arrah, the 24th March 1874.

From H. W. ALEXANDER, Esq., Collector of Shahabad, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I HAVE the honour to submit my eighth narrative for the fortnight ending on Saturday, the 21st March.

A.—STATE OF THE COUNTRY.

Abundance or scarcity of supplies in the bazar.

1. The supplies in the local markets have increased and are fully sufficient. Grain is still coming into the district in large quantities by rail. The rubbee is being rapidly harvested and will help greatly to increase the local stock.

In Bhubbooa the Deputy Collector reports the condition of affairs in this respect to be normal.

Kind and prices of grain selling at one or more specified principal marts.

In Appendix A. is given the kind and prices of grain selling at the chief marts in the district.

In regard to the price of rice, it will be noticed that it has both risen in some and fallen in other marts; on the whole, the prices are better than they were last fortnight.

Any information in regard to the amount and stocks of grain in the hands of zemindars and others.

3. No additional information has been gained under this head.

Rainfall, if any; state of crops; the condition of the people; actual facts as to any known cases of misery and starvation; grain thefts and robberies, and condition of any particular tracts.

4. The weather during the past week was cloudy and threatening; wind variable. A heavy thunderstorm occurred on the night of the 16th, accompanied by rain, which appears to have been very general; it did not, however, fall in sufficient quantity to do any material damage to either the standing crops or to those already cut and stored in the open granaries. In Bhubbooa some damage appears to have been caused by hail. This must, however, have been very slight, as prices were not affected by the circumstance.

In the Arrah sub-division the crops are being rapidly cut and harvested, and are reported favourably on, the crops in Diarah lands in particular.

In the Buxar sub-division the Deputy Collector writes, "Some of the barley and wheat is still uncut, and the harvest of the grain, which, though backward, is said to be a most promising crop, is little more than half through in many places."

From Sasseram Mr. Eyre reports, "The crops in the Sasseram sub-division are everywhere reported good. In Bhubbooa a half to a three-quarter crop is expected. I should be inclined to call this an under estimate of the probable outturn."

The cultivators are now busily engaged in cutting and storing their crops, and although labour is not, where it can be avoided, being made use of in order to save the grain given in payment, still many must be obtaining employment, from the fact that the numbers heretofore employed on relief works have considerably decreased within the last fortnight.

Beggars, and those who subsist entirely on charity, and the poor people of high caste, are suffering pressure, but not in any intensified form as compared with condition as reported in my last narrative.

Information is being gathered as to the number of such people who really stand in need of help, and subsidised relief will be afforded to all those who deserve and require it. It would be unadvisable to commence selling grain now, under the market rates. Trade is being carried on briskly, and we have yet to learn what effect the rubbee harvest will have on prices at present ruling in the market. No specified cases of misery and starvation have yet come to light.

There has been no increase in the number of grain thefts and robberies so as to call for special notice.

B.—RELIEF WORKS.

Full details in regard to all such works in progress will be furnished in the statement (called for in circular No. 5718, dated 3rd December last) which is due on the 25th instant.

No relief works in addition to those alluded to in my last narrative have been started during the period under report.

The rubbee harvest is attracting many from the works in progress; when all the crops have been cut and stored, people will again resort to the canals and the roads for employment.

C.—TRANSPORT OF FOOD.

Grain has been coming into the district during the past fortnight in increased quantity; if anything, private importations by rail being large, both in the Arrah and Buxar sub-divisions. The quantity so imported will be shown in a separate statement after detailed returns have been received from the Traffic Department, East Indian Railway. By river, only 500 maunds have been imported from Ghazeepore and Goruckpore.

In the Sasseram sub-division 3,361 maunds have been imported during the fortnight from other districts. The returns from Bhubbooa under this head are incomplete.

The means of transport are at present sufficient for all requirements. On this head the sub-divisional officer of Buxar remarks "that nearly all the private carrying of the sub-district is done by pack-bullocks, and that it is not advisable that large purchase of these animals, at high prices, should continue to be made for the supply of Tirhoot if they can be got elsewhere."

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

In the Arrah sub-division no grain has been received during the period under report. The amount noted in my last narrative has been received up to date and stored in the central golahs. I presume, before very long, further consignments, in accordance with requirements already reported, will be received.

In the Buxar sub-division nothing has been done in the way of storing grain since the date of the last narrative. In the Sasseram and Bhubbooa sub-divisions a total of 24,508 maunds have been received, all of which has been stored. The further requirements for these two sub-divisions have been intimated separately, and I trust may soon be complied with.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

In the Arrah sub-division no advances have been made for land improvements. Four applications of traders for advances, aggregating Rs. 3,000, have been transmitted during the fortnight, and orders in regard to these have been passed.

In the Buxar sub-division Mr. Armstrong reports, "Since my last narrative, seventeen petitions for tuccavee advances for improvements have been filed, of which, six have been rejected, the security offered being, in my opinion, unsatisfactory, and the remainder are being inquired into. I have also finally recommended the advance of a loan of Rs. 1,000 to Gunga Bishoon, teli, for the purchase of grain, good security having been tendered."

In regard to the applications for loans from the municipalities of Arrah and Sasseram, I trust they may receive early attention and be sanctioned.

F.—CHARITABLE RELIEF.

I have no additional information to give to that supplied in my last narrative in reply to circular No. 1251—S.R., dated the 5th March. In regard to the headings Nos. 1, 2, 3, 4, 5, a house-to house visitation has been carried out within the limit of the Arrah Municipality (this has been conducted by the different members of the Committee), in order to ascertain how many and what persons might require relief. Lists were furnished of respectable women and their children requiring aid, too old to work, or able to work, but not in public.

2nd. Of men, women, and children in want of help and capable of doing light work out of door.

3rd. Of men, women, and children incapable, from age or bodily infirmities, of doing any work, and who have heretofore subsisted on charity.

A meeting was held of the Arrah Sub-Divisional Committee on the 19th, and it was resolved that a sub-committee be formed of native gentlemen, residents of the town, to make careful inquiries in regard to persons named in list No. 1, and in each case, where it appeared advisable, to give immediate relief in the shape of an advance of Re. 1 and 16 chittacks of cotton (cleaned) the latter to be returned, spun into 14 chittacks of thread, in a fortnight. In this way 35 people have, up to date, received aid, and 36 have had gratuitous relief given to them.

In regard to the 2nd list the police were ordered to direct all named therein to seek for employment on the light labour gangs which have been started on relief works near the town. The locality where these light labour gangs are employed is indicated by red flags; any unable to do earth-work can spin rope or cotton thread.

On the 21st an inspection was held by the Civil Surgeon and myself of the people named in the 3rd list, and sturdy and well-conditioned beggars rejected, and only those selected as fit objects for charity who appeared in anything like a distressed condition; 18 persons were considered as proper subjects of gratuitous relief, and it was arranged that in each case a sum of Rs. 2 should be paid into a respectable native resident of that part of the town in which these poor people lodged, with directions to see that they each receive three pice daily. Similar inquiries must be made, and similar lists prepared, in regard to the whole of each sub-division. The agency available for this purpose is that of the sub-committees selected for each relief circle; further aid is, however, essentially required, in the shape of one or two inspecting officers, for this duty, and also for supervising the relief which may thus have to be given. A separate statement is annexed (Appendix B.) of the number of men, women, and children who have received gratuitous relief during the fortnight ending the 23rd March.

In regard to the Buxar sub-division Mr. Armstrong writes, "The actual charitable operations commenced are still confined to the advance to each officer in charge of the thannahs and outposts of a small sum for the gratuitous relief of infirm persons, chiefly professional beggars, who are relieved with food. A return is annexed, in accordance with the Government of Bengal's letter No. 1251—S.R., dated 5th March 1874, showing the number of men, women, and children who have received food regularly to each thannah and outpost during the fortnight. The arrangements being made in preparation of the machinery of charitable relief have been reported in my letter No. 280, dated the 13th March 1874. I note the Commissioner's opinion that it is advisable to postpone the giving of relief through sub-committees till the last possible moment, and I think while the members requiring gratuitous relief at the present head-quarters of the six proposed circles stand as low as they now do, it would be premature to start the regular feeding establishments at Chowsa, Buxar, and Saraya, and send in all the applicants to these places. I have called the proposed members of the sub-committees to a meeting on Monday next, when I will enlist their immediate services for the giving of any information concerning distress which may be in their power. The first thing in the way of a relief establishment that I should press for, would be the appointment of an inspector for each circle."

With reference to the Sasseram and Bhubbooa sub-divisions Mr. Eyre reports, "Upon the 26th February I commenced subsidised indoor relief in Sasseram, for all those physically unable to do earth-work on the relief roads. Grass fibre was obtained from the Kymore table-land, to be manufactured into rope. Three seers of the fibre is given out to each applicant at daybreak, to be returned in rope the same evening. The work is carried on in two large sheds provided for the purpose. The price fixed is five pice per seer of rope, and three seers represents the average daily labour of a person in the condition of those to whom such light work is applicable. Payment is made every day, and the daily earning of one anna three pie (fixed with due regard to the market rates of the common food) provides two fair meals.

" The following are the aggregate results of this relief:—

Date.	Number of Persons.	Daily Average.
26th February to 3rd March	51	8·5
4th March to 11th "	156	22·3
11th " to 20th "	192	19·2

" In addition, I have to report that arrangements have been made by the Sub-Divisional Committee of Sasseram and will shortly be made in the Bhubbooa sub-division for—

" 1. Purchase of fire-wood for poor-houses.
" 2. Purchase of necessary utensils, &c., for cooking food and drinking.
" 3. Construction of poor-houses.
" 4. Purchase of cotton for spinning relief.
" 5. Purchase of fibre for rope-making at the centres.

" The sub-committees and police are all engaged in making inquiries village by village, as to who are entitled to subsidised or gratuitous relief.

" Subscriptions amounting to Rs. 2,600 have been collected in the Sasseram sub-division."

No. 745F, dated Mozufferpore, the 25th March 1874.

From C. F. Worsley, Esq., Officiating Collector of Tirhoot, to the Officiating Secretary to the Government of Bengal, Statistical Department.

In forwarding the district narrative of scarcity and relief for the fortnight ending Saturday, 21st instant, I have the honour to submit the following remarks:—

2. *Para.* 8.—The want of carts for transport of private grain is a very serious difficulty; and though private trade might have been expected to do a great deal in this part of the district with sufficient carriage at its command, it cannot, I fear, under existing circumstances, be trusted to accomplish all that is required. There are still, no doubt, a considerable number of cattle of sorts in the interior, and from what I have myself seen in several villages to the south, and heard generally from others, I am of opinion that most villages have sufficient cattle to fetch such grain as they require, provided it can be obtained at moderately accessible marts. It is the town and the large marts that are primarily and directly affected by the scarcity of carriage; if they cannot secure sufficient carts their supplies are at once reduced; but in regard to villages (except in the north) the matter is mainly one of additional expense and trouble. I know from personal inquiries that villages 10 miles south of Mozufferpore, which used formerly to draw their supplies from the town, now import them on pack-bullocks from Hajeepore.

3. I agree with the district relief officer in thinking that our allotment of Government grain should be increased, and considering that carriage will probably be plentiful after the 15th June, and that private importations can be made in most parts of this sub-division throughout the rains, I think his estimate, which provides for supplying food to one-fifth of the population for two months, is both reasonable and sufficient. The additional allotment now asked for is 135,000 maunds.

4. *Para* 18.—The rubbee crop in the south of the Hajeepore sub-division is nearly a full one, but in the north it is very poor in several places. I saw yesterday at Shahpore Mircha Factory the produce of some 80 beegahs land, which the manager had stacked in his compound, and which he assured me was a fair sample of the outturn of the crop in his neighbourhood (about 10 miles north of Mahoweh thannah). The yield of grain he expected to be not more than 5 maunds per beegah. I have been over a good deal of the land in the south of the Mozufferpore sub-division and in the jurisdiction of the Chandrahattee outpost. What has struck me most is the irregular and unexpected plots in which good, indifferent, and bad crops occur. Side by side with a limited area of fine crops may be seen large fields either wholly bare or dotted with patches of produce, and the contrast is often equally marked even in the vicinity of village wells. The head constable of the outpost, which comprises 50 or 60 villages, estimates the average outturn at 8 annas, but I should not myself place it higher than 6. At present, want of water is felt much more severely than want of food in this part of the district.

5. *Para.* 21.—The telegram referred to in this paragraph was partially confirmed in a demi-official letter, dated 19th instant, which I received from the Executive Engineer, Durbhunga. In this letter he mentioned that "on three roads in the neighbourhood of Mudhoobunnee the numbers had increased from 57,000 to the enormous number of 114,430."

6. *Para.* 25.—I have not yet been able to visit personally the parts of the Sudder sub-division where distress is said already to exist, but I have arranged to make a tour with the District Superintendent of Police through the whole of the western portion of the sub-division between 27th and 31st instant.

Within a few days after I took charge of this district I began to receive petitions from villages in the south complaining of want of water and praying that their tanks might be re-dug at the expense of Government, and I therefore devoted my attention first to this subject. It is not my wish, nor indeed is it necessary, to dig tanks in every village where there is a deficiency of water; and hitherto I have refrained from giving money for this purpose, except in villages where the *maliks* are very poor and petty, and cattle have to be taken 1½ or 2 miles distance to water.

I have opened tank works at three villages, Koorunee, Sudwara, and Ghin-Ghuria in Chandrahattee outpost jurisdiction, and placed the works under one of the *maliks* or jeyt ryots of the village, who is paid Rs. 10 per month for supervision. The necessity of obtaining water is the best guarantee that a fair day's work will be exacted from each labourer.

7. I have visited Soomera and Chajan villages, in which the first symptoms of distress were observed more than a month ago. In the former village cotton-spinning, twine-twisting, and basket-making have become very popular, and afford ample employment to all who cannot work at the tank. In the latter village I found some 300 persons employed in digging out an old tank. None of the labourers appeared to me to be thin or weakly, nor have I noticed any bad cases on the tank-works at Gunnerpore, Sukree, and Behunpore along the Hajeepore road, where many hundreds of persons are daily employed.

8. I have issued strict instructions that wherever there is a real demand for employment (as at Motipore), and there is tendency of labourers to collect together at any one work, new works must be immediately opened in the neighbourhood and the labourers be distributed over them.

9. *Paras.* 27, 28.—With reference to crime, I think the fact of its being double what it was in January and February 1873 is less matter for surprise than the numerically small increase, if regard be had to the size and condition of the district. The general orderly behaviour of the people is most remarkable.

10. *Para.* 30.—I feel a little doubtful whether so large a number of works as 113 can be absolutely required in the Seetamurhee sub-division, where the number of labourers employed upon them is only 20,032. The increase of labourers does not appear to have been proportionate to the increase of works during the last fortnight, and an average of less than 180 labourers to each work seems smaller than it might advantageously be. I have now no direct control over this sub-division in relief matters, but I think it right to direct attention to the subject. The enhanced rates of wages in Seetamurhee sub-division I have previously noticed, and I am much surprised that they have not attracted more labourers.

11. *Para.* 34.—I am anxious to open more road-works in the Sudder sub-division, and I hope within the next 10 days to suggest some for the Commissioner's approval. One work I have already ordered to be commenced in rather a distressed locality. It is a road leading from Regye Factory (14 miles north-west from Mozufferpore) to Titariah in the Chumparun district, where it will join a new road passing *viâ* Seraha to Motiharee, and originally planned and partly executed by Mr. Metcalfe, Collector of Chumparun, in the scarcity year of 1869. When the entire road is completed it will form a second line of communication between Mozufferpore and Motiharee.

12. *Para.* 40.—I regret to observe that the balance of grain in hand at Bunker still continues to increase, and that yesterday it exceeded 80,000 maunds. The Southern Company are arranging to carry up the Gunduck to Sahebgunge, and thence to transport on carts to Seetamurhee, all the remaining grain that they have contracted to convey to that sub-division. By this arrangement some 1,000 or 1,200 carts will be set free and will become available for transporting increased quantities of grain to Cantee, Rossulpore, and Athar depôts of the Northern Company. I think hitherto that the Southern Company have been allowed to carry direct to Seetamurhee more than their fair share of grain, and that owing to irregular arrivals of grain the Northern Company have been put to great inconvenience and have had some reason to complain. Colonel Macgregor, however, has now made a distribution of grain under which the Northern Company will receive their due share each week, and I trust there will be no further contention between the two Companies.

13. *Para.* 59.—The distribution of charitable relief in Mozufferpore is being carefully made under the immediate supervision of the Chairman and members of the Sub-Committee. I have twice been present at the distribution of grain and am satisfied that the persons relieved are fit recipients of charity. To the care and precautions taken to admit none who are able to work I attribute the entire success of this institution.

14. In conclusion, I may add that relief preparations are advancing rapidly in the Sudder sub-division, and that, though increased distress is daily reported, adequate measures are being everywhere taken to afford relief.

Dated Mozufferpore, the 23rd March 1874.

From H. W. GORDON, Esq., Covtd. Deputy Collector, on special duty, Tirhoot, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I HAVE the honour to submit my narrative of scarcity and relief in the Tirhoot district for the fortnight ending Saturday, the 21st March 1874.

A.—STATE OF THE COUNTRY.

2. *Durbhunga.*—In the Durbhunga sub-division the supply of food-grains in the bazars does not differ from that last reported, The Rosera bazar supplies to some extent the markets on the south-eastern side of the sub-division. Supplies still continue to be plentiful in the Durbhunga bazar. Prices are everywhere high.

3. *Madhubanee.*—In Madhubani sub-division prices are about the same as last reported. The supplies in the bazars are reported to be small. Indian-corn in small quantities is being imported on pack-bullocks from Seetamurhee, and urid and gram from the North-West Provinces by way of Chumpta Ghaut.

4. *Seetamurhee.*—In Seetamurhee sub-division the prices of grain have remained steady, except at Sonbursa, where the price is reported to be below 10 seers. Sales of Government grain have commenced at Bhootahi and Sonbursa.

5. *Hajeepore.*—In Hajeepore sub-division prices have a downward tendency, owing no doubt to the cutting of the rubbee having commenced. The supplies in the bazars continue to be sufficient.

6. *Tajpore.*—In the Tajpore sub-division wheat and rice are slightly dearer. Mr. Wace fears that rice is not always procurable at the figures quoted in the markets in the interior. The bhadoi grains are selling at about the same rates, but the supply of makai is not quite so brisk as it was. The grain most common now in the bazars is a mixture of grain and barley, imported, it is said, from the North-West Provinces.

7. Mr. Wace writes: "I am, however, anxious about the bazar supplies. The contractors carrying from Chumpta Ghat have lately taken to using pack-animals. I have been asked to issue orders in the local markets to ensure a greater supply of them. This I have refused to do. I do not know how this great importing pergunnah has been hitherto supplied, with nearly all its carts drawn off to feed those tracts which usually export to it; but of this I am certain, that if pack-bullocks are also taken up, the bazar supplies must fail."

8. *Sudder.*—In the Sudder sub-division prices continue very high, especially at head-quarters, where common rice is now selling at 9 and wheat at 10 seers a rupee. That prices should rise is not, I think, surprising. Private importation is, I believe, almost paralysed, nearly all the available means of transport having been taken up by the contractors. The smaller markets in the interior now draw their supplies from the larger bazars of Mozufferpore, Sharfuddeenpore (10 miles from Mozufferpore on the Durbhunga road), and other places. At Rajkhund I was told the market was supplied from Sharfuddeenpore; the drain on the larger marts has consequently increased, and as the incomings do not balance the outgoings the prices necessarily rise, and I fear will rise until Government sales commence. I confess I am somewhat anxious about the supplies in the interior; in some places it is evident grain is only procurable in small quantities. On my way from Rajkhund to Kutra I met several men returning from a large mart (Nagwarah) with their pack-bullocks, but with no grain. They told me they could not get any. The rubbee now being harvested will no doubt afford some aid to the people; but this aid cannot be general, because in some rice-growing tracts there is no rubbee at all. I am therefore anxious to get more Government grain stored speedily in the sub-division. At present all the grain passing through goes to Seetamurhee, and I have written to the Commissioner stating the allotments I think required for each circle, and asking permission to take some of this Seetamurhee grain.

9. The annexed table gives the prices and descriptions of grain selling at some of the principal marts in the district on the 7th and 21st instant.

10. *Stocks.—Durbhunga.*—On this subject the sub-divisional officer of Durbhunga observes: "The only thing worth communicating to you is the fact that on two occasions, when Mr. Aikman in Hirni and Mr. Paul at Mohamadpore were present at fires, it was found that in each case large quantities of grain were stored in the houses that were burnt. Mr. Aikman reports that he thus found grain stored in most unlikely places." It is not said to whom this grain belonged: stocks may, and no doubt do, exist, which will never be sold to the public and cannot therefore be taken into account.

11. *Madhubani.*—The Madhubani officer reports: "I can add nothing to the information with regard to stocks in the country. My inquiries have elicited no traces of the existence of such stocks except of paddy in the hands of the mohunts, and I fear that the amount stated to be in their possession is exaggerated by popular reports."

12. *Seetamurhee.*—On this subject the sub-divisional officer of Seetamurhee says but little, Mr. J. Tripe, Superintendent of North Shewhur, writes: "I am convinced that in this neighbourhood no ryot has any store of grain, and we must look to feed the people either by relief works or sales for the next eight months, when the paddy crop comes in."

13. *Tajpore, Hajeepore, and Sudder.*—I have nothing further to report as regards stocks in these three sub-divisions. My impression is that in the Sudder and Tajpore sub-divisions stocks that will be available are inconsiderable.

14. *Rainfall and state of the crops.—Durbhunga.*—During the fortnight the rainfall in the Durbhunga sub-division was ·06 inches. The crops remaining in the ground in any quantity are rahur, barley, and cheena. Rahur is good, barley generally very poor, and cheena is not promising.

15. *Mudhoobunnee.*—In Mudhoobunnee itself the rainfall is reported to be ·06 inches; but in the neighbourhood of Narha Factory 1½ inches are said to have fallen. In the vicinity of Andramat, in the Naraya relief circle, a severe hail-storm occurred, which extended over an area of between 40 and 50 square miles. The rahur, barley, mango, and other crops which came near the centre of its sweep were completely destroyed. In the rest of the sub-division the rahur and mangos promise well. Very little cheena and moong has been planted.

16. *Seetamurhee.*—The Seetamurhee officer reports: "On the 9th there was a shower of rain ($\frac{1}{10}$ of an inch). The prospects of the cold-weather crop continue good in most places. The quantity, however, will not make up for the quantity unsown and the quantity that did not germinate. Wheat, barley, and rahur are fast approaching maturity; peas, mustard, gram, and massur are still being harvested. The mango crop is doing well."

17. *Tajpore.*—The rainfall at Tajpore during the fortnight was ·19 inches, but less where it was more needed. Mr. Wace still adheres to his previously estimated outturn of rubbee in pergunnahs Suressa and Balagutch. While it is hoped that this crop will save Balagutch, it is feared that in Surressa it will afford but a scanty subsistence for about two months. The prospects of the cheena, keoni, moong, and mangos are not so good as last reported. The mangos have suffered from the recent rain and high winds. People think the mangos will be a means of subsistence for more than a month, some say for two months; but I cannot help thinking this fruit will be a dangerous article of food to a starving population. The rain certainly did some good to the cheena, moong, and keoni sowings, and it is hoped that in parts they will afford considerable relief; but in the western tract and in the vicinity of the Tal Barreyla, where the soil is clayey, little or no relief can be looked for from this source.

18. *Hajeepore and Sudder.*—No rainfall is reported from Hajeepore, and only a few drops fell in the Sudder. In Hajeepore the rubbee is being harvested, and there is a very fair outturn. I have just returned from a journey through a portion of the Rajkhund and Kutra circles to the north and east of the Sudder sub-division. I did not find the rubbee looking generally as well as I expected. In parts where irrigation was possible there are fine patches especially of rahur, but the wheat and barley are exceedingly poor. There are large rice tracts in this direction, in which I was informed little or no rice was yielded. On the whole, I fear the rubbee in this direction will not afford means of subsistence for a considerable time. Much cannot be expected from the moong and cheena; more rain is needed for them. The warm west winds, which have already set in, will do great damage to such of this crop as has germinated, and irrigation, from the extreme scarcity of water everywhere, is simply impossible.

19. *Condition of the people.—Durbhunga.*—The sub-divisional officer writes: "Actual famine exists only in the Bahera thanna, and there only in certain villages, and among certain classes in those villages. Everywhere in Bahera and Singhia there are cases of emaciation and distress to be found, but only in the Desouta circle is there actual famine among any considerable number. In the Durbhunga thanna the cases of emaciation are met with as a rule on the great Durbhunga to Bahera road relief work. But if you consider that on this road there are at present 6 per cent. of the total population of the sub-division, that the people absolutely desert their villages during the day, taking with them the sick and old, who at the best of times exist in many villages, to receive the pay their mere presence on the work entitles them to, you will be surprised that so few bad cases occur among them. During the fortnight few deaths on the road have occurred, and I am informed that the bodies were emaciated. But, looking at the circumstances, the mortality seems very small." Mr. Aikman, Superintendent of Hatti relief circle, reports: "With regard to deaths from famine, it cannot be denied that such have occurred. In villages to the south of Bahera it was stated to me that several deaths from want of nourishment had occurred. In a village named Sheonagur I saw the body of a man who was said to have died from starvation. He was an old man, and the appearance of the corpse bore out the statement, as the body was in a state of extreme emaciation. But even in this case I noticed that the son of the deceased did not show any signs of suffering from want of food. In a place like Hatti people arrive often from considerable distances in a state of utter exhaustion, which even the most careful attention will not enable them to rally from. I have heard of five deaths having occurred in Hatti in this way. The only one that happened whilst I was here, was that of a labourer on the road. I saw the body. The end may have been hastened by want of proper nourishment, but the case did not seem to me to be one of pure starvation. I have appointed an inspector and two peons, whose duty it is to patrol this place and the works going on here and pick up and convey to the relief houses any case of extreme want. With regard to the question of mortality, I would remind you that the average Indian mortality, even in the best of times, is not less than 40 per mille; and considering the large numbers (not less than 10,000) at work on the road at this and Singhya we must not be surprised at deaths occurring."

No deaths from starvation are reported from other parts of the sub-division.

20. *Mudhoobunnee Sub-division.*—Mr. Magrath writes, "The people are rapidly reaching the end of their means of subsistence. This is especially the case in Pergunnahs Hatti and Jubdi, particularly the parts of them lying in the Motipore Circle." Three males (dosadh) and one female (dhanuk) were reported to have died of starvation in this circle. But the sub-divisional officer finds on inquiry that two "were children of a widower, who was himself in a state not only not of starvation, but of rude and well-nourished health. If these children died of starvation it was absolutely through neglect on the part of their father. The other case was that of a dosadh of

25 years of age, who appears to have preferred to sit idle in his village rather than go less than six miles to work on the road."

A tank was opened in this village as a relief work, but the people who came did not even stop for half a day, and most of them, when there, did not attempt to do anything. Mr. Magrath remarks that "this is the most disheartening point of the famine relief." Distress is said to be very general in the north of the Motipore Circle: four deaths from starvation were reported, but the sub-divisional officer considers that "disease was in all cases the proximate cause of death." Babu Ishri Parshaud reports two deaths from starvation. They were women who came to the tanks in the last stage. It is supposed that they came from places outside the district, as the names of the villages cannot be traced. At Harlakee the works now carried on are deemed quite adequate for relief of distress, but the Superintendent adds that "the time has now come when relief must be afforded to the upper classes." Among others the "sonars," it is said, will not work with the *kodali*.

Since the 22nd February the Sub-Assistant Surgeon has kept a record of cases of starvation admitted for medical assistance; of these two have died (one from spleen, and the other from disease of the heart), six have been discharged, four have absconded, and the rest are still under treatment.

21. Mr. A. Forbes, in charge of Naraya relief sub-division, writes, "The establishment of sub-circles has not been commenced at all too soon; in almost every village real cases of distress can be found by ferretting them out. And Mr. F. A. Forbes reports that his sub-superintendents are already bringing them to light in considerable numbers." The general prospects of the Naraya sub-division is not considered to be gloomy. The startling telegram, however, received a few days ago that 120,000 people, *i.e.*, between a fifth and sixth of the total population, had collected on three roads is indicative of wide-spread distress in the Mudhoobunnee sub-division.

22. *Seetamarhee.*—In the vicinity of Eturnah, in the North Shewhur Circle, great distress is anticipated. Bands of people from Nepal and the surrounding villages were flocking to the grain golah, and were delighted to find that grain was stored there to feed them in the time of their distress. In Shewhur the condition of the people is reported to be not discouraging.

Mr. Wise, the Superintendent, writes of Sonbursa that "rice is very scarce, and that he is afraid the Nepaleese will come down like bees, and the small quantity of 7,500 maunds will soon be finished. Small-pox has broken out in Seetamarhee, Majorgunge, and in parts of Jalleh, but the health of the sub-division is said to be generally good.

23. *Tajpore.*—There have been no cases of starvation in this sub-division, but misery is wide-spread. The worst parts are those west of the Mozufferpore road and the shores of the Bareyla, and those in the south-east quarters of the sub-division.

24. *Hajeepore.*—In this sub-division no cases of starvation, or of absolute distress, even amongst the professional beggars, have occurred. Indeed, this sub-division seems in every way to be better off than any other portion of the district.

25. *Sudder.*—Distress more or less severe is prevalent all over the sub-division. The Deputy Inspectors, whose appointments were alluded to in the narrative, have now visited portions of their respective circles. Their daily reports are not encouraging. The police, who maintained a perfect silence as to the condition of the people prior to the Somera case, are now submitting daily reports of an alarming nature. Many of these when tested are found to be exaggerated, while some are absolutely false. For instance, the reported two deaths from starvation in a village named Baragaon, some 14 miles west of Mozufferpore. On visiting this village I saw no signs of distress. The people (two women) who had died were in good circumstances, while their immediate relatives were in good condition and health. These deaths had evidently occurred from disease. The only complaints made were that there was a scarcity of water, an evil which is now becoming general. There, however, can be no doubt that distress is, and will be, much more severe than was ever anticipated. As Mr. Worsley wrote in a former report, the Sudder sub-division has laboured under the disadvantage (until lately) of having no special officer to make village visitations and careful inquiries. The result is that we are somewhat behindhand in our relief organisation. I have no fear, however, that the measures we are adopting will not meet all emergencies. I have started, and am starting, relief works (principally village tanks) in each circle. In six of the eight circles there are managers of factories who have undertaken to open, and, for the present, to supervise tank and road relief works. Under heading B it will be seen that many have been started. I may mention one instance as indicating the distress of the people. Mr. Fraser, of Motipore, started a road about a fortnight ago, and in about 10 days 5,000 persons flocked to it. I have been to his factory and selected some tank work in the neighbourhood so as to prevent overcrowding on one work. These labourers do not happily evince signs of much distress. Some of them come from a distance, but all return to their homes at night. High rates are not the inducement, because the highest rate given by Mr. Fraser is only little more than one anna per diem, while the Public Works Department are paying 1½ annas. The Commissioner has sanctioned the employment of an European supervisor of Mr. Fraser's works on Rs. 100 a month. Besides advances made to planters for relief works and for charitable relief, I have made over moneys to each of the Deputy Inspectors, authorising them to commence village tanks wherever distress indicates a need for them, and through the agency of the malik, putwari, village headman, or other local agency to whom a monthly remuneration will be given, to appoint mates of gangs of 20 labourers, in fact to make all necessary arrangements. Some Sub-Deputy Inspectors have also been appointed for each circle to assist the Deputy Superintendent in surpervising these village works. Small sums of money for charitable purposes have been also advanced to them and sent to thannahs and outposts in order to relieve cases of urgent want. Minor works, such as spinning, rope and basket making, have

been started in several villages with wonderful success. A head cotton golah has been opened at Mozufferpore and subsidiary golahs in some villages in the interior. In the villages of Chajun and Somera no signs of famine now exist; relief works of every description have been started, and no apprehension of distress need now be entertained. Mr. Deputy Collector Warde-Jones has just returned from a visit to certain distressed villages in the Paru Circle. In Janilpur and the neighbourhood he found some 80 persons who greatly needed help. He accordingly opened a cotton and jute godown, and had spinning and rope-making operations commenced at once. He found a large number of persons who were unfit for any kind of work. For these he established two poor-houses (one for males and the other for females), where cooked food is to be distributed daily under the immediate supervision of Mr. Abbott of Jointpore. At Paru Mr. Warde-Jones found matters as bad as at Jointpore, and made similar arrangements. Pending the arrival of the Superintendents of relief circles, I have been busy in dividing each circle into sub-circles of some 20 villages for the present, so that the Superintendents will have some materials ready to hand when they join. I am glad to say three Superintendents arrived on the 21st and will be posted to Paru, Belsundh, and Kutra, where relief measures seem more urgently called for. On my recent visit to Rajkund and Kutra circles I found the relief works consisted only of a road from Rajkund to Jaleh, started by Mr. O'Reilly, a tank by the Darbhunga Raj, to which however very few outsiders were admitted, and a private tank by a zemindar. The total number of people employed in these two circles was not more than 1,000 out of a population of about 218,000 souls. I started a tank at once near Rajkund through the village headman, and Mr. McEwen, of Rajkund Factory, promised to start others. He now writes to me that he has started two more tanks, and that from the numbers that came to these works he judges the people are in distress. At Kutra I made similar arrangements and had tank work started by the Deputy Inspector. The Executive Engineer has been asked to open work at different points along the Belsundh and Simree road which runs through the Rajkund and Kutra circles.

26. Our organisation of labour relief and charitable relief is yet scarcely systematic or complete. The Sudder sub-division, if not the largest in size, has the largest population (926,928) of the six, and it will take a little time to elaborate our arrangements to get matters into perfect working order. I have endeavoured to do my best, and I trust in my next narrative to be able to report a more systematic organisation.

27. *Crime.*—Grain thefts do not appear to have increased throughout the district during the fortnight. But crime, especially thefts and house-breaking, has greatly increased during the last two or three months. I subjoin a comparative statement for the months of January and February in 1873 and 1874.

Names of Sub-Divisions.	January.		February.	
	1873.	1874.	1873.	1874.
Mozufferpore - - - -	63	120	74	109
Tajpore - - - - -	23	47	46	56
Durbhungah - - - -	33	79	36	97
Hajeepore - - - -	8	39	13	65
Seetamarhee - - - -	46	90	52	118
Madhubani - - - -	27	78	27	76
Total - -	200	453	248	521

28. The District Superintendent of Police observes, "The most marked increase in proportion to usual average of crime for each sub-division is at Hajeepore, which has increased by about five times the ordinary amount, owing to rice thefts at the ghauts. Durbhungah and Madhubani, each has increased by nearly three times the average amount of crime. Seetamarhee has more than doubled. Mozufferpore shows something under 75 per cent. increase, and Tajpore exactly 50 per cent."

B.—Relief Works.

29. *Durbhunga.*—In the Durbhunga sub-division there are 10 roads and five tanks under the Executive Engineer. These works give daily employment to 76,071 labourers. Of these, 50,400 are employed in the Durbhungah and Bahera road. Village works employ 17,146, and the Durbhungah Raj 12,460; total for the whole sub-division, according to returns received, 105,677. Mr. Macdonell, however, observes that these returns are not complete, and he estimates that the total numbers employed do not fall short of 120,000.

30. *Seetamarhee.*—During the fortnight 66 new relief works have been opened in this sub-division. There are now 29 roads and 84 tanks, giving employment to 20,032 labourers daily. The Court of Wards employs 3,050, and private relief works 4,000, thus making a total of 27,082 souls. The rates paid on these works (2 annas per man, 1½ annas for women, and 1 anna for children) seem to me to be high. The highest rate paid by the Public Works Department in other sub-divisions is 1½ annas; and on many of the works carried on by the planters and village agency, little more than 1 anna is given, and yet the people flock to these works in large numbers. Mr. O'Reilly remarks that the Nepaulese come for work in great numbers on the relief works on the frontier.

31. *Madhubani.*—During the fortnight, 15 tanks and 3 roads have been started. There are now 38 relief works open, and 117,296 labourers employed daily. The telegram sent since the

returns were written gives 120,000 persons on the Belwarah and Mirzapore roads. The returns give only 50,000. The above numbers will therefore be increased by 70,000; and the total number employed in this sub-division will thus amount to 187,296. In most cases the local bazar supplies the food, but at Janjharpore, Belwara, Pandoul, and Kewan, rice is being sold on the works.

32. *Tajpore.*—In the Tajpore sub-division there are seven road relief works, giving daily employment to 1,057 labourers. Two tanks are also being deepened, employing 1,205 labourers daily. Total for the whole sub-division 2,262.

The few people who come to these works do not indicate much distress in this sub-division.

33. *Hajeepore.*—The Sub-Divisional Officer writes that "there are no purely relief works in this sub-division, and there is not the least necessity as yet to invite labourers by throwing open works."

The Executive Engineer gives the numbers working daily on the repairs of five roads as 635.

34. *Sudder.*—During the fortnight 19 tanks and four roads have been started. Of the tanks 18 are supervised by local agency at the expense of Government, and the other is a large private tank which is being excavated about 1½ miles from Mozufferpore, on the Hajeepore road, by Ram Monohur Sahoo, a wealthy mahajun of the town. Of the roads three are being carried on by planters, and the fourth is the road across the Turki Chour under the Executive Engineer. The relief works are now 16 roads, 25 tanks, and one embankment (Gunduk), and the total number of labourers daily employed on these is 22,992.

35. Summing up, then, we have for the whole district the following numbers:—

Mudhoobunnee Sub-Division - - - - -	187,296
Durbhunga - - - - - - -	120,000
Seetamurhee - - - - - - -	27,082
Sudder Sub-Division - - - - -	22,992
Tajpore - - - - - - -	2,262
Hajeepore - - - - - - -	635
Total - - - - -	360,267

C.—TRANSPORT OF GRAIN.

36. *Durbhunga.*—The programme of transport operations has been changed. The Sub-Divisional Officer writes—"There are four bases of operations—Monghyr, Mokameh, Chumpta, and Bunkar. The Alliance Company carry from Monghyr and Chumpta; the North-Western Contractor, Nil Komul Mitter, from Mokameh (*i.e.*, Semeria Ghaut); Mr. Wilson from Bunkar. Some of Mr. Wilson's grain is delivered at Poosah, and thence carried on by Mr. Studd. The Monghyr route is open for boats to Poorani Ghaut, south of Singhia. Three lakhs are to be delivered there, and distributed among my Bahera and Singhia golahs. The Mokameh grain is to be delivered at Pahuddee for Muddehpoora, &c. The Chumpta grain at Hya Ghaut for Modhoobunnee, and Mr. Studd is to deliver at my north-west golahs. The Alliance Company have made great, and not unsuccessful, efforts to increase their resources. They have now 6,000 carts in the field, and several hundred pack-bullocks. They have a fleet of boats, and state that they can put 3,000 more carts on work."

37. *Mudhoobunnee.*—The Sub-Divisional Officer reports—"The transport, as Government is by this time well aware, is blocked below Lehera, so that not one-fifth of the grain due has been laid down for transport into this sub-division.

38. *Seetamurhee.*—Grain is being pushed in steadily from Seetamurhee to the frontier outpost. The Sub-Divisional Officer writes—"I learn that grain coming from Seetamurhee has been temporarily directed to Durbhunga. I estimated eight lakhs of maunds for Seetamurhee sub-division; but in that made no provision for an increase of people from Nepal, and I trust that as much grain as possible may be thrown into the division with all the speed practicable.

39. *Tajpore.*—On the 13th there was a balance of 34,600 bags in hand at Chumpta, and the average despatches for the preceding days were 2,463 bags, and the greatest number despatched in any one day 5,215 bags. The Alliance Transport Company were thus working much below its contract, but it is hoped that the opening of the Monghyr route will bring more carts into the field.

40. *Hajeepore and Sudder.*—During the last few days there has been a hitch at Bunkar Ghaut. The last return shows 69,310 maunds as balance in hand. Major DeKantzow reports "that carts have come in only half strength;" some, it is alleged, have been taken on from Russulpore to Pooprea by the Northern Company, and others from Durbhunga. The northern contractors retort that the carts they have taken belong to their parts of the district, and not to Hajeepore, and that therefore they have a right to them. The refusal of the two Companies to amalgamate is to be deplored. Union in a matter of this kind would undoubtedly tend to make the contracts work regularly and smoothly.

41. *Private Importations.*—Private importations appear to be very small throughout the district. Some are going on in Mudhoobunnee, but to what extent is not known. In Tajpore it is reported that "zemindars and others are doing absolutely nothing: many of them are perfectly correct in stating that they have no means of transport now, if they wished to import." In the Sudder Sub-Division, I believe importations are almost *nil.* There is no means of transport. Merchants who have taken advances for the purchase of grain complain that they cannot get the grain they have purchased into the district. Even in Mozufferpore there is great difficulty in getting two or three carts for private purposes.

D.—Storage of Grain.

42. *Durbhunga.*—The quantity of grain stored in the Durbhunga Sub-Division is 91,978 maunds. The golahs have a capacity for holding 1,240,000.

Mudhoobunnee.—The quantity stored in Mudhoobunnee is 203,344 maunds.

Seetamurhee.—In Seetamurhee 236,602 maunds. In this sub-division the construction of five large golahs has been completed at Seetamurhee, and one is in the course of erection. The names of the golahs and relief circles in the three sub-divisions were given by Mr. Worsley in the last narrative, and need not be reported in this.

43. In Tajpore the quantities stored are as under—

	Maunds.
Poosah	17,858
Tajpore	1,766
Total	19,624

Golahs are being constructed to hold the extra 58,000 maunds for which Mr. Wace has applied.

44. *Hajeepore.*—In Hajeepore the quantities stored are—

	Maunds.
Hajeepore	1,980
Lallgunge	212
Mahooa	2,987
Total	5,179

45. In the Sudder sub-division—

	Maunds.
Mozufferpore	18,725
Kutra	6,628
Turki	10,722
Belsundh	2,808
Total	38,883

No intimation has been received of the arrival of any of the 20,000 maunds at Sahebgunge.

I have applied for an extra supply of 135,000 maunds, to be distributed as under—

	Maunds.
Mozufferpore	19,000
Sahebgunge	5,000
Kutra	18,000
Turki	7,500
Belsundh	18,000
Rajkhund	20,000
Paroo	27,000
Marwan	18,000
Total	132,500

say 135,000; and I am constructing golahs to receive the quantities.

47. Summing up these, the total quantity of Government grain stored in the district is as under—

	Maunds.
Durbhunga	91,978
Mudhoobunnee	203,344
Seetamurhee	236,602
Sudder	38,883
Tajpore	19,624
Hajeepore	5,179
Grand total	595,610

E.—Advances.

48. *Durbhunga.*—In Durbhunga Rs. 1,140 have been advanced for purchase of grain, Rs. 1,315 for excavating tanks, Rs. 100 for digging wells. Four applications are pending.

49. *Mudhoobunnee.*—The Sub-Divisional Officer of Mudhoobunnee has advanced Rs. 500 under the Land Improvement Act, and Rs. 830 to ryots under Sir Richard Temple's Minute No. 29.

50. *Seetamurhee.*—In Seetamurhee Rs. 3,385 have been advanced for purchase of grain, Rs. 26,850 have been lent to zemindars for the support of their poor ryots, Rs. 730 for digging wells, and Rs. 11,375 for land improvements.

51. *Tajpore.*—In Tajpore three applications for advances for the purchase of grain, and five for land improvements, are still pending.

52. *Hajeepore.*—No advances were made during the fortnight in Hajeepore.

53. *Sudder.*—Rs. 7,755 have been advanced for purchase of grain. It seems to me hardly advisable to continue these advances. It is almost impossible that grain can be now imported. The money will probably be spent in private speculation, and though the public may, to a small extent, be indirectly benefited thereby, still the object for which these advances are being made will not be achieved.

F.—CHARITABLE RELIEF.

54. *Durbhunga.*—The Sub-Divisional Officer gives information in a general form. In the Desonta and Rohar circles the grouping of villages has been completed, almost completed in the Singhia, and half completed in the Mahomedpore circle. "The only circles that remain are the Gangduti, Liherah, and Hya Ghât circles, and officers have been sent to them."

Poor-houses have been established at Durbhunga, Bahera, Hatti, and Singhia, in each of which cooked food and medical treatment are administered. Charitable relief is being distributed in the circles that have been organised, and the Inspectors have been directed to put on charitable relief on all proper cases. The numbers daily in the receipt of gratuitous relief are not given. The house-to-house register for the town of Durbhunga, as required by Sir Richard Temple, has been completed. "The town has been divided into seven circles, and the relief operations in each circle been entrusted to a committee. Mr. Macdonell regrets he is unable to give the lists of those on charitable relief in the various circles, and pleads as an excuse the unavoidable delay incident to all new arrangements in the submission of returns; he hopes, however, in his next report to be able to say that things are progressing in an orderly manner."

55. *Mudhoobunnee.*—The following statement has been submitted from this sub-division:—

Number of Committees and Sub-Committees as yet appointed.	Number of Special Relief Sub-Divisions opened and officered.	Number of regular Relief Circles opened and managed by Special Officers.	Number of Relief Circles opened and managed by Planters, Zemindars, and other Residents.	Number of Work-houses and Centres for the distribution of Food and Gratuitous Relief.	Number of Men, Women, and Children (with total) in receipt of gratuitous relief in any shape through the Charitable Relief Organisation.
1. Mudhoobunnee Sub-divisional Committee.	1. Mudhoobunnee.	1. Nowada, Mr. Mackertich	—	1. Mudhoobunnee	50 to 60 per diem.
	2. Narayn	2. Jhenjharpore, E. C. Ozanne	—	2. Motipur	300 per diem.
		3. Motipur, H. C. Williams	—	3. Naraya.	
		4. Mahadeomuth, F. A. Forbes	—	4. Muddehpoora.	
		5. Narayn, A. Forbes	—	5. Pandoul	130-140.
		6. Pattrahee, Mr. Lorimer	—	6. Kewan	40.
		7. Umgaon, H. Rattray	—	7. Belwara	30.
		8. Bhaknea.			
		9. Kutchra, Neeklay.			
		10. Doomra.			
		11. Mudhoobunnee, Ishri Pershad.			

As yet it has only been thought necessary to establish a shed as a poor-house at Mudhoobunnee, and in the other places the poor mostly come and go. A shed has also been erected at the dispensary "for those suffering from starvation and requiring medical assistance." The Sub-divisional Officer writes—"Messrs. Williams, Mackertich, Forbes, and Rattray report that they are engaged in the arrangement of sub-circle and house-to-house visitation by Superintendents. Mr. Williams has already two and Mr. F. A. Forbes four sub-circles already at work. Mr. Oozanne leaves at once for Jhanjharpore, and Babu Ishri Pershad will then start the sudder sub-circles. Relief by tickets has been started by Messrs. Williams, Mackertich, Forbes, and Lorimer."

56. *Seetamurhee.*—Mr. O'Reilly gives the subjoined statement:—

Number of Committees and Sub-Committees as yet appointed	1
Number of special relief sub-divisions opened and officered	1
Number of regular relief circles opened and manned by special officers	6
Number of relief circles opened and managed by planters, zemindars, and other residents	13
Number of work-houses or centres for the distribution of food and gratuitous relief	8

Number of persons in receipt of gratuitous relief in any shape through the charitable relief organised daily.	Men	2,800
	Women	1,600
	Children	821
	Total	5,221

57. Spinning and weaving are being carried on with great success in this sub-division. The number of persons to whom cotton and thread have been distributed is 3,261, and the amount expended in cotton and wages of labour Rs. 3,236. Rope and basket making have apparently not

been introduced. Messrs. Love and Wise, Special Superintendents, have joined their posts during the fortnight.

58. *Tajpore and Hajeepore.*—No charitable relief operations have commenced in these sub-divisions. Round about Poosah the number of beggars is reported to be increasing.

59. *Sudder.*—For the Sudder Sub-Division I beg to report as under:—

1. One Committee and five Sub-Committees have been appointed. Two Committees—one at Janitpore (in Paroo circle), and the other at Rajkhund—were appointed during the fortnight.

2. No special relief sub-divisions have been opened.

3. Eight regular relief circles have been opened. At present the only special officers are the Deputy Inspectors, who are carrying on the village visitation work.

*1. Sahebgunge.
2. Rajkhund.
3. Jaintpore, for Paroo.
4. Belsundh.

4. Four relief circles* are at present managed by planters.

5. Two poor-houses (one for males and the other for females) have been opened at Jaintpore, and two similar ones in Paroo. One poor-house has been opened in Mozufferpore.

6. The poor-houses of Jaintpore and Paroo have only just been opened, and no returns therefore received. Mr. Richardson, Chairman of Mozufferpore Sub-Committee, has furnished me with return, which I subjoin.

First Weekly Report of operations conducted by Mozufferpore Sub-Committee—Poor Relief.

Date.	Member of Committee in Attendance.	Adult Men.	Adult Women.	Children.	Total.	Approximate Amount of Food distributed.	Kind of Food.	Remarks.
1874. Sunday, 15th March -	R. J. Richardson -	11	—	—	11	5½ seers -	Janera.	
Monday, 16th March -	Baboo Ooma Churn Bose and R. J. Richardson.	15	20	4	39	18½ „ -	Do.	None but the blind, lame, aged, sick, very poor, and weakly have been relieved. Each adult has received ½ seer, and each child ¼ seer of janera or gram (uncooked) with a small quantity of salt daily. The distribution each morning at 7 a.m. has been made under superintendence of a member of the committee. A long shed is available for those who may wish to reside on the spot; as yet the building is unoccupied. Professional beggars and persons at all able to work have not been relieved.
Tuesday, 17th March -	R. J. Richardson -	19	27	6	42	24½ „ -	Do.	
Wednesday, 18th March	Syud Mohamed Ali Khan, R. J. Richardson.	25	32	10	67	31 „ -	Gram and salt.	
Thursday, 19th March -	R. J. Richardson -	31	53	24	108	48 „ -	Do.	
Friday, 20th March -	Baboo Kuldeep Sahoi, R. J. Richardson.	34	74	18	126	58½ „ -	Janera and gram.	
Saturday, 21st March -	R. J. Richardson -	53	95	23	171	97¾ „ -	Janera and salt.	
Total - -		188	301	85	574	265¾ seers = 6 mds. 25¾ srs.		

Gratuitous relief in money is being distributed by the Deputy Inspectors of circles. Returns show 79 persons have received this sort of relief. There must be a great many assisted by planters from charitable funds advanced to them, and by the police also from small sums I have placed in their hands. But I have no regular returns, and they cannot be expected until regular and systematic arrangements have been made.

In the Mozufferpore poor-house uncooked-food, and at Jaintpore and Paroo cooked food, is distributed.

60. Mr. Deputy Collector Warde Jones has at my request drawn up the following rules for feeding the poor with cooked food, which I hope may be approved.

RULES.

1. Gratuitous relief in the shape of cooked rice should be given to such as are really unfit for all kinds of work.

The Superintendents and Deputy Inspectors of circles to satisfy themselves that gratuitous relief is absolutely necessary.

2. When it is really found necessary to feed gratuitously, a poor-house, consisting simply of a thatched roof, supported by props (its size to be in proportion to number to be fed), should be erected, and the people to be fed should be assembled at 11 a.m. and again at 6 p.m. to partake of their meals. The hours to be announced by beat of drum.

3. Each "kangal's" name must be registered by the mohurir of the rice depôt, and the tickets should be granted to each "kangal" bearing his No. in the register. On this being produced he may be fed. Each "kangal" to eat his food at the refuge, and after finishing his meal he will go back to his village, unless unable to do so, in which case he may remain on the premises.

4. The following rations will be found fair and may be adopted:

* Rice cooked for adult male at two meals per diem, 12 chittacks; adult female at 10 chittacks; children at 7 chittacks.

To every maund of cooked rice, 8 seers of dâl may be allowed, and one third of a chittack of salt may be given to each "kangal."

When any "kangal" has gained strength by being thus fed, he or she must be turned out and the ticket granted taken away, and such person must be set to some task-work, such as public

---

Note.—[* These rations are lower than those granted in the Orissa famine; *vide* page 150 of Administrative experience in former famines.]

works, deepening ponds, filling up cesspools, repairs of wells, &c., or be employed in spinning cotton or rope-making. Native doctors will be needed to look after these and other poor-houses which may be opened in different circles.

61. Mr. Wardie Jones has worked zealously and successfully in introducing spinning cotton and basket-making in several villages.

62. In Somera, Chajun and the neighbourhood a quantity of thread, rope, twine, and baskets has been made, and the three latter sold to the Executive Engineer, and the system is being extended to the Belsundh, Kutra, Rajkund, and Paon circles. I have a difficulty in procuring cotton. Messrs. Jones and Co. have some at Bankipore, but cannot get it over for want of carts. I observe that a quantity is going up to Durbhunga in the contractor's carts. I hope that some may be spared for this sub-division, otherwise my spinning work will be checked.

63. Mr. Wardie Jones has framed, at my request, some rules for spinning, weaving, rope, twine, and basket-making, which I venture to append to this report. They contain many points which are not touched upon in the Durbhunga rules, given in Mr. Worsley's last narrative.

Rules for Spinning, Weaving, and Basket-making, &c.

1. A head golah for storing cotton, jute, hemp, &c., to be established at Mozufferpore, and, if necessary, at the head-quarters of each circle.

2. Such golahs should be stocked sufficiently to supply the sub-golahs, which should be opened at the same places as those at which grain sub-depôts are established.

3. The establishment to be entertained at the Mozufferpore head golah to consist of—

1 Darogah - - -	Rs. 50 per mensem (security of Rs. 800 to be given).
1 Mohurir - - - -	„ 30
2 Dandidars, at Rs. 5 each -	„ 10
5 Peons, at Rs. 4 each - -	„ 20
Total Rs. -	100

The establishment for the golahs at the head-quarters of circles to consist of—

1 Darogah - - - - -	Rs. 35	0	0	(security of Rs. 500).
2 Dandidars, at Rs. 4-8 each - - -	„ 9	0	0	
3 Peons, at Rs. 3-8 each - - -	„ 10	8	0	
Total Rs. -	54	8	0	

The establishment for the sub-golahs to consist of—

1 Mohurir - - - - - -	Rs. 15	0	0	(security of Rs. 200).
1 Dandidar - - - -	„ 4	8	0	
2 Peons, at Rs. 3-8 each - - -	„ 7	0	0	
Total Rs. -	26	8	0	

4. The Mozufferpore head golah to supply the golahs at the head-quarters of circles with cotton, &c., unless it be found more convenient and less expensive to make local purchases.

5. The quantity of cotton, &c., to be kept at the Mozufferpore golah, and at the golahs at the head-quarters of the circles, should be based upon the probable requirements of the sub-golahs. In order to ascertain the requirements of the sub-golahs, the Deputy Inspectors should at once proceed from village to village, making detailed tests, naming all persons who, by reason of social rank, caste prejudices, and physical infirmity, can do *no* other kind of work than cotton-spinning, rope-making, and weaving. After completing these lists, which should also estimate the quantity of cotton, jute, &c., required for each village, the Deputy Inspectors should forward them to the Mozufferpore head golah with a view to immediate arrangements being made.

6. After the several golahs have been stocked, notice to be given to the people by beat of drum through the agency of the police, that cotton, jute, &c., will be supplied gratis to deserving applicants, and subject to the prescribed rules.

6. The several darogahs and mohurirs will open registers in which will be entered the names of all persons (and their place of residence) to whom cotton, jute, &c., are supplied, the quantities given, &c.

7. On the appearance of a deserving applicant, not more than one seer of cotton (to be returned in thread within 14 days) shall be given at a time, and not more than 10 seers of jute (to be returned in rope within 5 days). If the applicant's village is close by, he need not have more than 4 seers of jute (to be returned in rope within 2 days) at a time.

8. The rate of remuneration for thread and rope-making, &c., to be as follows:—

From 1 seer of cotton 14½ chittacks of thread to be returned (1½ chittacks being allowed as loss in weight on account of dirt).	Payment 12 annas.
From 1 seer of jute 14½ chittacks of rope to be returned -	Payment 3 Luhia pice per seer of rope made.

[*Note.*—One woman cannot spin more than 1 chittack or 1¼ of cotton per day, and one person cannot make more than 2 to 3 seers of rope per day. The rates of remuneration are therefore very fair.]

9. If possible, the cotton and jute will be supplied on the security of the jet ryot; if such security cannot be obtained, the darogah will make full enquiries as to the place of residence, &c. of applicant.

10. If less than 14½ chittacks of thread or rope be returned for one seer of cotton or jute, the value of such deficiency to be recorded in the register and deducted from the full remuneration.

11. On the first appearance each applicant to be supplied, not only with the quantity of cotton mentioned in Rule 7, but also with an advance payment of 12 annas; advance payment for rope-making also to be made (according to the quantity supplied); when the thread and rope due are returned, a fresh supply of cotton and jute to be given and a further advance. If possible, somebody should be made to stand surety for the return of the thread and rope.

12. Women of rank, who cannot appear personally, and who are too poor to send servants, and who from natural prejudices would prefer to die than to leave their homes, may be supplied with cotton through the golah pyadas at their houses. The quantity of cotton and the amount of money advance to be the same as authorized for applicants who appear at the golahs.

13. At the end of a fortnight the pyadah will again take a further supply of cotton and moneys to their houses and bring back the thread due. Till, however, the thread due is returned no more cotton or moneys must be given.

14. Thread returned to the golahs must be given to the weaver class to be woven into cloth, "dhotis," &c. to be made by them.

15. No weaver shall have more than 5 Calcutta seers of thread at a time; for every seer of thread 18 chittacks of cloth must be returned. The value of any deficiency will be deducted from his remuneration. The remuneration to be $\frac{4}{5}$ths of an anna per chittack of cloth made, and the 5 seers of thread supplied to be returned in cloth within 14 days after the receipt of the thread. A sirdar weaver to be elected and held responsible for the thread supplied, and for the money advanced upon the 5 seers of thread.

16. Darogahs must try to sell the thread and cloth in their hands at the following prices, or at such other prices as may hereafter be fixed:—

Rs. 42 per maund, No. 1 thread.
" 38 " " 2 "
" 34 " " 3 "

Each seer of cloth of No. 1 thread to be sold at Re. 1-4.

17. When the sale-proceeds have amounted to Rs. 100, that amount will be remitted to the Mozufferpore head golah.

18. Thread and cloth given in must bear a ticket showing the name of the maker, number in register, and quality, and the thread of cloth of the same quality must be kept together in a systematic manner.

19. When upwards of 10 maunds of cloth, or 20 maunds of thread, are in store, the fact must be reported to the Mozufferpore head golah for orders as to the disposal of the same.

Basket-making.

20. Bamboo shall be supplied for basket-making, and each Dome needing relief shall elect a sirdar to whom four bamboos may be made over at a time. If possible, the "Domes" must make baskets on the golah premises, and be paid daily at the rate of one *Luhia* pice per basket. One man can make five or six baskets per day. From a large bamboo six or seven baskets, and from a middling size bamboo five or six baskets, should be made. The basket should be of the ordinary size and kind used for carrying mud by coolies employed in road-making.

21. Full accounts of all transactions at every golah must be kept, and should be frequently tested by the Superintendents of Circles, and by Inspectors, who will record at each examination, which should be once at least in eight days, that they have carefully examined them and found them correct. At the end of every month the Superintendents of Circles shall send a consolidated monthly return to the Mozufferpore head golah signed by them. These returns should specify the transactions of each of the sub-golahs, as well as of the golah at the head-quarters of their circles. A systematic set of forms for the use of the darogah is in course of preparation.

22. It must be distinctly remembered that none but actually distressed people who cannot earn their own livelihood without help are to come under the operation of the foregoing rules, and the Superintendents and Deputy Inspectors are to make continual and careful investigation into the condition of those who receive relief in order to avoid an abuse of the system now introduced.

No. 1284 F, dated Sarun, the 26th March 1874.

MEMORANDUM by J. E. DRUMMOND, Esq., Officiating Magistrate and Collector, Sarun.

Forwarded to the Secretary to the Government of Bengal in the Statistical Department, Calcutta, for information, with reference to his Circular No. 80 of the 17th November 1873.

NARRATIVE of SCARCITY and RELIEF in the SARUN DISTRICT for the Fortnight ending 21st March 1874.

A.—STATE OF THE COUNTRY.

I.—*Abundance or Scarcity of Supply in the Bazaar.*

The bazaars of the district are sufficiently supplied with grain, and if the up-country supplies hold out, private trade may probably be depended on to keep the grain marts continuously supplied till the next harvest.

In the sudder sub-division, during the fortnight, the private importations were, to Revilgunge 76,612 maunds, of which 15,700 were maize, 13,800 barley and wheat, 8,262 rice, and 34,850 other grains; and to Dooreegunge 1,931 maunds, principally rice; while the imports at the Gunduk ghauts from Tirhoot and Chumparun were 897 maunds. The exports of grain to Tirhoot and Chumparun amounted to 6,820 and 807 maunds respectively.

2. The following is Mr. Wright's account for the Sewan sub-division:—

"The bazaars in this division continue to be fully supplied with food-grains. The private importations during the fortnight, as far as could be ascertained, amounted to 7,136 maunds, of which 2,172 maunds were rice, 2,209 maunds paddy, 1,256 maunds Indian-corn, 1,003 maunds peas, and the remainder was made up of small quantities of other grains. The private importations, I feel certain, are much larger than what the above figures represent, but we cannot get correct returns as we have not a proper agency for collecting the information, and traders misconstrue our motives for wishing to obtain the returns, and will not therefore give them to us willingly."

Mr. Rattray writes as follows under this head: "Importations are ample, keeping the supply quite up to the demand, and traders inform me that they have no anticipation of the present supply failing them at any time during the year. So far as I can gather from them, they expect the importations to increase with the rains when large supplies by water are brought from below Patna. It is a fact that more grain is at present being brought to the markets than is disposed of, and far larger importations would take place if purchasers could be found. It appears, then, that the want lies in the want of means among the poorer classes, and not in the insufficiency of grain in the market.

"Grain is being brought from Gazeepore, Azimghur, and other districts across the Ghogra and Ganges, whilst large supplies are also coming down the Ghogra from the direction of Oudh, principally to Revilgunge, from which place the markets in this part* of the Sewan sub-division are supplied. The importations at Sewan are about 1,500 maunds a week, and the stocks in the hands of the traders vary from 4,000 to 6,000 maunds per week. At Rughoonathpore the importations are about 400 maunds per week, a good deal of which comes from the Gazeepore district; and at Durrowlee the importations are said to be about 1,500 maunds a week, and about 20,000 maunds in stocks in the hands of traders. The importations are chiefly Indian-corn."

* The south-west part.

3. Of the Hatwah Estate Mr. Hodgkinson writes:—

"The harvest operations, which have been in progress the last fortnight, have not only increased the grain supplies in the hands of dealers, mahajuns, and cultivators, but have enabled the poorer classes who work as labourers in the field to obtain three or four days' store of food, owing to payment for their work being, according to custom, made in kind. Importations have been quite nominal."

II.—*The kind and price of Grain.*

4. The kind and price of grain selling at the principal marts and at the thannahs and outposts are given in the annexed statement.

III.—*Stock of Food in the hands of the People.*

5. The crops now being harvested will probably pass into the hands of the mahajuns, and it is not likely that many cultivators will be in a position to retain private stocks. As confirmatory of the above opinion, the following from the General Wards' Manager's report, just received, may be quoted:—

"Of course the people—I mean the agriculturists—have some stock in hands of new rubbee harvest, and they will have something more, but the new produce has commenced to be brought into the market, and it is expected that very few of the cultivators will, and can, keep a little for their own consumption. Therefore the hopes of the people must be generally presumed to rest upon the mart and market supplies."

6. The Sub-Divisional Officer of Sewan reports as follows:—

"I can add nothing to what I have previously reported under this head.

"Mr. Rattray, when writing of the sout-west portion of this division, says there are no stocks of grain in the hands of the villagers, the bulk of whom depend on the local markets for their supplies. Landholders of wealth and position have grain in store, but not more than will suffice for the support of their household."

IV.—*Rainfall.*

7. During the fortnight the rainfall at Chuprah amounted to ·39 of an inch, and the rain seems to have been pretty general throughout the district, though slight. In some parts, as at Hutwah, where only ·03 of an inch fell. Hail also fell on the 7th and 16th; on the former occasion being confined to the Siswan and Rughoonathpore out-posts of the Durrowlee thana, and on the latter to the tract where the four thanas of Chuprah, Manjhee, Bussuntpoor, and Musrukh converge. The damage on the first occasion has, on enquiry, been reported to have been slight; but severe damage, amounting in some instances to destruction of two-thirds of the entire crops, is said to have been caused in several villages by the second hailstorm, and the ryots in some of these villages have come in a body to represent their losses, shewing bundles of the injured crop in verification of the same. Accurate report of the extent of the damage has not yet been received, but, even allowing for the usual native exaggeration, the loss is believed from different accounts to have been serious. The committee members of the Bunwar, Arrowah, and Hurpore relief centres have been specially addressed to devise measures for the relief of cultivators who have suffered, and a supply of cotton has been furnished to afford spinning relief for the female

members of families of the higher castes. Sums of Rs. 1,000 to Arrowah and Hurpore, and of Rs. 500 to Bunwar, are also about to be sent with a view to small charitable loans to needy cultivators unable to obtain advances from their mahajuns.

8. From Sewan Mr. Wright reports as follows :—

"On the afternoon of the 16th instant there was a fall of rain, which measured ·19 of an inch in the gauge at Sewan, and again during the night of the same day there was a further fall measuring ·02, or in all a little over two-tenths of an inch."

Under this head Mr. Rattray writes from Durrowlee thana as follows :—

"There has been no rain during the week, except over a small area in the neighbourhood of Rughoonathpore and Siswan, for about a distance of three miles inland along the banks of the Gogra. The rain was very heavy, and was accompanied with hail, which fell thickest about Siswan, but was small in size."

The above refers to the storm which took place on the morning of the 7th instant. In a subsequent report for the week ending yesterday, Mr. Rattray says—"There has been heavy "passing showers during the week, without hail, but with a good deal of thunder and lightning. "The rain appears to have been general."

V.—*State of the Crops.*

9. The yield of the rubbee crops is turning out better than was expected, and the outturn for the Digwarrah, Burrowlee, Burragowan, and Sewan thanas may be increased from 12 to 14 annas, from 6 to 8 annas, from 4 to 6 annas, and from 8 to 10 annas respectively. On the other hand, the estimate of the yield must everywhere be taken as being on the basis of 16 annas instead of 12 annas (the Government calculation) as the full average crop, and the result is that while a 9-anna crop, or between half and two-thirds of the yield in an ordinary year, may have been obtained on the area sown, not more than half an average crop will have been secured all round after allowing for lands which were not sown or afterwards failed. I am bound to add that while I accept Mr. Rattray's estimate of 10 annas for the whole of the Sewan thana, the crops I saw on recently passing through that thana were very poor indeed, on extensive tracts on each side along the road not more than a foot and a half in height, and very thin. In fact, they were much on a par with those I saw on the Hutwah estate, in respect of which I am quite in accord with Mr. Hodgkinson's estimate, which it should be observed was originally one-fourth of the average outturn in an ordinary year, and not one-fourth of the average crop on the area sown. I travelled nearly 80 miles to Kuttaya in the extreme north-west corner of the district, and the contrast in the crops on leaving the Manjhee thana was most marked. There is too a great deal of rice land in the Sewan and Burragowan thanas, and I am inclined now to think that the area of the rice land throughout the district was under-estimated by me, and that it is nearer 400 than 300,000 acres. This would leave as the rubbee food area this year about 600,000 acres, which, allowing for an average produce of 4½ or 5 maunds an acre, would give 27 or 30 lakhs of maunds as the yield of the rubbee harvest to meet a food consumption of 45 lakhs of maunds required for two millions of people at the rate of half a seer a head for the six months from the 15th March to the 15th September. The cheena may give 3 or 4 lakhs more, and there will remain a deficiency of 11 to 15 lakhs of maunds, to meet which we shall have about 7 lakhs of maunds of grain stored in different parts of the district. It is hoped, therefore, that even with an increased rate of consumption, private informations and the mango crop, which is happily a most promising one, will supply any deficiency till the next harvest.

10. Mr. Hudson wrote as follows about the crops in his narrative for the fortnight:—

"The crops look very well all along the banks of the Gunduck and also between Pursa and Dighwarrah, and thence to this place.* The wheat and barley looks especially promising between Bissumbherpore and Digwarrah. I should estimate the general rubbee outturn of this part of the country at a twelve-anna crop, both from what I have heard from the police and other officials, and because in three villages, Sootihur, Digwarrah, and Mirzapore, I have got the zemindars and cultivators to admit a twelve-anna crop; at the second place they even admitted a sixteen-anna crop for the grain, which is regarded as being exceptionally good this year."

* Gurkha.

11. The following is Mr. Wright's report of the Sewan sub-division :—

"The rubbee crops are being reaped throughout the division, and will in a very short time be all safely housed. The crops are yielding much better than was expected. The outturn will not be less than five-eighths of an average crop, and may possibly be three-fourths. In the Burrowlee thana, where the crops were very poor, Mr. D. N. Reid, of Suddowah, writes, 'The rubbee is good and will yield an eight-anna outturn, instead of a four-anna one as I first estimated.'"

"Some damage was caused to the standing crops in a few villages in the vicinity of Rughoonathpore by the hailstorm of the 7th instant, but the injury was not serious. The crops that were struck down by the hail were ripe and ready for cutting, and they have since been cut and gathered, and most of the grain that had fallen from the ripe ears has been swept up and collected with very little loss."

Mr. Rattray, who was in camp near where the hail fell, reports as follows:—

"In isolated cases the wheat and barley crop has been injured in the proportion of four annas to the rupee, and some fields of poppy have also suffered ; but on the whole no serious injury has been done."

The following is Mr. Rattray's account of the estate of the crops on the southern part of pergunnah Andur and in pergunnah Nurhurri ; more than half this tract is under paddy cultivation. "Wheat and barley in most of the fields promise a full crop, but there is a large area where the crop is thin and has suffered a good deal from drought. The average outturn will be a twelve-anna crop. Rahur is in excellent condition, and there is every hope of its giving a full outturn. There has been no damage done by frost. Sugar-cane is cultivated to a slight extent, and the pea crop is not large. In most of the fields the harvest is ripe and is being gathered. The villagers anticipate a full rubbee crop, but I doubt if the average will yield more than a twelve-anna outturn."

Of the crops in the southern part of pergunnah Chowhar and northern part of pergunnah Andur, Mr. Rattray says: "The rubbee within this area is now being gathered, and the outturn promises nearly a full crop, although in many of the fields wheat and barley will not give more than an eight to twelve annas outturn. Rahur is largely cultivated, and will probably give an average outturn. No damage has been done by frost. Sugar-cane is cultivated to some extent, and the outturn has been very fair; nearly half the area mentioned above is under paddy cultivation. The crop, however, unfortunately failed owing to the drought. The rubbee lands are principally along the banks of the Gogra and the Soondee and Doba streams. The average yield of the harvest has been from 8 to 15 cutcha maunds per beegha against 15 to 20 maunds last year, although to the north of Ghootnee the yield is stated to be equal to the average of previous years.

"The rain which we have lately had has benefited the cheena crops immediately, and also enabled the ryots to go on with their cultivation for the next crops. It has also revived the grass on the grazing lands for cattle. The poppy crop has been somewhat damaged by the rain and the high west winds.

"The blossom of the mango trees has suffered a little from the same causes, but the trees have blossomed so abundantly this year that even if a great deal more of the blossom be knocked off the trees will be laden with fruit. This crop will be of great assistance to the poor people of the district, as they not only eat the fruit, but also prepare a sort of bread from flour made of the kernel of the mango stone."

12. I am inclined to doubt the fact of mango stones being used for food by the people in ordinary years, though they are said to have been publicly sold in the bazaars for the purpose in the famine of 1866, and it is probable enough that they may be so used by the people this year when hard put to it. They cannot, however, be a very nourishing diet.

13. Regarding the Hutwah estate, Mr. Hodgkinson writes as follows:—

"The outturn of the rubbee crops on the estate will probably be something under 3,00,000 maunds, of which about two-thirds is wheat and barley; the rest principally peas and rahur. This is equivalent to a supply for the whole population for about two months; and being assured that my estimate of the stocks formerly held is correct, I believe that there is now sufficient food to carry the population on to the beginning of July, exclusive of the grain imported by Government and the Raj."

VI.—*Condition of the People.*

14. During a rapid tour in company with the Executive Engineer through the Chuprah, Manjhee, Sewan, Burragown, and Burrowlee thannahs, with two noteworthy exceptions at Kattaya in the extreme north-west of the district, I saw no traces amongst the people of great emaciation from want. In this neighbourhood, however, the unusual sight presented itself of two men engaged in satisfying their hunger by cooking and making an immediate meal of some grain from a wheat crop, which they were in the act of cutting. Everywhere in my course through the Hutwah estate I found abundant relief works provided in the shape of tanks, though at the time, owing to the harvest operations, the numbers on the works were very few. Mr. Hodgkinson and his subordinates deserve credit for the thorough manner in which relief for the people seems to have been organised. Here, as elsewhere, without such relief in the shape of work, many must have succumbed under the pressure of continuous high prices. In the large tract of rice country between Bhorry and Kattaya and in other similar tracts elsewhere, where the aughanee crop is the one crop of the year, it is to be feared that relief may have to be provided till next December. As instancing the relaxation of caste prejudices, it may be noticed that in the Sewan thannah some individuals of the Kaith caste, including women, were found to be working on the road. At one of the tanks, too, we were informed by the overseer in charge, that when the work was first opened, many of those who thronged it were in a weak and emaciated state, and were only gradually brought round to a working condition. Here it is evident that the exaction of any strict labour test would have been fraught with the utmost danger in preventing the people from seeking relief; and the work of separation of the weak from the strong, and of assignment of light labour to the former, was obviously not a duty which could be safely entrusted to the tender mercies of an overseer, who is tried by the test of the work turned out. On the whole, I cannot doubt that the state of the Sewan thannah was at one time most critical, and that nothing but a complete change of the ordinary Public Works system and the strictest orders for the admission of all classes to the works would have saved the people. The Sub-Divisional Officer's "couleur de rose" views as to the absence of distress and the necessity of exacting a full equivalent in the shape of work for the money expended for the relief of the people, if adopted from the outset, would, in all probability, have brought about very serious failure of the relief operations in his sub-division.

15. Mr. Hudson writes—

"During the past fortnight I have travelled from Mukeir to Gurkha *viâ* Pursa, Dherare or Bissumbhurpore, and Dighwarah. There appears to be some little distress round about Mukeir and also Pursa, but as one moves to the south-east this disappears altogether, and is admitted not to exist." And again—

"Have nowhere met with any signs amongst the people of extreme want and misery. I especially remark that the children in the villages appear well fed and in good spirits. As long as 'makai' stands at 15 pucca seers and gram at 18, and yams and potatoes may be had for 2 pice a pound, actual hunger need not be endured, while clothing and fuel have ceased to be necessary. I must, of course, except the professional beggars, and some wretched specimens of humanity whom I have seen on the relief works here and there, also some special cases of destitution described in my diaries of February 23rd and March 2nd. But I speak generally of the observations which I am enabled to make as I ride through the villages and make enquiries. In my diary of March 2nd I have spoken of nine cases which I met with at the village of Nepunnia* of persons belonging to that and the surrounding villages, who appeared to have been previously earning a respectable livelihood, but to have been reduced to helpless destitution by the present year's scarcity, and, not being professional beggars, to be unable to obtain relief. To these I advanced sums of Rs. 2 and 3 from my special charitable relief fund of Rs. 50 (after making careful enquiry), and also sent their names to the officer in charge of the nearest police-station, with an order to him to report to me on their condition at end of two months: seven of the nine persons thus relieved were women."

* Pursa Thannah.

The following from one of his diaries may also be quoted:—

"On the road inspected the tank being dug at Anjanee, a work which was set on foot at my recommendation. The two overseers inform me that about 600 people on an average are employed daily, and that some of them come from a long distance, even from beyond the Gunduk. The people made no complaints to me except of the rate of wages, but this, of course, is simply 'asking for more,' as they are paid the full Government rate. They are only in arrears four days. Many of the people are very old, lean, and decrepid, and incapable of doing any but nominal work. I told the Moonshee Kurreembux (who appears a very intelligent and superior character of his class) to turn none away who offered themselves, no matter how feeble. The rule is 'Who *will* not work, neither shall he eat,' but not 'Who *cannot* work, then shall he be starved.' One old man was pointed out to me as too feeble to work, who had reached the relief work just on the point of starvation; and another man was shown to me, who belonged to the adjoining village of Anjanee itself, and who was so weak when he presented himself to the overseers that they say they fed him themselves with their own hands. The staple food of the labourers on the works, viz., 'sutto' of makai and gram, is now sold here for one anna* per seer, pucca weight, so that an able-bodied man, after deducting the price of his salt and 'mosala,' does not get more than one full meal a day."

* *Query*—One and a half anna.
J. E. D.

16. Under this head Mr. Wright reports as follows:—

"The people are now fully employed in harvesting the rubbee crops. Labourers engaged in this work are paid generally in grain, and they make a very good thing of it, as they get about five or six seers of grain a day for their work. Numbers have left the relief works to go and cut the rubbee crops. When going to Simaria the other day, one of the Executive Engineer's chuprasses, who was employed in having the road repaired, told me that he found great difficulty in getting coolies to come to work on the road, as they preferred going to cut the crops."

Mr. Rattray says under this head as follows:—

"At present no serious distress prevails amongst the poorer classes" * * * * "very little anxiety is shown to obtain employment on the relief works in hand. The gathering of the harvest is giving employment to many. The action of the landholders in exacting arrears of rent is a source of universal complaint amongst the villagers."

And again, in a subsequent report, he says:—

"In the gathering of the harvest, the manufacture of molasses, and the works to be had on the public roads, there is ample employment, and every advantage is being taken of the facilities thus offered to relieve the pressure of high prices."

17. The action of the landholders referred to by Mr. Rattray was all along feared by me, and it is, I think, much to be regretted that the Government did not see fit to suspend at the outset both rent and revenue demands in all tracts where the most serious failure of crops occurred, and the greatest distress was apprehended, in preference to the partial measure adopted, which, however applicable to the estates of single proprietors, becomes ineffectual where property is divided among a numerous proprietory body.

18. Mr. Hodgkinson observes under this head that "there has been no material change in the " condition of the people."

19. The General Wards' Manager reports thus:—

"Though there has been a great change in the state of the country, yet it has not improved the condition of the people; nay, I presume it would gradually become worse, and will continue to be so till the next Bhadoe crops are gathered. My reasons for such a presumption are that their stores, both in kind and cash, have now been almost exhausted, owing to the present dearth, and almost the whole of their rubbi productions will pass over to, or be disposed of for, their mahajuns, and that they will soon stand in need of fresh loans for next year's sowings; and supposing they manage somehow to receive loans from their mahajuns (who are very backward in advancing money, as they find that the means of their debtors are very limited) for this purpose, they will still stand in need of their maintenance. The labouring class of people will certainly find some work in the fields, but I apprehend on a very reduced scale, as the employers will doubtlessly avoid, as much as possible, to avail themselves of the hired labour in consideration of their own straitened circumstances. Under these circumstances, I fear there will be a great demand of advances by the people of both classes, especially when the relief works will be stopped. I must also add that, at present, distress is not felt by the agricultural or the labouring classes, both of whom are now supported by the new harvest, the employment in the fields, and the abundant relief works in hand throughout the district. The professional beggars only feel the consequences of the scarcity materially, as reported by me on previous occasions."

VII.—*Known cases of Misery and Starvation.*

20. There have been no cases of starvation; and distress amongst the professional beggars and others unable to labour on the relief works is being relieved.

21. The following is Mr. Wright's report from Sewan under this head:—

"No such cases have come to light during the fortnight. A few cases of distress amongst professional beggars are all that have been reported, and these have been relieved by private charity."

Mr. Rattray, when writing from the Durrowber thana, says:—

"There is no destitution in the villages, and no case of death from starvation has been brought to my notice, either by the villagers or the police."

VIII.—*Grain Thefts or Robberies.*

22. There have been ten cases of grain thefts during the fortnight.

IX.—*Condition of any special Tract.*

23. The Sewan thana may be added to the tract previously reported as occasioning anxiety in the future, and I have accordingly transferred 15,000 maunds of the Chuprah grain allotment to that place, in addition to what had been previously allotted.

B.—RELIEF WORKS.

X.—*Progress of Relief Works, &c.*

24. The annexed statements show the relief works in progress and the number employed thereon. During the fortnight four additional works have been started, three in the Chuprah and one in the Sewan sub-division. The average number daily employed during the fortnight has been 93,571, and the number on the last day was 95,984, to which about 3,000 may be added on account of returns not received, so that there are now very nearly 100,000 persons employed. As this figure after all only represents about 5 per cent. of the whole population, these numbers may be expected to increase now that the harvest operations are nearly completed, and unless the proposed irrigation works are shortly sanctioned it will be a difficult problem to find work for all who seek it. I would also strongly advocate the proposed Ghogra embankment being also undertaken at once, and the requisite survey being made. Now that the river is understood to be in course of embankment on the right bank, the lands in this district will be still more liable to inundation, and if the work is ever to be done, there cannot be a better year for doing it than the present one. With these two great works, the Ghogra embankment in the south and the bank channel to the north as "pieces de resistance," it may be possible to provide for sufficient work being continuously afforded so long as the famine lasts. The per-centage of persons belonging to the non-labouring class amongst those now employed appears to be increasing, 27 per cent. of the workpeople under Captain May now belonging to such classes.

25. On the subject of the outturn of work, the following remarks may be quoted from Captain May's labour statement, as the considerations there cited seem to me to have much force, and are quite in accordance with the view of the matter expressed by me in paragraph 14:—

"It is found that the quantity of work turned out by the people on relief works is less than a fourth of what an able-bodied man does in ordinary times, but as the average capacity of these men is much below that of the "nuniah" or professional digger and their wages,—subsistence wages only,—it may be better to accept the outturn they give than to let them get into a helpless state and die. Exacting work does away with relief, and retrenchment for short work cannot be made without starving them, their wages being calculated at the lowest rate needful for subsistence only. When the above rates were fixed for relief works in this district, all the "nuniahs" left and declined to work at them, as in ordinary times they earn from 2½ to 2 annas per diem."

26. A similar remark is made by the General Wards' Manager, who observes thus:—

"It must be remarked that the employment of the old, infirm, and sickly people being, as a rule, avoided by private individuals, such sort of people generally seek employment at the relief works either started by the Government or on behalf of the Wards' estates. The consequence is, that the work becomes expensive, and the estimates previously made, wherein no allowance was erroneously made on this account, may fall short."

27. If it be the wish of Government that the system should be altered, I beg that explicit orders on the subject may be given; but I cannot say that I am prepared to recommend any change of system or to answer for the possible consequences of its alteration. Another difficulty is, that if full work be exacted and the works be rapidly pushed on, it is very doubtful whether, in the absence of other sanctioned schemes, our relief works will hold out as long as they are required; and this, it appears to me, is a very serious consideration.

XI.—*State Emigration to British Burmah.*

28. There are 79 emigrants in the depôt, of whom two are still suffering from small-pox, and one is in hospital.

C.—TRANSPORT OF FOOD.

XII.—*Approximate Amount of Private Food Supplies.*

29. All that is known under this head has been previously reported.

30. Regarding the Hutwah grain supplies, Mr. Hodgkinson forwards the following information:—

"Up to date, 65,176 maunds have been conveyed to golahs on the estate, and 8,800 maunds are at Revilgunge and in transit. The Collector has returned 6,057 bags on account of the grain formerly placed at his disposal, and they have been stored—1,728 bags at Hutwah and 4,329 bags at Burragaon. There is, therefore, 78,290 maunds stored in the Raj, exclusive of the additional amount of grain which has lately been sent up by the Collector to Gopalgunge, &c."

31. And the General Wards' Manager reports thus:—

"About 22,000 maunds of grain are stored at Revilgunge for advances to ryots, but as there has arisen a doubt whether so much grain should be bought on behalf of the Wards' estates from loans, and that whether such loans would be legal, the grains have been proposed to be retained there instead of being despatched to the several places selected for storage till the matter has been decided."

D.—STORAGE OF GOVERNMENT GRAIN.

XIII.—*Places of Storage and Amount of Grain received.*

32. The accompanying statement shows the storage places, the distribution thereat of the grain allotted, and the amount of grain received at the different storage places up to the end of the fortnight. The total amount of grain received had been 3,38,325 maunds, of which 3,07,926 maunds had been finally stored and 29,641 maunds were in transit. The transport service under Major Jackson at Arrah and Mr. Tonnerre at Doreegunge has proved very effective.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

33. Rs. 10,000 have been advanced during the fortnight for purchase of grain for sale, an Rs. 22,197 to zemindars for grain or money advances to their ryots, making up the total as yet advanced on these accounts to Rs. 1,39,700 and Rs. 3,09,087 respectively; and for land improvement Rs. 5,069 have been advanced, bringing up the total on this account to Rs. 62,274. The sum of Rs. 40 has also been advanced to persons for the support of their families, giving a total of Rs. 280 under this head.

F.—CHARITABLE RELIEF.

34. Government have misapprehended the report made under this head in the last narrative. So far from my having coincided with Mr. Hodgkinson's view that "there was no immediate necessity for any large scheme of charitable relief," a complete scheme for such relief for the whole district was submitted by me, and that scheme in its entirety is now in process of being brought into general operation. I now append a list of the names of the gentlemen through whose agency the charitable relief operations will be conducted, and beg that the names may be gazetted.

35. So far as returns have been obtained, the number receiving charitable relief is given below:—

Number.	By whom paid.	Number of Persons relieved.	Amount.	REMARKS.
			Rs. A. P.	
1	Officiating Joint-Magistrate, Mr. W. H. Hodson	9*	Not given.	* These have received advances of Rs. 2 and 3.
2	Executive Engineer, Lower Gunduck Division	455	49 0 0	
3	Manager of the Indigo Concern at Ramghur	7	8 0 0	
4	Baboo Sadhoo Sarun Sahoy of Bugowrah	20	9 10 0	
5	Munsiff of Pursa	96	9 0 9	
	Total	577	75 10 9	

36. It has been mentioned that Rs. 100 had either been sent or was being sent to each relief centre. These sums were, of course, intended merely as an instalment with which to commence operations, and I now propose to send further sums of Rs. 1,000 or Rs. 500 to the different centres, for employment in petty loans to distressed cultivators, to prevent them sinking into pauperism. The planter gentlemen in charge of these circles are in the best possible position to test applications for relief of this nature, and Messrs. Hudson and Rattray will be desired to refer cases, where it is impossible to make advances through the landholders, to the different centres for investigation and relief, if needed.

37. Wr. Wright reports as follows under this head:—

"The subscriptions to the charitable relief fund amounted during the fortnight to Rs. 232, and Rs. 234 have been collected during the same period."

"A large number of charitable relief circles have been fixed in this sub-division by the Magistrate of the district, and Rs. 1,400 has been distributed amongst them, as mentioned in my last report, and Rs. 1,600 more is in course of distribution. Besides the above sums, Rs. 50 has been sent to each of the following gentlemen:—Messrs. Tytler and Rattray, and Baboo Raj Kissore Narain. No reports have been received as yet by me of any gratuitous relief having been given."

38. And Mr. Hodgkinson writes thus:—

"Relief centres have been opened at—

Hutwah.
Bhorey.
Dhoboul.
Sreepore.
Jugdispore.
Protappore.
Chuckia.
Moniarah.
Kabala.
Sonobula.
Kalaya.
Gopalgunge.

for any persons who require gratuitous relief. There are 14 at Hutwah, 6 at Bhorey, and 4 at Sonobula receiving it. From the other places I have had no reports, but at no place do more than 2 or 3 obtain it."

"The enquiries, village by village, which I reported having directed in my last narrative, have nowhere been yet completed; but from what I have learnt by the results (so far as they have gone already) I am glad to state very few persons have been found of the class to which gratuitous relief is a necessity."

"The ticcadars, gomashtas, and putwarees of villages have been by proclamation warned that they are held responsible for reporting any cases which require relief and taking steps to send them to a centre."

No. 840 F, dated Chumparun, the 23rd March 1874.

From H. KEAN, Esq., Collector of Chumparun, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Scarcity and Relief Department.

I HAVE the honor to submit the fortnightly narrative of scarcity and relief for this district for the fortnight ending the 21st March.

A.—STATE OF THE COUNTRY.

From the Bettiah relief sub-division the reports are favorable. The bazars are still fully supplied, and rice has been selling from 10 to 12 seers per rupee. No rain had fallen, but one or two storms of hail had occurred, fortunately without doing much damage to the rubbee crop. The *cheena* and early *dhan* are very promising. No cases of starvation are reported. The hail had also fortunately done little or no damage to the poppy in this sub-division, which, as reported in the last narrative, is a very promising crop.

In the Sudder Sub-division the prospects continue favorable. A hailstorm passed over thannahs Gobindgunge and Kessariah (Circle No. 3) on the 9th instant, but the damage done to the rubbee was fortunately small. A detailed report of the course taken by this storm, and its effect upon the crops, has already been submitted through the Commissioner; it will be sufficient to notice here, that it appears to have crossed the Gunduck near Sonewal (thannah Gobindgunge), and extended as far east as Bansghat (Kessariah). It travelled fortunately over a narrow belt of country, and, as far as thannah Kessareah is concerned, caused but little damage, but simply because there is little rubbee and poppy crop in that thannah to injure. In the Gobindgunge thannah, however, in the neighbourhood of Arrey Raj Kotewa, &c., considerable injury to both crops was caused.

To counterbalance this, on the other hand, much good was done throughout the sub-division by the rain to the *cheena* and early rice crop. The former is said to be doing very well, but very much, in fact everything, depends upon its having more rain. If this does not fall the west winds will dry it up, and in the tracts which have not the benefit of artificial irrigation the yield will not be large. Mr. Weekes (Circle No. 3) has made advances to a large number of ryots for both masonry and *kutcha* wells (161 in all), and where these have been used the 'cheena' is very promising; five times the usual quantity of land has been sown in this crop. It is not, however, the "custom" in this district to irrigate to any large extent, and the lands, moreover, being impregnated with saltpetre, a partial irrigation is found to be unsuccessful. Altogether the prospects of the crops continue favorable. Some of the 'rubbee' has been cut, and the ear is said in many places to be remarkably good.

Condition of the People.—The accounts from Bettiah (Circle No. 4) continue favorable; the extent to which charitable relief has been found necessary will be given under its proper head. In Circle No. 3, Mr. Weekes reports that the condition of the people in thannah Gobindgunge causes little anxiety, but that they are not so well off in thannah Kessariah; the worst part he says is a tract of country lying between Barah, Rajpore, Peepra, and Bohurwah factories, or on the south-east portion of his circle. The otherwise well-to-do cultivators are still, he says, badly off, and make very numerous applications for loans. The European residents have relieved this class very freely from advances received from Government under Circular No. 4020 of 29th December last, and steps are being taken to afford further relief under the charitable relief rules. There is still grain in the country. At Kessariah (one of the chief marts) rice has been selling at 11 to 11½ seers for the rupee, and maize at 15. From Circle No. 1 (Addapore, Motiharee) and No. 2 (Dhaka Modobun) the accounts are much the same. No unfavorable symptoms have shown themselves, and no deaths from starvation are reported. The relief afforded on the works and by the charitable relief committees is steadily and surely asserting itself. It has been found unnecessary to resort to the measure suggested in my last narrative, viz., to sell Government grain to petty dealers at Kutkenuah and that neighbourhood, as it has now been ascertained that the markets are not so entirely without grain as was at that time supposed. The measure has, therefore, been postponed for the present. Mr. Kilby reports (from Circle No. 2) that he has been unable to induce anyone, *i.e.*, native residents, to take advances under the Land Improvement Act, although he has offered to liquidate two-thirds of the cost on behalf of the Government. He has consequently been directed to lose no time in devoting the money (sent to him for the above purpose) in re-digging old tanks along the main lines of roads. Altogether, in Circles 1, 2, 3, and 4, the condition of the people may be said at any rate to be no worse than it was when the last narrative was sent in, and in so far as a large amount of employment has lately been afforded by the gathering in of the opium harvest, and of the harvesting (now extending) of the rubbee, it is better. The subjoined statements will show the price of food-grains.

B.—Relief Works.

The following list will show the relief works in operation, and the number of persons employed thereon

Name of Work.	Men.	Women.	Children.	TOTAL.
Moteeharee station road	18,871	16,604	4,817	40,292
Ditto to Kutkenuah	11,643	15,473	5,878	32,994
Ditto to Dhaka	8,747	6,093	6,747	21,587
Ditto to Segowlie	207	254	66	527
Ghorashan to Dhaka	22,131	7,806	4,455	34,392
Bugha to Bettiah	121	229	63	413
Dhaka to Padumkair	9,028	2,488	1,072	12,588

Total of Sudder division and Bettiah sub-division	340,368	263,139	129,776	733,283

The daily number of workmen employed is therefore 52,377.

Besides this the number of persons employed on the lower Gunduck embankment is—

Men	55,730
Women	98
Children	274
Total	56,102

and the average daily number, 4,007, besides 17,300 workmen employed daily on the upper Gunduck embankment work.

Grand total daily number employed is 73,684.

The number employed on some of the works is very large in the Sudder sub-divisions; and Mr. Eckstien, Assistant Engineer, has been deputed to break up the gangs as much as possible, as it has been found in practice quite impossible to manage large masses. The Executive Engineer has also been requested to divide the labourers into able-bodied and light-labour gangs.

The number of tanks started has been increased, and work is provided in all quarters for all who are able to avail themselves of this kind of relief. I have received no complaints as yet that the labourers are unable to procure food in exchange for the pice received for their work, and all, except in the Ramnugger tract, are paid in money.

C.—Transport of Food.

I have nothing to report especially under this head. The contract for the transport of the district allotment of 50,000 maunds continues to work satisfactorily. The route through the Sarum district has been opened under the management of Messrs. Lethbridge and Gibbon.

D.—Storage of Grain.

The total amount of grain received into the district was, on the 21st March, 5,46,932 maunds. Of this 3,93,719 maunds had been stored during the fortnight; the following had been received:—

	Mds.
Bettiah sub-division	10,000
Sudder division	18,000
Ramnugger	Not received.

Several new sites for depôts have been selected and golahs erected.

E.—Advances to Private Persons.

The following sums were advanced during the fortnight:—

	Rs.
(1) For storage of grain	*Nil.*
(2) For assistance of ryots	65,576
(3) Land improvement	5,050

The total amount expended up to date on these three heads has been—

	Rs.
(1)	1,32,000
(2)	1,26,226
(3)	20,192

F.—Charitable Relief.

In Circle No. 4 (Bettiah) Mr. Samuells reports: "The scheme of charitable relief is now "complete, but the establishment having been only now appointed the exact results are not "known. Tuppah Manpore has been settled personally by me. Food will be furnished there "at their own houses to about 200 people, and a poor-house has been built, and now contains "a 100 persons, chiefly beggars from Ramnugger and Goruckpore. No residents of the sub-"division are found at present in the poor-house." A poor-house has also been established at Bettiah and will be open in a few days. Throughout the sub-division home relief is afforded to all, and complete lists of the number fed will be supplied hereafter. "No one however destitute "need suffer from want." Returns are not furnished at length in consequence of the absence of a regular paid establishment. This has been supplied and details will be furnished. In Circle No. 3 (Gobindgunge and Kessariah) Mr. Weekes reports that a site for a relief-house has been selected at Rajpore, and that the following members have been added to his sub-divisional committee:—

Mr. Carleton	(Sugrampore.)
„ J. Dixon	(Mokwah.)
„ J. Macdonald.	
„ M. Macleod	Peprah.
„ N. Macleod	Dainmutt.
„ F. G. Nicolay	Barah.
„ F. A. Shaw	Rajpore.
„ C. A. Shaw	Hosseinee.
„ F. Shaw	Bohurwa.
„ C. Shelverton	Assistant Engineer, Gunduck Embankment.
„ W. Stobie	Bohurwa.
„ J. Lamb.	
Baboo Gokool Chund	Kessariah.

The sub-division has been divided into circles, and each of the above gentlemen will take charge of the villages of his circle. This is the principle adopted in Circle No. 4 under Mr. Samuells and reported in a former narrative. In Circles Nos. 1 and 2 Sub-divisional Committees have been formed, and Mr. Oldham, C.S., who has lately been deputed to this district, has been put in charge of Circle No. 1, with his head-quarters for the present at Segowlie. These circles have also been divided similarly to Circles Nos. 3 and 4.

The arrangements in the Ramnuggur tract have been fully detailed in my letter No. 697 of the 11th instant, and need not be repeated here.

With reference to Circular No. 1,251—S.R., of the 5th instant, the following particulars are given :—

(1.) No. of Committees and Sub-Committees as yet appointed - -	District Committee - -		
	Sub-divisional Committees -	5	Ramnuggur Head-quarters of Circle - - No. 5 Bettiah ditto - „ 4 Sugrampore ditto - „ 3 Pattahi ditto - „ 2 Segowlie ditto - „ 1
	Sub-Committees - -	2	*Sub-Committees.* Bagaha, Bulthur Circle - No. 5
(2.) No. of Special Relief Sub-Divisions opened and officered - - -	5 as above.		
(3.) No. of regular Relief Circles opened and officered.			
(4.) No. of Relief Circles opened and managed by planters, &c.	Circle No. 1 not complete. „ „ 2—10 „ „ 3—10 „ „ 4—7 „ „ 5—1, Bugaha.		
(5.) No. of workhouses, &c. - -	Circle No. 1—2. „ „ 2—1 „ „ 3 „ „ 4—2 „ „ 5—2		
(6.) No. of men, women, and children on receipt of gratuitous relief.	I am able to give figures under this head for 2 sub-divisions only, viz. :—		

Circles Nos. 4 and 1.

Circle No. 4.	Persons relieved daily.	
Patjerwa - - - -	600	
Bettiah Town - - -	900	
Manpore - - - -	350	
Dokraha - - - -	200	
Lalsareah - - -	300	
Lohariah - - - -	1,000	
Pursa - - - - -	1,000	
		4,350

Circle No. 1.	Daily.
Gratuitously - - - - -	182
In return for light labour - - -	80
Motiharee Town - - - -	171

This does not include the relief afforded by the European residents. Both in this Circle (No. 1) and Circles No. 2 and 3, much relief has been given by these gentlemen whose houses are virtually relief-houses. Returns have been called for but have not been furnished as yet. About 5,600 persons have also received charitable relief through the officer in charge Upper Gunduck Division by instruction received from Sub-Divisional Officer of Bettiah.

The Ramnuggur report has not come to hand ; it will be forwarded on receipt.

Enclosure No. 4.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 30th March 1874.

READ—

The District Narratives of the Bhagulpore Division for the fortnight ending on the 21st March 1874.

The narrative for the Sonthal Pergunnahs was not received until Friday the 27th; the rest came in punctually.

2. *Monghyr.*—The supplies of grain appear to be generally sufficient, except in Buktearpore which now appears to be, rather than Jamooee, the worst part of the district. The numbers employed on the relief works continue to be comparatively small ; and the Lieutenant-Governor hopes that the Monghyr district will, thanks to the excellent rubbee crop, be well off, except perhaps for a time between the rubbee and the rains. The account given of the way in which advances for purchase of grain have been expended, and the amounts realised again invested in the purchase of fresh grain, is satisfactory. The account given of the distribution of charitable relief is also satisfactory, and the Lieutenant-Governor is glad to learn that Messrs. Campbell and Money are able to report that " very little distress exists at present in their circles."

3. *Bhagulpore*—The price of common rice at Mudheypoora seems now be very high, but in Soopole the supply of grain in the bazaars are sufficient. The Lieutenant-Governor desires that some account of the experiment in selling Government grain to the public may be given without fail in next narrative. The number of people on the relief works has risen to an average of 6,923, and of 16,577 on the works under the Court of Wards. The large number of people who are thus being relieved is creditable to Mr. Stevens and his assistants; but it is not clear why the numbers on the Government relief works are comparatively so small. The supply of grain already in store (273,000 maunds) should suffice to meet distress whenever it may come. The Lieutenant-Governor hopes that Mr. Kirkwood will take full care to make works available to the poor whenever and wherever wanted. Nothing is said as to any private works being executed by zemindars. Next narrative *must* show more clearly and correctly the numbers in receipt of charitable relief; at present about 1,340 persons a day appear to be in the receipt of such relief.

With reference to paragraph 8, the Lieutenant-Governor would wish to have a separate report upon the reputed deaths among Tirhoot immigrants into Mudheypoora. If they came by relief works and relief-houses, when in search of work, the two deaths may have been from disease.

4. *Purneah.*—Prices in the Purneah district seem to have varied little during the fortnight, though very high prices appear to have ruled for a day or two in parts of Kudbah and Arrareeah. The number of work-people on the roads has risen to 11,000. It should have been stated how much grain Mr. Rattray pays to his workmen, and next narrative should say what grain has been sold, and if Burmah rice, it should be stated at what rate, and whether it was acceptable to the people. The Lieutenant-Governor considers that the plan of letting a tank or a piece of road-work in contract to villagers, and paying them for it when it is done, is a very good way of preventing peculation, provided that the work is measured, and paid for by trustworthy people.

5. The grain transport arrangements appear to have worked very successfully; the cessation in the supply of grain at Caragola was due to the shortness of the railway despatches from Howrah, and it is hoped that this difficulty may not recur. Out of the 650,000 maunds to be carted from Caragola, Mr. Medock's note shows that 425,000 maunds had left Caragola by the 22nd March, and that grain was being sent forward at the rate of 9,000 maunds a day. At this rate, the full Purneah complement, as well as the 1¼ lakhs for Dinagepore, will have been sent forward from Caragola before the middle of May, and the whole should reach its final destination before the 10th June at latest.

The Lieutenant-Governor is glad to learn that the zemindars are coming forward, and that they had taken considerable advances for distribution to their ryots. He hopes the Government officers will verify, as far as they can, that the money really reaches the classes for whom it is intended. The account given of the charitable relief arrangements is not very clear; but it is satisfactory to find that several of the relief officers have their organization so far in train that he can advance and sell grain to head ryots, and the Lieutenant-Governor hopes that very many more such advances will be given in the worst tracts. So far as the figures show, it would seem that 5,051 people were receiving charitable relief.

6. *Sonthal Pergunnahs.*—The price of food is as yet nowhere very high; the coarser grains are selling at 15 seers a rupee or even cheaper; and the supplies are not reported as having failed. Still a great number of people (up to 9,000 labourers in Godda alone) are coming upon the relief works, and Government rice is being sold to them. Decision has now been taken to send some Government grain to the Sonthal Pergunnahs, and the Lieutenant-Governor hopes that by means of ample relief works, and advances to zemindars and Government ryots for land improvements, the people of the Sonthal Pergunnahs may be enabled to get through the present year. Sir George Campbell will be anxious to learn the result of Mr. Boxwell's visit to Benaguria, and to hear whether the Reverend Missionary's anticipations of early and grave distress in that neighbourhood are concurred in by the district officers.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

NARRATIVE of SCARCITY and RELIEF of the DISTRICT of MONGHYR for the FORTNIGHT ending 21st March 1874.

A.—STATE OF THE COUNTRY.

During the past week a deficiency of grain in the market at Bukhtiarpore being reported, a meeting of the District Committee was called, and it was resolved to sell grain from the Government golah under the prescribed rules so long as the deficiency lasts. This part of the country is the most isolated in the district. The soil and the inhabitants are equally poor, and the cartmen, who usually carry grain for the petty dealers at the lowest possible rates, have been unable to resist the more lucrative rates offered by the contractors of Monghyr carrying grain through to Soopool and Durbhunga in Tirhoot. Under such circumstances, the District Committee has availed itself of the permission to sell from the Government stores at the prescribed rates. I do not, however, anticipate any extensive sales of rice, but the cheaper Indian-corn will probably sell fast enough, as it is the favourite food of the lower classes.

The stock of old worm-eaten gram ordered to be sold was disposed of almost immediately it was offered for sale at twenty seers for the rupee. There was an immense influx of persons, some thousands, from the neighbouring parts of Bhagulpore, who were eager purchasers of small quantities, and they gave vent to their indignation in no measured terms, when the crowd became so dense that the Deputy Collector, being unable to deal small quantities fast enough, disposed of the residue wholesale, under certain restrictions, to petty dealers in the bazar. The appearance of these eager purchasers, however, was not famine-stricken, although all gave a forlorn account of themselves; and, indeed, in the most prosperous years grain offered for sale below the market rates would doubtless attract many purchasers.

As I have mentioned in former reports, there is not much rubbee around Bukhtiarpore, but what there is will soon come into the market, and, so long as this lasts, I do not anticipate any considerable sales from the Government golahs. When the rubbee grain is exhausted the people will probably apply again to our extensive stores.

Regarding the other parts of the district, supply meets the demand, but, with the exception of rice received for the higher classes, there is not much movement of private grain going on. During the week I paid a visit to the Jumooee sub-division, with a view to ascertain whether any deficiency in the Sekandra bazar is to be anticipated; but I found the shops well supplied, and the dealers, whom I called on to state exactly the position of affairs, agree in saying that they anticipate no difficulty in providing food for all those who have money to pay for it.

A large cargo of Indian-corn lately arrived at a ghat on the Ganges near Tegra. Baboo Bhola Nauth Dutt purchased a quantity of it at 16 seers per rupee with money borrowed from Government, and retailed it all to his ryots next day, much to their satisfaction.

From personal inquiries made by me at various bazars, I find generally throughout the district that rice is selling from 11 to 12 seers, maize at 14 to 15 seers, and peas and gram from 17 to 19 seers per rupee. It is currently believed in the district that these low prices are due to the presence of the Government golahs. The grain-dealers say there is no necessity for undue hoarding when there is the Government grain to fall back on in case their supplies fail. At Jamooee I found mahwa selling at 40 seers for the rupee. This article of food is largely consumed by the lower classes, who eat it with parched gram in the proportion of half a pound of gram mixed with four pounds of mahwa. The numerous mahwa trees in the district are covered with blossom, and there is every prospect of an unusually abundant harvest. Bears are very fond of mahwa, and the Sonthals in the south of the district, who are very partial to bear's flesh, shoot them in considerable numbers as they come out on moonlight nights to eat the blossoms falling from the trees.

The rubbee harvest is now general throughout the district. I calculate that 300,000 persons have found employment in the poppy fields, and at least 600,000 persons are engaged in cutting the crops. This will account for the small number of persons to be found on our relief works. During the past fortnight I have visited many villages in the distressed pergunnahs, and found them almost deserted by the poorer classes. Every man, woman, and child not actually bed-ridden has gone off to the fields, and it was a noticeable fact that on dropping my whip, whilst riding through the villages, I had to get off my horse and pick it up myself, an exertion I have never previously found necessary in this thickly-populated district.

It is quite a relief to miss the Mushirs, Dosadhs, Chamars, and Domes whilst visiting the Umrithu and Bisthazaree pergunnahs, but they will come crowding back again in time to gather the mahwa and plough the lands for the next bhadoi crop. Almost the only low caste people seen by me in a day's ride on Thursday last in Bisthazaree consisted of a family of Chamars, who had been detained in Girua Parsunda in consequence of a cow having died the previous evening. A busy circle of men were cutting up the flesh, and carrying it off; a number of half-starved dogs were sitting at a respectful distance; whilst a crowd of vultures formed an outer ring patiently waiting until the others had finished.

The condition of the people, as might be expected, has improved since the rubbee harvest commenced, but there is some difficulty in forming a reliable opinion whether the improvement will continue. Almost all, even those who should be best informed, give the most conflicting opinions, varying from great hopes that high prices will soon come to an end to the lowest despondency and alarm for the future. I think, however, unless some unforeseen calamity, such as another year of drought or excessive flood occurs, that except in isolated cases we need not fear actual famine in the district until the time of the bhadoi harvest. There must, however, be much distress amongst the poorer classes, who, from age, infirmity, or mistaken pride, are unable or refuse to take advantage of our relief works and the semi-Government relief works now undertaken by the zemindars in many parts of the district.

Every precaution is now being taken to feed the poor who cannot take advantage of our relief works; but under any circumstances these persons will have a hard time of it until the price of grain arrives at its normal state.

At present there is more distress around Bukhtiarpore than in any other portion of the district, but as large numbers of persons are being fed by Mr. Manson and Mr. Christian at Bukhtiarpore and Chapran factory, the people are kept from actual starvation. The Bhutia road and other works also afford work to the able-bodied. Mr. Roberts, the Assistant Manager of the Durbhunga estate, has been very actively employed in giving labour to all who require it under him; and on each occasion when I have brought apparently distressed tracts to his notice he has at once visited the place and made arrangements for giving relief. In a letter just received Mr. Roberts says: "There is not any fear of distress on this estate at present. Besides the vast irrigation "works at Karakpur itself, I have started the repairs of an old embankment at Marag, about "which you wrote to me. This will benefit the lands and enable the people to get food. I shall "start similar works at Gyghat, near Gungta, and other places, as necessity requires. The people "at Gyghat are employed by us at two annas a day in clearing the jungle, and men from other "villages are also employed, giving work to 150 people daily."

The action taken by the Manager of the Durbhanga estate forms a strong contrast to that taken during the present season by those who manage the neighbouring extensive estates of Rajah Lilla Nund Singh and his nephew. These persons are quite conspicuous by their apathy, and although I hope ultimately to persuade them to come forward, it is to be regretted that all such estates cannot be brought under the Court of Wards.

Mr. Wilkins at Begoo Serai reports much distress amongst those whom infirmity compels to subsist on charity. He is taking prompt measures to relieve such persons with the aid of Mr. Fearon, of the Birpur indigo factory.

I am glad to say that since writing the above the Dewan of the Rajah Lilla Nund Singh has come in and said that on behalf of his master he is prepared to open out relief works on his large estates in the district wherever necessary. I am very glad to get this information, and I think now that the zemindars generally are doing their duty great and general distress will be averted.

B.—Relief Works.

No new Government relief works have been opened during the fortnight. It has, however, been proposed to make or repair the road which is much used by pilgrims between Gya and Deoghur, part of which runs through the extreme south of this district. So far as Monghyr is concerned, this road will not afford much labour, the land lying high and dry, and the soil is so hard that a raised embankment is unnecessary. A gang of workmen, however, might be used to cut away the jungle on either side of the road, as a protection against wild beasts, which are common in the Chakai pergunnah. I have suggested to the zemindar, Sir Joymungal Singh, who is a sportsman, to organize extensive *battues* during the dry season as a means of relief, and ridding the jungles of tigers, leopards, and bears.

In the Begoo Serai sub-division a good deal of work is being given by the repair of village roads, generally carried out through the planters, and it is now under consideration what works can be advantageously commenced, if much labour is required after the rubbee is cut. There is, however, considerable difficulty in the matter, as the land lies very low and is regularly inundated by the Ganges. Embankments to keep out the floods are undoubtedly the best works where neighbouring zemindars do not object to them. The sub-divisional committee is now engaged in considering the best solution to the difficulty. The Tirhoot road has afforded a great amount of relief, but other works will probably be required. Mr. Wilkins has not reported much progress with the zemindars hitherto, but after the harvest I have no doubt that they will come forward. Similar remarks apply to the Furkya pergunnah, but considerable advances have already been made to zemindars in this part of the district. I have already mentioned that Mr. Roberts is providing ample work in the Durbhunga portion of Khurrukpore, where the rice crop failed. If all the estates in the district were equally well managed there would be little cause for alarm. The large estates in the district held khass by Government are chiefly dearas, and the crops are so unusually good that no relief works are required. I am, however, improving the water-supply in two smaller Government estates, Khero Praussur in Salemabad and Daudpur in Umrithu, by digging tanks, at a total cost of Rs. 3,000. These have already been commenced. A large tank, at a cost of Rs. 3,000, will shortly be commenced in the Jamooee sub-divisional cutcherry compound, and as there are works now going on all over the most distressed tracts south of the Ganges, I hope that everyone requiring labour will find it.

The wages paid by us averages 6 pice a day, and those who do piece-work and cut and carry a hundred cubic feet of earth-work earn as much as two annas. The zemindari rate for piece-work, however, is two rupees eight annas per hundred cubic yards, or a fraction under three pice per hundred cubic feet. This rate in times of scarcity is only sufficient to afford scanty food of the coarsest kind. Yet notwithstanding such miserable wages, the people generally appear content and happy. I have only been able to persuade some two hundred persons to emigrate and begin life again in Burmah under prospects which appear to be unusually favourable.

C.—Transport of Food.

The returns of the supplies of grain carried by the railway come in too late generally to be used in my fortnightly report, but the importations are not considerable. The exportations of rubbee are commencing, but they will not become general and extensive until the rains set in, when the Ganges will carry large cargoes of gram and wheat to Calcutta. I suspect that my former calculations were under-estimated, and that at least one-half of the rubbee crop now cut will leave the district during the next six months. The means of transport of grain have hitherto been found ample, and there has been no block that I know of. Mr. Thomas, the contractor here, tells me he has collected about 4,000 carts, and can carry away as much grain as arrives to Soopool. This gentleman is also, by Mr. Hankey's directions, carrying the remaining 30,000 maunds designed for Bukhtiarpore. The rivers on the road have been bridged with boats, and the arrangements under Mr. Hankey and Captain Grant appear to be as perfect as possible.

The Durbhunga rice is also being moved on as fast as it arrives, and a cargo of boats arrived during the week to carry grain up the Gunduk to Durbhunga. I am decidedly of opinion that when we have 50,000 maunds at Bukhtiarpore, no further supplies are needed, unless some unforseen calamity occurs. I paid a visit to Girnapersunda during the week and made arrangements for storing grain and making a good cart-track over the rice fields. The arrangements for the storage and guard of grain are generally ample and complete.

D.

As on former occasions I have mentioned the names of the places selected for storage, they need not be repeated. South of the Ganges I am of opinion that sufficient grain has already been stored, and as there is hardly any point more than 20 miles from the railway, there would not, I think, be much difficulty in increasing the supplies to any extent even during the rains, if necessary. North of the Ganges, however, the distressed portion of Furkya is almost inaccessible during the rains, and consequently a further supply of rice, making a total of 50,000 maunds, is being sent there. At the present moment there are 192,000 maunds of Government grain stored in the district. It will depend on the prospects of the bhadoi harvest, cut in September, whether more grain is required or not. There appears to be a general feeling of satisfaction and security throughout the district now that such large quantities of grain have been stored, and I have not heard of any grumbling, even amongst the grain dealers that their trade has been injured or interfered with.

E.

Rs. 56,800 have been advanced for the purchase of grain, and I hear that the grain so purchased has already been disposed of, and that the money-holders are preparing to purchase more with the money received from the retail sales. Rs. 33,790 have been advanced to zemindars for land improvements, and I have numerous applications under local investigation and report. No time is lost in making the advances, but, besides local investigation, the collectorate records have to be examined and the registration books, in order to ascertain whether the security offered is good. I have hitherto received satisfactory accounts of the way these advances are being employed. Nawab Ali Khan, of Hosseinabad, is employing nearly 800 men in digging tanks with the money advanced to him, and other zemindars in like proportion. The general complaint, however, is that labour is not easily procurable, and I tell the zemindars they can safely wait until after the rubbee harvest. I am certainly of opinion that the large sums of money now being spent on the various estates will be of great ultimate advantage to the district.

The loan of Rs. 5,000 obtained by the Monghyr Municipality is held in reserve until such time as its expenditure is required.

F.—CHARITABLE RELIEF.

Most of the past week has been spent in getting the system of relief into working order. Fortunately, the rubbee harvest, having afforded relief to the poor, has also afforded time to the sub-divisional committees to perfect their arrangements. A meeting has been held at Jamooee and at Monghyr, at which simple rules for the guidance of superintendents were laid down. These rules provide, first, for the supply of grain in deficient markets, secondly, for affording relief, village to village. The superintendent and his assistant will be accompanied by pack-bullocks, and coolies if necessary, carrying grain and cotton, and relief, under certain restrictions, required to guard against imposition, will be afforded at each man's door. The system of visiting villages empty-handed and directing half-starved people to relief centres is not generally a good one. Some time ago I began this practice myself, but finding the people were likely to die on the road, I determined to abandon it as far as possible. Relief centres distributing cooked food are now established wherever necessary, and I annex a statement of the numbers fed. The committees, however, think that distress is not at present so great as to call for much distribution of food in villages; but great latitude has been left to the discretion of superintendents, who, being on the spot, can judge better than the committees can at head-quarters. The superintendents are fully qualified to carry out the committees' views properly, and the assistant superintendents are all young and active zemindars of great respectability, who are only anxious to show their zeal in the public service.

Mr. Money spends all his time in riding from village to village, relieving distress wherever necessary; and on Thursday I met Mr. Baillie making a similar tour on foot in his circle at Bisthazaree, pending the arrival of his horses.

Mr. Wright has joined at Luckee Serai, and Mr. Manson has been at work for some time around Bukhtiarpore. The superintendents will be particular in making advances of money to respectable ryots where necessary but I am anxious to make all advances as far as possible through the zemindars, who are much better judges than we can be regarding those persons really in want. One man applied to Mr. Currie for a loan of Rs. 500, and, on being pressed, acknowledged that he required at least half of it to marry his daughter with the *eclât* befitting his caste and position. Other applicants for advances have made similar confessions, and expressed some surprise when the advance was refused. Besides Rs. 36,000 advanced to zemindars for land improvements, I have advanced Rs. 11,300 for advances to respectable ryots, according to a list hereafter to be furnished. This money should keep a large number of people from starving.

Mr. Campbell and Mr. Money have recorded their opinions that very little distress at present exists in their sub-divisions or circles. This, however, is only what I expected, having been over the ground myself, and found the condition of the people much improved since January. I have warned these gentlemen, however, that the improvement cannot be expected to last, and that we must make unusual exertions to get everything ready to afford relief when the temporary effect of an abundant rubbee harvest has passed away, as I expect it will not later than May. I am of opinion that all that is necessary is being done, and that actual starvation has been hitherto averted by the various relief works and distribution of food, which has kept alive alike the able-bodied and those not capable of work.

I have been asked to collect a thousand rupees' worth of fodder at Chapran factory, near Bukhtiarpore, for the cattle carrying grain into Soopool. This will make a capital relief work, and Mr. Manson is supplying the tools used by grass-cutters, in order that women and children may cut grass and store it. This grass will make better fodder, I think, than rice or wheat-straw usually given to cattle.

No. 440—S.R., dated Bhagulpore, the 24th March 1874.

From V. T. TAYLOR, Esq., Collector of Bhagulpore, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Scarcity and Relief Depaatment.

I HAVE the honour herewith to submit my ninth fortnightly narrative.

A.—STATE OF THE COUNTRY.

2. The Soopool sub-divisional narrative has not yet been received.

3. The Muddehpoora officer writes: "Supplies are not quite so easily procurable as they were " at the time of my last report. Grain, too, is somewhat dearer. Rice is selling at about " 13 seers small weight (64), and murwa 16 per rupee." The prices given are those for the Muddehpoora bazar only, and Mr. Martin has been instructed to furnish information in future of the prices ruling at several of the markets in his sub-division; those at his head-quarters only do not give a correct idea of the price of food-grain here and there in his sub-division.

4. The Banka officer reports: "The supply of food-grains can be easily got everywhere " according to the wants of the people." The price of rice at Banka and Umurpore has been stationary during the fortnight, but it has risen in other portions of the sub-division; the price of wheat has fallen by 2 seers in the rupee; and new barley is being sold at 21½ seers at one place and 19 at another. The Deputy Collector further remarks that, from what he can ascertain, he believes that paddy and rice is in the possession of every ryot, trader, and zemindar, according to his circumstances, for consumption, trade, or distribution to private servants and workmen.

5. At head-quarters prices remain the same for all grains excepting wheat, which is getting cheaper daily.

6. The rubbee crops are now being reaped, and the outturn will be very good in pergunnah Chye; a bumper crop is almost certain; and over other parts of the district it is put down as 6 annas to 12 annas, but this, from what I have myself seen, is below the mark. Cheena is *still* being sown, and this crop alone will give a heavy outturn this year. In one portion of the district a severe hailstorm, over an area of from 20 to 30 square miles, has done damage to the rubbee to the extent of 4 annas, as well as to the mango trees. This storm passed over a strip of pergunnah Narradigur and pergunnah Harrawuth. There have been a few drops of rain here and there during the fortnight, not sufficient to do either harm or good.

7. The mango crop so far promises to be exceedingly good, and the *mowah* crop in the south promises equally well.

8. Mr. Martin remarks that several starving persons from Tirhoot came to him a short time ago, and he sent them all to the Muddehpoora relief centre. Out of some 30 persons, only three availed themselves of the food supplied. He adds that a Mr. Mason had reported to Mr. Kirkwood, special relief officer north of the Ganges, that *several* persons had died of starvation; that on hearing this from Mr. Kirkwood he at once made personal inquiries, and it turned out that Mr. Mason could only speak to two persons who were supposed to have come from Tirhoot, not inhabitants of this district, and that he, Mr. Martin, was unable to ascertain whether the men died from disease or really from starvation; but these men would have had to pass over places where works were in progress, and through the Soopool sub-division, where there is any amount of work and relief at hand, before getting to Singhessur, three and a half miles from Muddehpoora, where they are said to have died.

9. Neither in the head-quarters nor in Banka is there as yet any real distress, notwithstanding the high prices; and now the reaping of the rubbee crops is giving occupation to so many, and the harvest being so good generally, matters will go on smoothly I hope for some time to come.

10. As soon as the rubbee crop is gathered and housed, rain will be anxiously looked for for the completion of all cultivating operations, and the final preparation of the lands for the murwa crop.

11. The following statement gives the difference in prices of some of the food-grains now and at the corresponding period of 1866 :—

—	Rice, 1st sort.		Rice, common.		Murwa.		Indian-corn.		Wheat.	
	1866.	1874.	1866.	1874.	1866.	1874.	1866.	1874.	1866.	1874.
	S. C.	S. C.	S. C.	S. C.		S. C.	S. C.	S. C.	S. C.	S. C.
Soopool - -	—	9 10	—	10 0	—	13 0	—	—	—	11 0
Muddehpoora - -	—	8 0	—	8½ 0	—	14 0	—	—	—	9 0
Head-quarters - -	10 11	10 11	12 8	11 5	—	—	15 2	15 2	10 1½	15 2
Banka - -	—	10 8	14 0	12 8	—	—	18 0	13 12	—	12 8

12. The theft and robbery return for March will be forwarded with the next narrative.

B.—RELIEF WORKS.

13. The annexed statement shows what is being done on this head.

14. I annex also a statement showing the total number of labourers employed on raj Durbhunga works in Soopool sub-division for the week ending 14th March; no later statement has reached me.

15. The District Engineer has not submitted the report showing fuller results of the sale of Government grain, but as no more rice has been indented for, I presume the experiment has not been very successful, but I have instructed him to give me the results for the next narrative.

C.—TRANSPORT OF GRAIN.

16. At the Bhagulpore railway station the total exports for the fortnight have been 8,516 maunds, against imports amounting to 9,172. Of the former, 5,873 maunds were grain and 1,419 wheat for Howrah, 333 maunds barley also for Howrah, and 345 maunds were rice up for Patna, Jamalpore, and Beeheea. Of the imports, 1,995 maunds were grain and 1,863 wheat from the usual up-country stations; 1,718 maunds were rice from Howrah, 2,029 maunds Indian corn from up-country, and 1,214 maunds were paddy, possibly seed-grain; the rest various other grain in small quantities. The returns from all the other stations show but little trade.

17. There is very little, if any, private exportation going on from the south of the district. Rice is being brought to Bhagulpore, while new barley and peas are being taken to the south from the rubbee tracts near Sooltangunge.

D.—STORAGE OF GOVERNMENT GRAIN.

18. The following statement shows the places of storage in the district, the amount sanctioned for each, and the quantity stored as far as is known; the errors in the previous fortnightly have been corrected:—

Muddehpoora Sub-Division.

		Already stored.
	Maunds.	Maunds.
Muddehpoora	50,000	29,117
Bhowanipore	25,000	9,640
Kamp	50,000	10,000
Soneburss	12,980	12,980*
Patterghat	2,614	2,614
Byjnathpore	15,000	—
Salpore	10,000	5,562
Total		69,913

Soopool Sub-Division.

			Actually stored.
Soopool		130,000	104,220

Kutooria	4,773	4,773

19. The rice lying at Jugdees Chuk has all been removed, and Phoolout is also cleared of all grain. Rice has not been coming in as fast as I should wish, and has not kept up to the transport power. The Monghyr contractors are carrying up the grain direct to Soopool and for

---

* Stored at Soneburss and Phoolout. The Phoolout grain will be taken hereafter to Soneburss.

golas south of Soopool. The Bhagulpore contractor is carrying grain direct for Kamp and Rajnathpore at present, and I believe the old route *viâ* Phoolout is going to be abandoned. I regret this, as the transport has got into such good working order, and we shall now lose a large number of carts.

20. The Soopool sub-divisional officer is removing the rice from Soopool to the northern golahs, and during the fortnight there has been a full lakh stored; more has possibly been stored than I have shown.

21. A third contractor contracted to take, I believe, a lakh up the Coosy, and his first essay of 4,400 maunds are stuck hard and fast; if possible, this quantity will be taken to Phoolout and sent up from there. I understand boats of too large a size have been used, but the river must be lower than when I tried it with smaller boats and failed.

E.—ADVANCES TO PRIVATE PARTIES.

22. List of persons to whom loans under Act XXVI. of 1871 have been granted by the Collector of Bhagulpore up to—

Names of Persons.	Amount advanced.	Purpose for which the Advance is taken.	Name of Mouzah or Village where the work will be carried on.
Pergunnah Mulnigopal.	Rs.		
1. Kishore Narain Singh - -	200	For a bund - -	Pursurmah.
2. Oogur Narain Singh - -	1,000	For excavating a tank - -	Hatwaria.
Pergunnah Ooturkhund.			
1. Laljeet Singh - - -	1,000	Ditto ditto - -	Patchgachia.
2. Bulit Jha - - -	150	For clearing an existing tank -	Tola Mowhura.
3. Bickram Khawas - -	200	Ditto ditto -	Patchgachia.
Pergunnah Kubkhund.			
1. Imam Buksh - - -	200	Ditto ditto -	Aoria Romoti.
2. Ami Chand - - -	1,000	For excavating a tank - -	Nohutta.
3. Jhummun Singh - - -	400	For clearing an existing tank -	Monohurputtee.
4. Sheik Mann and Sheik Asgur -	200	For erecting a bund - -	Koonda.
Total - - -	4,350		

Advances made to Zemindars for the purpose of helping their Ryots, under Government Circular No. 4,020, *dated* 18*th December* 1873, *up to date.*

Names of Zemindars.	Place of Residence.	Amount advanced.
		Rs.
Mr. James Hennessy - - -	Narainpore - - - - -	5,000
" John Christian - - -	Bongaon (Soopool) - - -	10,000
Baboo Troloke Narain Singh - -	Tituria " - - - -	1,500
" Rooder Narain " - -	Pachgatchia " - - -	7,000

Baboo Harbullub Narain Sing - -	Sonebursa (Muddehpoorah) - -	10,000
	Total - -	37,400

Six applications for Rs. 33,500 have been forwarded to the Commissioner for his sanction.

23. Rs. 18,600 have been advanced during the fortnight to trustworthy residents for purchase of food-grain, and Rs. 400 to petty shopkeepers of Soopool, making a total of Rs. 67,800 since the commencement of operations. One application for Rs. 4,000 has been sanctioned by the Commissioner, but the amount has not yet been disbursed, and another application for the same amount has been forwarded to the Commissioner for his sanction.

F.—CHARITABLE RELIEF.

24. The district north of the Ganges has been made into circles, as mentioned in my last narrative, but a few corrections being necessary, the information is again given this time. Muddehpoorah sub-division.—The distressed portion has been made into two circles—the Kamp circle, comprising the golah stations at Kamp, Sonebursa, Patterghat, and Byjnathpore, and the Bhowanipore circle, comprising the golah stations at Bhowanipore, Muddehpoora, and Lalpore.

25. Mr. Heysham has been appointed Superintendent of the Bhowanipore circle and has joined.

26. Mr. Davis has been appointed Superintendent of Kamp Circle vice Mr. Inman, and has been directed to join at once.

27. There is one sub-divisional committee already appointed, and a committee for each circle Superintendent will be appointed as soon as possible.

Relief centres for feeding the poorest classes are open at Muddehpoora, Gummuria, Byjnathpore and Petterghat at Byjnathpore; those coming for relief are employed in making rope for the golahs. The total number of men fed at all these centres amounts only to 40 persons.

28. The Soopool sub-division has been sub-divided, and a second sub-division called Simrahi sub-division has been made for relief purposes.

29. The Soopool sub-division will be supervised by the present sub-divisional officer, and contains the Soopool circle, comprising the golahs at Soopool, Chundail, Rutowli, and Hurdee, and the Ekar circle, comprising the golahs at Ekar, Patchgachia, Simani, Nohutta, Burgaon, Bungong, and Muheshi.

30. The Simrahi sub-division will be supervised by Deputy Collector Baboo Ram Sanker Sen, who has already left Bhagulpore to join his post; it will contain the Simrahi circle, comprising the golahs at Simrahi, Peepra, Pertabgunge, Bhulooa, Nathpore, Bheemnugger, and Arjillee Dulgaon; and the Narradigur circle, comprising the golahs at Nowabakkhur, Dugmurrah, Roshwar, Nurgo, Chandpeeper, Bhaptiahi, and Burhurra (the last three being the Court of Wards' golahs).

31. The *Soopool* circle is under the direct charge of Mr. Fanshawe, who has already joined.

32. The *Ekar* circle is officered by Mr. Wilson, who has joined that portion of this circle in which Mr. J. Christian is interested, and will be under his supervision, he having kindly consented to the arrangement.

33. The Simrahi circle will be officered by Deputy Collector Baboo Dwarkanath Sen, who will leave Bhagulpore immediately. The Naradigur circle is already officered by Mr. P. Duff, who is thoroughly acquainted with the raj property in this district, with an assistant already on the spot, Mr. D. Browne, posted at Dugmurrah.

34. The list of members for *each* superintendent's sub-committee has just been received.

35. To the charge of these two sub-divisions as special relief officer working directly under me, Mr. T. M. Kirkwood, C.S., has been appointed; he has only been in the north a few days, and I have no doubt he will be of great assistance in seeing that the superintendents of circles really do their duty and are constantly on the move. All these officers will make a regular village to village inspection, and find out, report on, and assist any and all who are really in distress.

36. Arrangements are being made that rice shall be sold to the public from the golahs of Bhowanipore and Ekar as an experiment at 12 seers the rupee, and the effect of such sales will be very carefully watched.

37. I regret I cannot give a detailed statement showing the number of persons relieved at each centre in the Soopool sub-division. Mr. Smith remarks that on examining the several returns from the village committees, he has found them so confused and incomplete that any statement compiled from them would be practically useless, but that he makes out that 1,300 men, women, and children have been daily relieved at 26 centres. Mr. Kirkwood has been asked to see if he cannot make some arrangements on the spot which will ensure correct returns.

38. Fifty maunds of cotton have been sent to Muddehpoora and Soopool sub-divisions, and a further supply of 80 maunds have been purchased and will be despatched at once.

39. The statement required in Circular No. 1251—S.R., of the 5th instant, is given below. With reference to column 2, the officer for the special relief sub-division has, as above mentioned, started for his post; with reference to column 4, a portion of the Ekar circle, comprising Bungong and Maheshi golahs, is being managed by Mr. J. Christian of Bungaon factory.

1	2	3	4	5	6
Number of committees and sub-committees as yet appointed.	Number of special relief sub-divisions opened and officered.	Number of regular relief centres opened and manned by special officers.	Number of relief circles opened and manned by planters, zemindars, and other residents.	Number of workhouses on centres for the distribution of food and gratuitous relief.	Number of men, women, and children in receipt of gratuitous relief shape through the charitable relief organization daily.
9 Two more have to be appointed.	1	4 The officers for the other two have been appointed and will join at once. One of the above officers has been specially appointed by Durbhunga Court of Wards.	Part of one, see above.	Four in Muddehpoora, twenty-six in Soopool.	Information still very incomplete, but about 1,340 daily.

Since commencing this the Soopool narrative has reached.

The sub-divisional officer remarks:—"Grain is procurable in all the hâts and bazaars in " quantities sufficient for all ordinary requirements.

"The price of rice ranges from 9¼ to 12 seers per rupee, the general rate being a little above " 10. The prices to the north are easier than they are to the south, and the highest rates " prevail in the western portions of Kubkhund. Murwa is to be had pretty freely at from 10 to " 13 seers per rupee.

"The hailstorm on the 9th instant fortunately extended over a tract of country where there " was not any great extent of rubbee.

"The rubbee crops are now being harvested and promise well."

C.—TRANSPORT OF FOOD.

Mr. Smith writes:—"I have no information as to any extensive importations, but grain of all " kinds in small quantities is finding its way into the sub-division from the Monghyr " direction."

The transport service is now working very satisfactorily, and Mr. Smith has between 4,000 and 5,000 carts working independently of the Monghyr and Bhagulpore contractors.

The remainder of Mr. Smith's narrative is entered in its proper place.

No. 1332 F, dated Purneah, the 23rd March 1874.

From W. KEMBLE, Esq., Magistrate and Collector of Purneah, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I BEG to forward herewith my fortnightly narrative for the period ending Saturday, the 21st March 1874.

A.

Private trade still continues active; prices vary; but the very coarse rice was procurable yesterday in the Purneah bazaar at 13 seers for a rupee; the less coarse at 11 and 12 seers, according to quality.

Down at Caragolah and at all the hâts in the south of the district the general price is 12 seers.

At Kusba, to which place rice is now imported from Purneah, the prices are—coarse rice (not the coarsest) 11¾, better kind 10½ seers, wheat 12½ seers.

The markets to the north are now being in a large measure supplied from Purneah.

At Arrareah prices are said to have risen considerably, but when I visited the hâts here last week I found rice selling at 10 seers. Mr. Rattray reports that it had fallen as low as 7 seers for a day or two.

Mr. Craven, from Kissengunge, reports that prices at one time rose very high owing to the difficulty of procuring carts, but that recently the difficulty had been overcome, and that all the markets were supplied by pack ponies and bullocks. The last price-current showed rice at 11 seers.

In the Bulrampore thannah, which I consider as much distressed as any part of the district, grain is procurable in the local market at 9 and 9½ seers per rupee.

At Kudba the prices have risen a little. Mr. Wyer reports that rice was last week sold here at 11 seers, janera 13 seers, makai 13 seers, kalai 14 seers.

At Belgachi, where rice had been a few days before as dear as 9½ seers, Mr. Wyer on the 12th found it selling at 11 seers, and potatoes at 20 seers, for a rupee.

I also hear that considerable quantities of seed-grain are being brought into the district from the south of the Ganges and from the north. I have lately been making special inquiries and visiting the villages myself in order to find out what supplies of seed-grain the people have; in every village I find that all the better class of ryots have a store, but not sufficient for the wants of the poorer classes who, I have directed, shall be helped, in cases where their landlords refuse to help them, by the Relief Committees and Relief Superintendents.

I am glad to report that the zemindars are now beginning to come forward. This morning I received a visit from Aga Saifulla Khan, who, in partnership with Nuckched Lall, is the largest landowner in Purneah, and whose zemindaries extend over the worst of the distressed tracts. I was informed by this gentleman, who has lately returned from Mecca, that he had sent orders for seed-grain to be advanced in all his villages, and that Baboo Nuckched Lall had joined him in this. I trust that this good example, set by a man in his position, will be followed by others.

Condition of the People.

I have not seen or heard of any cases of actual starvation, but the number of cases of distress is increasing, and would have been much larger but for the relief afforded by the Government roads and by Relief Committees.

For the last week or ten days the rubbee harvest has in most parts, especially in Arrareah and in the south, afforded employment to a large number of people; men, women, and children get paid one seer in every seven seers for plucking linseed and grain and reaping wheat; the men get employment also in ploughing for the early rice sowings, especially in bringing up the Government rice.

I consider that the employment given to carters, coolies, and owners of cattle by this last-named means, even had the carts only brought up stones, has been of immense benefit to the people.

In Dhurumpore they are certainly quite as well off as in ordinary years, as they have had a bumper rubbee crop.

From Bulrampore, Kusba Amour, some parts of Kudba and Bahadurgunge, and Arrareah, the number of persons coming on the works with their women and children shows that distress is being more acutely felt.

Mr. Rattray reports that in Arrareah a heavy hailstorm (subsequent to that mentioned in my last report) caused considerable damage in the villages of Hingna, Kupari, Purmanpur Aurahi, and Ahmudpur; assistance was being given to the people here. The rain, however, in other parts had done good; it would be of benefit to the kauni and cheena already sown, and help the sowing of murua and dhan. In Bulrampore the early "boro" dhan has been sown, but not, I think, in very large quantities; it will, I hope, make up for the want of rubbee, of which there is little in this thannah.

The mango crop continues to promise well.

The number of grain-thefts reported this fortnight amounts to 37; the value of the property stolen is Rs. 251-12-0.

P.S.—Since writing the above, I have received returns from Domur Hât, and find that at each market the quantity of dhan brought to market is about twice as much as was brought at this time last year. This is probably all for seed.

B.

The progress made in the Public Works Department road work, shown in the annexed report, during the last fortnight I consider very satisfactory.

The regular beldars are now drafted off from the roads in the more distressed parts of the district—Kudba, Kusba Amour, Dengra, up to the lower Koosee road, which is in Dhurrumpore, where there is no distress, and to the big north road, where the work is more important, and where there is little distress; it must be noted that on this north road but few women and children are as yet working.

The remark of the District Engineer with regard to the children on the Dengra and Turkeli is receiving attention; it is here that by far the largest number of persons have come for employment. The work has been going on for some time, and at first only a few persons could be induced to come on it. I have frequently been over this ground, and I believe that the people working now could not have been induced to handle a kodali by high wages or regular payment, and that not even the sale of grain at twelve seers per rupee would have brought them to work if they had not been in distress; without relief works in this neighbourhood the distress would have been very great; when more work is wanted here I shall repair the old Darjeeling road between Kusba Amour and Kusba. On the next road, Dengra to Bhopla (Dinagepore frontier), the arrangements are exactly the same, but the number of labourers is far less here; the distress is evidently less on the other side of the Mahanuddee at present. Further south the number of labourers on roads Nos. 7, 9, and $\frac{36}{8}$ show that they run through distressed parts of the district and afford relief. The system of payment now adopted answers well: a gang from a certain village take a tank, or two or three tanks, for which they get an advance as the work goes on; they are paid up every second day, or on completion; the same persons need not, and do not, work all day or every day, but come and go just as they please; as they appoint their own duffadar in this way, far more persons get relief from the roads than are actually shown on the returns.

The overseers tell me that those who have never before used kodalis soon learn their work, and take contract labour instead of daily wages. The order for issuing kodalis, referred to by Mr. Cordner, was passed a month ago. The total daily average on the Public Works Department roads is 7,612.

2. The second table annexed shows the number of labourers employed on roads not under the Public Works Department. These are the ordinary roads of the district, which are annually repaired by planters and Sub-Divisional Officers, and a few new roads opened in distressed parts of the district under villagers, planters, and others, as stated in the form. The total daily average of labourers on these roads is 1,258. Besides these all the Sub-Divisional Relief Officers are making numerous small village roads all over the district, which will be noticed hereafter; no returns of daily labour are received from them, but with these I should say the total daily number of persons employed cannot fall short of 11,000.

Government grain is sold everywhere on the roads, and the arrangements with the moodies work very smoothly.

Mr. Rattray pays his men in grain, and all parties prefer this mode of payment. The rate of wages has not been changed since my last report.

C.

I have ascertained from the books of Messrs. Bird and Co. that 13,303 maunds of grain have been brought into the districts *viâ* Caragolah alone since the 1st of this month by private traders.

The merchants complain of the high rate they have to pay for carts, but not of the difficulty in procuring them. In fact, in every village carts and cart-wheels are being manufactured as fast as possible.

The traffic by mean of pack-ponies, from the less accessible ghâts on the River Ganges, and from the north of the district, is still active. I annex Mr. Mulock's report on the transport of Government grain.

The stoppage of supplies at Caragolah is unfortunate, but will lead, I hope, to no bad results. Carts have been employed as far as possible in carrying grain from Purneah to out-golahs, and many of the cartmen have gone home stating that they will be glad to get a rest for the cattle; we can get as many carts as we require at a day's notice.

The main Ganges and Darjeeling road has, of course, been much cut up, but Mr. Anley has been directed to increase his agency for the repair of the unmetalled part which is most used by the carts, by putting on parties every 10 miles. This will also be a good relief work.

All along the relief roads, which are also used for transport of grain, special gangs of men are engaged in keeping open alongside the banks where new earth is thrown a passable track for the carts. This was especially required along the roads into Dinagepore,

D.

Mr. Mulock's note under head C. gives, with the fortnightly return already submitted, all the information about storage. The amount of grain sent out up to date is as follows:—

	Mds.	S.	C.
To labourers on road	4,280	20	0
To relief officer	373	26	15
	4,654	6	15

I consider that the stocks which we have already received, and which we are to have, are quite sufficient for all Government purposes, as well as for sale, under certain restrictions, to the public.

Mr. Mulock's Note.

In the past fortnight 10,891 carts have left Caragolah for the interior, carrying 62,456 bags, or nearly 1,24,912 maunds. This is an average of 777 carts carrying 8,922 maunds a day. Our average would be very much higher had the railway kept pace with our cartage, but Mr. Munro writes on the 20th to say that he has not got more than 60 bags at the ghât; at our present rate of transport we could have finished our 5th lakh well before the end of March. Our whole transport system has received a rude check by the supplies running short at Caragolah. It is very hard to pay demurrage at Caragolah to thousands of carts; and though there is an ample supply of fodder there collected by us, Mr. Munro says that the men will not stay even at the liberal demurrage rate of six annas a day without fodder, and four annas a day with fodder. I am taking advantage of this opportunity to give employment to as many carts as I can, by carting every grain stored at Purneah to out-golahs.

Mr. Hankey's new system of paying carters at Caragolah will come into operation at once. Mr. Munro has been supplied with Rs. 50,000, and I have requested him to begin final payments at Caragolah as soon as he can. He will have now to make large payments as demurrage to the carts waiting for a load at the ghât.

Up to the evening of yesterday we have carted away from Caragolah 4,24,749 maunds; of this up to the 14th, the latest date we have information of, we had sent 39,636 maunds to Dinagepore from Kissengunge, and up to yesterday 15,741 bags, or 31,482 maunds, from Dengra to Dinagepore. We have, therefore, almost completed the Dinagepore allotment of 75,000; it will certainly be completed by the 25th, when I have ordered carting to Dinagepore to be put a stop to. I have warned Mr. Lowis that his carts will be returned empty after that date.

Three new golahs have been ordered in, one at Azimgunge in Kudba, Hooti in Kissengunge, and Rudaba in Bulrampore. Golahs are being hastened on and will all be finished before the middle of April. I find it very hard to get good golahdars who understand accounts and the submission of returns, and it is very hard to get on with what we have got. I have got the golahdars at Toorkeli, Kudba, Kusba Amour, Kissengunge, Bulrampore, and Dengra to give security, but the majority of the storekeepers are mohurirs, whose maximum of remuneration should not exceed Rs. 10. They are the only men procurable in Purneah, and so we must do as best we can.

E.

The advances to zemindars for assisting their ryots with seed-grain made this fortnight are as follows:—

	Rs.
To Meer Mohamed Kazeem, zemindar	5,000
To Lalla Rukhairam	2,000
Total	7,000

To this must be added—

Amount advanced from Relief Fund to zemindars for assisting their ryots—

	Rs.
By Mr. Craven	5,500
By Mr. Wyer	14,700
Total	20,200

This latter amount was by mistake debited to the Relief Fund, but will be entered in its proper column next fortnight. This does not include advances made to ryots, of which I have not yet received a regular account.

F.

Relief officers have now arrived and have been stationed as follows:—

1.—*Sudder Sub-Division.*

Sub-Divisional Officer	Mr. Wyer.
Relief Superintendents	Mr. Perry, at Kudba. Mr. Gouldsbury, at Kusba Amour.

2.—*Bulrampore Sub-Division.*

Sub-Divisional Officer	Mr. Meikeljohn.
Relief Superintendents	Captain James, Bulrampore. Lieutenant Thornton, Dengraghât.

3.—*Kissengunge Sub-Division.*

Sub-Divisional Officer	Mr. J. A. Craven.
Relief Officers	Mr. Bertelsen, Bahadurgunge. Babu R. N. Chatterjee, Kissengunge.

4.—*Arrareah Sub-Division.*

Sub-Divisional Officer	Mr. Rattray.
Relief Superintendent	Mr. Quillet.

All these officers have joined except Babu R. N. Chatterjee, who only got his orders to-day.

Mr. Wyer, working the sudder sub-division, submits the following report:—In the course of the past fortnight the whole system of relief superintendence has been re-arranged. The Sub-Divisional Officers have now to submit their reports to the District Officer instead of the Relief Officer, and the elaborate accounts, which were issued by the Central Committee, have not now to be kept up. Before this arrangement was established I visited, as Relief Officer, the following relief centres:—Kusba Amour, Kilpara, Dengrabghât, Ranigunge, Nakah Bulrampore, Barsoe, Kudba, Mohinderpore, Belgatchi, Mahtour, and Bissenpore, and on Friday last went through ten villages along the north-east boundary of the sudder thannah. I made careful enquiries in one, and found no cases of starvation. Distress is most felt in Bulrampore and Kusba Amour thannahs, but up to the present time that is sufficiently met by the people finding employment on the relief works. In the sudder thannah the Assistant Superintendent has visited most of the villages in the Mohinderpore circle; he found that the people of those villages had been relieved by the distribution of rice at Mohinderpore, and by being employed on relief works. The people wanted seed, or money to buy seed with. Mr. D. Cruise has been granted Rs. 2,000 to distribute to them in small sums for buying seed. In the villages of the sudder thannah which I visited I found only four persons to relieve gratuitously, but in two of them—Sudbeli and Bissuntpore—Babu Mohesh Lall, at his own expense, had been relieving 42 persons since February. I lent twelve ryots 84 maunds of rice, to be repaid in Baisakh after the tobacco crop had been cut, and another, a jeth ryot, 20 maunds, to be paid for within six months. In Kusba Amour, Mr. Gouldsbury, the Relief Superintendent, visited 25 villages; he found little or no distress in any of them except one, Satta. Mr. Gouldsbury will repair an old road going from this village to Dulalgunge. Mr. Gouldsbury has started a relief centre at Arrareah, four miles north from Kusba Amour, under charge of a jeth ryot; he will station his assistant at Nundiah, a place about eight miles north of the thannah, and wishes to have another assistant to look after the villages between the Kunkai and Mahanuddee. He sent 20 maunds of rice to Ropahât, and this was eagerly bought up; he has sold rice to jeth ryots at 13 seers for the rupee, to be re-sold by them at 12 seers, but he has not sent in an account of the quantity so sold. I have been unable to obtain any assistant for Mr. Gouldsbury, but will be able to send him one on the 26th, on the return from Patna of Tejnarain, who is a candidate for the post, and who is now in for his examination for the Subordinate Civil Service. I have received no account from Kudba. Mr. Perry has been there only a few days, and so cannot be expected to furnish one. From what Babu Rojoninath tells me, and from what I saw myself, I do not think there is, or will be, much distress in this circle. I have appointed Gean Chand Mookerjee, an abkari darogah, who knows Kudba well, as assistant to Mr. Perry. The accompanying returns will show the number of people who were relieved during the past fortnight. Besides this a few seers of cotton for spinning have been distributed, and I have given out to 21 ryots, in sums varying from Rs. 20 to Rs. 100, Rs. 760 for the purchase of seed, and sent 94 maunds of rice to 14 ryots who have engaged to pay for it hereafter. I have started cleaning out a tank at Semulgachi: this will cost about Rs. 200; another tank is being cleaned out at Mohinderpore: half the cost of this will be borne by Mr. F. Cruise, the rest by the Relief Fund. I have told the Assistant Superintendent of this circle to clean out two other tanks in Bhoga and Piluaheah. No relief measures are necessary in the southern part of the sudder sub-division, since the people there continue to be well off.

F. Wyer.

In consequence of a deficiency of supply in the local markets, I authorised Mr. Gouldsbury to sell at Kotihât and also in villages where he found much distress. I authorised him to sell a supply to the villagers, giving it to the charge of the jeth ryots in the presence of the others. Mr. Gouldsbury has made a mistake in giving it to them one seer in the rupee cheaper: these terms only apply to traders. When Mr. Wyer says he has received no account from Kudba, he refers only to Mr. Perry. Babu Rojoninath Chatterjee, who has been stationed here since December, has sent in a report showing that the distress in this thannah has been relieved by him most effectually wherever it appeared. Besides the Department Public Works roads, which run right through the thannah, he has opened two other roads and distributed thread and cotton for weaving and spinning; distribution of rice on the ticket system has also been opened and a native doctor sent out who had opened a hospital. In the neighbourhood Babu Ram Chund Setya, agent for Rai Lutchmeeput Singh, has also been distributing relief in both cooked food and uncooked rice. In Bulrampore all cases of distress have hitherto been relieved by Mr. Burke, in charge of the Department Public Works roads, and Gean Chund Mookerjee, an abkari darogah, who are deputed to the spot; both these men have been visited during the fortnight by Mr. Wyer.

The roads in the sudder sub-division opened for relief, in addition to those mentioned under head B., are—

(1) Doolmalpore to Ekumbah, under Mirzah Mahomed Hussein.
(2) Kilpara to Kotihât, under Babu Hem Chunder Rai.
(3) Kudba to Laifgunge.
(4) Sirsee to Belah, under Mr. Pyne.
(5) Mahtour to Belgatchi, under Mr. Cauty.
(6) Bishenpore to Karah, under Mr. Wodschom.

Mr. Rattray, at Arrareah, has been giving village relief largely; he reports over 5,000 persons receiving it. I have warned him to be careful to see that the persons to whom his committees give their relief are proper objects of charity. He has opened a large number of village roads and tanks—41 of the former covering 96 miles, and 16 of the latter. This I consider a capital method of distributing relief. For other roads, some of which I have seen, he has advanced Rs. 975, and for the tanks Rs. 325, and estimates that 1,000 persons are relieved by this means; cooked food had begun to be distributed at Chilhunia and Toorkeli. I have visited both places; about 20 people a day are fed. They are mostly of the beggar class, who here, as well as in the other parts of the district, would die if not relieved. Mr. Craven, at Kissengunge, reports that the people will not take cooked food; he works entirely by the village ticket system, but has only relieved 335 persons, and has 147 miles of village roads under him; there is not so much distress in this part of the district, but Mr. Craven says that he is satisfied that some of the persons to whom relief was given would have died had they not been relieved.

No. 93 Ct., dated Camp Barhait, the 24th March 1874.

From J. Boxwell, Esq., Officiating Deputy Commissioner of the Sonthal Pergunnahs, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honour to submit a narrative for the fortnight ending Sunday, 22nd March 1874.

2. I am sorry to seem to be constantly making excuses. I can only state the facts, and let the inferences be drawn.

3. At 3 A.M., on Friday last, I got a telegram from the Commissioner, on which I left this within an hour and reached Bhagulpore in the afternoon.

4. I met the sub-divisional officers of Rajmehal and Godda in Bhagulpore, also summoned by the Commissioner.

5. Most of Saturday and Sunday I spent with the Commissioner; and part of the time Messrs. Grant and Stewart were with me.

6. I have now got narratives of Rajmehal and Deogurh and a report and some returns from Dumka; but I have not the Godda narrative.

7. I am, with the Commissioner's permission and orders, leaving Barhait immediately to visit the south of the district where distress has been reported.

AI.

8. Supplies have not been reported as having failed anywhere. I append an extract from the price-current:—

Place.	Wheat.	Rice, best.	Rice, common.	Bajra.	Maize.	Gram.
Dumka - - -	12	10½	11	16	16	12
Hiranpur - - -	14	12	13	22	21	20
Deogurh - -	12	11½	12½	—	16	16
Karon - - -	12	13–5	15	—	20	14
Rajmehal - - -	13	10	11–5	16	16	12
Sahibganj - -	14	11	13	17	18	15
Barhait - - -	12	11	13	16	17	—
Godda - - -	—	8	11½	15½	15	10

II.

Prices are almost stationary. The rise and fall nearly balance each other. The cheapest rice is 15 seers at Karon in Deogurh. The cheapest food is 29½ seers of bajra at Pakour.

III.

I have no information to give.

IV.

Rain with wind and thunder and a little hail has been reported from Deogurh. The rainfall at Dumka for the week ending 21st is ·31. A few drops fell here last night.

From Deogurh, it is said, the barley will not exceed three-fourths of an average crop as the ears are small. The harvest is beginning.

As I have not heard from Godda, I can add nothing to what I have already reported. There can be no change except that the harvest has also most likely begun there too. There may be some news about the cheena which was very young.

Along the Ganges I have just seen some fair wheat, barley, and ruhar. The people were hard at work reaping. I imagine, in the Bhagulpore district, there is ten times as much rubbee in an equal area, say of 50 square miles on the bank of the Ganges, as there is in this district.

The mohowa crop is said to be very bad in Dumka; it is fair in other places. The mango crop will be good; in a very few days it will be out of all danger from fog or rain.

The people all look well everywhere. Here in the Damun they are very independent and do not care to work except on their own terms.

I have heard of no misery or starvation anywhere. Grain-thefts seem not to be increasing; but a rather unusual number of bullock and goat thefts has been reported from Deogurh. Mr. Wilmot says in most cases the animals were stolen to be eaten; but he makes no mention of the nationality of the thieves.

I have no report of my own to make about any special tract, bnt I have heard uneasy rumours from the south of Sultanabad, and I have had a letter from Mr. Boerresen of Benaguria in the next pergunnah. I am going there as soon as I post this.

B.

I submit a statement of works on roads on a separate sheet. It is necessary to give a description as well.

The most important relief work now going on is the Godda and Barahat road; often mentioned as running through the heart of Manihari.

3. Mr. Grant told me on Saturday that his last day's count of persons reached 9,000, including the workmen on four tanks near the road. He did not give me closer figures. These people buy rice from the Government store at Doi. Mudis' shops have been established along the road wherever work is going on. The mudi buys from the goladar at Doi; sells to the people for coppers, with which he pays for his own quantum of rice; and the workpeople are paid with these coins; which thus run round a circle and act as counters.

4. I am urging Mr. Grant to open work on more and more tanks inside the Damun boundary. The work is of the best and most useful kind. Our greatest difficulty is to find men able to keep count of labourers.

5. Mr. Stewart reports having opened work on two tanks in his elaka, and being nearly ready to open two more. The Burhait and Sahebgunj road is going on now under his care.

6. I am myself giving work on three bandhs and two tanks in this neighbourhood. My plan is this: I collect a good number of the men of any village, with their manjhis or mustagir as they always call him. Sometimes they have chosen the site, sometimes I have. They are generally very eager to have the work done, and not very unwilling to do it themselves. I explain to the villagers that I am giving the manjhi an advance for the work, that he will pay them, and that they are to do the work. They agree; they seem to have great confidence in their manjhis. I believe in most cases the manjhis would not try to cheat them, and that he would find it very hard to succeed in doing so.

I have paid Rs. 190 in advances up to this. The work is going on well. There is not the least doubt about the workmen getting their pay, and I don't think the work will turn out very dear. There are about 60 people on each of three of the works. I don't know how many there are actually engaged on the other two. I have a few more than 200 altogether. There is no rush or anxiety. I have 8 more works marked down in this neighbourhood. Possibly there may be people at work on them all before long. In the Damun the workmen live on their own stores and what they buy from their neighbours. They are also coming a little more into the bazar than heretofore. The manjhi pays the workmen a rupee a week, and trusts to measurement afterwards to square the account. The general rate is Rs. 1-14 per thousand cubic feet; but I have promised Rs. 2-4 for a bandh where the ground is stony and the lead long. I have put a premium on this one because I want to have it done whether relief is necessary or not, and the men had left it saying the work was too hard for the pay.

8. Up to this the labourers have supplied their own tools, but I am going to get Government tools for them if I can. Their kodalis are not good enough.

C.

Mr. Wilmot reports 222 maunds of food-grain imported by the loop line between the 28th of February and the 7th of March. The private import into the district is insignificant, except to Sahibgunge for passage to the north of the Ganges. Our means of transport are sufficient for what we want.

D.

RAJMEHAL.

Our list of selected sites for storage is—

1 Patna, 2 Barhait, 3 Taljhari, 4 Bario, 5 Sahebgunge, and 6 Banjhi.

GODDA.

1 Doi, 2 Muraro, 3 Mohagama, 4 Barkope, and 5 Godda.

Golas will be finished at all these places by the 6th of next month. The gola at Doi has got most or all of its store of rice, is in charge of a goladar, and sales are being made. Golas are nearly ready at Patna, Mohagama, and Godda.

E.

The zemindar of Manihari, Babu Girindra Ghose, applied for a loan of Rs. 10,000 to spend on a multitude of petty works on his estate.

I explained to his amla that his proposal could not be accepted; but I had drawn up a modified proposal to spend Rs. 5,000 on a very much smaller number of individually larger works, and asked for the Commissioner's approval. The Commissioner directs me to stick to the rules and insist on a separate application for each work.

F.

Enclosure No. 5.

RESOLUTION.

Scarcity and Relief Department.

Calcutta, the 30th March 1874.

Read—

The fortnightly narratives of the districts of the Rajshahye Division for the period ending Saturday, 21st March 1874.

1. *Moorshedabad.*—Prices are again easier in this district, and supplies still continue ample, being augmented by the coming into the market of wheat, gram, and other rubbi grains. The early rice crop, reaped in May, is very promising; and on the whole the state of this district is not now one to cause much anxiety. The number of labourers on relief works, as given in the narrative, was from 4,100 to 4,300, all in good condition and able easily to procure food. The figures given in last narrative (2,270) were apparently incomplete. It would be convenient if the Magistrate gave the total daily average number on relief works for the fortnight instead of a long and sometimes incomplete list of works. Since last narrative four relief sub-committees have been formed in Rampore Haut, making 21 in all for this district. As yet only the old, infirm, and beggars have required gratuitous relief. The Magistrate has not reported, as he should have done, the total daily average number of persons receiving charitable relief; apparently 13 is the number at present, and the amount spent up to date on this account has only been Rs. 104-8-3. Particular attention must be given in this and other districts to the orders contained in letter No. 1251—S.R., dated 5th instant, regarding giving full information on certain heads.

2. *Dinagepore.*—The Magistrate's report is an excellent one, and on the whole re-assuring. It seems to show that there is every prospect of successfully overcoming the great difficulties which beset this district. As Mr. Lowis observes, relief measures were begun in time, and work being offered in an acceptable form, has so far sufficed to keep off starvation. The present narrative confirms the former accounts of the fast approaching exhaustion of stocks, but the sale of Government grain was authorised by Sir Richard Temple in thannahs Raneesunkoil, Hemtabad, Kaliagunj, Gungarampore, and Goraghat. The Magistrate has since been compelled to order the stores to be opened in Patiram and Patnitolla, where there has been a sudden rise in prices and alarming symptoms of approaching scarcity had shown themselves. The Magistrate is paying attention to the question of seed-grain, but believes enough will be forthcoming at the proper time. The numbers on relief works are daily increasing, being, by latest accounts, over 56,515, among whom are large numbers of women, whose coming is taken to indicate not only the pressure of scarcity, but also growing confidence in the management of the works. The way in which large works have been successfully managed without waiting for public works officers is very creditable to the administration of this district. The Lieutenant-Governor is glad to believe this. Mr. Lowis is requested to state whether any other class of women have come on the works save those accustomed to field labour. The transport arrangements are working well, and the subsidiary golahs being rapidly stocked. It is satisfactory to learn that the Burmah rice meets with much acceptance. Charitable relief has as yet been hardly called for, but signs are not wanting that it will be more extensively required shortly. The circles, 14 in number, have now been laid out, and 12 circle officers are at their posts. The subordinate staff is also being fast completed. But the Lieutenant-Governor trusts that much use may be made of local volunteer agency, and that zemindars and munduls will give ready and efficient aid in relief work. The total number of persons receiving charitable relief must be given in each narrative as above ordered.

3. *Bogra.*—Prices are rising, but rice is still procurable at over 11 seers a rupee; and the Magistrate is still hopeful that actual famine may be escaped. Sir Richard Temple has raised the district allotment of grain to 2,40,000 maunds, and arranged that seven relief circles should be formed under sub-committees and special officers. The number of labourers on works at the close of the fortnight has increased to 9,686, of whom 5,436 were women and children. 660 persons are reported as in receipt of gratuitous relief in Bogra thannah alone. The returns on this point are otherwise incomplete.

4. *Rajshahye.*—The pressure in this district is gradually becoming more marked; but the want is not so much in the actual food-supply as in money among the labouring class. The roads are attracting increasing numbers, the average daily number for the first week of the fortnight being 2,414 and 5,361 in the second. It is still believed that charitable relief will be required only for those helpless poor who cannot work. Three poor-houses are open, but the numbers relieved, though not given, are said to be small. Transport arrangements are now working smoothly and well.

5. *Maldah.*—Things continue much the same here. The *boro* dhan and mango crop, if not injured by storms, are expected to do much for the people in a large part of the district. The condition of the special tract in the north-west, which is really suffering at present, has grown worse. Three relief circles have been formed there under Sir Richard Temple's orders, and regular house-to-house inspection been started. The measures taken will, it is hoped, prevent actual starvation. The average daily number on the relief works in this tract was 1,704, the number for the whole district being 3,159. They are said to be increasing fast. The average number of persons getting charitable relief was 280 per diem.

6. *Rungpore.*—Supplies at high prices show no signs of failing, save towards the south of this district. No very precise information as to the condition of the people is given in the report. It is said to be "better in some places and worse in others." Eight relief circles have been organised, of which seven are manned. Over 4,000 persons are said to be getting relief at *annochutters*, while only 3,465 are working on roads. The report is very meagre and wanting in information.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

NARRATIVE of SCARCITY and RELIEF in the MOORSHEDABAD DISTRICT for the Fortnight ending Saturday, the 21st March 1874.

A.—STATE OF THE COUNTRY.

1. *Abundance or scarcity of supply in the bazar.*—There is but little change to report since the last narrative with regard to the supply in the head-quarters sub-division, the markets being still supplied with sufficient food-grains for the daily wants of the people, but the stock is said to be decreasing. As heretofore, there is an abundant supply in the Lalbag sub-division. The new wheat and barley as also new grain have come into the market. The sub-divisional officer of Jungipore reports that the supply of rice in the bazar seems to have been a little augmented in consequence of the late rains and the favorable prospects of winter crops; but that this has had little effect in lowering the price of rice. In the Rampore Haut sub-division the supply is abundant in the market of Nulhatee, but scarce in the markets of Pulsa, Rampore Haut, and Khurgram.

2. *Kind and price of grain selling at one or more specified principal marts.*—The average price of common rice in the sudder sub-division is rather over 12¾ seers per rupee; it is cheapest at Nowadah, where the price is 15 seers, and dearest at Khagrah (Berhampore), where it is 12 seers per rupee. This shows a slight fall in price during the fortnight. Wheat averages 14⅓ seers per rupee, and gram is cheaper owing to the new crop coming into the market, the average price being 16¼ seers per rupee. The price of kalai, pulse, and other food-grains are all somewhat lower owing to the harvest of the rubbee crops being nearly over in some places. In the Lalbag sub-division coarse rice is selling in the city of Moorshedabad at 12 seers per rupee, but at Bhugwangolah "purbi" rice (rice from Dacca and other eastern districts) is sold at 13 seers per rupee. In the Jungipore sub-division the price of new "hoimonto" rice ranges from 11¾ seers at Mirzapore to 13 seers per rupee at Shumshergunge. The bhadoi and Dacca rice is sold at 13 and 12 seers per rupee, respectively, at the latter place, while the last-named rice is selling at 13¾ seers at Shumshergunge. Wheat is selling at 20 seers per rupee in this sub-division. In the Rampore Haut sub-division the price of fine and coarse rice is shown as under:—

	Fine Rice.	Coarse Rice.
	Seers.	Seers.
Pulsa	10	12
Rampore Haut	11	13
Khurgram	$10\frac{2}{16}$	$11\frac{13}{16}$
Nulhatee	12	14

The amun paddy of 1874 is selling at the market.

I annex a statement showing the prices of common rice in some thannahs in various parts of the district during the corresponding periods of the past three months:—

	December 19th.	January 20th.	February 20th.
Sujagunge	14	12	11¾
Goas	13½	12	12¼
Kuliangunj	14	12	12
Bhurtpore	18	12½	11
Gokum	13	12	12
Nowadah	15	13	14½
Assanpore	12½	12	11
Shumshergunge	15	13½	12½
Rampore Haut	16	14	13¼

It will be observed that in the case of thannah Bhurtpore only has there been any marked increase of price during this period. The average price of rice is, as before remarked, somewhat less than that shown in the narrative of the 9th instant, and a good deal less than in the narrative of 23rd February.

3. *Any information obtained regarding the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots, and others.*—In the head-quarters sub-division the stock of food-grains in the hands of zemindars, mahajuns, and others is said to be about the same as in last narrative, *viz.*, 5½ lakhs of maunds, but as was then remarked this is purely conjectural. No accurate estimate of the outturn of the rubbee crops can be given, but it has been better than was expected a short time ago. The sub-divisional officer of Lalbag reports that no fresh information has been obtained on this matter, and that his opinion remains the same as before,

especially as regards the ryots. He asked a shopkeeper one day in a village in thannah Assanpore whence he got his rice from, and he said "from Kuliangunj," a thannah supposed to be one of the worst off in the district, and in which the failure of the "amun" rice crop was probably greatest. The sub-divisional officer of Rampore Haut states that there is little in store in the hands of zemindars, mahajuns, and well-to-do ryots in his sub-division. I have some doubts, however, as to the accuracy of this information with regard to the well-to-do part of the population.

4. *Rainfall, if any.*—The total rainfall throughout the district during the fortnight is given below:—

Head-quarters - - - - - -	·23
Lalbag sub-division - - - - -	·9
Jungipore sub-division - - - - -	·7
Rampore Haut sub-division - - -	1·44

The rain fell on the 7th, 8th, 9th, 10th, and 17th instant. It was rather heavy in some parts of the district on the 9th and 17th, and accompanied by hailstones, which have done some damage to the fruit trees and the rubbee crops. The rain has benefited the "boro" rice crop as well as indigo and mulberry. It will also lead to more early sowings for the "aous" crop. In the Jungipore sub-division, near the Ganges, I observed sowings for the "aous" crop going on last week, and these would be more extensive were it not that the cultivators are afraid that the young plants may be scorched by the hot westerly winds.

(5.)—STATE OF THE CROPS.

The early rice crop is in a promising state, and is expected to yield a good outturn. I have seen some very fine fields, and in some the plants have come into ear. The yield of this crop in a good year is heavy, and I trust that the supply of rice in the district will be considerably supplemented when this crop is reaped in May. Indigo, mulberry, and vegetables are all in good condition, having been benefited much by the rain. The sub-divisional officer of Lalbag reports that the rubbee crops, wheat, gram, barley, moshuree, and arahar are being cut and promise a fair outturn. He saw a great deal of very fine barley being cut about Akhrigunge some days ago. In the Jangipore sub-division the spring harvest has begun; wheat is being cut. The outturn is expected to be a good one. In thannah Mirzapore, where little or no "aous" rice used to be grown in former years, some patches of "hoimonto" rice lands have been sown with this kind. The sub-divisional officer of Rampore Haut reports that the late rain has done much good to the rubbee crops and "bora" paddy in Khurgram thannah, and has assisted the cultivators to plough the land for the coming sowings. The outturn of "bora" dhan will, it is expected, be fourteen-sixteenths of an average crop in this sub-division. From what I have recently heard, I believe that the outturn of the cold weather crops in the east of the district near the Ganges has been far better than was expected, and the prices which now prevail for wheat would seem to show that a good harvest has been reaped. On the whole, the prospects of the crops are very fair and promising, and it is a question whether the slight damage done to the blossoms of fruit trees by the late rains and hailstones is not rather a blessing, as in the event of a full harvest it is very likely the branches of trees would have broken down with the weight of fruits, or that the fruits themselves would not have been of good quality owing to their very abundance.

(6.)—CONDITION OF THE PEOPLE.

There is little or no change to report in the condition of the people. The high prices of food no doubt press heavily on the poor, and in places the people of the lower classes are said to be reduced to one meal per diem. This, however, is, I think, by no means general. Mr. Dinson, of Furreedpore Filature, in the Jellinghee thannah, informs me that no relief works are necessary at present in this part of the country, the people being busily engaged in cutting and housing their "choitallee" crops, and that he cannot even get sufficient coolies for the road repairs. In the Jungipore sub-division the harvest is giving employment to a large number of agricultural labourers. During the sub-divisional officer's tour in Thannah Sooty, he learned that a mahout in a village called Bazitpore had been unable to find a sufficient number of hands to re-excavate a tank for him. Similarly on inspecting a tank last week in the Bhugwangolah Thannah, on which I had caused work to be started, I found only nine men working, and was told that there had only been a few men at work for some days, as so many labourers were engaged in harvest work. In Thannah Mirzapore and in the north-eastern portion of Thannah Sooty, where the demand for labour continues active, the relief works started in the neighbourhood have tended to alleviate the distress of people. The sub-divisional officer of Rampore Haut states that the people that appear to be in want of food are principally the old, the infirm, and beggars. The Relief Sub-Committees since formed in this sub-division will, I hope, be able to meet and relieve cases of distress. Works have been started in the Rampore Haut and Nulhattee Thannahs for the labouring class of people, and other minor relief works will very soon be started in the Pulsa and Khurgram Thannahs. For Khurgaon the repairs of the Kandee road up to its junction with Badshahee road would afford employment for a good many, but the number of persons resorting to this work is by no means considerable. The necessity of starting relief works where required has been impressed on the sub-divisional officer of Rampore Haut.

7. *Actual facts as to any* known *cases of misery and starvation.*—No such case has yet come to notice.

8. *Grain thefts or robberies.*—There were ten cases of petty theft of grain in the head-quarters sub-division, which is a slight increase over the previous fortnight. None of the cases call for any particular notice. Two cases of grain theft occurred in Thannah Dewauserai, in the

Jungipore sub-division, during the fortnight. In two other cases of theft of other property the defendant pleaded poverty. In the Rampore Haut sub-division there have been three petty cases of grain theft. The sub-divisional officer of Lalbag reports of no grain theft. A crime statement is annexed.

9. *Condition of any special tracts.*—The only thing calling for notice under this head is the prevalence of small-pox and cholera in some of the villages of the Bhurtpore thannah. Cholera pills as usual are supplied to the police station and outposts for distribution to the people. Small-pox still prevails in Thannahs Shahanuggur and Assampore, and there have been some cases in Thannah Bhugwangola. In the first two thannahs Government and municipal vaccinators are at work, and application has been made for vaccinators for Thannahs Bhugwangola and Bhudreehaut. The disease still continues in Rampore Haut and Khurgram Thannahs, and the vaccinator who is employed for this sub-division has been unsuccessful in vaccinating the people owing to prejudice on their part. In both these thannahs the Hindus largely outnumber the Mahomedans, and the former are always more bigoted and obstructive in such matters.

(B.)—RELIEF WORKS.

Road from Panchgaon to Jeebuntee Bridge.—From 750 to 800 persons have been employed daily on this road; rice is obtainable in small quantities; the men are in good condition, are paid regularly at the rate of 3 annas per 100 cubic feet. Kodalies and pickaxes are supplied by Government.

Road from Radah Ghât to Gokum.—From 40 to 50 men have been employed daily on this road; rice is easily obtainable; the men are in good condition; are paid at the rate of 2 annas 6 pie per 100 cubic feet; they bring their own tools.

Road from Kasim Bazaar to Dowlut Bazaar.—From 15 to 20 men have been employed daily on this road; rice is easily obtainable; the men are in good condition; are paid at the rate of 2 annas 6 pie per 100 cubic feet; they bring their own tools.

Old Calcutta Road.—About 30 men have been employed daily on this road; food is easily obtainable; the men are in good condition; are paid at the rate of 2 annas 3 pie per 100 cubic feet; they bring their own tools.

Kishnaghur Road.—Three hundred men were working at the commencement of the fortnight on this road, but since the Chetinee embankment work has been started the number fell to 70; food is easily obtainable; the men are in good condition; are paid at the rate of 2 annas 3 pie per 100 cubic feet; they bring their own tools.

Road from Suktepore to Ramnuggur.—About 540 men have been employed daily on this road under Mr. Malcolm; food is easily obtainable; the men are in fair condition, but have to depend on the relief works for their livelihood; they are paid in cash at a rate of 2 annas per day; they bring their own tools.

Barromassia to Jellinghee Road.—About 50 coolies have been employed daily by Mr. Lang on this road; food is easily obtainable; the men are in good condition; are paid in cash at a rate of 2 annas per day; they bring their own tools.

Hurreehurpara to Barooeepara Road.—From 600 to 700 coolies were employed daily on this road during the first week of this report; the earthwork being completed as far as the old track existed, the men had only dressing of slopes to do; the number in consequence dropped to about 80. It has, however, risen again to 185; the men object to this kind of work, as they do not earn as much as in ordinary excavation. The men are in good condition; can obtain food easily; are paid in cash at the rate of 2 annas 6 pie per 100 cubic feet; the men bring their own tools.

Katlawaree to Akhrigunge Road.—About 80 men are employed daily on this road by Mr. Rogers; food is easily obtainable; the men are in good condition; are paid in cash at the rate of 2 annas per day; they bring their own tools.

Jellinghee to Doomdapara Road.—About 70 men are employed on this road by Mr. Lang; food is easily obtainable; the men are in good condition; are paid in cash at the rate of 2 annas per day; they bring their own tools.

Chitnee Embankment.—From 400 to 500 labourers have been employed daily on this work; food is easily obtainable; the men are in good condition; are paid regularly at the rate of 2 annas 6 pie per 100 cubic feet; the men bring their own tools.

Jungipore to Khamra Road.—From 80 to 100 coolies have been employed daily on this work; food is easily obtainable; the men are in good condition; are paid in cash at the rate of 2 annas 3 pie per 100 cubic feet; they bring their own tools.

Dewanserai to Jeeagunge Road.—From 40 to 50 men have been employed daily on this work; food is easily obtainable; the men are in good condition; are paid in cash at the rate of 2 annas 6 pie per 100 cubic feet; the men bring their own tools.

Joroon to Nowada Road.—About 60 men have been employed daily on this work; the supply of food is scarce; the men are in good condition; are paid in cash at the rate of 2 annas 6 pie per 100 cubic feet; they bring their own tools.

Dewanserai to Khamra Road.—About 20 coolies have been employed daily on this road; food is easily obtainable; the men are in good condition; are paid in cash at the rate of 2 annas 3 pie per 100 cubic feet; they bring their own tools.

Aurungabad to Pakour Road.—About 100 coolies have been employed daily on this work by Mr. Graham near Aurungabad; food is easily obtainable; the men are in good condition; are paid in cash at the rate of 2 annas per day; they bring their own tools, *Azimgunge to Radha Ghât Road.*—About 90 coolies have been employed daily on this road; food is easily obtainable; men are in good condition; are paid at the rate of 2 annas 6 pie per 100 cubic feet; they bring their own tools.

Azimgunge to Sagordighee Road.—About 20 coolies are employed daily on this road; food is easily obtainable; men are in good condition; are paid at the rate of 2 annas 6 pie per 100 cubic feet; they bring their own tools.

Bhagirutte Embankment.—From 90 to 100 coolies have been employed daily in jungle-cutting and repairs of the embankment; food is easily obtainable; men are in good condition; are paid at the rate of 2 annas 6 pie per day; they bring their own tools.

Kandee to Badshahee Road.—About 170 coolies have been employed daily on this road; food is easily obtainable; the men are in good condition; are paid in cash at the rate of 2 annas 6 pie per 100 cubic feet; the men bring their own tools.

A statement showing the expenditure on relief works carried on by the Public Works Department is annexed.

Work is going on on the Itoor tank under the Meshipore State. The re-excavation of a tank at Nobogram from funds of the Paikpara estate has also been commenced. From information received from the manager a few days ago, it appeared that there were about 150 coolies working on this tank by the preceding week's report, up to which Rs. 1,096 had been expended. Work is also going on at eleven other tanks, and on various village roads, under the supervision of residents and of sub-committees, but these works will be referred to under the head of "Charitable Relief."

In the Lalbag sub-division 89 extra coolies have been employed daily by the municipality on relief works during the fortnight, at a cost of Rs. 156-1, and the total cost up to date for relief works to the municipality is Rs. 981-12. The relief works undertaken by the municipality are clearing jungle, making a road from Topkhanna to the Himam Munzil, repairing roads about Dahapara, and excavating tanks at Amaipara, Beliapukur, and Ram Lal Akra. The municipal rate is Rs. 2 per 1,000 cubic feet of earth-work. Most of the tools are supplied by the municipality. The condition of the labourers is good. There are some further relief works under consideration.

It was intended to take up the road on the right bank of the Bhairub as a relief work under the sub-divisional relief committee, but the Executive Engineer has advised that nothing be done to this road until the question of the Bhairub embankment is settled. The sub-divisional officer has made over Rs. 20 out of the road-cess allotment at his disposal to the head constable in charge of the Burhamgunge outpost in order to erect a cutcha bridge at Nishestabagh. He has also out of this allotment had the bridge over the Bhairub at Hurrirampore repaired.

In the Jangipore sub-division the work on the Mirzapore and Monigram road is going on. The average number of persons employed daily on this road during the fortnight is about 32 The Banshabati and Hilora road was started on the 13th instant with 6 labourers, on the 14th the number of labourers rose to 50, on the 15th to 95. The Sub-Deputy Collector attached to the sub-division is superintending the work. No information has been received as to the number of labourers working on the Monigram tank. Other relief works going on in this sub-division have been noticed before.

In the Rampore Haut sub-division the road from Nulhattee to Khanpore has been marked out; about 200 coolies have been employed on this work during the 16th, 17th, and 18th instant; cash payments are regularly made at the rate of one anna nine pie, one anna three pie, one anna to each man, woman, and boy respectively. The rate of wages appears to be low as regards the men. The sub-divisional officer states that much difficulty is felt owing to the want of kodalies, for which he has made an indent. As, however, the people employed about Rampore Haut have been in the habit of bringing their own tools, there seems to be no reason why these men should not bring theirs, and his request has not at present been complied with, as the example would be a bad one. If, however, the supplying of tools appears to be really necessary they will be sent. Work has commenced on the road from road along the railway near Rampore Haut to Rampore, a Sonthal village; about 496 coolies have been employed during the past week. The labourers are paid by contract, and they earn about two annas per diem. There is no difficulty in the way of their getting supplies of food. The tools are brought by the labourers. The labourers seem to be in good condition and health. The work on the road to Naraynpore was recommenced on the 20th instant. Only 6 coolies were engaged on this work, but the number will doubtless increase soon. The deepening of a large tank in Murshidpara, Thannah Pulsa, has been commenced by Baboo J. C. Roy, and about 150 coolies are daily at work there. The work will be completed soon.

(C.)—TRANSPORT OF FOOD.

The Sub-Deputy Collector attached to the Jangipore sub-division lately proceeded to Mooraroee to collect statistics regarding the export of rice from that sub-division through the Mooraroee railway station. He has ascertained from the records of the station that 16,627 maunds of rice were exported in January 1874, against 24,660 maunds in January 1873, and 7,183 maunds 13 seers in February 1874, against 24,726 maunds in the corresponding month of the preceding year. This shows a considerable decrease in the exports of the current year; but considering the scanty produce of the year, such exports naturally tend to keep up prices. It appears that 9,324 maunds of food-grains have been sent out of the Rampore Haut sub-division, and 1,035 maunds of food-grains imported during the week ending the 28th February 1874, by the East Indian Railway. It is impossible to arrive at an approximate account of private food supplies which come into the district unless regular inquiries are instituted, and even then it is doubtful whether an approach to the truth would be obtained. Judging from observations and inquiries in the district, and from the sufficiency of supply in most of the markets, there can be little doubt but that importation is going on in a more or less degree.

(D.)—Storage of Government Grain at Relief Works.

Indent for 500 maunds of Government rice has been made for the Jungipore sub-division, and it has, I believe, arrived at Moorarooe. The rice will be stored in the Jungipore sub-divisional house.

(E.)—Advances to Private Parties and their Results.

There have been 36 applications up to date in the Sudder sub-division under the Land Improvement Act. In 21 cases inquiries are being instituted; in two cases applications have been ordered to be filed for want of sufficiency of security or other reasons; in one case the application has been withdrawn, and in the remaining twelve cases orders for payment have been made on production of registered bonds, and in four cases out of these advances have been actually made to the aggregate amount of Rs. 788–13–4, half the amount applied for being advanced in one case, and one-third in three cases. The works will be inspected and further instalments given as they may be required. No advance has yet been actually made on account of purchase of grain, as the proprietors of the Aurungabad concern have not yet executed the bond for Rs. 10,000. In the Jungipore sub-division advances to the amount of Rs. 2,275 have been made to nine parties for the re-excavation of tanks, and of Rs. 450 to one party for importing grain from beyond the distressed districts. In the Rampore Haut sub-division the sum of Rs. 490 has been actually advanced for the deepening of tanks. Thirteen applications for advances have been received by the sub-divisional officer during the fortnight under report, and he will require more funds to meet these applications. In the Lalbag sub-division no advances have yet been made.

(F.)—Charitable Relief.

There is little further to report on this head as regards the Sudder sub-division than what was stated in the previous narrative. The total amount of private subscriptions raised up to date is given below—

Donations - - - - - -	Rs. 22,272
Monthly subscriptions - - - - - - -	„ 403

The amount of donations includes the sum of Rs. 1,000 paid by Messrs. R. Watson and Company, and a similar sum given by Moonshee Zillah Ruhman of Talibpore. The work of repairing the village roads of Bhurtpore has been started by the Branch Relief Committee there, and 185 persons on the average daily worked from the 12th to the 16th instant. The Branch Relief Committee of Suktipore has started work in the repair of the village roads of Suktipore, and during the nine days from the 8th to the 16th, an average of 129 persons has been employed on them. The Gokum Relief Sub-Committee has commenced the work of re-digging a tank at Rangamatty. Rs. 100 have been paid by Messrs. J. Lyall and Company, on whose land the tank is situated, towards this work in addition to what has been paid out of the Relief Fund. The repairing of the village roads at Gowas is going on under the supervision of the Gowas Sub-Relief Committee. A road is being repaired by the Sub-Committee at Katlamaree, and 40 men were at work on this road on the 16th instant. About three persons on an average daily received gratuitous relief at the hands of the Nobogram Sub-Relief Committee during the fortnight.

In the Lalbag sub-division the subscriptions have not yet all been collected, and only one member has as yet sent in a list of persons to whom relief might properly be given. A meeting will soon be held there.

In the Jungipore sub-division gratuitous relief in pice and doles of rice is given in the court-house to old and infirm people. The able-bodied are relieved by the Committee by means of wages for spinning jute, at the rate of an anna per every kutcha seer of jute spun. From the 6th to the 19th instant, 91 persons, including men, women, and children, were relieved by the Committee out of the local subscriptions; and 40 by receiving wages for spinning jute. The average daily number of persons relieved would, therefore, be about 10. Arrangement has been made for the establishment of a Relief Sub-Committee at Aurungabad in this sub-division. I have paid out of the relief fund a sum of Rs. 100 for re-digging a certain tank in thannah Sooty, and another sum of Rs. 25 for a similar purpose in another place in this thannah. In both cases I visited the villages and obtained local subscriptions. A sum of Rs. 25 has also been paid out of the relief fund for repairing a certain road in Bajitpore in this thannah in aid of the same amount subscribed locally.

The following is a statement of sums raised, realized, and expended on account of private subscriptions in this sub-division:—

	Rs.	A.	P.
Monthly subscriptions promised up to date are -	69	8	0
Donations promised up to date - - - -	766	8	0
Subscriptions realized up to date - - - -	51	0	0
Donations ditto ditto - - - - - -	328	7	0
Total sum realized -	379	7	0
Spent in charitable relief up to date - - -	104	8	3
In making purchases of jute up to date - - -	53	0	0
Total sum spent - -	157	8	3

In order that relief works might be more extensively carried on in this sub-division the district relief committee have paid a sum of Rs. 500 out of the funds at their disposal for the above purpose, promising to give more in future.

Since the submission of the last fortnightly narrative four relief sub-committees have been formed in the Rampore Haut sub-division. The sum of Rs. 257 has been already realised up to the end of the present fortnight as donations for relief purposes. Places and sites at which the necessary godowns may be required were selected some time ago. The sub-divisional officer states that he does not anticipate that much will have to be done in this sub-division in the way of distributing charitable and gratuitous relief, or of establishing relief-houses for the distribution of food.

No. 477—S.R., dated Dinagepore, the 23rd March 1874.

From E. E. Lowis, Esq., Officiating Magistrate of Dinagepore, to the Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honour to submit my Narrative for the fortnight ending 23rd March.

A.—State of Country.

There was a good fall of rain during the fortnight under report, which has done much good to the boro rice already planted, and has been favourable for the bhadoi.

There is no great feeling of uneasiness amongst the people generally, for the efforts made by Government to avert the calamity are patent to all, and confidence in the power of the "Sarkar" is unbounded. Prices, however, are everywhere rising slowly but surely, plainly indicating that the supply of grain is becoming exhausted. Every preparation, however, has been made to meet the scarcity; rice is coming in rapidly, and is being distributed throughout the distressed tract at selected sites where golahs have been erected. It is worthy of note that many of the mahajuns, who but a short time ago were sure that prices would not rise, and that there would be no famine, have lost their confident tone, and are forced to admit that scarcity seems impending; these men are also providing for the anticipated period of high prices, by buying in dhan, or unhusked rice, which they will probably keep in reserve till the demand for seed-grain arises: their purchases will undoubtedly be profitable to themselves hereafter, and will be also of general benefit; for dhan now purchased by villagers is generally consumed. At one or two places, more particularly in the direction of Patiram, the rise in price has been rather sudden, and had confidence not been inspired by the sight of the timely precautions taken, there would, I am sure, have been a panic. From all I can learn it appears to me that surplus stocks are coming to an end, and the beginning of April will find us, as I predicted in my earlier narratives it would, with a portion of the inhabitants at least, looking to Government stores for their rice supply. The necessity for commencing sales of rice from Government stores was discussed with Sir Richard Temple, and he was pleased to sanction the proposal. It will be seen that his view of the gravity of the situation has been fully justified by the events of the last week. Considering the high price of grain, there is wonderfully little distress visible among the people, but then it must not be forgotten that relief measures were started here at an early date, and have been in operation in different directions ever since; and it is now well known that anyone in want of work can get it. Officers, too, have been stationed throughout the distressed tract, who have brought the requirements of their localities to the notice of the authorities, and have convinced the villagers that Government is both ready and willing to help. Villagers are, I am happy to say, getting quite accustomed to the idea that relief works have been opened for their benefit, and not, primarily, with the object of making roads; and many have joined our works before having exhausted all their resources, and have therefore a small reserve at home, in the way of jewellery, to fall back upon for the purchase of seed-grain, though they now earn their daily subsistence by working as coolies. The soundness of the policy pursued by Government in sanctioning works being opened without reserve is becoming more and more convincingly demonstrated; and it is beyond question that the commencement of relief operations and consequent diffusion of money throughout the country as soon as there was any apprehension of scarcity has enabled the people to meet it with confidence and vigour. Throughout Hemtabad, Ranisonkoil, and Kaliagunge rice sells at prices varying from 8¼ to 10 seers per rupee; in Peergunge, towards Dinagepore, it sells at about Rs. 3-10 to Rs. 3-12 per maund; at Gungarampore about the same; at Patiram it has risen to Rs. 4 per maund; and in the Bhaduria or Ghoro Ghat Circle it is much the same. The largest rise in price has been at Patiram, where, hitherto, rice has been cheaper than almost any other place in the distressed tract, and where the mahajuns, a very short time ago, were almost derisive in discussing Government importations. The question of how labourers on our relief works may be enabled to attend to their cultivation was alluded to in a former narrative, and it has since engaged my attention. From inquiries made among the relief officers it was evident that our labourers include a very large proportion of small cultivators, and that many of them being dependent on the wages earned for subsistence will be unable to leave when the time arrives for sowing and planting out the winter crop. Men of this class require help, and to ensure that, assistance must be afforded to those who really require it. I suggested a plan to Sir Richard Temple which he was pleased to approve, and which I have under his directions ordered the relief officers to carry out. Each officer will enquire among his coolies which of them wish, but are unable, to leave work in order to cultivate their land. In his capacity of relief officer the relief officer is already in communication with mundals and other respectable villagers; he will have no difficulty then in discovering whether any particular coolie has land; whether he really has no one to attend to his cultivation; how long such cultivation will engage his attention, and whether such person is to be trusted to repay any advance made to him. If favourable answers are elicited, the relief officer may permit any coolie to absent himself from work for a certain period, being paid as if he were present, any money so paid being considered an advance which the ryot has to repay out of the proceeds of the next harvest. The likelihood of the supply of seed-grain being sufficient, or insufficient, for the requirements of the coming harvest, is another subject regarding which particular enquiries have been made. The general opinion seems to be that seed-grain will fetch high prices, but that it will be forthcoming in sufficient quantities. A ryot who has obtained any return from his fields will keep a reserve of seed-grain under any circumstances, but there are also many ryots who have had no return to fall back upon; for their benefit, mundals, zemindars, and mahajuns will lay in, and are laying in, stocks of seed-grain, from which they can be supplied. All ryots will not have money to purchase it is true, but those who have not will probably be able to borrow at high interest from their zemindars and others. If any remain who can neither borrow nor buy, an expansion of the system whereby they obtain the means of subsistence to enable them to cultivate their fields may well be provided to enable them to obtain money to purchase seed. The sufficiency or otherwise of seed for the bhadoi sowings will be some guide in determining whether the seed for the hoimantee crop will be forthcoming, and on this point enquiries are being made. I do not myself consider that any reason exists for Government action in the matter, as I believe that seed-grain will be procurable though it will command high prices. The sale of Government rice will certainly tend to keep seed-grain out of the market, for unhusked rice is now generally sold like cleaned rice for purposes of consumption. There will be no necessity to part with it, however, on easier terms, owing to competitions of Government stores, for the holders of unhusked rice are safe in holding back, feeling sure that a time must come when seed-grain will fetch its price, quite irrespective of the rates for cleaned rice. The purchase of stocks of seed-grain by Government is beset with many difficulties, and is a course that should not be adopted unless the necessary supplies cannot be obtained in any other way. The ryots themselves are fully alive to the importance of the subject, and the mahajuns and others are not likely to let slip so favourable an opportunity of making money.

B.—Relief Works.

Our numbers are daily increasing; by the latest accounts Mr. Jones has 21,000 persons at work, Baboo Huri Mohun Chand employs over 9,000, Mr. Scanlan 12,000, Mr. Finucane 5,000, Sub-Inspector of Patnitollah 3,000, Baboo Poorno Chunder Goopto 2,200, Baboo Hura Kalee Mookerjea 2,000 and the three Public Works Department Overseers 2,615 more; of these a large proportion are women, who now flock to our works in numbers. It was some time before their prejudices could be overcome, but at last a few women came, found they were treated with kindness and consideration, and soon the report spreading others were induced to come forward, and now hundreds are employed. When the scarcity first began it was confidently predicted by natives, as well as Europeans, that women would not come to work under any pressure of want. It says much for the existence of scarcity that they have come; it also says something for the tact and management of my relief officers. The work of digging out and cleaning tanks has been commenced in some places, and now that Sir Richard Temple has authorised our taking such work in hand, whether subscriptions are raised or not to defray the expenses, many more works of that nature will be put in hand as soon as roads now under construction are finished. Task-work is being introduced wherever it is possible, in order that any one desirous of obtaining extra pay, by working overtime, may be enabled to earn more than 10 pice per day. Some ryots wish to try and earn enough to lay by a little for purchase of seed, &c.; and to enable them to do so, and in order to equalize the rates, I have directed the following rates to be allowed: 4 annas per 100 cubic feet for stiff soil, and 2½ annas for sandy soil. These are much the same rates as are paid by the Public Works Department, and I calculate that by them a man might earn as much as 4 annas a day.

C.—Transport.

With the exception of Government rice, none is brought into the district from outside, although the internal trade by means of paikars and beparees is still brisk enough. Rice, I am told, is not now coming in from Cooch Behar, and that accounts for the rise of prices and scarcity of grain in the Rani Sonkoil direction; the supply is evidently running short, and the Government stores have only just in time been thrown open. I have little doubt that these bebarees, finding it difficult to obtain rice elsewhere, will soon take to getting their supplies from us, and distributing among the hâts in the interior; these men might be supplied with rice at 13 seers per rupee, on condition of their supplying their customers at 12. The plan has been tried of selling rice to moodies at 13 seers, who engage to sell to the coolies at the roadside at 12, and it has been found to answer admirably. I hear of the plan having been introduced by Mr. Scanlan and Baboo Poorno Chunder Goopto. One moodie was caught by Mr. Scanlan selling at over the stipulated rate; he has been punished by not being allowed to get any more Government grain to dispose of. Mr. Scanlan has tried his coolies with Burmah rice, and finds they like it very much, and are quite willing to eat it. Mr. Jones also tried the experiment with a like result. The petty dealers are being encouraged to buy from Government stores. In two days 50 maunds were disposed of at the Nekmurd Golah to small purchasers. Carts are still coming in for employment, and are being now sent on to the Godagaree line, as many as are required having been supplied for the Maldah and Dinagepore line. Manik Chuck has been abandoned as one point of receipt, and Maldah substituted in its place. Our supplies for Dinagepore and Tamboolee are now taken on by cart from Maldah, and our supplies for Raigunge partly go by boat from the same place. An effort has been made to send some carts to help Mr. Reily, in his transport from Hyatpore; there has been some difficulty, however, in persuading the carters to work out of their own district and on an unknown route. Complaints of want of fodder are heard from Raigunge, but measures have been taken to purchase and send straw for the use of Government carters. Rice is flowing in from every direction. Mr. Scanlan is getting it in from Kishengunge almost faster than he can prepare golahs for its reception. Cholera, I regret to say, broke out among the carters at Ghoraghat and some of them ran away. The native doctor at Gungarampore, whose presence was not required at that place, was at once ordered to proceed to the spot; there have been no more cases, and confidence appears to have been regained by the carters. I find that the Bogra Magistrate experiences difficulty in maintaining the transport service to Ghoraghat. Some carts have been sent to his help, and more will, I hope, follow.

D.—STORAGE OF GRAIN.

Grain is being distributed to the subsidiary golahs as fast as possible, so that grain may be on the spot should any emergency arise. The surplus stocks in the district are, as I have said, apparently getting low, and the run on our Government golahs may commence any day, so it is well to be prepared. We have not yet been supplied with scales and weights, but I believe some sets are coming. I have noticed above that sale of Government stores has been commenced to the great relief of the inhabitants of certain tracts; it has been noticed that many of the four anna and eight anna pieces paid in exchange for rice have holes bored in them, showing that they have been used as articles of jewellery. I am informed that the Bengal rice is all clean and good, that the Rangoon rice is also clean, but that the Moulmein and Akyab rice is much mixed with unhusked rice, and the China rice has more husk than any. The circle officers have been directed to employ women in husking the uncleaned rice, thereby affording congenial employment to persons in distressed circumstances.

E.—ADVANCES.

Since I last wrote, one zemindar, by name Girija Moyee Debya, has applied for an advance of Rs. 5,000; her petition has been forwarded to the Relief Commissioner for sanction.

F.—CHARITABLE RELIEF.

As I mentioned in my last report, the sum of Rs. 100 was, as a preliminary measure, sent to each relief officer, to be expended in relieving cases of distress. At first there were very few applicants, all who were able to work being on the road, and the sick, infirm, &c., being either supported by relations or subsisting on the charity of individuals. Within the last week, however, there has been a change; the enhanced price of rice and falling off in the supply have induced people to be more sparing of their liberality, and the consequence has been that more applications have been made to the relief officers. The numbers up to the latest date were very trifling, but an apprehension exists that relief operations will soon be more widely extended. We are now, I am happy to say, in a position to meet any further demands that may be made, our arrangements being now complete. A district relief officer has been appointed, who, under orders of the Magistrate and Collector, will have special charge of this department; the district has further been divided into fourteen circles, each under a separate officer, who is responsible for his own division, and who will look after all relief operations therein, whether making of roads, digging of tanks, gratuitous distribution of rice, &c., and who will report once a week to the district relief officer, who in his turn has to report to the Magistrate and Collector all that goes on. Each circle officer is instructed to obtain the unpaid aid of village munduls and respectable inhabitants in carrying out his operations; he has also the assistance of two or more inspectors who are paid by Government. Some of these inspectors have already been appointed; twelve circle officers have also arrived and been sent to their respective posts. I append a map* of the district showing the circles and the name of the officer posted in each. It may be that the operations under this head will be more extended than I at present calculate; in that case, the size of the circles will have to be reduced, and the number of officers increased. I may add that when Sir Richard Temple was here, I agreed to appoint ten inspectors, leaving the rest to be appointed elsewhere. I have, however, been obliged to appoint more than my stipulated number in order to enable all the officers to proceed to their circles and start work. We shall not have too many men if all the officers come that Sir Richard Temple arranged to have sent, even though I have exceeded my stipulated number. The high price of grain is causing some distress among the professional beggars and others to the north of the district; the distress, however, does not appear to be greater than private charity can deal with. I learn that Baboo Syámá Sunkar Chowdhry, the zemindar of Jaigunge, mentioned in a former narrative, has opened dharmasálás in two places, and affords gratuitous relief to some 140 persons daily.

* Forwarded under separate cover.

G.—FINANCIAL RESULTS.

The total expenditure up to last fortnight was Rs. 4,84,604-5-11.

P.S.—Since writing the above, I have received a letter from Mr. Finucane, circle officer of Patiram, the purport of which I consider it advisable to communicate at once. Mr. Finucane writes on the 22nd to say that the sudden and unexpected rise in prices is causing considerable distress, that the number of persons seeking charitable relief increases, and that the symptoms of approaching famine are daily growing more alarming. A most significant fact is also noted that the sale of ornaments, stopped some time ago by the opening of relief works, has again begun. Mr. Finucane also says that he hears that parts of Putnitola are in a bad state. I have written to Mr. Finucane authorising him to commence selling from Government stores, such sales not having been formally sanctioned for that division, and directing him to give employment to any one seeking it by opening out any suitable work. As no officer has yet been appointed for

Putnitola, I have, with the consent of the Relief Commissioner, ordered Baboo Hurrish Chunder Ghose, who had been deputed to assist in the distribution of charitable relief under the officer in charge of Gungarampore, to proceed at once to Putnitola and take temporary charge pending the appointment of some European. The state of things at Patiram is not unexpected, and finds us prepared with stocks of rice on the spot and agency to meet the difficulty. I am confident that distress, as it arises, will be met effectually, Mr. Finucane being a very intelligent active officer. I have thought it proper, however, to add this note to my present narrative instead of waiting till another falls due.

E. E. Lowis,
Officiating Magistrate.

No. 929F, dated Maldah, the 24th March 1874.

From F. J. Alexander, Esq., Officiating Magistrate-Collector of Maldah, to the Secretary to the Government of Bengal, Statistical Department.

In continuation of this office letter No. 768F. of the 10th instant, I have the honour to submit herewith fortnightly Narrative of Scarcity and Relief in this district for the fortnight ending with 21st instant.

Narrative of Scarcity and Relief in the Maldah District for the Fortnight ending 21st March 1874.

A.—State of the Country.

Supplies fluctuate and are not as abundant as they were, but are reported equal to the local demand at all the principal markets in the district. The wants of the central and western tracts in the way of rice continue to be chiefly supplied from the large marts of Rohunpore and Neetpore, supplemented by importations from the eastern districts *viâ* the Mahanuddy. In the north-western part of the district, large importations from Sahibgunge *viâ* Hyatpore, brought in both by ryots and local traders, have helped to meet the demand which otherwise would fall short.

Prices continued generally steady throughout the greater part of the fortnight. Towards the close of last week, however, there was a rise of 1 to 2 seers, viz. from 13 to 11 at head-quarters, owing to the run in the local importations.

In the north-west tract prices remained unchanged, viz. 10½ to 10 seers.

In the south-eastern and south-western tracts they continued fairly favourable.

In the north-eastern tract there was a tendency to rise.

The following are the latest prices of paddy and ordinary rice at the under-mentioned principal markets in different parts of the districts.

Central part of the District.

At Bulbulchandi.

Paddy	18 seers per Re. (80 tolahs).
Ordinary rice	11 ditto ditto.

At English Bazar.

Ordinary rice	11 seers per Re. (80 tolahs).

North-east of the District.

At Bamongolah.

Paddy	21 seers per Re. (80 tolahs).
Ordinary rice	13 ditto ditto.

At Gazole.

Paddy	20 seers per Re. 80 (tolahs).
Ordinary rice	10½ ditto ditto.

North-west of the District.

At Chançhal and Abadpore.

Ordinary rice	10 seers per Re. (80 tolahs).

At Toolsigunge and Shumshi.

Ordinary rice	10½ seers per Re. (80 tolahs).

South-west of the District.

At Turtipore, Seebgunge, Kaliachuck.

Paddy	19 to 19½ seers per Re. (80 tolahs).
Ordinary rice	12 to 2 ditto ditto.

South-east of the District.

AT ROHUNPORE.

Paddy - - - - -	20¼ seers per Re. (10 tolahs).
Ordinary rice - - - - -	14 ditto ditto.

NOTE.—At Rohunpore, on the last market day, 2,600 maunds of paddy and 1,600 maunds of rice are reported as brought for sale.

The local stocks of grain at Rohunpore and Hoojropore Nawabgunge, both large marts on the Mahanuddy, are believed to be as follows:—

AT ROHUNPORE.

Paddy - - - - -	1,500 maunds	(80 tolahs).
Ordinary rice - - - - -	6,500 maunds	

AT NAWABGUNGE.

Cleaned rice - - - -	7,000 maunds (80 tolahs).

Rainfall.

There was a smart shower of rain on the night of 9th March, 0·44 inches being recorded. After which the weather set in fair for several day with westerly winds. On the 16th the weather was again threatening, but it cleared off with only a few drops of rain. Since then it has been fine with first westerly and latterly south-easterly winds. The mornings keep remarkably cool for the time of year; the days are getting perceptibly warmer.

State of the Crops.

The cold weather crops, wheat, barley, &c., are now being cut, and a full sixteen-anna crop in some places is being reaped. Taken all round, these crops have turned out very well, and on an average there will be a full twelve-anna yield.

The cheena (millet) crop, which will also shortly be reaped, also promise a full average yield.

The reports of the "bora" dhan are generally favourable. More rain is needed for this crop in some places where the supply of water for irrigation is falling short; but as a rule the plants look excellent and promise a plentiful yield.

The mango crop is also expected to be a good one.

A severe hailstorm is now the only danger to be feared for the bora dhan and the mango crop.

There was slight hail on the 7th to 9th March, but it was not sufficient to do any injury to the crops.

The sowing of the bhadoi dhan lands has commenced.

Condition of the District.

Small-pox is still reported in places; otherwise the general health of the district continues good.

No cases of starvation are reported from any part of the district, and the state and prospects of the people generally remains much the same as reported in the previous fortnight. A great deal depends on the "bora" dhan and the "mango" crop; if these turn out well, as it may be confidently expected they will, there will I think be no cause for immediate anxiety regarding a large portion of the district. The people themselves look to the mango crop here as an addition to the food supply in a greater degree than any one unacquainted with the district would be led to suppose. No special increase of thefts.

Condition of any special tract.

Distress so far is localized to the north-west of the district (thana Khurbah and part of Gorgoribah) bordering on Purneah and Dinagepore, to which all along our special attention has been directed.

Mr. Reily, in his latest reports, received yesterday, writing of that tract, says as follows:—

"The inhabitants of the villages to the west and north of the district have begun to show signs of distress. I caused a house visitation to be made by competent persons; Lieutenant Kelly and myself taking a number of villages ourselves, so as to be able to check the reports made to us, and found that in many cases families had been reduced to one meal a day. A large number of fresh relief works will have to be set on foot, and task work done away with. I have made a list of the distressed families in these quarters, and have made arrangements to place all who are unable to work either from old age or sickness on to the charitable relief lists."

It is clear from the above that we must be prepared to have a very large proportion of the population of this tract in our hands for several months to come. So far the relief roads, which we have started throughout the distressed tract, have afforded ample occupation to those who needed it; but these roads are now almost completed. The tanks which are being dug in several places will still afford occupation for the next two months, but more tanks must be started, and village roads; and if needs be we must fall back on the old bed of the Mahanuddy and clear that out.

I am sending Mr. Reily two Inspectors, so that a thorough weekly visitation of the villages in the distressed tract may be made, and the District Committee have allotted Rs. 5,000 from the general charitable relief fund for the Chanchal circle, to meet the case of those who are unable to work from old age, sickness, &c.

Mr. Reily continues to distribute grain to his tenants in the more distressed parts, and up to date 2,081 maunds have been thus advanced. He continues also to sell to outsiders (not tenants of the estates) from the grain he has purchased from the loans granted him.

B.—RELIEF WORKS.

During the fortnight work has been going on in the north-west tract under Mr. Reily on nine relief roads and six tanks. The total number of persons employed during the fortnight ending the 21st March being 18,950 men, 3,968 women, and 955 children.

It will be seen that the numbers employed have largely increased since last fortnight, and Mr. Reily anticipates that double the present numbers will require relief next month.

One of the above roads is completed and most of the others are approaching completion, and village roads and additional tanks will now have to be started to afford relief to those who need it.

Shops, where Government grain is sold at Rs. 4* per maund, have been established at all relief works under Mr. Reily, where the nearest rice shop is over one mile. The total sale of Government grain up to date at such shops is 89 maunds.

Work is also going on on the ordinary district and municipal roads, and on the other relief works noted below, irrespective of tanks which have been undertaken in several localities by private individuals.

The total daily average of persons employed on all works for the fortnight is as follows:—

—	Men.	Women.	Children.	Total.
On ordinary district roads	1,087	172	39	1,298
On municipal roads and tanks	56	25	4	85
On relief roads	864	110	34	1,008
On relief tanks	551	178	39	768
Total	2,558	485	116	3,159

Statement showing Total Number of Persons employed on Road and Relief Works during the fortnight ending 21*st March*, 1874.

Roads and Relief Works.	Men.	Women.	Children.	Total.
District roads	15,231	2,413	558	18,202
Municipal roads and tanks	795	354	60	1,209
Relief works	—	—	—	—
North-western tract.				
On nine relief roads	11,236	1,465	408	13,109
On six tanks	7,714	2,503	547	10,764
Eastern tract.				
On two relief roads	877	—	107	984
South-eastern and central tracts.				
On three roads	263	75	15	353
Total	36,116	6,810	1,695	44,621

C.—TRANSPORT OF FOOD.

Private trade continues fairly active; paddy and rice in considerable quantities finding its way by the Mahanuddy from the larger rice marts to the smaller markets and bazars.

The transport of Government grain progresses. The allotments for this district and Dinagepore having been considerably increased at the suggestion of Sir Richard Temple, in consultation with the local officers, viz., Malda from 100,000 to 150,000, and Dinagepore from 1,000,000 to 1,200,000, every effort will be made to increase the carriage to meet the additional amount of grain to be transported.

The grain return prepared up to Saturday, 21st March, shows 360,310 maunds "received into the district," of which 321,656 maunds 2 seers had passed through the district, or was in transit for Dinagepore, and 26,741 maunds as "stored in the district."

By the Hyatpore route the average daily despatches since the 9th March have been 1,500 maunds. On that route Mr. Reily has 350 carts at work, and between 350 and 400 pack-bullocks, and he expects 500 carts in a few days from Dinagepore. He will then be able to carry away 65,000 to 70,000 maunds a month.

On the Manickchuck and Neemaserai route Mr. Westmacott has 542 carts at work, and his average daily despatches are 1,469 maunds.

---

* Sir Richard Temple's instructions, since received, to sell at 12 seers per rupee, will now be attended to.

2.—*Gazole Relief Circle.*

	Number of persons relieved.
Gazole	93
Bamongola	6
Total	99

The expenditure was 3 maunds 12 seers 4 chittacks of rice.

3.—*Maldah Relief Circle.*

	Number of persons relieved.
At Maldah	42

The expenditure was 21 seers of rice and 3 pie in cash.

4.—*Nawabgunge Sub-division.*

Nowabgunge	9
Gomastapore	16
Kansat	166
Seebgunge	19
Shirshee	8
Total	218

The expenditure was 2 maunds 28 seers 14 chittacks of rice and 14 annas 3 pie in cash.

5.—*Sudder Sub-division.*

	Number of persons relieved.
English Bazar	511
Kaliachuck	324
Total	835

The expenditure was 9 maunds 23 seers 15 chittacks of rice 1 rupee 5 annas and 6 pie in cash.

The total number of persons relieved for the fortnight is thus 3,920, at an average of 280 per diem.

	Rs.
The total amount of local subscription up to date amounts to	6,842
Add Central Committee's grant	10,000
Total	16,842

At a meeting of the District Committee, held on the 21st instant, it was resolved to allot the Central Committee's grant as follows:—

	Number of persons relieved.
To Chanchal Relief Circle	4,000*
„ Gazole ditto	1,500
„ Maldah ditto	1,500
„ Sudder sub-division	1,000
„ Nowabgunge sub-division	2,000

Mr. Livesay, C.S., having joined, has been placed in charge of relief operations under my general superintendence.

No. 1,799, dated Bauleah, March 1874.

From W. H. D'OYLY, Esq., Collector of Rajshahye, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I HAVE the honour to forward herewith my narrative for the fortnight ending the 22nd instant.

STATE OF THE COUNTRY.

The markets still continue to be well supplied. I have only heard of a deficiency at one market, viz., at Keshore in the Tannore police-station, but there has always been a sufficient supply in the neighbouring markets. The complaints I have heard are not of a want of rice, but of want of money with which to buy it. Pressure is chiefly felt in the thanahs of Godagaree, Tannore, the north-west of Bagmara, and in the east of Singra. The people are flocking in large numbers to the road works in Tannore. I have lately visited this part of the district, and I found the men working on the road in good condition. In some places in Tannore, Bagmara, and Godagaree, ryots have been selling their cattle, but I have generally found that they keep their plough-cattle.

---

* The district officer has since deemed it advisable to increase the grant to Chanchal to Rs. 5000.

Wherever there is mulberry cultivation no distress is anticipated; the coming *bund* is a very promising one. The bora dhan crop is also looked forward to as a great stand-by; it has been very extensively cultivated this year, and with great success. The road works now in hand, and those kept in reserve, will, I trust, prove sufficient to enable the ryots to pull through till the rubbee and bora dhan are harvested.

The only persons for whom charitable relief will be necessary are the helpless poor who cannot work. I am glad to say that several zemindars are now coming forward to help their ryots with advances. Prices are rising a little, as will be seen from the following quotations, viz.:—

	Rice.		Dhan.	
	S.	C.	S.	C.
Bauleah	12	0	22	0
Nattore	12	12	22	0
Singra	16	0	30	0

There have been no cases of starvation, and no cases of robbery or dacoity. The whole of the increase in crime is in petty offences.

B.—RELEIF WORKS.

In the Tannore jurisdiction the number of workmen has greatly increased. The old track from Bauleah to Mandah is is good order, and is being used for the transport of rice to Putneetolla. We have therefore not been able to do much earthwork on it; but from Nowhatta it takes a sudden bend and runs eastwards along the Baralooee, and crosses this river at Nukrazee ghat. This is the only water to be crossed between Bauleah and Mandah; the ghats have been improved, and I have had to put on two boats, as the ferrymen took away their boats (it was a zemindary ferry).

To make the road shorter and better we have made a new road from Nowhatta to join the old one, about 5 miles north of Nowhatta, and this is the bit of work that has attracted over 4,000 labourers. Wherever scarcity of water is complained of along this line, I have had wells sunk; and where there are hollows near the line of road, they have been improved and made into small tanks. The villagers are delighted at this. The Executive Engineer is now going to mark out work on the feeder road from Tannore, and this will give employment to a very large number of labourers when the five miles of road above referred to are completed. For the distressed portion of the district in the Singra thana, near Koegaon, Runbagha, and Kathoom, I have directed the Deputy Magistrate of Nattore to commence work at once on the part of the Bogra road passing through those villages.

C.—TRANSPORT OF GRAIN.

The means of communication by which grain is brought into and through the district have been better than I at first expected. The Baralooee river has been the saving of a great portion of the district. Running from the Tannore beel past Nowhatta, and thence westwards right through the centre of the district, it joins the Attrai near Bagsur (seven miles north-east of Nattore). This river is open still for large boats, and the gunges all along it have been well supplied with constant importations. The cart-traffic has been almost altogether monopolized for the transport of Government rice.

D.—STORAGE OF GOVERNMENT GRAIN.

From the statement annexed it will be seen that the transport of Government grain has much improved. We can forward 10,000 maunds daily from Godagaree. The Railway returns, I am afraid, do not show total receipts and despatches up to date, but only for a period. I have asked the several storekeepers to report on this.

E.—ADVANCES TO PRIVATE PARTIES.

	Rs.
Advanced up to the date of last narrative	29,600
Advances in course of last fortnight:—	
Under Land Improvement Act	7,950
For advance to ryots	3,700
For purchase of grain	2,600
Total	43,850

F.—CHARITABLE RELIEF.

Mr. Manisty has established three poor-houses at Separa, Chowbeesnuggur, and Tannore, but only the infirm and helpless poor are fed gratuitously, and of these I am glad to say the number is yet small.

No. 9, dated Rungpore, the 23rd March 1874.

MEMORANDUM by E. G. GLAZIER, Esq., Officiating Magistrate, Rungpore, forwarded to the SECRETARY to the GOVERNMENT of BENGAL.

NARRATIVE of SCARCITY and RELIEF in RUNGPORE DISTRICT for the Fortnight ending 21st March 1874.

A.—STATE OF THE COUNTRY.

The supplies of rice have become somewhat less plentiful towards the south. At Kalligunge the falling off is supposed to be temporary owing to the prevalence of adverse westerly winds, but down in Govindgunge direction it is feared that the Dinagepore and Bograh supplies may be coming to a close, and prices have risen to Rs. 4-8 a maund, 80 tolahs' weight. Mr. Damant has taken charge of his relief sub-division there, and will commence selling the Government stores if occasion arises. I have allotted 50,000 maunds for that thannah, and there will be reserves of 15,000 maunds at Gyabunda, and 50,000 maunds at Kalligunge, to be drawn on as necessity arises, if my allotment of the three lakhs of maunds meets approval. The supplies elsewhere are well maintained, and imports come freely from Cooch Behar and Julpigooree. Mr. Khan, relief officer, made some enquiries lately in Kamargunge thannah, Swaruppore pergunnah, and found one jotedar who had 20,000 maunds of paddy in store. He rode over a fine rice plain, where there had been a full crop even last season, and it is said that a lakh of maunds was harvested, half of which is still in the hands of the people. The rest is in Hubrah, the head-quarters of the zemindary, and this rice comes back to us for sale in the markets from that place. I do not see any cause to anticipate any failure in the continuance of supply anywhere, but possibly in the south-west corner of the district; but organised enquiries as to the amount of importation are being set on foot to get more definite information regarding importation in all the principal markets, and the results will be from time to time reported. New pulse and kawn have come into the market at Sundergunge, and mustard-seed is still freely brought for sale in places. Except down at Govindgunge and Pirgunge, the prices are somewhat easier, ranging from Rs. 3-6 to 3-12 along the eastern half of the district, and Rs. 4 to 4-8 along the western border, all of 80 tolahs' weight. The local price is very little criterion of the state of the people; for at Swaruppore, where the large stocks I have referred to are found, the prices ruling are 6 to 7 pice a seer, or Rs. 3-12 to 4-6 a maund.

The following are market quotations:—

		Seers.	Chittacks.
		of 80 tolahs.	
Mahigunge Nowabgunge	per rupee	10	14
Bhowanigunge	„	12	13
Nisbetgunge	„	10	10
Polashbari	„	10	9
Molung	„	10	0
Sundergunge	„	10 to 10-8	
Dimla	„	12	11
Olipore	„	10 to 10-8	

No rain has fallen since the heavy hailstorm on the night of the 7th instant, which damaged the tobacco crop in places. The condition of the crops is good throughout the district. The potato crop, especially to the north, has been a bumper one, and people are freely resorting to it as a food-supply, and nearly half of our *annachatra* doles consists of this kind of food. Tobacco is being gathered, and, despite partial damage by hail, is fully up to the average; wheat is everywhere favourable, and is being harvested; so is kalai. Cheena and kawn are progressing well. The aus rice is being sown everywhere on the loamy lands, and in many places is sprouting well and is being weeded. No deficiency of seed has been reported in any direction. The red clay lands in the west and south-west of the district have not yet been broken up, and operations on them will be considerably later. The condition of the people is better in some places and worse in others. The Deputy Magistrate of the sub-division has visited Kamdiar Hat, and reports the condition of the people there as somewhat worse, though the price of brass utensils and silver ornaments in the markets has risen. The numbers at work on the road there went over 400, but have fallen again lately according to latest returns. Mr. Damant has now charge of Thannah Govindgunge as a relief sub-division, and I have given him instructions on the subject of making advances, adverted to in paragraph 6 of the Government Resolution on the last fortnightly report. A commencement will be at once made. Eight relief divisions in all have been organised in consultation with the Commissioner and under instructions of Sir Richard Temple, of which seven have been manned. The state of Molung remains much the same; the Relief Officer has it well in hand. Sundergunge is better, and Borobari very much so. In the latter place the people come more freely to the road works than anywhere else, there being nearly 700 working on one road. The people who come are the cultivators, who will work hard one day on the road from dawn to dusk and the next on their own fields, or will do their own field work first and finish up by a good day's work on the roads. The explanation, I think, is that they are Rajbungshis, and take more readily to this kind of work than the Mahomedan cultivators of the rest of the district.

The condition of Mahigunge Thannah is less favourable. The most distressed portion has been taken in hand and sufficient relief afforded, but the jurisdiction is very extensive and distress is spread very much over the whole area. I intend to work through it myself this week, and I shall see that sufficient assistance is given to the Relief Officer to enable him to overtake the whole work. There was a report received of a death from starvation in one part of this thannah, and I went to the spot two days ago, but the case was that of an old woman of 80 years of age who died of disease, doubtless in some measure aggravated by privation, for numbers have now to content themselves with one meal a day. The Relief Officer also found two women who were much reduced by starvation; he relieved them and they recovered.

No grain-thefts are reported.

B.—Relief Works.

The number of relief roads sanctioned has been increased to 49, but all are not opened yet; some are kept in reserve to be taken up as others are finished. The labourers at work remain much the same in number. The return of the roads is given at the close.

Very little of the Government rice has been disposed of to the coolies, as the local prices are generally under the rate of Rs. 3-12 a maund. Sales are made at Pirgunge, and have commenced at Govindgunge. The labourers are paid regularly.

C.—Transport of Food.

The imports of 2,000 maunds of rice are reported up the Teesta and Dhurlah, and 3,500 maunds on account of Maharani Swarna Moyee have been stored at different places. Transport is proceeding without block. The number of carts continue the same, but they are being collected now from all parts of the district to bring up the increased allotment, and pack-bullocks will probably be employed.

D.—Storage of Government Grain at Relief Works.

Maunds 3,00,000 have now been allotted to this district. It is proposed to be thus distributed to the relief division:—

	Maunds.
Govindgunge	50,000
Pirgunge	25,000
Sadullapore	15,000
Sundergunge	10,000
Molung	40,000
Mahigunge	30,000
Kamargunge	5,000
Durwani	5,000
Borobari	25,000
Chillakhal	20,000
Rungpore	10,000
Gyebunda	15,000
Kalligunge	50,000
Total	3,00,000

A complete list of the golah sites will be furnished later.

Accommodation is ready for 1,25,000 maunds, and the provisions of the remaining accommodation will be pushed on with vigour.

The following is the account of receipts and despatches:—

Receipts.

	Maunds.
Previously received	79,401
March 8th—By country boats from Naraingunge	410
Ditto Ditto steamer *Prince of Wales*	20,855
Total	1,00,666

Despatched during the Week.

Chillakhal	3,000
Kooreegram	*Nil.*
Panialghat	7,003
Koolaghat	5,000
Rungpore	1,000
Gyebunda	1,010
Pirgunge	1,040
Naldanga	1,190
Gobindgunge	420
Pairabund	*Nil.*
Kamdiar Hat	1,410
Sundergunge	1,000
Sadullapore	450
Molung	320
Alaikoori	830
Total	23,673
Previously sent	65,007
	88,680
Balance	11,986
Grand Total	1,00,666

Besides the above about 5,000 maunds are being unloaded from the Dacca boats, and about 24,000 from the steamer *Prince of Wales.*

The amount stored in golahs amounts to 59,604 maunds. The grain golahs at Mahigunge have been burned. Last night a large fire occurred in the Mahigunge town, and there was a high wind blowing, so that the flames leaped from place to place over great intervals of space, and the grain golahs caught. The amount stored is 5,500 maunds of Government rice and 1,260 maunds belonging to the Relief Committee. I was at the place this morning. It is still burning, and, as far as I can see, very little, if any, of the rice will be saved out of heaps of burning refuse. A special report will be sent. Some 1,000 to 1,500 maunds will be saved.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

A large number of advances has been taken by private parties:—

	Rs.
For purchase of grain	7,500
To zemindars for advances to their ryots	55,700
To jotedars and others	600
Add advances sanctioned but not yet taken out	30,000
Total Rs.	93,800

Other zemindars are coming forward with applications. It is generally understood now that the Government expect the zemindars to take advances for their ryots, and the best proof I can give of that is the article translated from the *Amrita Bazar Putrika* in this week's report on native papers, where a zemindar writes complaining that I am forcing the zemindars, rich or poor, *nolens volens*, to take the advances. The Kakenah zemindar has taken 15,000 for his ryots, and many of the largest zemindars are advancing large sums without having recourse to Government loans.

F.—CHARITABLE RELIEF.

The number relieved at *annachatras* is now over 4,000. I cannot give exact figures in this report, but by the next I hope to have regular returns from the Relief Officers.

At Rungpore there are four private *annachatras* and one Government one. One case of keen distress has been referred to above, and many cases of unrelieved want are found by the Relief Officers on their inspections, and supplies of food are given to last a fortnight at a time. More details will be given in next report. Forty-eight maunds of cotton have been given out in spinning relief, which have relieved about 1,900 women.

	Rs.	A.	P.
The total subscriptions realised up to date are	10,023	0	0
Government subscription	8,500	0	0
Total	18,523	0	0
Expenditure	8,562	10	0
Balance	9,960	6	0

No. 1208, dated Bogra, the 23rd March 1874.

From C. A. KELLY, Esq., Officiating Magistrate and Collector of Bogra, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I HAVE the honour to submit the Fortnightly Narrative as follows:—

NARRATIVE of SCARCITY and RELIEF of the DISTRICT of BOGRA for the Fortnight ending the 23rd March 1874.

A.—STATE OF THE COUNTRY.

Prices are rising, and at some of the marts have risen so high that I may probably soon open some store-houses of Government rice for sale to the labourers on relief works. This rise in price may be taken as indicating a certain amount of scarcity in supplies. Ordinary rice at Bogra was selling on the 21st at 11 seers 4 chittacks of 80 tolas per rupee. At Sultanganj 12¾ seers, and at Dupchanchia 11 seers 8 chittacks:—

	Maunds.
At Sultanganj	1,500
,, Dupchanchia	10,000
,, Hili	7,000
,, Burigunge	4,600
,, Kichak	3,600
,, Bogra	1,100

has been reported as in the hands of traders and petty dealers up to about the 21st instant. No rainfall this fortnight at the Sudder Station. The cutting of the mustard crop has been finished, and a 13-anna or 14-anna outturn has resulted. A 12-anna or 13-anna crop of sugarcane, which has not yet been completely reaped, is estimated. Other cold-weather crops, such as matar, khesari, in other parts are reported as fair. My remarks in the last Narrative with respect to the condition of the people may be taken in the main as repeated now. I still trust, without wishing to express a too confident opinion, that we may escape actual famine, but no doubt the condition of the people requires careful watching, a plentiful supply of labour as near at hand as possible, and charitable relief to a certain extent. Steps have been taken to attain these objects. The relief meeting referred to in my last Narrative was held on the 18th, and Rs. 1,190 was subscribed and promised. We have also received a liberal grant of Rs. 5,000 from the Central Committee at Calcutta, and are thus well supplied with money, for the present at any rate, especially with the double aid afforded by Government. I am aware of no cases of misery or starvation calling for special report. Help has been given to incapable persons in need. Seven grain-thefts reported during the fortnight. Among our bad tracts may be specially mentioned a large part of Bogra thanah, the country about Dupchanchia, and from it to Shanamukhi, Khetlal thanah, and the country in the north near Hili. Mr. Nugent, the new Assistant Magistrate, is now at Bogra thanah, and the Sub-Inspector is, and has been, doing good work. A Deputy Magistrate, Baboo Govind Kant Bidyahbushan, is in charge with instructions at Dupchanchia, and an intelligent Inspector* is in charge of Khetlal; and instructions have gone out to another Inspector with regard to the country in the north. Money has also been supplied. I have lately visited Khetlal, Panchbibi, and Badalgachi. In the latter thanah, which is almost all poli land, people seem to be doing very well. I trust that the Railway Engineers will, as soon as possible, prosecute the road between Dupchanchia and the railway referred to in my last Narrative. I have not yet heard of this measure having been taken. I have to-day, March 23rd, heard that the construction of this road will be at once proceeded with.

* He will look after Seebgunge also for the present.

B.—Relief Works.

I annex a list of lines of relief roads, with the number of labourers on the 21st March 1874 on each:—

——	Men.	Women.	Children.
1. Shariakandi road	43	150	224
2. Sultangunge „	886	1,140	228
3. From Seebgunge towards Ghoraghat	100	—	—
4. Matidali road	200	128	41
5. Seebgunge road	708	—	—
6. Nungola „	23	107	391
7. Nasipur „	573	—	—
8. Dupchanchia road	425	1,006	187
9. Serpur „	240	92	80
10. Dinagepore „	602	773	803
11. Burigunge „	150	—	—
12. Shonamukhi „	229	17	23
13. Tank at Fuldighi	71	—	46
Total	4,250	3,413	2,023

Lines of road have also been laid out between Sultangunge and Nasipur and Shonamukhi and Dupchanchia. We are now authorised to work on tanks also—a seasonable measure. One tank is already being worked upon. I have already referred to high prices in certain parts in the bazaars whence labourers are supplied, and we may probably soon have to sell to the labourers in Bogra and Khetlal thanahs. I need not report any further as to the tool supply. 3 annas 6 pie per 1,000 cubic feet for men on hard and dry land, 3 annas for men on ordinary land, 2 annas for women, and 1 anna for children, are being paid.

C.—Transport of Food.

The reports received show importation of 12,500 maunds of rice from Pubna, Dacca, and Mymensing district, by way of the Daokoba and Bangali rivers; 300 maunds of rice and 400 maunds of paddy from Rajshahye by carts. I have already mentioned in my previous Narrative that we want as many carts and boats as possible from Rungpore and Dinagepore, in order to send on the Ghoraghat supply of rice. I am aware of no block on the transport routes.

D.—Storage of Government Grain at Relief Works.

Places of storage previously reported upon. It may be mentioned in addition, however, that orders have been given to secure a large amount of storage-room at Shariakandi, and for a new store-house at Gohail. Amount of Government food-grain received up to the 21st March 1874 is 30,009 maunds rice and 16,200 bags (quantity not yet reported). We have not yet used any of our food-grain.

E.—Advances to Private Parties and their Results.

Two loans of Rs. 500 each have been made to respectable persons willing to assist their tenants. Another loan of Rs. 400 has been made to-day, the 23rd. A few other applications of a similar nature have been received and will be disposed of when the necessary requirements have been fulfilled. Some more such applications have since been received and will be disposed of.

F.—Charitable Relief.

As previously reported, relief on the private system has been carried on, but we now require more extended operations. I have already mentioned that I held a meeting on the 18th, and that our resources have been considerably strengthened by the Rs. 5,000 sent by the Central Committee. The amount we may reckon as at present at our disposal, including anticipated doubling by Government, amounts to above Rs. 14,574, which is sufficient, so far as can be seen at present, for our operations for some little time to come at any rate. A report of our meeting is being sent up. Aid will be given to persons unable to work on the relief works by cotton and jute spinning. This, indeed, was previously done to a certain extent in Bogra thanah. Officers are being put in special charge of the worst tracts and supplied with money. Village visitation will be undertaken, and help afforded according to the circumstances of the case. Should circumstances appear to demand such a step, we will start relief houses; but it was considered in the Committee, with my entire concurrence, that as far as possible village relief was preferable to the system of bringing people away from their homes into poor-houses. I am going to send up a few additional Committee names to the Relief Commissioner.

With reference to No. 1251—S.R. of the 5th March 1874, I may remark that members of the Committee have been chosen in each thanah. Those resident in out-thanahs may be considered as members of Sub-Committees, and those resident in Bogra thanah as members of a Central Committee. On this principle (for we have no sub-divisions) we may be considered to have one Committee and seven Sub-Committees.

Statement showing the Progress of Charitable Relief in the District of Bogra.

No. of Committees and Sub-Committees as yet appointed.	No. of special Relief Sub-Divisions opened and officered.	No. of regular Relief Circles opened and manned by special Officers.	No. of Relief Circles opened and managed by Planters, Zemindars, and other Residents.	No. of Workhouses or Centres for the distribution of Food and gratuitous Relief.	No. of Men, Women, and Children (with total) in receipt of gratuitous Relief in any shape through the Charitable Relief Organization daily; this should include People employed or relieved by the Relief Committees or Relief Officers under any of the Heads "Instructions."
One committee and seven sub-committees.	- - -	Four - - -	None - - -	None as yet - -	660 persons are reported from Bogra thanah. I hope to give information on this head more fully in future Narratives. We have only started Government relief very recently.

I may mention, with reference to blank heading No. 2, that we have no sub-divisions; but money has been sent out for relief purposes to all the thanahs. Under No. 3, I have entered the four bad tracts above referred to put in special charge of officers; under 6, the total number that I have obtained with regard to Bogra thanah. This heading is imperfect this time, and I am afraid it will be difficult to fill it up very completely in future Narratives. I shall, however, take steps to obtain information on the point. It will be seen that the number of labourers employed on relief works has largely increased, and a still further increase may be expected. I am anxiously hoping for a fair supply of rain in April, which no doubt would be of great service. Common rice was selling at 12 seers yesterday, March 22nd, at Bogra,—a slight improvement.

Sir Richard Temple and Mr. Robinson have visited the station, arriving on the night of the 18th and leaving the next afternoon. I met them in the interior, and relief matters were discussed. I may mention in conclusion that a bad report has been received from the officer in charge of landing arrangements with regard to a consignment of 5,000 bags of rice recently received from Calcutta, some of which were found half empty and containing husks as well as rice, and some rat-eaten. Mr. Toynbee has been addressed on the subject. All this rice should be carefully examined before it is sent to us from Calcutta.

Enclosure No. 6.

RESOLUTION.

Scarcity and Relief Department.

Calcutta, the 30th March 1874.

Read—

The fortnightly narratives for the Burdwan Division with the Commissioner's covering letter No. 328, dated 25th March, being for the period ending March 21st.

1. *Hooghly.*—Prices have again fallen in this district, and common rice is nowhere dearer than 12 seers a rupee. There would seem to be good deal of pinching among the poorer classes, but there is as yet no great rush in search of employment on roads. The number of persons for whom work is found by Government is 1,920, while 9,244 are employed by private persons. Among these are, however, included 1,100 brick-makers at Kotrung and other brick-fields. Charitable relief is given to 346 persons daily in some shape or other, and the number of

destitute persons is said to be increasing. The three deaths at Serampore have been separately dealt with.

2. *Burdwan.*—It seems now to be tolerably clear that Boodbood is the worst sub-division of this district, and distress has already shown itself there. The people are unwilling to go far from home to work on roads. The Collector should see if he cannot get zemindars and others to undertake more tank work, and he must himself start a sufficient number of roads. He ought not to have waited for formal sanction to a further grant of funds before beginning works really required. The daily average of labourers in the district is now 2,097. The accounts given of what is going on in the way of charitable relief, and for the help of the weaving class, are interesting and satisfactory.

3. The Accountant-General will be directed to propose some reasonable relaxation of the Sub-divisional Treasury Rules to meet the difficulties described in the Commissioner's 14th paragraph.

4. With reference to paragraph 17 of the Commissioner's letter, and to paragraph 8 of Mr. Whinfield's Burdwan narrative, it seems necessary to state precisely how matters stand. The Magistrate-Collector reported that the dealers were charging " in some places prices very much in excess of the market rates," and he recommended that 4,000 maunds of rice should be imported " for sale at market rates " in certain tracts, and he explained that such action would " tend to bring the modees (grain dealers) to their senses." When forwarding the Magistrate-Collector's letter, the Commissioner observed that " the natural effect of the Government intervention is to discourage the operations of regular traders in grain." At the same time the Commissioner presumed that the Magistrate-Collector's indent would be forwarded to the central committee for orders. On this the Lieutenant-Governor remarked that the relief committee's proceedings did not make it clear that they wished to purchase grain, that it would be in direct contravention of Government orders for the Magistrate-Collector to import and sell Government grain with the view of " bringing the dealers to their senses ;" at the same time the Lieutenant-Governor said that if the Burdwan relief committee desire to buy rice for themselves in the Calcutta market they can do so.

With reference to what is now urged by the Magistrate-Collector, the Lieutenant-Governor would point out that, if the people in Boodbood and the tracts thereabouts are badly off and are in distress because they cannot afford to buy food at its present price, then there is a clear case for the intervention of the relief committee. The committee can, acting under " Instructions for Relief Committees," either advance grain on loan, or sell it at favourable rates to indigent people, or distribute it gratis or in return for light-home labour, or they can distribute cooked-food. But unless the operations of ordinary trade in Boodbood are absolutely at a stand still, the Lieutenant-Governor cannot consent to Government officers selling Government grain to the public of that tract. If for some reason or other, such as the failure or absence of local capitalists or difficulties of transports the local grain trade is very dull, the Lieutenant-Governor would be ready to sanction advances for the purchase and importation of grain into Boodbood. It is difficult to believe that at a place on the Grand Trunk Road only two or three miles from a railway station there are no local capacities for the development of a private grain trade.

5. *Howrah.*—Mr. Grant's report consists only of a few lines saying, things continue as before, and there is every hope of there being no distress in this district.

6. *Beerbhoom.*—There is no present sign of starvation, but 2,237 persons are on the roads, and 680 are daily receiving charitable aid, the latter being chiefly beggars and such like.

7. *Bancoorah.*—Here a large number (2,650) of persons have come on the roads somewhat suddenly, and it seems clear that in Moheshra this form of relief was postponed too long. The Lieutenant-Governor begs that the Commissioner will see that enough facilities for work are now being given wherever required. About 320 persons are on charitable relief.

8. *Midnapore.*—The narrative for this district was received very late, with a separate covering letter from the Commissioner. It appears that special enquiry in the Jungle Mehals has shown that there is no present want of food there, and that supplies are coming in from Singhboom. There is some distress among the weaver villages transferred from Hooghly, but the relief committee is meeting this. The Lieutenant-Governor did not contemplate sending out prisoners from the jail to teach jute-weaving, and this cannot be allowed. Some villages are said to be suffering from fever, and gratuitous relief may be required there, but this should come from the Fever Fund and not from famine subscriptions, if it be true that there was no actual failure of crop in these villages.

By order of the Lieutenant-Governor of Bengal,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

No. 328 T, dated the 25th March 1874.

From C. T. Buckland, Esq., Commissioner of the Burdwan Division, to the Secretary to the Government of Bengal, Statistical Department.

In continuation of this office No. 238 of 11th instant, I have the honour to submit the district narratives for the fortnight ending 23rd instant. As the narratives are sent in original, I have to request that they may be returned, or that printed copies of them may be sent to me.

2. *Hooghly.*—The Collector commences his report by explaining the arrangements which he has made for engaging the Magistrate of Howrah on the public works to be executed in the

Howrah portion of the Hooghly and Howrah road cess district. The result of this arrangement will be seen hereafter.

3. *Prices.*—There has been a further fall of half a seer or more in the price of rice in every mart except Boidyabatty, where the price had previously fallen to 14 seers for the rupee.

4. The Collector, in paragraph 7 of his letter, has given some information as to the stocks and imports of grain, but it seems to me doubtful if the inquiries which are being made on this subject, apparently through the police, are not in excess of the inquiries permitted under Circular Order No. 90 of 20th December 1873, and the information furnished is so indefinite in some respects that I think it would be best to dispense with it.

5. In paragraph 10 the Collector gives the numbers of persons in several thanas who are stated to be suffering from want. The expression is vague, and it is not explained how this information is obtained.

6. A special report is submitted with my No. 319 T, dated 24th instant, regarding the three cases of starvation reported in paragraph 15. The conduct of the Barrackpore authorities in sending moribund persons over to Serampore will doubtless form the subject of an inquiry by Government.

7. The number of persons employed on relief works]in the Hooghly district appears to be as follows:—

On Government road works - - - -	1,920
On private works - - - - - -	9,244
Total - - -	11,164

8. The persons employed at jute-mills are rightly excluded from the above enumeration, and I think that the 1,100 brickmakers ought not to have been included, especially at Kotrung, where the Calcutta municipal brickfield is situated. It is very satisfactory to (see how much the number of persons employed by private individuals exceeds the number of those employed on Government road works.

9. With reference to paragraph 23 the Collector will be instructed to obtain the figures of imports and exports of grain at the several railway stations from the officers of the East Indian Railway Company.

10. The figures given by the Collecter under the head of "Advances to Private Parties" require to be explained. He has apparently included in the head advances not made under Act XXVI. of 1871. The advances made under that Act appear to have been Rs. 11,031 during the fortnight.

11. Under charitable relief, the Collector has omitted to send the statement required by the orders 1251 of 5th March, and he has been called on to submit it. The sub-committees are giving relief to a daily average of 43 men, 127 women, and 70 children; while the police are giving relief to an average of 70 persons. Thirty-six other persons were relieved from serais. This statement is not sufficient. Persons relieved by the police should be made over to the nearest sub-committee, and it should be arranged that each serai should be under the management of a sub-committee. No information is given as to the daily, weekly, and fortnightly expenditure on charitable relief.

12. *Burdwan.*—In this district I regret to say that distress is showing itself in a portion of the Bood-bood sub-division, especially in the angle formed where the lines of the East Indian Railway diverge at Kanoo Junction. The Collector reports that in some villages rice was sold last week at 10 seers for a rupee, but I am informed that the price has since fallen there. In Cutwa the reports are more favourable, and in Culna there is only an apprehension of distress. In Jehanabad the sub-divisional officer reports that even beggars get a seer of rice a head every day. In Raneegunge the sub-divisional officer reports that there will be distress among the very few weavers who live there "by-and-bye." In the Sudder sub-division the report is that the supply of rice is abundant.

13. Relief works have been carried on extensively in the district roads, but it appears that there is only a daily average of 2,097 men thus employed under the officers of Government. In some places there is no demand for works, and in Bood-bood the people are reluctant to go to any distance from their villages to obtain work.

14. Under the heading "Advances to Private Persons," I beg to call attention to the Collector's remarks regarding the difficulty caused by the rules of the Accountant's Department in obtaining payments of advances at sub-divisional treasuries. When I was at Burdwan about two months ago I noticed the delay in making these payments, and I instructed the Collector to place Rs. 3,000 at the disposal of each sub-divisional officer to enable him at once to make payments for advances under Act XXVI. of 1871, which the sub-divisional officer can sanction under the revised rules, up to the amount of Rs. 250 in each case. I found the Raneegunge sub-divisional officer entertaining scruples about the rules of the Accountant Department, and hestitating to make these payments; and thus it turns out that payment has been delayed. The sub-divisional officer is empowered by Government to sanctioned advances up to Rs. 250. I authorise the Collector to supply the sub-divisional officer with a sum proportionate to his requirements. But the Accountant's rules interfere, and payment cannot be made until a bill has been sent to be enforced by the Collector, who must necessarily depend on the signature of the sub-divisional officer for the validity of the document.

15. Under the head of "Charitable Relief" much more has been done than is to be inferred from the Collector's report. Five food depôts have been opened and are at work in the Bood-bood sub-division, including an *annochatra* which the Rajah is establishing at Bood-bood. Charitable sub-committees have been organised in the Bood-bood sub-division, ten in each thana, and the sub-divisional officer promises to send in their names to-morrow. The reports from the sub-committees organised in the Sudder sub-division have been laid before me by Baboo Bogalanund Mookerjee

to-day, and my special assistant has gone out to make inquiries in a village where complaints of distress are made, but which are not believed to be well founded. Sub-committees, ten for each thana, have been organised throughout the district, but the other sub-divisions have not yet sent in their names. The sub-divisional officer of Cutwa is remarkably energetic in his efforts at providing reproductive charitable relief, and his proceedings are thus very economically conducted. He has obtained a quantity of paddy, and given it out to be husked by women who do not appear in public, and this system is succeeding well; but the Collector does not expressly refer to it. Altogether Rs. 1,075 has been advanced for food depôts, and 1,250 to the weavers, and more money has been given yesterday and to-day. It will be seen that the weavers are bringing in the produce of their work. I have advised the Collector to have their manufactures priced reasonably and sent down to Calcutta for sale, as there is much reason to believe that if the tussur cloth is well made and sufficiently cheap, it will obtain a sale in the Calcutta market.

16. In paragraph 7 the Collector states that he had intended to start work on more roads in Bood-bood, but the district fund was exhausted, and *he thought it better* to apply for another grant of Rs. 50,000 before doing so. If I were inclined to be critical, I could show that the Collector was wrong in allowing his funds to be exhausted before applying for more; but as no serious harm has come of it, and as much harm is caused by censuring officers who are working to the best of their capacity, I will only observe that the Collector has been informed that he had been previously directed to apply for whatever funds he needs, and it is certain that the further supply of Rs. 25,000, which was instantly granted when asked for, has sufficed for his present wants, and it is his own fault if he does not send in timely applications for more money.

17. With reference to paragraph 8, I have only to repeat what I have already said, and I agree with the Collector that it is not necessary to make advances by Government to enable persons who have property to pledge to procure grain. If they have any property of real value it is always possible to raise money on it, and if the value of the property offered as security is fictitious it would be best for them to take charitable relief at once. As the Government has expressed so strong an opinion on the Collector's indent on behalf of the charitable relief committee for 4,000 maunds of Government rice, I am not disposed to advocate a repetition of the indent. Rice can be procured in the local markets at 14 seers for the rupee, and it is generally reported that the Government imported rice is not procurable at that price. It is, however, necessary to remember that rice has been sold in the Burdwan district for less than 10 seers for the rupee, and it is reported in the public newspapers that Government rice is being sold at 12 seers for a rupee in Behar. I regret to have to refer to a newspaper report, but the newspapers receive the Government special narratives which have not yet been sent to me or to the district officers, although the information would apparently be of the greatest value to us.

18. The Collector has submitted a copy of the proceedings of the last meeting of the district charitable committee, with his fortnightly narrative, but it will be separately reported.

19. *Howrah.*—The report of the Covenanted Deputy Collector is brief and promising, and calls for no remarks.

20. *Beerbhoom.*—In this district, although prices are easier, the Collector anticipates further distress, although there is as yet no sign of starvation or misery. The daily average number of persons employed on the roads is 2,237, and the number of persons relieved from charitable subscriptions is 680 per diem.

21. *Bankoora.*—The only part of this district which causes anxiety is pergunnah Moheshara. It is evident that if the Collector had not been stimulated to action when I was at Bankoora the distress in this part of the country would have been severe. Even under the mitigated form in which the Collector represents the fact that some persons put off going to the relief works too long, and are now fed gratis, it is to be feared that there has been unnecessary distress. The Collector states that if the roads already commenced in pergunnah Moheshara are not sufficient "we are prepared to commence other roads as need may arise;" but no intimation of any such works has yet reached me, and he will be requested immediately to submit his projects.

22. The number of persons employed daily on public relief works is 2,650. The number obtaining charitable relief is 320, of whom the most part are said to be beggars by profession, still continuing to ply their avocation.

23. *Midnapore.*—The report of this district has not yet arrived, but will be forwarded when received.

No. 573, dated Hooghly, the 21st March 1874.

From F. H. PELLEW, Esq., Officiating Collector of Hooghly, to the COMMISSIONER of the BURDWAN DIVISION.

I HAVE the honor to submit the narrative for the fortnight ending the 21st March 1874.

2. Adverting to instructions given in your Circular No. 216, dated 9th March 1874, on the Government Resolution of the 25th February 1874, I have the honor to state that the Executive Engineer has been instructed to forward to the Magistrate of Howrah, on the same day that he forwards the progress reports for the whole district to me, an extract containing all particulars of roads in progress in Howrah. I have also constantly informed Mr. Grant that whenever he thinks a relief work necessary it is incumbent on him to report to me to that effect, stating whether he wishes to carry it out himself, or through his committee, or by some influential gentleman resident on the spot, or by the Executive Engineer. I have also supplied him with the list of works at present known to be available for relief works in Howrah, and have repeatedly

invited him to propose additions to that list, and I have also promised at once to comply with any proposal he may make. As Mr. Grant has as at yet proposed no further relief works than those already ordered, I presume he does not consider them required.

3. In reference to paragraph 7 of the Resolution, I have given in this report the daily average number of labourers on relief works and the daily average number of recipients of charitable relief.

A.—STATE OF THE COUNTRY.

4. A list of the principal markets and gunjes [wholesale storing places] was given in last narrative; in none of these is there any scarcity of rice or other grain. Bolagur hât is now plentifully supplied.

5. I give below the kinds and prices of grain selling at the following principal marts in the district:—

1	2	3	4	5	6	7
Number.	Names of principal Marts.	QUANTITIES PER RUPEE BY THE SEER OF 80 TOLAHS				
		Wheat.	Barley.	Rice, best sort.	Rice, common.	Gram.
		Seers.	Seers.	Seers.	Seers.	Seers.
1	Baboogunge - - -	12	—	10, 10½	12, 12½, 13	12, 13
2	Chinsurah Khorooahbazar -	12	—	10, 10½	12, 12½, 13	12, 13
3	Balore - - - -	12	—	10, 10½	12, 12½, 13	12, 13
4	Jhikrapottagunge - -	13	—	10, 10½	12½, 13, 13½	12, 13
5	Serampore - - - -	12	20	8, 9	12, 14	13, 14
6	Chunditollah - - -	—	—	11½	13	12
7	Boidyabatty - - - -	12	22	8	14	13½
8	Bhuddressur - - -	14	18	12½	14½	15

6. It appears that a further fall of half a seer or more has occurred in every mart except Boidyabatty, where it had already fallen to 14 seers before the commencement of the fortnight. It is much to be hoped that the price will remain as low as it is now. The police reports have noticed a fall in price in the fortnight in all the markets throughout the district.

7. With regard to the amount and kind of grain in stock in the hands of zemindars, traders, ryots, and others, as already reported, there are no large stores of grain. In thannah Bansbarya private persons are reported to be still buying and storing grain. In Pundooah some villagers have been obliged to part with their grain, as they were in want of funds to till their lands or for other purposes. Baboo Joykissen Mookerjee has imported 400 maunds and stored it at Dwarbasnee. In the twenty-one villages of thannah Hooghly 16,000 maunds are reported to be stored, and many private persons have grain in store for one or two months' consumption. In Krishtonagore thannah eight persons are named as having 2,628 maunds, and the District Superintendent states that in this thannah and Huripal it is the practice of mahajuns to lay in stocks before the rains when the roads become bad. In the town of Serampore 5,374 maunds of paddy and 12,829 maunds of rice are now reported to be in store. In thannah Dhaniakhally 58,200 maunds of rice are found to be in possession of 158 zemindars and rich people, besides a good deal in the hands of cultivators. In Huripal importations are reported from Selimabad and Jamalpore in Burdwan, and from Ampta in Howrah, and five zemindars are said to have laid in good stocks in case of scarcity. In Balagurh one-third of the cultivators and almost all the upper classes have sufficient grain in store; but the police have yet not found any stocks in the hands of zemindars, &c. In Chunditolla it is stated that but little rice is imported as the people have plenty in stock, but on the other hand, 1,093 maunds, in addition to 1,595 previously reported, have been imported and stored by a zemindar.

8. Rainfall ·81 at the sudder station; somewhat more is believed to have fallen in the south of the district.

9. Boro rice and jola rice are growing in patches; the rain is said to have injured the flower of the former. Throughout the district the lands, softened by the rain, are being got ready for the aous crop. In Pundooah it will be sown on the first good shower. The rain has benefited the young sugarcanes, as well as all kinds of vegetable crops. Til sown on 100 beeghas in Bansbarya, 400 beeghas in Pundooah, 40 beeghas in Dhaniakhally, 400 beeghas in Huripal, and 150 beeghas in Balagurh, will yield in August next a crop worth Rs. 8 per beegha. If there be a few good showers at the proper time, *i.e.*, during the next month, the aous cultivation will be half as extensive again as in ordinary years.

10. As regards the condition of the people: In Bansbarya 441 persons, in Hooghly about 100, in Krishtonagore 548 persons, in Huripal 376 persons, in Balagurh 155 persons, in Chun-

ditolla 72 persons, and in Boidyabatty 42 persons, are stated to be suffering from want. In other thannahs no definite numbers are given. On the 16th instant the District Superintendent attended the great bathing festival at Tribeni Ghat, where about 5,000 persons were assembled He could find no distress amongst the crowd. Amongst the beggars at the ghat, nine only were occasionally in receipt of relief from the police. The District Superintendent also visited thannahs Boidyabatty, Bansbarya, Chunditolla, and Serampore: he states he could find no great distress.

11. It will be observed, however, that the number of destitute persons reported by the police is increasing. In Krishtonagore the larger number than in other thannahs is explained as being owing to the fever, which still lingers about this thannah, though in a mild form.

12. The number of people wanting employment, whether labourers or cultivators, has not increased. This is no doubt owing to the favourable condition of the land for ploughing. The cultivators are in most parts assiduously preparing the lands for the aous crop.

13. The condition of things is on the whole much the same as in the last narrative. On the one hand, the easier prices have given confidence, and on the other, a few more people have come to the end of their savings and require to be supported.

14. If the aous crop is got in as well as is hoped, and prospers, I think the cultivators will obtain assistance from mahajuns which will render their position safe. If it is a failure the mahajuns will refuse to advance, and there will be difficulty.

15. Three cases of death from starvation are reported. In two cases the persons were sent across by the Barrackpore authorities to the Serampore hospital, and died there. In the third case a starving women was picked up at a ghat in Serampore by the municipal police and sent to the same hospital. The case is under inquiry. The District Superintendent went to the spot immediately, and if the police are to blame they will be punished, but there is reason to believe that the the woman had only arrived the night before she was found, from Calcutta. On the old Benares and Grand Trunk Road, and in Serampore, serais are established to prevent such cases.

B.—Relief Works.

16. The following works are in progress in the district. I have been obliged to change the order of the roads from that shown in last month's report, in consequence of the returns not all arriving on the same day. The roads taken up for supplying labor are stated in the column of remarks, they are village roads. As stated above, the rain softened the earth, and people who wanted work a fortnight ago are now ploughing, hence I have not set on foot any more works during the fortnight, though as many as may be required are ready to be taken up at a moment's notice.

Sudder Sub-Division.

NAME OF ROAD.	Number of Coolies.	Supply of Food.	Condition of Labourers.	Mode of Payment and rate of Wages.	Arrangement for Tools.	REMARKS.
Dhanyakhalee Road	251	By purchase in bazar	Good	3 to 4 annas per 100 cubic feet, 2 annas khoraki given daily. Women 2 annas 6 pie, and children 2 annas daily wages.	Party supplied by department	No local coolies
Dwarbasnee Road	27	Ditto	Ditto	Ditto	Ditto	Nearly completed, 18 local coolies.
Muggrah to Tribeny	60	Ditto	Ditto	Ditto	Ditto	All local.
Shahgunge to Tribeny	13	Ditto	Ditto	Ditto	Ditto	Ditto.
Pandooah to Culna	200	Ditto	Ditto	Ditto	Ditto	130 not local, rest local.
Grand Trunk Road	45	Ditto	Ditto	Ditto	Ditto	All local.
Tribeny to Gooptiparah	48	Ditto	Ditto	Ditto	Ditto	Ditto.
Muggrah to Bhastarah	50	Ditto	Ditto	Ditto	Ditto	Ditto.
Kooluparah to Nischindpore	124	Ditto	Ditto	Ditto	Ditto	All local; the road was taken up to give labour. The people belong to the class of petty cultivators; they do full work.
Dukchara to Panchparah	69	Ditto	Ditto	Ditto	Ditto	Ditto ditto ditto.
Bhastara to Gooroop	60	Ditto	Ditto	Ditto	Ditto	Ditto ditto ditto.
Ditto to Dhanyakhalee	10	Ditto.	Ditto	Ditto	Ditto	Ditto ditto just commenced.
	957					

N.B.—The Bhastara to Boinchee road shown in last return is completed. New roads taken up in the fortnight are Bhastara to Gooroop and Bhastara to Dhanyakhalee roads.

Serampore Sub-Division.

NAME OF ROAD.	Number of Coolies.	Supply of Food.	Condition of Labourers.	Mode of Payment and rate of Wages.	Arrangement for Tools.	REMARKS.
Sheakhalla Road	80	Ditto	Ditto	Ditto	Ditto	16 local.
Old Benares Road	66	Ditto	Ditto	Ditto	Ditto	Nearly all foreign.
Chandernagur to Bhola	44	Ditto	Ditto	Ditto	Ditto	Nearly all local.
Connugur to Jonye	52	Ditto	Ditto	Ditto	Ditto	20 local.
Bydebatty Feeder	38	Ditto	Ditto	Ditto	Contractor supplies	Moulders partly local.
Chunditolla Road	8	Ditto	Ditto	Ditto	Partly by department, partly by contractor and coolies	Nearly completed; all coolies local.
Tarkeshur Road	25	Ditto	Ditto	Ditto	Contractor supplies	All local.
Joyne to Bora	18	Ditto	Ditto	Ditto	Supplied by department	This work was taken up to give labour; all coolies are local; and of the cultivating classes, 47 worked on the last day of the fortnight; they do full work.
	331					

N.B.—The branch Grand Trunk Road and Bydebatty Strand Road shown in last fortnight return have since been completed. The Jonye to Bora Road has been taken up in the fortnight.

Howrah and Mohesraka Sub-Division.

NAME OF ROAD.	Number of Coolies.	Supply of Food.	Condition of Labourers.	Mode of Payment and rate of Wages.	Arrangement for Tools.	REMARKS.
Old Benares Road	104	Ditto	Ditto	Ditto	Supplied by contractors	50 local coolies.

Branch Grand Trunk Road	20	Ditto	Ditto	Ditto		All local.
Juggutbullubpore Road	59	Ditto	Ditto	Ditto		56 local.
Ditto to Moshat Road	23	Ditto	Ditto	Ditto		17 local.
Ampta Road	99	Ditto	Ditto	Ditto		All local.
Andool Road	7	Ditto	Ditto	Ditto		Ditto
	632					
	1,920					

17. The following is a statement of labourers employed on private works undertaken independently of any Government assistance:—

Thannahs.	Number of Coolies.
Bansbarya	824
Serampore	2,509
Balagurh	369
Chunditolla	1,372
Pandooah	895
Dhanyakhalee	890
Bydibatty	1,187
Hurripal	459
Hooghly	435
Krishtonagar	304
	9,244

18. This excludes 2,509 labourers at jute-mills, but includes 1,100 brick-makers at Kotrung in Serampore. The owners of the jute-mills at Serampore have promised to employ every able-bodied man, woman, or child sent to them as a hand, or at extention work, and this is a great convenience to Serampore municipality.

19. In Hooghly and Chinsurah municipality 30 tanks are now being re-dug at the expense of the owners. This gives employment to 297 male and 227 female labourers,—in all 524 paid at full market rates.

20. In Serampore 10 tanks, giving employment to 170 labourers, are being re-dug.

21. These works are taken up after notices from the municipal authorities.

22. The following works are in progress under the Executive Engineer, Northern Drainage and Embankment Division, in this district. The works at the head of the Kana Nuddee are in Burdwan:—

——	Number of Coolies.	Remarks.
Canal to connect Kana Nuddee and Sursutty	278	All foreign coolies.
Ordinary embankment repairs, about	250	Ditto ditto.
	528	

C.—TRANSPORT OF FOOD.

23. 4,117 maunds of paddy and 2,233 maunds of rice and 600 maunds of kolye, are stated to have been imported into thannah Bansbarya; 18,652 maunds of paddy and 5,897 maunds of rice and 103 maunds of dâl into Serampore; 3,000 maunds of rice and 250 maunds of dâl into Hurripal; and 1,093 maunds of rice into Chunditollah during the fortnight. The roads are all in fair order. The Executive Engineer reports that he saw some carts of rice going from Balagurh to Pundooah station. I think this must have come from Culna or Santipore, or perhaps Govindgunge. Eastern Bengal rice is still largely sent up-country from Muggrah and Chandernagore.

24. There is no Government grain stored at relief works.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

25. The following is a statement of advances made to private parties:—

	Rs.	Rs.
Up to commencement of fortnight		32,880
On 12th March to Baboo Joykisshen Mookerjee	9,000	
On 12th ditto to Lala Matuklall	400	
On 13th ditto to Dwarkanath Bannerjee	300	
On 14th ditto ditto and others	481	
On 18th ditto to Hurro Chunder Chuckerbuddy	250	
On 20th ditto to Sumboo Chunder Chuckerbutty and Hurry Nath Chuckerbutty	600	
Total		11,031
Grand Total		43,911

F.—CHARITABLE RELIEF.

26. Forty-three men, 127 Women, and 70 children are shown as the average daily number in receipt of relief from the sub-committees. Of these 27 men and 93 women are working for the sub-committees in their own homes. The police relieved an average number of 70 daily from the thannahs, but they have not stated how many were men, how many women, or how many children. Twenty-nine men, 6 women, 1 child relieved from serais on old Benares road.

No. 1008, dated Burdwan, the 23rd March 1874.

From E. H. Whinfield, Esq., Officiating Collector of Burdwan, to the Commissioner of the Burdwan Division.

I beg to submit the fortnightly narrative due to day.

State of the Country.

2. The Bood-bood Deputy Collector reports that the supply of rice is abundant at Mancoor and Sonamookhy, but deficient at Gooskarrah; that best rice sells at the bazars at 12 seers 11 chittacks, and common rice at 13 seers 9 chittacks per rupee (but in places in the interior it is only obtainable at famine prices, viz., 10 seers the rupee, and even less); that rain fell on the 15th and 18th; that the crops now on the ground are sugarcane, teel, cotton, safflower, linseed, and vegetables; that bamboos have flowered and yielded a grain which is eaten by the poor; that no grain robberies or thefts have occurred; that the sugarcane and rubbee crops in some parts are flourishing, and in other parts the reverse. In his last report the Deputy Collector mentioned that he had heard of deaths from starvation in certain villages in the country lying north-west of Khanoo Junction, and between the Chord and Loop lines. He has now reported the results of a personal inquiry made by himself in these villages, which prove that there is much distress in that quarter. The two or three deaths reported at Joykistopore and Poorunderghur were deaths of persons who had been suffering from fever, but the Deputy Collector thinks it possible that their deaths were hastened by insufficiency of food. Baboo Bogolanund Mookerjee has visited some of these villages, and his report is to the same effect. There is no doubt that Bood-bood is the most distressed part of the district.

The Cutwa Deputy Collector says that boro dhan is forward, and urhur has done well, but the other pulses and the mango blossoms have been injured by rain; that the price of rice has slightly risen; that the supply is abundant in Cutwa itself, but somewhat restricted in the interior; that importation on a small scale continues; that no rain fell during the fortnight; that more work is wanted, especially in Ketugram and North Cutwa.

The Culna Deputy Collector says that the price of rice is lower, owing to continued importations; that at Culna and Nadunghat best rice (dohunagra) sells at Rs. 3-2 and Rs. 3-1 a maund, and common rice (bada) at Rs. 2-12; that considerable stocks of coarse rice, aus, and rashi are still held by mahajans and others; that ·58 inch of rain fell in the fortnight; that the outturn of the cold-weather crops is estimated at four annas, and that of potatoes at fourteen annas; that there has been some "apprehension of distress" in parts of Montessur and Poorbasthali, and that employment is wanted there; that allegations of distress have been made in the Native papers, but they are untrue and emanate only from persons "fishing in the troubled water of the time."

The Jehanabad Deputy Collector says that there is no deficiency in the supply of rice; that coarse rice is selling at an average price of 13½ seers the rupee; that the quantity of grain in store is not inconsiderable; that the rainfall in the last fortnight has been ·51 inch; that the condition of the people generally is fair; that even beggars get a seer of rice a head every day; that no grain robberies have occurred; that the weavers in Hajeepore and other places cannot get advances from their mahajuns, and are in need of employment. I consider that there is not the least occasion for anxiety about the condition of people in Culna and Jehanabad. Extravagant assertions that no rice is to be had, and that people are dying in parts of these sub-divisions, are appearing in the Native newspapers, but on investigation invariably turn out to be baseless, and it is worthy of note that most of these statements seem to emanate from the places which have least to complain of, such as thanas Culna, Gangoor, and Selimabad.

The Raneegunge Deputy Collector says that the supply of rice is less plentiful, but still sufficient; that imports from Midnapore have decreased; that prices have continued to fall slightly; that best rice (ramsal) sells at 11·5 seers to 12·55 seers, and coarse rice (Midnapore lali) at 14·2 to 14·5; that partial showers of rain have fallen during the fortnight; that the outturn of what small rubbee crops there are is from 12 to 14 annas; that there is no distress at present, but that the dearness of food is gradually telling on the poorer people; that one slightly distressed traveller from Manbhoom was discovered; that there are very few weavers in Raneegunge sub-division; and that there is no need for anxiety about their condition at present, though there will be distress amongst them "by-and-bye." This is certainly vague, as you have very justly remarked on previous statements in similar terms, but a certain quantum of vagueness is inevitable in all prediction of the uninspired kind; and, considering the excessive difference of opinion as to the condition of the people which manifested itself at the recent charitable relief meeting at Raneegunge, I think the Deputy Collector exercises a wise discretion in not venturing to fix the precise date on which distress may be expected to commence in his sub-division.

Of the Sudder sub-division the District Superintendent writes that the supply of rice in all the bazars is abundant; that the price of coarse rice varies from about 15 to about 12 seers the rupee; that a considerable quantity of grain is in store; that the late rains have done good; that teel and cotton are doing well; that there are no grain-thefts; that some of the poorer people are only getting one meal a day owing to the high prices; and that there have been no deaths from starvation.

Relief Works.

3. In Bood-bood earth-work is being done on four roads,—the Burdwan and Sooree road, the Mancoor and Dignagore road, the Bood-bood and Sonamookhy road, and the Burdwan and Bankoora road. The second is nearly completed, and more work will then be provided. The

health of the laborers is reported to be good, and they each earn two annas a day or more. The great difficulty here and elsewhere is that people will not go far from their villages to get work, and the amount of road-work that can be provided within a reasonable distance of each village is limited. Works are also going on at Sonamookhy and Patrosar.

In Cutwa work is going on on the Cutwa and Bhulpore road *viâ* Billessur, the Strikhund and Shambazar road, and the Udhanpore and Noliapore road, all in thana Ketugram and the northern part of thana Cutwa; also on the Karjona and Moorshedabad road in thana Munglecote. The Burdwan and Cutwa road is finished. The health of the laborers is said to be generally good, though they are weak. Another road will be at once taken in hand.

In Culna work is going on on the Burdwan and Culna road, and on the Boinchee and Buddipore road. On the latter there is said to be great difficulty in getting laborers. The Maharajah is excavating a tank in Culna itself, and repairs to the municipal roads are progressing.

In Jehanabad works are going on on the roads of four chowkedaree unions, but labourers are said to be procured with difficulty. It is also said that private persons find it difficult to obtain coolies.

In the Sudder sub-division work is going on at the Kanna Nuddee, and there again it is said that there is no local demand whatever for employment, also on the Burdwan and Sooree, and Kurjona and Moorshedabad roads. Moreover, the Maharajah is digging some tanks in Burdwan.

In Raneegunge work is going on on the Raneegunge and Munglepore road under the charge of the sub-divisional officer. I directed the rate of wages to be raised on this road, but the number of laborers is still very small. Work is also going on on the Searsole and Domohanee, and Assensole and Domohanee roads, under the charge of the Executive Engineer, on the Raneegunge and Sooree road under the charge of Mr. Phillips, Manager of the Equitable Coal Company, and on the Seetarampore and Purulia road under the charge of the Executive Engineer of Manbhoom.

The annexed Statement A. will show all particulars of these works at a glance.

TRANSPORT OF FOOD.

4. Importation from Midnapore and Cuttack into Bood-bood still continues; likewise from the Sunderbunds into Culna, from the south into Jehanabad, and from Midnapore into Raneegunge. The total export by rail during the first and second weeks of March was 18,566 maunds, and the total import 8,751 maunds. These figures show a great decrease on the figures for the previous months. As might naturally be expected, the extreme activity of trade which prevailed just after the reaping of the amun crop has now subsided.

ADVANCES TO PRIVATE PERSONS.

5. The amount of advances that will be eventually paid will be very small in comparison with the amount applied for, as in a very large proportion of the cases it is found to be impossible to make the advances consistently with due regard to the interest of Government. Payments might be a little accelerated if the new sub-divisional treasury rules were relaxed so as to allow of bills for the amount of advances being cashed by sub-divisional officers without previous enfacement by this office. At present every bill has to be enfaced here before it can be paid. The Accountant-General objects to bills being enfaced for the whole amounts granted to each sub-division for tuccavi advances. Another cause of delay is the necessity of serving notices on zemindars, but this is unavoidable. In accordance with the permission contained in your No. 751, dated 17th instant, I have appointed two temporary sub-deputies for Jehanabad and Cutwa to assist the sub-divisional officer in completing these tuccavi cases, and in visiting the works in progress and completed. The tabular statement of progress made in tuccavi cases is annexed.

Charitable relief.

6. In Bood-bood food-depôts are being opened under the orders of the district relief committee at Shur and Gulshee in Bood-bood, and at Polashdanga in the west of thana Sonamookhy; and the Maharaja is about to open one at Bood-bood itself. These food-depôts have been organised on a plan similar to that of the fever food-depôts, that is, they have been each placed in charge of two or three respectable residents of the place, who will superintend the distribution of food, exact light work, such as picking up dung and gooting, making mats, &c., from those able to work, and submit accounts. One paid cook and one paid work overseer is allotted to each food-depôt, and half a seer of cooked rice, with dâl and turkari on alternate days is served out to each inmate. The accounts required to be kept by the managers are the same as those now kept by managers of fever food-depôts. (The sheds required will be built by the paupers themselves.) The sub-divisional committees have distributed rice to the value of Rs. 47-5 to the infirm paupers at Dignagore and elsewhere.

Advances have been made to weavers in Mancoor, Sonamookhy, Koyelionpore, Joykristopore, and Khanoo, and to some widows of weavers, for the purpose of buying cocoons and spinning the silk. When this was first proposed some doubts were expressed whether we should ever see the money again, or any equivalent for it, but I am happy to say these anticipations have proved unfounded, as the weavers have brought in a good many thans of tussur, and appear to be disposed to deal honestly. Baboo Bogolalund Mookerjee has prepared very clear forms of receipts with counterfoils (which have been printed), of cash accounts, stock accounts, and individual weaver's accounts, and I think that this department of charitable relief will be of great benefit to the weavers at a comparatively small expense to the committee. At Cutwa the Deputy Collector is feeding an average of 142 persons a day at a food-depôt in his own compound. He is certainly managing it very economically, as the total daily cost is only Rs. 6-5, of which a considerable portion is recovered from the proceeds of the pauper's labour.

No charitable relief is being given* in any of the other sub-divisions, nor do I consider it to be required. The total amount of the subscription promised in the whole district up to date is Rs. 11,496, of which Rs. 8,491 have been realized. A copy of the proceedings of the last meeting of the district committee is enclosed.

* Except by the Maharaja at Burdwan and Culna.

Dated Howrah, the 21st March 1874.

From Trevor Grant, Esq, Officiating Magistrate of Howrah, to C. T. Buckland, Esq., Commissioner of the Burdwan Division.

In continuation of previous fortnightly reports, I have now only to say that matters remain in all respects as they were at the date of my last report, in which there is nothing to change, and to which there is nothing to add. There are still no indications whatever of existing distress, nor is there any apprehension of distress, if the very promising crop of boro rice does not fail. The boro continues to do well, and prices have a downward tendency. There is no increase in crime, no plundering for food at all, no increase in the number of applicants for labour, and there are no applicants anywhere for charitable relief.

In short, from what I know and see myself, and from what I learn from others, it seems to me nearly certain that if a good crop of boro rice is reaped this year, there will not be even distress in the district. I am aware that the boro is an uncertain crop, and that its present fair promise may be belied. But every day is making it safer, and even if it is lost, I believe that distress would be confined to Jagatbalabpore and Khanakool.

No. 319, dated Soory, the 23rd March 1874.

From R. D. Hime Esq., Officiating Collector of Beerbhoom, to the Commissioner, Burdwan Division.

I have the honour to submit my fifth fortnightly narrative under the prescribed headings.

2. Prices are easier since last report, and there is no difficulty in procuring supplies at the current bazar rates (*vide* Appendix, Table 1), still the impoverished condition of a large proportion of the ryots, whose crops have either totally or partially failed, re-acting on the labourers, a large number of whom are thrown out of work by the destitution of so many of their usual employers, renders relief-works necessary for both classes, to provide them with the means of purchasing the necessaries of life, however cheap and abundant, the famine here being of labour not of food. The mendicant class is, at the same time, thrown, to a great extent, on public charity. This distress, co-existing with sufficient supplies and moderate prices, is due to the inequality of the incidence of the failure of the crops, which, with its cause, I pointed out in my report No. 167 of 22nd November 1873. Still there is as yet neither starvation nor misery from want of food, though of course the lower classes have to stint themselves somewhat. No grain robberies have occurred, and crime generally shows no tendency to increase.

B.—Relief Works.

No fresh relief works have been started since last report. The number of labourers on these and on ordinary district works is shown in the Appendix, Form C. In addition to the numbers shown in this form, the number of women and children daily employed by the township of Soory on light labour averages during the week ending 21st instant, 245. A fifth relief road, that from Ilambazar to Doobrajpore, will shortly be commenced.

C.—Transport of Food.

Exportation continues, but on a diminished scale, the export of the fortnight ending 14th instant being 8,400 maunds, against 17,646½ maunds of the preceding fortnight. Owing to the absence of the returns (now received) from Ahmedpore railway station during the month of February and the latter fortnight of January, the returns of exports by rail during these periods* were shown below the actuals† in my last two reports. There are now some symptoms of a commencing importation.

	Mds.
* February -	- 27,323-30
January, latter half	- 15,632-10
† February -	- 30,793-30
January, latter half	- 17,216-10

D.—Storage of Grain.

None.

E.—Advances to Private Parties.

These are shown in the Appendix, Table II. No other advances have been made.

F.—Charitable Relief.

Continues on the system previously reported (*vide* Appendix, Statement 2). The local subscriptions amount to Rs. 12,353. The disbursements are Rs. 1,255 up to date.

No. 1315, dated Bankoora, the 23rd March 1874.

From W. R. LARMINIE, Esq., Officiating Collector of Bankoora, to the COMMISSIONER of the BURDWAN DIVISION.

I HAVE the honour to submit my fortnightly report on the state of the Bankoora district for the fortnight ending 22nd March 1874.

State of the Country.

2. With the exception of parts of pergunnah Moheshra grain is to be had whenever required. Rice has risen slightly in price, coarse rice selling at 14 seers per rupee, ordinary at 13¼ seers, and the best at 12 seers. Dhâl can be had at 12¾ seers per rupee, and the new wheat, which has just come into the bazar, at 13¾.

3. To meet the requirements of Moheshra, I have arranged with a large contractor, who will supply rice, dhâl, and salt, &c., in different fixed localities, at rates exceeding those prevailing at head-quarters by the cost only of carriage, &c., the maximum excess being four annas per maund. The *golas* for storing the grain are being erected at the expense of the District Relief Committee.

4. Rice is still being imported from Midnapore and Balasore, and in small quantities from Singbhoom. Exportation is more or less stagnant.

5. There was about half an inch of rain on the 16th. Its effect was beneficial on the whole, more especially to the indigo. The rubbee corps are nearly reaped, giving on the whole a good out-turn. Wheat and barley have been very fine, especially along the banks of the Damoodur.

6. There has been no change observable in the general condition of the people except in pergunnah Moheshra, where the demand for labour suddenly increased and necessitated the immediate opening of the works on the Morulo and Mejia road. It is quite clear now that we shall have to provide a large proportion of the inhabitants of this part of the district with work until the next harvest, for which purpose the two roads now in hand will not be sufficient. We are, however, prepared to commence other roads as need may arise.

7. No cases of starvation have been reported, but in Moheshra the people were being pinched, and were consequently obliged to resort to the relief works in large numbers. Some put off doing so too long, and we consequently are obliged to feed them gratis until they are strong enough to work.

8. One grain dacoity was reported, but it has been found on inquiry that the charge was a false one.

Relief Works.

9. The chief relief works are the roads from Morulo to Mejia, from Sattorah to Gungajulghatty, and from Onda to Taldangra, the Bankoora tank, and the Bishenpoor town roads. On these about 2,650 men, women, and children, are daily employed. The first two roads absorbing 1,900, and the tank 307. The rate of wages continues unchanged. Labourers are paid in actual cash.

Advances to private parties.

10. The number of tuccavi advances has now reached 334, of which 140 have been disposed of. Rs. 23,851 have been granted; Rs. 16,827 thereof being actually paid out of the treasury. In a great number of cases the proffered security has been found insufficient, and in one instance there was such a gross attempt at fraud that I was obliged to prosecute the applicants in the criminal court.

Charitable Relief.

11. The total number of persons reported as receiving relief is about 320, but some of the sub-committees have not as yet sent in any returns.

12. Subscriptions to the amount of Rs. 2,474 have been promised, exclusive of the Government equivalent, and steps have been taken to collect small sums from those who can afford to give. Money has been placed in the hands of the sub-committees, and the various *itinerant* officers of Government, such as Sub-Deputy Collectors, &c., have been similarly provided and are directed to relieve temporarily any urgent cases they may meet, so that those in distress may be able to reach the centres of relief, and there be regularly looked after. Up to the present, except in the cases already mentioned, charitable relief has been given only to those who are from natural infirmity physically incapable of working, and as a rule only half rations are given, the recipients being for the most part beggars by profession, and still continuing to ply their avocation.

13. The question of giving advances to weavers is under consideration, and arrangements will be made within the next few days. As far as I have been able to ascertain the *tussur* and cotton weavers object very strongly to commence gunny work. It is alleged, with what amount of truth I cannot say, that engaging in this coarse work would affect their skill in the lighter kinds, to which they would subsequently return, and that in consequence the future products of their looms would be of inferior quality.

14. Both Deputy Collector Babu Jugabundhu Khan and Sub-Deputy Collector Babu Sitikanta Ghosh, whose duties at present lie chiefly in Moheshra, have been directed to report at once if the present relief arrangements seem sufficient, and I will myself visit that part of the district during the present week. I confess to feeling much anxiety regarding Moheshra; but if the

contractor engaged to supply rice, &c., acts up to his promises, the relief will be considerable, and I trust that our arrangements will now ensure work being available for all who can work, and food for the needy and incapable.

In conclusion, might I venture to suggest that a knowledge of the condition of the surrounding districts would be of considerable use in enabling me to forecast the prospects of my own, and to say that I would be glad to receive a copy of the fortnightly reports of the Collectors of those districts. Now that they are printed there would be no difficulty in carrying out such a measure.

15. Statement of charitable relief—

(1.) One central committee.
(2.) Eleven sub-committees.
(3.) None.
(4.) Ditto.
(5.) Ditto.
(6.) In Bankoora, 33 men, 113 women, and 34 children.
In Mejia, 130; details not sent.
Total, 310.

No. 361 T, dated Burdwan, the 28th March 1874.

From C. T. Buckland, Esq., Commissioner of the Burdwan Division, to the Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

In continuation of my No. 328T, dated 25th instant, I have the honour to forward in original the fortnightly narrative for the district of Midnapore.

2. The Collector will be requested to submit a plain narrative in future, and not to combine with it answers to letters from this office which are not before Government.

3. It will be seen that the Collector is unable to maintain the position which he endeavoured to establish, that there would be great distress in the jungle mehals. I did not believe in it from what I saw myself; but as the Collector persevered in his arguments, I deputed my Special Assistant, Mr. Larymore, to make a careful local inquiry, and the result has been to show that there is no present want of rice in the jungle mehals, and that the people have also been able to obtain some supplies from the adjacent district of Singbhoom.

4. There is some slight distress among the weavers in Chunderkona and other weaver villages in those parts of the district which were transferred to Midnapore from Hooghly. The district charitable relief committee is providing for these persons. A food depôt has been opened in Chunderkona, and two experienced persons from the district jail have been sent out to give effect to the orders of Government on the subject of substituting jute manufactures for the ordinary work of weavers.

5. Some distress is reported in 28 villages in pergunnah Kasijorah in the Tumlook sub-division, where the Deputy Magistrate states that the malarious fever has incapacitated the people of about 28 villages for out-door work. This distress is therefore caused by fever, and not by scarcity, and there was no failure of the crops in this part of the district. The Collector states that the propriety of giving gratuitous relief in these 28 villages is still under consideration.

No. 567, dated Midnapore, the 23rd March 1874.

From H. L. Harrison, Esq., Collector of Midnapore, to the Commissioner of Revenue, Burdwan Division.

I have the honour to forward herewith the fortnightly narrative for this district, terminating on the 21st instant. Also to reply to your No. 216 of the 9th and No. 756 of the 14th March, based upon the previously fortnightly narratives.

2. Yours of the 9th and paragraph 3 of Government resolution dated 25th February. The rates were 14 seers to the rupee; but the market rate never went below 16. Before any purchases were made, the whole subject was laid before the Committee, and it was generally agreed that as a re-action had set in, no attempt should be made to offer for sale while the market remained easy. Hence we are at present merely preparing to meet any future contingency as far as scarcity of grain is concerned.

3. Yours of the 14th March. I referred to the proceedings of the committee which contained the conclusion I had arrived at from my visit to the north-east of the district. These proceedings have since reached you. For convenience, however, I may repeat that what I saw satisfied me that measures ought to be at once taken to relieve the Tantees; but that the work provided everywhere except in Chunderkona township was enough for those willing to do out-door work.

4. Accordingly a committee was organised immediately on my return, and since the 17th a temporary Deputy Collector has been at work organising relief in those parts.

A.

5. Referring to the fortnight under notice, the state of the market continues favourable. Rice is plentiful, and the recent decline is fully sustained.

6. In the jungle mehals paddy has become much dearer but rice cheaper and more plentiful. This is due to the fact of an importation having set in from Singbhoom. Mr. Larymore observed this when in the west of the district, and the police report confirms this.

7. Hitherto it has always been assumed from the reports of the state of Singbhoom that it would be as much as it could do to feed itself, and that we could expect no help from it; if anything, that the drain would rather be towards it. The opposite is now evidently the case, and as this is the normal line for rice to travel, it is certain that if Singbhoom has a sufficient surplus, there is no fear of scarcity of food in the jungle mehals any more than in other parts of the district.

8. It is not yet certain how far this supply can be depended on. It did not come in till rice had risen two seers in the rupee dearer at Daleijure than in Midnapore, but inquiries are being made and the result will be reported. There was a seasonable rainfall over the whole district in the early part of last week which was specially beneficial to the indigo.

B.

9. The labour reports may be thus summarised:

Bheempore - Jhargram -	Labourers freely offer their services at the subsistence rates offered, 6 pice.
Chunderkonah Keshpore -	Labourers freely offer their services at the subsistence rates offered, 7 pice.
Ghautal -	Some demand for labour at subsistence rates, 7 pice.
Daspore -	7 pice. No demand.
Midnapore town -	8 pice. Demand insignificant.

10. The roads in progress intended to afford relief are—

—	At 6 and 4 pie.		At 7 and 5 pie.	
	Men.	Women.	Men.	Women.
Lodhasyee to Bheempore	283	256		
Bheempore to Silda — Just commenced	40	30		
Bheempore to Ramghur — Just commenced	23	20		
Dohijuri to Pooreehatee	Return not received.			
Burdwan road	—	—	236	8
Kespore to Narajole; just commenced	—	—	100	—
Loohasale to Mohapal	37	31		
Bombay road	243	135		

This is irrespective of the roads made by contract and at ordinary rates, not intended for relief works specially. The number fluctuates a good deal. After the rain on the 16th and 17th nearly half the labourers left to plough for indigo and ous.

C.

11. The private food-supply from Singbhoom has been referred to under A. Means of transport everywhere sufficient. The bridges on the Gurbetta road have been examined and found to be suffering somewhat from the traffic, but not such as to endanger it. The Executive Engineer has, however, taken their protection specially in hand. The ferry at Midnapore now now keeps level with the traffic, which has somewhat diminished; the ferry at Dadkee between Gurbetta and Baancoorah is still fordable, but a new ferry boat is under construction to secure its efficiency when the river rises.

D.

12. No Government grain is to be stored in the district except in the jail.

E.

13. No municipalities have applied for advances. Forty-one applications have been received in all for land improvement, of which eleven have been rejected and six granted subject to your approval; twenty-four are pending. Every endeavour is made to expedite their disposal, but they are all from tenure-holders, and the notice to the landlords causes the delay, as well as the illness of the canoongo.

F.

14. Actual relief operations have commenced. One district, three sub-divisional and two sub-committees have been formed; three more are being formed.

Only one regular relief circle has been opened and officered, viz., the Chunderkona and Ghatal thannah and Narajole outpost of the Debrathanna. Temporary Deputy Collector Baboo Gossain Dass Dutt has been placed in charge of it.

15. One food depôt has been opened at Chunderkona for the relief of the most distressed Tantees by distribution of cooked food. The precise number receiving food has not yet been reported, as the depôt has only been open two days, but 128 persons in Chunderkona are receiving relief from the committee chiefly in the form of assistance in working with jute instead of thread; jute workers not being easily procurable, and it being most desirable that all who were willing to try jute manufacture should do so without delay. As a special case, a complete jute-loom, jute twist, and two experienced prisoners from the district jail, have been sent out to start the experiment. It is found that by a little adaptation the ordinary cloth looms can be made to work gunny cloth, and the special Deputy Collector has been directed to arrange for this with the assistance of the prisoners.

Enclosure No. 7.

No. 502, dated Camp Raghunathpore, the 23rd March 1874.

From Colonel E. A. Rowlatt, Deputy Commissioner of Manbhoom, to the Junior Secretary to the Government of Bengal.

With reference to paragraph 3 of circular No. 154, dated the 16th January last, I have the honor to submit the fortnightly narrative for the period ending the 21st instant.

A.—State of the Country.

I have but little to add to the information given in my last report on this heading. The supplies in the bazars are decreasing, and prices are still rising; they are at the places named below as follows:—

Names of Places.	Coarse rice.	Fine rice.	Pulses.
Raipur	18 Seers.	17 Seers.	17 Seers.
Manbazar	15 „	14 „	11 „
Barrabazar	16 „	12 „	12 „
Echagurh	20 „	16 „	16 „
Jhalda	14 „	12 „	12 „
Purulia	14 „	12 „	14 „
Govindpur	13 „	12 „	12 „
Raghunathpur	13 „	12 „	14 „
Nirsha	12 „	11 „	11 „
Gaurandih	12 „	10 „	10 „

There are supposed to be still considerable stocks of grain in the hands of the traders and grain merchants, but these they are keeping back and refuse to sell at present, hoping to realize larger profits by the rise in prices, which they anticipate will take place before the next harvest time. In those parts of the country where there are no bazars, there is a very general complaint that rice is not procurable for purchase, and some of the hâts are failing, although the traders had promised me to keep them well supplied with rice. The fact of rice being imported on Government account will, I believe, have the effect of inducing these holders of grain to open out their stores, as they will then see it is no use hoarding any longer.

There has been a considerable fall of rain during the fortnight amounting to 1·14 inches, which has, it is feared, destroyed all hopes of a good mango crop, and damaged the mohowa prospects, which latter, however, if no more rain falls during the next month or six weeks, may still give us a twelve-anna crop. Should rain again fall, this will be reduced to an eight-anna crop, which would very much increase the impending scarcity of food during the next four or five months. Altogether the weather during the fortnight has been unfavourable, so that the prospects have become rather worse than better since the date of the last report. The wheat, barley, and grain is being gathered in, and where it has not been injured by hailstorms, which have occurred in some places, the outturn will be good; but the quantity that will be reaped is insignificant.

There is no appearance as yet of any general distress amongst the people, but isolated cases of suffering for want of food are becoming much more common, and it is reported that some of the villages near the Damoodah, in the pergunnahs of Jharia and Pandra, where the crops failed almost entirely, are in much distress; arrangements have accordingly been made to provide them with work by opening out a road from opposite Telkupi to Nirsha in pergunnah Pandra, and by the construction of a reservoir in pergunnah Jharia close to the distressed villages.

B.—Relief Works.

All the relief works are now in full operation and are providing work for a large number of the labouring class, who otherwise would be unemployed and destitute of the means of supporting themselves and families. The numbers employed are given below:—

	Name of Work.			Number of labourers employed.
1.	1st Section, Chaibassa Road—from		Purulia to Kantadihi	83
2.	Ditto	ditto	Kantadihi to Chota Urma	21
3.	3rd Section,	ditto	Chota Urma to Jojodih	35
4.	Ditto	ditto	Jojodih to Jamdi	152
5.	4th Section,	ditto	Jamdi to Subarnarekha	232
6.	Road from Hospital to English School			*Nil*
7.	1st Section, Bankoora Road—from		Purulia to Singbazar	461
8.	2nd ditto,	ditto	Singbazar to Ludurka	190
9.	3rd ditto,	ditto	Ludurka to Hura	90
10.	4th ditto,	ditto	Hura to Chatna	255
11.	Charra junction			94
12.	Road from Damda to Barrabazar			40
13.	1st Section, Manbazar Road—from		Purulia to Kenda	364
14.	2nd ditto,	ditto	Kenda to Manbazar	232
15.	Govindpur and Tundih Road			88
16.	Road from Nirsha towards Jamtara			107
17.	Ditto	Raghunathpore sub-division		192
18.	Ditto	Ludurka to Gaurandi		3
			Total	2,642

Some difficulty is found in supplying the labourers with food, so that the arrival of Government grain is anxiously looked out for. The condition of the labourers is in general all that could be desired, though in some few cases loss of strength is clearly visible. It is earnestly to be hoped that no stoppage of any of the relief works may take place for want of funds, as the consequence would, I fear, be disastrous, and be sure to end in the starvation and death of many of those now employed on these works.

The labourers are paid by the day and also by task-work, which latter they prefer as they can make more by it than by taking the daily rate, which is 1 anna 6 pie for men and 1 anna for women and children.

There has been some difficulty in providing a sufficient number of tools, but that is being gradually overcome, and a reserve stock is being collected to be in readiness to meet any sudden demand for work.

C.—TRANSPORT OF FOOD.

Food is still being imported into this district from Singbhoom and Midnapore, but in what quantities it is not possible to ascertain. There is no deficiency of carriage, and every means is being adopted that is possible to improve the lines of communication leading in the required directions; but the supplies from these sources do not reach the northern and north-eastern parts of the district, which can only be supplied from Calcutta.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

Under this head I have nothing to report at present, but hope to have to do so next fortnight. The construction of store-houses is, however, being proceeded with at Govindpore and Nirsha, and arrangements have been made at Raghunathpore to store the Government grain as soon as received.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

Advances have now been made over nearly all the distressed pergunnahs to parties willing to import rice from a distance, and some more will yet be made. For this purpose I have just visited Govindpur and Pandra, and am now engaged in making these advances in all the distressed pergunnahs round about Raghunathpur. Advances have been made to both zemindars and traders, and I am in hopes that considerable quantities of grain will be imported by this means, but whether such will be the case or not has yet to be seen. The advances sanctioned by me amount up to date to Rs. 9,350. An advance of Rs. 4,000 has been received by the Purulia Municipal Committee, and works have already been commenced; within a very few days 250 persons have flocked to these works. The works to be executed are the deepening and completion of four tanks to improve the supply of drinking water and the widening out of the main street through Lower Purulia.

Advances to private parties for land improvements have now been made to the extent of nearly Rs. 48,000, and some more will still be made during the next month or so, after which it will be of no use granting any more of these loans, as there will not be sufficient time left, before the rains set in, in which to complete the works. The advances are being laid out in making and repairing bundhs, reservoirs, and tanks for irrigation purpose, which will form lasting and the best means for warding off future famines that could be undertaken.

F.—CHARITABLE RELIEF.

Immediately on the receipt of Government letter No. 1115—S.R. of the 28th ultimo, a District Relief Committee was formed at Purulia, and since then operations have been commenced for the relief of all persons applying for it, who are unable to work. Sub-divisional committees have also been formed at Govindpore and Raghunathpore, and arrangements have been made to establish branch committtees at Jharia, Tundi, and Poddardih, in the Govindpore sub-division, and at Mohal, Maurah, Chelliama, Pura, Sarbari, Murardih, Saturi, Gaurandih, Sonathol, and Kashipore, under the Raghunathpore sub-committee. At Govindpore and Raghunathpore, the distribution of food has also been commenced, but as yet the relief afforded at these stations and at Purulia also is confined to the beggar class, who are resorting to them in considerable numbers, as they find it no longer possible to gather sufficient alms in the villages on which to subsist. Sheds are being erected at Purulia and Ragunathpore for the accommodation of those seeking relief; and as the necessity arises, whatever further accommodation may be required will be provided.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 30th March 1874.

READ—

The district narrative for Maunbhoom for the fortnight ending 21st March.

Maunbhoom.—Supplies in the bazars are said to be decreasing and prices rising; but coarse rice is still to be had at prices ranging from 12 to 20 seers per rupee, and pulses from 10 to 17. The higher prices, however, prevail generally through that part of the district which is recognised as being worse off than the rest. A heavy fall of rain (1·14 inches) and hailstorms have injured the mango and mahowa prospects considerably. Isolated cases of suffering from want of food are becoming more common, the number of labourers on works is 2,642.

2. The Lieutenant-Governor does not understand what the Deputy Commissioner means by saying that "it is earnestly to be hoped that no stoppage of any of the relief works may take place for want of funds." It will be entirely Colonel Rowlatt's fault should such a thing occur. Government has repeatedly told all district officers that no works are to be closed for want of formal sanction to funds. They must go on disbursing money really necessary for relief purposes, applying at once for extra grants, at the same time proper care will ensure the provision of further sums sanctioned in due time, should those already made be coming to an end.

3. It appears that two sub-divisional and thirteen sub-committees have been formed for relief purposes. They should be at once supplied with funds and be set actively to work in the tracts where distress is expected.

By order of the Lieutenant-Governor of Bengal,
A. Mackenzie,
Calcutta, the 30th March 1874. Junior Secretary to the Government of Bengal.

No. 682, dated Lohardugga, the 25th March 1874.

Memo. by H. L. Oliphant, Esq., Deputy Commissioner of Lohardugga.

Forwarded to the Secretary to the Government of Bengal, in continuation of this office memorandum No. 542 of the 14th instant.

No. 214, dated Daltongunge, the 21st March 1874.

From L. R. Forbes, Esq., Officiating Assistant Commissioner of Palamow, to H. L. Oliphant, Esq., Deputy Commissioner of Lohardugga.

I have the honour to submit herewith my third fortnightly narrative of Scarcity and Relief in the Palamow sub-district, for the fortnight ending Saturday the 21st March.

Third Narrative of Scarcity and Relief in the Palamow Sub-District for the Fortnight ending Saturday, the 21st March 1874, submitted in accordance with orders contained in Government Circular No. 80 of the 17th November 1873.

A.

Abundance or scarcity of supply in the Bazars.—Though importations are continuing with the same vigour as before, I am afraid that private trade is beginning to show signs of being unable to cope fully with the demand; for instance, at the last Daltongunge market-day, Wednesday, the 18th, there were scarcely 50 bazar maunds of rice offered for sale, besides a few maunds of *dâls* of different kinds. There was no maize or maruah, and only three maunds of wheat; so that, in fact, there was nothing but rice and dâl. Prices rose from 12·36 to 11·81 seers per rupee for common rice, *i.e.*, one kacha seer; and strange to say the market rate of Goruckpuri pice rose from 21 gundahs or 84 pice per rupee to 18 gundahs or 72 pice. Again, in the great Garwah mart, at the last market, held on the 19th and 20th, on the opening day only 300 bullocks arrived with about 600 to 700 maunds of rice (bazar weight) which was bought up at once. The following day prices rose to the extent of a kacha seer in the rupee. But as I have before stated, as regards the great body of the people, particularly relief workmen, the market rate of prices as given in the price current is no criterion whatever of the price of rice as sold by retail; for instance, when at the relief works at Jurhasi, on the Behar road, a day or two ago the women crowded round with their infants in their arms imploring an increase to their present wages of 5 Goruckpuri pice. On inquiry I found that the market rate of pice was 19 gundahs or 76 pice per rupee, and that retail prices of common rice was at the rate of 5 pice for a kacha seer or 9 pucca chittacks, equivalent to 8·55 pucca seers per rupee. Hitherto the various chowdries in sending in their price-currents have quoted only wholesale prices, but the prices that ought to be quoted are the bunneahs' retail prices. I have given orders to have the retail prices of common rice only entered in column XIV. of the price-current for the future.

Kind and prices of grains selling at one or more specified principal marts.—Rice and dâls of various sorts may be said to be the only food-grains now offering in the bazars. Wheat is occasionally to be seen, but in very small parcels; and here and there a small quantity of this year's gram has been offered for sale. From all I can gather very little of the rubbee harvest, viz., of wheat, barley, and gram, will find its way into the open market; by far the greater portion will be kept back for seed, and the remainder consumed by the growers. Gram will be most freely offered, but this will probably be snapped up at once by the retailers for conversion into satto or meal. In the following table exhibiting the prices of grain selling in five of the principal marts, I have shown both the wholesale and retail prices—

Names of Marts.	Quantities per Rupee by the Seer of 80 Tolahs.						
	Wheat.	Barley.	Rice.		Murwa.	Indian corn.	Gram.
			Wholesale.	Retail.			
Daltongunge - - -	11·75	—	12·36	8·55	—	13·75	18·50
Garwah - - - -	11·75	14·62	12·50	10·25	14	13·50	14
Husainabad - - -	18·50	—	11·25	9·80	—	18·50	15·75
Satberwa - - - -	11·25	—	12·50	10·25	15	18·50	12·25
Manka - - -	—	—	12·50	10·25	15·81	14	18·50

Information regarding the amount and kind of grain believed to be in stock in the hands of Zemindars and others.—From what I can gather the stock of rice now in the hands of the traders is considerable and is being daily increased, but it is being held back not so much with a view to a rise in prices, but to meet the enormous demand that will take place when the agricultural season opens. On the other hand I am afraid that private stocks in the hands of the poorer agriculturalists (a very large class) are very small indeed; in fact, from all I hear, immense numbers of them are now reduced to one scanty meal a day, and as soon as they have consumed what little they may be able to spare for immediate consumption of their rubbee crops they will come seeking relief. It is to meet the future demands of these people that the traders, as stated above, are hoarding.

Rainfall.—The weather has been in a most disturbed state during the entire fortnight. On the 10th instant ·48 inches of rain was registered at the sudder station, but in some places the fall must have been heavier. There was almost continual cloudy weather from the 13th to the 17th, and the sky had a very threatening appearance. One or two light showers fell on the 15th and 16th, but the amount registered was only ·5 inches.

State of crops.—The harvesting of the earlier cereals and gram crops has been nearly completed. I am sorry to have to report that the continued disturbed weather has caused a loss of half the khesari dâl crop, and that the later gram crops have been attacked by caterpillars, and the probable loss in consequence is estimated at about 4 annas. The mowha crop promises well up to date, not more than 2 annas has been lost, and if all goes well a full 12-anna crop may be expected. It will be greedily snapped up by every one who can afford to purchase, by zemindars, well-to-do ryots, and traders, and kept back for the agricultural season, a large quantity, too, will be eaten on the spot as it falls from the tree. Dukhi Sahú of Garwah is of opinion that the amount that will find its way to market this year will be one-fourth of other years, *i.e.*, that to every 100 maunds offered in ordinary years not more than 25 maunds will be offered this year for general sale.

Condition of the people.—I am sorry to say that the gloomy account given under this head in my last report must be reported in this. From all I can gather, the condition of the body of the people is daily getting worse, the greater portion of the agricultural and artizan classes having to content themselves with one scanty meal a day, and some do not even get that, but are obliged to content themselves with one meal in two days.

Actual facts as to any known cases of misery and starvation.—A report was received to-day from the Husainabad or Jupla Sub-committee, giving the names of 168 persons, residents of Husainabad, most of them Mohamedan widows, who are said to be in a state bordering on starvation, some getting one scanty meal of 4 or 5 chittacks a day, others only one such meal in two days.

Grain-thefts and robberies.—Only four cases of petty grain-thefts were reported during the fortnight, but I was assured by the Honorary Magistrate of Ranka, Rai Kishen Dayal Sing, Bahadur, who was with me yesterday, that such cases were occurring daily in his part of the country, particularly along the trade tracks, and he was much surprised to learn that they had not been reported. I am not in the least surprised, however, in such times as these, the victims of these petty thefts, chiefly probably beparies travelling with their pack-bullocks, cannot afford to go 20 or 30 miles to report a loss of a maund or two of rice. I have called the attention of the Assistant Superintendent to the subject and directed him to take measures to put a stop, as far as practicable, to these petty thefts. I have also called his attention to the subject of another report made to me by the Honorary Magistrate to the effect that, within the last month, no less than 75 head of cattle had been killed while grazing in the jungle both for the sake of the meat and the skins. The Honorary Magistrate told me that he was using all the means in his power to discover who the perpetrators were, and that he suspected certain chamars were the instigators.

Condition of any special Tract.—The condition of Untari remains as before reported: about a third of the relief coolies have left for the harvest, but as soon as that and the mowha is over, they will flock back again in larger numbers than before. Yesterday I received information that the tract of country lying to the east of Daltongunge and within the jurisdiction of Panki outpost in tuppeh Pundag was in a bad state; that the poorer classes, both labouring and agricultural, were getting into a very low condition, and that most of them could scarcely get one meal of 6 or 7 chittacks of food a day. I have directed the proposed* road-work to be opened at once in that direction.

* From Lesligunge in Palamow to Baloomath in pergunnah Tori, zillah Lohardugga.

B.—Relief Works.

The relief works now open are :—

No. 1. Daltongunge Station Roads.
„ 2. Chandwa Road
„ 3. Behar „
„ 4. Moharajgunge „
„ 5. Garwah „
„ 6. Untari „
„ 7. Manjhiawan „
„ 8. Jupla „
„ 9. Petty irrigation works in Government estate.

Number of Labourers.—The number of labourers according to latest information is as follows:—

Relief work No. 1	386
„ „ 2	605
„ „ 3	1,540
„ „ 4	1,130
„ „ 5	311
„ „ 6	2,439
„ „ 7	594
„ „ 8	604
„ „ 9	327
Grand Total	7,936

The grand total shown in last report was 12,025—the decrease of 4,089 during the past fortnight is attributable to the opening of the harvest. There will probably be a still further diminution when the mowha crop is being gathered, but not much, and by the 15th of April the present number will most probably be trebled.

Supply of Food thereat.—No complaints have as yet reached me of shortness of food-supplies at or near the works. The retailers at some stations bring their stores to the works.

Condition of the Labourers.—As I stated in my last, all fresh applicants for relief are generally in a low condition, but those who have been working for some time are, as a rule, in a fair condition and able to do a fair day's work.

Mode of Payment.—This was fully explained in my last; the system then detailed still continues in force, but not with the regularity I would desire; I trust, however, now that with the assistance of Lieut. Grey and other officers, that the mode of payment of wages, and the keeping and submission of returns according to the system I have introduced, will be fully acted up to.

Rate of Wages.—The rates of wages as detailed in my first narrative remain unaltered.

Arrangement for Tools.—I am anxiously awaiting the arrival of the first batch of tools from Bankipore. The carts should have reached this yesterday. Arrangements have been made with Mr. N. A. Hodges, contractor, for the carriage of the 4,000 tools comprised in my second indent, and which I believe are now at Dihri.

C.—Transport of Food.

Approximate Amount of private Food-supplies come into the Sub-district during the Fortnight.—Any guess I could make on this head might only mislead. I prefer, therefore, to say nothing.

Sufficiency or otherwise of Means of Transport.—I believe that the number of pack-bullocks available for transport is sufficient; but what I doubt is, whether there is sufficient capital in the country to employ the whole. I also doubt whether the agricultural classes, who have turned importers, and who are using their plough-cattle for the purpose, will continue to do so much after the end of April or the 15th May. They will probably discontinue their journies then, in order to give their cattle some rest before the ploughing season comes on.

D.—Storage of Government Grain at Relief Works.

The following are the places at which golahs have been fixed :—

No. 1	Daltongung.
„ 2	Parasia.
„ 3	Panki.
„ 4	Nawa.
„ 5	Morebey.
„ 6	Surki.
„ 7	Nuggur.
„ 8	Sillidag.

With reference to golah No. 1, the amount to be stored here is 10,000 maunds of rice purchased by Government and now at Dehri. The Sub-divisional committee have arranged with

Mr. N. A. Hodges for the carriage of the whole from Dehri to this at a uniform rate of 8 annas per maund. Besides the above, Rs. 5,000 worth of rice purchased on behalf of Government by Thakurai Jagannath Dayal Sing of Chainpore, will also be stored in this gola. All the native gentlemen engaged in the purchase of rice for storage in the above golas have reported the arrival of a portion of their purchases, and an officer is about to be deputed by the committee to proceed to each gola weigh, and report.

Condition of Storage Houses.—A full report on the condition of the storage houses Nos. 2 to 8 will be given when the report of the officer above mentioned as being deputed to weigh rice has been received. The preparation of *dhelis* in the Daltongunge gola is all but complete.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

Rupees 1,600 were advanced during the fortnight to the eight native gentlemen who are purchasing on the part of Government, making a total of Rs. 40,000.

Advances to Municipalities.—There are no municipalities in the sub-district; but I would add that in the chowkeedaree union of Garwah, labour is being employed in improvements, a sum of Rs. 1,300 having been allotted from the funds of the town for the purpose.

Advances to private parties for land improvements, &c.—I have now one sub-deputy and one canoongo at work making local enquiries on applications for advances; and several applications are now before me for final orders.

F.—CHARITABLE RELIEF.

The sub-divisional committee have been actively employed during the fortnight in collecting subscriptions from private parties, and the sum subscribed up to date amounts to Rs. 3,978. The committee have this day given orders for the despatch of Rs. 200 to the Hussainabad or Jupla sub-committee for the purpose of affording immediate relief to the 168 persons reported to be in a starving condition in the town of Hussainabad; and have called for a further report from the sub-committee to be submitted within one week as to whether it is absolutely necessary to give the whole of these people gratuitous relief, or whether there are not some among them who ordinarily follow some trade, and to whom the relief afforded may take the shape of a Tuccavi advance.

The committee are also making arrangements for taking charge of the many helpless, blind, and lame, or otherwise crippled, who are now hanging on at the different relief works and receiving wages as relief labourers, and for whom hitherto it has been impossible to make other provision.

The Panki sub-committee have been directed to make immediate enquiries into the condition of their jurisdiction mentioned above as being in a very distressed state.

Note by the Deputy Commissioner of Lohardugga.

With reference to Mr. Forbes' remarks under heading A (actual facts as to any known cases of misery and starvation) I may observe that Mr. Roberts, the Assistant Superintendent of Police, was deputed to Hassenabad, under orders of the 22nd instant, to inquire into the truth of the report, and take steps to afford relief, if necessary. The information called for in paragraph 3 of Government letter No. 1,654—S.R., of 20th instant, (orders on 2nd fortnightly narrative) is furnished by Mr. Forbes under heading D, (storage of Government grain at relief works).

With reference to the remarks under heading F (advances to private parties for land improvement) I may mention that Baboo Gopal Chundra Mittra, the Second Special Commissioner, under the Chota Nagpore Tenures' Act, has since left for Palamow, and is now there exercising the powers of a Collector under the Land Improvement Act.

With reference to heading F (charitable relief) I may remark that, under orders received from the Commissioner, a public meeting will be held at Ranchee on the 28th instant.

H. L. OLIPHANT,
Deputy Commissioner.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 1st April 1874.

READ—

THE Palamow fortnightly narrative for the period ending 21st March.

The Assistant Commissioner is beginning to doubt whether the supply furnished by private trade will continue sufficient for the demands of his sub-division. Colonel Dalton, however, has assured the Government that he does not share Mr. Forbes' apprehension that private importations will cease on the 15th April. It appears that the prices hitherto returned in the price-currents to Government have been wholesale rates returned by the Choudries, while the actual retail rates were considerably higher. Stocks are still said to be considerable, but traders are holding back in view of later demands. The condition of the people is described as daily getting worse, many being reduced to one meal in two days. The Lieutenant-Governor hopes this is not literally so, and it cannot be if employment is given as it should be. Thefts are also becoming common, though of a petty character. The number of labourers on relief works (7,936) is less than last fortnight (12,025), owing to the opening of the harvest, which seems hardly consistent with the above statement of extreme destitution being general. Charitable relief operations are commencing.

2. On the whole, this report is of a very unsatisfactory tenor, and the Lieutenant-Governor begs that the Commissioner will satisfy himself of the real state of things. Further advances for the importation of grain have been sanctioned. The Lieutenant-Governor desires that in future this narrative should be forwarded through the Commissioner. He must express his surprise and regret that the Deputy Commissioner should not have a word to say.

By order of the Lieutenant-Governor of Bengal,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

No. 1989.—S.R.

Copy to Commissioner of Chota Nagpore, Deputy Collector of Lohardugga, and Assistant Commissioner, Palamow, with copies of the narratives.

By order of the Lieutenant-Governor of Bengal,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

Calcutta, the 1st April 1874.

Enclosure No. 8.

No. 40 M.A., dated Calcutta, the 26th March 1874.

Memorandum by Lord H. Ulick Browne, Commissioner of the Presidency Division.

Copy submitted to Government. I have nothing worthy of mention to report in addition to what the Collector says under any of the headings for Commissioners' reports, firstly to fifthly, except that the Collector's lists of district and sub-divisional relief committees are expected daily, and that the members will then be gazetted and utilised as an intelligence department.

2. Land-owners continue to take out loans for tank excavation.

3. The Collector does not mention the Kishnaghur weavers, but they are being looked after.

No. 277—S.R., dated Kishnaghur, the 23rd March 1874.

From C. C. Stevens, Esq., Collector of Nuddea, to the Commissioner of the Presidency Division.

I have the honour to submit my fortnightly report ending this day.

2. The belief that there is an abundance of grain everywhere in this district seems to prevail. Imports from other districts have not yet ceased. Exports are believed to have diminished. The mahajuns have opened their stores at last, and been making advances of paddy to ryots rather freely. The panic caused by Government having made large purchases of food-grains has decreased, the spring crops have derived benefit from the late rainfall, and more rice has been thrown into the market, in consequence of the near approach of the latest day fixed for the payment of land revenue. All these circumstances have occasioned a fall in prices of food-grain, and the market is easier than it was.

3. In the following marts coarse rice has been selling at the prices shown below:—

	Per Maund.			
	Rs.	A.	P.	
Ranaghat - - - - -	2	8	0	
Santipore - - - - - -	2	12	0	
Chagda - - - - -	2	10	0	
Haringhatta in Jajooly - - - -	3	0	0	
Bongong - - - - -	2	2	0	to 2 4 0
Meherpore - - - - - -	2	4	0	to 2 6 0
Kooshtea - - - - -	2	12	0	
Kishnaghur - - - - -	2	13	0	
Chapra - - - - -	2	10	0	to 2 12 0
Kaligunge - - - - - -	2	14	0	

4. There were showers of rain during the period under review, and the weather was somewhat unsettled at times. The nights and mornings were cold.

5. *State of the Crops.*—The late rainfalls have done much good to the spring crops, though in places, specially in the north, damage has been done by hail. The condition of cold weather crops, except tobacco, is generally favourable, and where reaping has commenced, the outturn may be said to be a fair one for the area sown.

6. *Condition of the People.*—The people do not appear to be nearly so anxious as they were some months ago; as yet there is no sign of a general distress, but a little pressure, it is feared, will be felt by the more indigent of the high caste people, and by those who ordinarily subsist by charity, or who from bodily infirmities are incapable of work. A number of the labouring class of people has found employments in works undertaken by means of the tuccavee loans as well as on Government works. A good deal of cholera has been reported, and three special native doctors are now at work. This, no doubt, is the effect of the extreme deficiency of water; it is a matter of satisfaction that so much will be done this year to improve the supply for the future.

7. *Actual facts—as any known cases of misery and starvation, grain-thefts and robberies.*—No cases of actual starvation have come to my knowledge. I may mention by the way that the women and children whom I mentioned in my first narrative as being in a critical state are supporting themselves by labour on the works opened in their neighbourhood. During the last fortnight 23 cases of grain theft have been reported by the police, but all of them are not to be traced to the present condition of the district.

8. *Condition of any special tract.*—Jagooly is the only place in the district where the supplies are reported to be somewhat short, but the people do not depend much on the markets. The people in the north of the Sudder sub-division, which is the only really very distressed tract, are finding plenty of employment for the present.

RELIEF WORKS.

9. All work on the roads has been stopped, except in respect to those whose cases were mentioned in my last report. Three tanks at Government expense are being excavated; about 1,200 labourers are being daily employed on those works, but the number is falling on account of the demand for labour on tanks dug from tuccavee loan.

10. *Transport of food.*—Only a small quantity of food has been exported from the Bongong sub-division, and about 3,000 maunds of dhan or paddy have been reported to have passed up the Itchamate. The export from Ranaghat is estimated to be 400 maunds of paddy to Hooghly, 757 maunds of rice to Hooghly, Baraset, and Chooadanga; 787 maunds of other food-grain to Calcutta and Hooghly from Kooshtea. 7,000 maunds of food-grains are said to have passed in the direction of Moorshedabad, and 6,000 maunds exported to Calcutta and Moorshedabad. The sub-divisional officer of Chooadanga reports that about 600 maunds of rice have been exported by rail to Naihati, about 300 maunds to Meherpore, and about 12,000 maunds have been passed *en route* for Kishnagur and Moorshedabad from Meherpore; about 5,000 maunds in all have been exported, chiefly to Calcutta and Moorshedabad.

11. At present no necessity has arisen for storage of Government Grain.

ADVANCES TO PRIVATE PERSONS AND THEIR RESULTS.

12. Rs. 21,116 have been lent to private persons and zemindars under the Land Improvement Act; almost in every case the work has been started.

CHARITABLE RELIEF.

13. About Rs. 15 have been spent on this head, but the cases are such as require no special comments.

X. 2

Enclosure No. 9.

RETURN of MEN, WOMEN, and CHILDREN employed on RELIEF WORKS in DISTRICTS of RAJSHAHYE, PATNA, and BHAGULPORE DIVISIONS, for the fortnight ending 21st March 1874.

J. E. T. NICOLLS, Colonel, R.E.
Secretary to the Government of Bengal,
Public Works Department.

Calcutta, the 31st March 1874.

No. 21 of 1874.

Government of India.

Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.

Famine.

To the Most Honourable the Marquis of Salisbury, Her Majesty's Secretary of State for India.

My Lord Marquis, Calcutta, the 10th April 1874.

In continuation of our Despatches relative to the drought in Behar and parts of Bengal, we have the honour to forward the Supplement of the "Calcutta Gazette" of the 8th instant, containing the usual statements of prices current and of the condition and prospects of the crops. There is nothing special to remark in either statement; in prices there is no great change, and the outturn of the cold weather crops in those districts of the Patna and Bhaugulpore Divisions where they are being harvested seems to confirm the favourable anticipations we expressed in our Despatch of the 27th ultima.

2. We all also forward the "Allahabad Gazette" of the 4th instant, which contains similar information from the North-Western Provinces. Your Lordship will observe that on the whole the reports are satisfactory, and that in the prices of some grains there has been a considerable fall.

Pages 165 to 187.

3. As promised in the 6th paragraph of our last Despatch, we enclose a letter from the Government of Bengal, forwarding Minutes by Sir Richard Temple, summarising the present relief arrangements in the distressed divisions of Behar and Rajshahye, together with a note reviewing the total allotments of grain to each district and the arrangements for transport. Our remarks upon these papers will be found in our Resolution of the 8th instant, which is also enclosed. At present we have only to observe that the general aspect of affairs, as described in our last Despatch, remains unchanged.

* Page 187.

† Pages 189 and 190.

4. We enclose a copy of our correspondence* with the Bengal Chamber of Commerce on the subject of the Government purchases of rice; we also enclose two communications† from the Government of Bengal,—the first relative to the delay which occurred, at the outset of operations, in the payment of labourers on Tirhoot relief works; and the second, received to-day reporting the occurrence of four deaths from starvation, in addition to the thirteen cases reported to Your Lordship in our weekly telegram of the 4th instant.

We have the honour to be,
My Lord Marquis,
Your Lordship's most obedient and humble Servants,
NORTHBROOK.
NAPIER OF MAGDALA.

SUPPLEMENT to the GAZETTE OF INDIA.

Calcutta, Saturday, 11th April 1874.

Government of India. Department of Revenue, Agriculture, and Commerce.

No. 1200 A.

EXTRACT from the Proceedings of the Government of India in the Department of Revenue, Agriculture, and Commerce, dated Calcutta, the 8th April 1874.

RESOLUTION.

The Governor-General in Council has considered the 14th Special Narrative, submitted on the 2nd instant, of the drought in Behar and parts of Bengal, and the letter from the Government of Bengal, No. 2088 S.R., of the 6th instant, forwarding a Note reviewing the allotment of grain to each district and the arrangements for its transport, together with Minutes by Sir Richard Temple, summarising the present relief arrangements in the distressed divisions of Behar and Rajshahye.

The Narrative, with the Lieutenant-Governor's observations and instructions, has been published in the *Gazette of India.* The same publicity will now be given to these subsequent communications.

Sir George Campbell has been obliged, on account of the state of his health, to resign the office of Lieutenant-Governor of Bengal, and it is the gratifying duty of the Government of India to acknowledge the zeal and ability with which His Honour has from the first devoted himself to the arduous task of conducting the operations for the relief of distress. The Governor-General in Council desires particularly to record his high appreciation of the manner in which Sir George Campbell personally directed and supervised the relief organisation on the occasion of his recent visit to North Behar.

The Governor-General in Council further desires to take this opportunity of expressing his entire concurrence in Sir George Campbell's acknowledgment of the obligation of the Government to Sir Richard Temple for the great energy and administrative power which he has shown in co-operating with the Lieutenant-Governor for the purpose of completing the arrangements to meet the famine.

The Government of India have also to record their cordial recognition of the zealous and efficient services of the Commissioners of the Patna, Bhaugulpore, and Rajshahye Divisions, and of the other officers mentioned by the Lieutenant-Governor and Sir Richard Temple.

It is not impossible that contingencies may arise which will place still greater strain upon the resources of the State, and call for additional exertions on the part of the officers of Government. But His Excellency confidently relies upon every officer doing his duty under a strong sense of the responsibility devolving upon him during the period of increasing distress which, it is to be feared, must be anticipated.

(True Extract.)
ARTHUR HOWELL,
Deputy Secretary to the Government of India.

No. 2088 S.R., dated 6th April 1874.

From C. BERNARD, Esq., Acting Secretary to the Government of Bengal, to the Deputy Secretary to the Government of India, Revenue, Agricultural, and Commerce Department.

WITH reference to paragraph 16 of the last special Narrative, which contained a promise to submit a note showing the whole allotments of grain to the distressed districts, and reviewing the transport arrangements and their working, and also to submit Minutes by Sir Richard Temple, summarising the present relief arrangements of the three very distressed divisions, I am now directed to submit these papers.

They consist of—

(a.) Summary of allotments and transport arrangements with a minute by Sir Richard Temple on the carrying power of the railway, written with reference to the above.

(*b.*) The letter of Sir Richard Temple's Secretary, No. 121, dated 31st March, with Sir Richard's Minutes, Nos. 52, 63, 64, 65, and 66, reviewing the relief arrangements of the Dinagepore, Patna, and Bhagulpore Divisions, and of the country generally, with a reply, No. 2060, dated the 2nd April, conveying to Sir Richard Temple the Lieutenant-Governor's warm acknowledgments for the assistance which he has rendered to the Government of Bengal during Sir George Campbell's incumbency.

2. The last Narrative has placed the Government of India in possession of the most recent information regarding the state of the country and the progress of relief arrangements, and the instructions issued by the Lieutenant-Governor after seeing for himself the worst parts of the country.

Nothing has since occurred to alter the views given in the narrative. We have still reason to hope that, so far, our greatest difficulties are confined to the Tirhoot district, and the more recent accounts from thence are favourable. In a telegram just received, Mr. Metcalfe says :—" Nothing like starvation is apparent. Village relief in hands of headmen. Working number on Bahera road twenty-six thousand* only, on Mudhoobunnee works two lakhs.† Employing Resaldars in disciplining mobs (*i.e.*, of labourers). Public health good. Baiparees increasing imports. Water-supply everywhere deficient. Village after village searched for hungry people. Mudhoobunnee, Nareya, Durbhunga circles all formed. Can honestly say famine well in hand."

3. The Lieutenant-Governor hopes that the enclosed transport note will satisfy the Government of India that the local transport arrangements as a whole are now extremely efficient, and that the carrying power is only limited by the carrying power of the railway. The Government of India will probably consider that question in connection with Sir Richard Temple's note on the subject and my letter No. 2089 S.R. of this date, submitting the question whether certain further quantities of grain are to be procured from the North-Western Provinces.

4. Sir Richard Temple's Minutes, attached to his Secretary's letter No. 121, set forth very clearly in precise and statistical form the various arrangements made for supply of grain transport and relief machinery. Sir Richard Temple very justly praises the judgment, discrimination, and assiduity displayed by Mr. S. Bayley, Commissioner of the Patna Division, in the discharge of the extraordinary difficult duties which have devolved on him ; and he commends the Deputy Commissioner, Mr. J. Hewitt. He cordially acknowledges the services of Mr. G. N. Barlow, Officiating Commissioner of Bhagulpore, and brings specially to the notice of Government the very valuable services rendered by Mr. H. Hankey, as Special Superintendent of Transport. He speaks in terms of high commendation of Mr. W. Le F. Robinson, in special relief charge of the four northern districts of the Rajshahye Division. In all the above praises the Lieutenant-Governor entirely concurs.

5. The time has now come when the present Lieutenant-Governor must shortly surrender his office. He is compelled to do so at a time when the country is unhappily placed in a very critical position ; but he hopes that the papers submitted with the last Narrative and with the present letter will show that, under the direction and control of the Government of India, the Government of Bengal has made very large, and generally successful, provision to meet the calamity which has befallen the country ; and Sir George Campbell trusts that in handing over the administration to a successor who has already so largely and so ably assisted him, he does so under circumstances which give fair hope that this Government, administered by the energetic and competent hands of his successor, and supported by the large means which the Government of India has so freely afforded, may be able successfully to carry the people through the time of trial, with no greater suffering than is inevitable under such a dispensation of Providence.

6. It has been explained that the present season so far promises very favourably. Accounts have just been received of a very beneficial fall of rain in the North Bengal Districts, and at this moment the appearance of the weather gives hopes of a further fall, which would be peculiarly opportune and beneficial after much land has been prepared and some crops sown in Bengal, and the rubbee harvest has been reaped and garnered in Behar.

7. If the season in Bengal should be favourable, the ensuing months being showery, as a season so commenced often is in Bengal, the Lieutenant-Governor would hope that, after the provision which has been made for supplying the distressed districts and maintaining a reserve, the condition of the people in the greater part of Bengal proper may not be greatly changed for the worse.

In the parts of Behar where the rubbee harvest has for some weeks given employment to the people, we must expect a large accession to the numbers for whom employment and relief provision must be made between the end of the rubbee harvest and the rains. But if the unusual drought is followed by early rains, as is frequently the case, that period will not be very long ; and when good rains commence, we may expect that, in all districts not reduced in an extreme degree, the people will of their own accord betake themselves to agricultural pursuits.

There remain the large tracts of North Tirhoot, and other more limited tracts, where, there being little or no rubbee, the people have come on our hands at a comparatively early period in very large numbers. It is the Lieutenant-Governor's earnest hope that the measures which have been adopted will suffice to meet the vast amount of distress existing in those tracts ; but he does not doubt that this distress can only be met by very earnest and sustained effort, which he surely believes will not be wanting.

Sir George Campbell trusts, then, that, by the mercy of God, the people, whom he leaves in very good hands, will be saved from starvation.

---

* When the measures for sifting and distributing the people on this road were undertaken, they were over fifty thousand.

† This is a decrease and not an increase on numbers previously stated.

8. Sir George Campbell is under very great obligations to many of the officers who have assisted him in the efforts which for the last six months he has made to meet the threatened famine; but at a time when the work is unfinished, he feels that he cannot ask for them the acknowledgments of the Government of India. He will, therefore, not here attempt to specify those who have in his opinion so far done well, beyond the concurrence in Sir Richard Temple's praises of certain officers which he has above recorded, but he will leave a note on the subject with his successor, who will hereafter be in a position to estimate the services of the various officers as a whole.

SUMMARY of ALLOTMENTS and ARRANGEMENTS for transport of Government grain to distressed districts, brought up to latest intelligence received to end of March.

1. The allotments of grain to the distressed districts, according to the latest revisions, are:—

	Maunds.	Maunds.
Patna	67,500	
Gya	2,20,000	
Shahabad and Soane Circle	3,17,000	
Tirhoot	42,00,000	
Sarun	5,30,000	
Chumparun	10,00,000	
Monghyr	3,78,000	
Bhagulpore	7,30,000	
Purneah	6,50,000	
Sonthalia	1,35,000	
		82,27,500
Hazareebagh	25,000	
Manbhoom	28,000	
Palamow	10,000	
		63,000
Moorshedabad	5,000	
Dinagepore	12,00,000	
Maldah	1,50,000	
Rajshahye	1,00,000	
Northern Bengal Railway	1,00,000	
Rungpore	3,00,000	
Bogra	2,40,000	
		20,95,000

2. If we include the Chota Nagpore in what may be called the western group of districts, the total allotment for them is 82,90,500 maunds or (converted at 27·2 maunds per ton) 304,797 tons. The total allotments for the eastern districts is in maunds 20,95,000 or tons 77,022.

The grand total of the allotment for all districts, as at present fixed, is therefore 381,819 tons.

3. The total quantity of grain despatched from Calcutta up to the 31st March is returned as follows:—

	Maunds.		Tons.
To the western districts	36,99,928	or	136,026
To the eastern districts	14,54,775	or	53,483

If we add to this 17,463 tons, purchased locally and in the North-West Provinces for the western districts, and 2,941 tons purchased locally for the Rajshahye Division, the total despatch of grain up to date stands—

	Tons.
For the western districts	153,489
For the eastern districts	56,424
Total	209,913

This leaves 171,906 tons yet to be supplied, of which 151,308 tons are due to the western and 20,598 tons to the eastern districts.

In the western districts of the Burdwan and Chota Nagpore Division, some further allotments may be required, but it is not expected that the quantity will be very large.

4. The statements of amounts actually received in the districts are mostly dated 28th March, but they are always considerably in arrear of the actual facts, depending on previous returns from out-stations, while the despatches from Calcutta are given up to date. The following statement of the amounts received in the districts, based upon the last transport returns and the district narratives, shows a greater difference than the amount in transit would account for. Difference in date must account for the remaining difference.*

---

* The difference between the total amount despatched and the amount shown as received is 20,813 tons. But it must be remembered, as stated generally in the text, that the returns of receipts are by no means up to date. In the Rajshahye Division, again, consignments are by water routes, some weeks upon the road, also there are often considerable quantities accumulated at Futwa, Kooshtea, Goalundo, and other ghâts on the south side of the river. Again, the railway despatches are made up for three days beyond even the nominal date of the district returns, and we may allow 3,500 tons a day by the two railways on that account.

The amounts received at the main receiving depôts of the districts appear to stand thus:—

	Maunds.
Sarun	3,79,690
Chumparun	6,23,275
Tirhoot	16,41,000
Shahabad and Soane Circle	1,79,000
Gya	1,40,000
Patna	58,822
Bhagulpore	4,57,491
Monghyr	2,15,933
Sonthalia	15,000
Purneah	4,56,645
Total for Patna and Bhagulpore Divisions	41,66,856
Rajshahye Division	9,64,186
Chota Nagpore	12,492
Total	51,43,534

or 189,100 tons in all.

It will be remembered, however, that this includes some considerable quantities stacked at receiving stations and not yet sent off to the interior; and, in the case of Tirhoot, this will make a good deal of difference, a considerable quantity of grain stated as received into that district being still at Champta and some other ghâts.

5. The following paragraphs examine the state of the transport question in detail district by district:—

SARUN.

6. The allotment is discussed in Sir Richard Temple's Minute No. 18, dated 12th February. It was there settled that 5,00,000 maunds were to be supplied for the district plus 30,000 to be advanced from Government stores for the Hutwa estate, *i.e.*, 5,30,000 maunds in all, exclusive of a further supply of 1,50,000 maunds to be obtained direct by the Hutwa estate; all to be stored by the 15th June. It was further settled that all grain for Sarun should be consigned to Arrah, and be sent across the river in native boats. Up to the present date the grain has been steadily carried into the interior without fail. The Sarun cart power could carry much more if necessity arose. The district transport return dated 29th March shows that 3,65,971 maunds had been thus received. Even this figure is not quite correct up to date, as the Collector's returns from the receiving ghâts could not give actual figures up to the 28th inclusive. We may safely assume that at least two more days' despatches had been received on the north bank of the Ganges by the 28th March, and that a third day's despatches were *en route* from Arrah. We know that there is no balance of Sarun grain lying at Arrah, and that the average daily despatch by cart and boat from Arrah is 4,573 maunds daily. According to the Collector's figures, then, Sarun had yet to receive 1,64,029 maunds of its allotment. But according to the above estimate it must have received 3,79,690, leaving 1,50,310 maunds still to be sent up. If the present orders to send daily 5,000 maunds to Arrah for Sarun hold good, the whole balance due would arrive by the 28th of April. Even at the average rate of despatch hitherto (4,573 maunds), the balance would have reached the district by the beginning of May, and might all be stored by the 15th May. In case of necessity the despatches might, after due notice, be reduced to 3,000 maunds per diem, and it is proposed to do this next week.

CHUMPARUN.

7. Coming now to Chumparun, according to Sir Richard Temple's Minute No. 13, dated 8th February, the allotment for this district was to be one million of maunds, to be imported by the 15th June. European contractors, Messrs. Lethbridge and Gibbon, undertook to cart from Bunkur Ghât opposite Patna 50,000 maunds a week, or 2,00,000 maunds a month from 15th February, say 7,00,000 maunds in all up to the 15th June. The Collector was to receive by 15th February, under previous arrangements, 2,15,000, and 50,000 maunds were then expected by the Gunduck for the embankment works. Besides all this, 1,50,000 maunds were being brought in by river on account of the Bettiah Raj and planters. No further arrangements for transport were, therefore, deemed necessary, as the Gunduck was expected to rise after the middle of May, and boat carriage become feasible, should further supplies of grain be required.

8. The only change in the Chumparun programme has been that, in order to relieve the extreme pressure at Bunkur Ghât, the contractors have, since the 9th March, taken from 7,000 to 14,000 a week of the Chumparun grain *viâ* Arrah. No information as to the actual total despatches by the Gunduck is available, but it is understood that the district is relying now entirely on its land carriage.

9. By the transport returns for the fortnight ending 28th March, the district had received 5,97,907 maunds, leaving it 4,02,093 to receive. If we may assume, as we certainly may, that here too the Collector's figures are two or three days in arrear of the facts at the time of his writing, this balance due would be reduced by about 8,456 maunds for each day: the average actual daily despatches from Arrah to Chumparun being 1,088 maunds, and from Bunkur to Chumparun 7,368 maunds. This would make the receipts in all 6,23,275 maunds. In round numbers, however, we may say that Chumparun had, on the 28th March, something under four lakhs of its allotment to receive. At 50,000 maunds a week (the contract rate), this would be

cleared off in eight weeks or less. At present the contractors are carrying off, by the two routes of Arrah and Bunkur alone, an average of 59,196 maunds a week. But the combined despatches for Chumparun *viâ* Bunkur and *viâ* Arrah need not exceed 50,000 maunds a week, say 15,000 *viâ* Arrah and 35,000 *viâ* Bunkur.

TIRHOOT.

10. Sir Richard Temple's Minute No. 35, of the 26th February, abstracts the arrangements for Tirhoot thus: 42 lakhs of maunds were to be conveyed before the rainy season, thus distributed—to Seetamurhee (10), Mudhoobunnee (16), and Durbhunga (16). The contracts made were as follow:—

	Lakhs.
A.—The *Western Contractors* were to take—	
From Bunkur to Seetamurhee *viâ* Mozufferpore - - -	6
„ to Contai for Seetamurhee - - - -	4
„ to Attrai and Poosa for Mudhoobunnee - -	5
„ to Durbhunga - - - - -	5
Total -	20
B.—The *Alliance Company* were to take—	
From Chumpta to Durbhunga - - - -	18
C.—A North-western Contractor, Nilcomul and Co., was to take—	
From Mokameh to Durbhunga - - - -	4

The above provided for the cartage of 42 lakhs of maunds away from the river ghâts.

The Seetamurhee grain was to be taken up at Contai and Seetamurhee, and distributed in that sub-division by a separate company, Messrs. Tripe, Begg, and Company.

The five lakhs delivered at Attrai and Poosa were to be carted on by Messrs. Studd and Wilson to Kamtoul, and thence by Mr. Llewhellin to Mudhoobunnee.

Of the total quantity of grain delivered in Durbhunga (5+18+4=27) 11 lakhs were to be taken on by Mr. Llewhellin to Mudhoobunnee.

In this way each sub-division was to get its quantum.

11. Minute No. 57 has assigned 67,000 maunds to Tajpore Sub-division, and directs that this supply shall be deducted from the allotment for such of the other sub-divisions as the Commissioner sees fit. The allotment for the Sudder Sub-division has not yet been fixed. Whatever may be required for this or Hajeepore, will for the present come out of the allotment for the rest of the district.

12. In Mr. Hewitt's report for the fortnight ending 14th February, he explains the routes and the quantities expected to be carried by each as follows:—

	Weekly quantity in maunds.
From Bunkur by Lalgunj to Contai - - - -	15,000
„ by Rusoolpore to Seetamurhee - - -	50,000 to 70,000
„ to Athar and Poosa - - - -	35,000
Total weekly from Bunkur -	1,00,000 to 1,20,000
From Chumpta to Durbhunga - - - -	75,000
„ Jamattia to Durbhunga (Singhia and Hatta) - -	35,000
Total from Chumpta - -	1,10,000

This arrangement, however, omits the despatches from Bunker to Durbhunga subsequently arranged. To supply 5 lakhs by that route, which was not commenced to work till after the Lieutenant-Governor went up in beginning of March, a despatch of upwards of 35,000 maunds a week, or 5,000 maunds per diem, is necessary.

13. The quantities despatched from Bunker for Tirhoot have averaged 15,843 maunds a day, or 1,10,901 maunds a week, from 8th to 25th March, and are improving steadily. Those from Chumpta by the Alliance Company have been very short, averaging only 6,092 maunds a day from 5th to 27th March. In consequence, however, of the failure of this Company to supply enough cartage at Chumpta, they have tried another route from Monghyr, and also a route by Mokameh, which it was proposed to use simultaneously by the North-West contractor, Nilcomul Mitter. Up to the 29th March the Company had, however, only sent 5,486 maunds by the Mokameh route. The rate of despatch by the Monghyr route, to a point on the lesser Gunduck, is stated at over 22,000 maunds a week, but this is only despatched by boat. We do not know yet what has been landed and carried off.

14. The arrangements as last reported stand thus: The Alliance Company is to work from Barh *viâ* Chumpta, and also from Monghyr and Mokameh. They are to take three lakhs in all to Poorani Ghât south of Singhia by boat, and stock the Bahera and Singhia golahs of Durbhunga. The Chumpta grain is to be delivered at Hya Ghât for Mudhoobunnee. Nilcomul, the North-West contractor, is to carry from Simeria Ghât opposite Mokameh, and deliver at Pahuddee for Muddebpoora and other circles in Mudhoobunnee; but as yet this contractor has not begun active operations. The grain from Bunkur *viâ* Poosa goes to the western parts of Mudhoobunnee, while the grain from Bunkur to Durbhunga goes direct to the latter place.

15. The review of the transport appliances for Tirhoot would not be complete without a reference to the Durbhunga railway, which will almost immediately carry from Chumpta to Nagurbustee (28 miles on the road to Durbhunga) 200 tons or 5,600 maunds a day; and which is to carry from Chumpta Ghât right into Durbhunga (44 miles) 600 tons or 22,400 maunds a day soon after the 15th April.

16. The present position, then, is—

The present actual average rate of despatch is—

	Weekly quantity in maunds.
From Bunker Ghât	1,10,900
From Chumpta Ghât	42,600
From Monghyr, by the Alliance Company	22,750
From Mokameh, by the Alliance Company	7,680
	1,83,930

The amount already in the district, 16,41,000 maunds, leaves 25,59,000 maunds still to receive (out of the allotment of 42 lakhs), to which must be added, say nearly 2,00,000 lying at the ghâts when the account was made up, giving 27,50,000 maunds in all to be despatched into the interior.

Taking nine weeks' despatches from 28th March to 1st June to arrive at destination by 15th idem, the *present* despatches would give us by the 15th June—

Nine weeks' despatches, at 1,83,930 maunds a week - 16,55,370

17. But we have the certainty (or almost certainty) of the following increase by means of the railway:—

The Durbhunga railway will raise the despatches from Chumpta Ghât from 6,090 a day to 22,000 a day; and this increase will, it is hoped, last for at least fifty days, thus giving an extra supply of - - - 7,95,500

or a total despatch of 24,50,000 against 27,50,000 to be carried.

18. 3,00,000 maunds remain.

For this we have the North-Western contractor, Nilcomul, but he has not yet begun the work he undertook.

We may hope, further, that the reserve carriage will help to make up any possible shortcoming in the above calculation.

There is at least one further resource, and that is the North Bhagulpore transport. Mr. Hankey writes that this is now immensely powerful, and that he can undertake to carry three lakhs of maunds into Tirhoot through North Bhagulpore, if only he can get the grain delivered to him, or the railway to carry. It may be considered that the above three lakhs, then, may either be sent by the arrangements already made or by the Bhagulpore route.

19. The general result of the above seems to be, that if the traffic remains uninterrupted till 15th June, we may expect to carry the whole Tirhoot supply. In the event of an unusually early rainy season, the land traffic may be interrupted, but in that case we may hope that the necessities of the district will also cease earlier, and the water routes will be opened.

20. The only apprehension is, that owing to the delay in the Chumpta Ghât forwarding arrangements, when the railway begins to work fully, too much grain may be accumulated at Durbhunga, and there may be difficulty in sending it on in time to Allapore and other stations of Mudhoobunnee. In that view it would seem to be preferable to send part of the supply by the Bhagulpore routes to Allapore direct.

21. Seeing that it is not desirable to send forward from the river side to Durbhunga more grain than can be forwarded to its ultimate destination (after the rains commence Monghyr would be a better point of departure than Durbhunga), and seeing the complaints that have been made of interference with private trade, the Lieutenant-Governor thinks it would be desirable not to take up local pack-bullocks and donkeys for transport from the Ganges, these animals being only used for the distribution beyond Durbhunga, when absolutely necessary.

22. The districts in the Patna Division, south of the Ganges, call for only brief notice.

SHAHABAD.

19. The allotment for Shahabad is put by Sir Richard Temple's Minute No. 61, dated 26th March, at 1,27,000 maunds. The district has received 65,000 maunds. For the Soane Circle 1,90,000 maunds are said to be required, of which 1,23,113 had been received; 66,887 more have to be ordered.

For the district and the canal together 1,28,887 more are required, of which 75,000 are to be rice, sent up to stations between Arrah and Mogul Serai. The rest is to be brought from the North-Western Provinces.

20. The district carriage has moved 3,000 maunds a day, and can do more if pressed. No grain has been sent since the 9th March for Arrah, or since 24th February for the Soane Circle. Some has now to be sent, but there is no urgency in the despatches for either this district or Gya.

GYA.

21. Sir Richard Temple's Minute No. 60, dated 25th March, provides 2,20,000 maunds for Gya; 1,40,000 are already there; 80,000 more have to be sent. Of this, 55,000 maunds is to be rice, and 25,000 grain from North-Western Provinces. Gya can move over 3,000 maunds a day. No grain has gone up since 8th March, owing to the shortness of railway waggons and demands of other places.

The transport of the allotted grain into the interior of the Shahabad and Gya Districts can be effected without doubt or difficulty, if only the railway can carry the required amounts to the railway stations early enough in the season.

PATNA.

22. The allotment here is 67,500, of which 58,822 have been delivered. None has been sent up since 23rd February; but as the district can move 22,000 maunds a day, it can take its balance at any time if required.

BHAGULPORE.

23. For North Bhagulpore the allotment by Minute No. 25, dated 19th February, is 7,30,000 maunds.

The last transport returns show to 28th March 4,57,491 maunds received, leaving a balance due of 2,72,509 maunds. All the routes were working clear, and rice did not come to hand fast enough for the transport power. Sir Richard Temple wished 40,000 maunds a week to go for this district to stations between Bhagulpore and Monghyr; and Mr. Hankey writes that the transport power is expanding immensely, if only they could get grain to keep the carts employed. The railway despatches for the week beginning 30th March are to be daily:—

		Minimum.	Maximum.
		Maunds.	Maunds.
To Monghyr	for North Bhagulpore	5,000	6,000
To Sultangunge		4,000	6,000
	- -	9,000	12,000
	-Weekly =	63,000	= 84,000

24. The actual daily average despatch into the interior from Jugdischuck, opposite Sultangunge, has been 3,610 maunds, and from Monghyr 3,520 maunds; but Mr. Hankey says that it is only want of grain that has kept the average down, as they really carried up to 7,682 maunds from Jugdischuck on an average of 11 days when full of grain. The Monghyr route can easily, he adds, carry 6,000 or 7,000 maunds a day. Even at the rate of 7,130 maunds from both ghâts, the whole balance due to Bhagulpore would be delivered in 38 days from 28th March, *i.e.*, by early in May. If they can carry say 13,000 maunds a week, the whole will be cleared off in 21 days from the 28th March.

If Bhagulpore is to carry three lakhs of maunds for North Tirhoot, its carriage will be kept employed up to the middle of June.

Excluding, however, any arrangements for Tirhoot by this route, 6,000 or even 5,000 maunds a day would be a sufficient supply for Bhagulpore.

MONGHYR.

25. The allotment for this district is fixed by Sir Richard Temple's Minute No. 64, at 3,78,000 maunds, and of this quantity 1,92,000 had, when Sir Richard wrote, been received into the district, plus 20,000, by the Court of Wards, leaving to be sent 1,66,000, all of which Sir Richard Temple said might come from the North-Western Provinces. The transport returns show an actual receipt of 1,95,933 maunds. No despatches have been made from Calcutta for this district since the 13th March, as the demands of other districts were more urgent, and the carrying power of the East Indian Railway was considerably below the mark. The Collector estimates that he has carriage available for over 5,000 maunds daily. The Monghyr grain stores and its distressed tracts are near to the railway; the district has already carried away promptly every maund it received, and if only the railway can supply the stations before the end of the season, all the Monghyr grain will be in position well before the middle of June.

SONTHAL PERGUNNAHS.

26. Sir Richard Temple has settled that a total of 1,35,000 maunds in all should be sent to the Sonthal Pergunnahs. Of this 15,000 maunds have already been sent; the storehouses and distressed tracts are near the railway; and this moderate supply of grain can be carried into the interior as soon as it arrives.

PURNEAH.

27. For Purneah, by Minute No. 44, of the 7th March, the allotment is 6,50,000 maunds. Besides this, 1,50,000 were to be carried through Purneah into Dinagepore, while it was contemplated that 1,50,000 maunds for Purneah might go *viâ* the Mahanuddee. This arrangement leaves the amount to be carted by Purneah from Caragola at 6,50,000 maunds. Mr. Hankey's report of the 12th March estimated that the carriage had developed so that they could carry at least 2,00,000 a month. Up to the 22nd March they had carted away from Caragola 4,24,749 maunds, and the carriage was adequate to taking much more than they had got (*viz.*, 8,922 maunds a day in the fortnight ending 21st March).

The transport return dated 28th March shows 4,36,645 maunds as received into the district at Caragola, leaving 2,13,355 to be received. But these figures are certainly a day or two in arrear.

Probably we may say, in round numbers, that on the 28th Purneah had not more than 1,90,000 maunds to receive at Caragola, and part of this was already delivered at Colgong and Sahibgunj. But we may take 1,90,000 as an outside figure.

28. The average despatch into the interior from Caragola for 30 days ending 27th March was 6,800. At that rate Purneah will have completely received its supply *viâ* Caragola in 27 days, or by about the 24th of April. There will remain the 1,50,000 maunds which are to come into Purneah *viâ* the Mahanuddee to replace the 1,50,000 which Purneah has to give to Dinagepore. Mr. Hankey says he can carry this from Sahibgunj up the Mahanuddee after the rains begin, if necessary. If the East Indian Railway could carry all the grain we require before the rains, then Purneah could complete its allotment, plus the 1,50,000 for Dinagepore, by the Caragola route alone. But in case of necessity the Caragola despatches might be reduced to 5,000 maunds per diem.

CHOTA NAGPORE.

31. A small quantity of grain (28,000 maunds at present) has been allotted to Manbhoom, and 25,000 maunds to Hazareebagh, and 10,000 to Palamow, which has been sent from the Soane allotment, being replaced there by despatches to an equivalent amount.

32. Moorshedabad is also at present permitted to draw up to 5,000 maunds from Government stores. Up to date only 500 have been sent.

EAST INDIAN RAILWAY POWER.

33. There remains now the all-important question of the carrying capacity of the East Indian Railway (of the Eastern Bengal Railway no doubt is entertained). The districts had in the last days of March yet to receive, *viâ* the East Indian Railway, in round numbers, the following quantities of grain:—

	Maunds.	
To Sarun	1,50,000	
„ Chumparun	4,00,000	
„ Tirhoot	25,59,000	
„ Patna	10,000	
„ Gya	80,000	
„ Shahabad and Soane Circles	1,28,000	
		33,27,000
„ Bhagulpore	2,72,000	
„ Monghyr	1,66,000	
„ Purneah	1,90,000	
„ Sonthal Pergunnahs	1,20,000	
„ Dinagepore, by Hyatpore, 2,000 a day for 60 days	1,20,000	
		8,68,000
Grand total by East Indian Railway		41,95,000, or about 154,000 tons.
From this we may deduct—		
Mr. Hewitt's local purchases at Patna	5,64,000	
North-Western Provinces' grain for Shahabad and Soane Canal	63,000	
North-Western Provinces' grain for Gya	25,000	
Ditto ditto for Monghyr	1,66,000	
		8,28,000
Which leaves for *up* trains		33,67,000, or about 124,000 tons.

At an average rate of despatch of 2,000 tons per day, this amount would be cleared off by the 31st of May.

This does not provide for Chota Nagpore and Burdwan requirements, which are not very great.

In fact, however, we cannot afford to delay despatches from Calcutta so long as the above, seeing the vicissitudes of the seasons, and that our district carrying power is now raised to a very high point. It would be extremely desirable to carry and store as much as possible in the next six weeks.

34. If we could work the railway up to the full amount that the carrying power of all the districts could be calculated on to take away, we should have to send about the following quantities weekly:—

	Maunds.
For Sarun	35,000
„ Chumparun	60,000
„ Tirhoot, with the Durbhunga Railway appliances	3,10,000
„ Shahabad, Gya, and Patna	15,000
„ Bhagulpore	70,000
„ Monghyr and Sonthalia	20,000
„ Purneah	60,000
„ Chota Nagpore Districts	10,000
Total	5,80,000

i.e., we should have to send 21,323 tons a week, or about 3,000 tons a day. This the railway cannot carry. But, as above shown, some districts will have drawn all their stock long before the latest date, and the despatches of some must be eased off, so that if the railway can take without fail 2,500 tons a day, as now arranged, we may expect that all the grain will be stored before the rains, if the moonsoon sets in at the usual time. This, however, will still involve some easing off of the transport now available.

Coming now to Eastern Bengal, and first—

RUNGPORE.

35. Sir Richard Temple's allotment for Rungpore is 3,00,000 maunds. Up to 27th March 1,46,534 maunds have been despatched from Calcutta, leaving 1,53,466 to be sent up in April and May. The transport returns show 1,29,004 received. The Eastern Bengal Railway Company's steamer can make 2½ trips from Goalundo to Kaligunge every month, and carry 25,000 maunds each trip. Mr. Davies, the sub-divisional officer of Goalundo, is also sending rice up in such native boats as he can hire suitable for the journey. These two sources of despatch will ensure 1,20,000 maunds being landed at Kaligunge on or before the 20th May. For the remaining 33,466 we have one of the India General Steam Navigation Company's steamers (either the *Bombay* or the *Lucknow*) and two flats, which will be transferred to Goalundo as soon as the Eastern Bengal Railway's additional steamer, the *Alfred*, commences to ply on the Kooshtea and Rajmehal route. She was to be at Kooshtea before April 1st; and the India General Steam Navigation Company's steamer, which is to be sent to Goalundo, will easily make two trips between the time she joins and the 10th May, carrying 20,000 each trip. This amply covers the 33,466 maunds required at Kaligunge to complete Sir Richard Temple's allotment. There is no reason to fear any break-down in this part of the transport arrangements. It will rest with the local authorities to ensure the success of the transport from Kaligunge into the interior. When Sir Richard Temple wrote his Minute No. 47, *i.e.*, on the 14th March, the rice for Rungpore itself was being carried by boat up the Teesta, and that destined for other parts of the district was being sent on by cart. There were 500 boats and 1,000 carts available, the estimated carrying power of which was 2,500 maunds daily. This would give a supply up to the 20th May of over one and half lakhs of maunds, and up to the breaking of the rains, say up to 15th June, of 75,000 maunds more. The water-routes will improve during the rains; and, unless any unforeseen accident should arise, the present arrangements may be confidently relied upon to perform the work expected of them. If more grain be required after the rainy season commences, it can be sent up by water from Kaligunge, where a reserve can, if necessary, be stored.

BOGRA.

36. The estimated requirements of this district are 2,40,000* maunds. Up to 27th March (according to the transport returns, which are not, however, it is believed, really up to date,) 52,974 maunds had been received into the district, leaving to be sent, during April or May, 1,87,026 maunds. The India General Steam Navigation Company's regular steamers will take 10,000 maunds each trip, and can make three trips in April and two in May. This provides for 50,000 maunds. Then we have the New River Steam Company's Steamer *Nepal* and two flats plying between Goalundo and Shohagipara, and carrying 20,000 maunds each trip. Between 1st April and 20th May she will make four trips and carry 80,000 maunds. There remains but 57,000 maunds (in round numbers) to be provided for. This will be taken by the steamer *Sultan* and her two flats, recently hired from Mr. Jackson. She and her flats take 14,000 maunds, and ought to make at least four trips from the date of her arrival at Goalundo (during the four weeks in April) to the 31st May. If any further steamer power is required for this route, the India General Steam Navigation Company's steamer *Lucknow* will, as per the next foregoing paragraph, be free from the Kaligunge route by the 10th May. It remains for the local authorities to arrange to carry away the grain as fast as it arrives, and, with water and land carriage together, this will not be difficult.

* *Vide* Sir Richard Temple's Minute of 16th March 1874.

REMAINING DISTRICTS OF RAJSHAHYE DIVISION.

37. With the exception of Bogra and Rungpore, which are supplied by steamer at two points, Shohajipara and Kaligunge respectively, all the districts of the Rajshahye division and the Northern Bengal Railway draw their supplies by several routes from the following points:—Hyatpore, Manikchuck, Rampore Bauleah, Godagari, Dhapari, and Goalundo. It is impossible to say the exact destination of all the grain sent up from the above main depôts, and it is therefore necessary to group the remaining districts together, and treat them as supplied collectively therefrom; thus—

DISTRICT.	Allotment.	Received at main Depôts North of Ganges up to 28th March.	Balance to be Received.
	Maunds.	Maunds.	Maunds.
Dinagepore - - - - -	1,200,000		
Maldah - - - -	150,000		
Rajshahye - - -	100,000		
Northern Bengal Railway - -	100,000		
Total -	1,550,000	781,700*	768,300

---

* These figures are certainly incomplete; 14,50,000 maunds have been despatched to the Eastern districts up to the 31st. The transport returns show only 9,63,686 maunds received at the depôts on the north of the Ganges in these districts, including Rungpore and Bogra. But the balances on the 1st April at the despatching depôts on the south bank were only 1,04,710 maunds, showing that much more than 9,63,686 maunds was on its way across, if not actually arrived.

38. By the latest returns available the actual despatches to the interior of the above districts averaged 17,000 maunds daily from all the depôts, *i.e.*—

	Maunds.
From Hyatpore	1,300
„ Manikchuck	1,700
„ Godagari	7,000
„ Beauleah	1,800
„ Dhapari	2,152
„ Noonnuggur	3,100
Total	17,052

But the above is not nearly the full carrying-power of the available transport, and the grain was being sent off nearly as fast as received. Until lately, the Rajshahye depôts have not been fully supplied with rice, owing to the greater and more urgent requirements of the other two divisions. If rice be available, the Eastern Bengal Railway can carry *at least* 28,000 maunds a day to the main receiving depôts at Kooshtea and Goalundo. At the rate of 17,000 maunds daily, all the rice, if delivered north of the Ganges, will have started for the districts in 45 days, or before the 12th May; and at the rate of 20,000 maunds daily, in 38 days, or by the first week in May. This would ensure most of its being stored before the rains.

In his Minute No. 45, of 11th March 1874, on the Dinagepore district, Sir Richard Temple says:—"I have seen something of the transport arrangements, and so far as I have seen they are efficient. * * * * * * The Collector and Commissioner are justified in their confidence that the million of maunds will be stored by the rains."

39. But in these districts it would be sufficient if the great mass of the grain reached main depôts on the upper reaches of the rivers before the rains commence. It could then be distributed easily in boats. And of the grain reaching such depôts in time there is now certainly no doubt.

40. The routes now being worked are thus described by Sir Richard Temple:—

"I.—Railway, Eastern Bengal. Terminus *Goalundo.*

"By country boats across the Ganges to junction of its affluent the Oorasagur; then through the Chullun Bheel Lake into the Attrai, passing through the Pubna and Rajshahye districts to Nowgong, a depôt on the Dinagepore frontier; thence through southern part of the Dinagepore district to Putneetola on the Attrai, a distressed locality; distance entirely by water 70 miles.

"II.—By steamer up the Brahmapootra to Noakeela opposite Bogra, thence by carts through Bogra district to Ghoraghaut and Bhadureea, distressed localities in south-eastern corner of the Dinagepore district; distance by water 120 miles, by land 50 miles.

"III.—Eastern Bengal Railway. Terminus *Kooshtea.*

"By steamer and country boats up the Ganges to Rampore, Beauleah, on north bank; thence by carts through Rajshahye district to Putneetola, already mentioned; distance by water 40 miles, by land 50 miles.

"IV.—By steamer and country boats up the Ganges to Godagaree, at junction of the Mahanuddee; thence by carts through parts of the Rajshahye and Malda districts straight on to Dinagepore. This is the first of the two main routes for the centre of the Dinagepore district; distance by water 60 miles, by land 90 miles.

"V.—By steamer and boats to Godagaree; thence entirely by boats up the Mahanuddee to Rohimpore, junction of the Poorna-Bhaba in the Malda district; thence up the Poorna-Bhaba past Neetpore to Gungarampore, distressed localities in the Dinagepore district; distance entirely by water 140 miles.

"VI.—By steamer and country boats to Godagaree; thence entirely by boats up the Mahanuddee to Malda; thence by carts through Malda district to Tumboolee, distressed portion of Dinagepore district, and on to Dinagepore. This is the second of the two main routes to Dinagepore; distance by water 110 miles, land 60 miles.

"VII.—By steamer and boats to Godagaree, to Malda, where transhipped into smaller boats and carried up the Mahanuddee to Churamum (Dinagepore district), junction of the Koolik; thence up the Koolik to Raigunj; thence by carts to Hemtabad and its neighbourhood; distance by water 150 miles; by land 20 miles.

"VIII.—By steamer up the Ganges to Manick Chuck, opposite Rajmehal, on north bank; thence by cart to Neema Serai on the Mahanuddee in district of Maldah; thence by boats up the Mahanuddee to Churamun (Dinagepore district), and Raigunj.; distance by water 150 miles, by land 20 miles.

"IX.—Station East Indian Railway, *Rajmehal.* Cross Ganges by boats to Manick Chuck; thence by carts to Neema Serai; thence by boats to Churamun. Also by carts past Neema Serai to Dinagepore; distance by water 40 miles, by land 20 miles in the first case and 60 in the second.

"X.—Station East Indian Railway, *Sahebgunj.* Down Ganges by boats to Hyatpore, north bank; thence by carts through Malda district to Churamun and Raigunj; distance by water 20 miles, by land 25.

"XI.—*Sahebgunj.*—Across river by steamer to Caragola; thence by carts through Purneah district to Dengrah Ghaut; thence to Hemtabad (Dinagepore district) and to Kishengunj

(Purneah); thence to Nekmurd (Dinagepore); distance by water miles, and by land 90 miles in the first case and 120 miles in the second case."

The Manick Chuck route has since been abandoned, but as its carriage will be made available for other lines there is no general loss of carrying power.

42. The only question remaining is whether there is transport enough to get the grain across the Ganges in time. For ferrying the Government grain across the Ganges from Kooshtea there are now working, besides country boats, the steamers named in the margin; and the transport officers at Kooshtea reports that he can put across the river from Kooshtea up to 300,000 maunds a month; and he has worked up to this rate for some weeks. It would seem therefore certain that the arrangements made are more than sufficient to secure the object in view.

Peel and two flats; *Koladyne* and one flat; *Lucknow* and two flats; *Bombay* and two flats; *Star of Dacca* and one flat. It is expected that the Eastern Bengal Railway steamer *Alfred* with two flats will take the place of either the *Bombay* or the *Lucknow* and set her free from the 1st April for the Bogra route. There will still remain, however, five steamers on the Kooshtea berth.

A. Mackenzie,
Junior Secretary to the Government of Bengal.

Calcutta,
The 30th March 1874.

Sir R. Temple's Note regarding the Railway Transport.

Minute No. 68, by the Honourable Sir Richard Temple, K.C.S.I., dated Calcutta, the 4th April 1874.

1. His Honour the Lieutenant-Governor has shown me the proceedings of the Government of Bengal regarding the transport arrangements for the Patna and Bhagulpore divisions, and invited me to state my opinion as to the means of inland carriage in those two divisions in relation to the transport of Government grain by the East Indian Railway Company.

2. From a consideration of the latest returns received, it appears that the inland carriage is carrying away from the several railway stations upwards of 2,000 tons a day; and this, too, after allowing for a short quantity, below engagement, being carried by the Alliance Company, and without counting the Government reserve carriage.

3. The Durbhunga State Railway has begun to carry grain, and will very shortly be carrying 800 tons a day. This quantity, added to the 2,000 tons, will make up a total of 2,800 tons daily.

4. I understand, however, that the Railway Company are not at present prepared to carry more than 2,500 tons daily. It is, of course, of vital importance that the amount carried should never, even for a single day, fall short of this amount. If this amount be maintained, the total quantity allotted will be sent forward from the several railway stations before the 1st June, and stored at the depôts in the interior by the 15th June, that is, the commencement of the rainy season, provided that no unforeseen accident occurs; and therefore the proposed arrangement may prove sufficient.

5. On the other hand, it has been seen above that the inland transit in the Patna and Bhagulpore divisions is now carrying, or is prepared to continue carrying, away somewhat more than the amount above set down, and I learn from the proceedings of the Government of Bengal that in some places the demands of the local authorities for Government grain have been unavoidably reduced in order that the limit of 2,500 tons daily, set down to be carried by the railway, may be observed.

6. Looking to the latest reports, I should consider that 3,000 tons daily can be carried away by local resources from the several railway stations thus:—

	Tons.
Durbhunga Railway - - - - - -	800
Country carriage - - - - - -	2,200
	3,000

It is to be observed too that the Durbhunga Railway is reported to be able to carry from 1,000 to 1,200 tons a day, and that the short-coming on the part of the Alliance Company may yet be partly retrieved.

7. On the whole, it is not too much to say that if every effort be strained by the local authorities to carry away the grain as fast as possible, upwards of 3,000 tons a day could be sent forward from the railway stations.

8. The result might be, that the various quantities which make up the total amount allotted would arrive at their various destinations in the interior of the districts sometime before the latest safe-day, namely, the 15th of June. This would not be a disadvantage, but on the contrary a great and a commanding advantage, for it would be a safe-guard against the many unforeseen accidents which might occur towards the end of the hot season. This margin of time might allow the authorities to repair losses, damages, or misfortunes, to which such a service and such operations as those now before us are very liable. It is therefore greatly to the interest of the districts concerned and conducive to the safety of the people that the authorities should have grain supplied to them (within the limits of the allotments) as fast as they can carry it away.

9. Great pressure has been put upon the local authorities to organize their transport as strongly as possible; and they have answered to that call in a manner which will, I trust, be found

worthy of the approbation of Government; and it would be very convenient if their districts could be allowed to reap the full benefit of these arrangements.

10. If, therefore, it be possible for the East Indian Railway Company to carry more than 2,500 tons of Government grain a day, say 3,000 tons, or even 3,400 tons a day, that would be a considerable advantage to the general relief operations in Behar. Whether the Company could do this, with due regard to other consideration is a matter on which I need not attempt to give an opinion. But I should feel sure that, subject to the direction of the Government of India, the Company will endeavour to effect this object if it be found reasonably practicable.

11. It is to be remembered that the amount carried by local carriage, as above set down, refers to the Patna and Bhagulpore divisions, and is irrespective of the local carriage of the Rajshahye division.

12. In offering these general remarks, however, I do not forget that besides the question of the carrying powers of the East Indian Railway, there is the consideration of the transport by sea from Burmah to Calcutta. It may or may not be possible to land sufficient quantities of the rice at Howrah in time to afford consignments to the amounts required to keep the inland carriage, up-country, up to its full working power. That, of course, is a matter upon which I am not, at this moment, able to form any accurate opinion.

No. 121, dated Calcutta, the 31st March 1874.

From G. H. K. Hart, Esq., on special duty, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I am directed by the Honourable Sir Richard Temple to report the completion of his second tour in the distressed districts.

2. The various Minutes, Nos. 39 to 62, 64 and 67, already submitted to the Government of Bengal, comprise all the remarks and recommendations which seemed from inquiry on the spot to be required. It is hoped that they will be found to treat of all the points adverted to in your letter No. 1236 S.R., of the 4th March, with one exception.

3. This exception is the case of Chota Nagpore, which country Sir Richard has been unable to visit by reason of the shortness of the time available.

4. I am to take this opportunity of submitting three Minutes, namely, No. 63, summarising the statistics of the Patna division in relation to scarcity and relief, and No. 65 for the Bhagulpore division (which may be taken together with the previous Minute No. 52, of 18th March, for the Rajshahye relief division), and No. 66, giving an abstract of the several summaries for the whole country comprised in the divisions of Patna, Bhagulpore, and Rajshahye, so far as the operations are concerned, which have come under Sir Richard Temple's cognizance.

5. He desires to tender his acknowledgments to His Honour the Lieutenant-Governor for the support so promptly accorded to all the recommendations which have been made; and he trusts that the general result of the proceedings may prove satisfactory to the Government of Bengal.

No. 109, dated Malda, the 18th March 1874.

From G. H. K. Hart, Esq., on special duty with Sir R. Temple, K.C.S.I., to the Honourable C. E. Bernard, C.S., Officiating Secretary to the Government of Bengal.

I am directed to forward, for submission to His Honour the Lieutenant-Governor, copy of a Minute by the Honourable Sir Richard Temple, No. 52,* dated 18th March, summarising under one view the main points connected with the districts of Dinagepore, Rungpore, Bogra, and Malda, as regards the anticipated distress therein.

Minute by the Honourable Sir Richard Temple, K.C.S.I., No. 63, dated Bhagulpore, the 27th March 1874.

From the latter part of January to the beginning of March, I was chiefly engaged in visiting the worst portions of the three districts in the Patna Division where severe distress is anticipated, viz., Tirhoot, Chumparun, and Sarun. I have since passed through the districts of Shahabad and Gya, and consulted the local authorities regarding the prospect of and preparations for the scarcity. I have also visited the Patna district, where no general scarcity at all is anticipated. That district is excluded from consideration in this Minute, which thus includes the whole of the Patna Division or Commissionership, except the district of Patna. The remarks and recommendations which I made will be found in the Minutes written during my visit, especially Nos. 1, 2, 5, 6, 10, 13 to 15, 17 to 19, 22 to 24, 29 to 36, 40, 57, 60, 61, and 67.

2. I now desire briefly to summarise, under one view, the main points, with the remark that any apparent discrepancies between the figures given in this Minute and in my former Minutes

---

* See Part III., page 185.

above cited are to be accounted for by the accession of more recent information having modified the statistics first presented.

3. The area and population of the five districts are as follow :—

District.	Area in Square Miles.	Population.
Tirhoot - - - - - -	6,343	4,384,700
Chumparun - - - - -	3,531	1,440,800
Sarun - - - - - -	2,654	2,063,900
Shahabad - - - - -	4,385	1,724,000
Gya - - - - - -	4,718	1,949,700
Total - -	21,631	11,563,100

4. The numbers of persons whom I have estimated, after conferring with the local authorities, as likely to need aid from Government during the period of worst distress, together with the proportion those numbers bear to the total population concerned, may be thus set forth:

District.	Number at Worst Period.	Percentage on Population.
Tirhoot - - -	1,000,000	23 per cent. on whole population.
Chumparun - -	316,000	50 per cent. on 285,600. 20 " on 404,100. 15 " on 466,200. 10 " on 284,900.
Sarun - - -	280,000	13 " on whole population.
Shahabad - -	105,000	6 " on "
Gya - - -	93,000	5 " on "
Total -	1,794,000	

5. These numbers have been obtained after separate inquiry by the local officers under my own observation for each tract in detail in each district by taking on the whole population a percentage representing those who are expected at the worst period to need assistance in some shape or other from Government, the percentages varying according to the circumstances of each tract.

6. The figures below give the quantities of grain which I have recommended to be sent, and the quantities which have, up to the middle of March, arrived within the several districts. I understand that the whole of the quantities recommended have been ordered by the Government.

District.	Recommended and Ordered.	Arrived in the District.
Tirhoot - - -	4,200,000	1,230,000
Chumparun - -	1,150,000	604,000
Sarun - - -	680,000	310,000
Shahabad - -	317,000	179,000
Gya - - -	220,000	140,000
Total -	6,567,000	2,463,000

Of this total quantity full 88 per cent. consists of rice, and the remainder, or 12 per cent., consists of mixed grain, wheat, Indian-corn, &c., chiefly obtained from the North-Western Provinces.

7. In communication with the local officers on the spot, I ordered the establishment of relief circles under the rules sanctioned by the Government of India, where they seemed to be required, and recommended the early appointment of officers, one for each circle, to supervise the distribution of relief, the relief works, and the medical arrangements. The numbers of such circles are as follows :—

Tirhoot - - - - - -	32
Chumparun - - - - -	6
Sarun - - - - - -	1
Shahabad - - - - -	0
Gya - - - - - -	0
Total - -	39

8. Before leaving the Patna Division to inspect the Bhagulpore and Rajshahye Divisions, I had fixed the places for these circles, arranged that there should be one superior officer and one native officer to each circle (with one superior European officer over each set of circles), and obtained the services of many of the European officers and most of the native officers required for the establishment on the above scale. The native officers were chiefly men selected from the Army.

9. Shortly afterwards Sir George Campbell proceeded to Durbhunga, and personally supervised the working of the circles, in several places enlarging the organisation according as the distress developed itself. Among other things he obtained the services of a number of trained native civil officials from the North-Western Provinces.

Subsequently, with Sir George Campbell's approval, I have obtained the services of a further number of native officials from the North-Western Provinces. And it has now been arranged that each circle shall have at least one European or one superior native officer and two subordinate native officers, some circles having more, according to circumstances. I have arranged, with Sir George Campbell's approval, that the temporary establishment shall be made up to this complement. It may now be said that all the officers, European aud native, have joined, or are on their way. Those who have not joined are being pushed on as rapidly as possible. These remarks apply to the Tirhoot and Chumparun districts.

10. For the districts of Shahabad, Gya, and Sarun, where the distress will not be of such a nature as to require the formation of circles, I have arranged that there shall be four superior native officials appointed as supervisors for each district, or twelve in all, to go the rounds of the villages and to see that all necessary measures are adopted.

11. The additional establishment for relief of the whole division may be approximately stated as follows:—

District.	European Supervising Officers.	Circle Officers.	Native Officers.	Total.
Tirhoot - - -	5	32	64	101
Chumparun - -	2	6	12	20
Sarun - - - - -	1	2	6	9
Shahabad - - -	—	—	4	4
Gya - - - - -	—	1	4	5
Total -	8	41	90	139

These numbers are in addition to the ordinary civil establishment of the district, European and native, all of whom are actively engaged in relief, which indeed forms an integral part of the civil administration.

12. With all the relief officers there are associated very many private gentlemen, European and native, scattered all over the country as members of sub-divisional committees or sub-committees. I cannot now state the number of those non-official coadjutors, but it must be considerable and greatly exceeding the numbers of the relief officers. In Tirhoot, Chumparun, and Sarun the indigo planters, collectively and individually, are rendering the most important aid. Many native zemindars are doing the same. It will be interesting hereafter to record the particulars of the non-official assistance thus rendered. I am sanguine that it will be found to be worthy of commemoration.

13. Before the period of my visit a permanent line of electric telegraph from Patna to Segowlee (north of Chumparun), *viâ* Mozufferpore and Motiharee, had been sanctioned and had been completed as far as Mozufferpore. But to save time I proposed that the remainder of the line should be made as a temporary line, and that there should be an extension to Bettia and Ramnugger. I then, after consulting the local officers, recommended that temporary lines should be made to all the principal centres of the Tirhoot district. This was sanctioned by Government, and the temporary telegraph lines, now complete and in work, may be thus stated :—

Line.	Miles.
Mozufferpore to Motiharee, Bettia, and Ramnugger -	102
Mozufferpore to Seetamurhee - - - -	32
Mozufferpore *viâ* Durbhunga to Mudhoobunnee - -	48
Barrh to Durbhunga, with branch to Tajpore - -	60
Mudhoobunnee to Nuraya - - - - - -	30
Total -	272

14. The great public works which subserve most beneficially the purposes of relief are—

	Miles.
The Soane Canal - - - - -	380
The Gunduck Embankment - - - -	90
Total -	470

and now the high level canal in the district of Chumparun, which is ordered to be commenced. The number of persons employed on, and the quantity of grain required for, these works are included in the total figures which I give for the several districts.

15. Besides these great works there are lesser relief works specially projected by the local officers. They consist chiefly of roads (earth-work) and tanks (excavation). The tanks under operation are numerous and scattered all over the country, and their number is increasing daily, and I cannot give it exactly. But the length of relief roads may be stated as follows:—

District.	Relief Roads.
	Miles.
Tirhoot	710
Chumparun	520
Sarun	575
Shahabad	487
Gya	185
Total	2,477

Besides the work on all these lines of road, there are the special repairs being executed under European supervision on the lines of the transit of grain, as will be explained presently.

16. The number employed on relief works of all kinds may be stated as follows:—

District.	Number of Persons.
Tirhoot	450,000
Chumparun, including Gunduck works	100,000
Sarun	90,000
Shahabad	2,000
Gya	1,000
Soane Canal Works	33,000
Total	676,000

If the number should seem small for Shahabad and Gya, then we must remember that the relief labourers of those two districts are chiefly on the Soane Canal works.

17. The number of persons receiving gratuitous relief is small. According to the latest information it did not exceed 4,200 in Tirhoot, and 1,200 in Champarun.

18. For the supervision of the relief roads and tanks, I have at various times applied for the services of overseers, which applications have been approved by Government, and the men have either joined or are on their way. Also several additional Engineer officers have been appointed. The number may be stated as follows:—

District.	Superintending Engineer.	Executive and Assistant Engineers.	Overseers.
Tirhoot	1	6	25
Chumparun	—	2	6
Sarun	—	2	3
Shahabad	—	—	2
Gya	—	—	4
Total	1	10	40

These are in addition to the establishment on the Soane Canal works and on the Gunduck Embankment, also to the ordinary Public Works establishment of the district, all of which assist in respect of relief works so far as they can.

19. For the work of the relief, I have applied for and obtained the services of native doctors and hospital assistants as below;

District.	Native Doctors and Hospital Assistants.
Tirhoot	60
Champarun	14
Sarun	–
Shahabad	–
Gya	–
Total	74

I found the districts of Sarun, Shahabad, and Gya so far supplied with this class of men that more need not be applied for, especially considering the more urgent requirements of other districts and the difficulty of procuring the men.

20. The grain supplied by Government is sent to depôts at places selected with reference to the area of distress. The number may be thus stated for the several districts;—

Districts.	Number of Depôts.
Tirhoot	74
Chumparun	24
Sarun	32
Shabahad	30
Gya	17
Total	177

All these depôts contain stores of grain. From these depôts the grain will be distributed according to circumstances.

21. The grain is despatched from Calcutta by separate arrangements, and reaches the stations on the East Indian Railway from Mokameh to Mogul Serai. It then comes under the charge of the Relief Department of the Patna Commissionership. That portion (which is by far the greatest) destined for the Tirhoot and Chumparun districts is conveyed to the south or right bank of the Ganges by four small branches near Mokameh, Barrh, Futwa, and Patna; of which four branches three have been made especially for this occasion. It is then placed on board steamers, or barges towed by steamers, and conveyed to three points on the north or left bank, namely, Bunkur opposite Patna, Chumpta opposite Barrh, and a point opposite Mokameh. At these points it comes under the charge of the inland transport service, and is carried to the depôts by certain main routes which may be described as follows:—

Point of Departure.	Route.	Distance in Miles.
Bunkur - - -	To Motiharee, Gobindgunj, Bettia, and Ramnugger	155
	To Poosa, Durbhunga, and Mudhoobunnee -	77
	To Seetamurhee and Sursoond - - -	80
Chumpta - -	To Durbhunga and Nuraya, north-eastern corner of Tirhoot District - - - -	95
Opposite Mokameh -	To Durbhunga - - - -	50
	Total - -	457

From these main lines there are branch routes, too numerous to mention here, to the various grain depôts.

22. The grain for Sarun is carried by carts from the station of Arrah, and crossing the Ganges, is carried to Hutwa and Sadowa, distance from 80 to 90 miles.

23. The grain for Shahabad is sent from the railway stations between Arrah and Mogul Serai and carted into the interior; average distance 50 miles.

24. The grain for Gya is sent from the railway stations at or near Patna, and is carted into the interior to a distance of 60 miles.

25. The means of transport at present employed may be approximately set forth in numbers as below:—

District.	Steamers.	Country Boats.	Carts.	Cartmen.	Draught Bullocks.	Camels.	Pack-bullocks.
Tirhoot - -	5	900	58,000	60,000	116,000	2,000	3,000
Chumparun -	—	200	8,000	8,500	17,000	—	—
Sarun - -	—	100*	3,500	8,600	7,000	—	—
Shahabad - -	—	—	1,000	1,050	2,000	—	—
Gya - -	—	—	500	525	1,000	—	—
Total - -	5	1,200	71,000	73,675	143,000	2,000	3,000

26. These various means of transport have been hired by Government. The carts and bullocks are for the most part brought into the field by five associations of European contractors. These contractors are indigo planters, gentlemen living on their own estates in the neighbourhood of the routes of transit. These contracts have been made by the local officers under my own supervision. The arrangements are at present working well, save in one case, where the contractors have not yet succeeded in carrying the full quantity engaged for. The remaining carts are furnished by small contractors, natives. It is remarkable that all the carts and bullocks are obtained within the limits of the Patna Division. The camels and pack-bullocks are furnished by a large native contractor from the North-Western Provinces.

27. Upon each of the main transit routes above mentioned there are several European officers to see to emergent repairs, to clear away obstacles, to construct temporary crossings, and the like; and with them there are also one regiment of Pioneers (natives) and five companies of Sappers; the whole being under the command of Colonel Macgregor, of the Quartermaster-General's Department. At the two main points of departure, Bunkur and Chumpta, there is a special organisation on a large scale under selected European officers.

28. Besides these means I have, with the approval of Government, caused to be engaged a body of reserve transport of a strength equal to 4,250 carts drawn by 10,000 bullocks, capable of carrying (at the rate of 16 maunds a cart) 68,000 maunds per daily march of 12 miles; also 6,000 pack-bullocks or pack-ponies. These carts and animals have for the most part been purchased for Government in the North-Western Provinces and in the Shahabad districts. The carts are divided into detachments of 250 carts each, with a complete military organisation under European and Native officers. This arrangement is being carried out under Mr. H. Rivett-Carnac. This reserve is intended to remedy any mishap or failure which may occur with the contract hired carriage; and its organisation is designed to render it as effective as possible for this end.

---

* The number of boats was much larger than is here set down, while the navigation of the Gunduck continued feasible. Double the number of boats now employed may be expected on the river as soon as the rains set in.

29. With a view to obtaining an additional resource on the route from Chumpta to Durbhunga, which is by far the most important of all the routes, I strongly recommended, at the end of January last, the construction of a tramway, distance 50 miles. The Government, after consideration, sanctioned the project, with important additions, whereby the line becomes a railway. The work is progressing under the good auspices of Mr. Molesworth and Major Staunton.

30. The advances of money (repayable) obtained from Government by landowners for the assistance of their tenantry and by traders for the importation of grain may be set forth as below:—

District.	By Zemindars for the Ryots.	By Native Traders for Importation.	Total.
Tirhoot - - -	95,506	522,650	618,156
Chumparun - - -	60,000	132,000	192,000
Sarun - - -	286,890	129,700	416,590
Shahabad - - -	—	3,300	3,300
Gya - - -	8,800	10,000	18,800
Total - -	451,196	797,650	1,248,846

31. I ordered Government grain to be offered for sale under clause 9, Rule 3, Part II., of Rules for Relief Committees, at the rate of ten seers to the rupee, in the several circles which form the eastern half of the Mudhoobunnee and Durbhunga sub-divisions. This order has been carried out. I afterwards directed that a rate of 12 seers to the rupee should be allowed. This order has not, however, been carried out as yet.

32. I cannot finish this summary without taking the opportunity of giving my testimony to the judgment, discrimination, and assiduity displayed by the Commissioner, Mr. Stuart Bayley, in the discharge of the extraordinary difficult duties which have devolved on him ever since the first threatening of scarcity in Behar. The ability with which he has sustained the pressure of so many urgent affairs, simultaneously presenting themselves for decision, entitle him to the commendation and the confidence of Government. I trust that he may in due course witness the successful result of his labours.

33. I also desire to commend to the notice of Government the exertions of Mr. J. Hewitt, the Deputy of the Commissioner of Patna. He has had a prominent share in the transit arrangements on both banks of the Ganges, and his general assistance to the Commissioner in all affairs relating to the scarcity has proved very valuable.

No. 119, dated Bhagulpore, the 28th March 1874.

From L. C. ABBOTT, Esq., on duty with Sir RICHARD TEMPLE, K.C.S.I., to the Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

I AM directed to forward copy of a Minute No. 64* of 28th March, recorded by Sir Richard Temple, regarding the requirements of the Monghyr District.

MINUTE by the Honourable Sir RICHARD TEMPLE, K.C.S.I., No. 65, dated Bhagulpore, the 28th March 1874.

I HAVE on three separate occasions during my two recent tours visited portions of the Bhagulpore Division or Commissionership. The observations and proposals which I have felt called upon to make will be found in my various Minutes written from the places visited, *viz.*, Nos. 25 to 28, 39, 41 to 44, 54A, and 64.

I now desire to bring together the main points in a synoptical shape, embodying in this Minute the latest information received by me as to the result of the orders I gave and the recommendations I made in the Minutes above cited.

2. There are four districts belonging to this division, in all of which distress, more or less, is anticipated, namely, Bhagulpore, Purneah, Monghyr, and the Sonthal Pergunnahs. I have marched through the most parts of Bhagulpore and Purneah, and I have passed by one of the worst parts of Monghyr.

3. The area and population may be thus stated:—

District.	Area in Square Miles.	Population.
Bhagulpore - - - -	4,327	1,826,300
Purneah - - - -	4,957	1,714,800
Monghyr - - - -	3,913	1,812,900
Sonthal Pergunnahs - - -	5,488	1,259,300
Total - -	18,685	6,613,300

---

* See Page 58.

4. The number of persons whom I have, in consultation with the local authorities, estimated as likely to require assistance from Government during the period of severest scarcity, together with the proportion between those numbers and the total population concerned, are as follow :—

District.	Number of People likely to need Assistance.	Percentage on Population concerned.
Bhagulpore - -	274,650	50 per cent. on 342,936 30 ,, ,, 344,587
Purneah - - -	240,000	30 ,, ,, 364,266 15 ,, ,, 527,051 and 50,000 souls for rest of the district.
Monghyr - -	172,000	40 per cent. on 430,000
Sonthal Pergunnahs -	60,000	25 ,, ,, 240,000
Total -	746,650	

5. The quantities of grain which I have recommended to be provided, and the quantities which have arrived in the several districts, are as follow :—

District.	Amount recommended.	Arrived in District.
	Maunds.	Maunds.
Bhagulpore - - - -	7,30,000	1,74,550
Purneah - - - -	6,50,000	3,45,000
Monghyr - - - -	3,78,000	2,12,000*
Sonthal Pergunnahs - - -	1,35,000	10,000
Total - -	18,93,000	7,41,550

The grain consists almost entirely of rice.

6. I have, in communication with the local authorities, fixed the relief circles for the distressed tracts in Bhagulpore, Purneah, and the Sonthal Pergunnahs. The Commissioner fixed the circles in the Monghyr District after consulting carefully with me. The numbers are as below :—

District.	Number of Relief Circles.
Bhagulpore - - - - - -	7
Purneah - - - - - -	8
Monghyr - - - - - -	4
Sonthal Pergunnahs - - - - -	2
Total - -	21

7. For the management of these circles the following establishments have been made up :—

District.	European Supervising Officers.	Circle Officers.	Native Officers.	Total.
Bhagulpore - - - -	3	7	14	24
Purneah - - - -	2	8	16	26
Monghyr - - - -	2	4	8	14
Sonthal Pergunnahs - -	1	2	4	7
Total - -	8	21	42	71

These establishments are in addition to the regular civil establishments of the district, who all assist in relief which is an integral part of the district work.

8. The relief works consist chiefly of roads (earth-work) and of tanks (excavation). The tanks are scattered all over the country, and I cannot give their number ; but the length of the roads projected may be set down thus :—

District.	Length of Relief Roads in Miles.
Bhagulpore - - - - - -	215
Purneah - - - - - - - -	505
Monghyr - - - - - -	254
Sonthal Pergunnahs - - - - -	230
Total - -	1,204

---

* Including 20,000 maunds stored by the Durbhunga Raj (under Court of Wards) at Khurrukpore.

9. The numbers of relief labourers are given below:—

District.	Number of Relief Labourers.
Bhagulpore	21,000
Purneah	12,000
Monghyr	12,000
Sonthal Pergunnahs	2,100
Total	47,100

10. I have, in communication with the Commissioner, proposed that the rate of payment for unskilled labour should be 1½ annas for a man per diem, with proportionately less amount for women and children, and that 2 annas per diem should be given, under a system of task-work, to the more skilled or stronger labourers.

11. There is the following extra establishment employed for relief works:—

District.	Superintending Engineers.	Executive Engineers.	Assistant Engineers.	Overseers.
Bhagulpore	1	0	2	7
Purneah	0	1	3	8
Monghyr	0	0	1	4
Sonthal Pergunnahs	0	0	1	0
Total	1	1	7	19

These are in addition to the ordinary establishment of public works in the district, all of whom aid in the operations of relief so far as they can.

12. The number of grain depôts may be stated thus:—

District.	Number of Grain Depôts.
Bhagulpore	32
Purneah	30
Monghyr	13
Sonthal Pergunnahs	11
Total	86

13. The grain is conveyed to the depôts by the following means: It is carried by the East Indian Railway to the stations of Sahebgunj, Colgong, Sooltangunj, and Monghyr, all on the south or right bank of the Ganges. From Sahebgunj it is carried across the Ganges by steamer, and from the other stations by boats or barges, to points on the north or left bank of the Ganges; whence it is carried to its various destinations by carts.

14. The transport service consists of the following number of carts and country boats or barges:—

District.	Carts.	Draught Bullocks.	Cartmen.	Country boats or Barges.	Steamers.
Bhagulpore	8,000	17,000	8,000	151	—
Purneah	8,000	17,000	8,000	200	1
Monghyr	2,000	4,000	2,000	39	—
Sonthal Pergunnahs	200	400	200	—	—
Total	18,200	38,400	18,200	390	1

15. Zemindars and traders have been repeatedly invited to take advances from Government, the former to enable them to assist their ryots, the latter to enable them to import grain for sale. The result is that up to 28th March the following sums have been taken approximately:—

District.	By Zemindars for Ryots.	By Traders for Importation.	Total.
Bhagulpore	37,400	68,000	1,05,400
Purneah	32,150	60,700	92,850
Monghyr	11,300	56,800	68,100
Sonthal Pergunnahs	—	—	—
Total	80,850	1,85,500	2,66,350

Government advances to ryots in Kissengunge (Purneah) for the purchase of seed-grain, or for subsistence, have also been authorised.

16. Returns made up to 28th March show that the following numbers of persons were in receipt of gratuitous relief from Government:—

In Bhagulpore - - - - -	1,300
„ Purneah - - - - -	5,335
„ Monghyr - - - - - -	1,603
„ Sonthal Pergunnahs - - - - -	—
Total - -	8,238

17. I have, on the recommendation of the local authorities, ordered the sale of Government grain at the rate of 12 seers to the rupee at the depôts in the thannahs of Bulrampore, of Kudbah, and of Kusbah Amour, in the Purneah district, in the parts of the Soopole and Muddehpoora sub-divisions of the Bhagulpore district, and at certain points in the Monghyr district.

18. In concluding this minute, I desire to cordially acknowledge the assistance I have received in my inquiries and proceedings from Mr. G. N. Barlow, the Commissioner, and to express my confidence in his ability to deal effectively and promptly with any difficulty that may arise in connection with the scarcity.

19. I also desire to bring to the notice of Government the very valuable services of Mr. H. Hankey, C.S., the Special Superintendent of Transport, both as regards the collection of country carriage under direct agency and the management of large contracts for the transport of Government grain.

MINUTE by the Honourable Sir RICHARD TEMPLE, K.C.S.I., No. 66, dated Bhagulpore, the 28th March 1874.

MY Minutes Nos. 52, 63, and 65 of 18th, 27th, and 28th March, present an abstract of what has been recommended, ordered and done during my tours through the divisions or Commissionerships of Patna, of Bhagulpore, and of Rajshahye; separate figures in those minutes are given for each district wherein severe distress is anticipated, and a total for each division. I now desire to draw up a brief *resumé*, giving separate figures for each of the divisions above named, and a grand total for so much of Bengal and Behar as I have visited.

2. The total area and population of the three divisions is as follows:—

Division or Commissionership.	Total Area in Square Miles.	Total Population.
Patna - - - - - - -	23,732	13,122,743
Bhagulpore - - - - -	18,685	6,613,358
Rajshahye - - - - - - -	17,694	8,893,738
Total - -	60,111	28,629,839

3. But it is only within certain tracts in each division that distress is anticipated. I give below the area and population of the districts or tracts in each division wherein severe distress is looked for, together with the proportion borne by the distressed parts to the whole of each division as respects area and population:—

Division or Commissionership.	Likely to be Distressed.		Percentage of Distressed Tracts on Total.	
	Area of Tracts.	Population of Tracts.	Area.	Population.
Patna - - - - - - -	16,666	8,124,164	70·22 per cent.	61·90 per cent.
Bhagulpore - - - - -	7,623	2,957,607	40·8 „	44·72 „
Rajshahye - - - - - - -	8,098	3,491,936	45·76 „	39·26 „
Total - - -	32,387	14,573,707		

4. The number of persons which I have taken as being likely to need assistance from Government during the worst period of the scarcity, together with the percentage of those numbers on the total population and on the population of the distressed tracts, are given below:—

Division or Commissionership.	Number of People estimated to require Aid at Worst Period.	Percentage on Distressed Population.	Percentage on Total Population.
Patna - - - - -	1,794,000	22·08 per cent.	13·67 per cent.
Bhagulpore - - - - -	746,650	25·24 „	11·29 „
Rajshahye - - - - -	802,863*	20·87 „	8·2 „
Total - -	3,432,713		

---

* Including 44,000 persons in the Rajshahye district, and, say, 30,000 on the Northern Bengal State Railway.

5. The following figures give particulars of the quantities of grain which I have recommended to be provided by Government, and the quantities which have already arrived in the districts :—

Division or Commissionership.	Provision recommended.	Arrived in the Districts.
Patna	6,567,000	2,463,000
Bhagulpore	1,893,000	741,550
Rajshahye	2,090,000*	370,000
Total	10,550,000	3,574,550

6. The number of relief circles established, together with the numbers of officers allotted thereto, is given below :—

Division or Commissionership.	Number of Circles.	Relief Officers.			Superintending Engineers.	Executive and Assistant Engineers.	Public Works Overseers.	Native Doctors and Hospital Assistants.
		European Superior Officers.	Circle Officers.	Native Officers.				
Patna	39	8	41	90	1	10	40	74
Bhagulpore	21	8	21	42	1	8	19	18
Rajshahye	31	19	31	15	1	—	28	31
Total	91	35	93	147	†3	18	87	123

This special relief establishment is over and above the ordinary civil establishments of the districts, all of which aid in the distribution of relief, which is an integral part of the administration of the various districts. Besides these, too, is the establishment on the Soane canal, the Gunduck embankments, and the Northern Bengal State Railway.

7. The banks and other miscellaneous relief works cannot be stated numerically; but the length of the relief roads, of the Soane canal, of the Gunduck embankment, and of the Northern Bengal State Railway within the distressed tracts is given below in miles :—

Division or Commissionership.	Relief Roads.	Soane Canal.	Gunduck Embankments.	Northern Bengal (State) Railway.	Temporary Telegraph.
Patna	2,477	380	90	—	272
Bhagulpore	1,204	—	—	—	20
Rajshahye	1,490	—	—	178	44
Total	5,171	380	90	178	336

8. The number of relief labourers as given in my several minutes may be thus abstracted :—

Division or Commissionership.	Persons employed on Relief Works.
Patna	676,000
Bhagulpore	47,100
Rajshahye	63,700‡
Total	786,800

9. The number of grain depôts opened, at all of which there are now stores of grain, is given below :—

Division or Commissionership.	Grain Depôts.
Patna	177
Bhagulpore	86
Rajshahye	61
Total	324

---

* Including the provision of 200,000 maunds for the Rajshahye district and the Northern Bengal State Railway.

† One Chief Engineer has since been appointed.

‡ Including 7,000 labourers on the Northern Bengal (State) Railway.

10. The means at present employed in the transport of Government grain are tabulated below, the figures being, however, only approximate :—

Division or Commissionership.	European Officers.	Carts.	Cartmen.	Draught Bullocks.	Camels.	Pack Animals.	Country Boats.	Steamers.	Number of Main Routes of Transport by Land and Water.
Patna - -	21	71,000	73,675	143,000	2,000	3,000	1,200	5	5
Bhagulpore - -	7	18,200	18,200	38,400	—	—	390	1	4
Rajshahye - -	5	9,200	9,200	18,400	—	—	720	3	11
	33	98,400	101,075	199,800	2,000	3,000	2,310	9	20
Government reserve -	12	4,250	4,250	10,000	—	6,000	—	—	—
Total -	45	102,650	105,325	209,800	2,000	9,000	2,310	9	20

In order to strengthen the principal line of transit in Eastern Tirhoot, the railway is being constructed from Chumpta to Durbhunga, a distance of 50 miles.

11. Advances of money have been obtained from Government in the following sums :—

Division or Commissionership.	By Zemindars for assistance of their Tenantry.	By Traders for Importation of Grain.	Total.
	Rs.	Rs.	Rs.
Patna - - - -	4,51,196	7,97,650	12,48,846
Bhagulpore - - - -	80,850	1,85,500	2,66,850
Rajshahye - - - -	90,000	46,000	1,36,000
Total -	6,22,046	10,29,150	16,51,196

Advances have also been authorised to ryots, both for their subsistence during the time which must elapse before their autumn and winter harvests are reaped, and for seed-grain to sow the autumn crops. But there are as yet no returns of the amounts of such advances made.

12. The approximate number of recipients of gratuitous relief from Government are :—

In Patna Division or Commissionership - -	5,400
„ Bhagulpore Division „ - - -	8,200
„ Rajshahye „ „ - - -	6,400
Total - -	20,000

13. In the three divisions the rates of wages for relief labour range from two to three annas per diem where there is task-work, and one to two annas where there is not. The above rates are for men ; proportionally lesser rates are allowed for women and children.

No. 120, dated Calcutta, the 31st March 1874.

From G. H. K. Hart, Esq., on Special Duty, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I am directed to forward, for submission to his Honour the Lieutenant-Governor, copy of a minute by the Honourable Sir Richard Temple, No. 67, dated 28th instant, containing request for the despatch of nine more public works overseers to the Chumparun and Sarun districts.

Minute by the Honourable Sir Richard Temple, K.C.S.I., No. 67, dated Bhagulpore, the 28th March 1874.

I have to request that the Government of Bengal will be pleased to send nine public works overseers in addition to the number already sent to the Patna division.

The men are required to supervise the relief works in Chumparun and Sarun, viz., six for the former and three for the latter district.

No. 2060—S.R., dated 4th April 1874.

From C. Bernard, Esq., Officiating Secretary to the Government of Bengal, in the Statistical Department, to C. E. Buckland, Esq., on special duty with the Honourable Sir Richard Temple.

I am directed to acknowledge the receipt of Mr. Hart's letter No. 121 of the 31st March, notifying Sir Richard Temple's return from his second tour in the famine districts.

2. The Lieutenant-Governor desires to thank Sir Richard Temple very heartily for all the assistance he has given the Bengal Government, and for the manner in which that assistance was given, while they have worked together. The Lieutenant-Governor is sure that Sir Richard Temple's proceedings have eminently subserved the public interest.

3. I am to state that the minutes received with Mr. Hart's letter under acknowledgment, together with minute No. 52, will be submitted to the Government of India, as giving a clear and comprehensive summary of the arrangements now made, and the opportunity will be taken to submit a note, showing, together with other matters, the satisfactory working of the transport arrangements for which the Bengal Government is so much indebted to Sir Richard Temple.

4. The Lieutenant-Governor believes that Sir Richard Temple has now seen all the districts in which danger may be apprehended except those of the Burdwan and Chota Nagpore divisions. Fortunately the affected parts of those divisions are extremely accessible, and it is hoped that any amount of assistance they may require will not be extremely large. The Lieutenant-Governor has directed papers recently received regarding these divisions to be submitted to Sir Richard Temple, and has no doubt Sir Richard will soon be in a position to judge what is required.

5. Sir George Campbell deems it most fortunate that, since he is compelled to cede his place at a time when the country is so critically situated, he should surrender it into the hands of a man both so eminent for his personal qualities, and so thoroughly cognizant of the subject which now engrosses the attention of Government, as is Sir Richard Temple.

Sir George Campbell would, in conclusion, beg again to thank Sir Richard Temple for the efficient aid he has rendered to himself during the last months of his administration.

The Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

Bengal Chamber of Commerce, Calcutta,
28th March 1874.

SIR,

THE President and Committee of the Chamber of Commerce desire me to request you will take the earliest opportunity of submitting for the consideration of His Excellency the Governor-General in Council the following representation, which they have been induced to make in consequence of a statement contained in the "Friend of India" of the 26th instant, and repeated in the "Englishman" and "Daily News" of the 27th idem, to the effect that a fresh purchase of 80,000 tons of rice from Burmah had been ordered by Government, in addition to the supplies previously arranged for and amounting, according to the official estimates, published in the "Gazette of India" of 31st January last, to 340,000 tons, at a first cost of about three millions sterling.

2. The immediate result of this statement was to give rise to the expectation that further withdrawals of bullion to the extent of 50 or 60 lacs for the purchase named would be at once required, as well as to cause apprehensions that the official estimates of the supplies of grain needed in the districts of scarcity have now been proved to be inadequate.

3. Looking at the matter purely from a commercial point of view, the Committee of the Chamber of Commerce respectfully submit that the heavy drain on the Treasury balances for the payment of the rice purchased by Government has already caused a very severe strain upon commercial resources, and such as might have led to grave results had it come, as suddenly as it has, upon an active or inflated state of trade instead of (as has actually been the case) upon an extremely curtailed condition of business, both export and import. This strain is evidenced not only by the frequent and rapid advances in the rates of interest, but also by the fact that the value of money and of Government securities as well as the rates of sterling exchange are now extremely sensitive and subject to great fluctuations according to every report that is circulated in respect to the financial measures and requirements of Government.

4. As an instance of the character of the prevailing rumours affecting the value of Government securities the Committee of the Chamber may mention that it has been generally stated and believed in the bazaar during the last two days that a loan of two crores of rupees is about to be issued here shortly, in addition to the amount now being raised in England, and that when the Famine Loan was first announced by telegrams from London the uncertainty as to its extent and nature, and as to the manner in which the funds would be made available in this country, caused a sudden fall of two per cent. in the price of Government paper, and a similar rise in sterling exchange, which have both been greatly modified by the official announcement that the probable sum required would not exceed three millions, and that the Secretary of State's drawings would only be reduced to 80 lacs a month, and the Committee of the Chamber are of opinion that it would have been well to have published in the "Gazette of India," a financial resolution to this effect, immediately the action of Government had been decided and approved by the Secretary of State, and trust that this course may be adopted in any future like transaction.

5. These considerations have led the Committee of the Chamber of Commerce to venture to inquire, for the satisfaction of the general mercantile community, whether the statement in question was in any way officially authorised or substantially correct, and whether any further large remittances to Burmah for rice purchases will be required to be made. The Committee fully recognize the necessity for the secret action of Government in respect to their rice purchases in the first instance, though they venture to think that the financial pressure caused by these transactions would have been less severe and more readily met by importations of

bullion, if the extent and period of the Government requirements had been made known sooner and more precisely, to the banking and mercantile community.

6. Perhaps it would be beyond the province of the Committee of this Chamber to express their conviction that on grounds of public policy, as well as of the interests of the community whom they represent, it would be desirable to check, as far as possible, the circulation of the unauthorised statements which have been made, both here and in England, regarding the ction of Government in connection with the famine, by means of the publication, from time to time, of such official papers on the subject as His Excellency in Council may seem fit; but at any rate they trust they will be excused for soliciting for the future such information regarding the matter as is likely to affect the mercantile interest in any serious degree whenever it can be communicated to them without detriment to the general welfare.

I have, &c.,
H. W. I. Wood,
Secretary.

No. 1122.

From Arthur Howell, Esq., Deputy Secretary to the Government of India, to the Secretary to the Bengal Chamber of Commerce.

Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.

Famine.

Sir, Dated Calcutta, the 2nd April 1874.

I am directed by His Excellency the Governor-General in Council to acknowledge the receipt of your letter of the 28th ultimo.

2. In reply I am directed to say that the statement which you inform me appeared in the "Friend of India" of the 26th March to the effect that a fresh purchase of 80,000 tons of rice had been ordered from Burmah had no official authority. It must have been based upon private information received of orders given some time ago by the Government of India.

3. In the despatch of the 30th January, to which you allude in the first paragraph of your letter, it was stated that, according to the best estimates which the Government of India were able to make, it was thought that the purchase of 340,000 tons of rice would be sufficient for the requirements of the distressed districts; at the same time it was stated that no difficulty was anticipated "in increasing the supplies still further, if in the course of the next three months additional necessities should appear to require it."

4. The revised estimates for the requirements of the famine districts, which were subsequently made by Sir Richard Temple, rendered further purchases necessary. The numbers for which the Government have now made provision do not differ materially from the original rough estimate of 2½ millions of people for seven months, which was made last November and published in the "Gazette" of January 31st, but Sir Richard Temple's calculations have been based upon an average daily consumption per head of three-quarters of a seer, instead of half a seer. The Government of India have thought it desirable to adopt the higher estimate, and therefore, with a view to the maintenance of a proper reserve, they have arranged for further purchases. The amount of rice for which provision has now been made amounts to 453,000 tons, independently of such purchases as have been made by Rajahs, zemindars, and others with funds advanced by Government. Of the whole supply, 280,000 tons have been arranged for from Burmah.

5. Arrangements have already been made for paying for the rice ordered from Burmah, and, as far as His Excellency in Council is at present able to judge, no further remittances of specie of any consequence will be required for the rice ports on Government account.

6. His Excellency in Council regrets the temporary derangement of the money market, which has been caused by the necessity of suddenly contracting the Government balances and by the demand for silver, and he trusts that the strain will now be quickly diminished.

7. In respect to the 6th paragraph of your letter, I am to state that His Excellency in Council entirely concurs with the Chamber of Commerce that it is desirable to give every publicity to the action of Government in connection with the famine. The fortnightly narratives from the Lieutenant-Governor of Bengal have from the first been placed at the disposal of the press. In order to give them greater circulation, they will, in future, be published in the "Gazette of India." The "Calcutta Gazette," which is published weekly, contains a list of prices and the latest reports from each district. The "Gazette" published weekly in the North-Western Provinces gives the same particulars for the distressed districts in those provinces. The "Gazette of India" gives general reports and list of prices for the whole country. Any further information of importance, especially such as may affect the interests of the mercantile community, will be published from time to time.

8. With reference to the 4th paragraph of your letter, I am to say that, in accordance with your suggestion, any alteration made in respect to the drafts by the Secretary of State upon

the Government of India will, in future, be notified in the "Gazette," and not, as has hitherto been the case, only through the columns of the press.

I have, &c.,
ARTHUR HOWELL,
Deputy Secretary to the Government of India.

Forwarded for information of Members of the Bengal Chamber of Commerce.

H. W. I. WOOD,
Secretary.

Calcutta, 2nd April 1874.

No. 2104—S.R.

From the Officiating Secretary to the Government of Bengal in the Statistical Department to the Deputy Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce.

Calcutta, dated 6th April / issued 6th April 1874.

Scarcity and Relief.

SIR,

WITH reference to your Letter No. 108, dated the 15th January, I am directed to submit copies of the papers marginally noted, showing that there was delay in paying labourers on Tirhoot relief works at the outset, and showing the serious notice the Lieutenant-Governor has been obliged to take of the matter.

Commissioner of Patna's Letter No. 241, dated 25th March, with enclosure.
Government of Bengal Letter No. 2102, dated 6th April 1874.

I have, &c.
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 241 F, dated Bankipore, the 25th March 1874.

From S. C. BAYLEY, Esq., Commissioner of Patna, to Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honour to forward copy of a Letter No. 124 F, of the 28th January last, from Executive Engineer, Tirhoot Division, explaining why on one occasion the coolies employed on relief works did not receive wages for 15 days as noticed in the "Indian Observer," and in so doing to state that through an oversight it was not submitted before.

No. 124 F, dated Mozufferpore, the 28th January 1874.

From A. S. URQUHART, Esq., Executive Engineer, Tirhoot Division, to C. F. WORSLEY, Esq., Covenanted Deputy Collector on Special Duty, Tirhoot.

IN reply to your Letter No. 19 F of the 17th instant, I have the honour to state that I have made full inquiries with reference to the Commissioner's No. 55 F, relative to the statement made in the newspaper regarding the coolies on relief works not having received pay for 15 days.

The rule which has hitherto existed regarding the payment of wages to coolies working on the local roads was that they were paid twice in the month, one payment at the commencement of the month and the second when the work was measured up at the end of the month.

Since these works have been considered as relief works the system has been changed, but owing to the small imprest allowed to the overseers and the works being settled all over the district, some of the coolies were in arrears, as you may remember when we were travelling together to Durbungah the coolies on that road complained that they had not been paid.

This was at once rectified, and by the time we returned to Mozufferpore they had all been paid up. I then took the responsibility on myself of increasing the imprest of the overseers, and reported the same to the Superintending Engineer, Northern Circle, who has approved of my proceeding; with the exception of this instance I am not aware of any other in which the coolies have been kept in arrears.

No. 106 F, dated Tirhoot, the 31st January 1874.

Memorandum by C. F. WORSLEY, Esq., Covenanted Deputy Collector, on Special Duty.

COPY forwarded to the Commissioner of Patna for information, with reference to his No. 55 F, of 13th instant.

No. 2102.—S.R.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department, to the Commissioner of Patna.

Scarcity and Relief.

Sir,

Calcutta, the 6th April 1874.

I am directed to acknowledge the receipt of your letter No. 241F, dated the 25th March 1874, submitting the Executive Engineer's explanation of a delay of 15 days in the payment of labourers on relief works in Tirhoot.

2. In reply I am to say that the oversight in your office in overlooking the Deputy Collector's endorsement, and not having sent this explanation sooner, is much to be regretted.

3. I am to request that Mr. Urquhart, the Executive Engineer, may be severely censured for the mismanagement which he admits to have existed in the payment of labourers on relief works; and the Lieutenant-Governor is of opinion that the Magistrate of the time, Mr. Halliday, is also much to blame for having permitted it, or for not having found it out. It is only very peculiar domestic circumstances that can excuse him from more severe censure.

4. The Lieutenant-Governor is of opinion that the maladministration in this matter was most serious; for he thinks that it is to the delay in making the works acceptable, popular, and sufficient as relief works, that the fact of the famine having gained on us in Tirhoot is mainly due. It is clear that sufficient work was not offered on sufficiently attractive terms, in proportion to the prevailing distress, during the early stages of the scarcity in that district. Considering the very decided and clear terms of the orders issued by Government on the 29th October 1873, and subsequently, both by the Government and by the Commissioner, the Lieutenant-Governor cannot but regard Mr. Urquhart's conduct as wholly inexcusable. The Magistrate, in whose time this serious neglect of a very important duty occurred, has left, the circumstances above alluded to having rendered him unable to continue his functions. The Lieutenant-Governor thinks that Mr. Urquhart should not, after what has happened, be allowed to retain the appointment of Executive Engineer of the great district of Tirhoot, for which Sir George Campbell gathers that his general want of energy unfits him.

5. The Public Works Department of this Government will be requested to reduce Mr. Urquhart to a much less important charge, leaving him only for the present in charge of the southern portion of the district, so long as no very great strain exists there.

I have, &c.,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 2103.—S.R.

Copy forwarded to Public Works Department of this Government for information and guidance, with copy of Commissioner's letter and enclosure under acknowledgment.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, the 6th April 1874.

From C. Bernard, Esq., C.S., Acting Secretary to the Government of Bengal, to the Deputy Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce, No. 2057 S.R., dated 4th April 1874.

I am directed to submit the prescribed weekly statement of famine relief operations in Bengal.

2. With reference to your letter calling for a weekly return of known cases of starvation deaths, I am to submit that, since the submission of my letter No. 1835, dated the 26th March, some cases of starvation deaths have been reported from the districts of Tirhoot and Hazareebaugh only. Paragraphs 19 and 20 of the Tirhoot fortnightly report (enclosure No. 3 to the fourteenth narrative) mention several cases of reported deaths (see paragraphs 10 and 11 of the narrative). The facts related show that it is by no means certain that all these deaths were due wholly to starvation or privation; but the Lieutenant-Governor believes that, out of the cases mentioned, perhaps five of the deaths must have been mainly due to privation. The deaths in Hazareebaugh were inquired into by European officers some days after the report of the deaths was made by the police, and it seems that two of the deaths must, so far as information could be obtained, have been due to privation, such as occurs in a poor country where food is dear, without there being what is properly called a famine. These seven cases added to six reported in my letter No. 1835 of the 26th March, make in all thirteen cases. But most of the deaths are of the same character as those reported from Serampore and Barrackpore. See my letter No. 1834, dated the 26th March. Sir George Campbell has explained his fears that a certain number of old people and children may have succumbed, or will succumb, to privation, over and above the cases which are enumerated above.

Letter from C. Bernard, Esq., Acting Secretary to the Government of Bengal, to the Deputy Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce, No. 2271 S.R., dated Calcutta, the 10th April 1874.

In continuation of my letter No. 2057 S.R., dated the 4th April 1874, submitting a report on cases of known deaths from starvation up to the 4th instant, I am directed to state that from reports received it appears that only three fresh deaths from starvation have occurred in the Hati Sub-division, and one body of a man, who must have suffered from want, was found on a road near Buktiarpore, in Monghyr. A report from a special relief officer at Simrahi showed that two deaths had occurred there, but the Soopool Sub-divisional Officer's return, which includes the statistics for Simrahi, does not exhibit any deaths. The Lieutenant-Governor has caused further inquiries to be made about these two cases reported from Simrahi, and the result of the inquiries will be made known to the Government of India. Meanwhile, the Lieutenant-Governor thinks that these two cases should not be reckoned as deaths* from starvation. The four deaths in Hati and Buktiarpore now reported, added to the 13 referred to in my letter No. 2057, dated the 4th instant, make in all 17 cases.

2. Reports of alleged deaths from starvation reach the Government from time to time, but on inquiry these generally prove to be cases of mortality arising from disease or infirmity. For instance, the Deputy Commissioner of Maunbhoom, in his letter No. 610, dated the 6th instant, reported "several cases of deaths from starvation have been reported, but these, I am happy to say, after full inquiry, have been found to be deaths from disease, and were evidently reported by the villagers as deaths from starvation, in order to excite sympathy and in hopes of obtaining gratuitous assistance in food and money."

3. Wherever the deaths have been traced to starvation, they have been included in the statement submitted to the Government of India.

---

* If, as is probable, the cases are identical with those referred to in the Bhagulpore narrative just received (today), they certainly were not famine deaths.

FURTHER CORRESPONDENCE.

No. 22 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.

Famine.

To the Most Honourable the MARQUIS OF SALISBURY, Her Majesty's Secretary of State for India.

MY LORD MARQUIS, Calcutta, the 17th April 1874.

WE have the honour to forward the fifteenth special narrative of the drought in Behar and parts of Bengal for the fortnight ending the 16th instant.

2. The general aspect of affairs remains unchanged; the total number of persons seeking relief continues to increase and is now 1,301,919; but the measures of relief keep pace with the growing demands upon them and are becoming week by week more efficient and complete. We believe we may accept the Lieutenant-Governor's statement that "the famine has been got well in hand, and will, it may be hoped, be effectually met and averted." On the other hand the reported failure of the water-supply in parts of North Tirhoot and Rungpore gives rise to well founded apprehensions.

3. The most noticeable new incidents in the Narrative are the signs of increasing distress in the district of Burdwan and the sudden rise in the price of common rice in Rungpore. In the former district there has evidently been a change for the worse in the Bood-bood Sub-division (population 242,818) and to some extent in the Cutwa Sub-division also (population 286,131). Sir Richard Temple has visited Burdwan and we now await the result of his inspection, which we hope to communicate to your Lordship next week. In Rungpore the rise of prices appears to have occurred in the markets in the immediate neighbourhood of the sudder station, and if caused mainly by the employment of the local carriage in the conveyance of Government grain, it may be expected to be but temporary, as the demands for the carriage of Government grain in Rungpore are not great.

4. As regards deaths from starvation, we enclose a letter* received to-day from the Government of Bengal. It will be observed that the three deaths in the Hathi Sub-Division, reported in the enclosure of our last despatch, are now ascertained to have been due to disease, but that the two cases at Simrahi, reported in the same enclosure, should be included among famine deaths. Five additional cases have been reported during the week from Mudhobanee, making a total, up to date, of 21 deaths from starvation.

* Page 152.

5. As regards transport arrangements, the Lieutenant-Governor reports that they are extremely satisfactory, and lead to the hope that every district will have received its entire allotment of grain by the end of May. It will further be observed that the Durbhanga Railway has now been completed, and that the despatches from Chumpta Ghat may consequently be expected to make up for past shortcomings.

6. In our despatches Nos. 9 and 11 of the 9th and 13th February, respectively, we mentioned the apprehension of distress in Nepal. We now learn from the Resident that Sir Jung Bahadur is only anxious about those districts which adjoin Tirhoot and Bhagulpore, and that he is doing all he can to relieve his people. The prospects of the spring crops in the valleys among the hills recently visited by the Resident are stated by him to be favourable,

and whatever can be spared of hill produce will be sent down to the distressed tracts.

7. Lastly, we enclose the *Allahabad Government Gazette* of the 11th instant, containing the usual statement of prices current and of the condition of the crops in the North-Western Provinces; the reports continue, on the whole, satisfactory.

We have the honour to be,
My Lord Marquis,
Your Lordship's most obedient and humble Servants,
NORTHBROOK.

FIFTEENTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL, FROM THE 3RD APRIL TO THE 16TH APRIL 1874.

1. On the 8th of April Sir George Campbell was permitted to resign the Lieutenant-Governorship of Bengal, and Sir Richard Temple was appointed to succeed him. The Lieutenant-Governor left the Presidency for the distressed districts on the night of Tuesday, the 14th April.

The weather.

2. The weather during the fortnight under report has continued favourable on the whole. Rain has fallen in most of the districts of the Rajshahye, Dacca, and Chittagong divisions, and also in parts of North Bhaugulpore and Purneah. This has been very opportune for the early rice sowings, and all the accounts show that a larger area than usual is prepared for this crop. More rain is required, and the weather seems sufficiently unsettled to make it possible to hope for this. In the Patna division the drought still continues, and the millets and pulse now approaching maturity are withering for want of moisture, while it will be impossible to prepare the ground for rice sowing without some heavy showers.

Rainfall of the fortnight in inches at some of the principal district stations.

Price of grain,

3. In the districts of Hooghly, Howrah, and Baukoora of the Burdwan division, prices have remained stationary, or with a tendency to fall. In Beerbhoom they have slightly risen. In Burdwan, although the price-current shows the price of common rice at over 14 seers per rupee, the Collector reports that in the interior of Bood-bood it is only procurable at 10 seers per rupee, or even less. There is no marked change in the Presidency division. In the Rajshahye division prices have risen slightly in Dinagepore, but were in the district narratives reported easier in Moorshedabad, Rajshahye and Maldah owing to private importations. At Rungpore sudder station they suddenly rose from Rs. 4 to Rs. 6-8 a maund, owing, it is said, to the demand for carriage on account of Government grain having paralyzed private trade. Only about 600 carts in all are here at present taken up for Government; and Mr. Robinson, the Relief Commissioner, reports that he has no doubt Rungpore could easily supply many more were proper rates paid. He is himself looking into this. From the district narrative it does not appear that prices in the interior have been at all affected. They are, however, extremely high throughout the south and west of this district. In the most eastern districts of Bengal the rates are either stationary or lower, except in Mymensing, which shows a rise. In Behar, south of the Ganges, the reaping of the rubbee crop has cheapened food-grains somewhat. North of the

Ganges the harvest has not had the same effect, and in Soopool an upward tendency is observed notwithstanding the harvesting of a very fair spring crop.

The price-current for the two weeks under report will be found at enclosure No. 2.

The present quotations of rice for some of the principal districts compare as follows:—

	Number of seers of common rice sold for a rupee 1874.				
	On 31st Jan.	28th Feb.	28th March.	11th April.	April 1873.
Burdwan - -	14	13½	13¼	14¼	24
Beerbhoom -	12⅜	12½	13½	$12\frac{13}{16}$	24
Hooghly - -	11 to 12	11 to 12½	12 to 13	12 to 13	18
Calcutta - -	12½	12¼	13	13¼	
Dinagepore -	13¼	14	10¾	10¼	27
Maldah - -	11¾	12	9½	10½ to 11	24½
Rungpore -	11¼	11¼	11½	7¼	27⅝
Dacca - -	16	14	13	17	32
Backergunge -	16½	15	16	16	28
Chittagong -	18	16½	16½	17	24

Lohardugga -	15½	16	14	14	17
Manbhoom -	15	14½	14½	14½	24

State of the crops.

4. The in-gathering of the rubbee or spring harvest has, in most of the Behar districts, been now brought to an end. In all those south of the Ganges the outturn has been much better than was originally anticipated; and in the Bhagulpore division, north of the Ganges, the yield has been on the whole very fair. In Sarun, however, the results are less satisfactory. The severe hailstorm of last month did much damage to the crop in parts, while the outturn generally appears to have been unequal, and in some tracts considerably below expectation. The firmness maintained by prices in spite of the reaping of this, ordinarily a most important crop in Sarun, is looked upon by the local officers as an unfavorable sign. In Chumparun the cheena, or lesser millet, was in a precarious condition from want of rain, except in tracts where irrigation had kept it alive. The outturn of the spring crop had not been here very satisfactory, and in the worst part of the district—Ramnuggur—there had been none to speak of. In Tirhoot the cheena (millet), and moong (pulse), are suffering from the continued drought, and it is impossible to prepare the land for rice. In all those districts where the mohwa tree grows, such as Bhagulpore, Monghyr, the Sonthal Pergunnahs, and the Chota Nagpore division, the crop this year has been singularly full and abundant, forming a most material addition to the food-supply of the poorer classes. In the Rajshahye division the rain which was much wanted to enable the ryots to complete the sowing of the early autumn crop has fallen pretty generally; and though more is still required, the sowings are now on the whole well-advanced. The silk-crop, which is always precarious, has, in the Rajshahye district, unfortunately proved a failure.

Seed grain.

5. The question of seed-grain has become of more immediate interest in Eastern Bengal, where sowings are earlier than in Behar. The Collector of Dinagepore writes:—
"As the bhadoi sowings have not yet been completed, it is not easy to "determine with certainty the question of sufficiency of seed-grain, to which "the attention of all circle officers has now for some time been directed. The "impression, however, is that seed-gain, both for bhadoi and hemantee (autumn "and winter rice), will be forthcoming, though at high rates. The inquiries made "by the circle officers show that the people are themselves fully alive to the "difficulty, and that dealers are purchasing and storing the produce of last "harvest. I am more and more convinced that there is a sufficiency of seed-grain

"in the country, a stock which the sale of Government rice will tend to keep up." The price will however be high. Already in one district the price of seed-grain is higher than that of cleaned rice. In Rungpore it is noted that though the ryots sometimes complained of want of seed, the lands where ready have all been sown, and a much larger area than usual has been cultivated with early rice. In the other districts of the Rajshahye division there will almost certainly be no lack of seed-grain. The view that seed would probably not be wanting was that taken by the late Lieutenant-Governor at paragraph 27 of his Tirhoot note appended to last narrative. Steps are being taken to assist, through the zemindars, those ryots who may be unable to buy seed at the high prices now ruling. In Tirhoot the subject has not been lost sight of as the following extract from the district narrative will show:

> "Mr. MacDonnell and the sub-divisional officer of Hattee are now directing their attention to the relief of cultivators and small farmers whom it is difficult to bring to our relief works. To these they are making advances in money for seed-grain and in grain for their own support. The principle they have adopted is that of making advances to the applicants by whole villages, the applicants entering into an association or system of frank pledge for repayment, their estimate being based on returns submitted by putwarees showing the quantity of land cultivated by each applicant, and the quantity of seed-grain required being calculated at the rate of 20 seers per beegha. In some instances they have persuaded zemindars to take the seed advances into their own hands; and one zemindar, Baboo Bunsee Dareer of Ragopore, proprietor of nearly half the Lehra circle, is specially mentioned for the public spirit and humanity which he has displayed in this respect, and in the administration of relief operations on his estates under their directions."

No special reference is made to the subject in the Sarun and Chumparun narratives, but it is incidentally mentioned that in one sub-division of the latter district fully two-thirds of the rice lands had been already prepared for the next sowings. From Purneah it is reported that the trade in seed-grain is brisk.

Supply of grain.

6. The supplies of grain in the local markets are, in most districts of Behar, still sufficient to meet the demand, and have been supplemented to some extent by the new rubbee grain which is already coming into the market. In the interior of Durbhunga, however, supplies are said to be scarce save in one or two large bazars. In Mudhoobunnee, where the same scarcity had shown itself, the sale of Government rice has brought into the market stocks of other grains held by petty traders. At a few places in Seetamurhee, and in one or two bazaars in Sarun, and at Bukhtiarpore in Monghyr, there was some failure of supplies. But generally throughout Behar the inferior grains are still procurable, though rice is everywhere very dear, and frequently not to be got. In the Rajshahye districts rice is becoming more and more difficult to buy, though other grains are generally available in sufficient quantity. The Dinagepore district officer thinks, however, that everything now points to exhaustion in the stocks of food-grains in that district, and traces a steady falling off in supplies, while the people are said to be anxious for the opening of the Government golahs. In Rungpore also, along the south-west and south of the district, deficiency is apparent until the tract on the east is reached, which is supplied by importation from the Brahmapooter. In all other parts of the district food is procurable at high prices. This is also the case generally in the Chota Nagpore and Burdwan divisions.

Private importations.

7. The railway is still carrying into Behar considerable supplies of grain on account of private traders. The figures for the fortnight ending the 4th April were—

	Tons.
From the North-west and Punjab -	- 15,974
„ Calcutta - - -	- 5,874
Total - -	- 21,848

The figures for the preceding fortnight were 17,928 tons from the North-West, and 7,737 tons from Calcutta.

The block at Patna city station reported in last narrative has been removed through the active aid of the Magistrate, and orders have been given for constructing at once a new siding and station yard, and otherwise improving the traffic arrangements in order to prevent a recurrence of the difficulty (see Appendix E.)* A fall of prices in the Patna bazar led to a slackening in the rate of

* Page 51.

private import to Behar from the Punjab. The Government has not yet received a final report on the subject, but it is believed that the falling off was only temporary. The amount of private grain sent up from Calcutta also shows a falling off, possibly in consequence of the orders that Government grain should have priority of despatch. It is to be hoped, however, that carriage will be found for all the private as well as for the Government grain; and the Railway Company have been told that it is not intended to displace private grain espatches but only that grain should take priority over ordinary traffic.

In the Rajshahye division there is a tolerably brisk private import into Rajshahye and Maldah on the Ganges, and to the parts of Rungpore lying near the Brahmapooter.

8. The usual note on the movement of food-grains will be found at Appendix A.*

Export of grain by sea.

The Collector of Customs has furnished a consolidated statement showing the export of food-grains from Bengal ports during the month of March. The total export beyond Bengal was 16,933 tons, making a total of 190,094 tons since the 1st October last.

Condition of the people.

9. The condition of the people is very fully explained in the district narratives (enclosures Nos. 4, 5, 6, 7, 8, and 9).† The increasing numbers flocking to our relief works indicate increasing severity in the pressure caused by high prices and a deficient market; and this fact is perhaps specially significant from its being very general and occurring at a time when the cutting of the rubbee harvest afforded in many parts remunerative employment to large numbers of the labouring class. Every week, however, sees the relief organisation more complete and more competent to deal with distress. And on the whole, it may be said that (thanks solely to the Government provision of work and food) the condition of the people in the distressed districts is not worse. The famine has been got well in hand, and will, it may be hoped, be effectually met and averted. The Commissioner of Patna writes: "Distress in the north of Chumparun and Tirhoot has continued to increase steadily, and the number of people resorting to the relief works is daily becoming larger. The organisation for dealing with these distressed masses is, however, daily improving; and what were three weeks ago hungry mobs, clamorous for relief, are now by degrees being transformed into organised gangs of work-people, while those unable to work have been weeded out and made recipients of gratuitous relief, light-labor gangs being formed for those who are unable to join the able-bodied working portion. The relief circles have now all been provided with officers, and arrangements are being made for starting village works in each circle, so as to prevent overcrowding on the roads and the larger works; and it is to be hoped that by this means much useful work will be done, while the dangers arising from the massing of large and unmanageable bodies of people on a few great works will be avoided."

At Appendix D.‡ will be found minutes by Sir Richard Temple summarising the principal statistics of distress, and the measures taken by Government to meet this emergency.

North Tirhoot.

10. A very full account was given in last narrative of the measures adopted in North Tirhoot. The present state of things in those tracts may be gathered from the following extracts:—

> "In *Seetamurhee* sub-division the condition of the people has improved generally, but isolated cases of distressed women and children are still to be found. For all such cases the sub-divisional officer is specially providing."

In *Durbhunga* the sub-divisional officer has observed a marked improvement among the people, especially in the direction of Bahera. He writes:—

> "I had myself grouped round Bahera, where I have no doubt the distress was as pronounced as in any other village in the sub-division. These were the villages in which I, in a former report, declared that famine had commenced. As then, so now, I had all the poor assembled; and were it not that I was assured by the jeyt ryot and putwaree, and group-inspector, that no famine-deaths had occurred, and that in the people now before me I saw the starving creatures of a month ago, I scarcely could have credited the change. I visited the village when the putwaree was distributing the daily allowance. There were no complaints whatever, and the improved condition of the recipients proved that the village headmen had not deprived them of Government charity. Indeed, this system of village-relief everywhere I went I found working well."

---

* Page 15.

† Page 52.

‡ Pages 35 to 51.

Bahera was, it will be remembered, the tract where actual famine had shown itself, and anxiety regarding which was one of the chief causes of Sir George Campbell's visiting Tirhoot last month.

The *Mudhoobunnee* sub-divisional officer writes :—

> "The time has now come when I must say that distress is general throughout the sub-division. A few favoured tracts, such as the neighbourhood of Ladma and Hurlaki thanas, are still comparatively fairly well off; but the fact that we have little less than half the population on our hands shews that distress is severe in general. But for the Government roads, we could not have hoped to cope with it."

From Mudhoobunnee several deaths are reported, five at least of which were probably due to privation or disease induced thereby. It is impossible to prevent such cases among the old and helpless, or among children, the classes which in fact furnish most of these cases. Every effort is, however, being made to discover and relieve those in want by careful village visitation and inspection, while food and work are everywhere available for all who will come for them. No famine deaths are reported from any other sub-divisions of Tirhoot. The water supply is unfortunately failing from want of rain, and should the needed showers not speedily fall a great aggravation of distress must undoubtedly be looked for.

South Tirhoot.

11. In the *Sudder*, *Hajipore*, and *Tajpore* Divisions there is an increasing demand for work, but the condition of the people is, on the whole, not much changed for the worse. The accounts given a few weeks back of the state of some parts of the Sudder Sub-division have been found to be exaggerated. This tract, however, needs careful watching, and a circle organization has been formed to that end. The planters have come forward readily here, as they had already done elsewhere to aid in looking after the village relief. The tobacco crop in Tajpore is expected to assist the ryots much, but there is some difficulty about getting the produce down to the Ganges as so many carts are taken up for carriage of grain. The Lieutenant-Governor has caused enquiry to be made as to whether return carts and Railway empties could not be made available for this purpose, and has sanctioned advances being given upon the security of the crop in case of need.

The rest of Behar.

12. In *Sarun* the ample provision of work made by Government has prevented any deterioration in the condition of the people. From *Chumparun* the same fact is reported. The people have been saved by the measures adopted for their relief, which are now described as being in good working order. Even in *Ramnuggur*, where the inhabitants depend almost entirely on Government help, direct or indirect, their state is reported to be sufficiently satisfactory. In *North Bhagulpore* the worst cases on the works are wanderers from Tirhoot. Village visitation is in progress, and will, it is hoped, bring to light any lurking distress, if such exists. In *Monghyr* there has been no change for the worse, rather the contrary, as the spring harvest has been good, and about six lakhs of rupees on account of opium payments have been distributed among the cultivators. In *Bukhtiarpore* only did the Relief Superintendent find very marked distress, where in two villages grain had to be doled out to 350 persons of the lowest classes who were found quite "famine-stricken." In *Purneah* no change for the worse is reported, but incendiary fires are said to be becoming frequent. In the *Sonthal Pergunnahs* the "people look well everywhere," though they are said to be nearly at the end of their stores in parts; but, as the Deputy Commissioner remarks, "Sonthals "would be merry and eat full meals up to their last handful of maize." Fortunately the Sonthals take very readily to out-door labor, and of this enough is provided.

The Rajshahye Division.

13. In *Moorshedabad*, the old, infirm, and beggars are coming more on charitable relief, and the pressure is tightening in some parts, as indicated by the increasing resort of laborers to the works. The failure of the silk crop in *Rajshahye* will add to the distress there, but this is not as yet at all severe. Both here and in Moorshedabad arrangements have been made for careful inspection by circle officers (without, however, a full subordinate agency as in Tirhoot) and the doubtful parts will be closely watched. In *Dinagepore* the sale of Government grain and the ample

supply of work has checked any development of distress. From the south of *Rungpore* the accounts are less favourable. Near Sadullapore and Govindgunge the village inspection has disclosed "greater distress than was anticipated." The district report says:—

> "In the tract lying west of the Kurotya, the state of the villages is wretched beyond description; the people have sold everything they possessed, and are now solely dependent on Government. Many have sold their plough-cattle, the last thing with which a Bengalee ryot parts. I found one instance where a man had sold the roof over his head. Many ryots have deserted the place altogether and gone to Bogra and elsewhere. The relief officer reports that the people seem to be most grateful for the relief works. The villages in this quarter are now quite deserted in the day-time. Every one is to be found on the road; the women are now coming readily, bringing their children with them. All are most anxious to get Government rice. The want of water is felt nearly as keenly as the want of food. In many villages people have to go two or three miles to bring a gharah of water. I have begun to excavate three old tanks in the worst parts, and am digging wells at every mile along the roads. A few cases of cholera, with one death, have occurred among the coolies. In many tracts on the south and the south-west of the district the poorer classes of ryots have been obliged to sell or pledge the few things they have. Many complain of the difficulty of having only one full meal of rice a day, and of having to eke out the second meal with various coarse substitutes for rice. There is much widely-diffused distress which is being carefully looked after, and relief to meet the circumstances that arise in each locality is promptly organised on the spot."

In *Maldah* it is feared that relief operations must be extended, and village-to-village inspection made, even in those tracts which have not hitherto been considered distressed. The numbers requiring relief in the north-west of the district are increasing rapidly; but no cases of starvation have yet been reported. The accounts received of late from *Pubna*, and especially from the *Serajgunge* division of that district, have been somewhat unfavourable. The parts bordering upon the distressed tracts of Rungpore, Dinagepore, and Rajshahye, may very possibly require more active assistance before the season is over. Meantime the Lieutenant-Governor has directed the opening of relief works, and authorised the Magistrate, in case of emergent need, to indent upon the nearest golahs of the neighbouring districts.

The Burdwan division.

14. There has been some change for the worse in the Bood-bood, and to some extent in the Cutwa sub-divisions of the Burdwan district. The collector reports that on personal inspection he finds the condition of the people in many villages wretched in the extreme. The endemic fever has already reduced the standard of health in those parts, and the number of applicants for relief has now become very considerable. The Lieutenant-Governor has himself gone to look into matters, and will give such further orders, supplementary to the measures of relief already taken, as may appear necessary. There is nothing fresh to report regarding any of the other districts of this division. The numbers on works and receiving charitable relief have increased, as was to be expected, with the advance of the season, but ample provision has been made to meet all needs. The Jungle Mehals of Midnapore, a remote tract, regarding which some anxiety was felt at first, are now believed to be safe from anything like severe distress.

The Chota Nagpore division.

15. A full report by Colonel Dalton upon the condition of the Chota Nagpore division to the end of March will be found at No. 8* of the enclosures. It will be seen that Palamow still continues to be the most distressed tract in this division, and that many people come to the works in an emaciated state. The relief organisation has been considerably strengthened here, and will now be able, it is hoped, to meet all demands on it. To both Manbhoom and Hazareebagh Government grain has been sent. In both districts, however, as well as in Palamow, the mohwa crop has given much relief to the poor. Work is provided for all who require it; and gratuitous relief is being given to those who cannot work. From Singbhoom the Deputy Commissioner reports:—

> "The relief works that have been opened out in this district are proving of the utmost benefit and there can be no doubt that but for them the short crops of the past season would have pressed hardly on the poorest. The assistance rendered was all required, and it is hoped and expected that through it the season will be tided over till the next crops. The mohwa and other wild fruit crops, more especially in the Kolhan, are turning out mercifully abundant, and they will supply food to the poorest for the next two months. The mohwa trees in the Kolhan are laden with blossoms in the most extraordinary manner, and blossoms themselves are of huge size and bursting with richness. Every tree is guarded with the most jealous care from the cattle. The Kols also prepare and eat the seed of the sâl tree; and the sâl trees this year are, beyond

---

* Page 141.

all experience, in most abundant bloom. It is no exaggeration to say that in the Kolhan forests 99 out of every 100 trees have blossomed, and blossomed in the most amazing way. In most cases literally not a leaf can be seen from the profusion and wealth of blossom. Other jungle fruits, the cha especially, are also in great abundance this year."

Mymensing.

15. Fears have been felt from time to time lest the trade demand upon the eastern districts of the Dacca and Chittagong divisions for rice to supply the more distressed tracts to the west should affect unfavourably the position of the exporting tracts themselves. During the last week accounts have been received from Mymensing to the effect that in a small part of the Jamalpore sub-division there is a deficiency in the local food supply. A proposal to import some Government grain has been submitted by the Commissioner. The Lieutenant-Governor has directed careful inquiry to be made as to the necessity of this. It seems probable that, surrounded as it is by districts which had surplus crops, this little corner may, by a little arrangement and stimulus given to local trade, be able to get supplies. Of course, if Government grain is really required, it will be given, and fortunately can be easily delivered by the Brahmapooter steamers at a ghât nearly opposite Kaligunge, where the Rungpore supplies are now being landed.

The Presidency division.

16. In the Presidency division the only tracts regarding which any anxiety has been felt, are the north-west corner of Nuddea near Moorshedabad, and a small part of the Satkhira subdivision of the 24-Pergunnahs. In Nuddea the system of advances for works connected with land improvements and water supply has led to the employment of the distressed poor in considerable numbers by private persons. About 4,000 souls thus find employment, besides 1,150 who are employed on Government roads; while weaving and spinning is provided for those who cannot labour out of doors. These measures have hitherto proved sufficient. In Satkhira, similarly, work is provided by Government for all who need it. The distress here is not severe as yet, though it is feared some suffering is in store for the people. A relief committee has, however, been formed.

Transport arrangements.

17. Among the papers printed as Appendix C.* will be found a note summarising and reviewing the state and prospects of the Government transport arrangements up to the end of March. The general result is extremely satisfactory, showing that each district will have probably received its entire allotment of grain by the end of May—several districts long before that date—and we may fairly hope that the whole will thus have been stored before the rains set in. The letter to the Government of India, No. 2257—S.R., dated 10th April, with enclosures, in the same Appendix,† shows that the despatches for the Rajshahye division are now fast approaching completion.

The Lieutenant-Governor is satisfied, as regards the western districts, that the local transport can easily carry away all the grain that the railway can supply. The manner in which the district officers have answered to the calls made upon them by Government for the organisation of a strong transport service has been worthy of all praise. The minutes by Sir Richard Temple, Nos. 55 and 58, Appendix G. to the 14th narrative, show what has been done to secure reserve carriage in case of any possible break-down; and the Government can now, the Lieutenant-Governor believes, rest assured that unless some very unforesen accidents occur, no serious failure in the scheme of relief can happen owing to any insufficiency in the transport service.

Since the last narrative was written, the Secretary of State has advised the Government that contracts have been made for the construction of the ten small steamers referred to in paragraph 23 of the 11th narrative. They are each to carry 20 tons, and tow a barge carrying 20 tons more. They will be shipped in pieces by canal steamers before the end of April, and may be expected to be ready for work here by the beginning of July. These, with the four similar steamers now making in Calcutta, will be useful for distributing grain from district depôts by the inland rivers, or for carrying up any further allotments should the necessity for this arise.

The Durbhunga Railway has been completed, the engine having entered Durbhunga on the 15th April. This will help very materially in placing the grain allotted to Durbhunga and Mudhoobunnee. This aid was much wanted, for the Alliance Company of contractors have not yet succeeded in bringing up their despatches from Chumpta Ghât to anything like the anticipated figure; and

---

* Page 18.

† Page 27.

Nilcomul, the North-west contractor, is also very backward in his arrangements. With the help of the railway, however, we can feel certain that all shortcomings will be now made up.

Despatches of Government grain.

18. The despatches of Government grain to the famine districts amounted (see Appendix B.) during the fortnight under report, (*i.e.*, up to Tuesday, 14th April) to 14,19,266 maunds (52,565 tons), which is a great improvement upon the despatches of the fortnight before (38,705 tons). The total despatches of Government grain from Calcutta to the distressed districts amount now to 65,73,969 maunds or 243,480 tons, while 150,925 tons had been finally stored to the date of the latest returns. The papers in Appendix C.* show exactly how the case stands as regards the amount and despatch of the grain yet remaining to be sent to each district.

* Page 17.

Local purchases at Patna.

19. The Patna dealers, whose undertaking to deliver 42,000 maunds a week of mixed grain for Tirhoot was noticed in paragraph 18 of the 13th narrative, are working out their contract very satisfactorily. There was a little shortcoming at first, caused partly by the difficulty they had in getting railway waggons, and partly by the want of bags of the size required; but all these difficulties have been overcome, and the grain they give, and the bags in which it is packed, are reported to be exceedingly good.

Relief works.

20. The fortnightly return of persons employed on relief works under officers of the Public Works Department will be found as usual at enclosure No. 10.† The following table, however, shows more completely the number of labourers on Government and Court of Ward relief works by the latest returns:

† Page 151.

	Last fortnight.	Fortnight under report.
Patna Division - - -	539,353	806,878
Soane Canal Works - - -	31,289	33,933*
Gunduck Embankments - -	28,834	29,299*
Bhagulpore Division - - -	51,430	87,198
Rajshahye „ - - -	82,586	167,871
Burdwan „ Nuddea, Chota, Nagpore, and Cooch Behar - -	22,000	47,794
Northern Bengal Railway - -	12,000	12,475
Total - -	767,492	1,185,448

From the above it would seem that the estimates of distress at the worst season formed some weeks ago by Sir Richard Temple and the local officers will be realised—perhaps more than realised in the Patna division. On the other hand, the distress in the Rajshahye division is as yet somewhat less, and in the Bhagulpore division considerably less than the estimate. Now that the spring harvest is over, the numbers may be expected to increase everywhere. The work of breaking up the great gangs upon the north Tirhoot roads and diverting them to village works has been going on. The Additional Commissioner in Tirhoot has been authorised to make saltpetre manufacture a relief work, if he can do so at reasonable rates, taking the necessary precautions for the protection of the salt revenue by buying in the salt or otherwise. Mr. Metcalfe was sanguine that he could employ great numbers in this way. In Sarun the cowrie system, under which each labourer is paid a certain number of cowries for each basket-full of earth carried, is reported to have answered well on the Hutwa Raj works, the outturn of work having proved on measurement to be all round not less than half the amount which able-bodied labourers at contract rates would be expected to show in ordinary seasons. At the same time care is taken that the weakest and youngest on the works can earn a livelihood. On the Sarun district works the plan has not been tried generally, from a fear least the condition of payment by results should deter those really in need from seeking employment freely. In Chumparun it has been introduced more extensively for able-bodied labourers, separate invalid gangs being arranged for those unfit for task-work. In most districts an attempt is being made to exact a moderate amount of real labour from those who are able to give it. In Bogra there has been a considerable influx of labourers on the roads, and the system in force seems to have been unduly lax. The Relief Commissioner has had his attention drawn to the matter.

---

* Incomplete.

Irrigation Department relief works.

21. On the Soane Canal Works the average number of labourers was 33,933 during the fortnight, as against 31,282 in that preceding. But as the returns of three of the Dehree sub-divisions have not been received, the figures are incomplete. Labourers are said to be increasing rapidly in the Arrah division. The Gunduk embankment gave employment to 29,299 persons on the average, but the returns for the Upper Gunduk works were incomplete. The work is mostly task-work, but weakly people presenting themselves are paid by daily wages, or on a liberal cowrie-system.

Northern Bengal Railway.

22. The number of labourers on the Northern Bengal Railway has not as yet much increased, but it is said that more are gradually coming in. On the railway, and the feeder roads, there were 12,475 on an average last fortnight. Arrangements are being made for sending large gangs from Bogra. The earth-work done is now equal to a bank 26 miles long, and 4 feet high, 1,80,000 bricks have been burnt; 50,000 are now in kilns; and 17,24,000 have been moulded.

Charitable Relief.

23. The system under which charitable relief is being distributed was fully explained at paragraph 23 of last Narrative. The number of people now in receipt of charitable relief of all kinds according to the latest returns was:—

Gya - - - -	430
Shahabad - - - -	180
Tirhoot - - - -	65,230
Sarun - - - -	1,016
Chumparun - - - -	17,076
Moorshedabad - - -	379
Dinagepore - - - -	4,464
Maldah - - - -	931
Rajshahye - - - -	185
Bogra - - - -	583
Rungpore - - - -	6,827
Bhagulpore - - - -	2,804
Purneah - - - -	2,178
Monghyr - - - -	1,367
Burdwan - - - -	9,137
Hooghly - - - -	901
Bankoorn - - - -	1,200
Beerbhoom - - - -	683
Maunbhoom - - - -	600
Palamow - - - -	300
Total - -	116,471

The following extracts from the Tirhoot report will show how matters are now being managed in Durbhunga and Mudhoobunnee:—

The sub-divisional officer of Durbhunga thus reports:—

" I have already explained the machinery of charitable relief as it existed when first set in action. I have now to refer to an extension of the system, by which, while retaining our former organisation, we are enabled to render the administration of relief more searching and certain. It consists in having prepared through the jeyt ryot and putwaree of each village a list of all those who are in want of relief in the village, and according to this list the group storekeeper dispenses weekly to each village in the group the quantity of grain required for the week's consumption. The distribution is made in the village, by the village headman and the putwaree. Among the other duties of the inspector will be that of seeing that in this respect the village headmen are up to their work. This sub-division has been divided into 12 circles. The Banhar and Warisnugur circles being outside the area where distress was most pressing, were not taken in hand till now. Of the other circles the grouping has been completed in all, except Lehera, Gungdak, and Hya ghât, where some villages still remain ungrouped. But before this week ends the work will be completed in these. In all of these villages the officers are at work, having the village list of distressed people made out; and looking to the fact that as our groups are made up, and inspectors appointed, this work can go on simultaneously in every group, it ought to be completed within a fortnight at farthest. My returns of those on charitable relief are incomplete,

> some circle officers having been unable to send in any returns, and others only returns for some groups. From these fragmentary returns I learn that the daily average on charitable relief is 14,563. I believe this, however, to be much under the real number."

The Mudhoobunnee officer writes:—

> "Charitable relief is now everywhere at work on the ticket system. The system of giving out cotton, too, is taking root, particularly under Messrs. Ozanne, Williams, Nicholay, and Baboo Ishree Pershad. I am establishing, through the relief superintendent at most places, *quasi* hospitals under the native doctors, for care of those who are, either by starvation or disease, unfitted to go to their own people, or to work. I would have the distribution of cooked food, where it is given, also under the superintendence of native doctors if a European is not present, as natives are slow to enquire into cases into which care and extra attention is required."

In the other sub-divisions, also, careful arrangements are being elaborated to meet any distress that may exist.

In Sarun the numbers on charitable relief are very small. In the whole Hutwa Raj, only 60 persons are shown as receiving charity at present, and at most 800 to 1,000 persons are expected to need aid in the Hutwa sub-division. In Chumparun, the organisation has, with the aid of planters, been made apparently very complete. In the districts south of the Ganges, and in most of Rajshahye division, only beggars and friendless individuals, and in Monghyr some of the very lowest classes, have as yet come in for charitable aid. In Burdwan, upwards of 9,000 persons are shown as attending the food depôts and relief houses. The poorer classes in this district have become accustomed to take cooked food readily at the fever food depôts, and they have no scruples in coming for this form of relief when pinched by high prices as they are at present.

Sales of Government grain.

24. But little information is given in the district narratives as yet with regard to the sale of Government grain. In Bukhtiarpore (North Monghyr), 2,000 maunds have been sold to the public. From Purneah the district officer reports:—

> "At Dengra and Kusba Amour there is less private trade than in other parts, but the scarcity is beginning to encourage private enterprise here as elsewhere. A cloth merchant of Kissengunge has opened a large store on the banks of the river, and keeps his supply up by small boats. In this neighbourhood I last fortnight authorised the sale of Government rice. Mr. Gouldsbury sold 10 maunds at Ratahat, and Mr. Wyer 16 maunds at Mathour, and 107 maunds 11¼ seers at Ootri at 15 seers per Burmah and 12 seers Bengal. The consequence of this was, that on the next hât day, at Ratahat and Mathour, not a single private trader appeared. I consequently reduced the rates to 12 seers, and forbade the sale of Government grain at the public hâts. This has restored confidence, and the beparees are now buying as fast as ever from the Purneah bazaar from the merchants who import it from Caragolah. I have directed the relief officers at Dengra and Kusba Amour to sell at 12 seers and 10 seers at their relief centres on fixed days; and, after inquiry, to village communities or group of villages; not more than 100 maunds to be sold at each circle until further orders."

In Dinagepore sales to the public have begun in limited tracts, and the Magistrate is ready to sell more generally as soon as the necessity arises. In Rungpore grain damaged by the accidental burning down of a Government golah was eagerly bought up by the people at fair rates.

25. The subscriptions to the central relief committee, including those from England, amount to Rs. 13,05,373 up to date, exclusive of the Government subsidy.

Advances to ryots.

26. The subject of advances to ryots is one of fast-growing importance. The extract given above in paragraph from the Durbhunga sub-divisional report shows how the plan is being worked in Tirhoot.

In Sarun nearly 3½ lakhs of rupees have been advanced to zemindars to be expended in grain or money advances to their ryots. The following extract from Mr. Howe's report on Ramnuggur, is interesting, and worthy of special notice in connection with this subject:—

> "The questions of the most pressing importance are, *first*, to provide the 'Assamee' (or cultivating) population with sufficient food-grain; *secondly*, to provide them with, or to enable them to obtain seed-grain. Almost the entire population of the sub-division is agricultural, and the proportion of the cultivating class that comes to our works is small, though the actual numbers are small. The remainder now depend almost entirely on the advances they have received either from their zemindars or from Government, nor have they anything except advances to look forward to until the next rice crop is reaped. The best of them are poor and in debt, and it is from this fact that the question of advances becomes so difficult. On the one hand, unless advances are immediately made on a large scale, the 'Assamee' population will be reduced to starvation; while, on the other hand, there is the risk that, unless great care is taken in investigating each case, the security will be insufficient. To make advances too readily (except in the comparatively small classes of cases coming under Rule F*) tends to demoralise the people, and

renders them reckless in getting still further into debt. The difficulty is to combine sufficient promptness with sufficient caution, and to make a searching investigation without thereby losing the right moment for action. Mr. Howe has submitted a scheme which has been sanctioned, and on which he has been acting. The following is an outline of this:—A register (mouzahwar) is prepared in each tuppah, in which the amount required approximately for each village is entered. This register is prepared in the first instance by the inspector of the circle, assisted, where possible, by any influential member of the committee resident in the tuppah. It is then carefully tested by the officer in charge of the circle, who can alter (increase or lessen) the total amount fixed in round numbers. As soon as this has been done, a certain quantity of grain is sent to each village, where it is kept in charge of the headmen of the village, from whom due security for its safe custody is taken. The class of cases requiring most immediate relief, *i.e.*, 'Assamees' coming under Rule F (which fortunately are comparatively few), will then be taken up and disposed of summarily. These men can be readily found, as there are but few in each village. The object of sending grain to each village, Mr. Howe explains, is, '*first*' to give confidence, for experience shows that the mere presence of grain in a village (if the object of its being brought is known) has this effect; *secondly*, to enable the advances under Rule F to be made at once. The summary inquiry preceding distribution under Rule F will be carried on simultaneously, and, having once decided to whom to give under this rule, there is nothing like *immediate action*, which of course can only be taken if the grain is ready; *thirdly*, because now is the best time for carrying grain throughout the interior, and we should therefore avail ourselves of it. Having provided every village with an amount of grain which approximately will suffice for advances, and having relieved the worst cases under Rule F, a formal register will be prepared and carefully tested by circle inspectors and officers in charge of circles:—

1. Name of mouzah.
2. Amount already distributed either by Rajah of Bettiah, or under Rajah of Ramnuggur's loan.
3. Number and names of Assamees requiring advances, with amount required by each.
4. Nature of security.
5. Remarks.

"When this return has been carefully tested, the zemindar will be called upon either to make the advance or to go security, Government making the tuccavee distribution. If he declines, the best security available will be taken, and the procedure laid down in circular No. 1088 of 25th February will be followed, *i.e.*, the zemindar will be warned that Government reserves the right to recover the advance by legislation or otherwise."

In Monghyr application for advances of this kind are numerous. The system pursued in Purneah is described thus:—

"In villages, where the people are badly off, grain is advanced on credit, the village community giving a joint bond for the repayment of the advance. This system works capitally, it keeps the people in food, it allows them to spend their money on seed, which is procurable in nearly every hât and is being imported largely from the north, and it enables us to distribute our grain at no cost at a time when carriage is available. Mr. Wyer at the Sudder has worked this system, and found that it succeeds better than any other, the people like it, and it is far better than making them advances in money, except in places (which are, in my opinion, very few) where there is no seed-grain to be had. In most villages the well-to-do ryots have seed-grain which they are ready to advance to their poorer neighbours if they see any prospect of being repaid. An advance of Government grain for food on joint security, or its sale in some cases, prevents the seed-grain from being eaten, keeps the poorer people in their homes, and enables them to cultivate their fields. The brisk trade in seed-grain is a good sign."

In Dinagepore such advances will, it is hoped, be given largely through zemindars. In Rungpore also the applications are many, and upwards of Rs. 90,000 have been advanced for this purpose. The Lieutenant-Governor is again about to call the attention of all officers in distressed districts to the fact that when the rains put a stop to out-door labour, the plan of advancing grain to ryots will be the best means open to us of tiding them over the months that must pass before they reap any crop from their fields. The security of the village headmen, or the collective security of a body of ryots, would generally be sufficient to warrant such advances.

Reserve officers.

27. The Government of India has arranged to provide a reserve of civil officers to take the place of any now employed who may break down during the course of relief operations. When the transport work is over, the military officers now engaged in superintending that work will also be available for relief.

Stock and cash accounts.

28. Forms of account for cash and stock transactions have been supplied to the districts where Government grain is stored, and on the 15th April stock was to be taken at all golahs and storehouses.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

Calcutta, 16th April 1874.

---

* *i.e.*, in the case of persons whose caste or family position preclude them from laboring.

APPENDIX A.

MOVEMENT OF FOOD-GRAINS.

1. Schedule A. shows in the form laid down by the Government of India, the total exports of food grains during March, to places beyond Bengal from all ports in the Bengal Presidency. The total exports to the end of March stands thus:

	Tons.
From 1st October 1873 to end of February 1874 as per Appendix A. of last narrative - - -	1,73,161
During March 1874, as per Appendix A. to present narrative - - - - - - -	16,933
Total to end of March - -	1,90,094

The total imports for the same period were stated in Appendix A. of the last narrative to be 1,98,870 tons, of which only 5,034 tons were on private account. The latest figures available (up to 7th April), show that the imports on private account are still quite nominal.

2. From the 29th March to the 4th April, 19,360 tons of food-grains have been sent into Behar from stations below Rajmehal and Jamui, making 2,52,508 tons since the 1st October that have gone up, including Government grain. From the 29th March to the 4th April, 8,292 tons have entered Behar from the North-Western Provinces, making 1,25,760 tons since 1st November.

3. The importation of food-grains to Calcutta by the Eastern Canals have been, from 1st to 10th April, 3,813 tons, making in all 1,75,646 tons since the 1st October.

4. The private traffic registered at the river stations during the fortnight ending 11th April has been—

Station.	Direction.	Quantity in tons.
Sahebgunge - -	Up the Ganges - -	3,487
Ditto - -	Down " " - -	268
Goalundo - -	Up " " - -	1,405
Kooshtea - -	Down " Gorai - -	294

G. TOYNBEE,
On special duty.

Calcutta, the 15th April 1874.

SCHEDULE A.

Statement showing the quantity of Rice (distinguishing table and other kinds), Paddy, Wheat, Gram, and other Food-grains, exported from the Presidency of Bengal for the month of March in the present year and last year respectively.

Calcutta Custom House,
The 15th April 1874.

T. B. Lane,
Offg. Collector of Customs.

APPENDIX C.

No. 2088—S.R.

From C. BERNARD, Esq., Acting Secretary to the GOVERNMENT OF BENGAL, to the DEPUTY SECRETARY to the GOVERNMENT OF INDIA, in the Revenue, Agriculture, and Commerce Department.

SCARCITY AND RELIEF.

Calcutta, dated 6th April / issued 6th April 1874.

SIR,

WITH reference to paragraph 16 of the last special narrative, which contained a promise to submit a note showing the whole allotments of grain to the distressed districts, and reviewing the transport arrangements and their working, and also to submit Minutes by Sir Richard Temple summarising the present relief arrangements of the three very distressed divisions, I am now directed to submit these papers.

They consist of—

(*a.*) Summary of allotments and transport arrangements, with a Minute by Sir Richard Temple on the carrying power of the railway, written with reference to the above.

(*b.*) The letter of Sir Richard Temple's Secretary, No. 121, dated 31st March, with Sir Richard's Minutes Nos. 52, 63, 64, 65 and 66, reviewing the relief arrangements of the Dinagepore, Patna, and Bhagulpore Divisions, and of the country generally, with a reply, No. 2060, dated the 2nd April, conveying to Sir Richard Temple the Lieutenant-Governor's warm acknowledgments for the assistance which he has rendered to the Government of Bengal during Sir George Campbell's incumbency.

2. The last narrative has placed the Government of India in possession of the most recent information regarding the state of the country and the progress of relief arrangements, and the instructions issued by the Lieutenant-Governor after seeing for himself the worst parts of the country.

Nothing has since occurred to alter the views given in the narrative. We have still reason to hope that, so far, our greatest difficulties are confined to the Tirhoot district, and the more recent accounts from thence are favourable. In a telegram just received, Mr. Metcalfe says:—"Nothing like starvation is apparent. Village relief in hands of headmen. Working number on Bahera road, twenty-six thousand* only, on Mudhoobunnee works two lakhs.† Employing Resaldars in disciplining mobs (*i.e.* of laborers). Public health good. Baiparees increasing imports. Water supply everywhere deficient. Village after village searched for hungry people. Mudhoobunnee, Nareya, Durbhunga circles all formed. Can honestly say famine well in hand."

* When the measures for sifting and distributing the people on this road were undertaken they were over 50 thousand.

† This is a decrease and not an increase on numbers previously stated.

3. The Lieutenant-Governor hopes that the enclosed transport note will satisfy the Government of India that the local transport arrangements as a whole are now extremely efficient, and that the carrying power is only limited by the carrying power of the railway. The Government of India will probably consider that question in connection with Sir Richard Temple's note on the subject and my letter No. 2089—S.R. of this date, submitting the question, whether certain further quantities of grain are to be procured from the North-Western Provinces.

4. Sir Richard Temple's Minutes, attached to his Secretary's letter No. 121, set forth very clearly in precise and statistical form the various arrangements made for supply of grain transport and relief machinery. Sir Richard Temple very justly praises the judgment, discrimination, and assiduity displayed by Mr. S. Bayley, Commissioner of the Patna Division, in the discharge of the extraordinarily difficult duties which have devolved on him; and he commends the Deputy Commissioner, Mr. J. Hewitt. He cordially acknowledges the services of Mr. G. N. Barlow, Officiating Commissioner of Bhagulpore, and brings specially to the notice of Government the very valuable services rendered by Mr. H. Hankey, as Special Superintendent of Transport. He speaks in terms of high commendation of Mr. W. Le F. Robinson, in special relief charge of the four northern districts of the Rajshahye Division. In all the above praises the Lieutenant-Governor entirely concurs.

5. The time has now come when the present Lieutenant-Governor must shortly surrender his office. He is compelled to do so at a time when the country is unhappily placed in a very critical position; but he hopes that the papers submitted with the last narrative and with the present letter will show that, under the direction and control of the Government of India, the Government of Bengal has made very large, and generally successful, provision to meet the calamity which has befallen the country; and Sir George Campbell trusts that in handing over the administration to a successor who has already so largely and so ably assisted him, he does so under circumstances which give fair hope that this Government, administered by the energetic and competent hands of his successor, and supported by the large means which the Government of India has so freely afforded, may be able successfully to carry the people through the time of trial, with no greater suffering than is inevitable under such a dispensation of Providence.

6. It has been explained that the present season so far promises very favorably. Accounts have just been received of a very beneficial fall of rain in the North Bengal Districts, and at this moment the appearance of the weather gives hopes of a further fall, which would be peculiarly opportune and beneficial after much land has been prepared and some crops sown in Bengal, and the rubbee harvest has been reaped and garnered in Behar.

7. If the season in Bengal should be favourable, the ensuing months being showery, as a season so commenced often is in Bengal, the Lieutenant-Governor would hope that, after the provision which has been made for supplying the distressed district and maintaining a reserve, the condition of the people in the greater part of Bengal proper may not be greatly changed for the worse.

In the parts of Behar where the rubbee harvest has for some weeks given employment to the people, we must expect a large accession to the numbers for whom employment and relief provision must be made between the end of the rubbee harvest and the rains. But if the unusual drought is followed by early rains, as is frequently the case, that period will not be very long; and when good rains commence, we may expect that, in all districts not reduced in an extreme degree, the people will of their own accord betake themselves to agricultural pursuits.

There remain the large tracts of North Tirhoot, and other more limited tracts, where, there being little or no rubbee, the people have come on our hands at a comparatively early period in very large numbers. It is the Lieutenant-Governor's earnest hope that the measures which have been adopted will suffice to meet the vast amount of distress existing in those tracts; but he does not doubt that this distress can only be met by very earnest and sustained effort, which he surely believes will not be wanting.

Sir George Campbell trusts, then, that, by the mercy of God, the people, whom he leaves in very good hands, will be saved from starvation.

8. Sir George Campbell is under very great obligations to many of the officers who have assisted him in the efforts which for the last six months he has made to meet the threatened famine; but at a time when the work is unfinished he feels that he cannot ask for them the acknowledgments of the Government of India. He will, therefore, not here attempt to specify those who have in his opinion so far done well, beyond the concurrence in Sir Richard Temple's praises of certain officers which he has above recorded, but he will leave a note on the subject with his successor, who will hereafter be in a position to estimate the services of the various officers as a whole.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Summary of allotments and arrangements for transport of Government grain to distressed districts, brought up to latest intelligence received to end of March.

1. The allotments of grain to the distressed districts according to the latest revisions are:—

	Mds.	Mds.
Patna	67,500	
Gya	2,20,000	
Shahabad and Soane Circle	3,17,000	
Tirhoot	42,00,000	
Sarun	5,30,000	
Chumparun	10,00,000	
Monghyr	3,78,000	
Bhagulpore	7,30,000	
Purneah	6,50,000	
Sonthalia	1,35,000	
		82,27,500
Hazareebagh	25,000	
Manbhoom	28,000	
Palamow	10,000	
		63,000
Moorshedabad	5,000	
Dinagepore	12,00,000	
Maldah	1,50,000	
Rajshahye	1,00,000	
Northern Bengal Railway	1,00,000	
Rungpore	3,00,000	
Bogra	2,40,000	
		20,95,000

2. If we include the Chota Nagpore in what may be called the western group of districts, the total allotment for them is 82,90,500 maunds or (converted at 27·2 maunds per ton) 304,797 tons. The total allotments for the eastern districts is in maunds 20,95,000 or tons 77,022.

The grand total of the allotment for all districts, as at present fixed, is therefore 381,819 tons.

3. The total quantity of grain despatched from Calcutta up to the 31st March is returned as follows:—

	Maunds.		Tons.
To the western districts	36,99,928	or	136,026
To the eastern districts	14,54,775	or	53,483

If we add to this 17,463 tons, purchased locally and in the North-West Provinces for the western districts, and 2,941 tons purchased locally for the Rajshahye division, the total despatch of grain up to date stands—

	Tons.
For the western districts	153,489
For the eastern districts	56,424
Total	209,913

This leaves 171,906 tons yet to be supplied, of which 151,308 tons are due to the western and 20,598 tons to the eastern districts.

In the western districts of the Burdwan and Chotah Nagpore Division some further allotments may be required, but it is not expected that the quantity will be very large.

4. The statements of amounts actually received in the districts are mostly dated 28th March, but they are always considerably in arrear of the actual facts, depending on previous returns from out-stations, while the despatches from Calcutta are given up to date. The following statement of the amounts received in the districts, based upon the last transport returns and the district narratives, shows a greater difference than the amount in transit would account for. Difference in date must account for the remaining difference.[*]

The amounts received at the main receiving depôts of the districts appear to stand thus:—

	Mds.
Sarun	3,79,690
Chumparun	6,23,275
Tirhoot	16,41,000
Shahabad and Soane Circle	1,79,000
Gya	1,40,000
Patna	58,822
Bhagulpore	4,57,491
Monghyr	2,15,933
Sonthalia	15,000
Purneah	4,56,645
Total for Patna and Bhagulpore Divisions	41,66,856
Rajshahye Division	9,64,186
Chota Nagpore	12,492
Total	51,43,534

or 189,100 tons in all.

It will be remembered, however, that this includes some considerable quantities stacked at receiving stations and not yet sent off to the interior; and, in the case of Tirhoot, this will make a good deal of difference, a considerable quantity of grain stated as received into that district being still at Champta and some other ghâts.

5. The following paragraphs examine the state of the transport question in detail district by district:—

Sarun.

6. The allotment is discussed in Sir Richard Temple's Minute No. 18, dated 12th February. It was there settled that 5,00,000 maunds were to be supplied for the district plus 30,000 to be advanced from Government stores for the Hutwa estate, *i.e.*, 5,30,000 maunds in all, exclusive of a further supply of 1,50,000 maunds to be obtained direct by the Hutwa estate; all to be stored by the 15th June. It was further settled that all grain for Sarun should be consigned to Arrah, and be sent across the river in native boats. Up to the present date the grain has been steadily carried into the interior without fail. The Sarun cart power could carry much more if necessity arose. The district transport return, dated 29th March, shows that 365,971 maunds had been thus received. Even this figure is not quite correct up to date, as the Collector's returns from the receiving ghâts could not give actual figures up to the 28th inclusive. We may safely assume that at least two more days' despatches had been received on the north bank of the Ganges by the 28th March, and that a third day's despatches were *en route* from Arrah. We know that there is no balance of Sarun grain lying at Arrah, and that the average daily despatch by cart and boat from Arrah is 4,573 maunds daily. According to the Collector's figures, then, Sarun had yet to receive 164,029 maunds of its allotment. But according to the above estimate it must have received 379,690, leaving 150,310 maunds still to be sent up. If the present orders to send daily 5,000 maunds to Arrah for Sarun hold good, the whole balance due would arrive by the 28th of April. Even at the average rate of despatch hitherto (4,573 maunds), the balance would have reached the district by the beginning of May, and might all be stored by the 15th May. In case of necessity the despatches might after due notice be reduced to 3,000 maunds per diem, and it is proposed to do this next week.

---

[*] The difference between the total amount despatched and the amount shown as received is 20,813 tons. But it must be remembered, as stated generally in the text, that the returns of receipts are by no means up to date. In the Rajshahye Division, again, consignments are by water routes some weeks upon the road, also there are often considerable quantities accumulated at Futwa, Kooshtea, Goalundo, and other ghâts on the south side of the river. Again the railway despatches are made up for three days beyond even the nominal date of the district returns, and we may allow 3,500 tons a day by the two railways on that account.

Chumparun.

7. Coming now to Chumparun, according to Sir Richard Temple's Minute No. 13, dated 8th February, the allotment for this district was to be one million of maunds, to be imported by the 15th June. European contractors, Messrs. Lethbridge and Gibbon, undertook to cart from Bunkur Ghât opposite Patna, 50,000 maunds a week, or 2,00,000 maunds a month from 15th February, say 700,000 maunds in all up to the 15th June. The Collector was to receive by 15th February, under previous arrangements, 215,000, and 50,000 maunds were then expected by the Gunduck for the embankment works. Besides all this, 150,000 maunds were being brought in by river on account of the Bettiah Raj and planters. No further arrangements for transport were therefore deemed necessary, as the Gunduck was expected to rise after the middle of May, and boat carriage became feasible, should further supplies of grain be required.

8. The only change in the Chumparun programme has been that, in order to relieve the extreme pressure at Bunkur Ghât, the contractors have, since the 9th March, taken from 7,000 to 14,000 a week of the Chumparun grain *viâ* Arrah. No information as to the actual total despatches by the Gunduck is available, but it is understood that the district is relying now entirely on its land carriage.

9. By the transport returns for the fortnight ending 28th March, the district had received 597,907 maunds, leaving it 402,093 to receive. If we may assume, as we certainly may, that here too the Collector's figures are two or three days in arrear of the facts at the time of his writing, this balance due would be reduced by about 8,456 maunds for each day; the average actual despatches from Arrah to Chumparun being 1,088 maunds, and from Bunkur to Chumparun 7,368 maunds. This would make the receipts in all 6,23,275 maunds. In round numbers, however, we may say that Chumparun had, on the 28th March, something under four lakhs of its allotment to receive. At 50,000 maunds a week (the contract rate), this would be cleared off in eight weeks or less. At present the contractors are carrying off, by the two routes of Arrah and Bunkur alone, an average of 59,196 maunds a week. But the combined despatches for Chumparun *viâ* Bunkur and *viâ* Arrah need not exceed 50,000 maunds a week, say 15,000 *viâ* Arrah and 35,000 *viâ* Bunkur.

Tirhoot.

10. Sir Richard Temple's Minute No. 35 of the 26th February abstracts the arrangements for Tirhoot thus: 42 lakhs of maunds were to be conveyed before the rainy season thus distributed —to Seetamurhee (10), Mudhoobunnee (16), and Durbhunga (16). The contracts made were as follow:—

	Lakhs.
A.—The Western Contractors were to take—	
From Bunkur to Seetamurhee *viâ* Mozufferpore	6
„ to Contai for Seetamurhee	4
„ to Attrai and Poosa for Mudhoobunnee	5
„ to Durbhunga	5
Total	20
B.—The Alliance Company were to take—	
From Chumpta to Durbhunga	18
C.—A North-Western Contractor, Nilcomul and Co., was to take—	
From Mokameh to Durbhunga	4

The above provided for the cartage of 42 lakhs of maunds away from the river ghâts.

The Seetamurhee grain was to be taken up at Contai and Seetamurhee, and distributed in that sub-division by a separate company, Messrs. Tripe, Begg, and Company.

The 5 lakhs delivered at Attrai and Poosa were to be carted on by Messrs. Studd and Wilson to Kamtoul, and thence by Mr. Llewhellin to Mudhoobunnee.

Of the total quantity of grain delivered in Durbhunga (5+18+4=27) 11 lakhs were to be taken on by Mr. Llewhellin to Mudhoobunnee.

In this way each sub-division was to get its quantum.

11. Minute No. 57 has assigned 67,000 maunds to Tajpore Sub-division, and directs that this supply shall be deducted from the allotment for such of the other sub-divisions as the Commissioner sees fit. The allotment for the Sudder Sub-division has not yet been fixed. Whatever may be required for this or Hajeepore, will for the present come out of the allotment for the rest of the district.

12. In Mr. Hewitt's report for the fortnight ending 14th February he explains the routes and the quantities expected to be carried by each as follows:—

	Weekly quantity in maunds.
From Bunkur by Lalgunj to Contai	15,000
„ „ by Rusoolpore to Seetamurhee	50,000 to 70,000
„ „ to Athar and Poosah	35,000
Total weekly from Bunkur	1,00,000 to 1,20,000
From Chumpta to Durbhunga	75,000
„ Jamaica to Durbhunga (Singhia and Hatta)	35,000
Total from Chumpta	1,10,000

This arrangement, however, omits the despatches from Bunkur to Durbhunga subsequently arranged. To supply 5 lakhs by that route, which was not commenced to work till after the Lieutenant-Governor went up in beginning of March, a despatch of upwards of 35,000 maunds a week, or 5,000 maunds per diem, is necessary.

13. The quantities despatched from Bunkur for Tirhoot have averaged 15,843 maunds a day, or 1,10,901 maunds a week, from 8th to 25th March, and are improving steadily. Those from Chumpta by the Alliance Company have been very short, averaging only 6,092 maunds a day from 5th to 27th March. In consequence, however, of the failure of this Company to supply enough cartage at Chumpta, they have tried another route from Monghyr, and also a route by Mokameh, which it was proposed to use simultaneously by the North-West contractor, Nilcomul Mitter. Up to the 29th March the Company had, however, only sent 5,486 maunds by the Mokameh route. The rate of despatch by the Monghyr route to a point on the lesser Gunduk is stated at over 22,000 maunds a week, but this is only despatched by boat. We do not know yet what has been landed and carried off.

14. The arrangements, as last reported, stand thus: The Alliance Company is to work from Barh *viâ* Chumpta, and also from Monghyr and Mokameh. They are to take three lakhs in all to Poorani Ghât south of Singhia by boat, and stock the Bahera and Singhia golahs of Durbhunga. The Chumpta grain is to be delivered at Hya Ghât for Mudhoobunnee. Nilcomul, the North-West contractor, is to carry from Simeria Ghât opposite Mokameh, and deliver at Pahuddee for Muddehpoora and other circles in Mudhoobunnee; but as yet this contractor has not begun active operations. The grain from Bunkur *viâ* Poosah goes to the western parts of Mudhoobunnee, while the grain from Bunkur to Durbhunga goes direct to the latter place.

15. The review of the transport appliances for Tirhoot would not be complete without a reference to the Durbhunga railway, which will almost immediately carry from Chumpta to Nagurbustee (28 miles on the road to Durbhunga) 200 tons or 5,600 maunds a day; and which is to carry from Chumpta Ghât right into Durbhunga (44 miles) 600 tons or 22,400 maunds a day soon after the 15th April.

16. The present position, then, is;—

The present actual average rate of despatch is—

	Weekly quantity in maunds.
From Bunkur Ghât - - - - - - - -	1,10,900
From Chumpta Ghât - - - - - - - -	42,600
From Monghyr, by the Alliance Company - - - -	22,750
From Mokameh, by the Alliance Company - - - -	7,680
	1,83,930

The amount already in the district, 16,41,000 maunds, leaves 25,59,000 maunds still to receive (out of the allotment of 42 lakhs), to which must be added, say nearly 2,00,000 lying at the ghâts when the account was made up, giving 27,50,000 maunds in all to be despatched into the interior.

Taking nine weeks' despatches from 28th March to 1st June to arive at destination by 15th idem, the present despatches would give us by the 15th June—

Nine weeks' despatches, at 1,83,930 maunds a weeks - - 16,55,370

17. But we have the certainty (or almost certainty) of the following increase by means of the railway:—

The Durbhunga railway will raise the despatches from Chumpta Ghât from 6,090 a day to 22,000 a day; and this increase will, it is hoped, last for at least fifty days, thus giving an extra supply of - - 7,95,500

or a total despatch of 24,50,000 against 27,50,000 to be carried.

18. 3,00,000 maunds remain.

For this we have the North-Western contractor Nilcomul, but he has not yet begun the work he undertook.

We may hope, further, that the reserve carriage will help to make up any possible shortcoming in the above calculation.

There is at least one further resource, and that is the North Bhagulpore transport. Mr. Hankey writes that this is now immensely powerful, and that he can undertake to carry three lakhs of maunds into Tirhoot through North Bhagulpore, if only he can get the grain delivered to him, or the railway to carry. It may be considered that the above 3 lakhs, then, may either be sent by the arrangements already made or by the Bhagulpore route.

19. The general result of the above seems to be, that if the traffic remains uninterrupted till 15th June, we may expect to carry the whole Tirhoot supply. In the event of an unusally early rainy season, the land traffic may be interrupted, but in that case we may hope that the necessity of the district will also cease earlier, and the water routes will be opened.

20 The only apprehension is, that owing to the delay in the Chumpta Ghât forwarding arrangements, when the railway begins to work fully, too much grain may be accumulated at Durbhunga, and there may be difficulty in sending it on in time to Allapore and other stations of Mudhoobunnee. In that view it would seem to be preferable to send part of the supply by the Bhagulpore routes to Allapore direct.

21. Seeing that it is not desirable to send forward from the river side to Durbhunga, more grain than can be forwarded to its ultimate destination, (after the rains commence Monghyr would be a better point of departure than Durbhunga), and seeing the complaints that have been made of interference with private trade, the Lieutenant-Governor thinks it would be desirable

not to take up local pack-bullocks and donkeys for transport from the Ganges, these animals being only used for the distribution beyond Durbhunga, when absolutely necessary.

22. The districts in the Patna division, south of the Ganges, call for only brief notice.

Shahabad.

19. The allotment for Shahabad is put by Sir Richard Temple's Minute No. 61, dated 26th March, at 127,000 maunds. The district has received 65,000 maunds. For the Soane circle 190,000 maunds are said to be required, of which 1,23,113 had been received. 66,887 more have to be ordered.

For the district and the canal together 128,887 more are required, of which 75,000 are to be rice, sent up to stations between Arrah and Mogul Serai. The rest is to be brought from the North-Western Provinces.

20. The district carriage has moved 3,000 maunds a day, and can do more if pressed. No grain has been sent since the 9th March for Arrah, or since 24th February for the Soane circle. Some has now to be sent, but there is no urgency in the despatches for either this district or Gya.

Gya.

21. Sir Richard Temple's Minute No. 60, dated 25th March, provides 220,000 maunds for Gya. 140,000 are already there; 80,000 more have to be sent. Of this, 55,000 maunds is to be rice, and 25,000 grain from the North-Western Provinces. Gya can move over 3,000 maunds a day. No grain has gone up since 8th March, owing to the shortness of railway waggons and demands of other places.

The transport of the allotted grain into the interior of the Shahabad and Gya districts can be effected without doubt or difficulty, if only the railway can carry the required amounts to the railway stations early enough in the season.

Patna.

22. The allotment here is 67,500, of which 58,822 have been delivered. None has been sent up since 23rd February; but as the district can move 22,000 maunds a day, it can take its balance at any time if required.

Bhagulpore.

23. For North Bhagulpore the allotment by Minute No. 25, dated 19th February, is 7,30,000 maunds.

The last transport returns show to 28th March 4,57,491 maunds received, leaving a balance due of 2,72,509 maunds. All the routes were working clear, and rice did not come to hand fast enough for the transport power. Sir Richard Temple wished 40,000 maunds a week to go for this district to stations between Bhagulpore and Monghyr; and Mr. Hankey writes that the transport power is expanding immensely, if only they could get grain to keep the carts employed. The railway despatches for the week beginning 30th March are to be daily:—

		Minimum.	Maximum.
		Mds.	Mds.
To Monghyr -	for North Bhagulpore - -	5,000	6,000
To Sultangunge -		4,000	6,000
		9,000	12,000
	Weekly =	63,000	=84,000

24. The actual daily average despatch into the interior from Jugdischuck, opposite Sultangunge, has been 3,610 maunds, and from Monghyr 3,520 maunds; but Mr. Hankey says that it is only want of grain that has kept the average down, as they really carried up to 7,682 maunds from Jugdischuck on an average of 11 days when full of grain. The Monghyr route can easily, he adds, carry 6,000 or 7,000 maunds a day. Even at the rate of 7,130 maunds from both ghâts, the whole balance due to Bhagulpore would be delivered in 38 days from 28th March, *i.e.*, by early in May. If they can carry, say 13,000 maunds a week, the whole will be cleared off in 21 days from the 28th March.

If Bhagulpore is to carry three lakhs of maunds for North Tirhoot, its carriage will be kept employed up to the middle of June.

Excluding, however, any arrangements for Tirhoot by this route, 6,000 or even 5,000 maunds a day would be a sufficient supply for Bhagulpore.

Monghyr.

25. The allotment for this district is fixed by Sir Richard Temple's Minute, No. 64, at 3,78,000 maunds, and of this quantity 1,92,000 had, when Sir Richard wrote, been received into the district, plus 20,000, by the Court of Wards, leaving to be sent 1,66,000, all of which Sir Richard Temple said might come from the North-Western Provinces. The transport returns show an actual receipt of 1,95,933 maunds. No despatches have been made from Calcutta for this district since the 13th March, as the demands of other districts were more urgent, and the carrying power of the East Indian Railway was considerably below the mark. The collector estimates that he has carriage available for over 5,000 maunds daily. The Monghyr grain stores and its distressed tracts are near to the railway; the district has already carried away promptly every maund it received, and if only the railway can supply the stations before the end of the season, all the Monghyr grain will be in position well before the middle of June.

Sonthal Pergunnahs.

26. Sir Richard Temple has settled that a total of 1,35,000 maunds in all should be sent to the Sonthal Pergunnahs. Of this 15,000 maunds have already been sent; the storehouses and distressed tracts are near the railway; and this moderate supply of grain can be carried into the interior as soon as it arrives.

Purneah.

27. For Purneah, by Minute No. 44 of the 7th March, the allotment is 6,50,000 maunds. Besides this, 1,50,000 were to be carried through Purneah into Dinagepore, while it was contemplated that 1,50,000 maunds for Purneah might go *viâ* the Mahanuddee. This arrangement leaves the amount to be carted by Purneah from Caragola at 6,50,000 maunds. Mr. Hankey's report of the 12th March estimated that the carriage had developed so that they could carry at least 2,00,000 a month. Up to the 22nd March they had carted away from Caragola 4,24,749 maunds, and the carriage was adequate to taking much more than they had got (viz., 8,922 maunds a day in the fortnight ending 21st March).

The transport return, dated 28th March, shows 4,36,645 maunds as received into the district at Caragola, leaving 2,13,355 to be received. But these figures are certainly a day or two in arrear. Probably we may say, in round numbers, that on the 28th Purneah had not more than 1,90,000 maunds to receive at Caragola, and part of this was already delivered at Colgong and Sahibgunj. But we may take 1,90,000 as an outside figure.

28. The average despatch into the interior from Caragola for 30 days ending 27th March was 6,800. At that rate Purneah will have completely received its supply *viâ* Caragola in 27 days, or by about the 24th of April. There will remain the 1,50,000 maunds which are to come into Purneah *viâ* the Mahanuddee to replace the 1,50,000 which Purneah has to give to Dinagepore. Mr. Hankey says he can carry this from Sahibgunj up the Mahanuddee after the rains begin, if necessary. If the East Indian Railway could carry all the grain we require before the rains, then Purneah could complete its allotment, plus the 1,50,000 for Dinagepore, by the Caragola route alone. But in case of necessity the Caragola despaches might be reduced to 5,000 maunds per diem.

Chota Nagpore.

31. A small quantity of grain (28,000 maunds at present) has been allotted to Manbhoom, and 25,000 maunds to Hazareebagh, and 10,000 to Palamow, which has been sent from the Soane allotment, being replaced there by despatches to an equivalent amount.

32. Moorshedabad is also at present permitted to draw up to 5,000 maunds from Government stores. Up to date only 500 have been sent.

East Indian Railway Power.

33. There remains now the all-important question of the carrying capacity of the East Indian Railway (of the Eastern Bengal Railway no doubt is entertained). The districts had in the last days of March yet to receive, *viâ* the East Indian Railway, in round numbers, the following quantities of grain:—

	Mds.	Mds.
To Sarun - - - -	1,50,000	
„ Chumparun - - -	4,00,000	
„ Tirhoot - - -	25,59,000	
„ Patna - - - -	10,000	
„ Gya . - - - -	80,000	
„ Shahabad and Soane circles -	1,28,000	
		33,27,000
„ Bhagulpore - - -	2,72,000	
„ Monghyr - - -	1,66,000	
„ Purneah - - -	1,90,000	
„ Sonthal Pergunnahs - -	1,20,000	
„ Dinagepore, by Hyatpore, 2,000 a day for 60 days - -	1,20,000	
		8,68,000
Grand total by East Indian Railway	- -	41,95,000, or about 154,000 tons
From this we may deduct—		
Mr. Hewitt's local purchases at Patna - - -	5,64,000	
North-Western Provinces' grain for Shahabad and Soane Canal	63,000	
North-Western Provinces' grain for Gya - - -	25,000	
Ditto ditto for Monghyr -	1,66,000	
		8,28,000
Which leaves for up trains -	- -	33,67,000 or about 124,000 tons.

At an average rate of despatch of 2,000 tons per day, this amount would be cleared off by the 31st of May.

This does not provide for Chota Nagpore and Burdwan requirements, which are not very great.

In fact, however, we cannot afford to delay despatches from Calcutta so long as the above, seeing the vicissitudes of the seasons, and that our district carrying power is now raised to a very high point. It would be extremely desirable to carry and store as much as possible in the next six weeks.

34. If we could work the railway up to the full amount that the carrying power of all the districts could be calculated on to take away, we should have to send about the following quantities weekly:—

	Mds.
For Sarun	35,000
„ Chumparun	60,000
„ Tirhoot, with the Durbhunga Railway appliances	3,10,000
„ Shahabad, Gya, and Patna	15,000
„ Bhagulpore	70,000
„ Monghyr and Sonthalia	20,000
„ Purneah	60,000
„ Chota Nagpore districts	10,000
Total	5,80,000

i.e., we should have to send 21,323 tons a week, or about 3,000 tons a day. This the railway cannot carry. But, as above shown, some districts will have drawn all their stock long before the latest date and the despatches of some must be eased off, so that if the railway can take without fail 2,500 tons a day, as now arranged, we may expect that all the grain will be stored before the rains, if the monsoon sets in at the usual time. This, however, will still involve some easing off of the transport now available.

Coming now to Eastern Bengal, and first—

Rungpore.

35. Sir Richard Temple's allotment for Rungpore is 300,000 maunds. Up to 27th March 1,46,534 maunds have been despatched from Calcutta, leaving 1,53,466 to be sent up in April and May. The transport returns show 1,29,004 received. The Eastern Bengal Railway Company's steamer can make 2½ trips from Goalundo to Kaligunge every month, and carry 25,000 maunds each trip. Mr. Davies, the sub-divisional officer of Goalundo, is also sending rice up in such native boats as he can hire suitable for the journey. These two sources of despatch will ensure 1,20,000 maunds being landed at Kaligunge on or before the 20th May. For the remaining 33,466 we have one of the Indian General Steam Navigation Company's steamers (either the *Bombay* or the *Lucknow*) and two flats, which will be transferred to Goalundo as soon as the Eastern Bengal Railway's additional steamer, the *Alfred*, commences to ply on the Kooshtea and Rajmehal route. She was to be at Kooshtea before April 1st; and the India General Steam Navigation Company's steamer, which is to be sent to Goalundo, will easily make two trips between the time she joins and the 10th May, carrying 20,000 each trip. This amply covers the 33,466 maunds required at Kaligunge to complete Sir Richard Temple's allotment. There is no reason to fear any break down in this part of the transport arrangements. It will rest with the local authorities to ensure the success of the transport from Kaligunge into the interior. When Sir Richard Temple wrote his minute No. 47, *i.e.*, on the 14th March, the rice for Rungpore itself was being carried by boat up the Teesta, and that destined for other parts of the district was being sent on by cart. There were 500 boats and 1,000 carts available, the estimated carrying power of which was 2,500 maunds daily. This would give a supply up to the 20th May of over one and half lakhs of maunds, and up to the breaking of the rains, say up to 15th June, of 75,000 maunds more. The water-routes will improve during the rains; and, unless any unforeseen accident should arise, the present arrangements may be confidently relied upon to perform the work expected of them. If more grain be required after the rainy season commences it can be sent up by water from Kaligunge, where a reserve can, if necessary, be stored.

Bogra.

36. The estimated requirements of this district are 241,000* maunds. Up to 27th March, (according to the transport returns, which are not, however, it is believed, really up to date,) 52,974 maunds had been received into the district, leaving to be sent, during April or May, 1,87,026 maunds. The India General Steam Navigation Company's regular steamers will take 10,000 maunds each trip, and can make three trips in April and two in May. This provides for 50,000 maunds. Then we have the New River Steam Company's Steamer *Nepal* and two flats plying between Goalundo and Shohagipara, and carrying 20,000 maunds each trip. Between 1st April and 20th May she will make four trips and carry 80,000 maunds. There remains but 57,000 maunds (in round numbers) to be provided for. This will be taken by the steamer *Sultan* and her two flats, recently hired from Mr. Jackson. She and her flats take 14,000 maunds, and ought to make at least four trips from the date of her arrival at Goalundo (during the four weeks in April) to the 31st May. If any further steamer power is required for this route, the India General Steam Navigation Company's steamer *Lucknow* will, as per the next foregoing paragraph, be free from the Kaligunge route by the 10th May. It

---

* *Vide* Sir Richard Temple's Minute of 16th March 1874.

remains for the local authorities to arrange to carry away the grain as fast as it arrives, and, with water and land carriage together, this will not be difficult.

Remaining Districts of Rajshahye Division.

37. With the exception of Bogra and Rungpore, which are supplied by steamer at two points, Shohajipara and Kaligunge, respectively, all the districts of the Rajshahye division and the Northern Bengal Railway draw their supplies by several routes from the following points:—Hyatpore, Manikchuck, Rampore Bauleah, Godagari, Dhapari, and Goalundo. It is impossible to say the exact destination of all the grain sent up from the above main depôts, and it is therefore necessary to group the remaining districts together, and treat them as supplied collectively therefrom; thus—

District.	Allotment.	Received at main depôts north of Ganges up to March 28th.	Balance to be received.
	Mds.	Mds.	Mds.
Dinagepore - - - - - -	1,200,000		
Maldah - - - - - -	150,000		
Rajshahye - - - - - -	100,000		
Northern Bengal Railway - - - -	100,000		
Total -	1,550,000	781,700*	768,300

38. By the latest returns available the actual despatches to the interior of the above districts average 17,000 maunds daily from all the depôts, *i.e.*—

	Mds.
From Hyatpore - - - - - - - -	1,300
„ Manikchuck - - - - - - - -	1,700

But the above is not nearly the full carrying power of the available transport, and the grain was being sent off nearly as fast as received. Until lately, the Rajshahye depôts have not been fully supplied with rice, owing to the greater and more urgent requirements of the other two divisions. If rice be available, the Eastern Bengal Railway can carry at least 28,000 maunds a day to the main receiving depôts at Kooshtea and Goalundo. At the rate of 17,000 maunds daily, all the rice, if delivered north of the Ganges, will have started for the districts in 45 days, or before the 12th May; and at the rate of 20,000 maunds daily, in 38 days, or by the first week in May. This would ensure most of its being stored before the rains.

In his minute No. 45 of 11th March 1874 on the Dinagepore district, Sir Richard Temple says:—"I have seen something of the transport arrangements, and so far as I have seen they are efficient.

* * * * * * *

The Collector and Commissioner are justified in their confidence that the million of maunds will be stored by the rains."

39. But in these districts it would be sufficient if the great mass of the grain reached main depôts on the upper reaches of the rivers before the rains commence. It could then be distributed easily in boats. And of the grain reaching such depôts in time there is now certainly no doubt.

40. The routes now being worked are thus described by Sir Richard Temple:—

"I. Railway, Eastern Bengal. Terminus *Goalundo.*

"By country boats across the Ganges to junction of its affluent the Oorasagur; then through the Chullun Bheel Lake into the Attrai, passing through the Pubna and Rajshahye districts to Nowgong, a depôt on the Dinagepore frontier; thence through southern part of the Dinagepore district to Putneetola on the Attrai, a distressed locality; distance entirely by water 70 miles.

"II. By steamer up the Brahmapootra to Noakeela opposite Bogra, thence by carts through Bogra district to Ghoraghaut and Bhadureea, distressed localities in south-eastern corner of the Dinagepore district; distance by water 120 miles, by land 50 miles.

"III. Eastern Bengal Railway. Terminus *Kooshtea.*

"By steamer and country boats up the Ganges to Rampore Beauleah, on north bank; thence by carts through Rajshahye district to Putneetola, already mentioned; distance by water 40 miles, by land 60 miles.

---

* These figures are certainly incomplete, 14,50,000 maunds have been despatched to the Eastern districts up to the 31st. The transport returns show only 9,63,686 maunds received at the depôts on the north of the Ganges in these districts including Rungpore and Bogra. But the balances on the 1st April at the despatching depôts on the south bank, were only 1,04,710 maunds, showing that much more than 9,63,686 maunds was on its way across, if not actually arrived.

"IV. By steamer and country boats up the Ganges to Godagaree, at junction of the Mahanuddee; thence by carts through parts of the Rajshahye and Malda districts straight on to Dinagepore. This is the first of the two main routes for the centre of the Dinagepore district; distance by water 60 miles, by land 90 miles.

"V. By steamer and boats to Godagaree; thence entirely by boats up the Mahanuddee to Rohimpore, junction of the Poorna-Bhaba in the Malda district; thence up the Poorna-Bhaba past Neetpore to Gungaramore, distressed localities in the Dinagepore district; distance entirely by water 140 miles.

"VI. By steamer and country boats to Godagaree, thence entirely by boats up the Mahanuddee to Malda, thence by carts through Malda district to Tumboolee, distressed portion of Dinagepore district, and on to Dinagepore. This is the second of the two main routes to Dinagepore; distance by water 110 miles, land 60 miles.

"VII. By steamer and boats to Godagaree, to Malda, where transhipped into smaller boats and carried up the Mahanuddee to Churamun (Dinagepore district), junction of the Koolik, thence up the Koolik to Raigunj, thence by carts to Hemtabad and its neighbourhood; distance by water 150 miles, by land 20 miles.

"VIII. By steamer up the Ganges to Manick Chuck, opposite Rajmehal, on north bank, thence by cart to Neema Serai on the Mahanuddee in district of Maldah, thence by boats up the Mahanuddee to Churamun (Dinagepore district), and Raigunj; distance by water 150 miles, by land 20 miles.

"IX. Station East Indian Railway, *Rajmehal.* Cross Ganges by boats to Manick Chuck, thence by carts to Neema Serai, thence by boats to Churamun. Also by carts past Neema Serai to Dinagepore; distance by water 40 miles, by land 20 miles in the first case and 60 in the second.

"X. Station East Indian Railway, *Sahebgunj.* Down Ganges by boats to Hyatpore, north bank; thence by carts through Malda district to Churamun and Raigunj; distance by water 20 miles, by land 25.

"XI. *Sahebgunj.*—Across river by steamer to Caragola, thence by carts through Purneah district to Dengrah Ghaut, thence to Hemtabad (Dinagepore district) and to Kishengunj (Purneah), thence to Nekmurd (Dinagepore); distance by water   miles, and by land 90 miles in the first case and 129 miles in the second case."

The Manick Chuck route has since been abandoned, but as its carriage will be made available for other lines there is no general loss of carrying power.

42. The only question remaining is whether there is transport enough to get the grain across the Ganges in time. For ferrying the Government grain across the Ganges from Kooshtea there are now working, besides country boats, the steamers named in the margin; and the transport officer at Kooshtea reports that he can put across the river from Kooshtea up to 300,000 maunds a month; and he has worked up to this rate for some weeks. It would seem, therefore, certain that the arrangements made are more than sufficient to secure the object in view.

Peel and two flats; *Koladyne* and one flat; *Lucknow* and two flats; *Bombay* and two flats; *Star of Dacca* and one flat. It is expected that the Eastern Bengal Railway Steamer *Alfred* with two flats will take the place of either the *Bombay* or the *Lucknow* and set her free from the 1st April, for the Bogra route. There will still remain, however, five steamers on the Kooshtea berth.

A. MACKENZIE,
Junior Secretary to the Government of Bengal.

Calcutta, the 30th March 1874.

Sir R. Temple's Note regarding the Railway Transport.

MINUTE, No. 68, by the Honorable SIR RICHARD TEMPLE, K.C.S.I., dated Calcutta, the 4th April 1874.

1. His Honor the Lieutenant-Governor has shown me the proceedings of the Government of Bengal regarding the transport arrangements for the Patna and Bhagulpore divisions, and invited me to state my opinion as to the means of inland carriage in those two divisions in relation to the transport of Government grain by the East Indian Railway Company.

2. From a consideration of the latest returns received, it appears that the inland carriage is carrying away from the several railway stations upwards of 2,000 tons a day. And this, too, after allowing for a short quantity, below engagement, being carried by the Alliance Company, and without counting the Government reserve carriage.

3. The Durbhunga State Railway has begun to carry grain, and will very shortly be carrying 800 tons a day. This quantity, added to the 2,000 tons, will make up a total of 2,800 tons daily.

4. I understand, however, that the Railway Company are not at present prepared to carry more than 2,500 tons daily. It is, of course, of vital importance that the amount carried should never, even for a single day, fall short of this amount. If this amount be maintained, the total quantity allotted will be sent forward from the several railway stations before the 1st June, and stored at the depôts in the interior by the 15th June, that is, the commencement of the rainy season, provided that no unforeseen accident occurs. And therefore the proposed arrangement may prove sufficient.

5. On the other hand, it has been seen above that the inland transit in the Patna and Bhagulpore divisions is now carrying, or is prepared to continue carrying, away somewhat more than the amount above set down, and I learn from the proceedings of the Government of Bengal that in some places the demands of the local authorities for Government grain have been unavoidably reduced, in order that the limit of 2,500 tons daily, set down to be carried by the railway, may be observed.

6. Looking to the latest reports, I should consider that 3,000 tons daily can be carried away by local resources, from the several railway stations thus:—

	Tons.
Durbhunga Railway - - - - - -	800
Country carriage - - - - -	2,200
	3,000

It is to be observed too that the Durbhunga Railway is reported to be able to carry from 1,000 to 1,200 tons a day, and that the short-coming on the part of the Alliance Company may yet be partly retrieved.

7. On the whole, it is not too much to say that if every effort be strained by the local authorities to carry away the grain as fast as possible, upwards of 3,000 tons a day could be sent forward from the railway stations.

8. The result might be, that the various quantities which make up the total amount allotted, would arrive at their various destinations in the interior of the districts some time before the latest safe-day, namely, the 15th of June. This would not be a disadvantage, but on the contrary a great and a commanding advantage, for it would be a safe-guard against the many unforeseen accidents which might occur towards the end of the hot season. This margin of time might allow the authorities to repair losses, damages, or misfortunes, to which such a service and such operations as those now before us are very liable. It is therefore greatly to the interest of the districts concerned and conducive to the safety of the people that the authorities should have grain supplied to them (within the limits of the allotments), as fast as they can carry it away.

9. Great pressure has been put upon the local authorities to organise their transport as strongly as possible. And they have answered to that call in a manner which will, I trust, be found worthy of the approbation of Government. And it would be very convenient if their districts could be allowed to reap the full benefit of these arrangements.

10. If, therefore, it be possible for the East Indian Railway Company to carry more than 2,500 tons of Government grain a day, say 3,000 tons, or even 3,400 tons a day, that would be a considerable advantage to the general relief operations in Behar. Whether the Company could do this, with due regard to other considerations, is a matter on which I need not attempt to give an opinion. But I should feel sure that, subject to the direction of the Government of India, the Company will endeavour to effect this object if it be found reasonably practicable.

11. It is to be remembered that the amount carried by local carriage, as above set down, refers to the Patna and Bhagulpore divisions and is irrespective of the local carriage of the Rajshahye division.

12. In offering these general remarks, however, I do not forget that besides the question of the carrying powers of the East Indian Railway, there is the consideration of the transport by sea from Burmah to Calcutta. It may or may not be possible to land sufficient quantities of the rice at Howrah in time to afford consignments to the amounts required to keep the inland carriage, up-country, up to its full working power. That, of course, is a matter upon which I am not, at this moment, able to form any accurate opinion.

No. 2257—S.R.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department, to the Deputy Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce.

Scarcity and Relief.

Sir,

Calcutta, dated 10th April 1874.

In reply to your letter No. 1128, dated 2nd April, I am directed to solicit a reference to the summary of grain transport arrangements recently submitted* to the Government of India, and also to submit copy of the papers marginally† noted.

* No. 2088, dated 6th April 1874.

† Government of Bengal to Commissioner, Rajshahye, No. 2,254, dated 10th April, with enclosures.

to bear in its very infancy the strain of a great crisis such as this which has arrived. The assistance which we obtain from other provinces is not in a moment adapted to a country and a system entirely different. Our anxieties have been spread over so wide a surface that it has not been possible to concentrate all our power on the points where the worst distress has actually occurred till the facts have solved all doubt. Moreover, there is this special difficulty, that we have the smallest machinery in the tracts inhabited by a quiet, poor, long-suffering race who give little trouble in ordinary times. North Behar is probably the most under-governed country in India; one young man as sub-divisional officer has there ruled and judged a population which would elsewhere have been provided with a full district machinery. (Of the Durbhunga Sub-division, for instance, the population is 867,409.) Yet here is the very population which comes on us in a body in the most helpless state. I am not surprised, then, that in such a sub-division as Durbhunga, notwithstanding the official aid which we have sent, there should have been some failure to meet the rush of the famine when reliance was placed too exclusivsly on official agency, and there was delay in attempting to work roughly with indigenous agency till the Government agency should be complete. I must strongly impress on all officers that whenever and however distress may come upon them, and to whatever extent they may and do properly apply for Government aid, they must not omit to do the very utmost that is possible by the means which their districts afford.

3. It has been already arranged to portion each sub-division into relief circles under competent Government officers; what is most wanting is inferior machinery reaching down to each village.

Village agency required.

It is certainly true that indigenous agency of one kind is very much wanting in North Behar. The active and intelligent middle class found in many districts of Bengal is scarce. Many zemindars have been too much in the habit of letting their villages to mere rent-farmers, and there is often difficulty in getting efficient aid from either zemindars or farmers. But on the other hand, when we go lower down, there is more of the old village machinery than in Bengal. Almost every village has its headman or jeyt ryot, and putwari, and there are a good many—Brahmins, Mahomedans, and others—who have a certain amount of native education. The census of Behar was almost entirely taken, and well taken, by the putwaris and headmen, and it seems to me that the machinery which could take the general census may well be used to census the poverty-stricken in each village, make lists of them, keep relief accounts, and work the village system of relief which the Government desires to adopt.

Headmen and putwaris.

Zemindars and their agents, and European planters.

4. The utmost use must be made of the zemindars and their agents and dependents. Every possible pressure must be put on those who are at all backward to induce and compel them to do their duty. In North Behar we have the very great advantage of the assistance of a very active and energetic body of European indigo planters. The aid which they have most willingly given has been almost everywhere fully used, and should be so everywhere.

Local committees and individual members of such should undertake specific duties.

5. The orders for local committees must be carried out in good faith. It may be true, as some officers assert, that committees are sometimes a sham; but either acting in committee or, still more, acting separately as individuals, every good resident should be utilised. The best way of beginning is to bring them together in committees, to portion off duties, and let it be settled in the presence of the body of the committee that each man capable of aiding is to undertake some specific function in a specific place or in a specific area.

Superintendents of groups of villages.

6. A very good plan had been formed of appointing to the charge of groups of villages paid superintendents, selected from the people of the country; the only drawback was the delay in effecting this, pending the completion of a large superior establishment for which European officers were thought to be indispensable. In Mudhubunnee and Hattee about Rs. 15 per mensem or less was allowed to these group superintendents. The Durbhunga plan which was circulated contemplated a uniform rate of Rs. 30 per mensem. I do not know that paying high and uniformly secures efficiency, and sometimes volunteers will do the work better than paid men. I would allow a discretion in regard to pay according to the circumstances and the class of people obtainable in each locality; but, subject to this caution, I entirely approve of carrying out the system of group superintendents. I trust it has now been nearly completed in North Tirhoot.

Village organization.

7. But beyond this, the point on which I have most dwelt is that we must not stop short with the group superintendents, paid or unpaid. We must have a proper organization in each village. The moment we go beyond the stage of great public works it is totally impossible to deal with the people in detail unless we have them localised and individualised, village by village and name by name. We cannot send them away from the roads till the village machinery is ready to receive them; we cannot distinguish people receiving relief by labour, charitable relief, and relief by advances, or prevent the same persons from receiving relief in different shapes till we have all those receiving relief registered, name by name, according to their villages, by some person who knows them, and who can be made responsible for their coming and going. Above all, it will be totally impossible to deal with the people on our hands and wean them eventually from dependence on Government unless we have an individual knowledge of them in their villages. I have occupied myself then in impressing on the local officers the necessity of carrying out a village organization. This should be done as much as possible through the zemindars. No man in the position of a landholder should be absolved from his duties and responsibilities if it be possible to obtain assistance from him. Finally, the headmen and putwari must be utilised in each village. They will keep a nominal roll of all persons in the village receiving relief either on works or gratuitously. Through them the village management may be conducted, and they will be responsible to check abuses. Small rewards according to work done may be promised and given to such headmen and putwaris. I authorise the Commissioner to arrange details of their remuneration.

Sirdars and mates of labourers.

8. It is generally desirable to allow the labourers to choose their own headmen, through whom they are paid, and through whom they deal with Government officers.

The circle officers may, however, both make use of and give relief to a certain number of persons unaccustomed to manual labour by appointing them to be petty overseers of charitable relief, watchmen over the grain stores, and so on.

Utilization of local police.

9. All the local police are to be subordinate to the circle officers for relief purposes, and may be utilized freely.

Famine of money and famine of food. Effect of the former.

10. The above arrangements are best carried out before severe distress has actually come on us; but in Durbhunga (partly on account of insufficient action in the direction above indicated) and in Madhubunnee we have experience of another and farther phase of the subject, viz., that in which very large numbers of people come on our hands for relief in great masses congregated together. I myself saw vast assemblages of this kind near Durbhunga, and by the last accounts still greater numbers were on relief works in the Madhubunnee sub-division, though not so much reduced in condition as the Durbhunga people. It may be said that famines are of two kinds, or at least there are two stages of famine—famine of money or labour famine, and famine of food-supply. It may, in rare cases of isolated districts, happen, as it did in Orissa, that the two stages become one, or that the famine is from the beginning an absolute deficiency of food-supply, the case being, as was stated in regard to Orissa, like that of a ship at sea which is suddenly found to be short of provisions. But with rare exceptions a money or labour famine precedes a food-famine, that is, food is to be had for money but it is dear, and the poorer classes, being thrown out of work, have no money to buy it. Very often the famine never goes beyond this stage; it has almost always been so in the North-Western Provinces, where there are abundant means of communication. Some of our stricken districts being very isolated we have feared and guarded against a food famine. But so far this has not come upon us. I have seen that even in North Tirhoot the bazars are still supplied; an active private import (by driblets in bullock-loads) is still going on, and food though dear has not reached what can be called extreme famine prices. Notwithstanding, however, the existence of supplies in the bazars* up to date, there is certainly what we must consider wide-spread famine; in some limited tracts some people have suffered from want of food before coming to our relief works, and in very considerable tracts the people have come to the relief works with a rush in very large numbers. Although these simple people very much follow one another like a flock of sheep, they are at first slow to move; and, even when they have not actually starved, I do think that when they very suddenly come to us in this unusual way in very large numbers it is a sure indication that what must be called famine is on them, that is, that they have reached the point when they would starve if not relieved.

Provision of work.

11. The first mode of relief for the Government to undertake is clearly (and this has always been recognised) giving work to the poorer classes who are without work and without means. The better classes who do not work on the roads generally do not starve till a later stage; they have some credit if not some property. While the producing and wages-earning classes maintain themselves, most of those dependent on them, even the beggars, are for the most part in some sort maintained also. Rich natives do a good deal in this way, and I saw two or three faqueers living on a gang of relief labourers in Tirhoot. At any rate, the beggars and helpless people who come on mere charity, and are not supported by private liberality, may well be provided for in the early stages of scarcity by the relief committees without a very large Government organisation.

In the present stage then the public works have been our most active care. Under previous instructions a good deal had been done in most districts to prepare plans of such works for emergencies, and more has been done since the present famine threatened. In those districts where the numbers seeking relief are not very excessive, I believe that our preparations have been sufficient; but in some districts where no very large special works are available, and enormous numbers have suddenly come on us, it cannot be said that either the plans of our works or our establishments are sufficient to enable us to obtain full money's worth from the labour of a needy multitude, among whom little organisation is, in the first instance, possible. In fact, there is no denying that in some of these cases our organisation has not been such as to prevent the occurrence of what must be called great abuses, judged by the standard of ordinary times.

Mode of dealing with a sudden rush of population to works.

12. In Behar, at any rate, women and children come on the works quite as readily as men; and it is because the whole family works, or pretends to work, that somewhat low wages with dear food are not incompatible with an almost liberal measure of relief, measured by the fare to which these poor people are accustomed—a very low one. Wherever some of the people have begun to starve, or nearly to starve, it is impossible to refuse work to all applicants, whether really capable of real work or not. The result of the suddenness of the rush upon us in some places, and the necessity of being on the safe side where famine has threatened, has been that we certainly have, and to some extent must still have, great multitudes on our works doing very little real work and very imperfectly supervised. But I have felt that this is better than letting the people starve, and that it must continue till we can sift them out and deal with them in detail: we cannot send them away till this is done. At the same time, I am clear that this cannot continue, and the first work which I have set Mr. Metcalfe (the Additional Commissioner) and the local officers to do is to make arrangements for dispersing these multitudes. Fortunately, the climate at this season is favourable; the people seem not to dislike the assemblages in which they are gathered, and I hope no great harm beyond a somewhat prodigal expenditure of money

---

* From what I saw of the activity of petty private trade, my impression is that for some time to come the bazars would be supplied in this way if it were not that the pressure on carriage for the transport of Government grain is beginning to interfere very seriously with the means of private traffic. Much complaint is now made that private people cannot obtain carriage, and that the bullocks and donkeys which hitherto supplied the bazars are taken up by the contractors. This is no doubt a great evil, and the local officers should do all that is possible to avoid it.

whether Western Rungpore and Bograh should draw any part of their supplies *viâ* Nowgong and the Northern Bengal Railway grain routes. If, however, you should decide to carry all the grain for these two districts along the routes previously settled, immediate pressure must be put upon the Magistrate Collectors of Rungpore and Bograh to increase their cart-power, and to carry away all these allotments before the rains.

7. Mr. Toynbee will be instructed to comply with your instructions and to shut off despatches for the Hyatpore route after Wednesday next, the 15th April, unless he hears either from you or Lieutenant Elliot that contracts have been made with cartmen for despatching grain after that date.

8. The Lieutenant-Governor desires me to add that, if you detect any error in the figures set out in the present letter, or if you consider that any of the arrangements now under contemplation should be altered, you should at once make a representation to Government. The Lieutenant-Governor will be glad to learn what explanation is given by Mr. Dawson in reply to your inquiry as to the large quantity of grain shown as "in transit" against Kooshtea.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 2255—S.R.

Copy, with copy of the enclosures, forwarded to Mr. Toynbee with special reference to paragraph 7.

No. 2256—S.R.

Copy of the letter, without enclosures, forwarded to the Commissioner of Bhagulpore, with reference to paragraph 4, and with the request that he will communicate with Mr. Molony as to the places at which he would wish the Purneah reserve supply to be stored, until the Mahanuddee rises.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Calcutta, the 10th April 1874. Officiating Secretary to the Government of Bengal.

No. 669—S.R., dated Berhampore, the 29th March 1874.

Memorandum by E. W. Molony, Esq., Commissioner of the Rajshahye Division.

Copy of the following correspondence forwarded to the Secretary to the Government of Bengal Statistical Department, for information with reference to his endorsement No. 1,665—S.R., dated 21st instant, on Sir Richard Temple's memorandum therewith forwarded.

No. 668 C.—S.R., dated Berhampore, the 29th March 1874.

From E. W. Molony, Esq., Commissioner of the Rajshahye Division, to F. A. Dawson, Esq., Kooshtea.

I have the honour to forward to you a copy of a statement I have this day sent to Mr. Toynbee, and of my covering letter. I also annex the rice statement of this Division made up to the 28th instant.

2. I request your attention to the large quantity shown as in transit in column 4 against Kooshtea, and would request the earliest possible attention to those figures. The statement is compiled from your advices of receipts up to the 25th of March inclusive, and the advices of receipts received from the several receiving Golahs up to the dates shown in the margin against each. The principle on which the statement is made out, is to show all receipts advised in column 3, to write off amounts advised as received in column 5, and to show the balance in column 4.

Godagaree - - - -	25th March.
Rampore Beauleah for Dinagepore -	24th "
Ditto for District Golahs -	24th "
Ditto for Railway. No advices, figures up to middle of February.	
Dhapparee - - -	23rd "
Hyatpore - - - -	25th "
Mauick Chuck - - -	26th "

No. 670, S.R., dated Berhampore, the 29th March 1874.

From E. W. MOLONY, Esq., Commissioner of Rajshahye, to G. TOYNBEE, Esq., Calcutta.

In forwarding the accompanying statement of rice transport progress in this division, I have the honour to request you will inform me when you expect to have the full quantity supplied to Kooshtea, and whether you will be able to supply Shahebgunge with 50,000 maunds for Hyatpore *vid* the East Indian Railway, at the rate of 2,000 maunds per day.

2. I would also ask you to consult your despatch registers to check the figures of the divisional statement, inasmuch as, specially as regards Kooshtea, Mr. Dawson brings the bags on stock at over various weights, two maund bags sometimes up to 2-5-0, and some bags at 1-1-0 and 1-2-0, and I have not ascertained yet clearly, whether this is gross or net weight.

3. As the Kooshtea steamers will be shortly liberated, there will be no difficulty in getting up the 3½ lacs to complete the Bogra and Rungpore allotments.

4. I append a copy of my fortnightly statement up to the 28th, submitted to Government, and would explain that the principle upon which it is compiled is to show all receipts adviced by the receiving depôts in column 3, to write off the amounts acknowledged to have arrived at the depôts mentioned in column 5, and to show the balance in column 4, which, therefore, displays all short weight, loss in transit, and, in fact, all that is unaccounted for.

5. I would also explain that my figures in column 3, include under Kooshtea 4,160 maunds, and under Goalundo, 37,000 maunds. Of the Railway Burmah rice first sent, you will remember that there was a confusion about this, a great deal having been booked by you to Kooshtea which was intended for Goalundo. The figures also include of local purchases under Kooshtea 1,076 maunds, and Goalundo 42,324 maunds.

FORTNIGHTLY STATEMENT of RICE for the Fortnight ending the 28th March 1874.

Division.	Total grain allotted.	Received into Division.	In Transit from point of Receipt.	Arrival at final Destination.	Explanation or Remarks.
Rajshahye - -	Dinagepore - - 12,00,000	Kooshtea - - - 770,253	Kooshtea (*a*) - - 288,265	1. Godagaree for Dinagepore and Maldah - - - 294,039	(*a*) One boat containing 1,250 maunds sunk in the Ganges near Belwah in Rajshahye; considerable portion of the cargo was got up by divers, but it was not fit for storage.
	Rungpore - - 3,00,000	Goalundo - - - 227,757	Goaloundo (*b*) - - 91,501	2. Rampore B. for Dinagepore - 35,604	
	Bograh - - - 2,40,000	Kaligunge in Rungpore 115,517	Rajmehal and Shahebgunge - - - 6,182	3. Shabebgunge for ditto - 38,443	(*b*) A further quantity of 400 maunds was lost by a boat sinking in the Attrye.
	Maldah - - - 1,50,000	Serajunge - - - 10,000		4. Nowgong for ditto (*c*) - 20,358	(*c*) Of this quantity 53 maunds is damaged rice saved from wreck.

At Shusgeeparah, H. - - - -		10,000						
			Balance due -	I. 2,80,491	J. 3,82,786			

A.—These entries show half the quantities proposed to be stored at the places in each district by Major Lindsay's Note, submitted with his letter No. 1679, dated 5th March 1874.

B.—This entry is the amount proposed to be sent off from the district allotment in addition to the moiety of the railway rice. I should be inclined to increase it by Rs. 10,000 and to transfer Rs. 10,000 of the railway store at Sooltanpore to credit of Bogra, thus reducing the entry in column 3 against that district to 215,000, and the total of column 3 to 2,065,000.

C.—This amount has been reduced ratiably from the district allotment and is added here, as I understand the rice will be carried and stored by the railway authorities, and that they will simply hold half the stock available for indents of the District Officers, if required.

D.—The entries in this line are the totals for Dinagepore and Maldah, as at present I have no data to show exactly how the rice has gone by each route. The whole of the Maldah allotment must go by main route No. 1.

E.—Maunds of 1,076 of local purchase is included in these figures, the whole of the rest has been received from Calcutta.

F.—The local purchases are included in this sum, but it is not quite certain whether the whole of the Dacca supply has yet been finally received in Rungpore. There cannot be, however, a larger balance due than 3,000 maunds.

G.—Mr. Dawson's receipts are entered according to the railway weights, taken by average, and are therefore in excess of those shown by Mr. Toynbee's advices.

H.—The latest dates of receipt shown in the statement, from which these figures are taken, are as advised on the dates shown below:—

Kooshtea	25th March.
Rajmehal	26th „
Shahebgunge	27th „
Goalundo	25th „
Kaligunge	23rd „
Serajgunge	No more expected.
Shahazirpara	22nd March.

I.—Of this, it would be well to send 50,000 by East Indian Railway to Shahebgunge, and 230,000 by Eastern Bengal Railway to Kooshtea.

J.—Of this amount, I calculate that 41000, in round numbers had still to be sent by the Oorasagor on the 25th March. The balance 341,786 has to be sent either from Goalunda or Calcutta by the Brahmaputra.

K.—Mr. Hankey has informed me that this quantity can be easily given by Purneah, I therefore presume that it is not necessary to send an equivalent up the Mahanuddy for that district. If such is the case, extra steamers will be available during the latter part of April for the Brahmaputra.

Dated Calcutta, the 4th April 1874.

Memo. by G. TOYNBEE, ESQ., C.S., on special duty.

Copy forwarded to the Secretary to the Government of Bengal, Scarcity and Relief Department, with special reference to paragraph 4.

Dated Calcutta, the 4th April 1874.

From G. TOYNBEE, ESQ., C.S., on special duty, to the COMMISSIONER OF RAJSHAHYE.

IN reply to your No. 670—S.R., dated the 29th March 1874, I have the honour to forward two statements, A and B, showing the position of your division as regards supplies of grain from Calcutta.

2. The balance of 2,24,611 maunds to be sent up to Kooshtea (and which includes 1,50,000 maunds for the Purneah district) will be easily finished by the end of April at latest. The 12,469 maunds for Sahebgunge will have been all despatched by the 6th or 7th April.

3. The weights brought on my books are the gross railway weights on which freight is paid, reduced to the standard of Indian maunds of $82\frac{2}{7}$ths lbs. I cannot say how the local officers have calculated the grain which they have received and despatched; but as my consignments are by tally and also by weight, and as I get receipts for them from the consignees, there will, I apprehend, be no difficulty in clearing up any discrepancies in the final account. Until despatches cease, it is only possible to keep a running account.

4. A copy of this letter has been furnished to the Secretary to Government, Scarcity and Relief Department, for orders as to the continuance of despatches to Sahebgunge by East Indian Railway.

STATEMENT A.

NAME OF DEPÔT.	Date up to which figures are given for each.	Amount received as per Mr. Toynbee's books.	Amount received as per local officers' accounts,	Difference (compared with column 1).		REMARKS.
				Excess.	Deficiency.	
		Maunds.	Maunds.	Maunds.	Maunds.	
Kooshtea -	25th March -	7,75,980 (*a*)	7,70,258 (*a*)	—	5,727 (*a*)	(*a*) The difference is probably due to loss in transit, for which I believe Mr. Dawson makes allowance; includes 1,076 maunds local purchases.
Goalundo	25th „ -	2,18,562 (*b*)	2,27,757 (*b*)	9,195 (*b*)	—	(*b*) This includes 42,324 maunds of local purchases. I cannot account for the difference, but as I get receipts for all I send up, it is probably due to a confusion of dates, those entered on the railway receipts not being always the date of despatch, but sometimes the day after.
Rajmehal -	26th „ -	76,080	58,495	—	17,585 (*c*)	(*c*) The difference, is, I think, due to the omission in the Commissioner's statement of the quantity sent up direct to the Northern Bengal Railway storekeeper at Rajmehal before the route was used for divisional grain.
Kaligunge -	23rd „ -	1,15,652	1,15,517	—	135 (*d*)	(*d*) Probably loss in transit.
Sohagipara -	22nd „ -	20,000	20,000	—	—*	
Sahebgunge -	27th „ -	59,671	59,701	80 (*e*)	—	(*e*) Probably excess delivery by Railway Company.

* In the Commissioner's statement Serajgunge is mentioned as having received 10,000 maunds, but from here all rice for Bogra is consigned to Sohagipara.

B.

STATEMENT showing the BALANCE on 1st APRIL of RICE to be sent up from CALCUTTA to the RAJSHAHYE DIVISION, and the routes by which it is to go.

Route as per Commissioner's statement.	Balance remaining to be sent up as per Commissioner's statement.	Deduct amount despatched to the various depôts from dates given in statement A up to 31st March.	Balance remaining on 1st April to be sent up.	REMARKS.
	Maunds.	Maunds.	Maunds.	
Route No. I -	2,80,491	1,93,411	87,080	Of this 74,611 to Kooshtea + 1,50,000 for Purneah = 2,24,611, and 12,469 to Sahebgunge.
	For Purneah -	-	1,50,000	
Route No. II -	3,82,786	55,185	3,27,601	All this to go to Goalundo, and thence by steamers and country-boats. When the Kooshtea supply is completed, the steamers on that route will be available for the Brahmapootra.
Total - -	6,63,277	2,48,596	5,64,681	

G. TOYNBEE, C.S.,
On Special Duty.

APPENDIX D.

No. 117, dated Bhagulpore, the 27th March 1874.

From L. C. ABBOTT, Esq., on special duty with the Honourable SIR RICHARD TEMPLE, K.C.S.I., to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I AM directed to forward copy of a Minute, No. 57, recorded by Sir Richard Temple on the requirements of the Tajpore Sub-division.

MINUTE by the Honourable SIR RICHARD TEMPLE, K.C.S.I., No. 57, dated Bankipore, the 24th March 1874.

The Commissioner, Mr. Bayley, has shown me two reports by Mr. Wace, the sub-divisional officer at Tajpore, regarding the grain requirements of that sub-division.

2. Mr. Wace's estimates are based on the numbers, calculated by per-centages on the total population in each tract, of persons who may be expected to need assistance.

3. The quantity thus brought out comes to 66,000 maunds of grain, out of which 8,000 maunds are already stored at Possa, leaving 58,000 maunds to be sent.

4. The question is whether the 58,000 maunds should be added to the total requirement of the Tirhoot district already presented (42,000 maunds).

5. I think not: the quantity required for Tajpore can be taken at the discretion of the Commissioner out of the general supplies of the Tirhoot district.

No. 1911—S.R.

COPY forwarded to the Commissioner of Patna, with a request that he will report from what allotment the additional supply for Tajpore should be taken.

By order of the Lieutenant-Governor,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta, Scarcity and Relief Dept.,
The 28th March 1874.

No. 113, dated Bankipore, the 25th March 1874.

From L. C. ABBOTT, Esq., on special duty with SIR RICHARD TEMPLE, K.C.S.I., to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I AM directed to forward copy of a minute, No. 59, recorded by Sir Richard Temple, regarding allowances for native officers sent to Behar from the North-Western Provinces.

MINUTE, No. 59, by the Honourable SIR RICHARD TEMPLE, K.C.S.I., dated Bankipore, the 25th March 1874.

I HAVE consulted with Sir W. Muir and Mr. Inglis regarding the granting of allowances to the Deputy Collectors and other officers lent by the North-West Government for famine relief work; and Mr. Inglis, at my request, kindly drew up the accompanying note on the subject.

2. The proposals therein contained seem to me to be very moderate. I would strongly recommend that the allowances set forth in Mr. Inglis' note be sanctioned.

NOTE by Honourable J. D. INGLIS.

DEPUTATION allowance to be drawn by Deputy Collectors and other native officers sent to Behar.

The Deputy Collectors ordered down are—

Kour Luchman Singh;
Pundit Adjodya Pershad;
Mahomed Mohsin;
Enayat Hosain Khan.

Kour Luchman Singh draws Rs. 600 a month, the others draw Rs. 250.

The tehsildars sent down draw Rs. 200 a month, the peshkars draw Rs. 50 a month.

Deputy Collectors, when in camp, in these provinces draw a travelling allowance of Rs. 3 a day or Rs. 90 a month; considering that these men are to be employed at a distance from home and in a province where prices are at famine rates, I think they should, while in Bengal, receive a slightly higher allowance.

The duties that the officers of the rank of Deputy Collectors or tehsildars will be employed on will be of the same description. Their responsibilities and expenses will be the same. I would, therefore, propose that officers of these classes should draw a fixed deputation allowance of Rs. 100 a month and not an allowance calculated by a per-centage on their salaries.

The peshkars should, I think, get an allowance of Rs. 50 a month.

Allahabad, the 23rd March 1874.

No. 1899—S.R.

From A. MACKENZIE, Esq., Junior Secretary to the Government of Bengal, to the DEPUTY SECRETARY to the GOVERNMENT OF INDIA, Department of Agriculture, Revenue, and Commerce.

SCARCITY AND RELIEF.

Calcutta, dated 28th March / issued March 1874.

SIR,

I AM directed to submit herewith copy of a letter No. 113, dated the 25th March 1874, from Mr. L. C. Abbott, forwarding Sir Richard Temple's Minute, No. 59, of the same date, relative to the allowances to be assigned to the native officers lent by the Government of the North-western Provinces to this Government for employment on famine duty in Behar.

2. I am to report for the approval of the Government of India that, in compliance with Sir Richard Temple's strong recommendation, the Lieutenant-Governor has, in anticipation of sanction, authorised the grant of consolidated allowance at the rate of Rs. 100 per mensem to the Deputy Collectors and tehsildars, and at the rate of Rs. 50 per mensem to the peshkars, so long as they may be employed in these provinces.

I have the honour to be, Sir,
Your most obedient servant,
A. MACKENZIE,
Junior Secy. to the Govt. of Bengal.

No. 109, dated Malda, 18th March 1874.

From G. H. R. HART, Esq., on special duty with SIR R. TEMPLE, K.C.S.I., to the Honorable C. E. BERNARD, C.S., Officiating Secretary to the Government of Bengal.

I AM directed to forward, for submission to His Honor the Lieutenant-Governor, copy of a minute by the Honorable Sir Richard Temple, No. 52, dated 18th March, summarising under one view the main points connected with the districts of Dinagepore, Rungpore, Bogra, and Malda, as regards the anticipated distress therein.

MINUTE No. 52, by the Honorable SIR RICHARD TEMPLE, K.C.S.I., dated Malda, the 18th March 1874.

1. I HAVE now completed my journey through the worst portions of the four districts of the Rajshahye division where severe distress is expected, viz., the districts of Dinagepore, Rungpore, Bogra, and Malda, which have been formed by the local Government into a separate relief division under Mr. W. Le F. Robinson as Commissioner. The observations and proposals which I have made regarding each of the districts will be found in the Minutes Nos. 45, 46, 47, 48, and 51, dated 11th, 14th, 16th, and 18th March. It now remains briefly to summarise the main points under one view.

2. The area and population of the four districts may be stated as follows:—

Districts.	Area in square mile.	Population.	Number per square mile.
Dinagepore	4,126	1,501,924	364
Rungpore	3,476	2,149,972	619
Bogra	1,501	689,467	459
Malda	1,813	676,426	373
Total	10,916	5,017,789	459

3. The number of persons which I have estimated, in consultation with the local authorities, as likely to need aid from Government during the worst months of the distress, together with the percentages of such numbers on the population, may be stated thus:—

	Numbers at worst from 2 to 4 months.	Percentage on population.	
Dinagepore	426,530	60 per cent. on	419,500
		30 ,,	582,766
Rungpore	127,400	20 ,,	123,000
		15 ,,	255,000
		10 ,,	120,000
		50 ,,	18,000
		5 ,,	145,000
Bogra	112,500	30 ,,	258,123
		20 ,,	175,243
Malda	62,433	30 ,,	92,011
		25 ,,	55,316
		15 ,,	48,999
		10 ,,	103,758
		5 ,,	65,548
Total	728,863		

4. The provision of Government grain, as already ordered by the local Government, or as now proposed by me, may be thus stated in maunds:—

	Already ordered by local Government.	Additional, proposed me.	Total.	Already advised in district up to 7th March.
Dinagepore - -	10,00,000	2,00,000	12,00,000	2,00,000
Rungpore - -	2,00,000	1,00,000	3,00,000	1,20,000
Bogra - - -	50,000	1,90,000	2,40,000	20,000
Malda - - -	1,00,000	50,000	1,50,000	29,000
Total -	13,50,000	5,40,000	18,90,000	3,69,000

5. I was particularly requested by the Government of Bengal to revise the relief arrangements in these districts, and to settle them wherever they remained to be settled. I found that this business was to some considerable extent done in Dinagepore, and partly in Rungpore. I have now, in consultation with the local officers, fixed all the circles. Their numbers are as follows:—

	No. of Circles.	European Officers.	Native Officers.	Subordinate Officials.		
				Civil.	Department Public Works.	Medical.
Dinagepore - -	13	9	4	29	13	13
Rungpore - - -	9	4	5	9	6	9
Bogra - - -	7	3	4	3	6	6
Malda - - -	3	3	2	5	3	3
Total -	32	19	15	46	28	31

6. All the officers (Native and European) have been appointed. Most, though not all of them, have joined. Of the subordinate officials, most of the civil have been appointed, but many have not yet joined. Few only of the medical or Public Works subordinate officials have been appointed, but I have made urgent application for them.

7. The relief works consist chiefly of roads and of tanks. The total length of the roads in miles I give below. The tanks are numerous, but number cannot be given. The number of laborers as known up to the latest report is also given, but it is increasing daily.

	No. of laborers as known up to 2nd week of March.	Total length of relief roads of district in miles.
Dinagepore - - - -	43,500	420
Rungpore - - - -	7,000	723
Bogra - - - - -	3,935	160
Malda - - - - -	2,252	187
Total -	56,687	1,490

8. The rate of wages for an adult male is 2½ annas in the Dinagepore, Rungpore, and Bogra districts per diem, task-work not being undertaken under 3 annas. The same rates prevail in Malda.

9. The number of circles in which I have authorised the sale of Government grain under the rules is,—

Dinagepore - -	4	Bogra - - -	None
Rungpore - - -	3	Malda - - -	1

10. The number of grain depôts in the several districts, nearly all of which depôts contain stores, is as follows:—

Dinagepore - - - - - -	30
Rungpore - - - - - -	15
Bogra - - - - - -	8
Malda - - - - - -	8
Total - -	61

11. The number of carts employed in the transport of grain in the several districts is as follows: if this number appears small as compared with other divisions, we must remember that in all the districts water carriage is largely used, sometimes by country boats and sometimes by steamers.

	Carts with pair of bullocks.	Country boats.	Steamers.
Dinagepore - - - -	5,000	250	...
Rungpore - - - -	450	50	1
Bogra - - - - -	250	20	1
Malda - - - - -	2,000	400	1
Total - -	7,700	720	3
Add carts from Purneah District employed in Dinagepore district - -	1,500		
Total -	9 200		

Pack-bullocks not having as yet been employed. A reserve of 1,500 carts has been ordered, 500 for each of the districts of Dinagepore, Rungpore, and Malda.

12. The amount of advances as yet taken by zemindars for the assistance of their tenantry, and the money advanced to traders for the importation of grain from a distance, may be thus approximately given, though it is hoped the amount will be largely increased. In round numbers, zemindars have taken Rs. 90,000, traders Rs. 40,000.

13. The number of persons at present receiving charitable relief may be thus stated for the present, though it is to be feared that the number will now increase :—

	Daily.
Dinagepore - - - - - - -	None.
Rungpore - - - - - - -	3,460
Bogra - - - - - - -	None.
Malda - - - - - - -	2,936
Total - - -	6,396

In Bogra some relief is given by private subscriptions.

14. No death from want, or from disease caused immediately by want, has as yet been reported from any district.

15. The cause of the distress in all the districts is the partial failure of the summer or *aus* rice crop, and the still greater failure of the winter (hemantee) rice crop, from scantiness of rain in the summer and autumn of 1873, together with the absence of any considerable cultivation, in the distressed tracts, of spring crops, wheat and pulses, to make up for loss of rice.

16. The worst period of distress in all the four districts is expected to set in during May, and to last till the middle of August; but the distress will last in some degree till December.

17. Private import trade is tolerably active in the Rungpore, Bogra, and Malda districts, but not at all in Dinagepore. Again, the situation of the Dinagepore district is much more difficult than that of the other three districts, because it is isolated at all times, landlocked in the hot season, though enjoying some facilities of water carriage in the rains; whereas the other three are on the banks of the large rivers, navigable by boats or steamers all the year round.

18. Lastly, I desire to speak in high commendation of the Relief Commissioner, Mr. W. LeF. Robinson. His extensive local knowledge, his promptitude in action, and his thoughtful care for the people, entitle him to the confidence of Government in the execution of his very important duty.

No. 119, dated Bhagulpore, the 28th March 1874.

From L. C. ABBOTT, Esq., on duty with SIR RICHARD TEMPLE, K.C.S.I., to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Scarcity and Relief Department.

I AM directed to forward copy of a Minute No. 64, of 28th March, recorded by Sir Richard Temple, regarding the requirements of the Monghyr district.

MINUTE by the Honorable SIR RICHARD TEMPLE, K.C.S.I., No. 64, Bhagulpore, dated the 28th March 1874.

HAVING visited the Monghyr district and discussed its affairs relating to scarcity with the Commissioner, Mr. Barlow, and the Collector, Mr. Lockwood, and the principal relief officer, Mr. Currie, I have to record the following observations.

2. The district is divided by the Ganges into two parts, northern and southern. On both banks of the river, especially the northern, there are spring crops which have turned out excellently well, and thus a large portion of the district is placed beyond the reach of apprehension.

3. But in the northern part of the district there is a tract named Bukhtearpore, included in the thana of Gogree, which is separated from the basin of the Ganges by a belt of swamp, and in which the main staple, rice, has failed, having produced a one-anna to two-annas yield. In the southern part is also a broad tract comprising the thanas of Sheikhpoora and Secundra, dependent mainly on the rice crop, which for the most part failed, having a yield of only 3 annas. There is also a hilly tract (around a branch of the Vindhyas jutting out against the Ganges) within which the rice crop has failed, especially near Khurruckpore, belonging to the Durbhunga raj. Throughout the district there are autumn crops, Indian-corn, and the like, which last proved indifferent, with a yield of only 6 annas.

4. The general situation may be summarised thus:—Several tracts of the district have lost the greater part of its food-supply for nearly a year. But in juxtaposition with these there are tracts with excellent crops. There are as good facilities for trade and communication as could reasonably be expected in any district. At present the poorer classes in the distressed districts

are engaged in cutting the harvest in the flourishing tracts, and when this employment ceases (in a few days more), they will probably come in great numbers suddenly on the hands of Government for relief. Thus the period of distress will be probably at its worst from the 15th April till the 15th June, when, if the rains fall favorably, there will be again employment obtainable. But the distress, though mitigated, will last till the produce of the autumn crop comes in by the beginning of September, after which time the distress will cease.

5. I requested the Collector to estimate the numbers of persons whom he expects will need assistance from Government, and he would take 40 per cent. on the population of the Bukhtearpore portion of the Gogree thana, on the population of the Sheikhpoora and Secundra thanas, and on the population round Khurrukpore, which calculation gives this result:—

In what thana.	Persons who will need assistance from Government.
Gogree - - - - - -	42,000
Secundra - - - - - -	44,000
Sheikhpoora - - - - - -	79,000
Khurrukpore - - - - - -	7,000
Total - -	172,000

I would accept this part of the estimate.

6. It is further agreed that we must provide for the whole number for two months (from 15th April to 15th June).

7. The Collector thinks that from 15th June to 1st October we should provide for a quarter of the number. The Commissioner thinks that it would not be safe to take less than a half.

8. The result of the two calculations may be seen thus—

Estimate by Commissioner.

	Mds.
172,000 for 2 months, at ¾ seer per day - - -	193,500
86,000 for 3½ months, at ¾ seer per day - - -	169,312
Total - - -	362,812

Estimate by Collector.

172,000 for 2 months, at ¾ seer per day - - -	193,500
43,000 for 3½ months, at ¾ seer per day - - -	84,656
Total - - -	278,156

9. I concur in the Commissioner's estimate, and consider that 360,000 maunds, plus 5 per cent. for wastage (18,000 maunds), making 378,000 maunds in all, should be provided for the Monghyr district.

10. Already 300,000 maunds have been ordered by the local Government, of which 192,000 maunds have been stored. Besides this there are 20,000 maunds stored by the Court of Wards (Durbhunga) at Khurrukpore, which, added to the 192,000, makes up 212,000 maunds, leaving 166,000 maunds yet to be sent. But as the grain sent as yet consists of rice, the remainder can conveniently be supplied, if the Government sees fit, by mixed grain obtained in the North-Western Provinces.

11. After communicating with me on the occasion of my visit to Soopole, the Commissioner has fixed the following relief circles, which appear to be quite appropriate:—

1. Bucktearpore - - - - - -	North of Ganges.
2. Luckee Serai - - - - - -	South of Ganges.
3. Secundra	
4. Sheikhpoora	

The three last-named circles form a group, and have been constituted a relief sub-division under Mr. Currie, C.S.

12. The local Government has already appointed European officers to each of these circles. I had previously authorised the Commissioner to appoint one native officer to each circle. I have now requested him to appoint a second native officer to each circle, which he will be able to do immediately. There is at least one overseer for public works in each circle; a native doctor has also been appointed to each.

13. I have the pleasure to state that the Commissioner and the Collector speak in high terms of the conduct of the zemindars in the distressed tracts, who are keeping their tenantry from their own resources, taking advances from Government for this purpose, and constructing tanks and such like works in the villages. The number of such tanks is reported to be at least 34. The Durbhunga Court of Wards also, through Mr. Roberts, the local manager, is setting the best example to neighbouring zemindars by storing grain, constructing works, and assisting ryots.

14. The amount of cash advances obtained from Government is shown in the subjoined table; the amount is creditable to the district authorities :—

Monghyr District.

	Rs.
Advances for purchases of grain, under paragraph 4 of Circular No. 80 of 17th November 1873 - - - - -	56,800
For land improvement, under paragraph 21 of Circular No. 80 of 17th November 1874 - - - - - -	33,790
Generally for helping ryots, under Government orders No. 4004 of 18th December 1874 - - - - -	11,300
Total - - -	101,890

15. The length of relief roads amounts to 254 miles.

16. The number of relief laborers, including those employed by zemindars on their tanks and those employed by the Court of Wards, may be stated for the present time at 12,000.

17. This is less than the number for some of the previous periods. But, as already explained, the people have gone off to the harvesting. It is to be feared that they will soon return to the relief works in much larger numbers than ever.

18. In this district, however, relief circles are in working order, and adequate quantities of grain are stored at all the points of probable requirement. And I have seen no district better prepared than Monghyr to meet an emergency of this kind. The Collector, Mr. Lockwood, and the principal relief officer, Mr. Currie, merit the confidence of Government.

R. TEMPLE.

No. 121, dated Calcutta, the 31st March 1874.

From G. H. K. HART, on special duty, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I AM directed by the Honourable Sir Richard Temple to report the completion of his second tour in the distressed districts.

2. The various minutes, No. 39 to 62, 64 and 67, already submitted to the Government of Bengal, comprise all the remarks and recommendations which seemed from inquiry on the spot to be required. It is hoped that they will be found to treat of all the points adverted to in your letter No. 1236—S.R. of the 4th March, with one exception.

3. This exception is the case of Chota Nagpore, which country Sir Richard has been unable to visit by reason of the shortness of the time available.

4. I am to take this opportunity of submitting three minutes, namely, No. 63, summarising the statistics of the Patna division in relation to scarcity and relief, and No. 65 for the Bhagulpore division (which may be taken together with the previous minute No. 52 of 18th March, for the Rajshahye relief division), and No. 66, giving an abstract of the several summaries for the whole country comprised in the divisions of Patna, Bhagulpore, and Rajshahye, so far as the operations are concerned, which have come under Sir Richard Temple's cognizance.

5. He desires to tender his acknowledgments to his honour the Lieutenant-Governor for the support so promptly accorded to all the recommendations which have been made; and he trusts that the general result of the proceedings may prove satisfactory to the Government of Bengal.

MINUTE by the Honourable SIR RICHARD TEMPLE, K.C.S.I., No. 63, dated Bhagulpore, the 27th March 1874.

FROM the latter part of January to the beginning of March, I was chiefly engaged in visiting the worst portions of the three districts in the Patna Division where severe distress is anticipated, viz., Tirhoot, Chumparun, and Sarun. I have since passed through the districts of Shahabad and Gya and consulted the local authorities regarding the prospect of, and preparations for, the scarcity. I have also visited the Patna district, where no general scarcity at all is anticipated. That district is excluded from consideration in this Minute, which thus includes the whole of the Patna Division or Commissionership, except the district of Patna. The remarks and recommendations which I made will be found in the Minutes written during my visit, especially Nos. 1, 2, 5, 6, 10, 13 to 15, 17 to 19, 22 to 24, 29 to 36, 40, 57, 60, 61, and 67.

2. I now desire briefly to summarise, under one view, the main points, with the remark that any apparent discrepancies between the figures given in this Minute and in my former Minutes above cited are to be accounted for by the accession of more recent information having modified the statistics first presented.

3. The area and population of the five districts are as follow :—

District.	Area in square miles.	Population.
Tirhoot	6,343	4,384,700
Chumparun	3,531	1,440,800
Sarun	2,654	2,063,900
Shahabad	4,385	1,724,000
Gya	4,718	1,949,700
Total	21,631	11,563,100

4. The number of persons whom I have estimated, after conferring with the local authorities, as likely to need aid from Government during the period of worst distress, together with the proportion those numbers bear to the total population concerned, may be thus set forth :—

District.	Number at worst period.	Per-centage on population.
Tirhoot	1,000,030	23 per cent. on whole population.
Chumparun	316,000	50 per cent. on 285,600.
		20 „ on 404,100.
		15 „ on 466,200.
		10 „ on 284,900.
Sarun	280,000	13 per cent. on whole population.
Shahabad	105,000	6 per cent. „
Gya	93,000	5 per cent. „
Total	1,794,000	

5. These numbers have been obtained after separate enquiry by the local officers under my own observation for each tract in detail in each district by taking on the whole population a per-centage representing those who are expected at the worst period to need assistance in some shape or other from Government, the per-centages varying according to the circumstances of each tract.

6. The figures below give the quantities of grain which I have recommended to be sent, and the quantities which have, up to the middle of March, arrived within the several districts. I understand that the whole of the quantities recommended have been ordered by the Government.

District.	Recommended and ordered.	Arrived in the district.
Tirhoot	4,200,000	1,230,000
Chumparun	1,150,000	604,000
Sarun	680,000	310,000
Shahabad	317,000	179,000
Gya	220,000	140,000
Total	6,567,000	2,463,000

Of this total quantity full 88 per cent. consists of rice, and the remainder, or 12 per cent., consists of mixed grain—wheat, Indian corn, &c., chiefly obtained from the North-Western Provinces.

7. In communication with the local officers on the spot, I ordered the establishment of relief circles under the rules sanctioned by the Government of India, where they seemed to be required, and recommended the early appointment of officers, one for each circle, to supervise the distribution of relief, the relief works, and the medical arrangements. The numbers of such circles are as follow :—

Tirhoot	32
Chumparun	6
Sarun	1
Shahabad	0
Gya	0
Total	39

8. Before leaving the Patna Division to inspect the Bhagulpore and Rajshahye Divisions, I had fixed the places for these circles, arranged that there should be one superior officer and one native officer to each circle (with one superior European officer over each set of circles), and obtained the services of many of the European officers and most of the native officers required for the establishment on the above scale. The native officers were chiefly men selected from the army.

9. Shortly afterwards Sir George Campbell proceeded to Durbhunga, and personally supervised the working of the circles, in several places enlarging the organization according as the distress developed itself. Among other things he obtained the services of a number of trained native civil officials from the North-Western Provinces.

Subsequently, with Sir George Campbell's approval, I have obtained the services of a further number of native officials from the North-Western Provinces. And it has now been arranged that each circle shall have at least one European or one superior native officer and two subordinate native officers, some circles having more, according to circumstances. I have arranged, with Sir George Campbell's approval, that the temporary establishment shall be made up to this complement. It may now be said that all the officers, European and native, have joined, or are on their way. Those who have not joined are being pushed on as rapidly as possible. These remarks apply to the Tirhoot and Chumparun districts.

10. For the districts of Shahabad, Gya, and Sarun, where the distress will not be of such a nature as to require the formation of circles, I have arranged that there shall be four superior native officials appointed as supervisors for each district, or twelve in all, to go the rounds of the villages and to see that all necessary measures are adopted.

11. The additional establishment for relief of the whole division may be approximately stated as follows :—

District.	European supervising officers.	Circle officers.	Native officers.	Total.
Tirhoot	5	32	64	101
Chumparun	2	6	12	20
Sarun	1	2	6	9
Shahabad	—		4	4
Gya	—	1	4	5
Total	8	41	90	139

These numbers are in addition to the ordinary civil establishment of the district, European and native, all of whom are actively engaged in relief, which indeed forms an integral part of the civil administration.

12. With all the relief officers there are associated very many private gentlemen, European and native, scattered all over the country as members of sub-divisional committees or sub-committees. I cannot now state the number of those non-official coadjutors, but it must be considerable and greatly exceeding the numbers of the relief officers. In Tirhoot, Chumparun, and Sarun, the indigo planters collectively and individually are rendering the most important aid. Many native zemindars are doing the same. It will be interesting hereafter to record the particulars of the non-official assistance thus rendered. I am sanguine that it will be found to be worthy of commemoration.

13. Before the period of my visit a permanent line of electric telegraph from Patna to Segowlee (north of Chumparun), *viâ* Mozufferpore and Motiharee, had been sanctioned and had been completed as far as Mozufferpore. But to save time I proposed that the remainder of the line should be made as a temporary line, and that there should be an extension to Bettia and Ramnugger. I then, after consulting the local officers, recommended that temporary lines should be made to all the principal centres of the Tirhoot district. This was sanctioned by Government, and the temporary telegraph lines, now complete and in work, may be thus stated :—

Line.	Miles.
Mozufferpore to Motiharee, Bettia, and Ramnugger	102
Mozufferpore to Seetamurhee	32
Mozufferpore *viâ* Durbhunga to Mudhoobunnee	48
Barrh to Durbhunga, with branch to Tajpore	60
Mudhoobunnee to Nuraya	30
Total	272

14. The great public works which subserve most beneficially the purposes of relief are—

	Miles.
The Soane canal	380
The Gunduk embankment	90
Total	470

and now the high level canal in the district of Chumparun, which is ordered to be commenced. The number of persons employed on, and the quantity of grain required for, these works are included in the total figures which I give for the several districts.

15. Besides these great works there are lesser relief works specially projected by the local officers. They consist chiefly of roads (earth-work) and tanks (excavation). The tanks under operation are numerous and scattered all over the country, and their number is increasing daily, and I cannot give it exactly. But the length of relief roads may be stated as follows :—

District.	Relief Roads.—Miles.
Tirhoot	710
Chumparun	520
Sarun	575
Shahabad	487
Gya	185
Total	2,477

Besides the work on all these lines of road, there are the special repairs being executed under European supervision on the lines of the transit of grain, as will be explained presently.

16. The number employed on relief works of all kinds may be stated as follows:—

District.	Number of persons.
Tirhoot	450,000
Chumparun, including Gunduk works	100,000
Sarun	90,000
Snahabad	2,000
Gya	1,000
Soane Canal Works	33,000
Total	676,000

If the number should seem small for Shahabad and Gya, then we must remember that the relief laborers of those two districts are chiefly on the Soane canal works.

17. The number of persons receiving gratuitous relief is small. According to the latest information, it did not exceed 4,200 in Tirhoot, and 1,200 in Chumparun.

18. For the supervision of the relief roads and tank, I have at various times applied for the services of overseers, which applications have been approved by Government, and the men have either joined or are on their way. Also several additional Engineer officers have been appointed. The number may be stated as follows:—

District.	Superintending Engineer.	Executive and Assistant Engineers.	Overseers.
Tirhoot	1	6	25
Chumparun	—	2	6
Sarun	—	2	3
Shahabad	—	—	2
Gya	—	—	4
Total	1	10	40

These are in addition to the establishment on the Soane canal works and on the Gunduk embankment, also to the ordinary Public Works establishment of the district, all of which assist in respect of relief works so far as they can.

19. For the work of the relief, I have applied for and obtained the services of native doctors and hospital assistants as below:—

District.	Native doctors and hospital assistants.
Tirhoot	60
Chumparun	14
Sarun	—
Shahabad	—
Gya	—
Total	74

I found the districts of Sarun, Shahabad, and Gya so far supplied with this class of men that more need not be applied for, especially considering the more urgent requirements of other districts, and the difficulty of procuring the men.

20. The grain supplied by Government is sent to depôts at places selected with reference to the area of distress. The number may be thus stated for the several districts:—

Districts.	Number of depôts.
Tirhoot	74
Chumparun	42
Sarun	32
Shahabad	30
Gya	17
Total	177

All these depôts contain stores of grain. From these depôts the grain will be distributed according to circumstances.

21. The grain is despatched from Calcutta by separate arrangements, and reaches the stations on the East Indian Railway from Mokameh to Mogul Serai. It then comes under the charge of the Relief Department of the Patna Commissionership. That portion (which is by far the greatest) destined for the Tirhoot and Chumparun districts, is conveyed to the south or right bank of the Ganges by four small branches near Mokameh, Barrh, Futwa, at Patna; of which four branches three have been made especially for this occasion. It is then placed on board steamers, or barges, towed by steamers, and conveyed to three points on the north or left bank, namely, Bunkur opposite Patna, Chumpta opposite Barrh, and a point opposite Mokameh.

At these points it comes under the charge of the inland transport service, and , carried to the depôts by certain main routes which may be described as follows:—

Point of departure.	Route.	Distance in miles.
Bunkur - - -	To Motiharree, Gobindgunj, Bettia, and Ramnugger - - - - -	155
	To Possa, Durbhunga, Mudhoobunnee -	77
	To Seetamurhee and Sursoond - -	* 80
Chumpta - - -	To Durbhunga and Nuraya, north-eastern corner of Tirhoot district - -	95
Opposite Mokameh -	To Durbhunga - - - - -	50
	Total - -	457

From these main lines there are branch routes, too numerous to mention here, to the various grain depôts.

22. The grain for Sarun is carried by carts from the station of Arrah, and crossing the Ganges, is carried to Hutwa and Sadowa, distance from 80 to 90 miles.

23. The grain for Shahabad is sent from the railway stations between Arrah and Mogul Serai and carted into the interior; average distance 50 miles.

24. The grain for Gya is sent from the railway stations at or near Patna, and is carted into the interior to a distance of 60 miles.

25. The means of transport at present employed may be approximately set forth in numbers as below.

District.	Steamers.	Country Boats.	Carts.	Cartmen.	Draught Bullocks.	Camels.	Pack-bullocks.
Tirhoot - - - -	5	900	58,000	60,000	116,000	2,000	3,000
Chumparun - - - -	—	200	8,000	8,500	17,000	—	—
Sarun - - - -	—	100*	3,500	3,600	7,000	—	—
Shahabad - - - -	—	—	1,000	1,050	2,000	—	—
Gya - - - - -	—	—	500	525	1,000	—	—
Total - - -	5	1,200	71,000	73,675	143,000	2,000	3,000

* The number of boats was much larger than is here set down, while the navigation of the Gunduk continued feasible. Double the number of boats now employed may be expected on the river as soon as the rains set in.

26. These various means of transport have been hired by Government. The carts and bullocks are for the most part brought into the field by five associations of European contractors. These contractors are indigo planters, gentlemen living on their own estates in the neighbourhood of the routes of transit. These contracts have been made by the local officers under my own supervision. The arrangements are at present working well, save in one case, where the contractors have not yet succeeded in carrying the full quantity engaged for. The remaining carts are furnished by small contractors, natives. It is remarkable that all the carts and bullocks are obtained within the limits of the Patna Division. The camels and pack-bullocks are furnished by a large native contractor from the North-Western Provinces.

27. Upon each of the main transit routes above mentioned there are several European officers to see to emergent repairs, to clear away obstacles, to construct temporary crossings, and the like; and with them there are also one regiment of Pioneers (natives) and five companies of Sappers; the whole being under the command of Colonel Macgregor, of the Quarter-Master-General's Department. At the two main points of departure, Bunkur and Chumpta, there is a special organisation on a large scale under selected European officers.

28. Besides these means I have, with the approval of Government, caused to be engaged a body of reserve transport of a strength equal to 4,250 carts drawn by 10,000 bullocks, capable of carrying (at the rate of 16 maunds a cart) 68,000 maunds per daily march of twelve miles; also, 6,000 pack-bullocks or pack-ponies. These carts and animals have for the most part been purchased for Government in the North-Western Provinces and in the Shahabad district. The carts are divided into detachments of 250 carts each, with a complete military organization under European and Native officers. This arrangement is being carried out under Mr. H. Rivett Carnac. This reserve is intended to remedy any mishap or failure which may occur with the contract hired carriage; and its organization is designed to render it as effective as possible for this end.

29. With a view to obtaining an additional resource on the route from Chumpta to Durbhunga, which is by far the most important of all the routes, I strongly recommended, at the end of January last, the construction of a tramway, distance 50 miles. The Government after consideration, sanctioned the project, with important additions, whereby the line becomes a railway. The work is progressing under the good auspices of Mr. Molesworth and Major Staunton.

30. The advances of money (repayable) obtained from Government by landowners for the assistance of their tenantry and by traders for the importation of grain may be set forth as below:—

District.	By zemindars for the ryots.	By native traders for importation.	Total.
Tirhoot	95,506	522,650	618,156
Chumparun	60,000	132,000	192,000
Sarun	286,890	129,700	416,590
Shahabad	—	3,300	3,300
Gya	8,800	10,000	18,800
Total	451,196	797,650	1,248,846

31. I ordered Government grain to be offered for sale under clause 9, Rule 3, Part II, of rules for Relief Committees, at the rate of ten seers to the rupee, in the several circles which form the eastern half of the Mudhoobunnee and Durbhunga sub-divisions. This order has been carried out. I afterwards directed that a rate of 12 seers to the rupee should be allowed. This order has not, however, been carried out as yet.

32. I cannot finish this summary without taking the opportunity of giving my testimony to the judgment, discrimination, and assiduity displayed by the Commissioner, Mr. Stuart Bayley, in the discharge of the extraordinary difficult duties which have devolved on him ever since the first threatening of scarcity in Behar. The ability with which he has sustained the pressure of so many urgent affairs, simultaneously presenting themselves for decision, entitle him to the commendation and the confidence of Government. I trust that he may in due course witness the successful result of his labours.

33. I also desire to commend to the notice of Government the exertions of Mr. J. Hewitt, the Deputy of the Commissioner of Patna. He has had a prominent share in the transit arrangements on both banks of the Ganges, and his general assistance to the Commissioner in all affairs relating to the scarcity has proved very valuable.

MINUTE by the Honourable SIR RICHARD TEMPLE, K.C.S.I., No. 65, dated Bhagulpore, the 28th March 1874.

I HAVE on three separate occasions during my two recent tours visited portions of the Bhagulpore division or Commissionership. The observations and proposals which I have felt called upon to make will be found in my various minutes written from the places visited, viz. Nos. 25 to 28, 39, 41 to 44, 54A, and 64.

I now desire to bring together the main points in a synoptical shape, embodying in this minute the latest information received by me as to the result of the orders I gave and the recommendations I made in the minutes above cited.

2. There are four districts belonging to this division, in all of which distress, more or less, is anticipated, namely, Bhagulpore, Purneah, Monghyr, and the Sonthal Pergunnahs. I have marched through the worst parts of Bhagulpore and Purneah, and I have passed by one of the worst parts of Monghyr.

3. The area and population may be thus stated:—

District.	Area in square miles.	Population.
Bhagulpore	4,327	1,826,300
Purneah	4,957	1,714,800
Monghyr	3,913	1,812,900
Sonthal Pergunnahs	5,488	1,259,300
Total	18,685	6,613,300

4. The numbers of persons whom I have, in consultation with the local authorities, estimated as likely to require assistance from Government during the period of severest scarcity, together with the proportion between those numbers and the total population concerned, are as follows:—

District.	Number of people likely to need assistance.	Percentage on population concerned.
Bhagulpore	274,650	50 per cent. on 342,936 30 „ „ 344,587
Purneah	240,000	30 „ „ 364,266 15 „ „ 527,051 and 50,000 souls for rest of the district.
Monghyr	172,000	40 per cent. on 430,000
Sonthal Pergunnahs	60,000	25 „ „ 240,000
Total	746,650	

5. The quantities of grain which I have recommended to be provided, and the quantities which have arrived in the several districts, are as follow:—

District.	Amount recommended. Mds.	Arrived in district. Mds.
Bhagulpore	730,000	174,550
Purneah	650,000	345,000
Monghyr	378,000	212,000*
Sonthal Pergunnahs	135,000	10,000
Total	1,893,000	741,550

The grain consists almost entirely of rice.

6. I have, in communication with the local authorities, fixed the relief circles for the distressed tracts in Bhagulpore, Purneah, and the Sonthal Pergunnahs. The Commissioner fixed the circles in the Monghyr district after consulting carefully with me. The numbers are as below:—

District.	Number of relief circles.
Bhagulpore	7
Purneah	8
Monghyr	4
Sonthal Pergunnahs	2
Total	21

7. For the management of these circles the following establishments have been made up:—

Districts.	European supervising officers.	Circle officers.	Native officers.	Total.
Bhagulpore	3	7	14	24
Purneah	2	8	16	26
Monghyr	2	4	8	14
Sonthal Pergunnahs	1	2	4	7
Total	8	21	42	71

These establishments are in addition to the regular civil establishments of the district, who all assist in relief which is an integral part of the district work.

8. The relief works consist chiefly of roads (earth-work) and of tanks (excavation). The tanks are scattered all over the country, and I cannot give their number; but the length of the roads projected may be set down thus:—

District.	Length of relief roads in miles.
Bhagulpore	215
Purneah	505
Monghyr	254
Sonthal Pergunnahs	230
Total	1,204

9. The number of relief laborers are given below:—

District.	Number of relief laborers.
Bhagulpore	21,000
Purneah	12,000
Monghyr	12,000
Sonthal Pergunnahs	2,100
Total	47,100

10. I have, in communication with the Commissioner, proposed that the rate of payment for unskilled labour should be 1¼ annas for a man per diem, with proportionately less amount for women and children, and that 2 annas per diem should be given, under a system of task-work, to the more skilled or stronger laborers.

11. There is the following extra establishment employed for relief works:—

District.	Superintending Engineers.	Executive Engineers.	Assistant Engineers.	Overseers.
Bhagulpore	1	0	2	7
Purneah	0	1	3	8
Monghyr	0	0	1	4
Sonthal Pergunnahs	0	0	1	0
Total	1	1	7	19

---

* Including 20,000 maunds stored by the Durbhunga Raj (under Court of Wards) at Kharrukpore.

These are in addition to the ordinary establishment of public works in the district, all of whom aid in the operations of relief so far as they can.

12. The number of grain depôts may be stated thus :—

District.	Number of Grain Depôts.
Bhagulpore	32
Purneah	30
Monghyr	13
Sonthal Pergunnahs	11
Total	86

13. The grain is conveyed to the depôts by the following means:—It is carried by the East Indian Railway to the stations of Sahebgunj, Colgong, Sooltangunj, and Monghyr, all on the south or right bank of the Ganges. From Sahebgunj it is carried across the Ganges by steamer, and from the other stations by boats or barges to points on the north or left bank of the Ganges, whence it is carried to its various destinations by carts.

14. The transport service consists of the following number of carts and country boats or barges:—

District.	Carts.	Draught Bullocks.	Cartmen.	Country Boats or Barges.	Steamers.
Bhagulpore	8,000	17,000	8,000	151	—
Purneah	8,000	17,000	8,000	200	1
Mongha	2,000	4,000	2,000	39	—
Sonthal Pergunnahs	200	400	200	—	—
Total	18,200	38,400	18,200	390	1

15. Zemindars and traders have been repeatedly invited to take advances from Government, the former to enable them to assist their ryots, the latter to enable them to import grain for sale. The result is that up to 28th March the following sums have been taken approximately:—

District.	By Zemindars for ryots.	By Traders for importation.	Total.
Bhagulpore	37,400	68,000	1,05,500
Purneah	32,150	60,700	92,850
Monghyr	11,300	56,800	68,100
Sonthal Pergunnahs	—	—	—
Total	80,850	1,85,500	2,66,350

Government advances to ryots in Kissengunge (Purneah) for the purchase of seed-grain, or for subsistence, have also been authorised.

16. Returns made up to 28th March show that the following numbers of persons were in receipt of gratuitous relief from Government:—

In Bhagulpore	1,300
„ Purneah	5,335
„ Monghyr	1,603
„ Sonthal Pergunnahs	—
Total	8,238

17. I have, on the recommendation of the local authorities, ordered the sale of Government grain at the rate of 12 seers to the rupee at the depôts in the thannahs of Bulrampore, of Kudbah, and of Kusbah Amour, in the Purneah district, in the parts of the Soopole and Muddehpoora sub-divisions of the Bhagulpore district, and at certain points in the Monghyr district.

18. In concluding this minute, I desire to cordially acknowledge the assistance I have received in my inquiries and proceedings from Mr. G. N. Barlow, the Commissioner, and to express my confidence in his ability to deal effectively and promptly with any difficulty that may arise in connection with the scarcity.

19. I also desire to bring to the notice of Government the very valuable services of Mr. H. Hankey, C.S., the Special Superintendent of Transport, both as regards the collection of country carriage under direct agency and the management of large contracts for the transport of Government grain.

MINUTE by the Honourable SIR RICHARD TEMPLE, K.C.S.I., No. 66, dated Bhagulpore, the 28th March 1874.

My minutes Nos. 52, 63, and 65 of 18th, 27th, and 28th March, present an abstract of what has been recommended, ordered and done during my tours through the divisions or Commissionerships of Patna, of Bhagulpore, and of Rajshahye; separate figures in those minutes are given for each district wherein severe distress is anticipated, and a total for each division. I now desire to draw up a brief resumé, giving separate figures for each of the divisions above-named, and a grand total for so much of Bengal and Behar as I have visited.

2. The total area and population of the three divisions is as follows:—

Division or Commissionership.	Total area in sq. miles.	Total population.
Patna	23,732	13,122,743
Bhagulpore	18,685	6,613,358
Rajshahye	17,694	8,893,738
Total	60,111	28,629,839

3. But it is only within certain tracts in each division that distress is anticipated. I give below the area and population of the districts or tracts in each division wherein severe distress is looked for, together with the proportion borne by the distressed parts to the whole of each division as respects area and population:—

Division or Commissionership.	Likely to be distressed.		Per-centage of distressed tracts on total.	
	Area of tracts.	Population of tracts.	Area.	Population.
Patna	16,666	8,124,164	70·22 per cent.	61·90 per cent.
Bhagulpore	7,623	2,957,607	40·8 „	44·72 „
Rajshahye	8,098	3,491,936	45·76 „	39·26 „
Total	32,387	14,573,707		

4. The number of persons which I have taken as being likely to need assistance from Government during the worst period of the scarcity, together with the per-centage of those numbers on the total population and on the population of the distressed tracts, are given below.

Division or Commissionership.	Number of people estimated to require aid at worst period.	Per-centage on distressed population.	Per-centage on total population.
Patna	1,794,000	22·08 per cent.	13·67 per cent.
Bhagulpore	746,650	25·24 „	11·29 „
Rajshahye	802,863*	20·87 „	8·2 „
Total	3,432,713		

* Including 44,000 persons in the Rajshahye district and, say, 30,000 on the Northern Bengal State Railway.

5. The following figures give particulars of the quantities of grain which I have recommended to be provided by Government, and the quantities which have already arrived in the districts:—

Division or Commissionership.	Provision recommended.	Arrived in the districts.
Patna	6,567,000	2,463,000
Bhagulpore	1,893,000	741,550
Rajshahye	2,090,000†	370,000
Total	10,550,000	3,574,550

---

† Including the provision of 200,000 maunds for the Rajshahye district and the Northern Bengal State Railway.

6. The number of relief circles established, together with the numbers of officers allotted thereto, is given below:—

Division or Commissionership.	Number of circles.	Relief Officers.			Superintending Engineer.	Executive and Assistant Engineers.	Public works overseers.	Native doctors and hospital Assistants.
		European Superior Officers.	Circle Officers.	Native Officers.				
Patna - - -	39	8	41	90	1	10	40	74
Bhagulpore - -	21	8	21	42	1	8	19	18
Rajshahye - -	31	19	31	15	1	—	28	31
Total -	91	35	93	147	*3	18	87	123

* One Chief Engineer has since been appointed.

This special relief establishment is over and above the ordinary civil establishment of the districts, all of which aid in the distribution of relief, which is an integral part of the administration of the various districts. Besides these, too, is the establishment on the Soane canal, the Gunduk embankments, and the Northern Bengal State Railway.

7. The banks and other miscellaneous relief works cannot be stated numerically; but the length of the relief roads, of the Soane canal, of the Gunduk embankment, and of the Northern Bengal State Railway within the distressed tracts is given below in miles:—

Division or Commissionership.	Relief roads.	Soane Canal.	Gunduk Embankments.	Northern Bengal (State) Railway.	Temporary Telegraph.
Patna - -	2,477	380	90	—	272
Bhagulpore - -	1,204	—	—	—	20
Rajshahye - -	1,490	—	—	178	44
Total - -	5,171	380	90	178	336

8. The number of relief labourers as given in my several minutes may be thus abstracted:—

Division or Commissionership.	Persons employed on relief works.
Patna - - - - - - - -	676,000
Bhagulpore - - - - - - -	47,000
Rajshahye - - - - - - - -	63,700†
Total - -	785,800

† Including 7,000 labourers on the Northern Bengal (State) Railway.

9. The number of grain depôts opened, at all of which there are now stores of grain, is given below:—

Division or Commissionership.	Grain Depôts.
Patna - - - - - - - - -	177
Bhagulpore - - - - - - - -	86
Rajshahye - - - - - - - -	61
Total - -	324

10. The means at present employed in the transport of Government grain are tabulated below, the figures being, however, only approximate:—

Division or Commissionership.	European Officers.	Carts.	Cartmen.	Draught Bullocks.	Camels.	Pack Animals.	Country boats.	Steamers	Number of main routes of transport by land and water.
Patna - -	21	71,000	73,675	143,000	2,000	3,000	1,200	5	5
Bhagulpore -	7	18,200	18,200	38,400	—	—	890	1	4
Rajshayhe - -	5	9,200	9,200	18,400	—	—	720	3	11
	33	98,400	101,075	199,800	2,000	3,000	2,810	9	20
Government reserve	12	4,250	4,250	10,000	—	6,000	—	—	—
Total -	45	102,650	105,325	209,800	2,000	9,000	2,810	9	20

In order to strengthen the principal line of transit in Eastern Tirhoot, the railway is being constructed from Chumpta to Durbhunga, a distance of 50 miles.

11. Advances of money have been obtained from Government in the following sums :—

Division or Commissionership.	By Zemindars for assistance of their tenantry.	By traders for importation of grain.	Total.
	Rs.	Rs.	Rs.
Patna - - - - -	4,51,196	7,97,650	12,48,846
Bhagulpore - - - - -	80,850	1,85,500	2,66,350
Rajshahye - - - - -	90,000	46,000	1,36,000
Total -	6,22,046	10,29,150	16,51,196

Advances have also been authorised to ryots, both for their subsistence during the time which must elapse before their autumn and winter harvests are reaped, and for seed-grain to sow the autumn crops. But there are as yet no returns of the amounts of such advances made.

12. The approximate number of recipients of gratuitous relief from Government are :—

In Patna Division or Commissionership - - - - -	5,400
„ Bhagulpore Division „ - - - -	8,200
„ Rajshahye „ „ - - - -	6,400
Total -	20,000

13. In the three divisions the rates of wages for relief labor range from two to three annas per diem where there is task work, and one to two annas where there is not. The above rates are for men; proportionally lesser rates are allowed for women and children.

APPENDIX E.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 9th April 1874.

READ—

The Honourable Sir Richard Temple's Minute, No. 62, dated 26th March, upon the subject of the block at the Patna Railway Station.

The joint report by Messrs. Hewitt, Mangles, and Bisset upon the points referred for enquiry.

RESOLUTION.—The three officers deputed to make this enquiry were all thoroughly conversant with the circumstances of the case; they had the advantage of free communication with the railway officers upon the spot, and they have therefore been able to make a final report without any delay whatever.

2. The fact that there has been a serious block of private traffic at Patna Station during the last few weeks, and that there is, under present circumstances, no security against the recurrence of such a block, is set forth clearly in Sir Richard Temple's Minute. The present report does not touch upon the circumstances of the recent block, but is confined to practical suggestions for the prevention of its recurrence. The report shows that it is inexpedient and would hamper the traffic, at once to take in hand the whole length of the long-discussed road to the Patna ghât station.

3. The committee recommends—

First.—That the short length of this road from the ghât station premises, the point where two roads bifurcate, be at once taken in hand and carried through. If this short length was done, then one of the narrow roads at the point of bifurcation could be kept for the ingress, and one for the egress of carts going to the ghât station. From the point of bifurcation to the station-yard, the new broad road would enable carts to pass each other easily.

The report explains why a new siding could not usefully be put in at a point between the city and the Bhaugulpore stations, and the committee recommend—

Secondly.—That a siding be put in and worked as a part of the city station, and a point on the branch line, to the Patna ghât, within a quarter of a mile of the city station. At this point there is an open space which could be easily converted into a roomy station-yard.

4. The committee report that the Commissioner and the Magistrate are ready at once to open out roads of approach to the new siding; and they suggest that obstructions be removed from the city station-yard, and that additional mechanical facilities be afforded for unloading bags off wagons on the railway bank.

5. The Lieutenant-Governor understands that the East Indian Railway Agency have agreed to carry out at once the committee's recommendation so far as the putting down sidings, extending the stations, and clearing the station-yard is concerned; orders have, the Lieutenant-Governor is informed, been issued to the Railway Company's Engineers on the spot to give effect at once to the committee's recommendations; and Colonel Taylor, the Consulting Engineer, has already started for Patna to see to carrying out these orders. The local civil officers have been directed by telegraph to make over the land for the siding with the least possible delay, and to prepare for opening out roads of approach to the new station.

6. The Lieutenant-Governor is now pleased to direct that copies of the committee's report be forwarded to the Commissioner of Patna, with an intimation that the committee's recommendations are all approved by the Lieutenant-Governor after consultation with Sir Richard Temple. Steps should be taken at once to carry out the committee's *first* recommendation, summarised at paragraph 3 above, to make over the land for the new siding and station as quickly as possible, and at once to open roads, of sufficient breadth to the new siding. The Consulting Engineer will be requested to state whether the land for this siding is required temporarily or permanently. And the Commissioner will be requested to report upon—

(*a.*) The cost of opening the approaches to the new siding, and upon the best way of meeting that cost;

(*b.*) The cost, &c., of opening out the short length of the ghât station road, and

(*c.*) The best time and way of opening out the remainder of the ghât station road, and the sources from which the cost thereof should be met.

By order of the Lieutenant-Governor of Bengal,
C. Bernard.
Officiating Secretary to the Government of Bengal.

No. 2261—S.R.

Copy, with copy of the committee's report forwarded to the Commissioner, Patna, with reference to paragraph 6.

No. 2262—S.R.

Copy forwarded to the Consulting Engineer, with request that he will state for how long the land for the new siding and yard will be required.

No. 2263—S.R.

Copy forwarded to the Public Works Department of this Government.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, the 9th April 1874.

Enclosure 3 to the 15th Special Narrative.

Comparative return of crime in the distressed districts for March 1874.

Districts.	Crimes committed in March 1874.				Total for March 1874.	Total for March 1873.	Total for March 1872.	Remarks.

Enclosure No. 4.

RESOLUTION.

Scarcity and Relief Department.

Calcutta, the 14th April 1874.

Read—

The District Narratives of the Patna Division for the fortnight ending on the 4th April 1874.

1. *Patna.*—Prices have fallen in the Patna District, and the yield of the spring crops has been much larger than was expected. The Lieutenant-Governor is glad to know that the suggestions, made by a committee of which Mr. Mangles was a member, for relieving the block of traffic at the Patna city station are being carried out. The Lieutenant-Governor is much concerned to hear that the coarse up-country grains in the Patna store-houses are being injured by weevils; he approves of their being sent across the Ganges for immediate use in North Behar. In other districts where there has been a demand for grain, the coarser grains have, under the orders of Government, been sold; and in the Bhagulpore Division the grain which was getting spoilt has been sold at a reduced rate. The Lieutenant-Governor will now cause the issue of separate

orders directing that the coarse grains in store in any distressed districts be examined, and sold off at once if they are getting spoiled. It will be necessary for the Tirhoot officers to watch carefully the storage and keeping of the northern grains now being delivered at Futwah ghât.

2. *Gya.*—From the Gya district, also, it is reported that the yield of the spring crops is very much better than had been anticipated. The Magistrate-Collector concurs in the view, which he believes the people of the district to hold, that Gya will not be afflicted by "anything like famine" if the autumn crops are good. So long as there is no general distress, and so long as the invalid gangs suffice to provide for the weaker laborers, the Lieutenant-Governor approves of Mr. Palmer's adherence to the payment-by-results system. But the progress of the works must be closely watched, so that no weakly may be turned off, or left with insufficient for their maintenance. As yet it will not be possible to send further grain-supplies to Gya, while the needs of North Tirhoot are so very urgent. 196 persons appear to be daily in receipt of charitable relief, and the arrangements for providing this relief appear to be sufficient for present needs. The Lieutenant-Governor is glad to learn that the people of Gya have contributed liberally (subscribing Rs. 18,254) towards the district relief fund.

3. *Shahabad.*—The account of supplies of crops and of prices is favorable. It would be convenient that the Magistrate-Collector of Gya and Shahabad should, as do all other Magistrates, note the daily average of work-people for the fortnight under section B, instead of referring to a return which is to be sent some days after to another department of Government; the Narratives would then be complete in themselves. The Lieutenant-Governor can hardly think that a rich open district like Shahabad cannot produce enough carts to carry promptly the small quantity of grain allotted to Shahabad, as well as to lift the Sarun supply from the railway station to the river. All other districts have, by offering fairly liberal rates of hire, educed every ample means of transport, and the Lieutenant-Governor anticipates that Mr. Alexander will, if any necessity occurs, be equally successful. Charitable relief is, it seems, being given daily to 239 persons. The applicants are only professional beggars and persons who suffer from physical infirmities.

4. *Tirhoot.*—Private supplies of grain are said to be insufficient in parts of the North-western sub-divisions, and prices are very high, notwithstanding that Government stores have been opened largely for sales to the public. In Mudhoobunnee the effect of opening the Government stores appears to have been satisfactory; and the Lieutenant-Governor would wish in future Narratives to have more complete information regarding the conduct and effect of sales to the public. Arrangements will be made to send up to Durbhunga and Mudhoobunnee the required quantity of copper coin as soon as possible. The condition of the people in Seetamurhee appears to be tolerably good; and it is very satisfactory to receive such assurances as Mr. Macdonnell gives of the improvement in the condition of the people of Bahera. With regard to Mr. Magrath's remarks (paragraph 12 of the Narrative), the Lieutenant-Governor would observe that a sub-divisional officer, if he find more assistance absolutely necessary, must at once represent such needs, and must not content himself with vague references in his fortnightly Narrative. Mr. Magrath is in frequent personal communication with the Additional Commissioner, and he must report at once if further superintendence is required.

5. The Lieutenant-Governor sees the difficulty which prevents the Saraisur tobacco-growers from disposing of their produce, and he will await anxiously any practicable recommendations the Commissioner may make upon the subject. He would hope that the transport department might be able to help dealers with backward empty carts or wagons on the Durbhunga railway, if only purchasers will come forward, and efficient arrangements are made to prevent delay in putting the tobacco on vehicles. At present, Sir Richard Temple would not entertain a proposal for Government to buy the tobacco, though he would quite approve of advances being made through zemindars on its security.

6. It is satisfactory that Mr. Worsley should be able to report that the condition of people in the head-quarter sub-division is as yet good. Of the deaths reported in paragraph 16, as having occurred in the Mudhoobunnee sub-division, it would seem that perhaps five may have been really due to privation. No famine-deaths are reported from other sub-divisions.

7. The figures given for relief laborers would seem to be wrongly copied; and they differ, moreover, from the numbers telegraphed from the sub-division on about the same date that the Narrative was written. Mr. Magrath telegraphed on the 6th April 250,000 people on the Mudhoobunnee works, whereas the present Narrative gives 192,000. Possibly, the latter figures may be the daily average for the fortnight.

8. The amount of grain stored in Durbhunga is still very small compared to the allotment and the requirements of this great sub-division. Next Narrative will, it is hoped, show that the Durbhunga railway has begun to pour grain into the sub-division.

9. The Lieutenant-Governor does not fully understand Mr. Magrath's remarks at paragraph 23, and he begs that the question of the best way of making advances to ryots may be brought up before him when he reaches Durbhunga this week. He wishes advances to be given to substantial ryots who may be in need, but he desires that such advances may be in grain rather than in money.

10. On the whole, the Lieutenant-Governor is satisfied with the progress made in getting the relief organisation thoroughly to work. In regard to the plan, explained at paragraph 30, of paying salaries to the assistants of planters who may efficiently supervise extensive relief operations, separate orders have been issued on a reference made by the Commissioner. Meanwhile, the arrangement described at paragraph 30 may stand until the Commissioner reports it for sanction with his recommendation.

11. *Sarun.*—The bazars seem to be on the whole well supplied, and at only one mart out of thirty is Indian-corn quoted at a dearer rate than 14 seers per rupee. Mr. Drummond is dis-

posed (paragraph 14) to take a less hopeful view of the spring crop yield than he did before, and it is clear that the hail-storm of the middle of March did much destruction over a considerable area. The condition of the people, however, in the parts where failure of crops was greatest has not grown worse during the fortnight; though the numbers coming upon the relief works have risen during the fortnight from 90,000 to 135,000. The Lieutenant-Governor hopes that misunderstanding, such as is alluded to at paragraph 29 of the Narrative, will not recur; if the Wards' estate where relief works are required cannot afford the outlay, the works must be continued from Government funds, and people must be on no account turned away. Any question as to the source from which the outlay is to be met can be subsequently discussed and settled.

12. The question, raised at paragraph 33 of the Narrative, as to Government taking over certain extra grain (28,000 maunds), ordered for miscellaneous Wards' estates in Sarun, can be settled when the Commissioner's recommendation shall be received. Meanwhile, the grain can be received, transported, and stored as a part of the Government allotment for the district, and the Calcutta grain officers will be directed, pending further orders, to reckon this quantity (28,000 maunds) as receipts towards the Sarun allotment.

13. The Lieutenant-Governor notices with satisfaction that the Magistrate-Collector of Sarun continues to give large advances to zemindars for the maintenance of their ryots. The Lieutenant-Governor would wish that these advances should for the future be make, as far as possible, in grain, at the rate of Rs. 2-8 a maund for Burmah cargo rice, and Rs. 3-4 a maund for the better kinds of clean rice.

14. Seeing that the system of relief works has shielded the district so far from general distress, the Lieutenant-Governor will not press the Magistrate-Collector to make more extended or elaborate arrangements for charitable relief, beyond what is described in his paragraphs 36-38.

15. *Chumparun.*—The Chumparun Narrative is, the Lieutenant-Governor is glad to find, very satisfactory. The people, whether on the works or in their villages, are getting into better condition; few cases of emaciation are seen, and no cases of starvation are heard of. Supplies of grain are, with help of the Government stores which have been opened in the worst tracts, sufficient, though clean rice is nowhere selling cheaper than 11 seers the rupee. The Lieutenant-Governor quite approves of the action of Mr. Oldham and some of the other relief officers, in exacting light task-work from the work-people who have not recovered their strength and condition.

The quantity of grain finally stored in the district is now 500,000 maunds, and should suffice for the work-people, and for advances to ryots. The Lieutenant-Governor is very anxious that this business of making advances to ryots should be pressed on systematically and actively; and he has been much interested in reading Mr. Howe's account of the system under which he makes his advances. Seeing how very badly off the ryots in Ramnuggur are said to be, and how very doubtful (the areas given at page 4 as the total spring and cheena breadths in a large tract are almost incredibly small) the prospect of the millet crops is, the grain advances to ryots cannot be begun too early. Those who happily have grain of their own will not take the Government grain when they know they have to repay it. If the difficulty about material security for advances be very great, the relief officer must be content with the security of the village headman, or the collective security of a body of ryots.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 2399—S.R.

COPY, with copy of the District Narratives, forwarded to the Commissioner of Patna, whose attention is invited to paragraphs 1, 5, and 11; to the Relief Commissioner Durbhunga, whose attention is invited to paragraphs 4 and 9; to the Commissioners of Rajshahye, Bhagulpore, and the Relief Commissioner, Rajshahye, whose attention is drawn to the remarks in Patna Narrative, about injury done to the coarser grains in store, and who are requested to take steps for giving effect to the orders in paragraph 1 for the examination and disposal of these grains; and to the Magistrate-Collectors of Patna, Gya, Shahabad, Tirhoot, Sarun, and Chumparun.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta, the 14th April 1874.

No. B, dated Bankipore, the 5th April 1874.

From A. C. MANGLES, ESQ., Collector of Patna, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I HAVE the honor to submit the following narrative for the fortnight ending Saturday the 4th instant.

A.—STATE OF THE COUNTRY.

2. The bazars at the head-quarters and the interior of the district are still well supplied with grain of all descriptions, and I have not heard of there being any deficiency anywhere.

3. I have during the fortnight been busily engaged in endeavouring to clear the block at the Patna city and ghât stations, and I am glad to say that I have to a certain extent succeeded in doing so, inasmuch as the Company have been able to unload all their wagons, and none are now standing under load. To do this, however, I have been obliged, besides visiting the stations myself, to depute Mr. Assistant Magistrate Allen to the Patna city station, and one of my Deputy Magistrates to the ghât station, to look after the railway clerks, and at the same time to see that the mahajuns come to take delivery of their goods. This can hardly be said to be the legitimate work of district officers; but still as I am satisfied that unless there is proper European supervision a block would again occur, I am still rendering the assistance to the Company, in the hope that it will soon take this responsibility upon itself, and appoint officers to settle all disputes arising between the clerks and the mahajuns regarding the charge of demurrage, and the giving and taking delivery of goods.

4. The following were the prices of grain obtaining during the fortnight:—

Patna.	Seers.
Rice, best	11
Rice, common	13
Wheat	16
Barley mixed with gram	21
Jowar	21
Maize	19
Gram	20
Behar.	
Rice, common	12¼
Maize	15
Wheat	13
Barley	17
Gram	17½
Dinapore.	
Rice	11½ to 12¼
Maize	15½ to 17½
Wheat	13 to 15½
Khesaree	18 to 19
Mussoor	18 to 19

No return has been received from Barrh as yet.

5. From the above, it will be seen that the prices of all sorts of grain, not excepting rice, have fallen in the principal marts; and in the mofussil also, owing to the harvesting of the rubbee crops, there has been a slight tendency to cheaper rates, and this even in those parts of the district where we expected to have the greatest distress, the rice and bhadoi crops having been almost failures.

6. We had no rain during the fortnight, and it was not required, as what we wanted was dry weather to allow of the cold-weather crops being cut and harvested. This has now nearly been completed, and the outturn is better than was expected. On this subject the Deputy Collector of Behar writes: "There has been a full 16-anna crop over the land that had been sown with rubbee. "Taking the average of the yield of the former years, this year's produce is by no means less "than three-fourths." In the Barrh sub-division I should reckon the crop as a 14-anna one, and in the Sudder and Dinapore sub-divisions at not less than 12 annas. During the fortnight I deputed one of my Deputy Collectors, Syed Ameer Hossain, to visit the south- and south-west portions of the district, they being the parts concerning which I had the greatest anxiety, and I was glad to learn from him that nowhere had there been less than an 8-anna crop, whilst in some parts there had been full 16 annas.

7. No case of misery or starvation was brought to light during the fortnight; and though the high prices are to a certain extent felt by the lower classes, they have, during the late harvest, been able to collect a certain amount of grain which will assist in keeping them till the next bhadoi crop comes in. There is an abundance of grain in this district; so that all we want is to provide labour, of which there is plenty on our roads for those seeking it.

8. No case of grain-robbery was reported during the fortnight, and the 8 cases of theft were all of a petty nature.

9. The statement of crimes, prescribed by the Government circular of 20th December last, not having yet been received from the District Superintendent, cannot be submitted with this report, but it will be forwarded as soon as possible.

10. 124 emigrants for British Burmah were registered during the fortnight. Of these 75 have already been dispatched to Calcutta, and the remaining 49 will be sent immediately. Of the 124, 56 were residents in this district, 24 of Gya, 14 of Sarun, 10 of Tirhoot, 1 of Chumparun, and 9 came from the North-Western Provinces.

B.—Relief Works.

The daily number of laborers on our relief works and local roads is fast increasing; and now that the harvesting of spring crops has been completed, I expect it will continue to do so. By the latest returns received from the Executive Engineer, which bring us up to the 28th of March, there were 10,015 laborers employed on the different works throughout the district, or some 1,000 in excess of the number reported in my last fortnightly.

12. In my original scheme for relief works, submitted to Government through the Commissioner in December last, I had, in addition to the works on the roads, estimated for Rs. 32,000 to be expended on the excavation of tanks where found necessary; and in my last fortnightly I informed that I had selected the sites for six such tanks. As the work in the fields is now daily becoming shorter, I have applied to the Commissioner for sanction to commence on some of these tanks, and for this purpose have asked that Rs. 10,000 out of Rs. 32,000 estimated may be placed at my disposal.

13. During the fortnight we received Government sanction to the proposed work of reclaiming a large swamp at the back of the Patna city, which work will be taken in hand at once; and as it is to cost some Rs. 50,000, should afford labor to all those seeking it in the city and its surrounding villages for some months to come, or at any rate till the rains, when they will be able to again find employment in the fields.

C.—Transport of Grain.

14. The subjoined figures will show the quantity of grain imported into the district during the fortnight ending the 28th ultimo:—

—	Rice.	Wheat, Oats, and Barley.	Janera.	Other Grains.
	Mds.	Mds.	Mds.	Mds.
By rail - - -	2,28,472	64,357	62,172	1,81,016
By river - - -	550	100	3,610	1,540
Total -	2,29,092	64,457	65,782	1,82,556

Or a grand total of 5,41,817 maunds, exclusive of wheat, was received at the Futwah branch line for Government, but inclusive of the Government grain received at the Barrh and Mokameh. The figures showing the actual quantity of such Government grain have not been obtained; but it is roughly estimated to have been about 1,50,000 maunds, leaving the balance of 3,91,817 as private importations.

15. During the week ending the 28th ultimo, the private importations at the Patna ghât station have again fallen below those at the Patna city station, as shown by the following figures:—

	Mds.
Patna ghât - - - - - - - -	66,990
Patna city - - - - - - - -	86,252

And I am satisfied that the increase of receipts at the Patna ghât, as shown in my previous narrative, was only owing to the Railway Company having compelled consignees to consign their goods to the ghât during the block, and to ease the city station.

16. Our means of transport continue sufficient to meet all requirements; and now that large batches of bullocks and carts are continually coming from the North-Western Provinces, I hope that I shall not again be compelled to have recourse to our local means of transport in the conveyance of treasure to other districts, and shall be able to leave it entirely for the use of private traders.

17. In my last fortnightly narrative I informed that I had made arrangements for the supply of 85,000 maunds of fodder for Tirhoot, and I have now made other arrangements for another 15,000 maunds, thus completing the lakh which I was called upon to supply. Behar has already commenced sending in its share, consisting of 25,000 maunds to Chumpta, and my supplies for Bunker ghât will begin coming in from to-morrow. I propose starting it for the purpose of weighment, &c., in the old jail buildings at Deegah, which are on the banks of the river, and from whence therefore there will be no difficulty in sending it on to its final destination.

D.—Storage of Government Grain.

18. No further supplies of grain have been received in this district, and no alterations have been made in the distribution of that which had been previously stored. All the golahs in the Sudder Sub-division were visited during the fortnight by the Deputy Collector, Syed Ameer Hossain, who has been appointed district grain officer. He reports favorably regarding them; and states that, so far, the grain stored has not been damaged by climate or insects; but I am sorry to say we have not been so fortunate in the Barrh and the Behar Sub-divisions, from whence the sub-divisional officers report that all the coarse grains have been attacked by weevils and other insects, and are fast being destroyed. I have obtained the Commissioner's sanction to sending the Barrh stores across the river to Tirhoot for immediate use, and if the same cannot be done with the grain now in Behar, I will direct the Deputy Collector to sell it for what it will fetch. The Dinapore Sub-divisional officer also reports that his grain has, to some extent, been damaged; and as it is not likely that we shall ever require any of it, I intend asking the Commissioner's sanction to be allowed to dispose of all the up-country grain assigned to this district.

E.—ADVANCES TO PRIVATE PARTIES.

19. No advances for purchase of grains were made during the fortnight. I have already expended the sum allotted me for the purpose ; and so long as our markets continue as well stocked as they are at present, I do not consider that any further advances are necessary, especially as those who have taken them and have purchased grain find considerable difficulty in disposing of it, as the prices in the local markets are quite as low as they could afford to sell at.

20. The sum of Rs. 9,500 was advanced during the fortnight to different zemindars in the Behar Sub-division for agricultural improvements. Some other applications were received but rejected, as from inquiry it was elicited that the money was not intended to be spent on the works entered in the petitions, but either to cover law expenses or to be used in paying debts, &c.

F.—CHARITABLE RELIEF.

21. Nothing was done under this head during the fortnight, there having been no necessity for it. Some of the native gentlemen, both in the city and in the interior of the district, have opened almshouses, which at present meet all requirements.

No. 507F, dated Gya, the 6th April 1874.

From A. V. PALMER, Esq., Collector of Gya, to the SECRETARY to the GOVERNMENT OF BENGAL, Relief and Scarcity Department.

I HAVE the honor to submit my fortnightly report on relief and scarcity in Gya district for the fortnight ending Saturday 4th April.

A.—STATE OF THE COUNTRY.

2. The Bazars continue to be sufficiently supplied with food-grains of all sorts. The annexed table will show the reported price-currents during the past fortnight. It will be observed that food-grains are generally somewhat cheaper than they were a fortnight ago. This is the result of the reaping of the spring harvest, some of which produce has already come into the market.

3. The rates, as here detailed, may be taken as being the highest rates that obtain, and there is no doubt that agriculturists and field labourers obtain their supplies very much below the rates here stated

Bazars.	Wheat.		Barley.		Rice, best sort.		Rice, common.		Millet.		Maize.		Gram.

4. There has been no rainfall within the district during the past fortnight. The weather has been everything that could be desired for gathering in the harvest. The sufficient rain in February brought new life to the rubbee crops, which resulted in the ears of corn being well-filled and the crops heavy. From every part of my district I am assured that the outturn has realized the most sanguine anticipations. Since the heavy rain in February we have had occasional showers up to within the last fortnight, during which bright weather and a wholesome westerly wind have prevailed.

5. I dare say that a more favourable weather for the harvest could not have been. For the past month at least I have neither seen nor heard of caterpillars, blight, or such like crop-destroyers.

6. I am happy to be able still to pronounce the condition of the people to be generally good.

7. It is extraordinary, with all the preparations around and the unusual action of the Government in importing food, to notice the apathetic character of the people. They at any rate have no gloomy anticipations, nor do the higher classes of natives anticipate anything like a famine. In this view I concur. I think that after the rubbee crops are threshed and stored, we must be prepared to find labor for the laboring and other classes, as distinct from agriculturists.

8. That the time has not yet arrived is clear from the indifference with which laborers come to our works, and the terms they wish to enforce before working at them.

9. No cases of misery or starvation have happily yet been heard of. Measures are being taken by which the state of each tract is ascertained, and where any real distress is apparent immediate relief has hitherto been afforded.

10. Grain thefts and robberies are not materially increasing, but offences against property generally, as previously noticed, have been steadily increasing for several months past.

11. The annexed comparative statements will exemplify at a glance what I have just stated.

COMPARATIVE STATEMENT of CRIME in which Grain was stolen in the Gya District for the month of March 1874, as compared with the corresponding month of 1873 and 1872.

B.—RELIEF WORKS.

12. The statement to be submitted two days hence to the Public Works Department of the Bengal Secretariat will, at a glance, give all detailed information of numbers of work-people employed. This information I have not by me at present in a complete form.

13. The marking out of the Puraya road has not yet been reported completed. I have begged the Executive Engineer to hasten it as much as possible, as I am anxious to commence work there by the 10th of this month. During the fortnight the Warisligunge road has been started in the Nowada Sub-division, an invalid gang having at the outset been employed.

14. There appears to be some hesitation with laborers to do work on the payment-by-result system. This I attribute to one or two cases in which duffadars on invalid gangs have freely dealt out daily payments without in the least degree exercising themselves in seeing that a fair amount of labour was given in return.

15. I have very great difficulty in obtaining competent duffadars, and also in getting them promptly looked after. Food in some cases is obtainable at a greater distance than I should wish; but many laborers bring their food with them; and as long as the laborers themselves are content with the existing arrangements, it is impolitic to make fresh ones, which, though for their benefit, would not be so construed, and might serve as a ground for discontent. The Magistrate of Jehanabad asserts that the able-bodied persons coming for work object to the payment-by-result system, inasmuch as they distrust the duffadars and Government.

16. If the system as indicated in my last report is followed and the work measured up every other day, and these measurements be again tested by a superior officery every 7 or 15 days, it is simply impossible that cause for distrust should exist, and I am quite satisfied that, if the sub-divisional and other officer superintending the work will personally take a little trouble to set the work going, this form of relief is by far the best adapted for able-bodied men seeking employment. These men should not be permitted to overcrowd the invalid gangs, the cases of the two sets of men being altogether different.

C.—Transport of Food.

17. The annexed table will give in a compact and condensed form an approximate account of food-supplies privately imported during the fortnight.

Private Importations.

Bazars.	Wheat.	Barley.	Rice, best sort.	Rice, common.	Millet.	Maize.	Gram.	Total.
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
Gya - - -	476	241	193	1,404	36	228	372	2,950
Nowadee - - -	—	—	—	12	—	—	35	47
Jehanabad - -	65	75	23	64	—	52	74	353
Aurungabad - -	154	—	15	300	—	8	145	622
Daoodnuggur - -	2,300	600	1,700	1,700	—	100	1,200	7,600
Total - -	2,995	916	1,931	3,480	36	388	1,826	11,572

18. This gives a total of 11,572 maunds against 9,599 maunds imported during the previous fortnight. This increase of 1,973 maunds is satisfactory.

19. Similarly there has been an improvement in the private importations reported in the Sudder Bazar of Gya as hereunder shewn:—

Bazars.	Wheat.	Barley.	Rice, best sort.	Rice, common.	Millet.	Maize.	Gram.	Total.
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
Fortnight ending 4th April	476	241	193	1,404	36	228	372	2,950
Do. do. 21st March	477	137	65	1,212	22	367	217	2,497

20. There is at present a diminution in the supply of carts. This is attributed, and rightly so I think, to two causes.

1st.—The very high rates and quasi-impressment of carts entering Patna for service in carriage of grain to the north of the Ganges.

2ndly.—To the large number of carts at present secured by the Opium Department for conveying opium jars to the Patna godown. The opium season in this district has been a bumper one. I trust that the latter cause will cease to exist before I am required to transport from Patna my newly allotted supply of grain.

D.—Storage of Government Grain.

21. The following is a summary of grain already stored in the district:—

	Mds.
In Sudder sub-division - - - - - - -	46,490
In Jehanabad - - - - - - -	34,850
In Nowada - - - - - - - -	35,116
In Aurungabad - - - - - - -	28,800
Total - - - -	1,45,256

22. I have about 5,000 maunds still to receive of my former allotments (1,50,000 maunds), which I have requested Mr. Toynbee to send to Bankipore. Under Sir Richard Temple's instructions a further allotment of 70,000 maunds has been advised, and which I have distributed thus:—

Sub-divisions.	Grain.	Rice.	Total.
	Mds.	Mds.	Mds.
Sudder Sub-division -	10,000	25,000	35,000
Jehanabad „ -	5,000	5,000	10,000
Nowada „ —	5,000	10,000	15,000
Aurungabad „ - -	5,000	5,000	10,000

23. And I have requested the Commissioner and Mr. Toynbee to send these quantities to the Railway Stations, Bihta, Bankipore, and Buktearpore, respectively.

24. I do not apprehend that it will be necessary to incur further expense for housing this grain. Of the 70,000 maunds, 50,000 will go to Gya and Nowada, at both of which places I have arranged with the Sub-Deputy Opium Agent for accommodation.

E.—Advances to Private Parties.

25. These advances are—

1st.—For purchase of grain.
2nd.—For land improvement.

1st.—*For purchase of grain.*—During the fortnight there have been three applications; of these one has been granted and two are under inquiry.

2nd.—*For land improvement.*—The first of the annexed statements will show the transactions during the past fortnight, and the second what the total number of applications have been and how disposed of.

Advances taken for Land Improvements.

Name of Applicant.	Nature and Locality of Work for which Advance has been applied for.	Amount of Advance applied for.	Period within which the Work is to be completed.
		Rs.	
Mungar Mahto ryot	1 Pucca well in Dhanonte	125	4 months.
Juglall Singh ryot	Repairs to a pucca well and embankment in Saidpore Chuk Zubra Pergunnah Okree.	50	3 do.
Fakeera Khan, Soochit Singh and Lukhee Koeri ryot.	1 Pucca well in Dhungawan	200	4 do.
Chitoo Mahto ryot	1 Pucca well in Kooraree	96	5 do.
Gunga Mahto and Ukul Mahto ryots	1 Pucca well in Dhungawan	175	4 do.
Baharee Mahto ryot	1 Pucca well in Futtehpore Nogawan.	125	3 do.
	Total	771	

Statement of Applications under Land Improvement Act for Fortnight ending 4th April 1874.

Sub-divisions.	Number of Applications received during the Fortnight.	Number of Applications received previously.	Total Number of Applications received.	Number disposed of.					Pending.

Aurungabad	—	78	78	27	35	2	—	64	14
Jehanabad	9	48	57	18	15	—	2	35	22
Nowada	2	5	7	2	—	1	1	4	3
Total	14	153	167	50	62	3	3	118	49

F.—Charitable Relief.

26. Relief by distribution of cooked food has been afforded in the Sudder, Aurungabad and Nowada sub-divisions.

27. The persons thus relieved are lepers and persons incapable of earning a livelihood for themselves, and who as far as can be ascertained by summary inquiry have no relatives capable of supporting them. In the Sudder a daily average of 147 persons have thus been fed. The daily average in Aurungabad is 35 persons, and in Nowada 14 persons.

28. The giving of raw cotton to be converted into thread has also been had recourse to as a method of relief in Aurungabad and Sudder station. In the former locality seven females are thus assisted, and in the latter 227.

Statement showing the progress of Charitable Relief during the Fortnight ending 4th April 1874, called for in Bengal Government No. 1251, dated 5th March 1874.

Number of Committees and Sub-committees as yet appointed.		Number of Workhouse or Centres for the Distribution of Food Gratuitous Relief.	Number of Men, Women, and Children, with Total in Receipt of Gratuitous Relief in any Shape, &c.
Sudder Sub-division	1	1	2,066
Nowada	1	3	194
Jehanabad	2	—	—
Aurungabad	4	1	248

N.B.—It has been settled by Sir Richard Temple that no special relief circles are required in this district. That eight ecial officers will be appointed to thoroughly examine any tracts likely to be distressed, and to visit generally the villages the mofussil, with a view to employment being found or relief administered.

29. It may not be out of place here to mention that for famine relief purposes a sum of Rs. 18,254-13 have already been collected within the district, and that this amount will still further be supplemented. The contributions are very creditable to the contributors.

No. 28F, dated Arrah, the 7th April 1874.

From H. W. ALEXANDER, Esq., Collector of Shahabad, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I HAVE the honor to submit my ninth narrative for the fortnight ending the 4th April.

A.—STATE OF THE COUNTRY.

Abundance or scarcity of supplies in the bazars.

The supplies in the local markets in the Arrah, Sasseram and Buxar sub-divisions have not in the aggregate fallen off in quantity.

In Bhubhooa, matters in this respect are reported to be normal.

Large quantities of grain are still being imported into the district by rail, and the new rubbee is coming into the market.

Kinds and prices of grain selling at one or more specified principal marts.

2. In Appendix A. is given the kind and prices of grain selling at the chief marts in the district. It will be noticed that on the whole the prices are slightly more favorable than they were last fortnight.

Rainfall, if any, state of crops, condition of the people, actual facts as to any known cases of misery and starvation, grain-thefts and robberies, condition of any particular tracts.

3. No rain has fallen. The rubbee has been generally harvested, and I think may be regarded as a much better crop than was at first anticipated. In the Arrah and Buxar sub-divisions, excluding the Deearah lands, the crop may, I think, be estimated as a fair average one; similarly so in the Sasseram sub-division.

In Bhubhooa sub-division, Mr. Eyre estimates it as a 12-anna or ¾ crop, while the Deputy Collector estimates it as less. I am inclined to accept the former's as the more accurate calculation.

In regard to the condition of the people I have nothing new to add to my last report. In large towns such as Arrah, Buxar, Chousa, Sasseram, Nasrigunge, Akherpore, Bhubhooa, Chynepore, where professional beggars congregate, and where many helpless indigent people belonging to the lower class are living, gratuitous relief and in-door subsidised relief has become now necessary, and in part has been commenced in one or two of the above-named places. In rural tracts no such necessity has at present arisen.

No cases of actual misery and starvation have as yet been brought to light. There has been no remarkable increase in the number of grain-thefts and robberies. Most of the cases reported have been petty thefts of crops, which are of yearly occurrence.

In the Sasseram sub-division, one theft occurred in a building, in which case 6 maunds 20 seers of wheat were stolen, and in another case 4 maunds 9 seers of rice were taken.

The comparative statement of crimes (Appendix B.) shows an increase by 88 over the cases in 1873, and by 121 over the cases in 1872.

I have nothing more to add in regard to the condition of any particular tracts; if any material change does take place, it will, I think, show itself in June.

B.—RELIEF WORKS.

Full details in regard to all such works will be furnished in the statement called for in circular No. 5718, dated the 3rd December last, which is due on the 8th instant.

In the Arrah sub-division, work will be started immediately on the road from Gurahnee to Bihta *viâ* Sikrita.

In the Buxar sub-division, the village road from Chousa to Jumooaon has been completed, and the continuation of it from Jumooaon to Dhunsahi has been commenced.

In the Sasseram sub-division, work is being carried on upon the roads from Chenari to Mullipore, and from Akherpore to Juddoonathpore. There was a considerable falling off in the number of laborers at the relief works during the cutting of the rubbee crops. Now that the harvest has been gathered the numbers resorting to the works are daily increasing, and will continue to do so, I am inclined to think, up to the end of this month.

C.—TRANSPORT OF FOOD.

There has been no falling-off in the importation by rail of grain by private traders in the Arrah and Buxar sub-divisions. The quantity so imported will be submitted in a separate return (which will follow), directly I receive detailed figures from the Traffic Department, East Indian Railway.

By river no importations are reported.

	Maunds.
The private importation in the Sasseram sub-division during the fortnight have been—By rail - - - - - -	3,865
From other districts - - - - - - -	[illegible]
In Bhubhooa—	
By rail - - - - - - - -	210
From other districts - - - - - - -	222

The means of transport are at present sufficient for all requirements. The Collector of Sarun is anxious now to employ only carts of this district for conveying his grain from the Arrah railway station to the river ghât; in other words, something more than 600 carts.

I now expect that further consignments of grain will be sent to me very shortly for this district, and I shall certainly not be able to convey it away if the Sarun grain is to absorb so much of the means of transport belonging to this district. One result has already shown itself, and that is, that I cannot convey grain at the same rate as I did when storing grain in January and February owing to the demand for carts which has thus arisen.

D.—Storage of Government Grain at Relief Works.

In the Arrah sub-division, 117 maunds 7 seers of rice was received during the fortnight and despatched and stored at once.

In the Buxar, Sasseram, and Bhubhooa sub-divisions, no grain has been received or stored during the period under report.

E.—Advances to Private Parties and their Results.

In the Arrah sub-division, an advance of Rs. 2,000 has been made to Nowrun Singh of Chandi for land improvements, and Rs. 300 to Jugdeo Sing of Aeer for the purchase of grain. No other advances of any kind have been made.

F.—Charitable Relief.

I have nothing further to add to my last report in regard to headings Nos. 1, 2, 3, 4, 5, of circular No. 1251 S.R., dated 5th March.

For the Arrah sub-division, three supervising relief officers have been appointed on Rs. 40 a month, whose chief work at present will be to make a village-to-village inquiry in order to ascertain what persons are fit subjects for gratuitous relief, or subsidised in-door relief, or who can be employed on light out-door labour, such as rope-making and cotton-spinning. Poor-houses will be at once opened at Gurhanee and Arrah, at which it is supposed that the chief recipients of charity will be professional beggars, who, from physical infirmities, are incapable of performing any work.

Rope-making and cotton-spinning will be provided also for those who are able to do such light work; 36 persons are now receiving subsidised in-door relief, and 44 persons gratuitous relief daily at Arrah.

In the Buxar sub-division, 119 persons in all, including men, women, and children, have received gratuitous relief daily at the following places:—Buxar, Doomraon, Nawanuggur, Choura Khyree. Two supervising relief officers on Rs. 40 a month have been entertained for this sub-division.

In regard to the Sasseram and Bhubhooa sub-divisions, Mr. Eyre reports—" No charitable " relief has yet been commenced in Sasseram beyond the subsidised in-door relief of rope- " making specified in my last narrative. The weekly returns of this relief are not to hand, and " I cannot therefore supply them. Gratuitous relief has been commenced in Bhubhooa. I " visited that place on the 31st ultimo, and personally supervised the relief. I could only find " 41 persons fit recipients of relief, and some of these were fitted for light work. I left full " instructions, and have since sent registers-tickets, and iterated the instructions already given. " I am afraid this relief is being misapplied. The day after I left, the number of recipients is " entered as 81; 40 was the number of the previous day. I will be at Bhubhooa on the 8th, " and will specially report on this matter. Details regarding sex have been called for, and will " be submitted in the report."

No. 891F, dated Mozufferpore, the 8th April 1874.

From C. F. Worsley, Esq., Officiating Collector of Tirhoot, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit my narrative of scarcity and relief in the Tirhoot district for the fortnight ending Saturday, 4th April 1874.

A.—State of the Country.

2. In Seetamurhee sub-division the supply of grain is sufficient, except in Cherout and Jelley where the people are dependent on Government supplies.

3. The Durbhunga sub-division, the supply in the Durbhunga and Rowserah bazars "still continues ample," but in the interior all articles of food are dear and scarce. In Hattee sub-division, it has been found necessary to supplement private trade by Government sales.

In Mudhoobunnee sub-division, the sale of Government grain at Mudhoobunnee has caused [illegible] grain of all kinds to be brought to market, and has also had the effect of lowering prices [illegible]. The bunyas, however, are stated to have recouped themselves to a certain extent, by [illegible] the number of local pice given in exchange for rupee coins, and the sub-divisional officer considers that it would be a good opportunity to introduce the standard pice coins. I would recommend that two lakhs of pice be forwarded if possible *viâ* Barrh and Chumpta Ghât for circulation in Durbhunga and Moodhubunnee sub-divisions.

5. In Hajeepore, Tajpore, and Sudder sub-divisions, the bazars have been sufficiently supplied.

6. The subjoined statement shows the kind and prices of grain selling at some of the principal marts:—

Name of Marts.	Wheat.	Barley.	Common rice.	Lesser millet.	Maize or Indian-corn.	Gram.
Seetamurhee - - -	10½	14	10	14	14	14
Jalley - - - -	—	—	10	—	—	—
Mudhoobunnee - - -	10	14	10	12	12	12
Khajowlee - - -	11	16	11	12	12	13½
Durbhunga - - -	12	—	10	13	12¼	—
Bahera - - - -	11¼	—	9¾	13	14¼	—
Singhya - - - -	9½	—	9	12½	11¼	—
Hajeepore - - -	13	19	11	—	16¾	16¾
Mohoowa - - -	18½	18	11	—	15	17½
Dulsingserai - - -	12¼	17	11	—	15	16¼
Sarmastipore - - -	18	16	9	—	14	15
Mozufferpore - - -	10	—	9	—	12½	14

7. In some of the western parts of Seetamurhee sub-division, the majority of the ryots are reported to have sufficient grain for their own wants. Elsewhere no additional information has been obtained regarding stocks, though the hoards of grain invariably disclosed by outbreaks of fires indicate the existence of hidden stores. I have directed the district superintendent to depute clever officers to specially investigate these cases, which have of late been very frequent.

8. There has been no fall of rain in any part of the district.

9. In Seetamurhee sub-division, the cheena and moong crops are suffering from the drought, and the same may be said of these crops in all parts of the district. In the western part of the Sudder sub-division, where sowings were probably made under as favorable circumstances as in any portion of the district, these crops are being fast dried up by the scorching west winds that have prevailed during the last fortnight, and when I was in that direction a week ago, the cultivators thought that they could not hold out for more than 10 or 12 days without rain.

10. In Seetamurhee sub-division, the condition of the people has improved generally, but isolated cases of distressed women and children are still to be found. For all such cases the sub-divisional officer is specially providing. The condition of the people (some 50,000) who attended the recent large Seetamurhee fair was fairly good; and as all came provided with grain for their own consumption, and fodder for their cattle, no difficulty was experienced in supplying them with food.

11. In Durbhunga, the sub-divisional officer has observed a marked improvement among the people, especially in the direction of Bahera. He writes: "I had myself grouped round Behera, where I have no doubt the distress was as pronounced as in any other village in the sub-division. These were the villages in which I, in a former report, declared that famine had commenced; as then, so now. I had all the poor assembled, and were it not that I was assured by the jeyt ryot putwaree, and group inspector, that no famine deaths had occurred, and that in the people now before me I saw the starving creatures of a month ago, I scarcely could have credited the change. I visited the village when the putwaree, was distributing the daily allowance. There were no complaints whatever, and the improved condition of the recipients proved that the village headman had not deprived them of the Government charity. Indeed, this system of village relief everywhere I went I found working well. Mr. MacDonnell and the sub-divisional officer of Hattee, are now directing their attention to the relief of cultivators and small farmers whom it is difficult to bring to our relief works. To these they are making advances in money for seed-grain, and in grain for their own support. The principle they have adopted is that of making advances to the applicants by whole villages, the applicants entering into an association or system of frank pledge for repayment, their estimate being based on returns submitted by putwarees showing the quantity of land cultivated by each applicant, and the quantity of seed-grain required, being calculated at the rate of 20 seers per beegha. In some instances they have persuaded zemindars to take the seed advances into their own hands, and one zemindar, Baboo Bunsee Dareer, of Ragopore, proprietor of nearly half the Lehra circle, is specially mentioned for the public spirit and humanity which he has displayed in this respect, and in the administration of relief operations on his estates under their directions.

12. The *Mudhoobunnee* sub-divisional officer writes: "The time has now come when I must say that distress is general throughout the sub-division. A few favoured tracts, such as the neighbourhood of Ladma and Hurlaki thannahs, are still comparatively fairly well off, but the fact that we have little less than half the population on our hands shows that distress is severe in general. But for the Government roads, we could not have hoped to cope with it; and though as our organisation becomes more complete we may hope that village works will relieve us of the feeble part of the population, it is idle to suppose that anything but a vastly increased superintendence, much more largely supplemented than it is at present by European energy, will enable us to bring food to the mouths of four-fifths of the population (whom I expect to have to feed), if we have them scattered throughout the country in their own villages."

13. In *Hajeepore sub-division*, excepting perhaps the extreme northern tract, the condition of the people has not been changed for the worse. There is still little demand for employment, owing, as the sub-divisional officer considers, to the high rates of wages paid on the Gunduck embankment by the Public Works Department. Local agency at present is quite sufficient to deal with all cases of distress.

14. The sub-divisional officer of Tajpore reports that "the people seem to keep up fairly," but that in the direction of the Tal Bareyla they are becoming pinched, and he looks for a marked deterioration in their condition in the next month or six weeks. The south-east portion of the sub-division, also, causes him some anxiety. The difficulty of disposing of tobacco produce, on which this sub-division greatly relies for its means of support, is thus noticed by Mr. Wace: "I should not be far out in saying that anxiety in the sub-division centres chiefly now in the question what is to be done with tobacco. There are a few buyers going about but there is a considerable balance over from last season, and a very fair crop of this year to be disposed of. The North-West merchants have, I suppose, taken alarm at the famine, and if they were here I do not know how they would transport their purchases. The carts now carrying rice to the north-east would in ordinary years be carrying tobacco up to barter for rice to bring down, or carrying tobacco down to the river. The matter deserves our earliest attention, for we have reckoned much on the wealth of Saraisa to tide it over the coming trial, and its chief source of wealth is tobacco."

Mr. Wace suggests that the tobacco might be conveyed down to the Ganges from Nagarbasti by rail, or that advances should be given by Government on security of the tobacco. Both suggestions are good under certain provisoes. If purchasers can be found in the Patna district, the conveyance of the tobacco to the banks of the Ganges will be a great boon to the cultivators; and I would be glad if the Commissioner would kindly authorise the Collector of Patna to ascertain whether purchasers are likely to be found in his district. With regard to advances, they might certainly be made, but if the tobacco is to be treated as actual security, it must either be delivered and stored at Poosah, in which case a temporary special establishment must be entertained or loans might be attempted through zemindars, who could be left to arrange the question of security between themselves and the cultivators. The only other course that occurs to me is for Government to buy up all the tobacco at the ordinary current rates, and to despatch and consign it to agents in the North-West Provinces for sale.

15. In the Sudder sub-division the condition of the people is good, so far as their outward appearance is concerned, but the demand for employment is increasing daily. I have lately made a tour through the whole of the western portion of the sub-division comprised within the jurisdiction of thannah Paro, and have met with no cases of distress except such as are being relieved gratuitously through the managers of factories. Having previously seen bad accounts of the extreme western tracts, I sent notice of my visit to the inspector of the thannah and desired him to produce before me some of the worst cases which he had reported. On my arrival, however, I was told that no "real distress" existed, but that professional beggars required relief, and work was wanted. On a tank-work adjoining the thannah, which had been opened two days previously, I found about 200 laborers, all of whom were in very fair condition. Similarly, on all the works which I visited (some 10 or 12), I found the people healthy and strong, and I was particularly struck with the good appearance of the children. I think very few of the laborers had become so destitute as to be wholly dependent on relief works for their support, but that they were certainly glad to avail themselves of employment offered to them near their houses. A large proportion of the population in this part consists of gowals and other agricultural castes, and I have no doubt that the numbers on our relief works will increase very largely during this month, as there will be no work in the fields to employ the people, and they have not sufficient food or means to maintain themselves in idleness for the next few months. Distress (which term I understand to mean actual bodily suffering and enforced privation of food) did not appear to me to have yet arisen to any extent. The state of things, however, will require constant watching, and the arrangements now made with the Commissioner's sanction, and which will be detailed further on, will be quite sufficient for all purposes of relief.

In the north and north-east of the sub-division the condition of the people, as reported by the police, gives cause for more anxiety. I intend to take an early opportunity of visiting those parts. In the meantime Mr. Deputy Collector Warde-Jones has been deputed to make inquiries, and the relief superintendents are engaged in organising their circles and opening works.

16. Some cases of death from starvation are reported from the Mudhoobunnee sub-division, but from the accounts given of them it is impossible to say how far they were owing to want of food. The following is Mr. Magrath's description of the cases:—

"Of known cases of starvation I have few to report; notably two people have died at Mirzapore; one man was found by Mr. Metcalfe and myself, the other, an old woman, by myself some days after. The man was not so attenuated, but that other causes than starvation may have led to his death, and had come along with all his people, who however decamped when they heard that I was enquiring for them. The old woman was very old, and died within 20 yards of where grain was being distributed. The report of the circumstances of death has not reached me, and as the police do not make any inquiry, but merely state that so many persons died of starvation in their reports, I do not hope for any additional evidence in the matter."

From Kutchra circle, four cases of death were reported in mouzah Dhangah, pergunnah Jorail, the property of the Maharajah of Durbhunga. I at once sent notice to Mr. Nicholay, sent off an officer to the village, and late in the day visited it myself. After a careful inquiry it appeared that not one of the cases reported had occurred within the month, and that the friends of the people who died were not in a starving condition, and that there was reason to suppose the whole story untrue, more especially as the Beneputtee head-constable who reported the matter had not been in the village for two months, and had made no inquiry whatever, taking the statement of the chowkeedar for gospel.

As, however, there were a certain number of helpless people in the village Mr. Nicholay made arrangements for their receiving a sufficient supply of rice on the ticket system. I have had only one other report of the sort from that circle, viz., of an old man in ill health at Damodapore, and as Mr. Nicholay has 26 tanks, and the ticket system is at work in all but one of his eight circles, I have little doubt that the distress there will be efficiently met.

Mr. Williams reports that soon after his arrival in Motipore, seven deaths from starvation were reported in that circle, two of them very old women, one at Bijai, and another at Thowa (these person were in receipt of Government relief); the third death was that of a mushar who came to work on the Motipore road from the village of Chapahi. As the Chapahi zemindar (a woman) has been giving relief largely to her people, the reason of his leaving his village is not apparent. A fourth came from a great distance, no one knew whence, for relief. He must have passed by places of relief whatever way he came. The other three died in the villages of Gandanti and Sima, to which Mr. Williams called attention on his first arrival at Motipore, and where relief has been extensively given, though unfortunately too late to save the lives of these people. Had my circle officers been sent to me at the time I joined, as I was promised they should be, I have no hesitation in saying that most of these deaths would have been avoided. In his later letter, Mr. Williams, who has now visited his whole circle, takes a more hopeful view of the general state of things, and concludes: "As long as the Mirzapore and Motipore road is in construction, " I have no reason to apprehend any heavy distress in the villages in the west and north of my " circle."

From the Mudhoobunnee circle, Baboo Ishree Pershad reports that of the four cases of starvation reported to him, one was of a man found in good health working on the roads; a second, that of a person who on inquiry proved never to have existed; the third case was not traced, and the fourth proved to be that of a man who, after working for one month on the Government road, died of dysentery, from which he had long been suffering. He observes that the villages near and about Pandaul are those in the greatest distress, and attributes the poor condition of the Dosadhs to the difficulty they have now in finding anything to steal. Mr. Kisch, from Bhakwa, which he has only recently joined, reports that of two cases of starvation reported to him, one man died of a disease from which he had been suffering for two years, and the other of old age. He, however, found severe distress in Barawn, but relieved it at once. Whilst I was with him distress in Dhatwar was brought to his notice, but he took prompt measures for its relief.

"Mr. Azanne from Jhanjarpore reports one death at Meljhain from starvation. This village, although very close to Jhanjarpore, appears to have suffered considerably from distress. Mr. Azanne however, on his arrival, at once relieved those who were in want. Four deaths also occurred at Jhanjarpore; two of them had been fed for 19 days; the third man came from a distance, and was very ill when he came; the fourth had been at work on the tank for seven days. He reports the village of Nanour as in great distress, but has only heard of one death there, which was not alleged to have been from want. He also found five children deserted by their parents and made arrangements for their support."

17. No cases of starvation are reported from other sub-divisions.

18. The annexed statement shows the number of thefts, &c., committed during the month of March:—

Sub-division.	March 1874.	March 1873.
Mozufferpore	87	50
Tajpore	28	19
Durbhunga	29	21
Hajeepore	Figures not given.	
Seetamurhee	65	28
Mudhoobunnee	Figures not given.	
Total	209	118

B.—Relief Works.

19. The number of laborers employed on relief works is as follows:—

Seetamurhee sub-division—

160 Government works	32,547
Private works	5,000
Total	37,547

Of the Government works, 46 have been taken in hand during the past fortnight—

Durbhunga sub-division—

Village works in Hattee sub-division	16,000
Ditto in Durbhunga circle	2,352
Ditto in Mohomedpore ditto	30,000
Durbhunga Bahera Road	38,754
Bahera Pooprce road	2,643
Durbhunga Mohomedpore road	1,364
Anar Road	4,145
Railway embankment	5,122
Works under Executive Engineer in Hatti sub-division	47,000
Works under Mr. Stevens	5,829
	153,209

Mudhoobunnee sub-division—	
80 works	196,486
Hajeepore sub-division	4,400
Tajpore ditto	2,550
Sudder sub-division under Executive Engineer	1,624
Under planters, 49 works	21,900
Roads, tanks, &c., under local agency	8,695
Total	32,219
Grand total of laborers	426,411

C.—Transport of Food.

20. Of private importations the sub-divisional officer of Tajpore writes: "I can say but little. "Zemindars and traders find in the difficulty of procuring carriage a ready and plausible excuse "for a natural disinclination to turn southwards instead of northwards for supplies." The other sub-divisional officers do not notice this subject. As regards the Sudder sub-division I have observed that grain still finds its way into Mozufferpore town in sufficient quantities, and the difficulty, or rather the increased cost of procuring carriage seems to have produced no worse result than a slight enhancements of prices. At Sahebgunge, too, a large mart on the river Gunduck, I found the grain market well supplied, and the dealers admitted to me that they experienced no difficulty in obtaining boats to import grain either from Patna or Revilgunge (in Sarun), both which places they have been drawing on for supplies. In short, all that I have seen and learnt confirms me in the opinion that the allotment of grain for which we have applied will be quite sufficient. It may perhaps be objected that if private trade is doing so much there can be no necessity for laying in more Government grain at all, but to this I would reply (1) that the sub-division has not hitherto depended wholly on imported food for its support, and that it would therefore be hazardous to trust entirely to private dealers when local stocks are exhausted; (2), that we ought to be able to exercise some control over our prices, which we can only do by becoming grain holders; and (3) that it is desirable during the season of cultivation, and in the rains, to lower prices to at least 12 seers per rupee.

21. Transport arrangements having been now placed under the immediate direction of Colonel MacGregor, it is unnecessary for me to say more on this head than that the companies on the western side of the district are working thoroughly well, and that the Durbhunga sub-divisional officer reports a great improvement on the part of the Southern Alliance Company. Though he declines to commit himself to any distinct statement, he believes that the Company will henceforth be able to carry between 3½ and 4 lakhs a month.

C.—Storage of Grain.

22. The amount of food grain already stored is as follows:—

Seetamurhee	333,678
Durbhunga	132,312
Mudhoobunnee	291,458
Hajeepore	5,179
Tajpore	19,624
Muzufferpore	44,677
Total	826,928

E.—Advances.

23. During the fortnight the following advances have been made—

Sub-Division.	Nature of Advance.					Total.
	To grain dealers.	To zemindars for support of their ryots.	To ryots for their own support.	For wells.	For land improvement.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Seetamurhee	50	1,050	1,100	40	1,260	3,500
Durbhunga	Not specified.				—	4,700
Mudhoobunnee	—	—	—	—	2,400	2,400
Hajeepore	—	—	—	525	—	525
Tajpore	—	—	—	—	—	—
Muzufferpore	—	—	—	—	100	—

On the subject of advances Mr. Magrath writes—"My remarks apply to the case of respectable ryots to whom at present no advances are being made. I should like something to be done for them at once, as otherwise they will go in with the rank and file of paupers. The working of Sir Richard Temple's loans up to the amount of Rs. 50, through the relief superintendents would, I am sure, be a great boon. The landholders also apply for loans; I was granting loans to them till the Additional Commissioner stopped me. I should like permission to be given to the relief superintendent also to give such advances up to Rs. 50.

F.—CHARITABLE RELIEF.

24. The Seetamurhee officer under this head submits only a statement which I insert below:

Number of sub-committees and committees as yet appointed	1
Ditto of special relief sub-divisions opened and officered	2
Ditto of regular relief circles opened and manned by special officers	10
Number of relief circles opened and managed by planters, zemindars, and other residents	10
Number of work-houses, or centres, for the distribution of food and gratuitous relief	8

Number of men, women and children, in receipt of gratuitous relief in any shape, through the charitable relief organisation daily.	Men	3,000
	Women	1,500
	Children	800
	Total	5,300

25. The sub-divisional officer of Durbhunga thus reports—"I have already explained the "machinery of charitable relief as it existed when first set in action. I have now to refer to an "extension of the system, by which, while retaining our former organisation, we are enabled "to render the administration of relief more searching and certain. It consists in having pre-"pared through the jeyt ryot-putwarree of each village a list of all these who are in want of "relief in the village, and according to this list the group store-keeper dispenses weekly to each "village in the group the quantity of grain required for the week's consumption. The distribu-"tion is made in the village, by the village headmen and the putwari. Among the other duties "of the inspector will be that of seeing that in this respect the village headmen are up to their "work. This sub-division has been divided into 12 circles. The Banhar and Warisnugur "circles being outside the area where distress was most pressing, were not taken in hand till "now. Of the other circles, the grouping has been completed in all except Lehera, Gungdak, "and Hya ghât, where some villages still remain ungrouped. But before this week ends the "work will be completed in these. In all of these villages the officers are at work, having the "village list of distressed people made out, and looking to the fact that as our groups are made "up, and inspectors appointed, this work can go on simultaneously in every group, it ought to "be completed within a fortnight at farthest. My returns of those on charitable relief are in-"complete, some circle officers having been unable to send in any returns, and others only "returns for some groups. From these fragmentary returns I learn, that the daily average on "charitable relief is 14,563. I believe this, however, to be much under the real number."

26. The Mudheebunnee officer writes—"Charitable relief is now everywhere at work on the "ticket system. The system of giving out cotton, too, is taking root, particularly under Messrs. "Ozanne, Williams, Nicholay, and Baboo Ishree Pershad. I am establishing, through the "relief superintendent at most places *quasi* hospitals under the native doctors, for care of those "who are, either by starvation or disease, unfitted to go to their own people or to work. I "would have the distribution of cooked food, where it is given, also under the superintendence "of native doctors if a European is not present, as natives are slow to enquire into cases in "which care and extra attention is required."

27. The Hajeepore officer reports—"I have appointed three inspectors on Rs. 70 per mensem "to carefully find out all the really indigent in the north part of "the sub-division. I have advanced Rs. 1,200 to the gentlemen "noted in the margin* who have all undertaken to relieve the "really distressed round them at the rate of Rs. 1-8 to Rs. 2 a "month. I have directed the inspectors to put themselves directly "in communication with these gentlemen, who have shewn the "most earnest desire to co-operate with me, and in whose hands "we may safely leave the distribution of charitable relief. I have received one return, viz., from "Mr. James Smith of Shahpore. The others promise returns next week. With this organisa-"tion we shall be able to meet all cases of distress as they arise ; at present they are scattered "about the place, and I have no apprehension that in any part will there be any thing like "universal distress."

28. The Tajpore officer reports—"It has been arranged that we should start at once a regular "system of village supervision. The manager of every factory will receive through his putwaries, "and jeyt ryots of the villages in farm to him, reports of the state of the village. For villages "not in farm to a factory, which will be picked out on receipt of lists now coming in from "factories, there will be a special organisation, either through sub-committees of which we "propose to have four, or paid agency, reporting either to the nearest factory or the nearest "sub-committee.

"It is further arranged that for the present every manager should give, in bad cases, gratuitous relief from the grain at his factory whether bought under Government advances or not, and that the price of this should be made good to him out of the relief funds.

"A subscription list has been opened. The donations made and promised up to date amount to only Rs. 676, and the monthly subscriptions to Rs. 67; no factory has yet subscribed. Three managers have promised subscriptions, while two have replied that they prefer to dispense charity from factory and private funds on the spot, to contributing to a general fund."

29. In the Sudder sub-division, gratuitous relief is administered in the town by a sub-committee as previously reported. The subjoined statement shows the numbers relieved during the past week:—

Date.	Member of committee in attendance.	Adult men.	Adult women.	Children.	Total.	Approximate amount of food distributed.	Kind of food.	REMARKS.
						M. S.		
29th March	R. J. Richardson, Esq.	58	172	7	237	2 36¾	Janera, salt, and gram	None but the blind, lame, aged, sick, very poor, and weakly have been relieved; each adult has received ½ seer, and each child ¼ seer of jenera or gram (uncooked), with a small quantity of salt daily. The distribution each morning at 7 A.M., has been made under the superintendence of a member of the committee. A long shed is available for those who may wish to reside on the spot; as yet the building is unoccupied. Professional beggars and persons at all able to work have not been received.

In the interior, gratuitous relief is given in the western part of the sub-division by the managers of the Sahebgunge, Seraiah and Jeypore factories, and in other parts by superintendents of relief circles. The officers having only recently joined their appointments, have been fully occupied in arranging their circles, and reports of progress made will be submitted in next Narrative.

30. With the Commissioner's approval, I have arranged to place all the villages in the Paru thannah and some in the head-quarters thannah, amounting together to about 700 under the direct management of planters and their assistants. I found, on making enquiry, that six factories held in lease or owned 695 villages; and as each manager was willing to take charge of his own villages, and of any others lying within the outermost limits of his lands, and to give the aid of his assistants for supervision of relief works, and administration of charitable relief, I considered the scheme to be admirably suited for the particular locality. The circles will be constituted as follows:—

Name of head factory.	Name of managers.	Names of outworks.	Names of assistants in charge of outworks.	Number of villages.	Cost of supervision monthly.
Kantce - -	Mr. Browne -	Rajshye - -	Mr. Llewhellin -	140	546
Moteepore - -	" Fraser - -	Muradpore, Chak Larwan.	" Barclay, Mr. Abbott.	135	606
Shahebgunge -	" J. Macdonald -	Manian - -	Both, one other to be appointed.	115	556
Dooria - -	" Studd - -	Majowbe, Karrumwaree.	Mr. Hamilton, Mr. Robertson.	130	596
Seraye - -	" H. Macdonald -	Kewulpoora, Azeezpore.	Mr. Macintosh, Mr. Thomas.	125	576
Jeytpore - -	" Abbott - -	—	—	50	188
					30,638

31. It will be seen that the superior agency consists of six managers and nine assistants. The former give their services gratuitously, but to each of the latter a remuneration of Rs. 100 per month are allowed. A local man on Rs. 10 is to be placed over each group of four villages. The rest of the establishment is composed of clerks, golahdars, payadas, and peons, details of which it is unnecessary to mention here. The supervision of these six circles will be my own special duty, and Mr. Gordon will have similar charge of the other circles in the sub-division, viz., Belsund, Toorkee, Katra, Raj Khand, and the Sudder, which will be worked in the ordinary way by relief superintendents.

32. The main advantages of administering circles through planters are: (1) that we shall always be able to prevent the congregation of people in large numbers; (2) that the planters' local knowledge and experience will enable them to detect all cases of imposition; (3) that planters can and do succeed in extracting from labourers more real work than we can hope to get by direct management; (4) that Government grain can be stored in the factories, and sold at the local hâts with great facility and without disturbing the markets, and (5) that the system is economical.

I do not propose to try the system more extensively in the Sudder sub-division, because factories in other parts are comparatively few, but I think it may be applied, if necessary, in the Tajpore and Hajeepore sub-divisions.

33. Good progress appears to have been made in the grouping of villages in circles of the Durbhunga and Mudhoobunee sub-divisions.

34. I would respectfully suggest that the form and headings of some subjects of the Fortnightly Narrative be now altered, as they seem scarcely suited to the system of relief circles, and there appear to be some points on which it is no longer necessary for district officers to report (*e.g.*, transport); uniformity of practice in reporting on relief circles is very desirable. I would also recommend that more detailed instructions be issued regarding the information to be submitted under head (F.), charitable relief.

No. 1477F, dated Sarun, the 8th April 1874.

Memo. by J. E. DRUMMOND, ESQ., Officiating Magistrate-Collector, Sarun.

FORWARDED to the Secretary to the Government of Bengal in the Statistical Department, Calcutta, for information, with reference to his circular No. 80 of the 17th November 1873.

NARRATIVE of SCARCITY and RELIEF in the SARUN DISTRICT for the Fortnight ending 4th April 1874.

(A.)—STATE OF THE COUNTRY.

Abundance or scarcity of supply in the bazaar.

1. With the exception of Bussuntpore, where supplies are reported to be somewhat scarce, the bazars of the district are everywhere sufficiently supplied with grain, and though the importations have somewhat fallen off, private trade still holds out.

2. In the Sudder sub-division, during the fortnight the private importations were, to Revelgunge 63,365, of which 12,750 were maize, 7,600 barley, 4,600 wheat, 7,050 rice, and the rest other grains; to Dooreegunge, 2,625 maunds, and to Maharajgunge, 1,382 maunds; while the imports from Chumparun were only 268 maunds. The exports of grain to Tirhoot and Chumparun amounted to 6,164 and 848 maunds respectively.

3. Mr. Hudson writes as follows of his sub-division:—

"My own observations, made in the Parsa thana, assure me that the bazars are very well supplied indeed with every kind of grain and every description of ordinary food—vegetables, small fish, goor, &c. In Bussuntpore and Mashrakh the result of my inquiries shows supplies to be running short. In the latter thana I have the testimony of 103 putwarees to the existence of a deficiency."

4. The following is Mr. Wright's account for the Sewan sub-division:—

"There is no falling off in the supplies in the bazars in this sub-division; the supply is always more than the demand. During the fortnight under report the private importations amounted to 8,861 maunds at Guthoni, Siswan, Darawlee, and Sewan. The above amount was made up of 2,836 maunds rice, 693 maunds gram, 308 maunds Indian corn, and small quantities of barley, wheat, and other grains. These importations were chiefly from Gazipore, Azimgurh, and Goruckpore, on the other side of the Ghogra River, and small quantities from Patna and Bhagulpore."

Mr. Rattray reports under this head as follows:—

"Importations still continue, and the supply in the market is equal to the demand. The importation of Indian corn has stopped, as the grain will not keep, and the stocks are said to be sold off."

5. Of the Hutwa estate Mr. Hodgkinson writes:—

"There has been no failure in the supply of grain during the past fortnight, but the firmness of the prices after the harvest points to the necessity of the supply being supplemented by sales of raj and Government grain before very long. Rice has, I regret to say, risen in price, only 15 and 16 seers kucha (9 to 9⅜ pucka) being now procurable for a rupee. But as other grains, of which the late harvest has given a new supply, form the staple-food of the poorer classes of the people at this season, I do not propose to open our stores while these may be expected to hold out, although rice has gone below the limit of 10 seers.

Prices of Grain in Pucka Seers.

	Hutwa Basar.	Meergunge Basar.		Hutwa Basar.	Meergunge Basar.
Common rice - -	10⅝	10¾	Barley and gram - -	16	16
Makai - - -	14¾	14¾	Wheat (jow kerao) - -	13	13

It is observed that Mr. Hodgkinson's prices differ from those returned by the police, and that the price of rice quoted in his remarks is not borne out by the price-current given by him below.

Kind and price of grain.

6. The kind and price of grain selling at the principal marts and at the thanas and outposts are given in the annexed statement. Prices are exceptionally high at Garhha, Bussuntpore, Dighwara, Goothnee, and Raghoonathpore, where, while the price of rice ranges at less than 11 seers, at the same time more than 14, 15, and 16 seers of grain of any kind are not procurable for the rupee.

Stock of food in the hands of the people.

7. Opinions seem to differ as to the ultimate destination of the crops just harvested, but, as stated in the last narrative, my own view of the matter coincides with that of the sub-divisional officer of Sewan, who reports as follows:—

"Up to the present, almost the whole of the grain of the rubbee crops which have just been reaped is in the hands of the cultivators; but they will not, I feel certain, retain much of it; the greater portion will be sold in the bazars, and a large quantity will also find its way into the hands of the mahajuns. It is only the better class of cultivators who will store any of it. The common class of cultivators in this district are not in the habit of storing grain, but depend on the bazars for their supplies. Very little of the food-grain sold in the markets by the cultivators is carried out of the district. Most of it is brought up by the dealers in the bazars, who keep it to resell at a profit afterwards."

Mr. Rattray says, that "the yield of the rubbee harvest has been reserved for private consumption, except where proprietors are much in debt to mahajuns." The Sub-Deputy Collector, on the contrary, says "that they are paying the greater portion of their creditors and keeping the smaller for their own use.

"Besides satisfying the mahajun's debts, the cultivators have to pay their rent to their landlords; very few of whom, including even the largest zemindars in the division, will forego or even postpone their demands, and to meet these claims, the poorest class of ryots must dispose of the grain obtained from their rubbee crops, and would therefore be able to store very little for their own consumption even if they wished to do so; but, as I have already stated, it is not their custom to store it; they prefer depending on the local marts for their daily wants."

A contrary report, however, is made by Mr. Hudson, who writes:—

"(1.) From personal inquiries made by me in the villages chiefly of the Parsa circle,

"(2.) From the report of the police of same circle made after investigation,

"(3.) From information given by the putwarees of 130 villages in the Bussuntpore and Mashrakh circles, it appears that the rubbee harvest, which has just been reaped, has been stocked by the ryots for their own consumption, and has not found its way into the hands of the zemindars and mahajuns."

And again he writes:—

"It is generally ascertained that the rubbee harvest throughout the three thanas is stocked by the assamees for their own consumption, and this supply, it is estimated, will last them for about two months. There can be no doubt that zemindars have stocks of grain in many places, but it is not generally admitted. At Sotihar, however, and other places in Parsa thana, where I made inquiries, the zemindars informed me that they were supporting their ryots with advances of grain; and this proves that they must have grain in stock.

"Two-thirds of the putwarees of Mashrakh and Bussuntpore, who have been questioned on the subject, deny that there are any stocks of grain at all; but as regards the recent harvest, I am convinced that this is a misrepresentation; and indeed the rest of the putwarees examined admit stocks in the hands of both ryots and zemindars, and confirm the result of my own investigation as to the rubbee crop."

Of course the crops just reaped are yet in the hands of the cultivators, but I doubt much their being permitted to retain them.

Rainfall.

8. There has been no rainfall during the fortnight.

State of the crops.

9. The rubbee crops have now nearly everywhere been gathered, but complete returns of the yield have not yet been received. The principal planters have been asked to furnish information on this head, but answers have as yet only come in from a few. In the next narrative I hope to give the final result for each thana. As feared, the damage done by the hail-storm of the 16th has proved on inquiry to have been very serious. From the report of the canoongo it appears that the destructive part of its course was in a north-easterly direction from Ghorahat on the Gogra, 5 miles north-west of Manjhee, and that it extended thence for a length of 18 miles to within a few miles south of Mashrakh, with a breadth of from 2 to 4 miles. The thickness of the hailstones on the surface of the ground is reported to have been somewhere three inches and somewhere four to five inches, while in some places they are said not to have melted away within 50 or 60 hours after the shower. The area affected by the storm is computed to be 45 square miles in extent, and about 80 villages are reported to have suffered, in more than 30 of which the loss to the crops has been 8 annas and upwards. It is estimated by the canoongo that one-third of the rubbee food-crops on an area of about 10,000 acres has been altogether lost. He writes also that "the villages that happened to be on the skirts of the storm line have suffered far less than those occurring in the centre of it, which have sustained damage nearly 10 or 12 annas," and he adds that "the grain recovered after the hail-storm will barely suffice for a month's consumption." The action of the landholders in preventing cutting of the crops pending settlement of the rents has occasioned greater loss than would otherwise have occurred.

10. Mr. Macrae, of the Arrowah indigo concern, who has outworks also in the Mashrakh and Parsa thanas, writes as follows with regard to the crops:—

"About 12 annas only of the land usually applied to rubbee were actually sown, and the rest abandoned for want of moisture and facilities of irrigation in the pergunnahs of Bal and Goa. In the month of January, the intense cold for some days greatly injured the crops of rahar, cotton, kerao, and mussur (pulses), and reduced their outturn to only about 4 annas yield; but the wheat and barley, which were helped by irrigation and some rainfall in February, have been very successful, and fully more than an average yield generally; but in the middle of March a destructive storm of hail and rain passed over a portion of the above pergunnahs, taking a direction from the village of Roosee to Mashrakh, some 10 koss in length and from ½ to 2 koss in breadth, and within that space the injury to the rubbee crops generally has been very serious. Of the opium crop, about 12 annas had been collected previous to the storm, and the balance was lost.

"Exclusive of the poppy, there has been of all rubbee crops about an average yield of 10 annas in pergunnahs Bal and Goa.

" In pergunnah Makair crops have been generally worse. A less area has been sown in rubbee, and less secured by irrigation from want of water, and the loss by cold and frost was in the same proportion as in the other pergunnahs, and little more than a 6-anna crop is reported."

Pergunnahs Goa and Makair comprise the whole of the Parsa thana and considerable portion of Mashrakh.
J. E. D.

11. Mr. Tullock, of the Nowadah factory, in the south of Parsa thana, writes that he estimates the actual yield of the rubbee crops in his "dehat" as under:—

Barley - - - - - - -	8 annas.
Wheat - - - - - - -	8 "
Rahar - - - - - - -	12 "
Gram - - - - - - -	8 "

12. The report of the yield to the north of the Bussuntpore thana is, as was expected, very unfavorable, Mr. Exshaw of Bala factory writing that the rubbee crop has not yielded more than 4 annas in his neighbourhood.

13. Mr. Hudson writes as follows:—

" The outturn of the rubbee crop for Parsa circle may be taken at 12 annas for half the cultivated area, and 4 annas for the remainder, the former representing the irrigated, and the latter the unirrigated soil. The outturn for Bussuntpore may be estimated at 4 annas."

14. The following is Mr. Wright's account of the state of the crops in the Sewan subdivision:—

"The rubbee crops are now almost entirely cut. A field or two of rahar may still be seen in places, but otherwise the country looks bare. The ryots are busy having their crops trodden out, and, as far as can be known as yet, the yield is pretty fair throughout the division."

Mr. D. N. Reid of Saddowah has been good enough to supply the following estimate of the rubbee crops in the Barowlee thana for this season, as compared with that of former average seasons:—

	Season 1873–4.	Former Season.
Wheat - - - -	$\frac{9}{16}$	$\frac{14}{16}$
Barley - - - -	$\frac{7}{16}$	16 annas.
Peas - - - - -	$\frac{7}{16}$	16 "
Gram - - - - -	$\frac{4}{16}$	16 "
Rahar - - - -	$\frac{10}{16}$	16 "

Of the crops in the Darawlee thana, the Sub-Deputy Collector reports that " the average out-" turn of barley and wheat is 13 maunds* per beegha against 15 " maunds of previous years. Rahar yields at an average rate of " 7 maunds per beegha."

* Probably kutcha maund.—J. E. D.

Of the Sewan thana, the Sub-Deputy Collector says that " the average outturn of these crops " (wheat and barley) in the jurisdiction of this thana is 9 maunds per beegha against 11 maunds " of previous year," is confirmed by my further inquiries.

And Mr. Rattray, in reporting of the crops throughout pergunnah Pachlakh, states as follows:—

" I have been over the whole of the Pachlakh pergunnah. There are scarcely any crops to be seen in the fields, as the gathering of the harvest is nearly completed. Rahar and a few fields of sugar-cane are all that remain to be cut of the rubbee crops. The yield of the rubbee has not on the whole been very much below the average of previous years."

After all, the present state of prices is the best test of the yield of the recent harvest, and under the circumstances one is justified in distrusting the view that the outturn " has not on the " whole been very much below the average of previous years," save in the case of dearah lands, and where exceptional means of irrigation were available.

15. Regarding the Hutwa estate, Mr. Hodgkinson writes as follows under this head:—

" I have nothing to add to my remarks in last report regarding the crop outturn. Cheena has been largely sown in opium and potato lands where water is procurable. The crop, as far as I have seen it, is healthy, but certainly thin."

Condition of the People.

16. The continuous high prices of food are beginning to tell still more upon the people, as is evident from the increased numbers on the relief works, but owing to the ample means of employment provided for the people in the immediate vicinity of their homes, there is no general distress of an extreme nature.

17. Mr. Hudson reports as follows:—

" There is no alteration, as far as I have had the means of judging, in the condition of the people. My experience in Parsa thana during the past fortnight tells me that they are in tolerably easy circumstances. Notably I have received spontaneous replies to this effect at Sotehar, Dhernee, Dighwara, Rasoolpore, and many other places throughout the south and west of the thana circle. I inquired at nearly every village along the road on my way from Garka to Teraiza, and everywhere received the answer 'hal achha hae.' All is well here at Mashrakh itself, and the Sub-Inspector makes a good report of the surrounding neighbourhood, but the putwarees of Mashrakh and Bussuntpore generally report distress amongst the people of their villages, and say that there is considerable resort to the relief works. I have not had much opportunity lately of forming a personal opinion myself as to the condition of these two circles, having been absent in Parsa during the past fortnight. The planters whom I have met with continue to assure me that there is no distress in the villages leased to them."

18. Under this head the following is the report of the sub-divisional officer of Sewan:—

"There has been no material change in the condition of the people since the date of my last report. They are still employed in the rubbee harvest and on the numerous relief works throughout the division."

Under this head Mr. Rattray says "that the laboring classes are finding work in the gathering of the harvest, and there is ample work for the poorer classes on the public roads and tanks which are keeping many, now pinched for food, from lapsing into a state of starvation, and, so far as I can judge of the prospects before us, it appears to me that relief measures will have to be continued for the next five or six months."

The following is extracted from Mr. Rattray's diary of the 27th March, written from Sreenugger in the vicinity of Mairwah:—

"Bhaban Singh, the principal zemindar in the neighbourhood, informs me that there is no distress, and that the poorer classes are finding work in the gathering of the harvest and on the tanks being excavated in this part of the country. He tells me that there is no want of grain in the markets, though not to be had except at high rates; rice selling at 12 seers for the rupee. He does not think matters any worse than when I was in the neighbourhood in the beginning of January last. On the contrary, he thinks that matters are somewhat better with the gathering of the harvest. So far as I can gather from him, he does not think that matters will be any worse at any time during the year than they are at the present moment."

It is to be hoped that Bhaban Singh's sanguine view of the situation may be justified.

Known cases of Misery and Starvation.

19. There have been no cases of starvation, and the means of relieving distress, which cannot be met by the relief works, are largely available throughout the district.

20. Mr. Hudson reports as follows:—

"No cases of starvation have occurred (as far as can be ascertained), nor have any exceptional cases of distress come within my experience, or been reported to me."

21. And Mr. Wright makes the following report from Sewan:—

"No cases of the kind have been reported. Mr. Rattray says that there is no serious distress at present, and I have seen no misery or destitution in the villages."

Grain-Thefts or Robberies.

22. There have been ten cases of grain-thefts during the fortnight.

23. The accompanying comparative statement shows the number of offences against property involving an intention of theft committed in the month of March during the years 1872, 1873, and 1874, as called for in Government Circular No. 4081, dated 20th December last.

It will be seen that the number of such offences is slightly fewer than in the two previous years, a result which, considering the nature of the season, is, I think, attributable only to the exceptional means of relief afforded to the people in the present year.

Condition of any Special Tracts.

24. The Chupra, Manjhee, Bussuntpore, Mashrakh, and Parsa thanas are the worse situated so far as the numbers on the relief works afford an indication of distress, the numbers in the Sewan sub-division being comparatively few, owing probably to the extensive sugar-cane production in that sub-division having given employment to the poorer classes for some months past.

B.—RELIEF WORKS.

Progress of Relief Works, &c.

25. The annexed statements show the relief works in progress, and the number employed thereon. The average number daily employed during the fortnight has been 120,129, and the number on the last day was 135,079.

Now that the numbers are showing a rapid tendency to increase, it is of the last importance that the great works of the bank channel to the north of the district, and the proposed Gogra embankment to the south, should be put in hand at once. Already many have had to be placed on village roads to find employment for the people, and during the rains it will be still more difficult to provide continuous work. The per-centage of persons belonging to the non-laboring class amongst those now employed is 33 per cent. During the fortnight ten additional works have been started.

26. Mr. Hudson writes as follows:—

"The results of personal inquiries made at random amongst the coolies show that they receive their due amount of wages in the currency of the place, and that the work is freely open to all classes."

27. Under this head Mr. Hodgkinson reports as follows:—

"Harvest operations have continued to keep down the number employed on relief works. The cowrie system, which has been invariably adopted on the raj works, has, after an experience of four months, been found to work admirably. The condition of the laborers is itself a sufficient proof that no evil results have followed from exacting work under this system, and it is most satisfactory to find that while persons of all ages and sizes, young and old, weak and strong, have been employed and none turned away who sought work, the outturn of work has been proved by measurement to be in almost every case not less than half the amount which able-bodied laborers alone would be expected to show in ordinary seasons; in other words, the cost is only double the amount which the cost estimated at the ordinary ticca rates would come to. In places where the works have been more directly under European supervision, still more favorable results have been obtained. The payment of the coolies for each basket-full of earth has been so regulated, that even the weakest and youngest on the works can earn sufficient for their livelihood; and it has not been found that the stronger have been able to make more than a fair day's wage. While the works have drawn the women and children of the laboring population to them in large numbers, the men of the family have kept to their fieldwork and not been enticed from it, as they would have been if they found the cowrie system yield them unduly high wages."

28. The cowrie system is being tentatively introduced by the executive engineer, but unless increased remuneration is given to those who are old and infirm or of tender age, in which case many complications might ensue, it is difficult to understand how these can earn sufficient for their livelihood, while at the same time only subsistence allowance is obtained by the able-bodied for a full day's work. It is not enough that none should be turned away who seek work on the conditions offered, but it is also necessary that the system should be such that none are deterred from seeking work by the conditions of employment given. Mr. Wright reported that the introduction of the cowrie system at Sewan resulted in large numbers deserting the works, a result which was claimed by him as an advantage; but as the presumption is that these would not have come on the works at all unless in need of the means of subsistence, the probability is that the relief intended to be given failed in a corresponding degree. Mr. Hodgkinson, with the extensive agency available on the Hutwa estate for seeking out and relieving in other ways cases of distress not met by the relief works, could perhaps afford to overlook this consideration, but with the limited agency at command at the outset in other parts of the district, serious danger might have been incurred by the general introduction of the cowrie system. Doubtless that system is the best, as far as the cost of the work is concerned, but it seems to me that the element of cost is quite a secondary consideration, and that the question is how best to ensure the saving of the lives of the people, and not how best to carry on the work given for that end. Perhaps the best solution of the problem would be to have the two systems in operation together on one and the same work, the one for the able-bodied and the other for the weak and infirm. But there are difficulties attending this plan also. As to the argument that persons would have deserted their field work for the relief works, if they had found the cowrie system yield them unduly high wages, I do not think that there is much force in it, as practically the ordinary wages of agricultural labor, being paid in kind, are much higher in a season like the present than any that could be carried on relief works, and where such laborers come on the relief works at a time of agricultural operations, it is because their employers prefer, during a period of scarcity, to perform themselves the labor which they would have hired in ordinary years, while if the cultivators who employ such labor are alluded to, it may be pointed out that it has never yet been found in any famine that this class are in the habit of neglecting the agricultural operations on which they depend for subsistence for the sake of a merely temporary employment on relief works, nor is it reasonable to suppose that they would do so. The comparatively low rents prevalent on the Hutwa estate, affording as they must exceptional facilities for the employment of agricultural labor, probably go far to account for the comparatively small numbers on the relief work there.

29. The relief works on the wards' estates were temporarily stopped owing to the Commissioner having demurred to the cost of such works being borne by the Court of Wards, except in the case of entire estates owned by minors in a thoroughly solvent position; and having objected also to loans being raised for the purpose. But the Commissioner having since explained that he did not mean to refuse conditional sanction to such works being carried on in certain cases, the general manager has been authorized to re-open the works to the limited extent conditionally sanctioned by the Commissioner.

State Emigration to British Burma.

30. Ninety-three emigrants have been despatched to Calcutta during the fortnight. More are coming into the depôt here.

C.—Transport of Food.

Approximate amount of private food supplies, &c.

31. Such information as is available under this head has already been given.

32. Regarding the Hutwa grain supplies, Mr. Hodgkinson furnishes the following statement:—

	Mds.
Stored Hutwa granaries	66,016
Embankment granaries	4,874
Returned by collector	13,006
Revelgunge	6,900
Between Patna and Revelgunge	1,000
	91,796

33. The Commissioner having refused to sanction the 28,000 maunds contracted for the General Wards' estates, at a time when the prospects of the future food supply for those estates warranted alarm and seemed to justify the fullest precaution, basing his refusal apparently on the alteration for the better, caused by the more favorable outturn of the rubbee crops, the grain delivered at Revelgunge in accordance with previous contract should, if not sanctioned for the Wards' estates, be taken over on behalf of Government, and can, if so directed, be made available in reduction of the balance of the district allotment still remaining to be received.

D.—STORAGE OF GOVERNMENT GRAIN.

34. The accompanying statement shows the storage places, the distribution thereat of the grain allotted, and the amount of grain received at the different storage places up to the end of the fortnight. The total amount of grain received had been 4,02,920 maunds, of which 3,74,003 maunds had been finally stored and 24,334 maunds were in transit.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

35. Rs. 177-7 have been advanced during the fortnight for purchase of grain for sale, and Rs. 35,817 to zemindars for grain or money advances to their ryots, making up the total as yet advanced on these accounts to Rs. 1,39,877-7 and Rs. 3,44,904 respectively; and for land improvement Rs. 18,872 have been advanced, bringing up the total on this account to Rs. 81,146.

F.—CHARITABLE RELIEF.

36. The number receiving charitable relief, so far as the returns obtained show, is noted below—

Thana	Names of circles whence relief has been given.	No. of persons relieved.	Amount paid.
1 Chuprah - - - -	1 Arrowah - - - - - -	79	90 0 0
	2 Garbha - - - - - -	78	78 0 0
2 Manjhee - -	3 Banwar - - - - - -	141	95 9 3
	4 Parsa - - - - - -	294	8 15 4
	5 Ramghar - - - - - -	7	7 0 0
3 Dighwarah - -	6 Dighwarah - - - - - -	23	7 0 0
4 Parsa - - - - -	7 Parsa - - - - - -	165	10 15 0
	8 Sitalpore - - - - - -	15	13 0 9
	9 Tehtee - - - -	47	100 0 0
	10 Jelalpore - - - - - -	49	100 0 0
5 Bussuntpore - -	11 Bagowra - - - - - -	58	81 13 0
	Total - -	956	532 5 4

37. Mr. Wright reports as follows under this head:—

"During the fortnight, the subscription to the charitable relief fund amounted to Rs. 140; the sums collected during the same period amount to Rs. 157."

In my last report I mentioned that Rs. 3,150 had been sent to the different circles for gratuitous relief of poor people who may be found unable to work. Up to date I have received intimation of only Rs. 3-13 having been paid. Of this sum Mr. D. N. Reid of Suddowah gave one rupee to a women "whose husband was reported as having died from starvation," but on enquiry Mr. Reid discovered that the report was false, and that the man had died from natural causes. The balance (Rs. 2-13) was paid by Maulavi Gholam Abbas of the Harpore Circle to six persons."

38. And Mr. Hodgkinson writes thus:—

"The number receiving charitable relief still continues very small.* The enquiries through village agency have been completed in some instances, and tickets will now be distributed to those who are reported to be incapable of working for gratuitous relief. In some cases this has been already done. Judging from the returns sent in I don't think that gratuitous relief will be necessary in more than for 800 to 1,000 cases in the Hutwa sub-division; but even after tickets are distributed, I do not expect that this number will be reached for some time to come. In my next fortnightly narrative I hope to be able to give the results of the enquiry and the steps taken on it in detail."

No. 967F, dated Champarun, the 9th April 1874.

From H. KEAN, Esq., Collector of Champarun, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I HAVE the honor to submit the fortnightly narrative of Scarcity and Relief for this district for the fortnight ending 4th April.

A.—STATE OF THE COUNTRY.

I propose to deal with each relief sub-division according to its number.

Sub-division No. 1.—This sub-division, which comprises thanas Moteeharee and Adapore, is in charge of W. B. Oldham, Esq., C.S. He reports—"That none of the bazar supplies of the

“ grain usually offered for sale at this time of the year have fallen short, but rice is scarce, while there is still an abundance of maize, and gram is quite equal to the demand.” At Segowli (the head-quarters for the present of this sub-division), coarse rice has been selling at 11 seers for the rupee. At Ramgurwa, six miles to the north of Segowli, it was rather dearer. The great annual mela at Adapore (on the Nepaul frontier) had been held during the fortnight, and there Mr. Oldham found that common rice was selling at between 10 and 11 seers.

At Kutkenwa (another frontier outpost) seven miles east of Adapore, and where the supply had shown signs of running short, the same price (nearly 11 seers for the rupee) obtained, while there was an abundance of maize at nearly 15 seers. The market at Kutkenwa had suddenly lightened within the fortnight, which Mr. Oldham assigns to the excellent rubbee crops existing just north of Kutkenwa in the Nepaul territory, and which had begun to be harvested.

With regard to supplies of grain in the hands of zemindars, &c., Mr. Oldham says:—“There are indications that the people still have considerable supplies; a large fire occurred at Segowli which destroyed 35 houses; only one of these was a grain dealer's, the others belonging to petty tobacconists and shop-keepers. In several of the latter, I found large supplies of maize and oilseeds, and some rice. One tobacconist stated that he had lost 600 maunds of rice. Another indication is the fluctuation in the numbers of the laboring gangs. In checking the relief distribution at Koraiya, a frontier village, reported as the most distressed in this sub-division, I found some persons who had been relieved, and despatched to the relief works lately opened there, in their houses. They explained to me that they did not care to work every day. Again, at Kutkenwa, which was also thought to be badly off, on very light task-work being introduced on the relief works there, the number of laborers fell one day from over 1,300 to 600.”

There had been no rain during the fortnight. The crops, with the exception of “cheena,” were being harvested; the barley, wheat, and dâl crops have been and are certainly not less than eight annas of an average season. The poppy crop is said to be very fair. The “cheena” was looking poor at present, on account of the west winds, where not irrigated. A large portion, however, had been irrigated from the local streams, and none is irrecovetable if even a little rain would fall. Of the rice lands, *i.e.*, those unfit for any cultivation but rice, fully two-thirds have been prepared for the next sowings.

Of the condition of the people Mr. Oldham reports very favourably; he says:—“Their condition is very much better than I expected, and they show no signs of sinking. All the gangs employed on the relief works consist of able-bodied people, all of whom are fit to have task-work exacted from them. They still swarm to the works, but show an independence both as regards their choice of sites for working, and when it is attempted to make them give a due return of labor, which is very significant; for instance, I found numbers of persons from villages near to and south of Segowli on Mr. Lethbridge's works at Ramgurwa, while work on the tanks being made here by the Public Works Department is very poorly attended. On the works under me I have been trying to introduce light task-work, that is, to exact at least 1,000 cubic feet from each gang of 50 persons, containing not less than 15 able-bodied men with tools. The result of trying to get only two-thirds of this work from the laborers at Kutkenwa has already been noticed. On introducing it at Sripore, 13 miles north of Motiharee on the road there, the coolies employed struck work altogether.”

This description of the condition of the people is very significant and speaks for itself. Mr. Oldham had only seen two cases of emaciation during his tour through his sub-division. One was an old Mussulman cultivator who had come into the Ramgurwa poor-house for food. He lived only two miles off and had three beegahs of land, which his son cultivated; he was himself long past work.

The other case was that of an old Rajpoot in a village about three miles from Ramgurwa factory; his grandchildren were in good condition, and he had two bullocks. He said he had starved himself to give his grandchildren food. He was supplied with a maund of maize and 20 seers of rice.

The spinning relief which Mr. Oldham is introducing will meet these cases.

Just before Mr. Oldham went round his sub-division, charitable relief had been distributed. This no doubt accounts partly for the good condition of the people. The usual number of beggars swarmed, Mr. Oldham says, at the Adapore “mela,” and they were all in good condition. The mela, however, was not so numerously attended as usual. Of the whole sub-division the northern two-thirds, Mr. Oldham says, is the portion which will require most attention, and of that tract, the fifty square miles adjoining the Ramnuggur country (*i.e.*, sub-division of Bulthur, which forms a portion of the Ramnuggur relief sub-division) are the worst off. This portion consists almost entirely of oily rice soil, and is, moreover, more thickly populated than the rest of the rice tracts.

Relief sub-division No. 2.—This sub-division, comprising thanas Dhaka and Modhubun, is in charge of Mr. S. Kilby. Regarding bazar supplies Mr. Kilby says:—“There is no difficulty experienced in obtaining supplies at any of the bazars; a very small quantity of the new rubbee crop had found its way into the markets, as the cultivators seem very loth to dispose of it.” With regard to the prevailing rates of food, Mr. Kilby gives the following table:—

Rice - - -	9 to 10 seers.	Rahar - - -	16 seers per Re.
Maize - - -	12½ to 13 „	Cheena - - -	15 „
Barley - - -	13 „	Kodo - - -	15 „
Wheat - - -	12 „	Murwa - - -	15 „
Gram - - -	13 „	Mussur - - -	16 „
Peas - - -	17 „	Oorid - - -	13 „
Kerao - - -	17 „		

There had been no rain, and the prospects therefore of the "cheena" crop (which is not irrigated to any large extent in these thanas), are very bad; indeed, unless rain falls shortly, this crop will be a failure except in low-lying and irrigated lands. Regarding the condition of the people, Mr. Kilby reports that in consequence of the numerous relief works that have been opened out, their condition is satisfactory. No cases of death from starvation have occurred, though some cases of emaciation have been met with. These persons have been regularly fed and they are now able to work on the roads. Funds have been supplied to each member of the sub-divisional committee, and to the police at Dhaka and Modhubun to enable them to provide gratuitous relief to all who from bodily infirmity cannot be referred to the works. About 80 persons had been thus relieved during the fortnight.

The central portion of this sub-division is stated by Mr. Kilby to be the worst, as it is for the most part a rice-growing country. The "rubbee" was being harvested, and a great portion had been threshed. The outturn, it is estimated, will be about as follows:—In the north of the sub-division (around Ghorashan), a ten-anna crop is expected; about Meerpore not more than a five-anna crop; further south to Seeraha about a four-anna, and in the neighbourhood of Modhubun and south to the Tirhoot boundary, an eight to ten-anna crop.

Relief sub-division No. 3.—This sub-division, comprising thanas Gobindgunge and Kessuriah, is in charge of Mr. Weekes, C.S. He reports as follows:—

"The state of the crops is again altered for the worse. There is hardly any moisture in the " soil, except in some of the lowest lying lands. The indigo does not germinate, or germinates " and dies, and the millet is being scorched up." With regard to the rubbee, Mr. Weekes reports that the crops are very much better in the west and north-west of his sub-division than in the north and south-east; the crop is being rapidly harvested, but the produce is in many places indifferent. The "kodo" crop is also said not to have germinated.

The harvesting of the cold-weather crop had caused a lull in the progress of distress. He is of opinion that the agriculturists will be able to tide over April, and the more fortunate part of them half through May with the assistance of the cold-weather crop.

In particular tracts, *i.e.*, from Gobindgunge along the Gunduck, past Burhurwa, Serni, and along towards Arrey Raj the fortunate villagers will be able to last through the whole of May and longer, but it is different, he thinks, with the rest of the division; no confidence can be placed in the millet crop. The two lowest classes (the incapables and the day-laborers) are provided for by the relief works and charitable relief. The ryots of all grades are clamorous for loans. If this estimate of the condition of the people is correct, Mr. Weekes should lose no time in organising village-to-village relief, and this I am glad to see he is doing. He says—

"The relief works reach most of the day-laborers. To ensure the relief of those unable to work, the aged, infirm, and the sick, I have been constantly in tents and on the move, and, with the assistance of the planters, have established a satisfactory system. The principle is to keep the people as much as possible in their villages. The putwaree of each village brings all incapables in his villages to the planters (who are members of the sub-divisional committee and relieving officers of the several circles), and their names, caste, residence, &c., as guaranteed by the putwaree, are entered in a register; each putwaree then receives every 7 or 15 days enough rice at ½ seer per head, to support those who are entered in the register, and residents of his village." This plan, Mr. Weekes says, is answering very well. Store-houses and centres are being selected, but he does not propose to build many granaries as there are many empty ones, he says, which he intends to fill when the need arises from the main stores, which are situated principally at factories within easy reach of each centre. Mr. Weekes has also used every endeavour to promote cotton spinning and weaving, and with considerable success. All the putwarees have been directed to extend this kind of relief, and are strictly enjoined to see that each person in want applies for and obtains the mode of assistance best suited to his or her case. Domes have either had separate earth-work assigned to them or been employed in making baskets; this has been found necessary, as other people object to work in company with Domes. Mr. Weekes has also pushed on the work of granting land improvement applications as fast as possible, and the pains he has taken has had the desired effect of increasing the number of applicants. The putwaree agency is indented upon largely also in this species of relief, each putwaree having to testify to the quality of the security tendered in every case in which Mr. Weekes does not personally inspect the property, and in each case in which money is advanced inquiries are made into the use to which it has been devoted. Another class of loans had been made through the European planters who have, both in this sub-division and in all the others (where planters reside), taken advances from Government for the assistance (in grain or money), of their ryots. These gentlemen, as Mr. Weekes observes (and as has already been frequently brought to the notice of Government), have shown great public spirit and humanity in this and in many other ways.

These loans (for assistance to ryots) have been of great value, reaching (as Mr. Weekes points out), "the main body of the middle class, who are the only large body, and at the same time by " far the most important class, who are not reached by other relief measures."

Relief sub-division No. 4.—(Thanas Bettiah and portion of Lowrya.) Mr. Samuells reports that the state of the bazars remains as before, and that no scarcity of supplies is felt. The price of rice was reported to have risen above 10 seers at Rutwal, but it was found to be incorrect, and when Government grain was offered for sale it found no purchasers. The people are said to be fully employed in harvesting the rubbee, and in their sugarcane fields. The price of rice had been steady at 10 to 11 seers. No cases of starvation had occurred and no increase in crime.

Relief sub-division No. 5.—(Bugha and portion of Lawrya.)—Mr. Howe reports from this sub-division as follows:—

"No rain has fallen during the past fortnight, and matters are much the same as when I last wrote. The sale of Government grain has proved a great success, and is much appreciated; it will, I think, have soon to be extended to the east of the sub-division, where supplies, though procurable, are getting scarcer. Rice has been selling during the last fortnight at the following rates:—

Rumnuggur Government rice through the traders, 11 seers cleaned, 12 seers uncleaned.

Shikarpore, varying from 9 to 10.

Harnatour, 10 seers.

Bughaha, from 9 to 10½ seers.

'Makai' has been selling at Ramnuggur at 13 seers, and at Shirkapore at 12; it has been procurable in sufficient quantities. In the east, rice (as above stated) had become more scarce, and the sale of grain will soon be necessary; at Harnatour (north-west), on the other hand, it had become more plentiful. This, Mr. Howe attributes to the fact of sufficient advances having been given. The Jharoos are more or less independent, and the demand being less, the owners of grain stores are more anxious to sell, perhaps, because they fear that Government rice may be brought to the market.

With regard to the general condition of the people, Mr. Howe reports—" Generally speaking, " our relief measures have very beneficially affected the condition of the people. During the " fortnight the daily average receiving support by working on the roads was over 9,000 during " the first, and over 12,000 during the second week, and the total number employed was 143,000. " Large advances (*vide* heading E) have been made to Assamees, and though the condition of " the latter in some parts of the sub-division is still far from satisfactory, there can be no doubt " that the advances already made have saved the Assamee population from starvation. The sale " of Government grain, by bringing ample supplies into the most distressed parts at cheaper rates " has greatly diminished the general distress, and restored the confidence of the people, whose " condition by these measures has been assimilated to that of ordinary years." There had been no cases of starvation, nor had grain thefts occurred, and fires had been much fewer, and all were accidental. Speaking of special tracts, Mr. Howe says, " In Tuppah Butsura I have been able " to obtain, through the European members of the sub-committee, accurate statistics of the " 'cheena' and rubbee crops. The area under cultivation was as follows:—

" Cheena - - - - - - -	307 beeghas.
" Rubbee - - - - - - -	365 "

" Owing to insufficiency of rain the out-turn has not been good. As mentioned in my last " narrative, the manufacture of sugarcane gives employment and support to many, and the worst " time for the tuppah will be when this employment ceases. The arrangements for meeting " distress are, however, fully advanced, so that we are prepared for the worst."

" In the Ramnugger tract, and generally, throughout the east and south, there has been no " 'rubbee' to speak of."

" In Ramnugger and the south, the people now, in some form or other, depend almost entirely on indirect Government help; while in the east we are rapidly coming to this condition. By this, I mean that in the former tract trade has failed to bring in supplies, and that but for the sale of Government rice there would be great scarcity and suffering; secondly, that the Assamees depend for food-supplies on advances made, and to be made, by Government; and thirdly, that our works keep alive a large portion of the population. But the number of persons who receive direct gratuitous aid from Government is comparatively trifling. In the east, food is gradually becoming scarcer, and as soon as the necessity of selling Government grain becomes inevitable the measure will be adopted.

B.—RELIEF WORKS.

The following is a list of the relief works, and the number of persons employed:—

Sub-Division No. 1.

Roads.	Men.	Women.	Children.	Total.
Motiharee station road - - -	9,579	8,205	2,422	20,206
Segowlee to Rajoul - - - -	23,965	13,142	11,451	48,558
Ramgurwah to Adapore - - -	11,954	4,448	3,470	19,872
Adapore to Kut Kenwa - - -	4,485	5,306	3,324	13,115
Kut Kenwa to Motiharee - - -	8,084	9,125	3,507	20,716
Narkatya to Goraghat - - -	1,020	880	592	2,492
Total - - - -	59,087	41,106	24,766	124,959
Tanks.				
Ramgurwa - - - - -	Not received.			
Sakrar - - - - -	Ditto.			
Pursutampore - - - -	3,506	4,828	2,928	11,262
Narkatya - - - - -	921	1,783	777	3,481
Total - - - -	4,427	6,611	3,705	14,743

Sub-Division No. 2.

Name of work.	Number of people employed.
Dhaka to Nepaul boundary - - - - -	2,562
Jamoah to Suraha - - - - - -	31,724
Dhaka to Pareywa - - - - -	1,862
Dhaka to Belwaghat - - - - -	12,110

Name of work.	Number of people employed.
Motiharee to Dhaka	21,168
Dhaka to Pudumkair	29,288
Ghorashan to Kut Kenwa	17,066
Pareywa to Tilhara	6,692
Pareywa to Pakri	10,010
Pakri to Buraor	7,686
Pakri to Etwaghat	9,618
Modhubunghat to Seeraha	18,046
Seeraha to Modhubun	16,940
Kuttahaghat to Madhuba	180,940
Sullypore to Simraghat	6,720
Tanks—	
Nusrouli	2,352
Surata	7,084
Bandar	3,864
Dhaka	4,732
Pursoni	4,270
Mudwaha	6,986
Kahargawah	22,274
Total	261,794

The returns for sub-division No. 3 are so imperfect that they cannot be given in detail, but the approximate number of men, women, and children employed on the works in that sub-division during the fortnight were—

Men.	Women.	Children.	Total.
18,951	17,371	12,595	48,917

Sub-division No. 4.

Name of work.	Men.	Women.	Children.	Total.
Bettiah to Gobindgunge	25,230	26,230	14,434	65,894
Bettiah to Tangraghat	18,945	23,436	6,335	48,716
Lalseryah to Bettiah	17,787	15,083	8,686	41,556
Dhokraha to Pursa	2,893	5,416	1,543	9,852
Lawriah to Bettiah	5,414	2,680	1,125	9,219
Lawriah to Bugha	1,449	728	404	2,381
Total	71,718	73,573	32,327	177,618

Sub-division No. 5.

Name of work.	Men.	Women.	Children.	Total.
Ramnuggur to Bugha	8,021	8,785	3,227	20,033
Ditto to Shaeya	18,293	21,605	4,097	43,995
Ditto to Chankee	12,028	14,695	2,903	29,726
Shikarpore to Lawriah	1,503	1,618	701	3,822
Ditto to Bulthur	2,823	3,544	1,045	7,412
Bettiah to Bhoura	900	842	490	2,232
Bugha to Harnatur	2,259	3,890	1,394	7,543
Harnatur to Tirbeni	1,318	3,844	1,710	6,872
Total	47,661	60,337	15,826	123,824
Lower Gunduck Embankment	79,189	406	840	80,435

Therefore, the grand total number employed is 832,290 and the daily average is—

59,449	
18,000	Upper Gunduck Embankment.
77,449	

Regarding circle No. 1, Mr. Oldham writes:—

"There is a full supply of food in the neighbourhood of all the works, except at Ramgurwa, where temporarily grain payments are being made. At some of the works, where the men were getting only 4 pice on the task-work system, when the 6 pice rate was started, they refused to work, saying that they preferred the 4 pice without the measurement."

All the laborers, Mr. Oldham says, are in a fit state for task-work to be rigorously exacted, and, indeed, for the able-bodied to be turned away and drafted to the Public Works Department works.

To prevent the task-work system pressing too hard, an invalid gang has been started at each work, to be composed purely of persons who are unfit for task-work. Experiments in spinning relief on a small scale have been made, and were eminently successful. Cotton was given to some

30 persons only, all of whom gladly received it, and have spun it into very fair thread, and accounted for it strictly. Unfortunately, cotton is not procurable in any large quantities, and Mr. Oldham has therefore written to Gazeepore for some.

Mr. Kilby also reports that in circle No. 2 food is procurable near all the works, and that no complaints had been made to him on that score. Wages are distributed daily. The work-people being their own tools, and higher wages are given to men who bring their own kodalis, viz., 9 pice (1¼ anna). Mr. Kilby has started the "cowri khep" system, and finds that it works admirably. The maximum wage of 9 pice is given only to men who perform a full day's work, 7 to 8 pice being given to others. The Public Works Department has lately taken charge of most of the relief works in this sub-division, and much credit is due to Mr. Eckstein, the Assistant Engineer, for the trouble he has taken to break up the gangs, which were getting unwieldly and putting matters altogether on a better footing, He has commenced several tanks, and has introduced the petty contract system, under which men with kodalis get on an average 2 annas a day, and others 6 or 7 pice. Baboo Durgapersad, of Modhubun, a wealthy landed proprietor, is constructing a road from Modhubun to Kodduporeghat, for the relief of his ryots.

In circle No. 3 Mr. Weekes has several tanks in progress, and he also has tried the "cowri "khep" system with success. Mr. Weekes has been working hitherto without assistance from the Public Works Department. Mr. Arnot, who has lately joined the district, has now, however, been deputed by the Executive Engineer to the charge of the works in this circle.

Sub-division No. 4.—In this circle, Mr. Samuells has also been working without assistance, except from the planters. The district has now been divided into East and West Champarun, and an Executive Engineer and staff * of officers placed, in charge of each division. It will now be possible to systematise matters, and put the whole of the relief works on a more satisfactory footing.

**Bettiah sub-division, styled West Champarun.*
Mr. Armstrong, Executive Engineer,
„ James } Subordinates.
„ Smart }
„ Scallon }
Sudder Division, styled East Champarun.
Mr. Handcock, Executive Engineer.
„ Eckstein } Subordinates.
„ Arnot }
„ Wells }
„ Johnstone }
„ Saunder }

Some of these officers have been deputed to Mr. Howe's circle also. The daily average in this sub-division, No. 5, has reached 12,000 or 3,000 more than in the previous week. "People of all classes," Mr. Howe says, "flock to the roads and "tanks, the poorer among the cultivating classes coming in "very large numbers. The roads which attract most laborers "are those around Ramnuggur, in which tract distress has "been more severe than in any other part of the sub-division. The health of the laborers is "good, and a marked improvement in their condition is perceptible. They have now had regular "employment and good pay for some months, while food has become plentiful and comparatively "cheap since Government rice has been sold to the public. These causes have had the effect of "considerably improving the condition of the labouring classes, and of all who come to the relief "works; there are, however, of course a large number still who, from weakness, are unable to "perform a full day's work." "On the three roads branching from Ramnuggur, traders who purchase rice from Government retail it to the workmen at 11 seers. In the east and west portions of the sub-division, where the system of selling rice to the public has not yet been introduced, sales to our workmen under Rule A. continue. At Harnatur and Bughaha the rate is 10 seers. The Executive Engineer, Upper Gunduck embankment, reports that rice was less plentiful than before, and was selling at 9 seers per rupee. The laborers are still purchasing maize and other grains at 12 seers and 13 seers. The Government sale had been very small. He states that the Burmah rice is not liked, and that a good deal of paddy is mixed with the rice.

About half of the earth-work has been finished. He complains of the inefficiency of the sub-overseers, and states that as portions of the embankment are finished, the coolies working thereon return to their villages, and are seldom persuaded to go further on for work. Out of the total assignment of grain, 150,000 maunds, 128,000 had been stored. The daily average of persons employed was 18,743.

C.—Transport of Grain.

The contract for the transport of grain is working most satisfactory, even more than the stipulated amount having been conveyed per week into the district. The contractors complain that grain is not delivered to them fast enough at Bunkurghat. The route through Sarun to Gobindgunge is in full working order.

D.—Storage of Grain.

The construction of storage golahs is still going on. The following is the amount actually stored on the 3rd April:—

	Mds.	
In the Ramnuggur tract - - -	168,543	Includes embankment grain.
In the Bettiah sub-division - - -	175,457	
In the Sudder district - - -	153,247	

E.—Advances to Private Persons.

The following sums were advanced during the fortnight:—

	Rs.
I. For storage of grain - - - - -	Nil
II. For assistance of ryots - - - - -	7,500
III. For land improvement - - - - -	2,315

The total amount expended up to date under these three heads has been—

	Rs.
I.	1,32,000
II.	1,33,726
III.	22,507

F.—Charitable Relief.

Sub-division No. 1.—Mr. Oldham reports as follows regarding this heading—"The arrangements for charitable relief are completed. I have now the following members in my sub-committee, and shall have added to their number within the next fortnight:—

Mr. R. Lethbridge, Ramgurwah factory.
„ Thorp, Huroliah.
Captain F. Knowles, Commanding 2nd B. C., Segowlie.
Mr. A. Edwards, Motiharee.
„ W. F. Gibbon, Tirkowleah."

Mr. Oldham has also two sub-committees under him. He says: "Mr. Lethbridge's assistance is invaluable. He has undertaken, and is actually looking after, the whole of the tract in farm to his factory, which embraces a great part of that which will require most attention. There is a poor-house and hospital at Ramgurwah, both of which are being enlarged under Mr. Lethbridge's supervision. I found that he had started the ticket system as followed in Orissa, and up to date tickets for grain have been issued from his centre to 320 persons. The two inspectors under me have now visited almost every village in the sub-division, and distributed money relief as they went, as have also done the Sub-Deputy Collector, Baboo Jugeshwar Singh, and Moonshee Durbari Lal. These distributions, with Mr. Lethbridge's arrangements, have fully alleviated all present distress, and left time for the grain-ticket system, which has now been started in all but the south-west portion of the sub-division, to come into operation. The inspectors have also convened and established 'punchayats' in all the villages visited by them, to whom they have made over the sums for the maintenance of the persons charitably relieved, and, on checking the visitations, I have found that the 'punchayats' had acted very well, nor did I hear a single complaint against any of them."

Sub-division No. 2.—Mr. Kilby writes—"The sub-division is being divided into 10 circles, each containing 40 villages; a member of the sub-divisional committee will be placed in charge of each circle, having an inspector and 3 sub-inspectors under him; each sub-inspector will be put in charge of 15 villages."

In this way Mr. Kilby proposes to account for the whole of his sub-division, each portion being placed under the charge of some responsible person, and each village provided for. This scheme differs from the system adopted by Messrs. Oldham and Weekes in the 2nd division, and Messrs. Samuells and Howe in the Bettiah division. In that the sub-agency to be employed is paid, and will be somewhat costly, but it has its own advantages. One of the members Mr. Macqueen, has started the system in 90 villages. Mr. Begg, another member, is making arrangements for his circle, and Mr. Kilby has commenced the scheme in 60 villages. These three circles comprise the worst portions of the sub-division, and the other circles will shortly, Mr. Kilby reports, be in working order. Mr. Kilby states that he is almost swamped with applications for loans, which, although not really required in most cases, necessitate enquiry in all; arrangements are being made to provide Mr. Kilby with assistance. A hospital has been erected at Pakree, but the health of the people is so good that there have been no admissions. A village-to-village enquiry has been, and is being made by Mr. Kilby and his inspectors; those who are incapable of working, receive gratuitous relief from the members of the sub-divisional committee, and in a few instances funds have been supplied to the village punchayats for distribution.

The measures adopted for charitable relief in subdivision No. 3 have already been notified in this report. In sub-division No. 4 (as reported in a former narrative for the fortnight ending the 21st February), Mr. Samuells has divided his jurisdiction into eight relief centres, each centre being placed in charge of some responsible person. The agency employed is altogether unpaid. Poor houses have been opened at Rutwal and Bettiah, and about 4,000 persons receive charitable relief daily throughout the sub-division.

Sub-division No. 5.—Regarding the arrangements in this sub-division, Mr. Howe writes: "The questions of the most pressing importance are, first, to provide the 'Assamee' population with sufficient good grain; secondly, to provide them with, or to enable them to obtain seed-grain. Almost the entire population of the sub-division is agricultural, and the proportion of the cultivating class that comes to our works is small, though the actual numbers are large. The remainder now depend almost entirely on the advances they have received either from their zemindars or from Government, nor have they anything except advances to look forward to until the next rice crop is reaped. The best of them are poor and in debt, and it is from this fact that the question of advances becomes so difficult. On the one hand, unless advances are immediately made on a large scale, the 'Assamee' population will be reduced to starvation; while on the other hand, there is the risk that, unless great care is taken in investigating each case, the security will be insufficient. To make advances too readily (except in the comparatively small class of cases coming under Rule F.), tends to demoralise the people, and renders them reckless in getting still further into debt. The difficulty is to combine sufficient promptness with sufficient caution, and to make a searching investigation without thereby losing the right moment for action." Mr. Howe has submitted a scheme which has been sanctioned, and on which he has been acting. The following is an outline of this: a register (mouzahwar) is prepared in each tuppah, in which the amount required approximately for each village is entered. This register is prepared in the first instance by the inspector of the circle, assisted, where possible, by any influential member of the committee resident in the tuppah. It is then carefully tested by the officer in charge of the circle, who can alter (increase or lessen) the total amount fixed in round numbers. As soon as this has been done, a certain quantity of grain is sent to each village, where it is kept in charge of the headmen of the village, from whom due security for its safe custody is taken. The class of cases requiring most immediate relief, *i.e.*, "Assamees" coming under Rule F (which fortunately are comparatively few) will then be taken up and disposed of summarily. These men can be readily found, as there are but few in each village. The object of sending grain to each village, Mr. Howe explains, is—"first to give confidence, for "experience shows that the mere presence of grain in a village (if the object of its being brought "is known) has this effect; secondly, to enable the advances under Rule F to be made at once.' The summary inquiry preceding distribution under Rule F will be carried on simultaneously, and, having once decided to whom to give under this rule, there is nothing like immediate action, which of course can only be taken if the grain is ready. Thirdly, because now is the best time for carrying grain throughout the interior, and we should therefore avail ourselves of it. Having provided every village with an amount of grain which, approximately, will suffice for advances, and having relieved the worst cases under Rule F, a register in the following form will be prepared and carefully tested by circle inspectors and officers in charge of circles:—

1	2	3	4	5
NAME OF MOUZAH.	Amount already distributed either by Rajah of Bettiah, or under Rajah of Ramnuggur's loan.	Number and names of Assamees requiring advances, with amount required by each.	Nature of security.	REMARKS.

When this return has been carefully tested, the zemindar will be called upon either to make the advance or to go security, Government making the tuccavee distribution. If he declines, the best security available will be taken, and the procedure laid down in Circular No 1088 of 25th February will be followed, *i.e.*, the zemindar will be warned that Government reserves the right to recover the advance by legislation or otherwise. There are numerous landholders, jaghirdars, aritdars, &c., whose security will be sufficient. The other landholders in the sub-division are the Rajahs of Bettiah and Ramnuggur. Mr. Howe has addressed Mr. Gibbon, the manager of the estates belonging to the former, and he will no doubt afford his cordial co-operation. Under the Rajah of Ramnuggur's security Mr. Howe has advanced 5,094 maunds, and Colonel Boulderson about 4,000. There are numerous villages, he reports, not belonging to the Rajah, where advances have to be made direct to Assamees, and where the procedure under Circular 1088 of 25th February will have to be followed. The tuppahs in the south belonging to the Rajah of Bettiah also require attention, the advances made by Mr. Gibbon being either incomplete, or having proved insufficient. Mr. Gibbon has been addressed on this subject, with regard to the very important question of providing seed-grain to the assamees. Mr. Howe promises to submit a report as soon as he had completed some further inquiries he is making. There is very little seed-grain, he says, in his sub-division, and he fears that it will be withheld in order that high prices may be obtained under the special head of charitable relief. Mr. Howe writes:—"The "sub-division has been divided into four large circles with 11 sub-circles (corresponding with "tuppahs), in each of which there is a sub-inspector who prepares and tests the register of those "unable from weakness to work. The poor-houses at Ramnuggur and Bagaha are in full work-"ing order. The principal feature in the charitable relief scheme is the village-to-village relief "system (Rule 4); about 1,400 poor are supported each day. Colonel Boulderson manages the "circle in the east (Balthur), with five sub-circles; Mr. Joakim is at Hurnataur, where a similar "system is in force; while I manage the Ramnuggur circle with four sub-circles. The Bagaha "sub-committee supervises tuppah Butsorah and the poor-house at Bagaha. In this way every "part of the sub-division has proper supervision, and the rules are being carried into practical "effect. The congregation of large masses at any place is avoided, while no case of distress can "occur without being brought to notice and relieved."

Enclosure No. 5.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 14th April 1874.

READ—

The district narratives of the Bhagulpore division for the fortnight ending on the 4th April.

RESOLUTION.—*Monghyr.*—The supplies in the bazars of the Monghyr district appear to be sufficient, and all who have money can get food; prices, except in Buktiarpore, are nowhere below 11 seers per rupee. The condition of the people generally is unchanged. Village to village visitation is going on in the worst tracts, and the people are found to be generally in good case, except in Buktiarpore, where the relieving officer had at his village visitations to deal out grain to 350 persons. It is reported that no deaths have occurred from actual starvation; at the same time it is said that on a road near Buktiarpore was found the body of an old traveller who must have suffered from want.

2. Relief work can, it is said, be had by all who want it, yet the numbers so relieved are not large, viz.—

On Government relief works - - - - -	3,071
Commissioner of Wards' works - - - -	4,000
On works executed from advances - - - -	1,103
Total -	8,174

It is explained, however, that the people have not yet come back from their work in the harvest fields. The Magistrate-Collector and the Commissioner must be careful to watch the rubbee country, wherein a considerable quantity of Government grain is already stored, so that they may be able to declare as soon as possible how much of the grain may be held as reserve, available for the wants of more necessitous tracts.

3. The Lieutenant-Governor agrees for the most part in the views expressed by Mr. Lockwood, in regard to making advances for purchase and storage of grain; he believes that Collectors and their subordinates exercise an intelligent discretion in the matter. And that being so public money will go further in advances for purchase of grain, and in advances for land improvements than it could do in any other shape. It is satisfactory to learn that in all cases of advances to ryots, the Monghyr authorities have been able to employ the services, and get the security of superior landholders. At the same time it must be remembered that, where ryots are really in need, advances of grain should by no means be withheld merely because the superior landholders will not come forward to share the responsibility. On this particular point the Lieutenant-Governor does not at all follow the view of the Collector. It ought to be possible to afford some aid to distressed ryots to sustain life till the new crop shall come in, without causing the abuses and demoralisation which the Collector seems to apprehend.

4. 3,459 maunds of grain have been sold to the public, and about 20 maunds to work-people. 1,367 persons are daily in receipt of relief; and the relief officer in the worst part is sending grain to distressed villages, and distributing it through the local village agency in a manner which seems to be successful.

5. *Bhagulpore.*—Though the spring harvests have been decidedly good, yet prices have not fallen in Soopole and Muddehpoorah. Nothing is said of the condition of the cheena crop, of which the breadth is said to be beyond anything known in previous years. No ascertained cases of famine-death are reported, except that of an infant of thirteen months. The numbers employed on relief works have risen greatly during the fortnight, and are now

On Government relief work - - - -	8,300
On Soopole works, under the Court of Wards' - -	25,435
Total -	33,735

The number employed on private works seem to be less considerable than in Mongh

6. The transport of Government grain has gone on very satisfactorily and efficiently, except that the supply delivered at the railway stations, was for some days less than the transport contractor required. Four lakhs of maunds of Government grain were stored in North Bhagulpore before the end of March. 157 maunds was sold to relief laborers, and 340 maunds to the public. The sales to the public appear to have operated satisfactorily, and not to have stopped such private trade as there was. Sales to the public are now beginning at three other places in North Bhagulpore. 1,633 people are in daily receipt of charitable relief; many of the applicants are people from Tirhoot. Registers of people for house to house relief are being completed. Zemindars have taken considerable advances for helping their ryots; but it has not been necessary to make direct advances to ryots on any considerable scale.

7. *Purneah.*—The supply of grain in the bazars would seem to be fuller than at the time of last Narrative. The Lieutenant-Governor approves Mr. Kemble's action in stopping sales to the public at Dengraghat, when he saw that local traders were coming forward to sell; still we need not regret that sales were temporarily begun, seeing how very low the supply in the bazars at one time fell. On the whole, the condition of the people seems certainly not to have grown worse during the fortnight, and the information obtained regarding the possession and importation of seed-grain by the Purneah ryots is satisfactory.

8. The Lieutenant-Governor thinks that there is much merit in the plan described by the Collector of advancing grain to village communities on the collective security of the community; and this method will be suggested for consideration in other districts.

9. The number of people on the relief works has risen greatly during the fortnight, the daily average being now 17,250. Government grain is being sold at 12 out of 16 of the larger relief works; but the quantities as yet taken are not large. The transport operations in Purneah are well forward. The charitable relief arrangements appear to be working well, and the circle officers are carrying out the rules intelligently. The average number of people in receipt of this form of relief is 2,178 daily.

10. The Sonthal Pergunnah's Narrative has not yet (10th April) been received.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 2374—S.R.

COPY, with copies of the district narratives, forwarded to the Commissioners of Patna, Bhagulpore, Rajshahye, to the Relief Commissioners, Dinagepore, and Durbhunga, and to the Magistrate-Collectors of Monghyr, Bhagulpore, Purneah, and the Sonthal Pergunnahs. The attention of Commissioners is invited to paragraph 8 of the present orders regarding the advisability of making advances to ryots on the collective security of the village community.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Calcutta, the 14th April 1874. Officiating Secretary to the Government of Bengal.

P.S.—The Sonthal Pergunnah's Narrative has now (13th April), been received. The Lieutenant-Governor is glad to find that Mr. Boxwell has visited the neighbourhood of which the Reverend Missionaries reported so badly, and has found the people all in very good condition, though there is cause for fearing much scarcity and distress a month hence. The works which have been at once opened, and the Government grain which is being carried into the district should enable the Magistrate fully to relieve distress, and to give advances of food to carry ryots through the rainy season. The goodness of the mowah crop will greatly help the people. The great rise in the numbers of the work-people, who now amount to 26,869, would seem to show that the people had been much in want of work. There seems, as yet, to be no need for charitable relief in the Sonthal Pergunnahs; but the Deputy Commissioner will have to arrange by what means he will make advances of grain to ryots such as he adverts to at paragraphs 30 and 31 of his Narrative. Happily the village organisation in the Sonthal Pergunnahs is very well preserved, and the Government officers will be able to work through village headman as well as through zemindars.

NARRATIVE of SCARCITY and RELIEF of the DISTRICT of MONGHYR for the Fortnight ending 4th April 1874.

A.—STATE OF THE COUNTRY.

THE bazars generally continue to be well-supplied, and the price of grain remains almost stationary. The rubbee grain has not yet come into the market in large quantities, but when it does come in, I do not anticipate much change. Rice is selling from 10 to 12 seers per rupee, gram and peas from 17 to 18, and wheat from 15 to 16 seers per rupee. The deficiency in the Buckteerpoor market, however, continues, and had it not been for the prompt measures taken in opening the Government golas, there would have probably now been a famine in that part of the district; as it is, about 2,000 maunds of grain have been disposed of, and Mr. Manson, the Relief Superintendent, anticipates that all our stores there will be readily purchased before the next rice harvest. Mr. Manson with the zemindars calculates that the rubbee grain cut in those parts will only feed the people for a fortnight; but as I have been over a good deal of that part of the country myself, I consider that this estimate is under-stated. I calculate that the rubbee now cut should supply the Buckteerpoor market for at least two months, particularly as high local prices and scanty carriage will, I hope, induce the owners to sell what they have in the pergunnah instead of exporting it as is generally done in favorable years.

In consultation with relief superintendents, I am of opinion that during the fortnight the condition of the people has not materially changed. The poorer classes have not yet returned in any considerable numbers from the rubbee cutting, but the harvest will not last much longer, and the miserable hovels of the low-caste people found in every village will soon be occupied again. I have made inquiries from every one likely to give me information on the subject, and it appears that each person employed as a labourer in cutting the crops, on an average, will bring home about a maund of grain, so that these persons, numbering probably 600,000, will have at least a month's supply to go on with. Indeed, if all goes well with the crops remaining to be gathered during the year, the poorer classes will probably look back on the past time between the rice and the rubbee harvest as the most trying period of the year. The mowah prospects are excellent. Mr. Roberts at Khurrukpore agrees with me in putting it down as a 16-anna crop, and the mango prospects, although not so good as at first anticipated, promise fairly. On the whole the cheena is looking well, but the Indian-corn sown after the February rain looks poor, except where it has been freely irrigated. The early maize will not have any perceptible influence on the price of grain as it is too limited in extent. Mr. Currie, Mr. Baillie, Mr. Money, and their assistant Shah Abdool Hossein, express anxiety for the next three months; but I think the gigantic efforts which have been taken to give relief wherever necessary should remove all real anxiety as to the future, supposing that prices return to their normal state after the next general harvest. There has fortunately been no rain during the fortnight, and the district has reaped a good rubbee crop under very favorable circumstances. Khalians with piles of grain are now to be seen all over the rubbee country, and the samples of corn, barley, gram, and rahur which I have examined have been excellent; even the oats, which in most years are little better than wild oats, have some little amount of grain within the husk.

I have lately sent to the Asiatic Society Museum in Calcutta specimens of 27 kinds of jungle roots and seeds which are largely consumed by the poor people in this district. They were collected by Major Waller during his recent cold-weather tour of police inspection. The native names and manner of cooking them are described, and Major Waller has also recorded his opinion regarding their flavor and general advantages as food. Some of them appear to be highly poisonous unless carefully prepared, and I hope that some one sufficiently learned in botany may be able to identify them.

Mr. Roberts, the Assistant Manager at Karakpore, continues to report favourably on the Durbhunga estate at Khurrukpore. He has issued notices inviting persons to apply to him for *bonâ fide* tuccavi advances, and on any local distress being reported he at once goes to the place, and if necessary affords work or gratuitous relief. In all the other Court of Wards' estates and Government estates labour is being provided whenever necessary, but fortunately these are nearly all favorably situated, and require very little assistance. A report just received from Mr. Currie shows that since the 1st of April, Mr. Wight, Superintendent, Luckiserai, and his assistant Nowab Willayet Hossein, have visited 44 villages, and that although relief has been given without stint, the total amount given is small. Regarding the country north of Luckhiserai Mr. Currie writes— " The people say they are provided for the next month or six weeks, and here about the Mushurs, &c., who have returned from the rubbee harvest, say with perfectly happy faces that they have grain for 10 days. They take no thought for the morrow of the 10th day. The sickly smell of mowah is strong round their villages, and that will support them a few days more. I should not be surprised if in a fortnight or three weeks, we had distress rather bad; the mowha and mango crops may help to eke out a living, but I cannot think they will support the people altogether. For myself I do not know how the people live, yet with the exception of one or two in every village, and six or seven in the large villages, they seem plump and happy.

"I was at Owri on the 1st and found the place in a bad way; the ground looks as if it had been fallow; not a grain was got from 1,072 beegahs either of paddy or rubbee. Large tuccavee advances are being taken by the zemindars, but the place is cursed with the bane of this country, —numerous owners of minute shares.

"I have sent grain to the putwari for distribution to some people whose names were taken down."

From the tenor of all the reports received by me, as well as from my own observations, the condition of the district may be stated as follows:—

All who have money to purchase it can get as much grain as they want. The owners of the rubbee grain are well off, and happy in consequence of the high prices. The ryots on the Jumooee rice-country, and those to the north Furkya towards Buckteerpoor, as well as the entire purely labouring population are hard pressed for food, in consequence of high prices. But work can be got by all who require it, and actual distress is being relieved by the Government officers wherever they find it.

B.—Relief Works.

Since the commencement of distress in this district, I have done my best to persuade the zemindars and ticcadars to come forward and provide work or money for their ryots wherever necessary. Most of the zemindars have come to me and given an account of what they are doing and intend to do. I have given advances to all who appear to require them under the law for the improvement of estates, and these advances, already amounting to Rs. 40,000, have certainly taken away a good many laborers from our works. As I have remarked in former narratives, I have been particularly anxious to encourage irrigation works in the distressed parts of the Jumooee sub-division, because since November I have visited nearly every village there, and in each have found signs of departed prosperity in immense silted-up tanks, probably two or three hundred years old, most of which were dry even before the end of the year. I calculate that the money now advanced in this district will give employment on irrigation works to nearly 10,000 people until the rains set in. This and considerable tuccavee advances should do a great deal of good and take off pressure from our relief works.

No Government roads other than those already in hand have been commenced during the fortnight, but I have submitted to the Commissioner a map showing 17 villages where, if necessary, most useful tanks can be dug out under the Public Works Department, and 41 villages where light labor tanks may be dug out under superintendents of circles. These tanks will afford labor to 150,000 persons for two months, if necessary. The 300,000 persons lately employed in the poppy fields have not much to do at present, but the six lacs of rupees distributed amongst them by the opium agent should keep them from starving until they can get labor elsewhere either gathering mowha or ploughing their fields as they will do after the first good fall of rain.

The rubbee harvest is drawing to a close, but immense numbers of persons are still in the fields or at the threshing floors, and I hope they may find employment there for a week or two longer.

The zemindars have not got into the groove yet for submitting returns of laborers punctually, but I find that the following number of persons are employed either in wards' estates or in estates where relief works have commenced by Government advances:—

	Men.	Women.	Children.
Kamasi - - - - - -	41	21	9
Lakhochuck - - - -	38	29	0
Kewl - - - - -	75	63	0
Damodurpur . - - - -	15	13	0
Kharagwara - - - -	23	22	0
Sondhi - - - - -	64	25	0
Phulwaria - - - -	44	0	0
Burara - - - - -	50	30	0
Pertabpore - - - -	500	0	0*
Ekara - - - - -	250	0	0*

Besides the above about 4,000 persons are employed at Karakpore.

C.—Transport of Grain.

I annex a statement shewing the movement of private grain by rail. As might be expected, it is inconsiderable. Seeing that there is a vast quantity of grain in the district, and although a very considerable portion is set aside for exportation, it will not leave the district until the rains finally set in and render the Ganges navigable.

Vast quantities of carts have been attracted here through the agency of Mr. Thomas, the contractor, moving on grain to Northern Bhagulpore. The only drawback is that the railway cannot supply grain fast enough, and the cartmen, who are an independent race, go away unless their carts are loaded as fast as they wish. I found great want of grain at Surroop Gita Ghat, where large bodies of men connected with transport are collected, so I sent a petty trader with grain, and an assistant to set up a shop at the place at once. The Durbhanga grain also arriving at Monghyr is shipped off at once, and no block of any kind has occurred. I give all parties any assistance which they may require directly it is asked for.

D.—Storage of Government Grain.

The only places now to which Government grain is being moved is to Sondhi and Girna Pursunda, between Jamooee and Luckhiserai. It is proposed to store a total of 25,000 maunds at Sondhi, and 10,000 maunds at Girna Pursunda. The gola at Sondhi is nearly ready, and as there was great difficulty in getting materials for building at Girna Pursunda I went to the place myself and got the loan of a good gola, where 8,051 maunds have already been stored. A little addition to this place will give all the accommodation we require. I do not see any reason for changing my opinion already expressed in former narratives, that unless some unexpected change in the condition of the district takes place, we have sufficient stores of grain to meet any demands on us. Although immense purchases of Monghyr rubbee are being made on all sides for exportation, I think that what will remain, supplemented by our stores, will prevent actual famine in the district. It must also be remembered that I have advanced Rs. 61,000 to private parties for the purchase of grain, and although the first purchases have in many instances been disposed of, the money is being used again to buy more.

There is a considerable amount of Government grain now stored in the good rubbee country. It was stored there before the January rain, at a time when the rubbee prospects were bad. It will not, I think, be quite safe to dispose of this grain yet, but the golas are to be sealed up for the present, and placed under the least possible establishment.

Arrangements are being made for taking stock of all the golas on the 15th. Copy of circular No. 1828, dated 26th March, has been supplied to each officer, and I hope that there will be no delay whatever in the matter.

E—Advances to Parties and their Results.

The advances for purchase and storage of grain have formed one of the principal and most satisfactory methods of relief in this district. All the money advanced has been received by gentlemen who have not only taken a good deal of interest in the matter, but who have personally seen that the grain is retailed to those who most require it at cost price. Advances to private parties for land improvements form also, I think, an excellent scheme for relief, and although only Rs. 40,690 have been hitherto advanced, the total amount of applications I have received is very great. It is said that some of these advances will not be properly applied, but I am myself of a different opinion, for, besides having put the credit of the applicant and his security to a reliable test, I think, that very few persons will consider it worth their while to misuse the money, particularly as the works are visited from time to time by Government officers. Hitherto reports on these works have been very satisfactory, and the zemindars know that if the reports do not continue satisfactory, the full amount advanced with interest will at once be demanded back by me.

Another excellent form of relief is that of tuccavi advances to ryots through zemindars, and here also, although I have only been able to advance Rs. 18,900 as yet, the applications for advances are very numerous. It will be difficult for the landowners to misappropriate the money when they have in each case to furnish lists of the persons to whom the money is advanced.

All the persons to whom I have advanced money are zemindars, ticcadars, or persons who have given full and ample security. I have not made any direct advances to ryots. If once such a course was followed to any extent, it would I think be impossible to prevent the most widespread and demoralizing abuse, besides causing endless trouble and loss to Government.

---

* These returns were verbally given by the zemindar.

F.—CHARITABLE RELIEF.

Mr. Currie, the Additional Sub-divisional Officer, reports that during the fortnight 95 villages (names given) have been visited in his sub-division. This number will be largely increased during the next fortnight, now that the relief officers are settling down to their work, and deputy assistants have been appointed. On reading Mr. Currie's report the most noticeable points are that the poorer classes are still away from their homes cutting the crops on dearah lands; that although in almost every village destitute persons are to be found amongst the aged women and children, no deaths from actual starvation have occurred; the grain is procurable in all the bazaars throughout the sub-division, and that although the people at present appear pretty well off, yet considerable anxiety is felt for the time when the temporary relief afforded by the rubbee harvest has worn off. Mr. Currie reports that he has visited several relief works commenced with money advanced by Government, and, except in one instance, the result was satisfactory. The complaint, however, is general that during the rubbee harvest laborers are procured with difficulty, and as we have no desire to press labor, I have told all zemindars taking advances that I am not for the present very anxious to see their works progressing.

I have seen Mr. Money, the Superintendent of the Sheikpura circle, and he reports that there is hardly any perceptible change in the condition of the people during the fortnight; that the hovels of the poorer classes are still deserted; only very few persons have returned from their migrations, but that those who have returned have brought back a maund of grain each, which will carry them on for another month at least. Mr. Money gives a good account of his assistant, Shah Abdool Hossein. This gentlemon has an elephant and horses, and he gets over a good deal of ground during the day.

Since his arrival at Bucktiarpore on the 11th March, Mr. Manson, Superintendent, has been actively engaged in visiting the villages within his circle, and affording relief wherever necessary. On the whole, I consider this part of the district more distressed than any other, and indeed in two villages, Sitanabad and Hurewa, Mr. Manson found the people so famine-stricken that he was compelled to deal out grain to no less than 350 persons. These persons were chiefly the old and very young of the lowest classes, whose rice crops almost entirely failed. The system followed by Mr. Manson is that which has been generally adopted in the district of sending grain to the village, and dealing it out daily through the most respectable persons in the village. I feel confident that this system will not be abused, and, indeed, considering that each receiver of the Government bounty is registered, and a calculation of the total requirements made, the person to whom the grain is entrusted, even supposing him dishonest, would hardly consider it worth while to appropriate the grain for himself. Most of the villages within the circle have been visited and timely relief afforded. The total amount of persons who have received out-door relief during the month in the Bucktiarpore circle is 741, making a total of 1,156 persons relieved. Mr. Manson has a good active assistant in Baboo Bhola Nauth Dutt, the zemindar of Burowni. An English-speaking Deputy Assistant, Baij Nauth Sahai, has also joined, so that part of the country is well provided for. There is no doubt that the gigantic exertions we have been making to pass grain into Tirhoot and Bhagulpore has raised the rates of carriage here, and consequently private trade at and around Bucktiarpore has not lately been so active as it probably would otherwise have been. I think, however, that whatever damage we may have done has been amply compensated by our sales of grain and Indian-corn, amounting already to 2,000 maunds, at a fairly cheap rate.

Mr. Manson during his tours found by the roadside two miles north of Bucktiarpore the body of an old man who had evidently died, if not from actual starvation, at all events from the effects of want. Although Mr. Manson made all possible enquiries he was unable to learn the man's name or his place of residence; apparently he was a traveller going north. Mr. Manson also found an infant deserted by its mother, who, probably knowing that he would have it taken care of, threw it in his way.

Rules for the guidance of Relief Superintendents.

The poor-houses which have been erected at Monghyr, Jumooe, Begoo Serai, Sikandra, Bucktiarpore will remain under the management of the officer of the circle to which they belong, and all the expenses connected with them will be defrayed from the money at the disposal of the Superintendent. Very few persons have as yet taken advantage of the accommodation afforded, apparently preferring to hang on in their own hovels, however wretched; but by degrees, particularly when the rains commence, many persons will come in, and a medical officer will, if necessary, be provided for each poor-house. Cooked food will, as a rule, be distributed at these poor-houses, and each Superintendent will provide any food which appears necessary for the patients from the funds at his disposal.

A sum of one thousand rupees has been placed to the credit of each Superintendent, either at the Government treasuries or at the cutcheries of the nearest banker or zemindar. The first persons who should receive the attention of Relief Superintendents are respectable ryots and others, who, in consequence of their crops failing, have been reduced to poverty, and who only require small pecuniary assistance for purchasing food to help them over the present season of scarcity. These persons have not an equal chance with common laborers and professional beggars in the struggle for existence.

The best plan to provide for these persons is to give them money advances through the zemindar, ticcadar, or mahajun. On arriving at a village the first care of the Superintendent will be to ascertain the number and names of such persons, and then call on the zemindar and ticcadar to advance them money at once, say ten or twenty rupees each, according to circumstances. If the landlord pleads inability to advance from his own funds, the Superintendent may advance up to Rs. 200 to any single zemindar, ticcadar, or mahajun, and take from him a bond on plain paper according to the sample furnished. This advance will at once be reported to the Collector, and the amount will be adjusted. If, however, the landlord refuses, or is unable to furnish good security for repayment, a special report of his case should at once be sent to the Collector for disposal or report to Government under Circular No. dated . Such reports, however, will I think be rare, as I have found landlords very willing to make advances where necessary. In the meanwhile, if delay appears dangerous, the Superintendent may advance not more than Rs. 20 either in money or grain to ryots direct, merely taking a note of hand under promise to repay the amount when the next crop is cut. A respectable jeth ryot may perhaps be induced to stand security for several such persons. Respectable purda-nisheen women might be included in this system of advances, but the Superintendent must be on his guard that he is not imposed on; he should insist on the women's names being recorded, notwithstanding any alleged breach of etiquette in doing so. If they can be persuaded to repay the amount advanced by spinning so much the better. A list of persons to whom money is advanced, with the amount, should be demanded in every case where the advance is made with the Government money, and the Superintendent on visiting the village, without in any way appearing to doubt the probity of the landlord, should ascertain whether the money has actually been advanced or not.

Superintendents will find, particularly as the season advances, in almost every village many persons of low caste who are regarded by their more aristocratic neighbours very much in the same light as the village pigs. These persons have little money and less credit, and as they are the first to die of starvation in times of scarcity, they form the greatest source of anxiety. The able-bodied amongst these races can work, and they should at once be directed to the relief roads and tanks, but those to whom the labor test cannot be applied must be relieved. It will generally be found useless to tell such persons to go and get cooked-food at our centres. I have myself tried the experiment, and found that many of them would probably die on the road.

The only practical method of relief is for each officer either to send or take grain to the villages, and having registered the persons requiring relief leave sufficient food with the headman to support them until he can visit the village again. The headman should be treated courteously, and in ninety-nine cases out of a hundred he will readily and faithfully discharge the duty of dealing out the grain daily to the poor. The chowkidar should be called on to attend daily the distribution of food to keep order, and as he will probably be found badly off, he should receive half a seer of rice daily for his trouble. Money for the purchase of salt, dâl, &c., may, if necessary, be also given.

Superintendents will be careful to inquire regarding the sufficiency or otherwise of seed-grain in each village, and if he finds that reported deficiency cannot be met by small advances through the zemindar, the matter should be reported at once to the Collector, who will see that the necessary supply is given. But I do not anticipate much want in this particular, for I have seen seed-grain religiously sealed up even in the most distressed villages.

Each assistant superintendent of circles will have a permanent advance of Rs. 50, and as each assistant is a zemindar of high standing, he should receive the full confidence of the Superintendent, and he be allowed to distribute tickets and money for dâl, salt, &c., to those whom he finds starving in the villages within his circle. He should also bring at once to the notice of the superintendent any cases where an advance of money can be recommended.

Rules regarding light labor relief have already been circulated.

E. Lockwood,
Officiating Collector.

No. 39—S.R., dated Bhagulpore, the 7th April 1874.

From V. T. Taylor, Esq., Collector of Bhagulpore, to the Secretary to the Government of Bengal, Scarcity and Relief Department.

A.—State of the Country.

I have the honor to forward my tenth fortnightly narrative.

2. The Soopool Sub-Divisional Officer reports: "There is very little difference between the present supply of food-grains in the various bazars and what it was at the date of the last fortnightly narrative, but on the whole prices of grain, except wheat and barley, have an upward tendency, and, contrary to expectation, the harvesting of the rubbee crops has had little or no effect on the general condition of the market." At Soopool itself rice is selling at 9 seers, and murwa at 12, and throughout the sub-division prices range, for rice from 9 to 11 seers, and for murwa from 10 to 15 seers.

3. The Muddehpoora officer writes: "Supplies are more plentiful than they were at the time of my last narrative, owing chiefly to the sales from the Muddehpoora Government golahs, and from the private stores of Baboo Hurbullub Narain Sing at Sonebursa. Barley was selling at the Sonebursa market at 20 seers the rupee (80 tolah weight); at the Muddehpoora market, held on the 3rd, clean rice was selling at the rate of 5 pice a seer (64 tolahs weight), and coarse rice at 4½—or 10 seers 3 chittacks and 11 seers 7 chittacks, standard weight, against 8½ the previous week.

4. The Banka officer reports that the supply of food-grains is more abundant in consequence of the rubbee harvest, and murwa being available; the price of rice has remained unchanged, but that of wheat has fallen by 1 to 2½ seers, and that of gram has fallen by ½ to 1½ seers; new barley is selling at 22½ seers.

5. At the head-quarters there has been a very slight fall in the price of common rice, and a slight rise in the price of wheat.

6. The rubbee harvest is now almost over, and in pergunnah Chye and the head-quarters sub-division the crop may be safely put down as a very good one indeed, and above an average crop of ordinary years. In Banka sub-division what rubbee there was has also yielded above an average crop. In Muddehpoora the Sub-Divisional Officer reports an 8-anna crop to the north of his sub-division, but, taking the whole sub-division together, I am not wrong in putting it down as a 12-anna one. The Soopool officer admits a 12-anna or an average crop. The cheena cultivation, which is far beyond anything ever seen in this district, is not taken into account; it is still in all stages of growth.

7. The mowah is reported as excellent, but the mango crop, it is said, now will not be so good as was at first anticipated (in some parts of the north of the district).

8. The Soopool officer writes: "No cases of misery and starvation* have come to light; a large proportion (on one occasion, when an account was taken at the centre here, it was found to be nearly 50 per cent.) of our paupers are from the Tirhoot district, and most of them are most worthsome objects; as yet very few others than the very lowest classes, and those who, in the best of years would have been to some extent dependent on charity, have been attracted to our relief centres, though I recognise the fact that nothing but the most careful village-to-village inquiries—and these are now in progress—can ensure that many fit objects of relief are not holding out in their own houses.

9. The Muddehpoora officer writes: "I have heard of no new cases of deaths from starvation; in fact, from inquiries made by me during my late tour to the west no starvation is likely.

10. There have been a few deaths at some of the relief centres in the Soopool sub-division which cannot in any way be put down to starvation, and are not to be wondered at when one sees the class of persons who come to them. Mr. Smith says, "Five out of seven deaths were those of residents of the Tirhoot district, and in most of them I can certify that disease (in many cases of long standing) was the cause, though possibly the end has been accelerated by privation)." Many of the persons who died had been for a long time in the relief poor-house, with a doctor in attendance and properly looked after and fed.

11. There is no actual distress in either the head-quarter nor Banka sub-division.

12. The following statement shows the difference in prices of some of the food-grains now and at the corresponding period of 1866:—

—	Rice, 1st sort.		Rice, common.		Murwa.		Indian-corn.		Wheat.	
	1866.	1874.	1866.	1874.	1866.	1874.	1866.	1874.	1866.	1874.
Soopool - -	—	9 10	—	10 0	—	—	—	—	—	12 8
Muddehpoora - -	—	11 0	—	13 0	—	13 0	—	—	—	10 0
Head-quarters - -	11 6	10 8	12 0	11 6	—	—	15 2	15 2	11 6	14 8
Banka - -	—	11 0	14 0	12 0	—	—	18 0	14 0	—	15 0

13. The theft and grain robbery statement for March is annexed.

B.—Relief Works.

14. I annex a statement showing what has been done under this head during the fortnight, as also one showing the number of persons employed on the Durbhunga Court of Wards' estates in this district. Now that the rubbee harvest is over an increase may be expected in the number of laborers on all works.

15. Some 157 maunds 23 seers of grain have been actually sold to laborers on the relief roads, and arrangements are being made to have rice for sale on every work, so that those at work may have the option of purchasing it in preference to other grains in the bazars.

16. As regards the works being carried on by private individuals or zemindars, it is next to impossible to procure any information as to the total number or daily average of persons employed. Baboo Hurbullub Narain Singh is the only honorable exception, and is the only man who shows he is taking a real interest in what he has undertaken, and the only one who voluntarily supplies any information; he has in hand one bandh, eight tanks, and what he calls miscellaneous works; he shows a total number of 7,421 men, women, and children employed. There are other works being undertaken, but Mr. Kirkwood remarks he is afraid none with any vigour; they are carried on by fits and starts; payments, whether in cash or in kind, very irregular; and in the case of Mr. John Christian, who has undertaken an extensive work in the shape of bandhs, he writes, "Mr. Christian has a bandh in progress near Bungaon, but the wage given appears very inadequate for all but the sturdiest laborers." The fact is, that none of the zemindars have attempted to raise their rates, when we did on our works. Though it is almost impossible to get any statement approaching to accuracy from any private works, yet it is satisfactory to know that works of this kind are being carried on, and a certain number of persons, however small, being benefited thereby.

---

* Two deaths have been just reported at the Mullarh tank (Court of Wards); a child of 18 months from inanition and one of the working coolies. The Deputy Collector, Baboo Ram Sunker Sen, says he received the body, and considers starvation to have been the cause; but Mr. Duff does not say so. The deceased's wife and three children were working at the tank as well, and were not new-comers.

C.—Transport of Grain.

17. At the Bhagulpore railway station but little has been done during the fortnight in the way of imports or exports. The exports were only 6,949 maunds, of which 571 were local, and the rest, 1,947 maunds wheat and 4,431 oats, to Howrah. The imports were about 6,000 maunds only, the chief being 1,362 maunds Indian-corn, 491 maunds wheat, 1,138 maunds gram, 891 maunds rice, and 975 maunds paddy; about 292 maunds of rice were imported at the Pointee station, 574 at Colgong, 28 at Ghogha, and 729 at Sultangunge, exclusive of Government rice. The exports were almost nothing.

18. There is but very little private importation going on, and nothing is heard now of exportation from the interior of the district; there is a small amount of private importations in the north from Monghyr.

D.—Storage of Government Grain.

19. The following shows the quantity of grain stored at each of the places of storage in the district as far as is known:—

Muddehpoorah Sub-Division.

	Mds.	Already stored. Mds.	
Muddehpoora	50,000	29,220	
Bhowanipoor	25,000	9,982	
Kamp	50,000	26,298	
Soneburs a	12,980	12,980	At Phoolout
Patterghat	2,614	2,614	and Soneburs a.
Byjnathpoor	15,000	4,516	
Lalpoor	10,000	5,148	
		90,758	

Soopool Sub-Division.

	Mds.	Already stored. Mds.
Soopool	130,000	56,319
Chundail	10,000	1,000
Rutowlee	8,000	4,496
Hurdi	10,000	—
Nowabakkur	30,000	22,099
Dugmurrah	30,000	27,274
Roshwar	40,000	30,870
Nurgo	20,000	19,709
		161,767
Chandpeeper } Court of Wards	12,000	4,000
Bhuptiahi	12,000	4,000
Burhurra	6,000	4,133
Poepra	20,000	4,964
Pertabgunge	30,000	40,332
Bhulooa	20,000	10,535
Simrahi	40,000	4,746
Nathpore	10,000	7,436
Bheemnugur	5,000	5,052
Urjillee Dulgaon	8,000	8,000
Ekar	60,000	28,834
Pachgachia	20,000	—
Semani	20,000	—
Nohutta	10,000	4,020
Burgaon	5,000	—
Bungaon	30,000	15,000
Muheshi	10,000	—
		302,819

Sudder Sub-Division.

	Mds.	Already stored. Mds.
Permeshurpoor	1,000	1,000
		1,000

Banka Sub-Division.

	Mds.	Already stored. Mds.
Dhoorya	2,250	2,250
Kutoorya	4,773	4,773
		7,023

20. The Phoolout route is closed, and the two contractors are carrying away the grain from Jugdis Chuck and Monghyr very rapidly.

21. Mr. Smith has been sending rice from the Soopool golahs as fast as he can, and all the outlying golahs will now soon have their full allotment.

22. It will be seen that about 120,000 have been stored during the fortnight, and over four lakhs stored in all, and it is possible that more has been actually stored in some places than I have as yet received intimation of; some grain has reached Pachgachia, but I have not heard how much.

E.—Advances to Private Parties.

No further loans were granted during the fortnight under Act XXVI. of 1871.

The following zemindars received advances for helping their ryots:—

Name of Zemindar.	Place of Residence.	Amount. Rs.	A.	P.
Hur Narain Singh	Beerwa	1,000	0	0
Mr. Bowers	Bhuptiahi	15,000	0	0
Baboo Hirun Gurbh Narain Singh	Sookpore	3,000	0	0
„ Thakoor Man Singh	Do.	2,500	0	0
„ Ram Lall Sahoo	Kushur	4,000	0	0
	Total	25,500	0	0
	Altogether to end of fortnight	62,900	0	0

Rs. 5,000 have since been sanctioned by the Commissioner for payment to Mr. Bowers.

Rs. 5,000 have been advanced to the municipality under Government orders No. 1242, dated 4th March 1874, and only Rs. 200 to a petty shop-keeper for purchase of grain from the nearest bazars.

F.—Charitable Relief.

23. All the circles in this district referred to in my previous narrative are now officered, and it is unnecessary for me to re-write the details.

24. Under this head sales to the public may be properly dealt with. As mentioned in paragraph 36 of the last fortnightly narrative, arrangements, were made to sell to the public at the rate of 12 seers for the rupee, the quantities not greater than one maund, nor less than one rupee's worth from the Ekar and Bhowanipore golahs at the head-quarters of circles of the same names. But, Mr, Kirwood writes, owing to the delay in receipt of the letters (he moving about) the sales from Ekar and Bhowanipore could not commence before the 4th April. The results will be fully detailed in the next narrative.

25. I considered it advisable to open the Muddehpoora golah, as rice was only, so it was alleged, procurable in the bazars at 8½ to 9 seers the rupee. Orders were issued to this effect, and the result is thus reported by Mr. Kirkwood: "The effect of the sales at Muddehpoora has been as may have been anticipated,—the price-current in the bazar has fallen from 9 to 11 seers per rupee, and 11 seers is now the retail rate" (see Mr. Martin's remarks, para. 3); "but it is only the very poor who buy at that rate, all who can club together to make up a rupee, buy at the gola. The sales at Muddehpoora during the five days ending 3rd April show 597 purchasers of 340 maunds 19 seers, at 12 seers the rupee. All the proceeds, except Rs. 595-15 realised on the 2nd and 3rd have been paid into the treasury; that amount has not been paid in as the treasury was closed. As on the first day only 25 maunds were sold, we have 315 maunds, or an average of 79 per diem, for the other days."

26. The rule, as laid down by me originally and approved by the Commissioner, was that not more than 100 maunds should be sold in any one day, and not more than one maund or less than one rupee's worth to be sold to any one person. I further added a restriction that no person purchasing one maund should purchase any more for 30 days; this restriction was objected to on the ground that a person with a large family could not live on a maund a month; though this may be the case, my own idea was that the purchased of one maund of rice could easily supplement his purchase with murwah and other cheaper grains. Mr. Kirkwood, moreover, remarks:—"A rule that no man is to buy more than a maund a month is of course practically defeated every hour; such a rule, it may safely be asserted, is one impossible of enforcement."

27. There cannot be any doubt that great difficulty will be experienced in preventing the system of sales to the public being abused; but with the quantity of grain we shall have stored in this district, if the rice thus sold gets into the hands of those for the benefit of whom the sales are intended, there will not be many persons left to be gratuitously relieved.

28. The golahs of Ekar and Bhowanipore are now open, and I am now issuing orders for sales from Soopool.

29. In the Muddehpoora sub-division there are two circles only, and the under-mentioned five relief centres are open, viz., Muddehpoora, Byjnathpore, Ghylar, Gummerla, and Sonebursa. The average number of persons gratuitously relieved at each is given by Mr. Kirkwood thus:—

Muddehpoora	16
Byjnathpore	31
Ghylar	5
Gummeria	19
Sonebursa	15
	86

30. These relief centres will be removed altogether as soon as the house-to-house relief system is in full operation, and a very fair commencement has been made in this direction. Poor-houses will take their place, and are already in course of erection at Kamp and Bhowanipore, the head-quarters of the circles. These will have a doctor attached, and all the houseless, poor beggars, lepers, and other diseased and miserable objects will be collected and properly looked after; deaths may be expected to occur among them, but such deaths of such objects cannot be called deaths from starvation.

31. Mr. Kirkwood reports:—"At some of the golahs, notably those at Bhowanipore and Ekar, considerable numbers of light laborers have been employed on earth-work, rope-twisting, &c. At Ekar, too, about 800 people have been daily relieved by receipt of pice in exchange for baskets of grass as fodder for cattle; these were nearly all women and children. He adds—" No regular relief has yet been issued to these people; the registers for house-to-house relief are in course of preparation. Urgent cases of distress here and there have been relieved by money gratuity."

32. In the Muddehpoora sub-division five ryots have been advanced Rs. 72 for the purchase of grain and seed, and four more applications had been received, not yet dealt with.

33. The following shows the daily average of persons gratuitously relieved at the centres in each of the circles of the Soopool sub-division:—

Soopool Circle.

Soopool, daily average	100
Sookhpore	43
Chandail	31
Burooari	57
Khoknahi	45
	276

Narredigur Circle.

Nawabakkur	31
Deeghai	20
Bhuptaihi	99
Dugmurah	64
Burhurra	35
Chandpeeper	33
	282

Ekar Circle.

Ekar	41
Patchgachia	112
Murwullah	10
Bungaon	234
Muheshi	134
Koond Birhat	46
Burgaon	26
Notha	131
Total	734

Simrahi Circle.

Dharrara	99
Battaneah	61
Bhulooa	62
Khubdah	13
Nathpore	20*
Total	255

34. Most of these, again, it is hoped, will be closed as soon as the house-to-house registers are complete and the poor-houses erected; these have been commenced at Soopool, Ekar, and Burgaon, and also at Nawabakkur and Simrahi. At Soopool 50 per cent. of those relieved are from Tirhoot; and Mr. Kirkwood found many of those relieved at Bungaon unfit recipients of entirely gratuitous relief; these were sent off to work.

35. Mr. Smith, the Soopool Sub-Divisional Officer, remarks: "The tract to the west along the
" Tiljooga is undoubtedly the worst off, and will doubtless be the only tract where, at all events
" for some time, general distress may be expected. It is, however, the object of special attention,
" and fortunately the population is very thin. The careful diaries of Mr. Fanshawe, the Soopool
" circle officer, show that he is working exceedingly well, always on the move, and constantly
" visiting village after village, and I think with care and a little system we have not much to fear
" as regards this circle."

---

* Approximate return not received.

36. About 157 maunds 23 seers of grain have been sold on the Government relief works; the laborers, as a rule, supplying themselves from the markets, but in the case of the Durbhunga Court of Wards' tanks, a system had been commenced of payment of grain; this was considered objectionable, especially, as Mr. Smith remarks, as it amounted to little short of gratuitous distribution to all applicants without any attempt at getting any return for it; and payment in cash has been ordered, the laborers being at liberty to purchase Government rice, which is ready for them.

37. Spinning and weaving have not yet been commenced, but cotton has already reached Soopool and Muddehpoora ample for a fair start in this direction.

Number of Committees and Sub-committees as yet appointed.	Number of Special Relief Sub-divisions opened and officered.	Number of Regular Relief Circles opened and manned by Special Officers.	Number of Relief Circles opened and managed by Planters, Zemindars, and other Residents.	Number of Work-houses and Centres for the Distribution of Food and Gratuitous Relief.	Number of Men, Women, and Children in Receipt of Gratuitous Relief in any Shape through the Charitable Relief Organization Daily.
District committee, three sub-divisional committees, and six circle sub-committees, have all been appointed.	1	All are now manned: in all six.	Part of the Ekar Circle is looked after by Mr. J. Christian.	Four in Mudehpoora, 26 in Soopool.	1,633

No. 1451F., dated Purneah, the 7th April 1874.

From W. KEMBLE, ESQ., Magistrate and Collector, Purneah, to the SECRETARY to the GOVERNMENT OF BENGAL, Calcutta.

I HAVE the honour to submit herewith my fortnightly narrative for the period ending Saturday, the 4th April 1874.

Narrative of Scarcity and Relief for the Fortnight ending the 4th April 1874.

A.

DURING the fortnight I have visited Arrareah, Dengra, Kusba Amour, Bulrampore, Barsoe, and Kudba.

At Barsoe, where from reports I had been led to believe that there was a serious deficiency of grain in the market, I found a good supply, several boats laden with rice, kullai, &c., had come up the river, and the quantity not only of grain but also of sugar, fish, &c. was abundant. In this neighbourhood I also found that the villagers had generally a good supply of seed-grain.

Prices at Barsoe hât—

Rice brought from Hyatpore and other places in the Maldah district - - - - - - -	10 to 11 seers, 85 sicca weight.
Potatoes - - - - - - -	20 „
Kullai - - - - - - -	16 „
Indian-corn - - - - - - -	11 „

Mustard was selling at Rs. 3-2 a maund, and was being taken away in the boats which had brought up the rice; dried fish was being sold for export to Rungpore and Dinagepore at Rs. 16 a bundle; and sugar, brought from those districts, was sold at Rs. 3-2 a maund. Private trade being so active here, I did not avail myself of Sir Richard Temple's permission to sell Government grain to the public. Matters are looking brighter near Kudba owing to private trade, the good rubbee in the south, and the relief afforded by Government works.

At Bulrampore the people have a larger stock of grain than in any other part of the district I have visited as distressed; they have no rubbee, and consequently will feel the pressure more later on. Mr. Meeklejohn and Captain James are organising relief measures here.

At Dengra and Kusba Amour there is less private trade than in other parts, but the scarcity is beginning to encourage private enterprise here as elsewhere. A cloth merchant of Kissengunge has opened a large store on the banks of the river, and keeps his supply up by small boats. In this neighbourhood I last fortnight authorised the sale of Government rice. Mr. Gouldsbury sold 10 maunds at Ratahat, and Mr. Wyer 16 maunds at Mathour, and 107 maunds 11½ seers at Ootri, at 15 seers per Burmah and 12 seers Bengal. The consequence of this was that on the next hât day, at Rata and Mathour, not a single private trader appeared. I consequently reduced the rates to 12 seers, and forbid the sale of Government grain at the public hâts. This has restored confidence, and the beparees are now buying as fast as ever from the Purneah bazar from the merchants who import it from Caragola.

I have directed the relief officers at Dengra and Kusba Amour to sell at 12 seers and 10 seers at their relief centres on fixed days; and after inquiry, to village communities, or group of villages, not more than 100 maunds is sold at each circle until further orders. In villages, when the people are badly off, grain is advanced on credit, the village community giving a joint bond for the repayment of the advance. This system works capitally, it keeps the people in food, it allows them to spend their money on seed, which is procurable in nearly every hât, and is being imported largely from the north, and it enables us to distribute our grain at no cost at a time when carriage is available. Mr. Wyer at Sudder has worked this system, and found that it succeeds better than any other, the people like it, and it is far better than making them advances in money, except in places (which are, in my opinion, very few) where there is no seed-grain to be had.

In most villages the well-to-do ryots have seed-grain which they are ready to advance to their poorer neighbours if they see any prospect of being repaid. An advance of Government grain for food on joint security, or its sale in some cases, prevents the seed-grain from being eaten, keeps the poorer people in their homes, and enables them to cultivate their fields. The brisk trade in seed-grain is a good sign. At head-quarters there has been a rise in the prices, but this is owing almost entirely to a large quantity of coarse rice brought up by a few traders being nearly all consumed. There has been no great general rise in prices, as the price currents sent up would lead one to suppose. Private traders as well as Government have suffered from the inability of the railway company to supply carriage. Mr. Rattray from Arrareah reports prices much easier. Rice was selling in the north of his sub-division at 9⅜, and 10 seers at Turkeli, and wheat at 12_4. The rubbee crop up here has been first rate.

Mr. Craven reports from North Kishengunge that if Government Burmah grain were offered at 12 seers to the people, they would not take it, as rice was selling there at 12 and 13 seers the rupee, and throughout the subdivision there had been a general fall in prices from 1½ to 2 seers the rupee.

Here, as elsewhere, rain is now wanted for the rice sowings, and for the kauni and cheena. Mr. Craven however reports that the lower classes are beginning to show signs of distress, and that beggars are increasing. This is the case everywhere, but the relief afforded by our works, and by the charitable committee, will, I hope, prevent any severe distress being felt. During the fortnight three deaths have occurred at our relief-houses, two at Barsoe, and one at Kusba. I inquired into those at Barsoe myself, and found that both the deceased had been sufferers for some time from disease, and that their deaths could not be attributed to want, they had both for some weeks been inmates of the poor-house. The case at Kusba Amour was of the same description.

We have now native doctors at all our circles, except Bahadurgunge, who will be of great use in treating these cases of diseases, which are, in the present time of scarcity, brought so prominently to our notice. Mr. Craven reports that he notices that much charitable relief is given in every village by well-to-do Mahomedans, and this is, I believe, the case everywhere; and amongst Hindoos also.

The most unfavourable symptom I have to report this fortnight is the frequency of fires, which both Messrs. Rattray and Craven assert are the work of incendiaries; from enquiries which I had made myself I think they are right. It seems that these fires generally occur in some village where there are a number of fairly-stocked golahs. In Belgachi, Saifgunge, Kusba, and Ranigunge, and in many other places, there have lately been large fires.

Zemindars are at last getting alive to the necessity of helping their ryots. Aga Saifulla Khan is making advances near Kusba Amour, where they are wanted, and I have advanced to a good many putneedars in Kishengunge.

Of the crops at present much cannot be said as the rubbee is all cut.

The number of grain-thefts amounts to 26 during the fortnight. The value of the property stolen is Rs. 167-4. This is not very alarming.

B.

The progress return of Mr. Cordner is annexed. I have during the past fortnight been with him over the greater part of his roads, making arrangements to enforce some task from the large numbers of all able-bodied men who flock now to our works. I have no doubt that this will soon be managed; it is everywhere found that the village people soon get accustomed to use the kodali and prefer contract work. A few beldars, who under orders should have been drafted off to the north road, have been allowed to remain on each work, as they distribute themselves among the villagers, serve as duffadars, and teach them to measure.

Under orders from the Commissioner, for women, children, and others who cannot do a fair day's work, employment will be provided by the relief officer on petty works.

The number of persons employed on these last is increasing. The returns do not show all the persons relieved by road-work, as considerable sums of money have been given out for village roads which have been made by villagers, who cannot be got to send in return of laborers. I have sent up this week a map showing all the works opened or proposed, except petty village roads, including sites selected for tanks, in case there should be a greater demand for employment than our roads can satisfy. This, however, is not likely to be the case, while I trust that we shall be able to finish the work laid out. Huts have been built at each work, but are not patronised by the workmen.

Mr. Rattray pays his coolies in grain, at 15 seers the rupee for Burmah rice, to the amount of their daily earnings. The average number of laborers engaged on the Department Public Works works by last return is 14,669, and on the relief officers' petty works 2,587; this gives a total of 17,250. Grain is now sold on all the works at 12 seers and 15 seers, which is above the rate at which it is sold to the villagers.

It is not necessary to copy here the returns which have already gone up; the above figures differ from them, and slightly, as the latter did not include 64 persons employed on roads and 140 on tanks at Assaragurh by Mr. Craven, and 9 employed by Mr. McQueen. The last-named gentleman's figures, which include no women or children, show that in Dhurumpore the demand for work is far less than in other parts of Purneah.

C.

I have not received any return from Caragola this week to show me the quantity of private grain imported. From reports in the bazar I fear it has fallen off a little owing doubtless to the same cause which brought about the stoppage in the importation of Government grain last fortnight.

The means of transport have not failed as in the district yet, nor is it likely that any difficulty on this head will arise. Private trade continues as active in the south-east of the district as ever. The Morung authorities have either found that they have some spare grain across the border, or they are not so vigilant to prevent smuggling as they were, as Mr. Craven reports that rice is being brought in for sale; he also reports large quantities brought from Julpigoree.

D.

Mr. Mulock's note on the golahs and carting arrangements is annexed.

All the golahs are being or have been leeped, and special arrangements made to protect them from fire at Saifgunge. Last week, when half the bazar was burnt down all round them, the golahs were preserved. I hope soon to have arrangements complete for distributing the grain to the villages and smaller golahs.

During this fortnight 4,727 carts left Caragola carrying 27,267 bags, or 54,534 maunds of grain. This is an average of 339 carts per day, a great falling off from our former averages. This is caused by the causes mentioned in the last narrative, namely, the sudden running short of our stores of grain at Caragola, and the consequent impression among the carters that no more grain was coming to the district. Our liberal rates however are again drawing them back, and Mr. Munro writes that he expects to have carted away five lakhs of maunds from Caragola before Thursday next.

All the golahs for the reception of Government grain are being fast completed, and the sub-divisional relief officers are looking after their construction; sites have been chosen at Kooti, Rudail, and Azimgunge; the three new golahs decided on. The new golahs at Palankof and Sirsee are completed.

Preparations are being made for the general stock-taking on the 15th current. I have distributed personally the forms to eight goladars, and thoroughly explained the principle of the accounts and forms; and Mr. Craven, who was in the station on Saturday, took away the officers present at all the golahs, but at Dingra, Turkeli, Mutiari, Kishengunge, Bahadurgunge, Kusba Amour, Bulrampore, Barsoe, Kudba, and Purneah, I expect to be able to have European officers to check the stock-taking. In any golah where the amount at stock-taking is stated to be much less than our register shows, it will be necessary to have a European officer deputed to recount the bags. The coolies who take out the grain will be paid in grain, which will be more acceptable than money, and will obviate the necessity of sending large sums of money to the goladars.

I have received 38 bales of 30-seer gunny bags from the Alipore Jail, which I have distributed, with 4 packing needles and 2 maunds of twine, to all the principal golahs.

E.

The advances to private parties have this fortnight been small, amounting only to Rs. 3,000 to two persons, Gopaul Sing and Udhan Mull, for purchase of grain, and Rs. 3,000 to Srikant Jha and Aga Saifulla Khan to help their ryots.

The last-named gentleman has however asked for Rs. 3,000 more, which I have recommended shall be given.

Advances have been made by relief officers to ryots and others, but I much prefer to help the poorer classes of people by advancing food-grain to them, and thus prevent them from eating their seed, which they would have to do in many cases if not helped.

I hope that the example set by Aga Saifulla Khan would have been more generally followed, and trust yet that it will be.

Since the end of the fortnight under review further advances have been made.

F.

Charitable relief has been generally and freely given throughout the district. The report of Mr. Wyer, the relief officer, submitted a few days ago, was very incomplete, as the sub-divisional officers had not fully understood that their reports were to go to him.

I can from personal inquiry state that the relief officers are generally actively engaged in their work, and I am sure that the existence of relief centres and relief works is known in every corner of the district, and that if any person in want does not get relief it is his own fault. Mr. Wyer, at head-quarters, has visited most of the villages in the distressed part of the sub-division; he has advanced money for seed to those ryots whose landlords would not help them, and has, under my orders, sold and advanced grain to villages where the need of such help was apparent; he has not given any relief by cooked food.

Mr. Thornton and Mr. Gouldsbury, at Dingra and Kusba Amour, have been very active in giving out twine and cotton and jute, and in arranging circles of villages for the sale and distribution of grain.

Mr. Perry, at Kusba, has been more active in opening out road and tank work; he finds but few applicants for relief at poor-houses. He and the Dengra and Kusba Amour relief officers work the ticket system very successfully, and check the lists. The active and intelligent way in which Lieutenant Thornton has taken to this work, which is quite new to him, is very creditable.

Mr. Craven, at Kishengunge, and Mr. Bertleson, at Bahadurgunge, are working on the ticket system, and are opening a number of useful works both in roads and tanks. Some bunds for irrigation purposes have been taken in hand by Mr. Bertleson. Both these officers have done well in looking after the larger Department Public Works works in their circles; they have been directed to open more petty relief works.

Mr. Rattray, at Arrareah, has started a very large number of petty roads, and has worked the ticket system fairly; but I fear that he has been too indiscriminate in his charity.

Instead of advancing cotton and twine to indigent persons for spinning, he has advanced a large sum in cash, for the purpose, he explains, of enabling such persons to buy the raw materials. The plan I cannot approve, and have stopped.

The average number of persons, according to the last retnrn, who are in receipt of charitable relief, is 2,178. This is far below the real number.

The return does not include persons in receipt of relief by spinning, and has not been received from some centres at all. Regular rules and tables for returns, about which up till lately there has been some misunderstanding, have been sent out now. The rules are based on those circulated in Tirhoot.

Dated Camp Sibpore, the 8th April 1874.

From A. Boswell, Esq., Officiating Deputy Commissioner of Sonthal Pergunnahs, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit a narrative for the fortnight ending 5th April 1874.

2. For the last fortnight I have been travelling fast, and never staying more than three days in any place. I have left my office all behind me, and have found it necessary to sacrifice report-writing considerably.

A.

3. I.—Supplies are not said to have failed anywhere. Food is reported plenty in the Deoghur sub-division, except at head-quarters, where the demand is very great; it is surprising that a resort of beggars and devotees like Baidzanath has not furnished a good deal of distress before this.

4. In Godda the laborers are chiefly supplied from the Government golah at Doi.

5. It is impossible to say whether the local markets would have stood the strain or not unhelped.

6. Anyhow there is food for the people, and they are able to get it.

7. I have not heard from Rajmehal.

8. There is a considerable quantity of rice stored in Sultanabad; but the mahajuns are unwilling to sell, wishing to force up prices. It is likely enough we shall have to import a little to prevent prices rising too high.

Extract from Price Current A—II, 9th paragraph.

Market.	Wheat.	Rice, best.	Rice, common.	Bajra.	Maize.	Gram.
Doomka - - - -	12	10	11	16	16	12½
Pakawar - - - -	17½	18	14	19½	17¾	20
Deoghur - - - -	12	12	13	—	13	15
Jumtara - - - -	—	12	18	—	—	13
Katikund - - - -	—	11	12	18	18	—
Barhait - - - -	—	11	18	—	16	—
Sahibgunge - - -	16	12	13	18	18	16

10. The cheapest rice is 14¼ seers at Patrol. The cheapest food is 30 seers of barley at Pakauri. Prices are generally steady, with slight local fluctuation.

11. III.—An agent of the Rajah of Sultanabad has 6,000 maunds of rice stored at Pakuria.

The Rajah has a good deal of rice stored at Maheshpore. Six mahajuns in the neighbourhood are believed to be holding up considerable stores for famine prices.

12. IV.—On Friday last there was rain with hail from Maheshpore to about 6 miles west. I do not know how far north or south it spread.

13. The hail damaged the mango crop a good deal. The rain has helped ploughing much. I have not received any registered rainfall.

14. The mohwa flowers are the chief crop coming in now. I am sorry that the last weekly weather and crop return but one gave a misleading account. It was made up at Doomka, where some of the trees were late in flowering.

15. I have myself seen mohwa trees in full flower from Benajarhia to Doomka and Moheshpore, and I have heard of the crop from Deoghur and the Hendwa pergunnah. It is quite first-rate nearly everywhere, and is bad nowhere. The best is so good that the whole crop may be put down as excellent. I have breakfasted on boiled mohwa flowers, and I can say that they are wholesome and valuable food.

16. The mango crop is not so good, and the kend trees are promising badly.

17. I find that, beside the flower, the mohwa fruit yields an edible seed, with oil.

18. There is no ordinary rubbee in any part of the south of the district. I have heard of about 200 beeghas of good grain in Sultanabad, and literally nothing else.

19. The Godda report gives no details of the rubbee crop.

20. In Deoghur sugar-cane is doing well.

21. People look well everywhere. I have seen one half-starved boy of about 7. His parents were beggars, who died about two months ago. He is a dome by caste and has no relations. He came to show himself to me. He was very thin. His ribs could be counted, and the big lean joints showed out the miserable leg and arm bones. He had been living on scraps from door to door since his parents died. I gave him in charge to a comfortable Brahman. This I should think must count as a case of actual distress.

22. One man has died, and another man is said to be dying near Maheshpore from combined disease and poverty.

23. The wonder is that we have not heard of dozens of such cases, as they are constantly occurring all over the world.

24. I was for three days at Benagurhia with Mr. Bœrresen, the missionary, last week.

25. The complaint is, that the people are nearly at the end of their stores, and that there is danger of great distress once the rains begin.

26. If people are going to starve six weeks hence, their being well and hearty now won't alter the fact. But it is impossible to trust the accounts the people give of their own condition. This is one of the greatest difficulties we have to fight against. The first answer to any inquiry is always, "our crops all died; we have nothing; the Sarkar is our father and mother; if the " Sarkar helps us we may escape." This is the refrain to nearly every song all over the district. When pressed to give details the people let out that their case is by no means so bad. They admit that they had very uneven crops; that most villages had a share of good and bad luck.

27. In the hill country west of Benagarhia there was fair maize, and a little good rice. The population is thin, and mohwa trees are plenty. In spite of some complaints I consider this region safe.

28. The people of the plains or rolling country of Dari Maleshwar are much worse off. The villages are thicker and larger than in the hills; the people trusted more to rice and lost more.

29. They are coming in great numbers to works I opened in concert with Mr. Bœrresen last week. But they are in excellent condition so far. The men are strong and the girls tall and good-looking. I did not see a thin, weak frame, or a woe-begone face among a thousand labourers.

The cattle also are in good case.

30. Still, it would be very wrong to let such appearances mislead. In about six weeks the first rains may be looked for; the people must plough their land, and they must be able to live while they have to be engaged on work which does not bring them in their food for the day.

31. As has been long foreseen by every one, the time of greatest difficulty will be from June to September, when men must be ploughing their fields, or there will be no crop next year; when transport will be most difficult, and when the last grain of the old harvest will be eaten, possibly before the first of the new harvest is eatable. Sontals would be merry, and eat full meals up to their last handful of maize.

32. Therefore about Benagurhia and Dari Maleshwar generally, I say the people are still in very good condition. Scarcity up to this has not affected them, but I believe the accounts of their short supplies to be true. They will not get so much mowah as the people in the hills. They are much more numerous in an equal area.

33. Supplies in the local markets are believed to be nearly sufficient. I have, with the help of the missionaries, opened relief works which I mean to extend.

34. A gentleman who lives in the neighbourhood, and who trades in country produce, has engaged with me to buy any required quantity of rice from the Government, and sell it to the laborers at the prescribed rates.

35. I think by working one day on a road or a tank, and another day on his own field, the poor cultivator will be able to pull through.

36. The poor laborers will also pull through, because, though their resources are less than the cultivators, they can give all their time to immediately paying work.

37. I should not like to try to give a more minutely accurate description than this of the condition of the people of Dari Malishar, and I think this will do to work on.

38. I am just now in the middle of Sultanabad, about which I had heard alarming reports. Mr. Wood has been here for some time, and I have had the very great advantage of meeting him.

39. I saw a good deal of this country in November. I reported then that the rice crop was most uneven, but that I thought it averaged 8 annas. I am not able now to say whether the estimate was right or wrong. I can only say that the people's own accounts of their condition are ridiculously untrustworthy. I give an instance. In November I was going through a village. I was talking to my mahawal; we were admiring some magnificent rice that was growing along a deep khal full of water. The khal ran winding almost like a tangled rope, and for a considerable distance on each side for a long stretch of the khal this very fine rice was growing. The uplands had not been ploughed. The village was not large, and a number of the villagers

stood looking at my elephant. I said to them, "The whole country is going to ruin. What "about you?" They answered, laughing, "We are all right, we have got our's safe." A week ago I passed through the same village, and I was told that not a grain of rice had been saved. The water in the khal is not dry yet. Cows drink it, and buffaloes lie in it.

40. The tenants of Sultanabad are not on good terms with their landlord. They are constantly asking me what the Sarkar is going to do, and they are inclined to convene meetings to make proposals, and hear news.

41. The Rajah of Maheshpore has promised to spend Rs. 5,000 borrowed and Rs. 2,000 of his own money on tanks and bands. Work has already been begun on a very good line of road and on several tanks.

42. I consider that relief works are necessary in Sultanabad, and, as I have already said, we shall probably have to import some rice.

43. In Maheshpore laborers are refusing task-work. Daily labor attracts many hundreds of persons, who like pay for lazy work. Number rolls of day-laborers are apt to mislead.

44. Crime does not appear to be increasing.

B.

45. Yesterday I received the district progress report, which I have to submit in original as I am alone in the interior without a clerk.

46. In addition to the works reported in this sheet, I opened work last week by the kind help of Mr. Bœrresen on a tank and a band near Benagarhia. I gave Mr. Bœrresen Rs. 1,000 to carry on the work. In four days the number of laborers increased from 200 to 1,100, almost all Sonthals.

47. Mr. Meara has opened work on the Bario and Pratapore road, but finds that laborers will not come to it. They prefer the Barahat road. This requires investigation.

48. As I have said, the people of Sultanabad are working on a road and on tanks selected by Mr. Wood. These works will now come on the regular list.

C.

49. I have nothing of importance to report.

D.

50. I have nothing to report. I have not received details from Doi, our only working golah. I have not received sufficient information from Rajmehal to make any report.

E.

51. As I have said, Rajah Gopal Chundra Singh Bahadoor, of Maheshpore, is borrowing Rs. 5,000 for tanks, of which he is going to begin 20 immediately.

G.

	Rs.	A.	P.
The progress report gives some details of expenditure totalling - -	1,743	0	3
Advance to Mr. Bœrresen for Benagarhia band and tank - -	1,000	0	0
Total - - -	2,743	0	3

P.S.—The father of the distressed boy of paragraph 31 has turned up. The boy had told me his father and mother were both dead. I cannot yet say whether the father wants to get hold of the boy's subsistence allowance or not.

Enclosure No. 6.

RESOLUTION.

Scarcity and Relief Department.

Calcutta, the 14th April 1874.

Read—

The fortnightly narratives for the Rajshahye division, for the period ending 4th April.

Moorshedabad.—The effect of the reaping of the rubbee crop is perceptible in the markets of this district, for though rice is a little dearer, averaging 12¼ seers per rupee, wheat and gram are at 17 and 18 seers, and other grains cheaper.

2. As before reported, it is only the begging and indigent non-laboring classes that are suffering from actual want, and to whom it has been found necessary to give gratuitous relief. For the labouring classes, work is provided, and is readily taken where the pressure is at all severe. Difficulty is said to be felt in undertaking tank work for want of a supervising agency. It is thought that the head men of villages cannot be trusted with the disbursement of money on this account without a tolerably active supervision. The Lieutenant-Governor thinks that this difficulty is exaggerated. It is hoped that the arrangements recently made, under the Commissioner's orders, for dividing the district into circles, with an officer in charge of each, will make it easy to introduce this form of relief more freely where required. The Lieutenant-Governor was prepared, from his own knowledge, to find the necessity of such circles in the

western half; but he hopes that in any case a full circle organisation will not be found necessary in the eastern half, that is on the east of the Bhagirattee river. If, however, the collector thinks that it does, then the Lieutenant-Governor will be glad to receive a special report.

3. The average number of persons on relief works daily is 3,464. The daily number receiving charitable relief is 379. It is stated that the manufacture of jute-cordage has proved a useful form of light labour, and more popular than thread making. The relief committees of other districts may, perhaps, try this. Government grain when sold to an independent relief committee need not continue to be shown as Government grain.

4. *Rajshahye.*—Though prices are easier here, owing to private importations, than they have been for some time, the failure of the silk crop which is now reported, will, it is to be feared, cause much distress that would otherwise have been avoided. The district has, however, been divided into circles under the Commissioner's orders, and a careful watch must be kept upon the condition of the poorer classes. The average number of labourers on relief works had risen to 6,587, in the first week of the fortnight. The return for the last week is not submitted. 185 persons daily receive charitable relief at poor-houses, but these returns are also incomplete.

5. *Maldah.*—The collector notes a marked decrease in the supply of rice and paddy in the local markets. Prices are nowhere less than 11 seers per rupee, and go as high as 9 seers. Wheat, and other rubbee grains, are however coming in, and helping to relieve this extreme pressure. The rubbee harvest has fortunately been above the average. Seed for the bhadoidhan sowings has been procurable, though at very high rates, and a much greater area than usual has been laid down.

6. Mr. Alexander thinks the condition of the people getting worse by degrees, and now anticipates that village-to-village inspection will be necessary; arrangements for this seem to have been made. The Lieutenant-Governor observes that this process can only be necessary in the tracts on the west banks of the Muhanuddee and its affluent. It can hardly be required in the tract between the Ganges and the Muhanuddee. If it be, however, the Lieutenant-Governor would be glad to receive a special report. In the very bad parts, the increase in the number of ordinary villagers coming for cooked food to the depôts, indicates the growth of distress. It is not, however, understood why these people should receive cooked food; they should be set to work on relief works. 3,160 persons daily find employment on relief works, while 684 are receiving charitable relief.

7. *Dinagepore.*—Mr. Lowis' report is as usual full and interesting. Rain is much required in this district to enable the ryots to complete the sowing of the light lands for the bhadoi crop, and to plough up the heavier soils. The collector believes that seed-grain exists in the country in sufficient quantity, though the prices of it will range high. He proposes to put some pressure on the zemindars to induce them to assist ryots who have no means of their own to purchase seed. Probably it will be found that the zemindars will do this readily enough for their own sakes, if the grain exists. But it is right to devote constant attention to the matter. It is, as Mr. Lowis says, better for Government to avoid direct dealings with the cultivators, and get the zemindars to perform their natural duties.

8. The facts related by the Collector confirm the conclusion to which he had already come, that the general stocks of the district are now fast failing. Fortunately the Government rice is available in sufficient quantity to meet all distress.

9. The numbers on relief works have risen to 74,806.

10. Transport is working smoothly and well. The Collector would like to take 40,000 maunds more *viâ* Dingraghat, in addition to the 1,60,000 already sent through Purneah, but the present arrangements cannot be again disturbed, and the East Indian Railway cannot be further burdened. It is to be hoped the Collector may find the forms of the stock accounts less complicated than he expects them to prove.

11. The arrangements for charitable relief are complete; 1,791 persons were receiving this form of aid.

12. *Rungpore.*—The Rungpore report is on this occasion sufficiently lengthy, and gives a very fair idea of the state of the district, and the local distribution of distress. It might, however, with advantage have been more condensed. The worst tract is that in the south by Govindgunge, where village inspection has disclosed even greater distress than was anticipated. In some parts the people have been reduced to something approaching extremity, though no deaths are reported. It is hoped that the Collector can show that he has from the first exercised sufficient vigilance in this respect. The Lieutenant-Governor warns him most earnestly, both as to the present and the future. No shortcoming in this vital respect can be overlooked or permitted. Relief measures seem now to be on an efficient footing; work is provided; advances are being made to zemindars and jotedars for their ryots, while the latterly eagerly watch the due application of the sums so lent by Government.

13. The total number on relief works is not given. They are said to be much the same as before, except in Govindgunge, where about 10,000 people are on the roads. Last narrative showed 3,465 labourers for the whole district.

14. The transport of grain is said to be going on smoothly, though complaints are made that private trade is interfered with by the Government demand for carriage. It can hardly be the case that a district like Rungpore should feel seriously the withdrawal of 653 or even 1,000 carts. The special report of the burning down of a Government rice golah will be awaited. 1,62,828 maunds of rice have reached the district.

15. Over 4,000 persons are said to be in receipt of charitable relief. They are chiefly of the begging class.

16. *Bogra.*—The Collector reports that no change has taken place here during the fortnight in the condition of the people; but the numbers on relief works have risen from 9,686 to 24,951 persons, of whom only 7,980 were men. It is evident, from Mr. Kelly's account, that the population of the villages is turning out to perform nominal labour on the roads. If these people are really distressed, work must be found for them in their villages. But it is stated as a fact, that well-to-do people come on the roads bringing their labour-servants with them. Certainly in such cases the labour test should be made a reality. Mr. Robinson's attention is invited to Sir George Campbell's "Note" published in the last *Gazette*, where this question is discussed. He should take steps to have the works classified as there directed. The Lieutenant-Governor begs that Mr. Robinson will take the earliest opportunity of visiting the Bogra district.

17. The Collector thinks the land carriage of the district insufficient to carry off the whole of his increased allotment. In that case, he must arrange to store it at places from which it can be conveniently distributed in boats later in the season. Mr. Robinson should, however, look into this question without delay and report the result. The Lieutenant-Governor has hitherto been under the impression that there is enough land carriage in the district for so small an allotment.

18. Charitable relief is being given to 583 persons.

By order of the Lieutenant-Governor of Bengal,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

No. 2386.—S.R.

Copy forwarded to the Commissioner of Rajshahye, the Relief Commissioner of Rajshahye, and the district officers of the division for information and guidance.

No. 2387.—S.R.

Copy forwarded to the Commissioners of Patna and Bhagulpore.

By order of the Lieutenant-Governor of Bengal,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

Calcutta, the 14th April 1874.

Narrative of Scarcity and Relief in the Moorshedabad District for the Fortnight ending Saturday, the 4th April 1874.

A.—State of the Country.

1.—*Abundance or scarcity of supply in the bazaar.*

The supply of food-grains other than rice is reported to be increasing in the bazaars and hâts of the Sudder sub-division, and the prices are easier. There is still sufficient rice for daily consumption, but the stock is reported to be gradually decreasing. In the Lalbag sub-division there is still an abundant supply in the bazaar. The mahajuns of Baloochur and Azimgunge have opened their stores and are supplying the bazaar. In the Rampore Haut sub-division the markets are in a similar state to what was reported in the last narrative. In the Jungipur sub-division it is reported that the supply of rice and dhân in the market of Dhulian, from East Bengal, is abundant. The Sub-Divisional Officer saw a number of Dacca rice-boats in the Ganges near Dhulian on last Monday and Tuesday. The supply of rice in other bazaars is reported to be scantier than in other years; but there is always enough to meet the daily demand.

2.—*Kind and price of grain selling at one or more principal marts.*

In the head-quarters sub-division the price of common rice is somewhat higher than at date of last narrative; the average of 12 of the principal marts gives 12¼ seers per rupee. It is cheapest at Nowada, where the rate is 15 seers per rupee, and dearest at Kallyangunge, where it is 11 seers per rupee. The price of wheat and gram has fallen; of the former the average is 17 seers, and of the latter 18 seers per rupee. Other food-grains such as kulai, dâl of different sorts, &c., are somewhat cheaper, but the whole of the rubbee crops have not yet been gathered. In the Lalbag sub-division coarse rice still remains generally at 12 seers per rupee. Wheat has fallen one seer, and barley two seers. In the Rampore Haut sub-division the prices of fine and coarse rice are as follow:—

	Fine rice.	Coarse rice.
Khurgram - - - - -	$10\frac{2}{16}$	$11\frac{9}{16}$
Pulsa - - - - - -	10	12
Rampore Haut - - - - -	12	14
Nulhattee - - - - -	12	14

It will be observed that in the market of Rampore Haut the prices have fallen by one seer in comparison with those mentioned in the last narrative. In the Jungipur sub-division the price of new "hoimonto" rice is given at 12 or 12¼ seers per rupee.

3. *Any information obtained regarding the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots, and others.*

The stock of food-grains in the hands of zemindars, mahajuns, and others in the Sudder sub-division is said to be much the same as before. No precise estimate has been attempted. The

Laibag Sub-Divisional Officer still adheres to his former opinion. No further information has been obtained on this point, as no special enquiries have been made. The Sub-Divisional Offices of Rampore Haut, as stated in the last narrative, states that there is little in store in the hands of zemindars and mahajuns.

4.—*Rainfall, if any.*

There was a slight fall of rain on the 24th ultimo in the following station jurisdictions:—Jellinghee, Nowada, and Bhurtpore; and on the 1st instant in Gowas, Dewanserai, and Jellinghee. Hail fell in the latter place on the same date, which is said to have partially injured the crops in the ground. It appears from a report since made by the Sub-Divisional Officer of Jungipur that ·88 inch of rain fell in the afternoon of the 3rd instant (accompanied by gale and hailstones). The rain will greatly benefit the cultivation of the early rice, do material good to the boro dhan now on ground, and prepare lands for the ploughing of the late or hoimonto rice.

5.—*State of the Crops.*

The prospects of the early rice, indigo, and mulberry crops are good. The Sub-Divisional Officer of Lalbag reports that the rubbee crops on the "dearah" lands are all being reaped, and will give a very fair outturn. Mulberry, especially, is doing well, and this is a great thing for the people who depend to a great extent in some parts upon silk. Unfortunately a somewhat considerable proportion of the worms have died, and the mulberry leaves fetch a small price and will be partly used for feeding cattle.

In the "rarh" country most of the lands have been turned up and are being manured. In the "dearah" lands the ryots are busy in turning up the ground for the "aus" sowings. The Sub-Divisional Officer of Rampore Haut states that the outturn of boro paddy in his sub-division will probably be fourteen-sixteenth of an average crop. He does not speak well of the state of the rubbee crops which have been somewhat injured by the late hailstones. In the Jungipur sub-division the spring crops are reported to be good. Wheat and barley are nearly harvested. The yield will be a good one, but notwithstanding this the price of rice shows a tendency to rise.

6.—*Condition of the people.*

There is hardly any change in the condition of the people from what was stated in the last narrative, but in some parts the people are reported to be in great want and to require assistance from the relief sub-committees. The Sub-Divisional Officer of Lalbag reports that in his present tour he had only come across some three or four cases of real distress, the persons in distress all belonging to the beggar class, and in these cases he had given money relief. He had gone through a good many villages in thana Bhadureehaut during the last few days and in the villages neighbouring Sagurdighee, and he had seen some persons to whom it would be soon necessary to give gratuitous relief. For this purpose a relief house will soon be started at Sagurdighee, and gratuitous relief in the shape of uncooked food will be given. There are a good many laborers about here who are in want of work. The Executive Engineer has been requested to have the repairs of the part of the Nulhattee and Azimgunge road in the neighbourhood of these villages started at once. The Sub-Divisional Officer had gone through several villages in these parts and had demarcated the boundaries of tanks to be taken up as relief works under the sub-divisional relief committee. He states that the great difficulty as regards the excavation of these tanks as relief works is the want of competent persons to supervise the work. He does not think that it would be safe to make over the money for these tanks to the headmen of the several villages, and that he has no other agency at his command. He could start work almost immediately on these tanks had he any one who could supervise the work, and on whom he could rely to see that the work was fairly done, and that the laborers were properly and promptly paid. I have, in a report to the Commissioner, made some little time ago, recommended the appointment of a Superintendent or Assistant for relief purposes by whom works such as tank excavations could be supervised. It is not advisable in many cases to entrust such works to the headmen of villages at any rate without tolerably regular supervision. In some of the villages near Sagurdighee the Sub-Divisional Officer remarked that some of the dried-up tanks had been dug over, and on his asking the reason was informed that the poorest people had dug up the ground in search of "mattans" (earth root honey-combed inside, which when boiled is eaten with salt). This root is probably only used as an addition to the usual food, but still from this it would seem that the time for gratuitous relief in these parts has come, otherwise, he says, he has seen no signs of distress. I believe that these roots are consumed to a certain extent every year whether there be good harvest or bad. The Sub-Divisional Officer of Rampore Haut states that the people that appear to be in want of food are principally, as reported in the last narrative, the old, the infirm, and the beggars, and that the poorer class of people are in difficult circumstances. This remark may be applied to the district generally. The laboring class have been extensively employed in carrying the mud from dried-up tanks and putting it in their fields by way of manure. Works have been started for this class of the people, and other works will soon be started, so that I believe that no anxiety need be felt for them. These people, it appears, have not flocked in great numbers to the works which have been going on. Near Nulhattee the people were employed and paid at first at a daily rate, and when the work was offered them by contract they went away. This shews very plainly that their circumstances are not very bad. As regards the Jungipore sub-division I think I may give a general view of the country in the following words:—It may be said that the fortunate parts of this sub-division are the "dearah" or alluvial lands near the Ganges, which yielded a good "bhadoi" harvest last year, and have yielded very good winter and spring crops in the present, and the worst parts are west and south Mirzapore, of which "hoimonto" rice may be said to be the sole crop, though there is a little boro dhan on the margins of two extensive tanks. Shumshergunge is so well off that for some time at least it may be left to take care of itself. There is an active demand for labor at Dhulian, and the rate of wages is one rupee for a batch of five laborers, a rate higher than any obtaining elsewhere in this sub-division for unskilled manual labor. Mirzapore is the thana which will continue for some months to come to be the object of most anxious solicitude. Two relief sub-committees have of late been formed in this thana, and 100 maunds of rice have been despatched from Jungipore to the sub-committee at Mirzapore and stored in the thana godown. The Juroor and Nowada road, on which work is going on, passes through west Mirzapore, the most distressed part of the sub-division. From the above it will appear that the people of the Jungipore sub-division are well off in Shumshergunge and Dewanserai, and badly off in southern and western parts of Mirzapore. In the north-west portion of thana Sooty, the mals and krores who have no lands of their own are suffering.

7.—*Actual facts as to any known cases of misery and starvation.*

No cases of death from actual starvation have come to light. There was a rumour about a woman of a certain village in the Jungipur sub-division having been starved. The Sub-Divisional Officer enquired into the matter on the spot and found it to be utterly unfounded. Many such rumours, I believe, when tested by personal inquiry, will be found to be entirely groundless. Many cases of distress and misery have been relieved by the relief commitees, and, though it is impossible, with the agency at my command, to search out every case of great misery among the most helpless, there are, I think, sufficient means for them to make their distress known to the officers of Government in the various parts of the district, and to the various relief committees.

8.—*Grain-thefts of robberies.*

Eight cases of petty thefts of grain were reported during the fortnight in the Sudder sub-division, two of which were of such a petty nature that enquiry was refused. There have been four grain-thefts in the Rampore Haut sub-division, and no cases have been reported from the Lalbag and Jungipur sub-divisions. A crime statement is annexed.

9.—*Condition of any special tracts.*

Small-pox and cholera are both very prevalent in parts of the head-quarters sub-division. The former is most prevalent at Salar and Kandi in the Bhurtpore thana. Cholera prevails in the Sujagunge and Borooah stations. In the Lalbag sub-division small-pox is still prevalent, though decreasing in the city of Moorshedabad. There have been some cases of cholera in Baloochur. In the Rampore Haut sub-division small-pox is still raging in the villages of Doonigram and Autkoola, and the villagers are reluctant to be vaccinated. The vaccinator sent here for vaccination has been sent back, as the season for vaccinating is over. Cholera has made its appearance in the village of Mulsa, and indent has been made for cholera medicines. The public health in the Jungipur sub-division is reported to be generally good, except that there are some sporadic cases of small-pox here and there.

B.—RELIEF WORKS.

The average number of persons employed on the several relief works is 3,464. The laborers are generally in good condition, and can obtain food easily except in the case of the Juroor and Nowada road, at which food is obtainable in small quantity. The rate of task-work varies from 3 annas 6 pie to 2 annas per 100 cubic feet throughout the district, and cash payments are made at the rate of 2 annas per diem. The men generally bring their own tools, but in a few cases they are supplied with them. A statement shewing the expenditure on relief works is submitted. Several relief works have been started under the City Moorshedabad Municipality; the number of laborers daily employed has been 85, and the total cost during the fortnight has been Rs. 126. There has been a falling off in the number of the laborers, owing to some of them having left to reap the rubbee harvest. The condition of the laborers are reported to be good. They are paid at the rate of Rs. 2 per 1,000 cubic feet of earthwork. Tools when required are supplied by the Municipality.

Some difficulty has been experienced by the Sub-Divisional Officer of Rampore Haut on one road for want of picks. The Executive Engineer has been requested to send 30 of these to him.

C.—TRANSPORT OF FOOD.

It appears that importation is still going on *viâ* Allatuli; 9,910 maunds of food-grains have been exported from the Rampore Haut sub-division, and 921 maunds have been imported into the sub-division by railway during the fortnight ending 21st March 1874.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

The rice received by Mr. Toynbee for the Jungipur sub-division was found by actual measurement to be 491 maunds 39 seers 9 chittacks; of this 100 maunds have been despatched to the relief sub-committee at Mirzapore, and stored in the thana godown. As the rice has been paid for by the relief committee, I have some doubts whether it should now be considered as "Government grain at relief works." In the Rampore Haut sub-division seven places of storage for grain have been selected, but it has been resolved to store grain at present only at Khurgram, Bhuddevpore, and Jhillee. A golah will be erected at Khurgram thana for the purpose.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

Nineteen applications under the Land Improvement Act were received in the head-quarters sub-division during the fortnight under report, and a sum of Rs. 2,140 has been disbursed on this account. The Rampore Haut Sub-Divisional Officer reports that 50 similar applications have been received by him during the fortnight. Additional funds have been supplied to him for the purpose of making advances. A sum of Rs. 100 has been advanced by the Sub-Divisional Officer of Jungipur during the fortnight for the excavation of a tank.

Charitable Relief.

In compliance with the orders conveyed in the Government letter No. 1251—S.R., dated the 5th ultimo, the following statement is submitted:

1	2	3	4	5	6			
Number of Committees and Sub-committees as yet appointed.	Number of Special Relief Sub-divisions opened and officered.	Number of Regular Relief Circles opened and manned by Special Officers.	Number of Relief Circles opened and managed by Planters and Zemindars and other Residents.	Number of Work-houses or Centres for the Distribution of Food and Gratuitous Relief.	Number of Men, Women, and Children (with Total) in Receipt of Gratuitous Relief in any shape, through the Charitable Relief Organization *daily*; this should include people employed or relieved by the Relief Committees or Relief Officers under any of the Heads of the "Instructions."			
					Men.	Women.	Children.	Total.
23	—	—	18	2	4,348	715	244	5,307*
					Daily Average.			
					311	51	17	379

* Out of this number, 305 persons have been relieved gratuitously, and the rest by employment in road-repairing, jungle-cutting and tank-digging. Reports from the relief sub-committees of Saktipore, Bhurtpore, and where relief works have been started, have not yet been received. Of the number given above who have been gratuitously relieved, a considerable proportion consists of the inhabitants of a village in the Boroosh thana who were suddenly reduced to destitution by the destruction of their houses by fire.

Column 1.—These committees consist of the district relief committee, its executive sub-commitee at head-quarters, 12 sub-committees in the Sudder sub-division, 3 sub-divisional relief committees, and 4 sub-committees under the Rampore Haut sub-divisional relief committee, and 2 sub-committees in the Jungipur sub-division.

The committees entered in column 4 are the 12 sub-committees in the Sudder sub-division, 4 in the Rampore Haut sub-division, and 2 in the Jungipur sub-division. During the fortnight under report a sum of Rs. 150 has been sent to the Secretary of the Kattamaree sub-committee for the repair of a road in order to give employment to able-bodied men seeking relief, and another sum of Rs. 150 has also been sent to him for the purpose of excavating a tank at Lakrajpara in thana Gowas. A sum of Rs. 180 has also been sent to the Hurhurparah relief sub-committee for the repair and construction of certain roads. Rs. 100 were sent out to the relief sub-committee at Bhurtpore for construction of a bund in a village named Syed Koolut, and a sum of Rs. 276-9-0 was sent to the Secretary of the Hurhurparah relief sub-committee for the purchase of paddy. The Gokum relief committee have been supplied with 10 maunds of jute for relief purposes, and 200 maunds of rice have been despatched from the Berhampore Co-operative store to Bhurtpore for sale to poor people on advantageous terms, the price of rice in the village being somewhat high as compared with other markets. A portion of this rice will also be available for gratuitous relief to persons in distress from whom no labor can be exacted. The sub-committee has started the system of relief by grants of cotton and jute for the manufacture of thread and cordage, and some manufactured material has been received. There was very little desire on the part of the poor, at first, to avail themselves of this means of relief, as owing to the decline of the thread manufacture, caused by the introduction of English thread, the profits yielded by one day's work were quite inadequate for one day's subsistence. More advantageous terms have now been granted as remuneration for work done, and there will, in all probability, be a considerable increase in the number of persons who will accept relief of this kind. The manufacture of cordage being far more remunerative than that of thread, no difficulty is experienced in inducing persons really in distress to take grants of jute on the condition of their receiving the value of their labor as ascertained by the difference in the prices of raw and the manufactured material.

The Gokum sub-committee having reported the great difficulty felt by the poor in the village and its neighbourhood in procuring rice, has been authorised to sell rice to such people from the stock already stored there. Both in this case and that of Bhurtpore, necessary instructions to secure the correct working of this measure and the submission of accounts have been issued.

The Sub-Divisional Officer of Lalbag reports that gratuitous relief is about to be organized in thana Bhadreehaut, and possibly in thana Bhugwangola, though he does not think there is any pressing need for it in the latter thana. There are no persons receiving regular gratuitous relief in his sub-division. He had given the sum of Rs. 2 only to two distressed-looking beggars, Re. 1 each, during the last fortnight. Charitable relief is given in Jungipur on every Thursday and Sunday; 129 persons were relieved by wages for jute-spinning; 39 received doles of pice; and between a hundred and two hundred persons, chiefly professional beggars, who cannot procure alms enough for subsistence, received doles of rice.

It should be remarked here that the average number of persons relieved as given in the last narrative was by no means complete; several returns were received too late to be incorporated in the narrative, and information as much as was available at the time of the submission of the narrative was given. The sub-committees have been again reminded on the subject of the punctual submission of these returns.

W. Wavell,
Officiating Magistrate and Collector of Moorshedabad.

Berhampore,
The 7th April 1874.

No. 622—S.R., dated Dinagepore, the 6th April 1874.

From E. E. Lowis, Esq., Officiating Magistrate of Dinagepore, to the Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honor to submit my narrative for the fortnight ending 6th April.

A.—State of the Country.

There has been no rain during the past fortnight, and the want of it is beginning to be felt, as until some does come the bhadoi sowings cannot be completed. The rain that fell so opportunely during February was taken advantage of to break up the land for the early rice; the sowings however were not completed, and a considerable amount of land still remains unsown. The earth in fact had become so dry, that the rain we had did not suffice in all places to afford moisture enough for sowing, though it moistened the ground sufficiently to enable ploughing operations to be carried on. The above remarks apply only to pali or light soil, on which bhadoi is generally grown. This crop it is true is also cultivated on khiar or stiff soil, but there has not yet been rain enough to enable the cultivators to plough such lands, much less to sow them on the khiar lands; however, if the cultivators fail to get any bhadoi, they will, if the weather be favorable, be able to fall back on hemantee or winter rice. The time for bhadoi sowing has not yet passed however, so that though rain now would be welcome, no present anxiety is experienced at its absence. The bora rice promises well, though in some places the water necessary for its preservation, it being a crop dependent entirely on irrigation, is beginning to fall short. To the north of the district a very large area has been devoted to the cultivation of kaon, which is, I believe, a species of millet. This crop is generally sown in February and ripens in June, but this season it has been put in without much regard to proper seasons, and plants are to be found in Thackurgaon thana in every stage of progression, some just coming up, while other fields are beginning to ripen. As the bhadoi sowings have not yet been completed, it is not easy to determine with certainty the question of sufficiency of seed grain, to which the attention of all circle officers has now for some time been directed. The impression, however, is, as I stated in my last report, that seed grain both for bhadoi and hemantee will be forthcoming though at high rates. Bhadoi seed grain, at one place I visited, was selling a week ago at 9 seers per rupee, a rather higher price than was fetched for clean rice in the same locality. The inquiries made by the circle officers show that the people are themselves fully alive to the difficulty, and that dealers are purchasing and storing the produce of last harvest; while those who have stocks are holding back, in the hope that the price of seed-grain will eventually be high. I am more and more convinced that there is a sufficiency of seed-grain in the country, a stock which the sale of Government rice will tend to keep up. But admitting that there will be a sufficiency, the question has been raised by more than one relief officer, how far will the poorer cultivators be able to provide themselves out of the stock in the market? And the result of their inquiries seems to show that some of the laborers on the relief works will be unable to command means enough to enable them to buy seed-grain. Some of our coolies have come on the works before exhausting all their resources, and have something at home to fall back upon to help them in this difficulty; others, again, are able, by laboring diligently at task work, and by living economically, to save something, while others will obtain help from their zemindars or rich neighbours. There remains, however, a certain proportion, so it is reported, who have no means to fall back upon, who are unable to earn more than a bare subsistence, and whose zemindars will not help them, and as regards this class it becomes a question how far and in what way assistance should be afforded. It is most obviously the duty of the zemindar to help men of this class, and it is a duty cheerfully undertaken by all liberal and intelligent landlords; there are, however, it is said, landlords who are neither liberal nor intelligent, and such should be compelled to perform the duty. There is, I believe, a feeling among the people that Government, which has done so much, will step in and undertake this burden too; but I do not at all consider that the feeling should be encouraged. Government have agreed to advance money to zemindars on most liberal terms; those who expend money in helping their ryots have been promised indulgence as regards payment of Government revenue; arrangements have also been made whereby the ryots working on our roads can obtain subsistence while absent for purposes of cultivation. Government have done all that can be done to ensure that the next harvest shall not be a deficient one, and the further task of providing seed-grain need not be undertaken by them, but should be made incumbent on the zemindars. I propose directing my circle officers to inquire on whose estates the laborers who say they cannot afford to get seed-grain reside; they will then inform the zemindars in question that certain of their ryots are in want of seed grain, remind them of the offer of Government to advance money and grant indulgences to those who assist their tenantry, and warn them that if they decline to undertake so obvious a duty, that Government will be moved to make the advance, holding the zemindar personally responsible for the debt. The responsibility will thus be cast on the right shoulders, and a safeguard afforded against any unnecessary advances being given, for we may be quite sure that any zemindar thus called on to help a ryot, who has means at his disposal, will take very good care to let the circle officer know that advances are not needed. I do not myself think that landlords will be so forgetful of their own interests as not to take care that their ryots have the means to raise the next crop. If however it is found that such is indeed the case, some such measure as I have suggested will have to be adopted. I would deprecate any direct dealings between the Government and the ryots in this matter. Government have not the same facilities for testing the *bonâ fides* of an application, or for recovering the advance, as are possessed by the zemindars, and if the responsibility must be incurred, it should be incurred by those best fitted to sustain it. The prices ruling at the different hâts, and the scarcity of the supply in many places, still point to exhaustion in the stocks of food-grain. Rice is now sold in Thakurgaon, the northern thana, at Rs. 4 a maund, and at few places can it be obtained at a cheaper rate, while sometimes it goes as high as 8 seers per rupee. In Habra and Chintamon, where there was some rice, and which are places that in ordinary years export largely, prices are rather easier, and rice is being taken from thence to other parts of this district, as well as to Rungpore and Bogra. As I noticed in my last report, prices rose very suddenly at Datiram, and distress began to be felt there and at Patintala; the rice however was at hand, ready to supply the market, and a European was at once despatched to take charge of the latter circle. What distress exists is met as it arises, and the panic has been allayed. Within the last week the supply of rice in the Gungarampore division fell short in the same sudden and unexpected manner; there was however an officer at hand, sale of rice in this circle had been sanctioned, and the arrangements for selling it in train; no difficulty was therefore experienced. The circle officer reports, however, that but for the timely arrangements made on receipt of orders sanctioning sale of Government rice, there would have been much distress. In Bhadooria circle there has been no sudden falling off of supplies, but though gradual, the falling off has been steady. The sudden failures of supply which have occurred at Patiram and Gungarampore show how thin a wall often divides scarcity from famine, for until the market day there seems to have been no suspicion at Gungarampore that the supply would fall far short of the demand. Prices at the station itself are touching Rs. 4 per maund, and the people are clamorous to have the Government golahs thrown open. I am waiting, however, for prices to rise above the present rates, or until there is some indication that the supply is not ample should occasion a rise, I am quite prepared to sell. As I write, a storm has passed over the station attended with but little rain; the heavy clouds, however, betoken rain to the north and north-west.

B.—Relief Works.

The number of persons employed on the relief works is daily on the increase; the only officer whose return shows any decrease is Mr. Scanlan, but that is accounted for by the fact of his having introduced task work throughout all the roads under his charge. The greater number of his coolies at first left, but finding that he remained firm, and that by working diligently an able-bodied man can earn more than ten pice a day, they are gradually coming back, and by this time I have no doubt he has as many as ever. It must not be supposed that Mr. Scanlan is applying a severe and rigid labor test. All women and children, as well as infirm and old men, are admitted at daily wages; but the able-bodied are obliged to do task work, and are paid according to the amount of earth excavated. Women are employed on all the works; they are all of the lower class of agriculturists, but are not generally accustomed to work in the fields. They seem to take very kindly to the work, however, now that they have overcome their first scruples. As I have already pointed out, many of our relief laborers have joined the works before being reduced to absolute want, some of them having small stores of seed grain in their houses; and as soon as the weather is favorable for agricultural operations, these men will leave the works for a time. I may add that some of them employ the early morning in ploughing up their lands before coming to work on the roads. In the month of June there will, I fear, be some difficulty in providing work for laborers, for road work will be finished and tanks cannot be dug after the rains have begun. There will, however, be a demand then for agricultural labor which will absorb a good many. The weekly reports called for from circle officers render it almost unnecessary for me to notice the number of laborers employed; but as the return has perhaps not been correctly given this week, I subjoin a list compiled from the latest information at my disposal; the numbers are even larger than those mentioned, for the coolies daily increase. In the Kaliagunge, Tambolee, and Bindol circles there are 9,698 persons at work. Mr. Jones finds employment for 27,472; these numbers probably include Chooraman. Mr. Scanlan has under him 8,785; Baboo Hari Mohan Chane, 11,427; Mr. Finucane at Datiram has about doubled his number, and now employs 7,099. At Patnitolla there are 3,700 under Baboo Poorno Chunder Goopto, at Bhadooria 3,360, and in the Sudder circle, 693; while the Public Works Department find employment for 2,572 more.

C.—Transport.

Our transport arrangements continue to work smoothly, and rice is being brought in as rapidly as could be expected; our allotment for Dinagepore is almost all in now. Mr. Westmacott at Maldah therefore has been directed to discontinue his service here, and to fill in the Tamboolee golahs, which he ought to do, with the large number of carts at his disposal, in the course of a month or so. Mr. Scanlan at Rani Sonkoil has got in already very nearly one lakh out of the 1,40,000 maunds allotted for his division; the rest of his rice Mr. Scanlan must get through Raigunge, for the Purneah authorities, as the present arrangements stand, only supply us with 1,60,000 maunds in all, of which 39,000 maunds have gone to Bindoil and Hemtabad. I would suggest the advisability of at least the balance of Mr. Scanlan's allotment, say another 40,000 maunds, being put down for us at Dingraghat; it is a mere step across from that place to Hurreepore, and other golahs in the Rani Sonkoil division, and if we have to bring from old Maldah or Hyatpore, it is a much more tedious and expensive journey. For Patnitolla and Patiram, I learn from Lieutenant Hawkes that he can put down 2,000 maunds a day at Nowgong if I can carry it, and more if I like to take more. There ought to be no difficulty in taking 2,000 maunds a day by cart from Nowgong to Patnitola, and at that rate another month or so should see Patnitolla and Patiram full also. There is now no difficulty about carts; the men find they are liberally paid and well treated, and work therefore willingly. There was some slight hitch about getting carts to go across the water, and serve on Mr. Reily's line from Hyatpore to Chooramon, but the men have been persuaded to go, and the difficulty got over Pack-bullocks we do not employ at all; some were taken on to carry rice from Maldah to Kalikamora, but as a complaint was made that private trade was interfered with and as plenty of carts were procurable, the bullocks were given up; nor do I think there will be any necessity to fall back upon their services again.

D.—STORAGE OF GRAIN.

Rice is being distributed throughout the country at the different golahs, for it is clear the time is not far distant when we shall have to supply the market to a considerable extent. Forms for stock accounts are beginning to come in; they have not all arrived, but from what I have seen, they promise to be somewhat elaborate, rather too much so for ordinary golahdars on Rs. 15 or 20 a month. For these accounts to be of any value, we must assume that the quantity stored has been, in the first instance, accurately calculated; but this is just what we do not know, and what it would be now almost hopeless to attempt to ascertain. As I pointed out in previous reports, we have never been provided with proper weights and scales, so that the rice could not be weighed at the golahs even if we have wished to do so; but even if the weights and scales have been forthcoming, they could not have been made use of, for at the rate rice was poured into the district, it was as much as we could do to stow away our grain without stopping to weigh. A grain officer has now been nominated, but it will be quite impossible for him to go round, as the printed instructions seem to contemplate, and weigh the grain in golah. The instructions again seem to contemplate the ascertainment of the wastage during the journey to Calcutta, from thence to the points of receipt into the district, and from such points to final destination. As a fact, the bags have not I believe been weighed anywhere on the journey, and the deficit to be found now will be the wastage during the entire journey. I have not however seen all the accounts, so I am perhaps premature in judging of their adaptability.

E.—ADVANCES.

There have been no further applications for advances.

F.—CHARITABLE RELIEF.

The district relief officer has been entrusted with the duty of filling in this head of the narrative, and his report is appended. It seems to me advisable, however, first to mention the general principles on which our scheme for charitable relief is founded. The first idea was to have a central executive committee in the station, who should direct relief operations through subcommittees scattered about throughout the district. This was before I was aware of the extensive agency that was to be placed at my disposal. It was soon apparent that the committee system would not work, there was a feeling of divided responsibility; the action of the magistrate was also liable to be hampered, since a measure that seemed advisable to him was liable to be vetoed. I therefore, acting under the directions of Sir Richard Temple, did away with the agency of committees as a directing power altogether, and impressed on all circle officers that as I am responsible for my district, so each officer is responsible for his own circle, such responsibility being shared by none; that the aid of the respectable local authorities is to be sought, and their counsel and advice treated with respect, but that each officer is to use his own discretion in acting on it, though, in the event of an officer acting in direct opposition to local experience, he is bound to report the action taken by him. Each officer, with the aid of two or more inspectors, manages his own circle with the assistance and through the co-operation of the respectable inhabitants, and reports weekly to the District Relief Officer all that he is doing. The District Relief Officer has general control over all the circles, subject to the direction of the Magistrate and Collector, and is independent, except in so far that he is to be guided by the spirit of the instructions issued by me to all circle officers. The District Relief Officer is in fact in charge of a particular department, much in the same way as the superintendent of police is in charge of his, subject to the general control of the head of the district. The report of the District Relief Officer is subjoined.

"Arrangements for giving charitable relief within this district have been in force for about a month, but it has only been within the last fortnight that the necessity for the systematic disbursements of charity has arisen. The figures at my disposal for the present report show the following result for the first half of the fortnight under report:—

PLACE.	Week ending 7th March.	Week ending 14th March.	Week ending 21st March.
Bhadooria	No return	—	51
Bindoil	Ditto	—	80
Dinagepore	Ditto	—	2
Kalinguuge	Ditto	1	—
Patiram	—	—	208
Ranisankoil	No return	—	No return.
Nekmurd	Ditto	—	20
Now bazar	Ditto	—	44
Tamboolee	Ditto	No return	4
	Ditto	Ditto	65
	Ditto	3	18
Total	—	4	492

The "places," it will be observed, do not correspond with the 14 circles into which the district is now divided, because these circles were constituted subsequently to the date of the returns tabulated above. The returns given below for the second week of the fortnight corrrespond accurately with the new circles.

Charitable relief is granted to all persons who have no money wherewith to buy food, and who cannot, by reason of age, caste, or other adequate excuse, earn a livelihood for themselves. Light work, as spinning and gunny cloth work, is provided for the better ranks of females, and for males who cannot do hard work; inquiries are duly made into the circumstances of persons who apply for charitable relief, but relief, when obviously required, is never withheld during the progress of inquiries. The agency of mandals and other heads of villages is employed both in making inquiries and in distributing rice. The rice is bought from Government stores at 12 seers a rupee for fully husked rice, and at 14 seers when the grain has not been completely cleaned before being packed in the bags. In either case, the daily dole amounts to half a seer of clean rice for adults, and a quarter seer for children under 12. The question has been raised by two officers whether this quantity is sufficient, and no doubt it is a minimum allowance. But I think we should not at present increase it; our work is still before us; we know not with accuracy how many mouths we may yet have to feed, and should husband our resources accordingly. It has yet to be proved, moreover, that half a seer of rice, supplemented as it is with the sum of one pice per adult for the purchase of salt and other seasoning ingredients, is insufficient to keep a man in a fair condition. One case has been reported in which a woman preferred to work and get eight pice a day to accepting her half seer of rice and one pice; but if the woman's labour was worth eight pice, it is clear that the arrangements by which one charitable relief elicits working power instead of encouraging idleness is altogether good, and, as far as my present information enables me to judge, half a seer is just that quantity which will suffice for the support of weak and infirm persons, and at the same time not afford any inducement to those who are able to work to abstain from exerting themselves for their better support. The following table gives the number of persons receiving charitable relief on the dates shown in column 2. No comparison is made of the details of the circles this week with the details of the last week shown above, because this week the district is divided into different circles from those in which it was divided last week.

	CIRCLE.	Date of Report.	Number receiving Charitable Relief.	Total of this Report.
1	Bhaduria	—	96	
2	Bindoil	31st March	146	
3	Chooramon	No return	—	
4	Dinagepore	2nd April	193	
5	Doorgapore	No return	—	
6	Gungarampore	31st March	112	
7	Kaliagunge	2nd April	100	
8	Luskerhat	1st April	86	
9	Porsha	31st March	11	
10	Patnitolla	28th March	219	
11	Patiram	31st March	697	
12	Ranisonkhoil	31st March	123	
13	Lamboolee	31st March	8	
14	Bochagunge	No officer yet appointed.	—	
	Total	—	—	1,791

This gives a daily consumption of, say, 850 seers, or a little over 21 maunds; which is a monthly consumption of 651 maunds; and if the people be fed up to the end of September (six months from date), 3,906 maunds will be consumed. The number of applicants for relief will increase as time passes.

Patiram, it will be observed, is far ahead of any other circle in the amount of charitable relief given; but I have perfect confidence in Mr. Finucane, and feel sure that he will not give relief where relief ought not to be given. The professional beggars, deprived of their sustenance as ordinarily obtained through the charity of their friends, contribute to the number of applicants for charitable relief. Every possible endeavour is made to induce them to work, and it seems a fair question whether strong-bodied men, who are by caste beggars, have any claim to support when they refuse to work. A few men have been discovered about Dinagepore who come for charitable relief in the morning to the Government place of distribution, and at a later hour resort to a distribution of food given to professional beggars by the Dinagepore agent of the Banker, Dhanpat Singh Roy, Bahadoor. Inquiries are under progress with the object of striking the names of these men off the list of paupers who receive charitable relief from Government.

Except in Patiram, it will be observed that the number receiving charitable relief is still small. The organisation by means of circle officers, aided by their assistants, and advised but not controlled by their sub-divisional (or circle) committees, is admirably adapted to the requirements of the work in hand, while local agency, chiefly in the form of sub-committees for small groups of villages, renders important services in distributing rice almost at the very door of each recipient of charity. Cases may occur in which extreme apathy or caste prejudices, honoured even in extremes, may induce people to be still and die rather than let their cases be known about; but excepting these, not likely under any circumstances to be numerous, it is not probable that any deaths from starvation will occur within this district.

The collection of private subscriptions is now nearly over. Several sums, promised when the relief schemes were first commenced, remain to be collected, and I trust will be paid by those who promised them. Of new subscriptions only 25 have been collected during the past week, making the total local subscriptions actually paid Rs. 7,170.

The committee has received also 20,000 as a subsidy from the Central Relief Committee, and, as I write, a cheque has been brought to me for another sum of the same amount from the same committee.

No. 90, dated Bauleah, the 7th April 1874.

From W. H. D'Oyley, Esq., Collector of Rajshahye, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honour to submit my narrative for the fortnight ending 4th instant, and regret that it has been unavoidably delayed till to-day.

A.—STATE OF THE COUNTRY.

In the Sudder sub-division there have been large importations, and rice and paddy is getting cheaper. In Bauleah and Charghat common rice is selling at from 13 to 13½ seers (80 tolahs' weight) per rupee. In parts of the Nattore sub-division, also, prices have improved. At the same time, in some places the supply in the markets has not been sufficient and the prices have been very high, notably at Sahebgunge on the Attrai and Sooktigatchee. This the Deputy Collector of Nattore attributes to the strain on the local markets caused by the outsiders who have come to work on the railway drawing their supplies from them. I have written to Major Lindsay on the subject. I have lately received reports of short supplies at Bhundaikhara, but last Wednesday the price of rice was by no means high there, 12 seers (80 tolahs' weight) being procurable per rupee: while at Godagaree, a few days ago, I ascertained that rice was cheaper at Gobindpore Haut (the market which supplies a great portion of the Godagaree thana) than it had been a short time back. While the price has in many places improved, I regret to have to report that the silk bund, which was looked forward to with so much hope, has proved a failure, and this no doubt will cause a great deal of distress. I am, however, hopeful that the work provided in several parts where the pressure is most felt will prove sufficient for the able-bodied, while those unable to work will get relief at poor-houses.

2. There have been no cases of starvation; the condition of the labourers on the roads is still good. Petty thefts have been more numerous than they were in the corresponding months in 1872 and 1873, and I think there can be no doubt that this increase is owing to the high price of food. The number of cases of house-breaking is smaller than that for the corresponding month of the last year, and the number of cases of theft and housebreaking during March last is considerably smaller than the number reported during February.

B.—RELIEF WORKS.

I have only been able to send the return for the first week of the fortnight, as that for the last week reached me only last night, and was found to be incorrect, I hope to be able to forward it in a few days. It will be observed that the total number of labourers during the first week was still large. I have advanced Rs. 1,000 to the manager of the Tahirpore estate to improve the road from Bauleah to Tahirpore, as relief was much required in these parts. Mr. Durand was also entrusted with the repairs of a portion of the road from Bagmara to Bundaikhara, and the remaining portion has been done by a sub-inspector of police.

C.—TRANSPORT OF GRAIN.

The means available for the transport of grain are ample, and far exceed what was expected. It is now quite clear that by giving fair rates any amount of carriage is available. It is doubtful whether public trade has been interfered with by the employment by Government of such an enormous quantity of carts and boats. I have heard complaints that a cart is not to be had for love or money, but at the same time importations continue.

D.—STORAGE OF GOVERNMENT GRAIN.

The annexed statements show the progress. There has been no falling off in the amounts forwarded through for other districts.

F.—ADVANCES TO PRIVATE PARTIES.

	Rs.
Advanced up to the date of last narrative	43,850
Advances in course of last fortnight under Land Improvement Act	1,600
Advances to ryots	1,025
Advances for purchase of grain	1,700
	48,175

F.—CHARITABLE RELIEF.

In the Bauleah sub-division there are at present three poor-houses, and the following statement shows the average number of persons fed daily at each:—

Bauleah	61	Pootea	23
Nowhatta	33		

These are chiefly poor women without the means of support, blind, and lame.

2. In the northern Bhurind sub-division there are at present four poor-houses, and the average number fed daily at each is as follows:—

Bagsole	22	Larupara	10⅔
Saljore	23	Bamneegram	13

In the south Bhurind division there are four poor-houses, but the sub-divisional officer has not been able to send the accounts as yet, as he had not received them from the several poor-house keepers when he submitted his report.

In the Nattore sub-division there is one poor-house, which was lately opened by Rai Baboo Grish Chandra Lahory, but which is now under the management of the sub-divisional committee. No accounts have been received from this institution.

I have directed the sub-divisional officer of the northern Bhurind to collect kunker at convenient places, paying women and children at the rate of one anna per cubic foot for it. There is a good deal of kunker in the Bagmara elaka, and there will be water communication in the rains, by which it can be brought to Bauleah.

The district relief committee have applied to the Central Relief Committee for a grant to relieve the poor sufferers whose houses and property were destroyed by the fires which occurred lately in the town of Bauleah. Of course, money will only be given to those who are fit objects for charitable relief, and of these there are a great many; and it is estimated that Rs. 3,000 will be required for this purpose. The amount of suffering caused by the fires can be imagined from the fact that upwards of 76,000 rupees' worth of property was destroyed. A sub-committee has been formed to inquire into the matter, and to discover who are really deserving of charitable relief.

No. 42—F, dated Maldah, the 8th April 1874.

From F. J. ALEXANDER, ESQ., Officiating Magistrate-Collector of Maldah, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

IN continuation of this office letter No. 929F. of the 24th ultimo, I have the honor to submit herewith the fortnightly narrative of scarcity and relief in the Maldah district for the fortnight ending 4th instant.

Fortnightly Narrative of Scarcity and Relief in the Maldah District for the Fortnight ending the 4th April 1874.

A.—STATE OF THE COUNTRY.

THE supply of rice and paddy in the local market is less abundant in a noticeable degree than hitherto, and is gradually decreasing in quantity each successive market-day at a great many of the local hauts and bazars.

The importations of rice and paddy through private sources from the eastern districts are also comparatively small, and arrive at irregular intervals. New wheat in considerable quantities has come into the local markets, but has not had much effect on the quotations of rice and paddy, the supplies of which (rice and paddy) so far as central and southern tracts has been barely equal to the demand, and that is all. In the north-west tracts considerable importations of food-grains from Sahebgunge, *viâ* Hyatpore, were reported during the early parts of the fortnight, but had fallen again during last week. The reason of the decrease, so Mr. Reily thinks, may be indirectly caused by the fact that the Dinagepore officials are selling rice at 13 seers for the rupee to the public, "but it is hard to estimate" he says "to what it is owing."

Prices have been unsteady and fluctuating with the deficiency in the rice supplies. During the early part of the fortnight there was a marked and sudden rise, 9 seers to 10 seers being the price then quoted for ordinary rice at most of the principal markets in the central and southern tracts, where supplies had hitherto been plentiful. At the close of the fortnight prices were rather more favorable again, 10½ to 11 seers of 80 tolahs per rupee being the quotation for ordinary rice at the sudder station, and to-day 11 to 12 seers is obtainable.

The following are the latest prices of paddy and ordinary rice for the fortnight at the under-mentioned principal markets in different parts of the district (wheat is selling at the sudder station at 15 seers of 80 tolahs per rupee):—

CENTRAL PART OF THE DISTRICT.

	Seers of 80 tolahs per rupee.
At Englishbazar sudder station—	
Ordinary rice	10½
At Bulbul Chandee—	
Paddy	15¼
Ordinary rice	11

SOUTH-EAST OF THE DISTRICT.

	Seers of 80 tolahs per rupee.
At Gazole—	
Paddy	20
Ordinary rice	11
At Bamongola—	
Paddy	20
Ordinary rice	1

NORTH-WEST OF THE DISTRICT.

At Chanchal, Tulseegunge, Shumsee, Abadpore—	
Ordinary rice	10

SOUTH-WEST OF THE DISTRICT.

At Sheebgunge—	
Ordinary rice	9

SOUTH-EAST OF THE DISTRICT.

At Kohunpoor—	
Paddy	15
Ordinary rice	10½

Note.—At Kohunpoor on the last market day, 1,000 maunds of paddy and 125 maunds of rice are reported as brought for sale, the gradual decrease in the supply will thus be noticed in comparison with last fortnight.

RAINFALL.

During the early part of the fortnight, strong westerly winds prevailed, succeeded by south and south-east winds, with excessive heat till Friday, 3rd April, when a heavy thunderstorm, accompanied by hail and rain, passed over the district from south-west to north-east. Since then the weather has been cooler, and at times cloudy, but without more rain. The rainfall of the 3rd is recorded at the sudder station (which was quite in the centre of the storm) at 0·88. The north-west of the district got little or no rain.*

STATE OF THE CROPS.

The wheat and barley harvest is almost completed, and these crops have turned out above the average. The cheena (millet) and the gram crops, now harvesting, are also turning out well.

Before the rain of the 3rd a good deal of the bora dhan crop was in a very critical condition ; the extensive area cultivated this year, and the difficulty of irrigating the drier portions of it, owing to the low state of the jheels, had made it very problematical whether a very considerable portion of the plant would not dry up, and every effort was being made, where such was the case, by cutting bunds, to save as much of the crop as possible. The rain of Friday last has, however, I am glad to be able to report, come in time to save much of what was drying up, and if we have another shower within the next fortnight the bora dhan will give a considerable outturn and help a good deal to supplement the food-supply at a most critical time. It will be ripening in another 20 to 25 days. I have visited in the centre of the district an extensive area of the crop, both before and after the rain, and am glad to be able to report so far well of it. Accounts of it from the south-west are also good, but in the north-west it is stated to be much in need of a shower of rain.

The sowings of the bhadoi dhan crop have been commenced, and a very much larger area than in ordinary years is reported to have been prepared for the reception of this crop. The want of proper seed has, however, been severely felt, the price of such seed having risen to Rs. 6 a maund.

The mango crop promises fairly well. In the "Parooa" jungles the bamboos (known as the beora bans) have this year flowered and produced grain in abundance, and many of the poorer classes have within the last few days been collecting this grain as an article of food.

CONDITION OF THE DISTRICT.

The health of the district continues generally good, but the poorer classes are feeling the high price of rice very much. About the towns and large villages especially, there are many women, some with families and some without, who in an ordinary year manage to support themselves by husking rice, but are now reduced to great poverty for want of their ordinary occupation. The plentiful wheat harvest and comparatively cheaper price of the same has, with the help of the previous "kalai" crop, helped to sustain the poor, but the fact that numbers of people have lately been collecting the bamboo rice in the Parooa jungles shows that the scarcity is beginning to tell heavlly on many, even in the richer tracts, where the necessity for very extended relief has hitherto not been thought necessary. Diastrous fires, too, during the week at the sudder station have caused additional trouble to many of the lower classes. The sudder relief committee are getting up a subscription for those who have really suffered from these fires. Hitherto, our charitable relief operations have in the central and southern tracts been confined to a few relief centres at the chief places, where the old and the sick and infirm have received gratuitous help; but the present condition of the district assures me that throughout the district our relief operations must now be extended, and village-to-village visitations be made even in those tracts which hitherto have not been considered distressed. No cases of starvation are reported from any part of the district, but instances of old and infirm people in real distress have come to light.

---

* N.B.—After writing so far last evening (April 7th) a heavy thunderstorm from the north-west came up, accompanied by heavy rain and hail. The rainfall recorded at the sudder station was 0·69, No reports received from out-stations.

The 8th April 1874. F. J. ALEXANDER.

I annex a comparative statement of cases of robbery and theft, &c., for the month of March, it does not call for special remark, there is no remarkable increase of crime, and no sort of disorganization of society, by people leaving their homes in numbers in search of relief; but that many families are on "short commons" is only too significantly indicated by the fact which I have mentioned, of many persons collecting bamboo rice in the Parooa jungle. The medical officer cannot say that it is unwholesome, or actually injurious to health, but if eaten for several days together he thinks it would produce sickness. It has all the appearance of a fine rice (which, indeed, I suppose it is), and it is a fact that it is being eaten by many, if not in place of ordinary rice, still as a supplement to other ordinary food. The natives say, with superstitious dread, "in a famine year the bamboo flowers and produces grain."

CONDITION OF ANY SPECIAL TRACT.

From the distressed tract (thana Khurbah and part of Goregoribah) no cases of starvation are reported, but Mr. Reily in his latest report writes:—"The numbers availing themselves of the distribution of food at the kitchen at Chanchal increase daily, the maximum being 500 in one day. The majority of these recipients are villagers of the neighbouring estates, and are persons who would not, unless driven by necessity, accept food in a cooked state without loss of caste privileges, and this may therefore be taken as a genuine instance of distress among the ryots of this tract."

B.—RELIEF WORKS.

During the fortnight, work has been going on in the north-west tracts under Mr. Reily on 12 roads and 8 tanks. Three of the roads have been completed. Government rice is sold to persons labouring on the relief works at 12 seers per rupee, but the details of the quantity sold have not been furnished. Mr. Reily says:—"I have not thought it necessary to sell Government "grain to the public up to the present moment, as, from diligent enquiries, I find that the supplies "of the private marts are quite equal to the demand. Government grain will be sold by me at "the sanctioned rates directly I see that there is a necessity for supplementing the private "supplies."

Work is also going on on the ordinary district roads and municipal roads, and on the other relief works noted below.

During the fortnight two new relief roads have been started, viz., one at Boolbool Chandee, in thana Maldah, under Mr. Livesay, district relief officer, and another near Gomastapore, under Lieutenant Burgess.

Shops, where Government grain is sold at 12 seers per rupee, have been opened at several places where the local supplies were failing, or the local rates very high. On the Dinagepore road, beyond Maldah city, I found a day or two since that the workmen (Beldars) were daily taking their supplies from a Government shop close by, and were fairly contented with what they got, and ignored "bamboo rice." Further on, however, in the Parooa jungles, I found that all the local villagers (Polis, Raj-bangsis, &c.) had deserted the road-work to go and pick up "bamboo rice." At Englishbazar the coolies object to the "Alooa-rice" at 12 seers, and the mudi has sold but little yet, nor is it likely he will do so as long as Poorbi-rice is obtainable (as it now again is at 10 to 12 seers).

The following quantities of Government grain have been sold at the under-mentioned places to workmen employed on relief works, but the information is incomplete, as the returns from some of the shops have not been received:—

	M.	S.	C.
At Boolbool Chandee - - - - - -	4	5	12
" Balio Nowabgunge - - - - - -	18	8	8

The total daily average of persons employed on all works for the fortnight is as follows:—

	Men.	Women.	Children.	Total.
On ordinary district roads - -	969	238	68	1,275
" municipal roads and tanks - -	72	12	3	87
" relief roads - - - -	906	64	75	1,045
" relief tanks - - - -	662	86	5	753
Total - -	2,609	403	151	3,160

Statement showing the total number of persons employed on road and relief works during the fortnight ending 4th April 1874.

C.—Transport of Food.

Private trade in paddy and rice is very dull, the small local craft that ply on the Mahanuddy, between Roharpore and the chief bazaars, are barely sufficient to keep up the necessary supplies, while the private trade in these articles with the eastern districts is very irregular and fluctuating. The fact is that every available boat on the Mahanuddy has been taken up in the Government transport work, and private trade must necessarily be slack.

The trade in new wheat, which is brought from the dearah to the bazaars and hauts on pack-bullocks, is fairly brisk.

The transport of Government grain goes on satisfactorily. Up to the end of last week, *i.e.*, April 4th, the grain return shows 4,43,404 maunds received into the district, of which 4,01,668 maunds had passed through the district, or was in transit for Dinagepore, and 26,741 maunds was stored in the district. By the Hyatpore route Mr. Reily had carried some 75,000 maunds up to the 2nd April, viâ Domroil, for the Dinagepore district, and his average despatches for last week have been over 2,000 maunds a day. He is expecting 600 carts from Dinagepore, and with this will be able to raise his despatches to 3,000 or 4,000 maunds a day, and in that case expects to complete by the end of the month the quantity of grain to be carried by that route.

Mr. Westmacott's despatches for the last week by the land route, from Old Maldah to Dinagepore, averaged 1,844 maunds per diem, and by the water route from Neemaserai to Raigunge and Chooramon (Dinagepore) 1,219 maunds per diem.

The Manickchak route is to be closed, and the remainder of the grain carried by the Godagaree and Hyatpore routes. The carts now employed on the Manickchak route, between that place and Neemaserai, should if possible be put on the Hyatpore route.

D.—Storage of Government Grain.

The grain return for the last week shows 26,741 maunds stored in the district, but there have been some additions and changes in the disposition of the grain, and I am not sure that these figures are quite correct. The returns of stock, which will be taken this week, will enable me to state precisely what quantity is in store at each golah.

The falling off of the local supplies, and the consequent rise in the prices has necessitated my distributing grain to localities where it was not expected it would be needed so soon, if at all, but where it is now repuired for the charitable relief committees and labourers on relief works.

Up to the close of the fortnight the arrangements as to storage of grain at main golahs and distribution to subsidiary ones were as follow :—

Main golah No. 1, at English Bazaar—	Maunds.
In stock previously - - - - -	3,396
Received during the fortnight - - - -	1,588
Total - - -	4,984

Distributed to subsidiary golahs during the fortnight, from English Bazaar main golah, as follows:—

	Maunds.
To Boolbool Chandee	200
„ Bholahat	50
„ Nowabgunge	200
„ Seebgunge	50
„ Kansat	50
„ Mohodeepore	50
„ Kaliachak	50
„ Gomastapore	250
Main golah, No. 2, at Old Maldah—	
In stock	6,870
Main golah, No. 3, at Gazole—	
In stock	5,394
Main golah No. 4, at Khurbah Dumroil—	
In stock	4,000
In stock at subsidiary golahs, viz. :—	
At Soroopgunge	1,500
At Tulseegunge	1,300
Main golah No. 5, at Futtehpore Hyatpore—	
In stock	1,475

The arrangements for storage-room for a large quantity of grain at Neemaserai and Old Maldah are being made by Mr. Westmacott.

E.—Advances to Private Parties, and their Results.

The advance of Rs. 50,000, applied for by Raj Nath Guho under clause B, paragraph 4 of Government Circular No. 80, dated 17th November 1873, and of which Rs. 10,000 had already been advanced under sanction of the Special Commissioner, has now been sanctioned in full by Government, and is available as soon as the applicant appears to receive the same. Rs. 100 has been ordered to be advanced to one Juggur Nath Sing, farmer of a Government estate, to assist his ryots (Government Circular No. 4020, dated 18th December 1873) (this money has since been paid). No other advances have been made, several have been sanctioned, and are available when the parties come forward to register their agreements.

F.—Charitable Relief.

The arrangements in regard to charitable relief are progressing; several new centres have been opened; circles allotted to different officers; and inspectors deputed to visit villages, and report and relieve all cases of distress that come to their notice.

Looking at the present condition of the people, and the pressure caused by the high prices, and want of means in money to the poorer classes, I have deemed it advisable to start arrangements whereby the inspection and relief, not only of the admittedly distressed portion of the district, but of each thana shall be more extended than hitherto.

The present arrangements are as follow:—

Special Relief Circles.

1.—*Chanchal Circle.*—Head-quarters, Chanchal, under Mr. Reily, with Lieutenant Kellie to assist him. One relief inspector at his post, one appointed, and ordered to join at once. One native doctor arrived, and sent to join his post.

2.—*Gazole Circle.*—Head-quarters, Gazole, under Baboo Okhoy Kumar Bose, Sub-Deputy Collector. One relief inspector at his post. One native doctor arrived, and ordered to join his post at once.

3.—*Malda Circle.*—Head-quarters, Bulbul Chandee, under Baboo Hem Chunder Kerr, Deputy Magistrate and Deputy Collector. One relief inspector at his post. One native doctor.

Sub-Divisional and Thana Circles.

Sudder Sub-Division.—Includes Englishbazar, Kaliachak, and Seebgunge, and part of Goregoribah, under Mr. J. J. Livesay, C.S., district relief officer. One relief inspector (Mr. Christopher Owens) deputed to Seebgunge, at his post.

2.—*Gomastapoor Thana Circle.*—Head-quarters Gomastapore, under Lieutenant Burgess. One relief inspector at his post.

Nawabgunge Thana Circle.—Head-quarters, Nawabgunge, under Baboo Isan Chunder Sein, Sub-Deputy Collector. One native doctor at his post.

Note.—All the officers placed in charge of the above circles are at their posts. The appointment of an additional road overseer has been intimated, but I have not heard of his arrival yet.

The results of charitable relief operations for the past fortnight, so far as reported, are as follows :—

1.—*Chanchal Relief Circle.*

Name of Centre.	Total of persons relieved.
Chanchal	4,217
Maltipore	522
Khurbah	392
Futtehpore	110
Soroopgunge	158
Toolsigunge	644
Debeegunge	102
Goregoribah	25
Arhidanga	4
Total	6,174

The expenditure was 72 maunds, 26 seers, and 2 chittacks of rice, and Rs. 1–15 cash.

2.—*Gazole Relief Circle.*

Name of Centre.	Number of persons relieved.
Gazole	36

The expenditure was 33 seers, 12 chittacks of rice, and 2 annas cash.

3.—*Maldah Relief Circle.*

Name of Centre.	Number of persons relieved.
Maldah	238
Boolbool Chandee	118
Total	356

The expenditure was 4 maunds, 3 seers of rice, and Rs. 3-10-6 cash.

4.—*Sudder Sub-Division.*

Name of Centre.	Number of persons relieved.
Englishbazar	760
Kaliachak	816
Kansat	248
Seebgunge	275
Total	2,099

The expenditure was 26 maunds, 7 seers, and 2 chittacks of rice, and Rs. 4-0-6 cash.

5 —*Gomastapore Sub-Division.*

Name of Centre.	Number of persons relieved.
Gomastapore	279
Shirshi	88
Total	367

The expenditure was 4 maunds, 20 seers, 8 chittacks, and Rs. 1-6-6 cash.

6.—*Nawabgunge Sub-Division.*

Name of Centre.	Number of persons relieved.
Nowabgunge	428
Anupnuggur	10
Lukhinarainpore	84
Shurullah	2
Jhelim	27
Total	551

The expenditure was 6 maunds, 8 seers, 2 chittacks of rice, and 1 anna 9 pie cash.]

The total number of persons relieved during the fortnight is thus 9,583, at an average per diem of 684 persons.

The total amount of local subscriptions up to date amounts to Rs. 7,383.

Add Central Committee's grant—

1st instalment	-	10,000
2nd ditto	-	10,000
Total	-	27,383

The following sums have been paid to the Secretaries to the under-mentioned committees through Baboo Isan Chunder Sein, Sub-Deputy Collector, as the Government contribution equivalent to the amount locally subscribed, viz. :—

	Rs.
For Kansat	813
Seebgunge	400
Nowabgunge	589
Gomastapore	280
Rohunpore	197
Total	2,279

No. 10, dated Rungpore, the 6th April 1874.

Memorandum by R. Porch, Esq., Joint Magistrate and Relief Officer, Rungpore, forwarded to the Secretary to the Government of Bengal.

Narrative of Scarcity and Relief in Rungpore District for the Fortnight ending 4th April 1874.

A.—State of the Country.

In the part of the district north-east, towards Kurigram, the importation of grain is active, and the supply at the hauts and bazars is reported to be as plentiful as it used to be in ordinary times. The weeding of the early rice has everywhere begun, and in some parts near Kurigram laborers are in consequence leaving the relief works. There is no change in this quarter in the condition of the people, which occasions little anxiety at present, and is as satisfactory as can be expected while prices are so high. The grain market continues the same, both as to supplies and prices, which are from Rs. 3-8 to Rs. 4 per maund of 80 tolahs weight.

At Borobarce in the same direction the relief officer observed, on road No. C 6, that women of low caste and prostitutes had come out to work, and it was assumed that the circumstances of the poorer people in that neighbourhood were getting bad. The zemindar of Bhitarband opened an annochatra at Dinhata, and the daily average of those who attended was 35, and has not increased. No cases of actual distress were discovered. The wheat and pulses recently harvested have temporarily improved the condition of the people in this neighbourhood. The importations there are by land from Cooch Behar, and by water from Gowalparah and Eastern Bengal. The supplies are fairly maintained by both routes. In Fulbara Chakla distress is general, but it has not assumed any severe form among the poorer classes. The Cooch Behar officers are doing a great deal towards relief by providing work on roads and in digging wells. Want of water here, as in many other parts of the district, is complained of.

2. Passing to Kishoregunge and Juldhaka, and that quarter on the north-west, the reports are, that the supplies of rice in the chief markets are well maintained, and that prices remain the same,—from Rs. 3-8 to Rs. 4 a maund of 80 tolahs weight. The standing crops are all doing well, and the prospect is good. The condition of the people in that part of the district is in no degree critical as yet, though, from the dearness of food and straitened means, many isolated cases of distress have come to notice, and have been relieved.

From Kallygunge, on the south-west, Mr. Blair reports :—

"The price of best rice at the river ghâts is Rs. 4-2 to day, April 3rd 1874, and the lowest-priced rice Rs. 3-14. The price has been rising steadily during the fortnight. The supply has been very deficient; the average daily amount at the Premgunge and Kalmoo ghâts has been about 500 maunds at the former, and 600 maunds at the latter—1,100 maunds. There is, I hear, a large supply of grain at Chellobaree, about one day's journey south of this, and rice is selling there at Rs. 3-5. The dalals of this ghât have sent word there, and have no doubt that a lot will come up. The rise here is stated to be owing to the deficiency of the supply and the great want of grain.

"There has been no rainfall during during the fortnight, and the early crops are in consequence suffering much. The 'cheena' is all on ear, and very much dwarfed and withering up; the kown crop is also suffering much, and it is stated that unless rain falls soon both crops will be a failure. Wheat and other cold weather crops have all been gathered, and are good." Between the 1st and 4th rainfall has been reported, and it appears to have been tolerably general. The country looks bright and green, and the crops still promise well.

3. Towards Gaibanda and Bhowanigunge, south-west and southwards, and towards [illegible] south-east of Gaibanda, the supplies of rice in the bazars are reported to be scanty, [illegible] falling off of imports from the neighbouring districts of Bogra and Dinagepore, [illegible] from Rs. 3-9 to Rs. 4 per maund of 80 tolahs weight.

No reliable information can be obtained regarding private stocks; but it is believed that about one-eighth of the population have about two months' stocks in hand. Wheat and barley and sugarcane are very good. The millets have been suffering from want of rain; early rice continues being extensively sown on the palee lands; but in the direction of Kamdiar (red clay) land, the sowings have not yet been commenced. The condition of the people in the south-east of the district remains unsatisfactory on account of the high prices, but the wheat and pulses have much benefited those who raised these crops. Applications for advances from the ryots are most numerous, and the zemindars and large jotedars are required to help their ryots. Loans are being made, but it is found difficult to manage with the non-resident landowners.

4. In Nisbetgunge and Kourgunge, on the west of the station of Rungpore, the condition of the people is not less favorable than in the southern parts of the district already described. More active relief is, however, going on in that quarter, and the circumstances of the poor are carefully watched. Information of urgent distress, and of a case of starvation was received yesterday, and the relief officer proceeded to Kourgunge to give relief and to ascertain the facts.

5. In Mahigunge, Sundargunge, and Molung active relief work is going on everywhere, and arrangements are well organized in advance of present necessities. The recent sale of the rice saved from the fire at the Mahigunge golahs was so arranged as to be in some degree a measure of relief for the poor people of that neighbourhood. Public relief in the way settled, and charitable aid in all its modes, are being actively applied to assist the indigent ryots and their families who, in many villages are very hard pressed, and to seek out individual cases of destitution which might be fatal except for the watchfulness of the relief officers and their assistants. Distress appears, both from official and private report, to be well got in hand in these parts. Private trade is active. The prices at the chief hâts and bazars are from Rs. 3-9 to Rs. 4 per maund of 80 tolahs.

6. Proceeding southward to Peergunge, Sadullapore, Govindunge, and Kamdyar, owing to the pressure from high prices, local failure, or absence of crops and ill-supplied markets, the condition of those first affected by the scarcity is more critical than in the part of the district last described. The reports have occasioned doubt and anxiety. The promptest action has been taken on the first information or requisition. The staff has been increased in Govindgunge; the transport of grain there has been pushed forward; the relief officer has been kept supplied with funds. Materials for home relief have been sent, and employment on road repairing and well-digging has been opened out in every direction through the worst tract for the relief of distress in the neighbouring villages; advances of grain are about to be made to the indigent ryots should circumstances be found to require this.

7. The relief officer, Mr. Damant, reports that the supply to the south and east of Sadullapore "and of Govindgunge is still tolerably well maintained by imports from the eastern districts by the Brahmaputra. In Peergunge, and the west of Govindgunge, the supplies are very small and may part us at any time. Importation from Dinagepore seems to have entirely ceased. A very little comes from Bogra, but this cannot last long. Prices are excessively high, ranging from Rs. 3-12 a maund on the banks of the Brahmaputra to Rs. 5; in some small hâts the price is Rs. 4-4."

"The village inspection has disclosed greater distress, the relief officers reports, than was anticipated. In the tract lying west of Kurotya, the state of the villages is wretched beyond description; the people have sold everything they possessed and are now solely dependent on Government. Many have sold their plough cattle, the last thing with which a Bengalee ryot parts. I found one instance where a man had sold the roof over his head. Many ryots have deserted the place altogether, and gone to Bogra and elsewhere. The relief officer reports that the people seem to be most grateful for the relief works. The villages in this quarter are now quite deserted in the day time. Every one is to be found on the road; the women are now coming readily, bringing their children with them. All are most anxious to get Government rice. The want of water is felt nearly as keenly as the want of food. In many villages people have to go two or three miles to bring a *gharah* of water. I have begun to excavate three old tanks in the worst parts, and am digging wells at every mile along the roads. A few cases of cholera, with one death, have occurred among the coolies."

In the neighbourhood of Ramnagur, Dhaperhât, Tremohini, and Peergunge considerable distress is reported. No cases of death have occurred, but many instances of people very much reduced by starvation have been found. There are about 10,000 persons employed on the roads, of whom about half are men, one-third children, and one-sixth women. The women only work on the roads on the west side of Govindgunge where they come in great numbers.

8. In many tracts on the south and the south-west of the district, the poorer classes of ryots have been obliged to sell or pledge the few things they have. Many complain of the difficulty of having only one full meal of rice a day, and of having to eke out the second meal with various coarse substitutes for rice. All those who work on the road earn enough to provide their two meals of rice a day, and a little for their families besides. The ryots in many places from time to time complain of inability to sow their lands from want of seed. The lands, however, where ready, have all been sown, and a far larger area than usual has been cultivated with early rice. Many of the ryots are found after investigation to have complained of their zemindars and of their circumstances without reason. There is, however, much widely-diffused distress which is being carefully looked after, and relief to meet the circumstances that arise in each locality is promptly organised on the spot. People complain of the dearness and of having to live closely, but only in isolated cases has the pressure from high prices produced actual distress. There has been no deaths traceable to the present scarcity. No premature deaths have come under notice for inquiry. The only case that has come under inquiry in the last fortnight was that of a very old woman who died of disease, probably hastened by privation.

9. The wheat and pulses have been stored by the ryots and are being used for food; very little of it finds its way into the market.

The wheat is not ground in mills and made into flour for bread, but is simply husked and boiled like rice and eaten with salt, chillies, &c.; or else after husking it is made into a coarse sort of meal, and then mixed with water, into a mash and sweentened with goor and so used for food. The poor here do not appear to know the proper use of wheat, and if taught can make nothing of it, as they have no hand-mills for this purpose.

10. All classes understand thoroughly the modes of relief adopted by the Government, and many anticipate the action of the relief officers, by ready complaints of distress, with suggestions for relief works, and annachatras in their neighbourhood. They are very grateful for what is being done, and the laborer-ryots declare that many of them must have perished but for the relief works. Under the present circumstances of the people (except in the worst parts of Govindgunge) small advances are better appreciated and more sought after than any other form of relief.

11. There have been numerous complaints from bodies of dissatisfied ryots as to alleged abuses in manipulating the advances obtained by the zemindars and jotedars without interest from Government. The cases have been disposed of to their apparent satisfaction, and every precaution has been taken to see that the advances are properly distributed among the ryots, and that substantial agreements are executed to guard against possible attempts hereafter at realising prohibited interest from the ryots. The independence of the ryots in Rungpore affords the best guarantee against such endeavours.

12. All complaints regarding scarcity are taken up at once, and assistance and investigation proceed together. Relief works are opened within easy distance of villages where great proverty or distress are believed to exist, and all able-bodied persons requiring means of subsistence are provided for in that way. People unfit for work are sent to the nearest annachatras; if too distant, they get a ticket for 7 days or 14 days' food, or an advance direct. The homeless mendicants are housed at the chatras as long as they choose to remain, but a few beggars unfit for work obstinately refuse to avail themselves of the annochatras, and they have been temporarily relieved with donations of raw rice and a little money at the villages they usually frequent.

13. Complaints of neglect on the part of the zemindars are promptly inquired into, and the attendance of the zemindars or their agents is caused, and they are required to assist their ryots with money or grain from their resources, or else to take advances from the Government for the purpose. The zemindars, as a rule, appear to be behaving well to their ryots, but some of them are still very backward in their duty in this respect. During the last fortnight relief has everywhere, and in every mode, become developed and better organised. The appearance of large bodies of the peasantry has been carefully observed and reported on from all quarters. There are no indications of debility or deterioration from insufficient nourishment among the generality of the poorer classes, who live much from hand to mouth.

14. In the north and north-east of the district near Kulaphat, the relief officer visited a number of villages, and also along the road from Kulaghat to Saptana. There was nothing apparent to indicate distress among the poor of this neighbourhood, and inquiry confirmed this view. In some places the men were very clamorous, and from their behavour it was clear they were under a false impression, and believed that if they were only sufficiently importunate and complained as loudly as possible, the Government would supply them with money by loan or advance, or even as a gift. In the same locality others were found going to the opposite extreme. They resented the idea of there being distress in their villages, and answered to all inquiries—"there are none in want here." The condition of the people does not appear to be bad in that part of the district (Borobari). It is, however, with the rest being carefully watched. The price of rice there is from Rs. 3-4 to Rs. 3-8 a maund of 80 tolahs weight.

15. In another case a petition from a body of clamorous ryots, giving a very bad description of distress and starving people, and of the neglect of the zemindar, was investigated. It was unfounded in fact throughout. On censuring the ryots, they blamed the mooktears for using exaggerated language. In numerous cases the ryots have complained without cause against their zemindars when they were well-off, and no relief was necessary.

16. In the majority of the villages bordering on the lines of relief works, a considerable percentage of the indigent ryots would have had the greatest difficulty in procuring their proper daily food, if it were not for the relief work; as it is, they are at present enabled to tide over a very critical time without loss of life or bodily injury from privation. It is evident, without referring to the worst parts of the district on the south-west, that within some 15 or 20 miles south of Rungpore, were it not for the timely relief measures, numbers must have been permanently enfeebled and have perished prematurely from privation; not only many of the beggar-folk who are now maintained by charitable relief, but some of the peasantry also, who have up to the present time been preserved in good condition, physical and moral, by the relief works now everywhere affording healthy employment.

17. There are no signs among the labourers of weakness or disease attributable to the present restricted means of the classes that supply rural labor. Whenever there has been a *bonâ fide* demant for employment, as a relief measure, work has been opened in the neighbourhood requiring it. Where supplies are short, moodies are commissioned to sell Government rice to the coolies at 12 seers for the rupee, and grain can be taken in part payment of work where local supplies run short.

18. To resume: serious anxiety is not felt regarding the condition and prospects of the people in view of the relief measures now organised, except as regards the tract prominently brought to notice in previous narratives, viz., Gobindgunge, Sadullapore, and Peergunge. The grain

transports have been pushed on in that direction to ensure that the supplies shall be equal to all requirements. Money and materials for relief have been despatched. A native doctor, with medicines, was sent out at the first intimation of a probable outbreak of cholera. It has been arranged that either the Magistrate or myself shall be present at head-quarters, so that any intelligence received may at once meet with proper attention. A Deputy Magistrate was sent to Peergunge, who, with an intelligent assistant, is temporarily supervising relief, and looking out for the occurrence of distress. Previously, a Deputy Collector of considerable experience visited Peergunge and noted its requirements. An additional officer of experience, Inspector Prokast Chundra Deb, was hurried off from transport work to the relief officer of Govindgunge on the first intimation of anything like an approaching crisis in those parts. The people there are coming in numbers to the relief works. The part of the country is in a bad state for supplies by private importation, and the people are generally reported to be very destitute; still Mr. Damant writes that there is no immediate danger of any loss of life from starvation.

The means for relief now being pressed forward, appear to be equal to the emergency. The Magistrate has settled to go out to Peergunge and Govindgunge after conferring with the Relief Commissioner, who will be at Rungpore on the 5th or 6th instant.

19. With regard to the details and statistics required, urgent reminders have been sent to the relief officers to obtain these.

The circles have been but recently organised. Many of the officers are new to the work. The necessary subordinate appointments have only just been filled, and clerks are on their way out, or have only just joined. Though the relief circles are manned and active work is going on everywhere in the most unsparing way, the results of the work do not come up in detail as required, and the great increase of work makes it difficult with a small staff, to keep up the requirements by official communication. Efforts are being made to procure the details and statistics regarding classes of people obtaining charitable relief, and it is hoped that a return may be submitted in the next narrative. There is such a demand for intelligent, trustworthy natives for all kinds of work connected with relief, that it is impossible to get an agency of the desired efficiency, as to general attainments and knowledge of English. All the public officers have been in some degree disorganised by the drafting off good active officers on relief duty, and still there are difficulties in filling "relief" appointments properly, such as transport clerks, golahdars, relief officers, assistants and writers, and road sub-overseers.

The relief-officers have got the work of supervision well in hand, and they will be required now to submit and procure the submission of the details as to charitable relief required. [While engaged in writing this report, the station was visited by a most remarkable hail-storm. There had been a great increase of heat at about 4 p.m., Saturday, April 4th, when a gale and blinding dust-storm, accompanied with the rumbling of distant thunder set in from the south-west. It blew a regular hurricane, sweeping the plain with clouds of dust. A drenching rain, which seemed to last two or three minutes only, cleared the landscape almost instantaneously, and then the wind blew very chill, and large hail-stones, bristling with icicles, battered down on the roof and verandah, and kept striking the ground—thud-thud—at intervals of 20, or 30, or 40 yards. They looked like a good handful of hailstones compactly crystalised into solid lumps. As the wind was strong, they were projected with much force, almost point-blank for about a stone's throw, and then striking the ground with considerable sound, they bounded along two or three times, becoming suddenly spent and motionless from their spiked shape. The largest of them were, in the solid part, about the size of a tennis-ball, but measured round the short, thick icicles jutting out all round, the were, some of them, about the size of a cricket-ball. Some had a star-fish and coral like form. All had the flowing stalactite appearance which makes the rudest outline when frozen over pleasing to the eye. They certainly were most picturesque looking missiles. Some reminded of the spike balls of iron, found at the end of old maces, and similar mediæval weapons. The storm was soon over, and the rain has done good. Fortunately the tobacco has all been cut and gathered, and none of the present crops have been injured. The mango trees have suffered. Mr. Oram, an old resident of Rungpore, informs me that he saw larger specimens than those outlined, the sketch of which is forwarded.]

20. Eighteen grain thefts have been reported during the last fortnight. Two constables were detected in dishonestly disposing of a maund of the rice saved from the Moheegunge fire, and from the separate sums of money, aggregating about eleven rupees, found in the waist-cloth of one of them, it appeared probable that the offence discovered was not the only one committed by him. Both were convicted and punished for criminal breach of trust as public servants.

Petty pilferings of the Government rice while on transit to the golahs are attributed to the police and to the gáriwáns; a two-maund bag has been found half a maund short on reaching its destination. Under the present system it is difficult to get a thoroughly satisfactory explanation of deficiencies or to make the constables and gáriwáns accountable for the same.

THE MARKET QUOTATIONS ARE AS FOLLOWS:—

		S.	Ch.	
Nowabgunge Mahigunge	per Rupee	11	4	of 80 Tolahs.
Gaibunda	„	10	0	„

Govindgunge	„	9 to 10	0	„

B.—RELIEF WORKS.

The number of relief-roads has been increased from 49 to 56.

New roads have been opened and sub-overseers employed on them; 4 roads are still kept in reserve. The numbers remain about the same except in the Govindgunge circle, where about 10,000 people have come upon the relief works for support. In Govindgunge, the rate has been raised from 3 annas per 100 cubic feet to 4 annas.

In Govindgunge they are employed in excavating tanks and wells also, as water is very scarce. The relief works have been steadily pushed forward during the last fortnight. The laborers have been paid regularly, and there have been no complaints from them. Government rice is being disposed of at 12 seers for the rupee, but no account of the sales has been submitted. In Peergunge, Govindgunge, and Borobaree sales have taken place.

C.—TRANSPORT OF FOOD.

With regard to private imports in Nesbetgunge thannah—in four villages Madupore, Sampore, Basuntpore and Ormaree, the relief officer found 5,000 maunds of paddy stored. One resident of Sampore deals extensively in Julpigori rice, keeping a train of 16 carts, and hiring also for that purpose. Private trade is brisk in the interior, and ryots go long distances with their pack-bullocks to purchase grain where the market is slightly easier. Complaints have been made that the hiring of carts and bullocks by the Government has interfered much with private trade; and though the rates are high the cartmen regard it as "begâr" or compulsory work and dislike it, although the rates are high. Formerly private parties could procure a cart and pair of bullocks for about Rs. 14 a month. The rate given a cart and pair of bullocks was first fixed at Rs. 7 a month. Subsequently the last lot were engaged at Rs. 20, and all now demand the same. Pack bullocks are now being engaged at Rs. 7-8 a month, and a corps is being organised. Several hundred maunds of rice have arrived for the Moharam Farnamagi, and also for the Tagores of Peergunge. The rice transport is working well, and there is no block anywhere. The despatches are less this week—as the carriage by boats has been stopped; 320 carts were received during the fortnight at Kallygunge, and 653 carts in all were at work. Efforts are now being made to bring the number up to a thousand or more. The zemindars have been called upon to assist, and a specially appointed officer deputed to the interior to engage and collect carts.

About 950 maunds were imported for private parties at Kallygunge and 800 maunds at Kolmughat during the last fortnight.

Inquiries were widely set on foot to organise a transport service for shallow water with dug-outs, but it was not practicable. The transport officer is about to visit Gaibanda to see if further means of transport can be opened up to Sadullahpore, partly by land and partly by the Ghaghat.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

The golas are ready in part everywhere, and the transport of grain is being steadily effected in accordance with local requirements. The list of completed subsidiary golas has not been received from each circle; a complete list will be forwarded as soon as possible.

Accommodation is now ready for 1,85,000 maunds.

Besides the above, about 6,000 maunds are being unloaded from boats from Goalundo, and about 22,000 from steamer *Prince of Wales.* The whole of this is being stored in the Peergunge gola.

A special report regarding the circumstances of the destruction of the Mahigunge gola, and the disposal of the salvage rice has been submitted through the Relief Commissioner.

E.—ADVANCES TO PRIVATE PARTIES.

Numerous applications have been made for advances by all classes of zemindars, patnidars, lakhirajdars, jotedars, great and small. Where they are not known, local investigations are made by the relief officers; and the *bonâ fides* of the application, the status of the applicant, the condition and number of ryots, and the propriety of the loan are reported on, and after such further inquiry as can be made, advances are sanctioned under the best safe-guards that can be devised to insure their being applied as intended, and to prevent abuses.

Advances.

The amount of money advanced to the zemindars and jotedars to help their ryots is as follows:—

	Rs.
For purchase of grain - - - - - - - - -	7,500
To zemindars for advances to their ryots - - - - - -	87,650
To jotedars - - - - - - - - - -	3,950
Add advances sanctioned during the fortnight, but not yet taken by the parties, previously sanctioned, and still pending - - - -	21,250
Total -	1,20,350

F.—CHARITABLE RELIEF.

The numbers daily relieved is over 4,000. Exact figures cannot be given, as no returns have been submitted from several of the annachatras.

There has been no instance of severe distress reported during the last fortnight, but many proper cases for relief are discovered by the officers on their village inspection; several new relief centres have been opened. One in particular at Dhaper hât in Sadullapore, where the poor were found in very bad circumstances. (A road for relief work was opened there at the same time.)

The people who accept relief at the annachatras are nearly all by habit or infirmity unfit for work, and are of the beggar class; such an abundance of relief has been provided for them (they are not a large number for the district), that they are very independent about attending the annachatras for food.

They murmur at the Government annachatra arrangements, and are unwilling to stay at the chatras in the day or to do any work. They object to remain for a second meal, and beg to be provided with the early and late meal together, once only in the morning, so that they may fill their bellies well and take their chance of getting what they can elsewhere for supper. Where annachatras are near together, as at Sankamari (public), and Radhabullab (private), the more active of them manage to get a meal at both chatras. Ample arrangements have been made so far for relief centres, and if people of this class are found unrelieved, it is because they will not remain where food is provided for them at the chatras. When found in the villages, they are temporarily provided for with an advance of grain and money. At the annachatras every effort is made to see that they are availed of to the fullest extent in accordance with the spirit of the rules, so as to relieve want among a class which is now almost entirely thrown upon organised public and private charity.

The officers in charge of relief centres, public and private, endeavour to keep in attendance those who begin to frequent the chatra, so that their charitable action may contrast favorably with that of other relief centres, and may be as unrestricted as possible.

At the annachatras at Alaikury, the scale of food has been raised fram 4 chittacks of rice and 4 chittacks of potatoes, to 6 chittacks of rice and 4 chittacks of potatoes, and half-a-pice for condiments. This scale is general. The average attendance now is 48 Mahomedans receiving cooked food, and 60 Hindus receiving uncooked food. Before the rules of issuing cooked food, to Mahomedans was instituted, the number taking relief was about 500 a day; when the cooked food system was adopted, the numbers fell at once to the present average, which has since been steadily maintained there without any complaints of distress.

Home relief in the shape of cotton for spinning, and paddy for husking, have been freely given. At the annachatras some women, able to do a little work have been asked to take it, but they refuse, and it has not been pressed on them. In the Gobindgunge annochatras, the relief officer has not adopted the cooked-food system, potatoes are scarce there, and half a seer of raw rice and a half pice are [illegible]n to each person who comes for relief.

New cotton a[illegible] rice-distributing centres have been established in the relief circles, and agencies opened [illegible]ong the pradhans of the villages. In Sundergunge, the zemindar Baboo Annadaprosad Rai is now opening a cooked-food relief agency in one of his villages (Khamthana).

The arrangement is for the zemindar to supply the rice, and servants to take charge of it and prevent waste and embezzlement, and the ryots with their families will come and eat the rice cooked by some of their own village people, who may be willing to serve at a house selected by themselves.

It will be a kind of co-operative private arrangement, and relief will be given in a form less open to prejudice than in the public or private annochatra as ordinarily unengaged.

Memorandum by Magistrate.

During the fortnight I have been through the Mahigunge, Sundergunge, and Molong relief divisions and conferred with the relief officers at their work. In Mahigunge distress is spread over a large area, and I have given Munshee Muttiulla an extra assistant for the work. I went over the worst tracts and consider that the relief officers will be able to meet all requirements. Sundergunge is a small circle, distress has been acute there, but the worst has now abated, and all is well in hand. Baboo Okhoy Koomar Sen of the Molong circle thinks his division safe; road works are plentiful, the people flock to them, and a large part of the western area of the thannah is well cared for by Baboos Luchmiput and Dhanput, who take the entire management of all relief in their estates. A large number of boys are everywhere on the roads, and, earning their four pice, materially assist their families. The state of Mr. Damant's sub-division, Govindgunge, Peergunge, and Sadullapore is the most critical. The relief officer for Peergunge has not yet arrived, and I had sent down there temporarily, Baboo Brojo Mohun Roy, Deputy Magistrate. In the tract of Govindgunge, west of the Kurutiya, a large part of the population has turned out on the road, men, women, and children, and they are supplied with Government rice. 6,000 maunds have been stored in the thannah, and the whole number of carts under the transport officer will now be employed in carting rice to Govindgunge and Peergunge, where the allotments are 50,000 and 25,000 maunds, respectively. The other divisions will be supplied by boat and pack-bullocks. I am now about to proceed to the circle of Mr. Damant's division.

The registration of importation has been commenced, but the returns are as yet incomplete. For Rungpore itself, I have the returns of one week complete, the supply is a total of 1,837 maunds—

	Mds.
Rice	1,488
Paddy	349
Imported from Dinagepore—	
Rice	1,447
Paddy	157
Local Supplies—	
Rice	41
Paddy	192

The Dinagepore supplies come mostly from Habrah, but the Executive Engineer who was lately at Kholahatti tells me that some of the cartmen, who brought rice averred they brought it from Diangepore city, where the price is cheaper than it is here.

At the mouth of the Teesta, the importation by boat was, during the fortnight—

	Mds.
Paddy	1,968
Rice	4,712
Total	6,680

No returns have yet been received from the Dhurlah.

Importations at the mouth of the Teesta, and at Kallygunge on the Brahmaputra were 1,750 maunds.

From here all the river-side and inland market on the eastern border are supplied either by boat or pack-bullock. At Sundergunge market, where I was a week ago, the supply of rice 125 maunds, and paddy 150 maunds, all came either from the mouth of the Teesta, or from Chilmari on the Brahmaputra.

To the north-north-west and north-east trade is active as usual, and the reports show stocks in places. I have no details to show in this report, but hope to have some for the next.

Rungpore, the 6th April 1874. E. G. Glazier, Officiating Magistrate.

No. 41, dated Bogra, the 6th April 1874.

From C. A. Kelly, Esq., Officiating Magistrate and Collector, Bogra, to the Secretary to the Government of Bengal, Statistical Department.

I have the honour to submit the fortnightly narrative as follows:—

Narrative of Scarcity and Relief of the District of Bogra for the fortnight ending the 6th April 1874.

A.—State of the Country.

There are still supplies in th [illegible] nough at high rates. Ordinary rice at Bogra was selling on the 4th April at 10½ see [illegible] per rupee, at Sultanganj 10½ seers, and at Dupchanchia 11 seers.

	Maunds.
At Sultangunge	1,200
„ Dupchanchia	9,000
„ Hili	5,000
„ Burigunge	4,000
„ Kichak	3,000
„ Bogra	1,000

has been reported as in the hands of traders and petty dealers up to about the 4th April 1874. ·82 inches of rain fell at Bogra on the 1st and 1·82 inches on the 3rd instant. A fair average of matar and other cold-weather crops is expected. The sowing of sesamum and jute has commenced. The aous crop has been partly sown in the eastern part of the district and the sowing continues. As regards the condition of the people, I would beg to repeat the remarks given in my last narrative. I notice in the report of Mr. Gupta, recently received, the case of a person he observed starving in his circle, thannah Shibganj, and in which I presume (though he does not mention it) that he gave immediate relief. I am calling for further report from him on this point (as he does not give particulars). Fifteen grain thefts during the fortnight. I have already mentioned our particularly bad tracts, and in addition I should now mention the north and east of Shibganj; but I am of opinion that the whole district requires watching while these high prices continue, as of course isolated cases of hardship may be expected to occur even on the more favoured tracts. I have already submitted a scheme to Mr. Robinson with the view of attaining this object.

B.—RELIEF WORKS.

I annex a list of lines of relief roads and works with the number of labourers on the 3rd April on each—

No.	———	Men.	Women.	Children.
1.	Shariakandi road	487	643	1,685
2.	Sultangunge road	574	1,211	730
3.	Matidali road	433	857	1,178
4.	Dupchanchia road	294	1,127	959
5.	Dinagepore road	2,749	4,063	5,058
6.	Shibganj road	660	—	—
7.	Serpur road	343	282	123
8.	Nungola road	765	223	569
9.	Nashipur road	198	170	351
10.	Dupchanchia to Shynamukhi	525	343	231
11.	Tank at Fuldighi	72	25	—
12.	Tank at Kahalu	480	—	50
13.	Tank at Birgaon	45	—	—
14.	Tank at Goharpara	193	—	93
15.	Nakhila road	—	—	—
16.	Tank at Pilkhanj	162	—	—
	Total	7,980	8,994	8,027 = 24,951

This number is certainly large, but it must be noted that the number of men among the whole is only 7,980. The labour exacted from the women and children is light, the pay comparatively good, and no wonder the works are popular in these times. I have actually heard of persons coming with their own labourer servants on to the road work, and people leave their villages *en masse* for the purpose. I shall direct the circle officers to endeavour to prevent very small children from coming on to the roads, as the people are bringing them very young. They are employed in beating the earth, and of course such relief is practically almost gratuitous, but it is difficult to draw a hard and fast line in such a matter. Another reason which tends to account for such a large influx is, in my opinion, the large proportion of Mahomedans, over 80 per cent. in this district. Hindu women would naturally be averse to leave their homes. I hear of men actually staying at home and making their women go out and work for them. I shall be prepared to sell food when necessary to labourers on the works. At present they are supplied from the bazars.

C.—TRANSPORT OF FOOD.

The reports received shew importation of 11,000 maunds of rice from Pubna, Dacca, and Mymensing districts by way of the Daokolea and Bengali rivers, 600 maunds of rice and 500 maunds of paddy from Rajshahye by carts. Now that the very considerable increase of 1,90,000 maunds of rice has been ordered to Bogra in addition to our previous allotment, I am unable to say that our means of transport are sufficient. We have more than 600 carts at work, which nearly, if not quite, exhausts our cart resources. Pack-bullocks and ponies have been called for from all police stations* and out-posts, some of which have been sent in. The Serpur police have also been told to send small boats to take rice from Bogra to Serpur. I have also asked the Commissioner of the division to have 50,000 maunds of our allotment sent from Goalundo to Joregatcha whence we can convey it in small boats up the Karotaya to Bogra. I have also written to Natore and Serajgunge for more carts, and the Sub-Inspector of Adamdighi has been directed to try and obtain carts from Natore. I really do not see what more we can well do. We might perhaps be able to utilise some of our road labourers as transport coolies, and I will see what can be done in this respect. If the Government or the Relief Commissioner could send a supply of carts or other efficient means for transport from elsewhere, no doubt we could distribute our supplies more quickly; six hundred more carts would be not more than necessary. Meanwhile we must get on as best we may, and as the district is small, when the rice is once landed at Shohagipara we could, in case of need, send sufficient for immediate wants to any part of the district from there without much delay.

---

* Those sent in have been found unfit, and returned. We cannot expect effectual aid by this agency.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

In addition to places of storage previously reported upon, new storage room has been ordered at places noted in the margin in order to accommodate the increased supplies ordered. Amount of food-grain reported as received up to the 4th April 1874 is 49,729 maunds. The only food-grain as yet distributed has been 150 maunds sold for Rs. 500 on account of charitable relief purposes.

1. Bogra.
2. Dupchanchia.
3. Khetlal.
4. Panchbibi.
5. Hilee.
6. Gobail.
7. Shonamukhi.
8. Madhupur.
9. Gayabanda.
10. Durgapore.
11. Dargahat.
12. Jamirbaria.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

Several applications have lately been received from persons willing to assist their tenants. Rs. 2,500 have been given out in the period under report as loans in compliance with applications. Some undisposed of applications will receive attention.

F.—CHARITABLE RELIEF.

I have already reported in my last narrative on our commencement of charitable relief operations on the Government aided system and our committee arrangements. Mr. Atkinson, Mr. Collier, and Mr. Gupta, relief circle officers, have arrived and have gone out to their respective circles, viz., Panchbibi and Badalgachi, Adamdighi, and Shariakandi. Mr. Nugent has also been out in Bogra thannah, of which he is the relief circle officer, and Inspector Umes Chandra Ghose is in charge of Khetlal. I propose now that Mr. Clay, District Relief Officer, has arrived, to put him in charge of Bogra thannah and to send Mr. Nugent, aided by two assistants, to take charge of thannahs Sherepore and Shariakandi, with special reference to the distressed account in these thannahs, which are on the whole comparatively well off.

Statement showing the progress of Charitable Relief in the District of Bogra.

Number of Committees and Sub-Committees as yet appointed.	Number of special relief Sub-Divisions opened and officered.	Number of regular relief circles opened and manned by special officers.	Number of relief circles opened and managed by planters, zemindars, and other residents.	Number of work-houses or centres, for the distribution of food and gratuitous relief.	Number of men, women, and children (with total) in receipt of gratuitous relief in any shape through the charitable relief organisation daily; this should include people employed or relieved by the relief committees or relief officers under any of the heads of instructions.
One Committee and seven Sub-committees.	—	Five - -	—	—	Up to 4th inclusive, 583* are reported, but the returns from Panchbibi and Badalgachi are not yet received. They shall be sent as soon as possible after receipt.

* Vide my remarks in my last narrative.

I have remarked above on the subject of the increased number of labourers on our works. I am glad to be able to report a most seasonable rain-fall on the 1st and 3rd April 1874 at Bogra, which I trust may have extended largely over the khyar land. It has arrived most opportunely and cannot fail to do considerable good. Amun rice was selling at 10 seers in the Bogra market on the 6th April 1874. I would remark in conclusion that it should not be supposed that the whole of the very large number of persons employed on our relief works are very badly off. It may be taken as a fact that many comparatively well-to-do people have come to them. But with reference to what I have said above with respect to light labour and good pay, I would not be understood as recommending either the increasing of the security of the labour test or reduction of the wages. The object of Government is to save life, and although in many cases the pay may be received by people who could exist without it, yet on the other hand I consider that it would be unsafe by means of a hard and fast rule to deprive many others, viz., those really in distress and often with large families, of what is no more than adequate for their wants. We are in urgent want of at least three native overseers or sub-overseers. I trust they may be sent at once.

C. A. KELLY,
Officiating Magistrate.

Bogra Magistracy, the 6th April 1874.

Enclosure No. 7.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 14th April 1874.

READ—

The Fortnightly Narratives of the Burdwan Division for the period ending 4th April.

1. *Hooghly.*—On the whole the account given of the condition of this district is satisfactory. Prices are stationary; there is no marked distress of a general character anywhere, and no very great demand for relief work. Only 1,650 persons are employed on Government work and 7,812 on private undertakings; of the latter, however, only 2,147 are said to be local laborers. The organisation for charitable relief is very extensive, there being no less than 136 sub-committees, besides four large serais or public kitchens on the great lines of traffic. 901 persons daily are receiving charitable relief.

2. *Howrah.*—Mr. Grant was specially ordered to include in his report the relief works and charitable relief operations in Howrah. It is not satisfactory to find him still omitting to furnish any information on these matters.

3. *Bankoora.*—Prices show here a tendency to fall, and in the distressed tract of Moheshra work has been provided for all who require it. The Commissioner has again sent Mr. Larymore to inspect this pergunnah, and his report will be awaited. The numbers on Government relief works were 2,740 in all, while about 2,000 more are employed on private works. About 1,200 persons daily get charitable relief.

4. *Beerbhoom.*—There is no marked change for the worse in this district as yet. About 3,600 persons are on relief works, and 683 are daily getting charitable relief.

5. *Burdwan.*—The Government has already had special report upon the increase in distress in the Bood-bood sub-division of this district. The Collector has now personally ascertained that things are worse here than he had at all anticipated. The fever has of course reduced the condition of the people of this part below the standard. It is hoped that the collector will be able to show that he exercised from the first due vigilance as to the consequences of want supervening on chronic disease. Cutwa sub-division also appears to be more distressed. The other parts of the district are not very badly off. The table showing the number on relief works is not very clear, and the column for the average daily number is wrongly totalled. Apparently about 13,000 persons are on the works, while 9,137 persons are in receipt of charitable relief. The charitable relief is administered by the district committee, five sub-divisional committees, and 225 village committees.

6. The Lieutenant-Governor, being about to visit the Burdwan District himself, will not here make any further remark.

7. *Midnapore.*—The state of this district is not now such as to cause any alarm or anxiety. The Jungle Mehals, about which some fears were entertained, are apparently not badly off; and though some distress among the weaving population near Chunderkona had shown itself, this has been met by starting gunny-weaving and opening food depôts for charitable relief. The measures adopted seem sufficient.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

No. 2378—S.R.

COPY forwarded to the Commissioner for information, and communication to district officers.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

Calcutta, the 14th April 1874.

No. 17T, dated Burdwan, the 10th April 1874.

From C. T. BUCKLAND, Esq., Commissioner of the Burdwan Division, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I HAVE the honour to forward herewith, in original, the fortnightly narrative for the district of Burdwan up to the 6th instant.

My previous letters will have prepared the Government for the receipt of more unfavourable accounts of the state of the Bood-bood sub-division, and the Collector states that the number of applicants for relief is increasing at a rate which he did not at all anticipate. It is to be regretted that he did not take earlier and more active measures to make himself acquainted with the state of the sub-division, but now that he has become more alive to the difficulties with which we have to contend, I trust that the measures which are being taken for the organisation of charitable relief will be found sufficient for the protection of the people.

The Collector complains of the non-receipt of the Jehanabad sub-divisional report, but it reached him on the 7th April, and contains no information of any material importance.

The Collector has appended a copy of the proceedings of the charitable relief district committee, and of the rules drawn up for the guidance of the relief sub-committees. I beg to recommend that these may be separately published in the "Calcutta Gazette."

No. 11, dated Burdwan, the 6th April 1874.

From E. H. Whinfield, Esq., Officiating Collector of Burdwan, to the Commissioner of Burdwan Division.

I have the honour to submit the narrative for the fortnight ending to-day.

A.—State of the Country.

2. The Raneegunge Deputy Collector says that the supply of rice is plentiful; that rice is still flowing in from Midnapore and Bankoora; that the grain trade at Raneegunge town is very brisk; that prices have risen about two annas a maund, and now range from 11 to 12·30 seers; of best rice, and 13·5 to 13·91 seers of common rice for the rupee; that no rain has fallen; that there is "no immediate cause for anxiety as to the condition of the people;" that rice is procurable everywhere; that there is no considerable demand for employment on the relief works; that the weaver class has been taken in hand, but even in their case the need is not very urgent; that in places inspected by him during the fortnight nothing like local distress among the weavers was found, but on its becoming known that it was intended to relieve them they applied for relief in large numbers; that a few cases of distress amongst beggars and travellers have come to light, and that even the village sub-committees do not allege the existence of any misery or starvation at present.

For my own part I do not think that there are any grounds for anxiety about Raneegunge at present.

In Bood-bood, I am sorry to say, the case is otherwise. The number of applicants for relief in that sub-division is increasing at a rate which I did not at all anticipate. In my last fortnightly report I mentioned that several food depôts for the distribution of cooked food had been opened there, and the attendance at some of these, notably at Gulsee near Khanoo, was very large. I have therefore thought it best to go over some of the more easily accessible parts of the sub-division in company with Baboo Bagalananda Mookerjee, and endeavour to gauge the amount of distress for myself. Accordingly I visited Gulsee and Kamoo villages near Khamoo junction. Oorgram, Mahata, and Dignugger near Gooshkara station, and Pogram, Kolianpore, and Bhedia, near Bhedia station. Also I have been to Bood-bood itself, and visited the villages of Erall and Bhalkee. The result of my enquiries is that there is most undoubtedly a great deal of distress there. This distress is more severe in the fever-stricken villages, such as Dignugger, Kamoo, &c., but it prevails in a less degree in almost every village I visited. The condition of some of the people I saw was very wretched. One man, who had been worn by long-continued attacks of fever, and recently by want of proper food, said that he was accustomed to sit all day in a tank to ease his pain. The labourers (Bagdis, Haris, Doms, and so on) complained very loudly of the want of work, and it appeared that many of the men had immigrated to Cachar and elsewhere, leaving the women and children. The so-called respectable classes were nearly as loud in their complaints as the poor. Sonars complained that their trade was at a stand still; napits, that people have given up shaving; cultivators, that the mahajuns have refused the usual advances of grain; brahmins, that their sources of income have failed; chowkidars that their chowkiran lands yielded next to no crop, and that their money dues (dwar mashara) are not paid; fakeers, cripples, and lepers, that charity is no more; weavers, that advances were no more to be had Allowing, of course, for some exaggeration in all these complaints, still the looks of many of the complainants were enough to prove that they were in the main founded on truth. I should add, however, that I did not hear of any deaths from starvation. When this was asked about, the invariable answer, of course, was that many had died, but on asking for names and details, I found it impossible to arrive at any single authenticated case of death from starvation in the villages I visited. Deaths of fever-stricken persons, of course, there have been. The Deputy Collector has visited some villages in the west of the sub-division, and his report is gloomy. The price of rice at the large marts continues nearly as low as in other sub-divisions, but in the interior it is only procurable at the rate of 10 seers the rupee, and even less. At Bhedia, for instance, I found the cutcha seer of only 58 tolahs selling for 5 pice, and at Eral 14 chittacks of the cutcha seer of 72 tolahs cost 5 pice. The wheat and barley on the banks of the rivers has all been cut, but a good deal of teel is still on the ground. In some parts the people are eating the paddy-husks (koonro), which are generally given to cattle.

What has been done in the way of relief is set forth under the proper headings below.

The Cutwa Deputy Collector gives a somewhat less favourable account of his sub-division than in former narratives. He says, however, that rice is everywhere procurable for ready money, and that the allegation to the contrary means only that mahajuns are demanding unusually high terms for making advances, but adds that if the rains set in early and the season proves a good one, they may probably relax their terms. He says teel has been as extensively cultivated in this sub-division as in Bood-bood. He states that the condition of the people, especially in Ketugram and Manglecote, is becoming a greater cause for anxiety day by day; that petty thefts are increasing, and the plea of starvation is more frequently heard from the culprits, and that the number of confessing thieves in March was 9. It is not impossible that some of these confessions were made with the view of getting admission to the jail. At Patna in 1866, if I remember rightly, a number of persons actually petitioned to be imprisoned in the jail. The Deputy Collector mentions that the cultivators are still unwilling to work, but in some cases are beginning to do so, especially in Ketugram. He estimates the number of indigent labourers in Cutwa and Munglecote at over 11,000.

I am afraid distress is on the increase in Cutwa as in Bood-bood. The great rush of applications for relief which has been experienced in the past fortnight has no doubt (as you have observed) been much stimulated by the organisation of village sub-committees all over the country, and by the constant flying visits paid by various officers to almost every quarter, but that distress really is increasing in Bood-bood and Cutwa I have no doubt whatever.

The Jehanabad Deputy Collector has not sent in his fortnightly narrative, and I must beg that some notice be taken of this delay. It was only a month ago that his attention was particularly called to the necessity of submitting these narratives with punctuality.

I may say, however, of both Jehanabad and Cutwa, as well as of the Sudder sub-division, that I consider there is no need for any anxiety about them at present. The only parts where there is any appearance of distress is the western half of Sahebgunge thannah adjoining Bood-bood.

B.—Relief Works.

3. The annexed Statement I. shows all the road and other public relief works now going on under the charge of the Executive Engineer, the Embankment Engineer, the sub-divisional officers, the town committees, and chowkeedary punchayats and private persons. I would particularly draw attention to the circumstance that the demand for work in the Jehanabad sub-division (old Benares road) is very small, as it is also in the Sudder and Culna sub-divisions (Buddipore road and Kana Nuddee works). The demand for employment in Raneegunge, too, would seem to be but small. Work has been commenced on the road from Kanoo to Sahebgunge, but the returns have not yet come in. The numbers shewn in the statement of the roads and works in charge of the sub-divisional officers of Jehanabad and Kanoo are estimates, as their returns have not been received. The Maharajah is carrying on tank-works at Culna and Burdwan, and Baboo Hitlal Misser at Bood-bood and Mancoor.

C.—Transport of Food.

4. Importation continues from the districts on the south. The total export by rail during the third week of March was 10,946 maunds, and total import 4,030 maunds. The returns for the last week in March have not been received.

D.—Storage of Grain.

5. The district committees have resolved to store grain at Kanoo and Bood-bood for the food depôts.

F.—Advances to Private Persons.

6. These are shewn in the Appendix. A Statement II. Advances for purchasing grain continue to be asked for, as remarked in my last report.

E.—Charitable Relief.

7. The arrangements for charitable relief are being extended and adjusted by degrees. The following is an outline of them. A district relief committee and five sub-divisional committees have been organised; 225 village sub-committees have been appointed all over the district, that is to say, rather over 10 to each thannah, or about 1 to every 15 square miles. In the vast majority of cases, these village sub-committees now act only as reporting agencies, *i.e.*, as a sort of intelligence department to bring distress to the knowledge of the district and sub-divisional committees. But where the pressure of distress makes it necessary, they are used as administrators, distributors of relief, and managers of the food-depôts and relief-houses which are established wherever necessary. The village sub-committees in charge of these food-depôts have received instructions to distribute cooked food to the infirm gratuitously, but to exact some kind of labour from the able-bodied. At the last meeting of the district committee, a set of rules for the guidance of these village sub-committees in charge of food-depôts was approved, which will be translated and circulated to them; a copy is annexed to this report. At the present moment there are no less than 27 food-depôts at work chiefly in the Bood-bood sub-division. The number has been swelled during the past fortnight, not only by the institution of many new depôts but also by the inclusion in the list of all the old fever food-depôts, the cost of maintaining which was accepted by the district committee at their meeting of the 28th ultimo, in consequence of

the fever relief funds running short. Besides these, the Maharaja has three food-depôts at Burdwan, Culna, and Bood-bood. Wherever distress increases and the number of food depôts becomes so large as to be unmanageable by the sub-divisional officer and his committee, as has been the case in Bood-bood, it is intended to appoint relief inspectors at the rate of about two to a thannah to visit and supervise these food-depôts. A mohurir to keep the accounts, cooks at the rate of one to every 100 men, and work overseers at the rate of one to every 50 men are also attached to each food-depôt. These persons will be selected from among the distressed persons if possible. The sheds required will be built by the recipients of relief. The able-bodied men will be employed on any adjacent road work, or else at a tank in the neighbourhood; women will be employed on the various kinds of light-labour specified in the rules. Provision has also been made for making advances of money or material to weavers, to Beeparies, to import grain, and to Pardahneshin women for spinning thread and husking rice. Simple accounts will be kept and abstracts submitted weekly. It is intended to utilise all the existing inspecting agencies, medical, educational, and police, so as to exercise more complete supervision over these food-depôts, and enforce the application of the labour-test in the case of all able-bodied persons. The cultivators, and other so-called respectable classes, have been, of course, kicking against this regulation and holding out for gratuitous relief, but now show symptoms of giving in in some places. Rice for the use of the depôts is about to be stored at Bood-bood and Kanoo. The complete charitable relief organisation above sketched out is at present only required in Bood-bood. But something of the same sort will have to be set going ere long in Cutwa. The relief operations of the whole district are superintended by Baboo Bogolanando Mookerjee and an assistant. The prescribed statement of relief food-depôts will be found marked III. in the Appendix, as also a list of the food-depôts now opened, and the attendance at them.

This statement does not show the particulars of advances to weavers and others which are made in many cases direct by the district and sub-divisional committees.

Rules for the guidance of relief sub-committees.

1. Every person admitted into a relief-house shall be provided with a ticket.

2. The tickets shall be of two descriptions (*a*) for gratuitous relief (*b*) for labour test.

3. The labour-test must be enforced in every possible case. But persons incapable of work shall receive gratuitous relief.

4. Able-bodied men must be sent to the nearest road or tank-work. If no such work be available, the members must devise some suitable work, and report for the approval of the sub-divisional officer.

5. Able-bodied women may be employed as follows:—

(*a.*) Collecting ghooting or kunkur.
(*b.*) Picking up cow-dung, and preparing it for fuel.
(*c.*) Mat-making.
(*d.*) Basket-making.
(*e.*) Making rope and twine.

6. Women who are unable on account of their social position to do any work of the above description may be employed either in husking grain or in spinning thread in their own houses, and they shall be paid for their labour either in money or in kind as they wish.

7. Work-overseers must be selected from the recipients of relief; one such overseer must be allotted to supervise the work of every fifty persons. These overseers shall, in addition to their daily allowance of cooked food, receive the wages of 2 pice per day.

8. Ordinarily, cooked food is to be distributed. If any persons, for any sufficient cause object to taking cooked food, uncooked food may be given to them. But all must do some work except the sick and infirm.

9. To each person is to be allowed daily half-a-seer of rice (pucca weight), 1 chittack of dâl, and 2 chittacks of vegetables, with a proportionate quantity of salt and mussalas; milk and sago may be given only to sick persons who produce a doctor's certificate declaring that they require them.

Milk may be given to children under 3 years of age.

10. One cook is to be appointed for every hundred men.

If possible these cooks should be selected from among the recipients of relief, and should be paid by the fixed allowance of food and wages of one anna a day.

11. To every relief-house a mohurir must be appointed to keep the accounts, and if possible he must be selected from among the recipients of relief. Paid mohurirs, coolies, and work-overseers will be allowed only when such cannot be obtained from among the recipients of relief.

12. Each relief-house (hotel) should be under the immediate management of the local sub-committee, subject to the supervision of the circle relief-inspector and sub-divisional officer.

13. Advances of money or thread may be made to weavers.

The cloth prepared, therefore, will either be sold in the local market, or if that is impossible will be forwarded to the sub-divisional officer for sale.

The advances to the weavers shall be of sums varying from Rs. 5 to 10, and no second advance shall be made to any weaver till he has produced cloth to the full value of the first advance.

The same rule must be observed in making advances to women of cotton to spin, or of paddy to husk.

In giving advances, the accompanying cheque forms will invariably be used.

14. The sub-committee will procure rice and cotton, &c., in the cheapest market open to them. If any saving can be effected by purchasing rice in Burdwan or elsewhere, the sub-committee will address the sub-divisional officer on this subject.

15. The following accounts must be kept by the relief sub-committee :—

1. Cash accounts.
2. Registers of persons fed.
3. „ of advances to weavers.
4. Store book.

16. The following abstracts of the accounts must be sent to the circle inspector every Saturday.

1.—*Cash Accounts.*

Officiating Collector.

---

* Food-depôts marked with asterisks are old fever food-depôts.

† Out of this sum, Rs. 2,000 has been given to the Deputy Magistrate of Cutwa for collecting ghooteems.

At a meeting of the Executive Committee of the District Relief Committe held at Burdwan on the 4th April 1874.

PRESENT:

E. H. Whinfield, Esq., in the Chair.

Mr. E. H. Ruddock.	Baboo Motilal Chowdhry.
„ J. Cockburn.	„ Sriram Ghose.
„ R. T. Serestre.	„ Mohendro Nath Pundit.
Baboo Gopal Cunder Sen.	„ Bugolanando Mookerjee.

The following resolutions were passed,—

1st. That the "rules for the guidance of village relief sub-committees," framed by the Secretary, be approved and issued.

2nd. That a sum of Rs. 1,000 be paid to the Culna sub-committee for the purchase of rice.

3rd. That the Cutwa sub-committee be authorised to employ a clerk on Rs. 20 a month.

4th. That a permanent advance of Rs. 100 be made to the Bood-bood sub-divisional committee.

5th. That a sum of Rs. 500 be sent to the Bood-bood sub-committee for the purpose of trying the experiment of making advances in sums of Rs. 5 to 100 to baparees to enable them to import rice from the south on pack-bullocks.

6th. That the advance of Rs. 1,000 drawn by the Chairman for the establishment of the relief-houses be sanctioned.

7th. That 1,000 maunds of rice be purchased and stored at Khanoo Junction, and 1,000 maunds be purchased and stored at Bood-bood.

8th. Various petitions and reports from the village sub-committees in the Sudder sub-division were then heard and disposed of.

9th. That Mr. Perkins, station-master of Kanoo, and his assistant, be asked to look after the store at Kanoo, and that a chowkedar on Rs. 6 be employed to guard it.

10th. That the Jehanahad sub-committee be authorised to expend any sums they may think necessary for the relief of distress not exceeding the amount of the subscription collected in Jehanabad.

E. WHINFIELD,
Officiating Collector and Chairman.

No. 14, dated Midnapore, the 6th April 1874.

From H. L. HARRISON, Esq., Collector of Midnapore, to the COMMISSIONER OF REVENUE, BURDWAN DIVISION.

I HAVE the honour to forward herewith, the report on scarcity and relief in this district for the fortnight ending April 4th. I regret to find that the last report arrived late. It was despatched from this office on the usual date.

A.

2. Grain continues plentiful throughout the district. The surplus stock however of Midnapore is practically exhausted, and what now passes north along the Bankoora road, and north-west along the low level canal, is almost exclusively Orissa rice. This is stated by all the dealers, and a few days ago, at the Sudder ghât, I questioned each of some 50 gareewans, and only found one man whose load was the produce of Midnapore. The purchasers first exhausted the nearest centres of surplus stock, and have gradually proceeded further as these have become exhausted.

3. Prices continue stationary with a slight tendency to a rise, especially in the extreme west, where 16¼ can only now be obtained instead of 18 and 17½ as was the case when I last reported. The imports from Singbhoom referred to have ceased; whether the spare stock is exhausted, or whether the low prices which it induced have discouraged further imports, can not be certainly known till a renewed rise again gives it an opportunity of profitable entry. As a consequence, the supply at the principal hâts is decreasing rapidly, as shown in the following table:—

	Number of maunds produced for sale.			
Dabijuri	160	110	131	66
Ramghur	0	26	26	22
Ghutia	50	30	25	20
Sildah	0	18	13	11
Jhargrom	8	10	10	10
	Up to 21st March.		28th March	4th April.

Certainly I do not anticipate any severe famine, *i.e.*, scarcity of grain in these tracts this year such as occurred in 1866. If my previous reports gave that impression, it was my failure to express myself correctly. In that year 50,000 persons died; in this year I do not suppose a tenth part of that number would be in danger, even if we folded our hands, and let matters drift. All I contend for is, that in this tract its own supply will not suffice for consumption, while extreme want will ensue before prices rise so high as to turn back the stream of trade to this quarter from the rest of Midnapore. On the other hand, if the Chota Nagpore division has a surplus on which we can draw, we are perfectly safe; if it has not, sale of rice on behalf of the committee will afford great relief at the worst period, and greatly diminish the proportion of the population which under any circumstances will have recourse to jungle roots and fruits, and inferior grains for support, as a mere result of high prices.

4. I also submit that, even if we are taking necessary precautions, we are doing so at no appreciable expenditure, and therefore the error is harmless. Experience already shows that the state of public confidence has much to do with the amount of rice thrown into the market in the jungle mehals. From all sides the report was universal that rice could scarcely be procured even at the hâts; a few hundred maunds came in from Singbhoom (for it has now been ascertained that it was a very small quantity, and has since quite stopped), and the market remained easy for nearly four weeks. It is now again lightening, and the price at Sildia is reported to have risen 1½ seer per rupee. It is therefore extremely probable, that if ever a crisis does come, the benefit which we can confer by promptly tendering a few hundred maunds for sale at convenient places will extend far beyond the mere quantity brought forward. Even the fact that we are known to have these small stores spread over the country, for sale if need be, produces some effect in bringing the stores of petty cultivators into the market, as they see that they incur no risk of starvation if they run short. At any rate, the experiment cannot cost the committee above Rs. 200 to 300 as the difference between cost price and ultimate sale, which I submit is purchasing confidence at a cheap price.

B.

5. In accordance with your orders, all public employers of labour have been called upon to return the number of laborers on their works; they had not had time however to respond to the call, and on the other hand the occurrence of three holidays in the days preceding this report, has led to the non-receipt of many of the usual returns for relief works. I therefore ask your permission to defer to next report a full account of the laborers on each work. Suffice it to say that this branch of relief is in a more satisfactory state than any other. The Joki embankment has been commenced in Hidgelee; the high level canal is employing large bodies of laborers, and the embankment repairs are doing the same. Our road relief works, therefore, only fulfil the functions of gleaners, and pick up the residue, who either being weak, or not able to satisfy the contractors, or being tied to their homes, are unable to proceed to a distance to labour.

6. It is mainly with this view that I have had recourse to the system of paying a subsistence daily rate on the special relief roads. It does not attract the coolies from other work when obtainable; on the other hand it is well adapted to enable the feeble and sickly to tide over the crisis, and supports the largest number at the least cost. That it is an expensive form of work admits of no doubt.

7. It at present proves very well adapted to these ends. The numbers fluctuate greatly, as every fall of rain, every local opening for labour, immediately takes off three-fourths of the coolies; as soon as it is over they come back again. Also they of course demur to the rates, which are, however, amply sufficient to support health, and therefore do not come forward till in real need.

8. The general indications of the fortnight are that the demand for labour is not increasing in the jungle mehals. Most of the ordinary working population have long since come on the canal and embankment works; and it is only the portion that does not general migrate for labour that we have to assist. The useful rainfall in Februay has afforded large openings for employment to this class.

9. On the other hand, the demand for labour is visibly increasing in the north-east of the district, especially round Keshpore and Narajole. A new relief road, Keshpore to Narajole, has been marked out and begun, and a declaration sent to you for publication. It has already 500 laborers upon it and will soon be completed; we have two more roads in the same neighbourhood Narajole to Dasspore, and Nawada to Nimtollah to construct, and I hope that this will suffice. The most densely populated thana of all, Dasspore, appears to be perfectly secure, with its silk bund and general prosperity, as no demand for labour at subsistence rates is made from there.

C.

10. There is no block now at the Sudder ghât, as the stream of exportation towards Bankoora is somewhat diminishing. The 50 garries I refer to in the early part of the report, had, all but five, been ferried over, but they find it convenient to halt on the sands during the day, and reserve their going to Bankoora till nightfall.

D.

11. No Government grain is stored in this district.

E.

12. Advances to private parties for land improvement will not be of any consequence in this district. The favorable rules were only extended to the jungle mehals, the greater portion of which is under Messrs. Watson and Co., either as putneedars or izardars. They of course require no advances, neither do the zemindars of Nyabossan (Moharaja of Mourbhunye) or Nyagram, or

Baboo Ramnidhi Coondoo the mohajun, who is virtually the zemindar of Jhargram and Cheearah. These zemindars, and Messrs. Watson and Co., occupy nine-tenths of the jungle mehals. Hence all the applications have come from tenure-holders, intermediate between the zemindar and the ryots. In many cases the security was not satisfactory, and the zemindar was generally opposed to the advance. Hence I have rejected two-thirds of those that are ripe for decision, and have only sent up eight to you for sanction; even in these the propriety of making the advance is very problematical, and generally against the wish of the landlord. I infer from the decision which you have arrived at in two already rejected by you, that you are averse to making the advance where the zemindar opposes it, and if so, probably nearly every application will be ultimately rejected.

13. I must confess that I do not think this result will be much to be regretted. As I have said, our means have been husbanded, and we have thus far no difficulty in meeting the demand for labour; and on the other hand I have little doubt that, with very few exceptions, the main object of the application has been to strengthen the claim of the intermediate tenure-holder by making Government his creditor as regards that tenure.

F.

14. Operations to relieve distress among the weavers, and perhaps also among other traders, such as braziers, have been pressed on during the fortnight. As estimated in a separate letter, I fear that our expenditure in this work may aggregate Rs. 40,000 before the next harvest, though this I look on as a maximum figure.

(1.)—We have now four sub-divisional committees. That at Contai, however, will I hope have nothing to do beyond collecting subscriptions

The subscriptions promised up to date are—

	Rs.	A.	P.
Sudder sub-divisional committee - - - -	7,517	0	0
Gurbetta „ „ - - - -	1,579	0	0
Tumlook „ „ - - - -	1,144	0	0
Contai „ „ - - - -	303	8	0
Total - - - - -	10,543	8	0

The treasury being closed, I cannot state the precise amount collected; but it amounts to a reasonable portion of the sum subscribed.

We have three special sub-committees already appointed, one for Chundrokonah, one for Ramjeebunpore, and one for Kuanpore *cum* Mowbunee; several others are in course of formation. Distress is greatest at Chundrokonah and Kuanpore, which is adjacent to it though not in the township.

(2), (3), and (4).—There is only one special relief circle, viz., the thanas of Chundrokonah, Ghatal, Keshpore, and outpost Narajole, which temporary deputy collector, Baboo Gossain Doss Dutt, is specially entrusted with.

(5). A large food depôt has been opened at Chundrokonah which relieves both that place and Kuanpore. Over 100 persons are already fed at it daily. This is independent of the epidemic depôt relief which, however, is reported as diminishing. No food relief was found necessary at Ramjeebunpore where the peoople are much better off than at Chundrokonah, though some distress is apprehended a month hence.

15. As there were many applicants for food relief at Kheerpoy, some of whom were obviously in great need of it, a depôt was opened, but out of 72 candidates the deputy collector, whose judgment in these matters can be trusted, only passed 8; it is therefore at present on a very small scale.

16. The other forms of relief already initiated, besides out-door work from municipal funds, are two: (1)—Husking rice. The rice needed for the food depôts is purchased unhusked and made over to distressed women to husk and give back cleaned rice, reserving the usual proportion as their remuneration. Forty-five women are thus supported at Chunderkonah and four at Kheerpoy; but it is reported that 50 women can advantageously be relieved in this way at the last-named place. (2.)—Weaving gunny cloth. I reported last fortnight that I had sent out two convicts to give the necessary instructions. I see that this measure has been disapproved of, and they will be recalled; but I saw no ready means of instruction except this, and the number sent was very small, involving the very minimum breach of jail discipline.

17. The movement is at present succeeding well; 200 weavers in Chunderkonah wished to learn; but only 20 from Chunderkonah, eight from Kheerpoy, three from Ramjeebunpore, and three from Kuanpore could be taught from the jail loom and paid daily wages while learning. The rest must learn from them; and the Deputy Collector has received authority to advance jute and take back gunny cloth, and advance thread and take back cloth from all distressed weavers, fixing the quantity on the principle of allowing a profit of nine to ten pice a day for a full day's gunny work and seven to eight pice a full day's cloth work. The extra profit for gunny is both to compensate the gunny workers for the novelty of their work, and to offer some inducement to them for learning it; and also because the committee infer from the orders of Government on the subject that they will be able to dispose of the gunny cloth with greater facility.

No. 9—S.R., dated Burdwan, the 9th April 1874.

From C. T. Buckland, Esq., Commissioner of the Burdwan Division, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honour to submit herewith the fortnightly narrative for the fortnight ending 6th April 1874, which have been received up to date.

2. *Hooghly.*—The Collector's report is carefully drawn up, and needs few remarks. There has been no change of prices and no marked progress towards distress. The total number of persons employed on public relief works under the district road committee is given as 1,650, whilst 7,812 persons are employed on private works; but of these only 2,147 are returned as local labourers. 109 tanks are being excavated or improved by them. In addition to these 718 labourers are employed on 85 tanks in the Hooghly and Chinsurah municipality, and 90 men on 8 tanks in the Serampore municipality. Altogether, including some other works, the Collector in paragraph 22, shows that 12,808 persons are obtaining public or private employment, but there is some apparent inaccuracy in the figures as totalled.

3. As the bulk of the rice exported from Chandernagore by railway is chiefly for distances over 150 miles, it is clear that it passes towards Behar and beyond this division.

4. Charitable relief is being administered through 136 sub-committees, and the numbers receiving relief are given as 234 men, 472 women, and 195 children, or less than 1,000 persons daily. In addition to the sub-committees, there are four serais for supplying food to needy travellers, and these are managed by the police, and this appears to be the best arrangement as explained by the Collector.

5. *Howrah.* The Magistrate of Howrah has submitted a very brief report, but he will be requested to state in future the number of persons employed on public roads as relief works; for instance, on the Juggutbullubpore road, and also to notice the proceedings of his charitable relief sub-committees at Khanakool and Juggutbullubpore.

6. *Bankoorah.*—The report of the collector is not so full as I could wish. He does not state the price at which rice is being sold in pergunnah Moheshara, which is the most distressed part of the district, although in other parts of the district prices have a tendency to fall.

7. In the fifth paragraph the collector refers to certain information which I sent him on some Bankoora labourers who appeared at Burdwan, saying that they could get no relief in their own country. Their statements turned out to be rather exaggerated, and when they were provided with work at Burdwan they soon recovered from the exhaustion of their journey to Burdwan. The statement shows that 2,740 persons are being employed on public relief works, and of these, 679 are on the Gungajulghatty and Saltora road, and 688 on the Moroolee and Mejia road, which roads are intended to provide for the wants of the Moheshara pergunnah.

8. The statement in paragraph 6 regarding persons seeking work from Maunbhoom is probably an exaggeration, similar to that of the Bankoorah people at Burdwan. But provision is being made for a considerable expenditure on a road from Bankoora to Purulia, to meet any possible wants towards the Maunbhoom frontier, and I have applied for a special grant of Rs. 16,000 for this purpose.

9. Charitable relief is being given to about 1,200 persons daily, and about one-third of these are in the Bankoora station, and about one-fourth of the number are at Mejia. The proceedings of the charitable relief committee are reported separately, and sent for publication in the *Calcutta Gazette*.

10. I have sent my special assistant, Mr. Larymore, to make a further inspection of the arrangements going on in pergunnah Moheshara for public works and charitable relief, and shall submit a special report if there is anything requiring the interference of Government.

11. *Beerbhoom.*—The report of the Collector notices a tendency to a rise in prices, but it is very slight, and the average rise in price is only five chittacks in the rupee. The Collector, however, anticipates further pressure; and I have been urging him demi-officially to make full provision to meet it by road relief works and charitable relief organisation. I also sent my special assistant up from Burdwan to meet Mr. Hime and the executive engineer at Bhulpore, which is about the centre of the distressed part of Beerbhoom, and he brought back a satisfactory report of what he saw, no distress being as yet visible or unrelieved. I have nothing to add to the collector's report except to notice that the export of rice by the railway still continues.

12. The reports from Burdwan and Midnapore will be forwarded when received. The latter is necessarily a day behind the others, as the dawk takes two days from Midnapore to Hooghly.

No. 2, dated Hooghly, the 4th April 1874.

From F. H. Pellew, Esq., Officiating Collector, Hooghly, to the Commissioner of the Burdwan Division.

I have the honor to submit the district narrative for the fortnight ending the 4th April.

A.—State of the Country.

2. *Abundance or scarcity of supply in the bazars.*—Reports from all thanas state that there is no scarcity of grain in the bazars, only in thana Pandooah, the sub-inspector thinks that the

supply of local rice is diminishing, and that imported rice will take its place sooner or later befor the aous crop is ripe.

Price-current of Food-grains.

1	2	3		4		5		6		7

7	Bydobatty	12	12	22	22	8	8	14	14	13½	13½

3. *Amount and kind of grain in stock in the hands of zemindars, traders, ryots, &c.*—There has been no change in prices in the fortnight. At Dwarbasinee in Pandooah 600 maunds have been added to the stock of 400 maunds already reported as stored by Baboo Joykissen Mookerjee. In Dhuneakhally a total amount of 61,200 maunds is reported to be now in store in the hands of zemindars. In Hooghly 23,343 maunds are reported. As you have expressed an opinion that it is doubtful whether the enquiries into stocks of rice are advisable, I shall order the police to discontinue them. At Govindgunge in the north-east of thanna Balagurh on the banks of the river is a large gunge called Govindgunge, here are stored some 7,100 maunds of imported rice, and about 3,000 maunds are stored at Mugragunge, in Bansberia.

4. *Rainfall.*—Rainfall *nil* at the Sudder station, but there is a slight fall of rain reported from Serampore, Bydobatty, and Chunditolla. A storm with hail and rain occurred on the 24th March in the neighbourhood of Ooterpara, and did some injury to plantain trees.

5. *State of the crops.*—The til reported to have been planted in paragraph 9 of the last narrative is reported to have failed in thana Bansberia, but is growing in the other thanas. Rain is required everywhere for the til, the vegetable crops, puttle turmooz, kakoor, &c., and for the aous sowing. The cutting and crushing the sugarcane is still going on. A good deal of new sugarcane was planted out after the rains of the 16th and 18th March, and there is promise of a good crop next year. The crop now in the mill was a good one. The mango crop is good in some thanas, fair in others, and promises badly in Dhuneakhally, Kristonugger, and Bydobatty. The land is prepared everywhere for aous sowings on a very extensive scale. Four or five good showers will be necessary to get the whole crop in, and such may reasonably be expected at this season.

6. *Condition of the people.*—In Pandooa the police report that the smaller agriculturists require employment to enable them to purchase rice and save their stores, but there is no lack of employment at present. The district superintendant of police who visited thana Balagurh reports that some Boona coolies on Gooptipara Chur, that were settled there in former years by indigo-planters, though reported to be in distress are not actually so. He says—"They will not leave "their churs to look for work. Relief works in that part are not yet a necessity, though a few "persons having no cultivation going on are glad to resort to them." The Joint-Magistrate went out last week and started some road repairs close to the chur to which they can come if they want work.

7. Of Dhuneakhally the sub-inspector writes that about three-fourths of the population are husbandmen. Though the amun rice yield was small, the people were aware that it would be wise to lay in stocks, and did so as much as they could. When rice rose to 9 seers for two or three days in February last the people were alarmed, and much rice was imported. In the west of the thana near the Damoodur there were rich harvests of sugarcane and vegetables, but distress may arise in the east of the thana unless rain falls and the aous be got in. In that case money and grain will be freely supplied by mahajuns and zemindars.

8. Except isolated cases of indigence arising from accidental causes, the number of which is shown under head "Charitable Relief." There is no distress at present in the district. Work is abundant, and yet the local laborers, who avail themselves of it, are not very numerous. Near the Damoodur there is great difficulty in procuring labor, and it is evident that the good crops of sugarcane, &c., have compensated in the tract along its banks for any failure in the rice crop. The Serampore sub-divisional officer says there is no want, unconnected with disease, except in the case of a few high caste women who are lakhirajdars and cannot get in their rents.

9. No cases of starvation have occurred during the fortnight. To prevent all possibility of such cases amongst the numerous travelling population, two more serais have been established on the Bydobatty feeder road, as will be stated under head "Charitable Relief."

10. The figures given in paragraph 10 of the last narrative were reported by the police. Since the establishment of the committees of relief the police have ceased these particular enquiries, and have been instructed to make over their lists to the sub-committees.

11. *Grain thefts and robberies.*—A grain theft of two maunds of rice from a house is reported from Bansberia thana, and another from Kristonugger thana. This last was committed by an old offender. In the former case no clue has been obtained.

12. *Condition of special tracts.*—In the east of Pandooah, in Ballagurh, in the neighbourhood of Bhastara in thana Dhuneakhally, and in parts of Bydobatty, Chunditolla, and Hurripal, cultivators of small holdings are glad to get work. The district superintendent of police visited Hurripal on the 24th ultimo. He says that the rains have facilitated the planting of sugarcane and vegetables, the potato crop has turned out much better than was expected, and the sugarcane, of which a good deal is grown, was a fair crop. The profit per beegha of potatoes has been Rs. 40, and of sugarcane Rs. 35. On the immediate banks of the Damoodur there were good crops of all kinds, and his conclusion is that, notwithstanding the failure of the main rice crop, there will be no more distress than at present unless prices rise again.

14. The Collector of Howrah will give the Howrah works separately.

15. Of the village roads taken up, the most important are the Jamgram to Moolye and the Kulapara to Nischindipore roads which open up Culna market to the people of Ballagurh and Pandooah, respectively.

16. The following statement of works undertaken by private persons, independently of Government assistance, is prepared by the police, to whom person undertaking such works were requested to furnish information. It is of course defective, but it shows a very large amount of privately undertaken land improvement. I have excluded the Kotrung brickmakers as well as all mill hands.

—	Station.	Number of Coolies.	Remarks.
Sudder Sub-division	Bansberia	795	Of these 278 are local.
	Ballagurh	416	248
	Pandooah	1,064	182
	Dhuneakhalee	827	254
	Hooghly	523	334
Serampor Sub-division	Serampore	1,505	241
	Bydobatty	1,088	109
	Hurripaul	501	166
	Chunditolla	780	184
	Kristonagore	318	151
	Total	7,812	2,147

17. The work on which these laborers are employed is almost exclusively tank-digging or re-digging. 109 tanks are being thus excavated or improved.

18. Besides this, Baboos Joykissen Mookerjea of Ooterparah, and Rajkissen Banerjea of Telinipara, are employing a daily average number of 142 coolies, of whom 53 are local, on the excavation of the Ghea Nuddee at their own expense.

19. In the Hooghly and Chinsurah Municipality 718 laborers are employed on 85 tanks at the cost of the proprietors, after notice under Act III. (B.C.) of 1864. Of the laborers, 492 are men and 226 women. In the Serampore Municipality the number of laborers thus employed is 90 on 8 tanks.

20. Under the Executive Engineer, northern drainage and embankment division, the following works are in progress:—

Thana.	Name of Work.	Daily Average of Laborers.	Condition.	Remarks.
Bydobatty	Canal to connect Kananuddee and Saruswati.	314	Good	All foreign laborers.
Ditto	Dankoonee works	Not returned.	Ditto	Half local, half foreign.
Dhuneakhalee Kristonagore Huripaul	Ordinary repairs	208	Ditto	Chiefly local coolies.*
	Total	517		

---

* *N.B.*—In last return I stated that the ordinary repairs were done by foreign coolies. The Executive Engineer now states however,—"Ordinary repairs to embankments are chiefly done by local coolies, who combine the work with rice cultivation."

21. On 28 tanks being dug or improved from tuccavee advances, a daily average number of 1,879 laborers, of whom 369 are local, are being employed, as reported by the recipients of the advances.

22. The work going on may be summarised as follows:—

	No. of laborers.
(1.) Government works in Hooghly excluding Howrah—	
Road committees' work under Executive Engineer - -	1,408
Ditto ditto supervised by private parties - -	242
Embankment and irrigation works - - - -	517
(2.) Works under advances from Government - - -	1,879
(3.) Works undertaken by private parties under orders of municipality - - - - - - - -	808
Spontaneously, including Ghea Nuddee - - -	7,954
Total - - - -	12,808

C.—TRANSPORT OF FOOD.

23. Private importations still continue. The roads are in good order. The transport of food grains by railways are as follows:—

Fortnight ending 28th March 1874—

UP.—Outward traffic, *i.e.*, despatched from Station.

—	Under 150 miles.	Over 150 miles.	Over 300 miles.	Total.

Total -	38	—	—	38

24. There was no up-inward traffic or down-outward traffic, that is to say, no rice or grain brought from Howrah or Calcutta by train was taken out of any of the stations in the Hooghly district, nor was any rice despatched at Hooghly stations towards Calcutta or Howrah. The 31,786 maunds of rice sent up-country from the various stations is, I suppose, Eastern Bengal ice brought by boat to Serampore, Chandernagore, Hooghly, and Muggrah, and in hackeries om Culna and Govindgunge to Pandooah. The Muggrah khall has always two or three boats

laden with rice from the eastern districts, and several large merchants are engaged in the trade there.

25. The other food-grains sent up country are chiefly from Chandernagore station. The grain probably comes from Bhuddessurgunge.

26. I have not hitherto given these figures, as the transport of grain by railway through this district did not appear to me to come within the scope of heading C., as detailed in Circular No. 80. I have merely, therefore, remarked in former narratives that large quantities of grain are transported up-country from Muggrah and Chandernagore.

D.—STORAGE OF GRAIN AT GOVERNMENT RELIEF WORKS.

27. Nil.

E.—ADVANCES TO PRIVATE PARTIES.

28. Under heading E. advances are to be included under three heads according to the directions given in circular No. 80, viz., advances for grain, advances to municipalities, and tuccavee advances. I give separate figures for each—

	Rs.
Advances for grain already reported	18,000
In fortnight	
Total	18,000
Advance to municipalities	Nil.
Advances under Tuccavee Act up to commencement of fortnight	25,911
During fortnight.	
March 27th, Goluk Nath Pyne	200
Ditto 30th, Sreeram Sircar	400
April 2nd, Bulloram Ghose	150
Total	26,661

29. The paucity of advances is due to the unsatisfactory nature of the securities tendered by the petty lakhirjdars and mokurareedars, who chiefly have presented applications, and to the difficulty in getting the consent of superior holders when the security is not manifestly an independent saleable interest. Those applicants who offered sufficient security and showed good titles got their advances in a very short time.

F.—CHARITABLE RELIEF.

30. Under the orders contained in circular No. 1251—S.R., of 5th March, I have the honor to submit a statement:—

Number of Committee and Sub-Committee as yet appointed.	Number of special relief sub-divisions opened and officered.	Number of regular relief circles opened and manned by special officers.	Number of work-houses or centres for distribution of food, &c.	Number of men, women, and children (with total) in receipt of gratuitous relief in any shape through the charitable relief organisation, daily.
1 District Committee 1 Sub-Divisional Committee. 136 Sub-Committees	Nil.	Nil.	Nil.	Men - 234 Women - 472 Children - 195

31. The district committee was established on the 28th February. The subscriptions paid in to date have amounted to Rs. 5,387, and the disbursements to Rs. 1,775-11-9.

32. The sub-divisional committee was subsequently formed, all sub-committees in the Serampore Sub-division have been made over to it. It receives subscriptions which are paid into the sub-divisional treasury and reported to the district officer, in order that a Government grant of equal amount may be credited, and it expends money from advances made to it by the district committee.

33. The sub-committees at present working are as follows:—

Thana Dhuneakhally	13	Directly under district committee.
„ Hooghly	8	
„ Bansberia	6	
„ Pandooah	17	
„ Bullagurh	10	
Hooghly and Chinsurah Municipality	26	
Thana Bydobatty	3	Directly under sub-divisional committee.
„ Huripaul	21	
„ Chunditolla	11	
„ Kristonugger	11	
„ Serampore	10	
Total	136	

34. Besides this serais have been established on a small scale for the relief of travellers on the main roads in the district as follows:—

On Grand Trunk Road	Muggra and Serampore.
On Old Benares Road	Bassooree and Sheakhalla.
On Bydobatty Feeder Road	Nalikul and Tarkessur.
On the banks of the Hooghly	Telinipara.

At these a meal is given to travellers who appear to be in want and wish for relief.

35. These serais are established at police outposts or thanas and are under the police. An establishment of a cook and a sweeper is maintained at each. In paragraph 11 of your letter to Government forwarding my last narrative, you state that they should be made over to relief committees. I would respectfully beg that they may be allowed to remain as they are for several reasons. First, the relief sought at the serais is generally urgent, and it cannot be expected that the members of the sub-committee should be at a relief house day and night, whilst the police must be there; secondly, I have tried to get two committees to take charge of such serais, and the result was a failure.

Dated Howrah, the 4th April 1874.

From T. Grant, Esq., Officiating Magistrate of Howrah, to C. T. Buckland, Esq., Commissioner of the Burdwan Division.

In continuation of previous fortnightly reports I have now only to say again that I have nothing whatever to bring to your notice that has not already been reported. Things remain in all respects unchanged. I have no material whatever from which to make a new report. I could only repeat my two last preceding narratives without addition or variation, and there is nothing for me to say except that those communications are as applicable to the present date as to the dates they bear.

No. 16, dated Bankoora Collectorate, the 6th April 1874.

From W. R. Larminie, Esq., Officiating Collector of Bankoora, to the Commissioner of the Burdwan Division.

I have the honour to submit my narrative for the fortnight ending the 6th April 1874.

State of the Country.

2. Rice, wheat, barley, &c. are to be had in sufficient abundance throughout the district except in Moheshra, which, as I have already observed, is dependent upon imports for its supply. Baboo Ragunath Ghosh has during the last fortnight sold a large quantity of rice in the pergunnah at lower rates than those at which the people there had been before able to purchase it. I am still of opinion that money should have been advanced for the purchase of rice in that pergunnah, and I think that the absence of this commodity pinched more than the want of work, for road-making in Moheshra commenced as early as the 15th February, and disinclination to go more than a few miles from their houses was the only obstacle to procuring employment.

3. Prices have been stationary, but the tendency is to a fall. Best rice is selling in Bankoora at 12 seers per rupee, common at 13½, and coarse at 14 seers, 6 chittacks. Prices at Bishenpur are slightly lower; new wheat and barley are selling respectively at 15 seers and 24 seers, 8 chittacks per rupee.

4. The rubbee crops have been reaped; cotton, til, and indigo are doing well.

5. There has not been much alteration in the condition of the people. The poorer classes are, as might be expected, more or less pinched, and, where work has been provided, I think the labouring classes are better off than the smaller agriculturists. In consequence of information furnished by you that some persons, residents of Meliara, in this district had been found destitute in Burdwan, I instituted enquiries, and found that work in tank-digging, &c. was available in Meliara, and that charitable relief was being given within 4 or 5 miles of that place. I have now commenced a road running from Barjora to Gangajalghati, through Meliara. In my last report I mentioned works being ready for the Moheshra people, if the two roads now in progress were insufficient. I referred to the roads from Mejia to Barjora and from Gangajalghati to Barjora, which had been previously reported to your office; these would be, in fact, continuations of the two roads which are being made. There have been no cases of death from starvation, and no grain thefts or robberies have been reported.

6. It may not be out of place to mention here that some 30 or 40 people came from Manbhoom crying out for work, and stating that none was to be had in their part of the district.

Relief Works.

7. A table is annexed shewing the various works in progress and the number of people employed. I have been endeavouring to get similar returns from private persons, but they come in irregularly, and are often inaccurate. However, I estimate the total number thus employed at about 2,000 daily.

8. A road will shortly be opened to meet the Purulia road at Moheshra, in the Chatna thana. The Manbhoom authorities have commenced work on their side.

9. It will, I think, be necessary to give more work in Onda thana when the road from that place to Taldangra is completed, or even sooner, and the road cess committee are of opinion that the best line would be from Bankoora to Taldangra, viâ Kurpa, as the circuit would thus be completed.

10. From what I have seen myself, and from the reports of others, I believe that the labourers are in good condition. They receive the ordinary wages in actual cash.

11. Besides the regular relief works, we have arranged, from the funds at the disposal of the district relief committee, to re-excavate three tanks, one at Saltora, and one near each of the lines of road under construction, at a point about midway between extreme ends. On these works, those only are to be employed who from physical weakness are unable to earn a sufficiency of food by piece-work on the road.

Transport of Food.

12. Rice is still being imported from Midnapore. The conveyance of rice to Moheshra is the only transport agency requiring notice.

Advances to Private Parties.

13. The number of applications for tuccavee advances has now reached 373, and sums aggregating Rs. 28,803 have been granted, of which Rs. 21,211 have actually been drawn. The making of new tanks or the re-excavating of old ones are almost the only purposes for which the money is being spent.

Charitable Relief.

14. The total number of persons receiving charitable relief is now about 1,200 daily, as per list annexed. According to promise made in my last report, I visited Mejia and its neighbourhood. The number of persons receiving relief had increased so much that I thought it best to open three new relief centres in the pergunnah, and I have since arranged for the opening of a fourth. All the Moheshra relief centres are now managed by paid overseers, supervised by an officer specially deputed for the purpose, all acting, of course, under the direction of the various sub-committees.

15. The arrangements for relieving weavers have now been completed in Bankoora itself, and the Bishenpoor sub-committee is arranging for the requirements of that town.

Statement of Charitable Relief.

(1.) One central committee.
(2.) Eleven sub-committees.
(3.) Four.
(4.) None.
(5.) Fourteen.

Statement showing average daily number relieved during the past week.

—	Men.	Women.	Children.	Total.

W. R. Larminie, Officiating Collector.

No. 18, dated Soory, the 6th April 1874.

From R. D. Hime, Esq., Officiating Collector of Beerbhoom, to the Commissioner of the Burdwan Division.

I have the honor to submit my district narrative for the fortnight ending 4th instant.

A.—State of the Country.

Prices continue almost stationary since last report, but exhibit now a rising tendency; the temporary fall was probably due to the payment of the March Government "kist" forcing rice into the market. There will now, I expect, be a gradual steady rise of prices, and a constantly increasing demand for employment till the commencement of the rains withdraws the labouring population from public works to agricultural operations. Every effort is being made to meet this demand by starting new relief roads and keeping others in readiness for any emergency. There is as yet no difficulty in procuring supplies at the current bazar rates (*vide* Appendix 1). No grain robberies have occurred, and no cases of starvation have been reported during the fortnight. Helpless want is being relieved by the charitable organization as it shows itself.

B.—Relief Works.

Three new relief works, Nos. 6, 7, 8, are set on foot since last report, viz., the road from Ilambazar to Doobrajpore (No. 6), that from Burdwan to Panchthoopee (7), and that from Gonootia to Kotasoor (8). The last is undertaken by Mr. Jones, Manager of the Gonootia silk concern. Three more relief roads, viz., those from Poorunderpore to the river Adjai (the Burdwan road), from Bulpore to Benglehatra, and from Laghata to Kolgram, will shortly be commenced. I have also under consideration a proposal from the Deputy Commissioner of the Sonthal Pergunnahs to construct the portion of a proposed road from Doomka to Mullarpore railway station, which will come within my district. The surveys for this road will shortly be made. The number of laborers on district works of all kinds is shewn in the Appendix, Form C.

C.—Transport of Grain.

Exportation continues; that of the fortnight ending 28th ultimo was 10,655 maunds.

D.—STORAGE OF GRAIN.

The charitable relief committee is buying up 1,000 maunds of rice for storage at Soorool in anticipation of emergencies.

E.—ADVANCES TO PRIVATE PARTIES.

Shown in Appendix, Table 11.

F.—CHARITABLE RELIEF.

Continues on the system previously reported (*vide* Appendix, Statement 2). The disbursements up to 28th ultimo are Rs. 2,764-7-10. No fresh subscriptions have been received during the fortnight. Independent relief operations are carried on in Doobrajpore by Baboo Ram Runjun Chuckerbutty, zemindar of Hetumpore, regarding with a separate report is submitted.

Enclosure No. 8.

No. 874½, dated Chota Nagpore, the 31st March 1874.

From Colonel E. T. DALTON, C.S.I., Commissioner of Chota Nagpore, to C. BERNARD, Esq., Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my relief report for the fortnight ending Monday, 30th March.

2. The area in which a pressure from scarcity is hard on the people has no doubt increased rather than diminished since last report. In about a third of the Maunbhoom district, in Hazareebaugh, and Palamow, the high prices of food are more or less felt by all classes; but it is only in places where food is not only dear but difficult to procure that bad symptoms of distress have been noticed, and our recent action has chiefly been to introduce both employment and food into such localities.

3. The weather has been during the last fortnight, on the whole, bright and favorable. The mowha crop received less injury than was anticipated from the rain which fell at the commencement of the period under review. Accounts received from all quarters, except from some parts of Hazareebagh, give fair expectation of its probable yield of flower, which is just now falling. A good mango season is still expected, and the rubbee crop, which is now nearly reaped, will give in most places an average return; but the area of land cultivated this year being so much less than usual, the supply of food thus obtained will not materially affect prices. The prospects of the mowha and the rubbee harvest have, however, temporarily reduced the number of people employed on relief works. For two months or longer the chief food of the poor classes will be mowha.

4. Relief committees have been formed in all the districts and sub-divisions of districts and other places where they were likely to prove of use.

5. *Hazareebagh.*—Mr. Beadon on returning to Hazareebagh, after consultation with me, was met there by information that ten deaths had occurred in the north-east of Kodarma, it was alleged from starvation, and a pilgrim was reported to have died from the same cause on the Grand Trunk Road. Further inquiry locally made by Mr. Beadon himself or by his assistant, Mr. Tobin, showed that, with three exceptions, each of the deaths could be traced to ordinary disease. The exceptions being (1) Ramni Goalin, a lone woman who lived in an isolated position, and the cause of whose death was uncertain; (2) a woman of 60 years of age who apparently, from all that was known, had sunk under privation; and in regard to the third, it could not be ascertained that any such person had ever existed. Mr. Beadon says, all who died were "old, infirm, friendless, and isolated." There are no doubt many people so situated and circumstanced in the sparsely inhabited portions of the district, unknown and unthought of till death ensues. It is not an easy matter to find out how such people sink or to know in time that they are in want of food.

6. It was not considered till this occurred that Kodarma was at all in a precarious position. As a Government estate it had met early attention. Mr. Beadon visited it himself in January, and Baboo Rajgopal Roy, Deputy Collector, was subsequently sent there to make advances and to give employment, and a tehsildar was appointed in whom Mr. Beadon had great confidence. Irrigation works projected by Rajgopal were opened in several places; but, notwithstanding the indigence now disclosed, very few sought employment. The people on whom the scarcity most told were of the non-working class, and arrangements have now been made to supply such persons gratuitously with cooked food. There is no want of work; the road from Burhee to Gowa, which will go right through Kodarma, has been commenced, worked both ways from its centre in Kodarma. Orders for opening it had been issued a fortnight before, but the services of the Assistant Engineer, Mr. Pereira, were required to align it, and he could not be spared sooner from other important works. The latest accounts show only 50 persons employed. From this it would be inferred that there cannot be widespread distress; but Mr. Tobin remains in Kodarma, and I have desired that a special report on the condition of the people there may be forthwith submitted. The Kodarma ryots have just received payment from the opium department of a large amount, and this is, no doubt, the reason that few of them care to work.

7. But the inspection tour made by Mr. Beadon in North Khurruckdea forced on him the conclusion that the ordinary means of supply was inadequate to meet the deficiency of food in some portions of that tract and on the Grand Trunk Road, and this induced him to telegraph to Government for 28,000 maunds of rice. The Government have promptly responded, and have ordered by rail to Pachumba 25,000 maunds, which is rapidly arriving. This will, I think, be sufficient, and Mr. Beadon, in a letter dated the 27th, says he will require more unless his projected pilgrim road is sanctioned. He proposes to distribute the rice as shown in the margin. He will have, besides, stores of grain in the bhandars of the Ward's estates, Dunwar and Gowan. Mr. Beadon is most anxious to undertake the pilgrim road recommended in my letter No. 239T, of the 25th February last. It would certainly be a most useful work, and Mr. Parkinson, who has not much to do at present, could be directed to survey and mark it out.

Distribution of Government rice.

3,000 maunds at each of the chuttees on the Grand Trunk Road, viz., Chowparun, Burhee, Barkotta, Bugodhur, and Doomree.

2,000 maunds in Kodarma and 10,000 maunds in reserve at Pachumba.

8. Mr. Beadon has advanced to merchants Rs. 33,000 to stimulate and ensure a larger rice importation for Hazareebagh station and other parts of the district south of the Grand Trunk Road, and has also arranged with the zemindar (styled rajah) of Koonda for the storage of rice as a reserve in the western parts of the district. The arrangements now effected will, I think, prove sufficient, but if more be necessary, the Ranchee merchants are quite ready to engage to store rice here for Hazareebagh.

9. I have proposed to them that they should confine their operations to the importation of rice from Gangpore (where a fortnight ago it was selling at 32 seers for the rupee), and from Sumbulpore, where I believe it is cheaper. The Palamow traders are now doing this, but for them it is a three months' journey. If the Ranchee and Lohardugga traders will follow my advice (and if necessary they might be assisted by loans) it would greatly economise carriage and accelerate the delivery. Palamow pack-bullocks travelling only as far as Lohardugga would carry thence the rice imported from the southern districts, and the Hazareebagh traders would transport it from Ranchee.

10. A road has been projected as an additional work in Dhunwar (Khurruckdea), from Dhunwar to Dorundah (Khurruckdea), to cost Rs. 700,* half of this cost borne by the road committee and half by the estate. This I have sanctioned subject to confirmation by the Board.

* Sanctioned by Board.

11. *Lohardugga.*—On the 28th instant a meeting was held at Ranchee to establish a District Relief Committee; this was not called for by any distress in Chota Nagpore Proper, but as a measure of precaution and to obtain funds for general as well as local relief purposes. Upwards of Rs. 3,000 were subscribed at the meeting.

12. I have, with permission of Government, availed myself of the services of Mr. F. T. Peppe, Sub-Deputy Opium Agent, who volunteered to act as an agent to make advances under the Land Improvement Act in certain detached villages in valleys of Tamar to the south and in Tori to the north-western corner of the Chota Nagpore zemindary. Tori is the only considerable portion of Chota Nagpore which appeared to me likely to need assistance. I reported on it in my letter No. 49T of the 16th January 1874. The manager, Mr. G. K. Webster, has been employed there for some time making settlements. He has opened some small works, sanctioned at the cost of the estate, which gives present employment, and we have road projects which will give more. Mr. Webster reports under date the 28th instant, that with the mowha there is no want of food at present, though in June and July pressure may be felt. This we shall have no difficulty in meeting.

13. *Palamow.*—Since date of my last report Lieutenant Grey and Baboo Gopal Chunder Mitter have been deputed as relief officers to Palamow, the latter with a portion of his establishment as Special Commissioner, including a good native surveyor and Baboo Prosunno Coomar Daniary, Assistant Engineer, passed through this station on his way to Palamow by dawk, on the 26th instant.

14. Mr. Forbes continues to give unfavourable reports on the condition of the Palamow people resorting to the works. He says when they first make their appearance that many of them are in an emaciated state, but pick up after working a few days, and are then able to do a full complement of work. This would indicate that the wages of their labour gave them sufficient sustenance, but he finds the price at which the rice is retailed by the bunias to the workpeople employed give them only 8·55 seers for the rupee, and they were clamouring for higher wages. So long as it is found that those who come on relief works thin recover their condition and others retain it I would deprecate any increase. It appears that it was only at one place, Turhassi, that the Assistant Commissioner found that the rice was being retailed st 8·55 seers for the rupee. He should have interposed and supplied rice from the nearest store at 10 seers. This would have brought down the retail price, for it is to be observed that at the open markets in Palamow proper the highest quoted is 12·36.* Mr. Forbes informs us that hitherto the market prices, which he calls the wholesale prices, have been given in the price current statements, and determines in future to give these bunia prices. This I object to, but he may give both as he does in the table in paragraph A. of his report of the 21st instant. The bunias in some places set up their shops where the labourers are working, and this of course gives them some claim to add to the market rate.

* And have since fallen.

15. My last report gave 12,562 as the total number employed on the Government relief works; these figures were taken from the February return. The return of the 7th March gives 7,866, and Mr. Forbes' report of the 21st ultimo 7,936. The decrease is said to be owing to the withdrawal of the agricultural labourers for the rubbee harvest, and it is probable that the number

will not rise to the February figure till the mowha, which is yielding well, is exhausted. Mr. Forbes is however of opinion that it will reach 20,000 at an earlier period.

16. The harvesting of the cold-weather crop appears to have caused a lull in importation of rice for a short time which made the Assistant Commissioner fear it was falling off. But I am credibly informed it is now brisk as ever, and I have been assured by the traders here that there is no fear whatever of its subsiding. I have however moved for sanction to make further advances to stimulate importation up to Rs. 50,000,* which we can use if we find the trade slackening. I have been informed that rice bought in Gangpore at 32 seers for the rupee was conveyed on pack-bullocks to Gurwah, and might without loss to the importer have been sold at 25 seers, but it was disposed of at from 13 to 14 seers. With such a profit we must expect that the importation of rice from the south will continue till the supply from thence is nearly exhausted.

* Since sanctioned.

17. The Deputy Commissioner received my instructions some months ago to watch narrowly the export trade from Chota Nagpore Proper to Palamow, and he is of opinion, in which I concur, that it is going on satisfactorily.

18. My latest information is in a letter from Lieutenant Grey, dated the 25th instant. On his way to Daltongunge he passed a body of about 400 people going to work, the majority women and children, who said they had been sent to work by the head of the family as there was not food in the house sufficient for all its members. Lieutenant Grey found this to apply to other places and gangs seen by him. Only a portion of the family seek work, and I hope it will be found that the withdrawal of so many will leave sufficient in the house to sustain the remainder. A few destitute people were seen in the town of Gurwah whom the local committee relieved, and on road-work Lieutenant Grey noticed four women claiming to be Rajputins by caste and one Brahmani, but they were people who had long been accustomed to work in the fields. On the whole, the people did not appear to Lieutenant Grey to be very emaciated, and he found them particularly patient.

19. Mr. Forbes tells us of a report that a number of respectable Mahomedans of Hosenabad, most of them widows, were in dire distress, and the Assistant Superintendent of Police was deputed by the relief committee to inquire, and it is presumed to relieve them if necessary. Mr. Forbes has also, he says, been informed by a zemindar, that grain-thefts are occurring daily, though not reported to or by the police, and that 75 heads of cattle had been slaughtered, he supposes by chamars, for the meat and skins. He has directed inquiry by the police, but he must also report how such things, if true, are not known to and reported by the police.

20. *Manbhoom.*—The condition of this district is apparently better than that of Palamow. Grain is still exported from the eastern pergunnahs, and as yet we have had no reason to suppose that the southern zemindaries were in distress. The bad parts are on both banks of the Damoodur, and between the Burrakur and Damoodur, and by the latest accounts extend to the common boundary of the Hazareebagh district. The Deputy Commissioner, in his report of the 25th to Government, observes that there is no appearance of any general distress as yet amongst the people, but isolated cases of suffering for want of food are becoming more common than they were, the great difficulty in the distressed parts of the district was to obtain food, for though in the estimate of the Deputy Commissioner there is still a good stock in the hands of the grain-dealers, they are still keeping it back in the expectation of higher prices, it is difficult in many places to obtain what is required for the people on the relief works. I believe that when the Government grain now daily arriving at Burrakur has been distributed amongst the several selected places for storage that the great pressure now felt will cease and all danger will for a time be averted. Colonel Rowlatt has arranged for having 5,000 maunds at Rughoonathpore, 5,000 at Govindpore, 5,000 at Nirsha, 1,000 at Poddardih, 1,000 at Jherriah, and 10,000 will be kept in reserve at Burrakur. I do not think more will be required.

21. The number of people on road relief works is represented in Colonel Rowlatt's report of the 25th as 2,642. He informs me that the labourers are in very good condition, which he thinks is due to the early period at which work on bandhs and roads was provided; but considering that Manbhoom has a floating population of two or three hundred thousand people of low caste, whose ordinary condition is that of the labourer, the number given as taking to road work appears very small. I am inclined to think that one cause of the comparative paucity of workpeople in Manbhoom may be found in the system of contract under which road works are done there. Of course the contractor takes his fair share of work out of each man, and it may be that he is not very partial to weak or sickly workpeople. Colonel Rowlatt's attention will be requested to this.

22. The report of the 25th gives no estimate of the numbers employed on the works for which advances have been given under the Land Improvement Act. Colonel Rowlatt tells me that from want of supervising agency he is unable to obtain accurate returns, but he roughly estimates that there are on all works not less than 20,000 people employed.

23. With my No. 760, of the 25th March 1874, I submitted to Government a report which Mr. Mackenzie, the Extra Assistant Commissioner of Gobindpore sub-division, had received of death of the four boys at villages near the Damoodur, in Jherriah, it was alleged, from starvation. These casualties have not yet been tested. The zemindar of Jherriah reported that he had heard of two deaths only, and was of opinion that the starvation may have been superadded by the villagers to excite commiseration. If this be so, the ruse was successful as the zemindar, Rajah Rasbehari Singh, has started a tank as a work for the people of the distressed villages, and opened a relief-house within easy distance of them. A branch committee has been established for Jherriah, and subscriptions raised sufficient to meet the relief measures immediately required. This zemindar is apparently doing his duty to his people, and the Sandra Rani is behaving with her usual liberality. I have given my sanction to an additional relief work in the Gobindpore

sub-division. A road from Gobindpore, through Beliapore Baghmara, to cross the Damoodur near Ghurbur, which is well calculated to give effective relief to the distressed villages adverted to above. The line has been examined by Colonel Rowlatt and Mr. Mackenzie. By this new route a considerable saving of distance will be effected between Gobindpore and Purulia. I need say no more about Manbhoom as the Deputy Commissioner's report of the 25th, now before Government, is full and clear, and I have no later information of importance except what is above given.

24. *Singbhoom.*—I have received no report from Singbhoom since the 18th ultimo. Captain Garbett has been in camp all the time, and on the date of the latest letter I have received from him, the 20th ultimo, he was, I am sorry to say, suffering from fever. He says he has been making a thorough inspection of all the new Kolhan reservoirs, and that they are getting on famously. He calculates that about 4,000 people are employed on them daily. This is in addition to the road works, so that labour has been provided for a very fair proportion of the inhabitants of the Kolhan. Captain Garbett concludes as follows:—

"I do not now believe, as I at one time feared, that we shall have general and severe distress in the Kolhan. I am, however, quite sure that but for the assistance rendered we should have now had sore trouble."

No. 2275—S.R.

From A. MACKENZIE, ESQ., Junior Secretary to the Government of Bengal, to the COMMISSIONER of CHOTA NAGPORE.

SCARCITY AND RELIEF.

SIR, Calcutta, the 10th April 1874.

I AM directed to acknowledge the receipt of your letter No. 874½, dated the 31st March 1874, being your report on the state and prospects of your division for the fortnight ending 30th March 1874.

2. The salient points in this report have, the Lieutenant-Governor observes, been already dealt with in the Government order passed on the District Narratives for Palamow and Maunbhoom, and on the special reference regarding Hazareebaugh.

3. In my separate letter No. 2230 of yesterday's date, you have already been informed that over 20,000 maunds of rice have been sent up to Giridhi for the use of Hazareebaugh district. I am to request that you will be good enough to report whether you wish any further quantity to be sent up to the same place. In the meantime further despatches have been stopped.

4. An extract (paragraph 7) of your report will be communicated to the Public Works Department of this Government, with a request that the services of Mr. Parkinson, who is a good energetic man, may be fully utilised.

I have the honour to be, Sir,
Your most obedient servant,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

No. 2276—S.R.

Extract paragraph 4 of this letter, with extract quoted, forwarded to the Public Works Department of this Government for information and guidance.

No. 2277—S.R.

Extract paragraph 3 forwarded to Mr. Toynbee for information and guidance.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Calcutta, the 10th April 1874. Junior Secretary to the Government of Bengal.

No. 610, dated Purulia, the 6th April 1874.

From Colonel E. A. ROWLATT, Deputy Commissioner of Maunbhoom, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Scarcity and Relief Department.

With reference to paragraph 3, Government circular No. 154—S.R., dated the 16th January last, I have the honour to submit my narrative for the fortnight ending the 4th instant.

A.—STATE OF THE COUNTRY.

Since the importation of Government rice has commenced and the mohwa flowers have begun to fall, the price of rice has in some few places become somewhat easier, and supplies are more readily obtainable, as those who have stocks of grain begin to see that it is of no use holding out for excessive high prices. In remote and inaccessible places especially, where there are no bazars or large dealers, great scarcity still prevails, and in these it is reported that the lower classes are living almost entirely on mohwa, which has begun to fall most opportunely, and will yield a full crop in the southern parts of the district, and not much less in the centre of it. It is variously estimated that the mohwa crop will last the people for from one to two months, according as trees abound or are scarce. It unfortunately happens, however, that in the worst parts of the district there are but few trees, in fact that along the road between Raghunathpore and Chandankiari on the Hazaribagh road, which I rode over a few days ago, I saw but very few trees, and in Torang and Hesla, I was told they had all been cut down for firewood. In the sub-division of Govindpore mohwa trees are pretty thick, and the crop is reported to be a good one. As the consumption, however, of mohwa will be greater this year than is ordinarily the case, it will not last so long as usual, and very little will be left for storage and consumption hereafter.

The prices of rice and pulses by the last reports received from the police up to the 4th instant are as follow:—

Names of Places.	Coarse Rice.	Fine Rice.	Pulses.
	Seers.	Seers.	Seers.
Raipore - - - -	17	16	15
Manbazar - - -	16	15	11
Burrabazar - - -	16	12	10
Echagarh - - -	18	16	12
Jhalda - - - -	14	13	12
Purulia - - - -	15	12	10
Govindpore - - -	13	12	13
Raghunathpore - - -	12	11	10
Nirsha - - - -	12	11	10
Gaurandih - - -	12	11	11

The mango crop will be almost an entire failure.

There are now no crops on the ground except the sugarcane, which has been lately planted. A small quantity of cheena seed has been procured from Arrah with which to make an experiment, but it is too soon yet to know whether it will succeed or not.

The only people who are at present suffering from actual want of a sufficiency of food are the beggars, numbers of whom abound in all the towns and large villages. These find it no longer possible to pick up a scanty subsistence in their usual haunts, and are therefore flocking into the relief centres, where large numbers are being fed daily on cooked food. The laboring classes are still in most places pretty well supplied with work, but many of the reservoirs and tanks for which tuccavee advances have been made are now finished or nearly so, and large numbers, hitherto employed on these works, will soon be without employment, so that the resort of larger numbers to the roads until rain again falls may surely be expected. As soon as rain again falls ploughing, which has now almost ceased, will recommence. It is reported that a large number of those just above the class of out-of-door laborers are now living on one meal a day, and distress is, I fear, likely to increase amongst this class.

Cases of distress have been reported from several localities, especially all along the borders of the Damudah river in pergunnahs Nowagarh, Jherria, and Pandra, but for all these work has been provided in the construction of reservoirs and on roads undertaken as relief works. In some villages in pergunnah Chelliama great distress is said to prevail, and Captain Samuells, the relief officer at Raghunathpore, has proceeded there with a supply both of food and money, and will make the necessary arrangements for the relief of these villages through the sub-committee at Chelliama, which has lately been established. Distress has also been reported in some villages in the north-east of pergunnah Charra, to where rice will be sent to-morrow; and from pergunnah Bagdah 33 persons have been sent in by the police to Purulia, who, being beggars, were entirely destitute of the means of subsistence. Several cases of deaths from starvation have been reported, but these, I am happy to say, after full inquiry, have been found to be deaths from disease, and were evidently reported by the villagers as deaths from starvation in order to excite sympathy, and in the hopes of obtaining gratuitous assistance in food and money.

Thefts of grain have increased, and one case of plundering has taken place at Hudlachak in pergunnah Chelliama, the object of which was clearly to obtain food. The number of persons in hajat is also increasing, and getting beyond the powers of the present staff of officers to deal with. An officer with full magisterial powers to take up the police cases is urgently required.

The tracts referred to in my last narrative still continue the most distressed, and I am sorry to say the area still continues to increase by the addition of distress in pergunnah Nowagarh in the west of the Govindpore sub-division, and that of Bagda to the south-east of Purulia, which is now in as bad a state as any of the other pergunnahs of the north-east portion of the district.

B.—Relief Works.

The number of roads now in progress of construction as relief works amounts to 12, and sanction has just been received from the Commissioner to continue work on the Govindpore and Purulia road, which will afford employment to those in distress in pergunnahs Cheliama and Jheria, through which it passes, and in which this road has yet to be completed. The district, however, is suffering for want of supervising agency, as for all these works, measuring 252½ miles in length, we have only one executive engineer, one supervisor, and four road overseers, who are quite unable and insufficient in number to superintend the work properly, and orders have been received transferring the supervisor to Singbhoom.

The roads are as follows, and their length, and the number of laborers employed on each, is given as near as the returns, which are still imperfect, will admit. I believe that very many more are being employed, and hope shortly to get correct returns of the numbers actually at work on them:—

No.	Name of Road.	Length in miles.	Numbers employed.
		Miles	
1	Purulia and Chaibassa road - - -	36	521
2	Branch from Chaibassa to Burrabazar - -	18	118

	Total - - -	252½	6,444

The roads numbered 1, 2, 4, 5, 6, 8, 9 and 11 have been completely marked out, and parties are at work all along them. Nos. 3 and 7 are marked out except in a few places, which will soon be done; the work, however, is not interrupted in consequence. No. 10 has been marked out as far as Tundihnagar, and I am now in correspondence with the Deputy Commissioner of Hazareebagh whether it should go on straight to Serampore or join the Hazareebagh and Giridih road at the crossing over the Burrakur river. Nos. 12 and 13 have still to be marked out, and orders have been sent to place laborers on these roads as soon as possible from the distressed villages along the Damudah, and not wait to do so till the whole lines can be completely laid out. The laborers obtain their supplies at the bazars, hâts, and shops in the vicinity of the works, and some of the contractors have also established depôts from which the laborers draw their supplies at the current rates of the neighbourhood. The condition of the laborers on the roads is satisfactory; they are paid, if they work as daily laborers, at 6 pice the men and 4 the women, whilst those who take the task-work make about the same or a little more if they work hard. There has been a difficulty in procuring tools in sufficient numbers fast enough, but this has been pretty successfully met by purchases made at Râneegunge, Bankoora, Jhalda, and other places in the district. The smelters and blacksmiths of the district have been kept in full employ much to their advantage, as the price of kodals has risen from 7 or 8 to 10 or 11 annas each, and the numbers of kodals and picks purchased for use on the roads, tanks, and reservoirs has been very large indeed.

The excavation of three large tanks in Purulia from the municipal loan lately made by Government has been commenced, on which 125 people are employed, and one other has been commenced on as a relief work by the district relief committee, on which 263 persons are employed, who are not able to do a full day's work.

TRANSPORT OF FOOD.

Food is still being brought up largely from Singhboom and the south and south-west of the district into the central and north-eastern pergunnahs both by pack-bullocks and carts. There appears to be no deficiency of carriage, and every effort it was possible to make has been resorted to in order to improve the road leading from Chaibassa to Purulai after it enters this district at the Mankoi ghat on the Subarnarekha river. The Government grain delivered at Burrakur by the East Indian Railway has been rapidly transported along the Grand Trunk Road to Nirsha and Govindpore, and by the Burrakur and Purulia road to Rughunathpore. To show the immense advantage of having a good road to make use of in a case like the present, I may mention that carts loaded one day at Burrakur delivered the grain the next morning at Rughunathpore, a distance of 21 miles, which, had there been no road, would have taken them at least three days; and this they did although they had to halve the loads and make two trips each across the sands of the Damudah, to prevent the necessity of which, and to guard against the possibility of a block there, in case it may become necessary to transport large quantities of grain from Barrakur to Rughunathpore, a temporary light causeway is being made across the bed of the Damudah, which will effectually prevent any such block taking place.

STORAGE OF GOVERNMENT GRAIN.

Between the 28th March and 3rd April, 11,742 maunds of Government rice have been delivered by the East Indian Railway at the Bunakar station, which has all been despatched by cart and stored, at Nirsha 2,542 maunds, at Govindpore 2,766 maunds, at Raghunathpore 5,434 maunds, and 1,000 maunds have been sent to be stored at Poddardih in Pandra pergunnah for the use of the sub-relief committee at that place. Golahs are being constructed at all the above places, and in the meantime storage accommodation has been arranged for in various private and public buildings which have been taken up for the purpose. The sub-district relief committee at Manbazar is also arranging for the storage of 1,000 maunds of rice at that place for the use of the branch committees subordinate to it.

Advances to Private Parties and their Results.

Advances for the purchase of grain have now been made by me to 45 individuals, amounting altogether to Rs. 17,595, out of the lakh of rupees placed at my disposal by the Government for that purpose, and applicants are still coming forward.

A loan of Rs. 4,000 has been received by the Purulia municipal committee with which a debt of Rs. 1,000 has been paid off, and the balance is being expended in the clearing out and improvement of several large tanks in the town, which hitherto have been sinks of filthiness and hot beds of disease. Advances to the extent of Rs. 53,550 have also been made to 228 private parties for land improvements, which have been expended in the construction of reservoirs and excavation of tanks. Most of the persons who have taken these advances have applied them faithfully to the purpose for which the loans were granted; a few, however, have done either little or nothing; and one or two instances have been reported in which the money has been applied to other purposes, such as paying off debts, getting married, &c. I therefore have directed a prosecution under Section 417, Indian Penal Code, to be instituted against one person who has thus been guilty of obtaining a loan under fraudulent pretences, which will, I have no doubt, have a very salutary effect, and act as an effectual stimulant on those who may have intended to apply the money to a different purpose from that for which it was advanced. I fear very few others will now apply for advances to whom such could be safely made.

Charitable Relief.

On the 11th of March a district relief committee was established at Purulia, and shortly after sub-divisional committees were formed at Govindpore and Raghunathpore; and on Saturday, the 4th instant, I presided at a meeting at Manbazar, where a sub-divisional committee was also formed and arrangements made for setting sub-committees at work at four places in subordination to it. It was arranged that a store of 1,000 maunds of rice be laid in at once, and depôts established at Manbazar and Bagda for the supply of cooked food to all persons in distress who are unable to work, and also to render assistance to all others who might be in need of it. Cooked food is also being supplied daily at Purulia, Govindpore, Podardih, and Raghunathpore, to about Rs. 600 indigent and diseased persons, who are quite incapable of working, and are no longer able to procure alms in their villages. The arrangements at present are sufficient to meet the necessities of the times; but should distress increase to a greater extent further measures will have to be adopted, and more officers will be required to carry them out.

At the present date there are the district relief committees at Purulia, three sub-divisional committees at Govindpore, Raghunathpore, and Manbazar, and 22 sub-committees at work spread over the district from the north-west to the south-east part of it, and at present these will suffice. To each of the sub-divisional committees Rs. 1,000 have been sent in aid of the subscriptions they have raised, to enable them to commence relief operations at once. The most intelligent and respectable persons of the neighbourhood have been selected to form the sub-committees. Where cooked food is supplied, the members of the committees are each provided with a certain number of blank tickets, which are given by them to those seeking such relief, on which the name of the person is written. With these the persons admitted to receive food go to the depôt, when the ticket is numbered, and the number and name of the party entered in the register, and then all who can show a ticket get food and no others receive any. By this means every case is properly inquired into before relief by cooked food is supplied, and none who are able to work are admitted, but are sent to labour on the nearest relief works. Sheds are being built at the depôts for the accommodation of the lame and blind, and those who are unable to return to their villages after taking their food.

Cotton will also be given out to poor women of respectable families, who may be in distress to spin into thread, for which they will be paid in rice, and this thread will then be made over to indigent weavers to weave into cloth, for which they also will be paid in rice, and the cloth then be sold or given away on charity to those who are unable to procure any themselves. This will, I consider, be necessary even for decency's sake, as it is pretty certain that those who cannot feed themselves will also be unable to provide clothes. It is also intended to assist indigent silk-weavers in the same way by supplying them with cocoons.

Total expenditure from the district and sub-divisional treasury, as shown in last narrative, Rs. 24,146-6-3.

RESOLUTION.

Scarcity and Relief Department.

Calcutta, the 9th April 1874.

Read—

The Maunbhoom Narrative for the fortnight ending 4th April 1874.

1. The falling of the mohwa crop, and the importation of Government rice are said to have had the effect of rendering prices easier in this district. Common rice is now nowhere dearer than 12 seers per rupee, and in the south of the district can be got at 16, 17, and even 18 seers. The mohwa crop has made a material addition to the food-supply, estimated at from one to two months food, according as the trees are scarce or abound. Unhappily they are scarce in the north where distress is worst. Only the begging class are suffering from actual want, and are flocking to the relief centres and eating cooked food without scruple. Work is provided for all the labouring poor. All the cases of deaths from starvation that have been reported, have proved on inquiry to be deaths from disease.

2. Colonel Rowlatt complains of the weakness of his supervising staff. The wants of more severely distressed districts prevent his getting more men; but if he can find locally any persons fit for employment as sub-overseers, he may entertain them. The returns show only 6,444 persons on road work, but the Deputy Commissioner believes that there are in reality very many more. He must arrange to obtain complete information on this matter, which is one of primary importance; any failure in obtaining this information will be regarded by the Lieutenant-Governor as an administrative shortcoming. It is expected that the next report will give a full and correct return. 388 persons are employed on other works.

3. The Government grain received (11,742 maunds), has gone easily forward and been stored. The Commissioner believes that this district will not require more than 27,000 maunds.

4. It is satisfactory to learn that most of the money advanced to private parties has been properly utilised.

5. The arrangements for charitable relief seem now complete and capable of further expansion if need be. About 600 indigent and diseased persons are in daily receipt of cooked food.

By order of the Lieutenant-Governor of Bengal,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

No. 2245—S.R.

COPY forwarded to the Deputy Commissioner, Maunbhoom, and to the Commissioner of Chota Nagpore.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

Calcutta, the 9th April 1874.

Enclosure No. 9.

No. 3M.A., dated Calcutta, the 7th April 1874.

From LORD H. ULICK BROWNE, Commissioner of the Presidency Division, to the SECRETARY to the GOVERNMENT of BENGAL, Scarcity and Relief Department.

In continuation of my No. 40M.A., dated 26th March 1874, submitting the fortnightly narrative of the Collector of Nuddea for the fortnight ending 23rd March 1874, I have now the honour to submit the collector's report for the fortnight ending 6th April 1874.

2. *Heading firstly, advances to import grain.*—Blank.

3. *Heading secondly, public works relief.*—There is so much employment afforded by the tank-digging carried out by private individuals, that comparatively few relief works are required on the part of Government. This is an excellent thing, as the road work will be useful when the rains set in and put an end to tank work. The last labor return I have received shows rather less than 4,000 people known to be employed on tanks and road work, and 800 less than were shown in the return for the previous week. This is probably owing to some demand for labour in connexion with sowing or preparations for sowing the aous crop.

4. *Heading thirdly, provision of food for relief works.*—Blank.

5. *Heading fourthly, charitable relief.*—The collector has not yet sent me a list of the proposed members of the district relief committee, though I have reminded him on the subject more than once.

He has, however, been in communication with some of the gentlemen selected, and I expect to receive the list at any moment.

6. *Heading fifthly.*—Land-owners and land-holders continue to take out tuccavee loans for tanks.

No. 368—S.R., dated Kishnaghur, the 6th April 1874.

From C. C. STEVENS, ESQ., Collector of Nuddea, to the COMMISSIONER of the PRESIDENCY DIVISION.

I HAVE the honor to submit the following report on the condition of the district during the fortnight ending this day.

2. The reports received from the several sub-divisions show that there is sufficient grain everywhere except in thana Jaguli, where the trade of rice and paddy is very limited. But as most of the zemindars have paddy-lending concerns, and there are also mahajuns who give out paddy to the ryots, there is little or no chance of there being any actual want of food. The sub-divisional officer of Kooshtea reports that "the stock of grain is sufficient to meet the local demands at the current rates." The assistant collector of Meherpore says that, as a general rule, there is no great difficulty in getting rice. The deputy collector of Ranaghat believes that except in thana Jaguli grains are plentiful everywhere else. The assistant collector of Bongong say that "it may be confidently asserted that there is little or no chance of there being any actual want of food in this sub-division." The sub-divisional officer of Chooadanga reports that the coarse varieties of rice are to be had in plenty at all the principal hâts of the sub-division, and that a brisk importation of the better qualities is going on, and the bazars are invariably well supplied. The supply of rice in the north of the Sudder and west of the Meherpore sub-divisions is scanty.

There has been one slight shower of rain in the last fortnight, but it appears to have been very unequally distributed. The latest news from Kooshtea and Meherpore show a considerable fall of rain on Saturday last. Almost all the rubee crops have been removed from the fields, and the yield has been more than was expected. The ploughing of lands for the great sowing (aous) of Baisakh has been vigorously prosecuted everywhere, and the land will probably be unusually well-tilled this year. Sowings of aous crop in low lands have commenced in Meherpore.

3. There has been no great fluctuations in the prices of grain. They have continued steady, and the following are the rates of coarse rice which have prevailed in the several principal marts:—

	Per maund.		
	Rs.	A.	P.
Meherpore	2	9	0
Bongong	2	4	0
Ranaghat	2	8	0
Santipore	2	8	0
Chogda	2	8	0
Haringhati	2	12	0
Kishnaghur	2	13	0

4. In by far the greatest part of the district I do not think that anything more than "pressure," and that not very severe, is felt. In the north-west of the district, however, there is no doubt that the middle class people are beginning to suffer want, and measures are now being taken for their assistance. The people of a class accustomed to field labour are somewhat better off in consequence of the large quantity of work being provided for them both from Government funds and from tuccavee loans.

5. The means of transport are sufficient. In Kooshtea, about 8,000 maunds of food-grains have been reported to have been imported, and about 10,000 maunds have been passed through that sub-division during the fortnight. From Chooadanga the through traffic has been reported to have been very considerable; about 20,000 maunds are estimated to have been imported, and 590 maunds exported. In Bongong both the import and export trade has considerably decreased, as the mahajuns everywhere are said to have now opened their golahs. In Ranaghat the supplies received are estimated to be 514 maunds of rice, 365 maunds of paddy, besides other kinds of grains. The Meherpore sub-division is said to have been supplied with 7,000 maunds of rice from Eastern Bengal. The export of rice from the district generally has received a natural check from high prices.

6. The portion of the district which is suffering most has been alluded to above. It is satisfactory that, from the manner in which work has been spread, the people have been enabled to attend carefully to their cultivation. I regret to say that there is a good deal of cholera in the distressed parts, and that I have had to provide three native doctors for that tract alone.

7. *Storage of Government grain.*—None; nor is any needed.

8. A relief committee has been organized, and subscriptions are being raised, chiefly with the view of affording employment to people who will spin cotton and to the weavers.

9. Twelve case of grain-thefts have been reported by the police. No cases of death or starvation have come to light.

10. Of the tanks undertaken from Government funds, those at Chandghur, Mira, and Hatgacha have almost been finished. More work will have to be provided in those neighbourhoods. The average daily number of persons on the Government works in the distressed parts is about 1,150, and is not at present increasing.

No. 2379—S.R.

From A. Mackenzie, Esq., Junior Secretary to the Government of Bengal, to the Commissioner to the Presidency Division.

Scarcity and Relief.

Sir,

Calcutta, the 14th April 1874.

I am directed to acknowledge the receipt of your letter, No. 3M.A., dated the 7th instant, submitting a copy of the Nuddea district fortnightly ending 6th idem,

2. With reference to the above, I am to say that the summary of results recorded therein affords satisfaction to the Lieutenant-Governor, and his honor will be glad to have the names of the individuals, who having distinguished themselves by providing tank-work for the relief of the distressed in this district.

I have the honor to be, Sir,
Your most obedient servant,
A. Mackenzie.
Junior Secretary to the Government of Bengal.

J. E. T. NICOLLS, Col. R.E.,
Secretary to the Government of Bengal, Public Works Department.

Calcutta, the 14th April 1874

No. 2446—S.R.

From A. Mackenzie, Esq., Junior Secretary to the Government of Bengal, to the Deputy Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce.

Scarcity and Relief.

Sir,

Calcutta, dated 17th April, 1874.

In continnation of Mr. Bernard's letter No. 2271—S.R., dated 10th April, submitting a report on cases of known deaths from starvation up to the 10th instant, I am directed to state that, in paragraph 16 of the Tirhoot Narrative for the fortnight ending 4th April (enclosure No. 4 to the 15th Narrative), several deaths are reported to have occurred in Madhoobunnee sub-division, of which perhaps five may be fairly attributed to privation. The three deaths in Hathi sub-division, noticed in the last letter, are now reported to have been deaths of persons actually in receipt of gratuitous relief, who died from diarrhœa (possibly the consequence of previous privation); they certainly did not die from starvation. The two deaths from Simrahi, also noticed in the letter of the 10th April, are the same as those described in the Bhagulpore Narrative (enclosure No. 5 of the 15th Narrative) in the words quoted in the margin. But it is now stated by the Deputy Collector that there had been great irregularity in the payment of wages to the work-people on this tank, which is Court of Wards' (Durbhunga Raj) work, and he seems to attribute the deaths to this cause. The Commissioner has been directed by telegram to look into the matter at once, and report the real facts and parties to blame, after remedying any defects of this kind in the system of payment.

"Two deaths have been just reported at the Mullarh tank: a child of 13 months from inanition, and one of the working coolies. The Deputy Collector Baboo Ramsunker Sen says he received the body, and considers starvation to have been the cause; but Mr. Duff (the Relief Superintendent) does not say so. The deceased's wife and three children were working at the tank as well, and were not newcomers."

2. From Durbhunga the sub-divisional officer reports three deaths; one a child in arms whose mother was unable to suckle it; a second that of a laborer on the Bahera road in receipt of daily pay; third that of a man found dead on the road between Durbhunga and Bahera. The cause of the death in the last case is not stated, and looking to the ample provision for relief afforded in that part of the country, and the many thousands who are taking advantage of it, the probabilities are that the death was not directly due to starvation at all. None of these Durbhunga deaths seem to fall within the category of known starvation deaths.

3. To sum up, if we deduct from the 17 cases reported up to 10th instant, the three deaths in Hathi, now ascertained to have been due to disease, and add the five deaths now reported from Mudhoobunnee, and the two cases from Simrahi (which, if the sub-divisional officers account of them be true ought perhaps to be included), we get a total, up to date, of 21 deaths attributable mainly to privation.

I have the honor to be, Sir,
Your most obedient servant,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

No. 24 of 1874.

Government of India.

Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.

Famine.

To the Most Honourable the Marquis of Salisbury, Her Majesty's Secretary of State for India.

My Lord Marquis,

Calcutta, the 24th April 1874.

In continuation of our despatches on the drought in Behar and parts of Bengal, we have the honor to forward the Supplement to the *Calcutta Gazette* of the 22nd instant, containing the usual statements of prices current and of the condition and prospects of the crops. It will be noticed that in prices there is scarcely any change, that the cold weather crops in Behar are for the most part harvested, and that in Chota Nagpore considerable relief is being afforded by the mohwa crop.

2. Sir Richard Temple is still in North Tirhoot, and we learn from him by telegraph that although in that district and in Chumparun distress is gradually increasing everywhere, it is effectually met, and preparations are being matured to arrest any sudden increase in it. The local authorities, acting under the

Lieutenant-Governor's orders, are making great efforts to break up the large gangs of labourers on relief works, and to draft the infirm and the old—women and children—to their villages, retaining the able-bodied men on the roads. These measures will effect a large reduction of the numbers on the roads, and will bring a consequent strain on the village circle system, which is being strengthened to meet the pressure so caused. The Lieutenant-Governor adds that the health of the people is good, and their physical appearance improving since the relief operations commenced. We trust to submit to Your Lordship the details of all these measures in the next special narrative.

3. No fresh cases of known deaths from starvation have been reported during the week, as will be seen from the enclosed letter from the Government of Bengal.

4. We forward herewith the *Allahabad Gazette* of the 18th instant, containing the prices current and the district reports of the North-Western Provinces. On the whole, and excepting the district of Goruckpore, these reports continue to be very satisfactory. The enclosed correspondence with the North-West Government will further inform Your Lordship of the measures of relief adopted in Bustee and Goruckpore, and of our opinion of those measures.

5. In our despatch of the 27th ultimo,* we forwarded a correspondence with the Chief Commissioner of Oudh, relative to the measures taken to mitigate scarcity in that Province. We now learn from Sir George Couper, who has recently visited the distressed tracts, that the relief works are in full operation, giving employment to about 25,000 persons, that a temporary reduction of these numbers will be caused by the gathering of the mohwa and the mango crops, which are good, and that if the usual rain sets in seasonably there will be no further fear of famine. *Part IV., pp. 3 and 5.

6. From the Government of Madras we have received the accompanying papers† relative to the partial failure of the crops in certain districts and to the measures there taken to avert distress. We await the result of the report to be submitted by the officer deputed to visit the districts concerned; it will be noted that in the opinion of the local Government the distress will not be severe. †Page 156.

7. In continuation of paragraph 7 of our despatch, No. 14 of the 6th ultimo,‡ we enclose a comparative statement§ shewing the quantity of food-grains, in detail, exported from the Presidency of Bengal in the six months, from 1st October to 31st March, in the official years 1872-73 and 1873-74. ‡Part II., page 184. §Page 168.

We have the honor to be,
My Lord Marquis,
Your Lordship's most obedient and humble Servants,
NORTHBROOK.
NAPIER OF MAGDALA.

No. 2608—S.R.

From A. Mackenzie, Esq., Junior Secretary to the Government of Bengal, to the Deputy Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce.

SCARCITY AND RELIEF.

Sir, Calcutta, dated the 23rd April 1874.

In continuation of my letter No. 2446—S.R., dated 17th instant, I am directed to state that no fresh cases of known deaths from starvation have been reported during the week in the sub-divisional returns, most of which are now to hand. In the Dinagepore district narrative for the fortnight ending 20th April, Mr. Lowis, however, writes,—"Two deaths from starvation were "reported to me" (in thana Beergunge of that district, where distress had not been anticipated); "on enquiry it turns out that these men did not actually die of starvation, but of sickness, still "there is no doubt that their deaths were hastened by want of proper nourishment. The officer "who went to enquire, was also told that one old beggar woman, who had no one to look after "her, had died from want of food, her usual alms being refused her by the villagers." The real facts as regards this last case, if it occurred, do not appear to have been ascertained. None of those cases can, perhaps, be classed as known starvation deaths, but are of the character of those described in Mr. Bernard's letter No 1835—S.R., dated 26th March.

I have the honor to be, &c.

No. 348A. of 1874.

From C. A. Elliott, Esq., Secretary to Government, North-Western Provinces, to the Secretary to Government of India, Revenue Department.

Sir, Dated Allahabad, the 16th April 1874.

I am directed to forward, for the information of His Excellency, the Governor-General in Council, a copy of my letter to Commissioner of Benares, No. 341A, dated 16th instant, being a review of the reports of a committee appointed by the Lieutenant-Governor to visit the districts of Goruckpore and Bustee on the condition and prospects of those districts.

I have the honor to be, &c.

No. 341A. of 1874.

From C. A. Elliott, Esq., Secretary to Government, North-Western Provinces, to the Commissioner, Benares Division, Scarcity Department.

Sir, Dated Allahabad, the 16th April, 1874.

I am directed to acknowledge the receipt of your letters, Nos. 51A. and 51B., dated the 22nd and 30th March, containing the views of the Travelling Famine Commission which was appointed to report on the condition of the Goruckpore and Bustee Districts.

2. Mr. Simson and yourself, with Colonel Davidson, entered the district of Goruckpore at Burhul Ghat, and marched northward to Nichloul, then westward to Bansee, thence diverged towards Mendhawul, and finally proceeded southward to Bustee. All the gangs and poor-houses were visited; the officials and native gentlemen consulted; and a full report is now submitted with proposals for the relief of both districts.

3. Throughout this tract the northern half is by far the most distressed. Rice is there the main staple and it entirely failed. Where winter crops are ordinarily sown for a second harvest, after the rice has been reaped, these also, from the early cessation of the rains, were not sown. The loss therefore, over all this northern area, has been most disastrous. But it is more complete in the Goruckpore District than in Bustee. The Maharajgunge Tuhseel in Goruckpore is the worst: towards the west things are not so bad. It is gratifying to observe that this improvement westward is in some degree due to Messrs. Bridgman and Peppe's irrigation works having preserved much rice on their estates, of which the former lies in both districts, and Mr. Peppe's estate in Bustee.

4. The Committee have closely inspected the labor gangs and also the poor-houses, and their instructions have been on all points judicious. The gangs in Goruckpore were found to be remarkably efficient and orderly. Mr. Lumsden deserves great credit for all his arrangements, which are characterized, as you say, "everywhere by forethought, care, and supervision." Mr. Peart, the District Engineer, has also done excellent service, which has been acknowledged by promotion in his department.

5. The organisation of the labour gangs was not found to be so efficient in Bustee, chiefly through inattention on the part of the District Engineer. Another officer, Mr. Tait, has now been sent to take his place; the errors and defects noticed by you have been duly remedied; and it may be hoped that the department will now be worked effectively. Mr. P. Wigram's health has broken down under the anxiety of the district charge, which he has administered with much care and good judgment. To Mr. Elliot, who has already had some experience of the district and of the distressed parts, the Lieutenant-Governor looks to see that all the arrangements connected with the relief and supply of grains are adequate and well regulated.

6. The supervision in both districts seems to be for the present sufficient, but if any material increase of labourers should occur, some additional agency may be needed. This will be readily granted. Mr. Mills, an officer of police, has been deputed to Goruckpore, and he will be able to take the oversight of some of the heavy gangs; he is well qualified for this work by his experience in similar duty at Lullutpore in 1868-9. The stationing of a European officer at Nichloul is most necessary; and the Lieutenant-Governor would impress on both magistrates the necessity of having the gangs frequently visited by their European staff and their superior native officials.

7. In a tract so extensive, and in which the failure both of the spring and of the autumn crops has been so general, it may be feared that the present harvest will not bring the relief which it is doing elsewhere; and that the numbers on the works will, especially in Goruckpore, continue to increase till the new crops of rice come. There are, by the last reports, above 24,000 already on the works in Goruckpore, and 21,000 in Bustee; and material relief and abatement are hardly to be looked for till September. It is to be feared that large crowds will be dependent on us

throughout the rainy season, and it is a point for timely and serious consideration in what way shelter and suitable work can then be provided for them during the rains. This question should engage the forethought both of Messrs. Lumsden and Elliot. No relief works have yet been opened in Deoree Tuhseel, which is said (para. 12) to be next worst after Maharajgunge, and which adjoins a peculiarly bad tract in the Sarun District. The estate of this tuhseel should be looked to by the Joint Magistrate of Kussya, and projects for relief work should be matured and held in readiness, to be set on foot whenever they may be found necessary.

8. In regard to the sufficiency of grain in the country, there seems little doubt that Bustee will not suffer anywhere from scarcity of stocks. Still Mr. Elliot should satisfy himself personally on this point, although your conclusions seem based on satisfactory grounds. In Goruckpore, on the contrary, the markets to the north, in the Maharajgunge Tuhseel, may run short at a time when importation is difficult in the rains. The population of this tuhseel is about 325,000 souls; of this, Mr. Lumsden calculates that private stores will provide for three-fourths, but that a fourth, or, say (80,000), may have to be provided for by aided importation for five months, say, at half a seer per diem all round, or about 150,000 maunds. To secure this, two courses are proposed: first, to advance money (repayable within a year) free of interest to traders, who will guarantee to store grain at points indicated by the Magistrate. The rate is to be the average prevailing between 15th April and 15th May next, and for every 40 seers so calculated, the contractor is to lay down 30 at the required depôts. The grain is to be imported from the more prosperous tracts, and is to be inspected by the magistrate. The Government will have power to take whatever quantity of grain they require from these stores, at the rate above indicated, up to 15th October, after which date the contractor may sell the balance as he likes. The advantages of the plan are fully detailed in paragraph 19 of your report.

9. Besides this, advances without interest, but repayable within six months, will be offered to grain merchants, who will import food from the more prosperous tracts into the Maharajgunge Tuhseel, which they can sell at their own discretion. This plan is the more to be commended, because it will interfere as little as possible with private enterprise and trade.

10. Mr. Lumsden will, from time to time, report his proceedings under this authority; and he will, as noted in paragraph 15 of the report, hold his hand at discretion as he finds the pulse of the market growing full and satisfactory. He is, however, responsible for providing that at least 150,000 maunds shall be laid down in the northern depôts, unless he has satisfactory grounds (which should be communicated to Government) for believing that so large a quantity is not needed.

11. The next proposal is the advance of tuccavee for seed grain. This is an anxious subject: for if seed-rice is only procured with great difficulty the consequences to agriculture may be serious. The Government of India will be asked to secure the good services of the Nepal Durbar to allow seed-rice to be exported to our zemindars, they supplying other grain, as wheat and barley, if necessary, in lieu of it. A lakh and a half of rupees may be advanced without interest to the zemindars for this purpose (paragraph 14, Goruckpore Report). In Bustee the same measure will be necessary, but to a lesser degree (paragraph 31). Half a lakh of rupees may be authorized on this account (without interest for one year), the amount in each case to be regulated by the area of rice cultivation. The operations under this head will be reported to the board, and regulated by them, both as to terms and period for repayment.

12. There remains the question of remission or suspension of part of the revenue demand. The settlement in Goruckpore is, as a rule, very light; but the greatness of the calamity, and the present prostration of agricultural interests, fully justify the Commission in their proposals for a partial remission, which, to inspire confidence and heart, should, as proposed, be definite and final.

13. The calamity having been uniform in its intensity throughout the Maharajgunge Tuhseel, Mr. Lumsden thinks that the remission should also be uniform. This will avoid detailed investigation and all inducements to bribery and corruption. The Collector is right in holding that this measure may be made irrespective of the means of individual zemindars. One half of the rubbee demand in that tuhseel, or one quarter of the year's revenue, estimated at about Rs. 66,000, may, accordingly, be remitted. The principle of Section 23, Act XVIII. of 1873, will be applicable, in order that the relief may with certainty reach the cultivator. In the rest of the district the collector will treat each case upon its own merits, making such recommendations for remission or suspension as the circumstances may justify.

14. Similar considerations, but with somewhat less severity, apply to Bustee. The arrangements settled by you with the Collector will place this matter on a satisfactory basis. The area recorded in the settlement records as under "Jurhun" and "Bhudowee" (or late and early) rice, will be noted, and a proportionate reduction made in the demand. The circumstances here not being so urgent as in Goruckpore, it will be open to the collector to consider whether the relief should be by temporary suspension or permanent remission.

15. It would be useful if the Government and Board were in possession of a map, shewing in colored outline the tracts most affected, or as they are called in Bengal in "black," or worst tracts, and the "grey," or less severely afflicted tracts, and this should be prepared by Messrs. Lumsden and Elliot as soon as they have leisure. The expenditure up to the end of March has been about Rs. 51,000.

16. It is roughly estimated that the relief works may cost half a lakh of rupees a month in each district up to September, or (say) six lakhs of rupees. The Government of India and the Accountant-General will be apprised of this estimate, including the works in progress or that may hereafter be required in other districts. It is hoped that the whole expenditure may not

exceed, both in labour and (contribution to) charitable relief, seven or eight lakhs of rupees; but this estimate is dependent on the full and timely setting in and continuance of the coming rains.

17. The Deputy Surgeon-General, Allahabad Circle, will be requested to see that all reasonable requisitions for native doctors and medicines are promptly met. The arrangements of the Committee for Hospitals and for the segregation of infectious and other diseased persons are judicious.

18. I am to request that the thanks of Government may be conveyed to Mr. Warren for his public spirit in undertaking charge of the works at Gopalpore. Orders are under issue, through the Board, directing that a covenanted assistant magistrate from each district should be stationed in direct supervision of the works in the north.

19. During the Lieutenant-Governor's tour in Goruckpore and Bustee, the subject of utilizing the streams running from the Terai was considered by His Honor, and some correspondence ensued. But the Irrigation Department could not spare an officer for the survey at the time. The project will now be taken up again by the Public Works Department, but any design of the kind will take time to mature, and will, it is feared, hardly afford labor soon enough to meet present requirements. It will not, however, be lost sight of.

20. Finally, Sir William Muir's cordial thanks are tendered to Mr. Simson, yourself, and to Colonel Davidson, for the admirable manner in which you have carried out his instructions. Your inspection has been thorough and scrutinizing; your directions have been full and judicious; and by aid of the information and advice thus rendered the Government is enabled to look forward with confidence to the issue, and to believe that the principle enforced by the Government—that there shall be no loss of any single human life which can, by any reasonable efforts or means at the disposal of Government, be saved—will be carried out fully and effectively, and yet without any unnecessary expenditure of the Government resources.

I have the honor to be, &c.

No. 1384.

From **Arthur Howell**, Esq., Deputy Secretary to the Government of India, to the Secretary to the Government of the North-western Provinces, Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.—Famine.

Sir, Dated Calcutta, 23rd April 1874.

I am directed to acknowledge the receipt of your letter No. 348A of the 16 instant, enclosing the Lieutenant-Governor's review of the reports of the Committee appointed to enquire into the condition and prospects of the districts of Bustee and Gorruckpore.

2. In reply I am to state that the Government of India approve of the measures adopted, and especially of the particular attention that has been paid to procuring seed rice of proper quality. The Government of the North-Western Provinces have already been informed that the Nepalese Government have agreed to give facilities for the supply of seed grain from Nepal.

3. This correspondence will be published in the *Gazette of India* and reported to the Right Honorable the Secretary of State.

I have the honour to be, &c.

Letter from **C. G. Master**, Esq., Acting Secretary to the Government of Madras, to the Secretary to the Government of India, Department of Revenue, Agriculture, and Commerce.—No. 412, dated 1st April 1874.

I am directed to forward, for submission to the Right Honorable the Governor General in Council, the papers noted in the margin, furnishing the information as to the failure of the harvest and the consequent scarcity of food grains in the districts of South Arcot, Trichinopoly, and Coimbatore.

Go. O.,	13th January	1874, No.	52.
„	10th February	„ „	181.
„	24th „	„ „	251.
„	3rd March	„ „	302.
„	3rd „	„ „	304.
„	10th „	„ „	330.
„	17th „	„ „	358.

2. This Government, it will be seen, have ordered the commencement of relief works and the establishment of relief houses where necessary, and have deputed Mr. Banbury, Second Member of the Board of Revenue, to South Arcot to report on the condition of the district and the measures which should be adopted to mitigate the effects of the scarcity.

3. The crops in the districts of Chingleput, Madura, and Tinnevelly have also failed to a large extent, and in these, as well as in the districts already named, considerable remissions of land revenue will have to be made.

4. From the further information which has reached them there is not, in the opinion of Government, any probability of severe distress. Mr. Banbury has completed his inquiry, and the Government expect his report in a few days.

Proceedings of the Government of Madras in the Revenue Department,—No. 52, dated 13th January 1873.

Read the following:—

Proceedings of the Board of Revenue,—No. 8733, dated 20th December 1870.

Read the following:—

LETTER from J. B. PENNINGTON, ESQ., Acting Collector of Trichinopoly, to the SECRETARY to the BOARD OF REVENUE,—No. 8733, dated Trichinopoly, 15th December 1873.

With reference to my season telegram of the 9th instant, I think it desirable to apprise the Board of the possibility of a considerable failure in the harvest to the east of the Trichinopoly Taluq, chiefly in the villages dependent on the great *Kuttapar* Tank which is now empty.

2. As intimated in my telegram, there has been a practical failure of the monsoon almost all over the district; for, though we had a considerable fall of rain (from the west) in October, as noted in the margin, the weather cleared up at the beginning of November, and there has been no rain to speak of* in this part of the district since. One consequence of this failure of the rain that is expected here in November and the beginning of December has been that the Cauvery has been too low to furnish a full supply to the channels, and yet too high to permit of the construction of Corumboos; so that the first constructed (on the 27th ultimo) was breached almost immediately.

Inches 16.

* Inches only 1·12.

3. It has been successfully repaired at last, and water is again coming down the channel; but whether it will reach Kuttapar in time to save the crops remains to be seen.

4. The Tahsildar has just returned from the head of the Weyacondan, and is now on his way to Kuttapar, the channel being full again. Every effort is being made to expedite the flow of water by clearing out the channel; a revenue inspector has been sent to the villages affected to report daily on the state of affairs, and I am making special inquiries as to the condition of the crops in the Illupur Division to the south where, I am afraid, the season has been peculiarly bad and the tanks are all rain-fed.

5. A capricious season like the present clearly proves how much these long and ill-regulated channels require subsidiary reservoirs such as that described in Mr. Banbury's Report to the Board, dated 29th December 1868, No. 266, to the importance of which I drew attention in forwarding* a copy on 10th June 1873. As it is, the land affected is practically as much dependent on the local rainfall as that under any purely rain-fed tank.

* *Vide* Board's Proceedings, No. 1864, dated 23rd July 1873.

6. There was slight rain here yesterday, but it seems to have passed off again.

P.S.—I have just learnt that water is flowing freely into the Kuttapar tank, and trust that the crops may nearly all be saved. There is also some slight prospect of rain to-day, but the accounts from the south are not hopeful.

Submitted for the information of Government.

2. The Board are glad to say they have heard that rain has fallen in Trichinopoly since this letter was written.

ORDER thereon by the GOVERNMENT OF MADRÁS.

The Government are glad to hear that later accounts are more favourable.

2. These papers will be communicated to the Department Public Works, for early consideration of paragraph 5 of the acting collector's letter.

PROCEEDINGS of the GOVERNMENT OF MADRAS, REVENUE DEPARTMENT, No. 181 dated, 10th February 1874.

Read the following:—

PROCEEDINGS of the BOARD OF REVENUE,—No. 220, dated 4th February 1874.

Read the following:—

LETTER from J. B. PENNINGTON, ESQ., Acting Collector of Trichinopoly to the SECRETARY to the BOARD OF REVENUE,—No. 18, dated Viralimalei, the 27th January 1874.

I very much regret to have to report that the harvest in the southern part of the Trichinopoly Taluq (commonly called the Illuppur Division), comprising the villages marginally noted (with a population of 17,807 by the last census), has almost entirely failed.

1. Kottrapatti.
2. Kottargudi.
3. Isvarankovil.
4. Yennai.
5. Illuppur.
6. Yidayapatti.
7. Papukudi.
8. Pungunipatti.
9. Irundevipatti.
10. Vattukadu.
11. Vellaiyar.
12. Virapatti.
13. Rappusal.
14. Perunallur.
15. Velur.
16. Alundur.

2. There has been no rain to speak of since October, and in many villages it is not too much to say that the whole harvest of wet and dry grains will not produce one measure of seed for next year; and, except perhaps in one village (Rappusal), the few fields that have escaped have been saved by unremitting labour at wells, and it is doubtful if the outturn will repay the expenditure.

3. I have suspended collections on rice-land, and am having careful accounts prepared of the crops that have actually perished from want of water; and having seen many of the villages with my own eyes, shall have no hesitation in remitting the assessment on them entirely under Board's Circular Order No. XX of 1872 (S. O. No. 137-31.

4. There does not, however, appear to be any great scarcity of grains as yet, partly owing to the harvest of last year having been good, and partly to the fact that, within five miles of Illuppur (at Annavasal in the Puducottah territory), the crops are magnificent and paddy will be abundant; so that prices have not risen materially as yet.

5. I do not, therefore, propose any remission on dry land though, I believe, the crop has not been more than 1-16th of the average); but, as there may be a lack of work for agricultural labourers, I have requested the district engineer to prepare estimates for repairing one tank in each village by way of providing employment if it is required. It is said that many of the pullers have gone already to Dindigul and the new line of railway to get work, and Ceylon is a well-known labour-market close at hand, to which they will resort if necessary; so that I do not anticipate anything like actual starvation.

6. I have, however, requested the deputy collector to proceed to Illuppur to watch the progress of events, and shall get him to spend some of the money that has already been allotted for the improvement of the water-supply in villages in clearing out and enlarging the drinking-water tanks of Illuppur and the surrounding hamlets. At present the want of good water is their greatest grievance.

Submitted for the information of Government.

2. The part of Trichinopoly on which Mr. Pennington reports always suffers first and most when there is a drought. The measures which he has taken in sending the deputy collector to Illuppur and preparing to give work to the villagers (if necessary) on their village tanks seem to be sufficient and the best that can be made. The Board think Mr. Pennington should be authorised to have the work on any tank commenced without waiting for the estimate to be prepared, if he thinks it necessary to do so.

3. There seems to be no need to fear any great scarcity of food at present, but the progress of events should be carefully watched.

4. The Board observe that Mr. Pennington does not intend at present to recommend any remission on dry land, though he believes the yield has not been more than 1-16th of the average. If there is any great distress, this matter will, of course, be reconsidered.

ORDER thereon by the GOVERNMENT of MADRAS.

The measures contemplated by the Collector for the employment of farm labourers, who are likely, under present circumstances, to be thrown out of work, are judicious. It is observed, however, that great numbers of these people are obtaining work in Ceylon and on the new line of railway in the adjoining district.

2. The Board's suggestion that the relief works may be at once taken up as emergent, if necessary, is approved.

PROCEEDINGS of the GOVERNMENT of MADRAS in the REVENUE DEPARTMENT,—No. 251, dated 24th February 1874.

Read the following:—

PROCEEDINGS of the BOARD of REVENUE,—Dated 23rd February 1874.

Read the following:—

LETTER from J. H. GARSTIN, Esq., Collector of South Arcot, to the SECRETARY to the BOARD of REVENUE.—No. 82, dated Cuddalore, 19th February 1874.

As the Board in their proceedings of the 2nd instant throw on me the responsibility, as a matter of course, of foreseeing any scarcity which may be coming on, and of providing against it, I have the honor to state that I do anticipate scarcity during the months of April, May, June, and July in some parts of this district, more particularly in the western and north-western portions, and I, therefore, beg to have the sum of Rs. 30,000 at once placed at my disposal for the purchase of grain and for defraying the expenses attendant on its storage, distribution, and the establishment of relief houses.

2. The sum asked for may seem large, but I fear it is not more than what the necessities of the case may require. The present prices of the staple food-grains at the very moment of harvest are, as set forth in the table given below, side by side with the prices ruling at this time last year, and in the last year of scarcity, very high:—

Grains.	Number of Local Measures sold per Rupee.						
	1874. February.	1873. February.	1872. February.	1866 (Famine Year).			
				February.	June.	July.	August.

Ulundu	6¼	7½	9¼	7	5¾	5	4¼

3. Large quantities of rice are being exported, viâ Porto Novo, to Ceylon; and it is but too manifest that prices will rise, thus putting it altogether beyond the power of the poorest classes to purchase those grains which they are accustomed to eat, and I, therefore, think the present moment should be seized to buy and store up in those parts where the scarcity is likely to be most severely felt a sufficient quantity of grain, wherewith to pay and feed those who may come to the Government for food, and are able to work for it, and to feed those who may not be able to work.

4. Twenty thousand rupees laid out at once in buying paddy, ragi, and cambu will purchase enough to feed about 1,200 persons for four months, and I shall consider myself very fortunate if there are no more than that number to be assisted during that period throughout the district. Should the number be less and the grain not required, it can easily be sold without any loss; but it will be of little use granting money hereafter if food is not to be bought. Now is the time to take measures against any possible famine by storing food, and, therefore, I do not hesitate to take on myself the responsibility of asking for funds.

5. The jamabundi will not be over till the middle or end of April throughout the whole district, and till then I cannot expect to receive the reports from the divisional officers which I called for in my circular memorandum, of which a copy was sent to the Board; so that I shall not be in possession of detailed information, gathered from all the village officers of the district, as to the stocks of grains in their villages, and the prospects of scarcity in their vicinity, till such scarcity has actually begun, and it will then be too late to take preventive measures; so that in the present crisis, time being an element of the greatest value, and detailed official reports not being available, I am obliged to act on such information as I can get; and from what I learnt yesterday in a long conversation with the Trikalore tahsildar, who has just finished a three-month tour throughout his taluq (during which he has revised the ayacuts of all the tanks in his taluq which required revision), there seems to be little doubt that in the western portion of that taluq and throughout much of Trinomalay, and in the Gingee Frikah of Tindivanum severe distress from scarcity of food will be felt.

6. I propose, therefore, that if the sum I ask for be granted, to place most of it at the disposal of the divisional officers for the purpose of at once buying and storing in the centres of the tracts most likely to be affected all the grains of different kinds which they can for the sums placed at their disposal, arranging for the employment of all persons who can work and who require relief as much as possible on the repairs of their own village tanks and channels, payment being always made in grain. For those who cannot work food would have to be supplied at relief houses. The rest of the funds would be held in reserve to meet contingent expenses.

7. I have again called on the divisional officers for immediate reports as to the probability of scarcity in their divisions, and hope soon to receive them. They will be at once forwarded to the Board.

8. I deprecate the employment on new works of such persons as may be employed as labourers receiving relief, because, in the first place, as they will probably be for the most part people accustomed to agricultural labour, they will all the more readily and easily devote themselves to repairing tanks and clearing channels, while this work will prove certainly more remunerative to Government than any other, and will admit of supervision by village officers.

9. As to the source from which the funds asked for may be supplied, I cannot think of any better one than Local Fund balances, which, up to the end of last month, amounted to a sum of Rs. 2,10,766 for the two circles in this district, after making provision for all charges, except that of Department of Public Works supervision which may be set down as under Rs. 75,000.

Submitted for the orders of Government.

2. The Collector of South Arcot, referring to the Board's intimation in their Proceedings of the 2nd February 1874, No. 198, that "the Collector will, of course, be careful that if a scarcity "is really coming it is foreseen and provided against," reports that he expects scarcity in the western part of Trikalore, in a great portion of Trinomalay and in the Gingee part of Tindivanam, and applies for sanction to buy Rs. 20,000 worth of grain, and spend Rs. 10,000 more in storing and distributing it, and establishing relief houses. He proposes to employ the distressed on tanks and channels and pay them in grain, and to establish relief houses wherever they may be necessary. He suggests that the Rs. 30,000 may be taken from the Local Fund balances.

3. The price list given by the Collector, which states the number of "paddies" (each of which is equal to 1·68 imperial seers) selling for a rupee, is ominous, inasmuch as it shows that prices are rising rapidly, and have reached the level which they attained at the same time of 1866, "the famine year;" but it is not, as the Collector thinks, a significant fact that prices are so high at the very time of the harvest, for the experience of the Settlement Department shows that prices are not lower during the ryots' selling months than during any other part of the year. The exports of grain, so far as the Board can gather from a hasty inspection of the returns before them, are unusually large. The exports of rice from Cuddalore and Porto Novo from November to January in 1872–73 were valued at Rs. 13,304. In the same months in 1873–74 they were valued at Rs. 34,129.

4. Beyond the rise in prices and activity in exports, the Collector has no definite information, and he does not expect to have such information in time.

5. His chief reason for applying for leave to purchase grain immediately seems to be that it will become dearer, but this is not enough. A large purchase of grain in the local market would make prices rise suddenly, and would probably cause a panic. The mere raising of prices would enormously increase the number of people unable to buy grain enough to support life. Nothing would justify such a disturbance of trade, except a reasonable assurance that the stock

of grain in the afflicted areas is too small, and that the creation of a demand for it by distributing money will not attract grain in the ordinary course of trade. This is not proved. On the contrary, the areas which are threatened are small, and within three or four days' journey of the coast, so that grain can be carried into them promptly, either from the ports or from the surrounding tracts. Even if it ever becomes necessary for the Collector to buy grain, the Board think he should import it from Madras or one of the northern ports.

6. The Board resolve to recommend Government to authorize the Collector to proceed with all works (situated in the threatened tracts) which are entered in the Local Fund Budget for 1874-75, which is now before Government, and to begin as relief work the cleansing of tanks and channels in any villages which may appear to be in a specially bad condition. Payment must, of course, be made in money as long as grain can be bought by the labourers. The cost of these relief works, the Board think, should be paid from Imperial Funds. It may eventually be necessary to establish relief houses, and this also should be left to the Collector's discretion.

ORDER thereon by the GOVERNMENT OF MADRAS.

The Government approve of the Board's proposals, contained in the last paragraph of their proceedings, for the execution of Local Fund works in anticipation of the budget being passed, and for the commencement of relief works of the nature described where absolutely necessary. The question of provision for the latter will be referred to the Department Public Works for consideration. Should it prove necessary, relief houses must be opened.

2. Further particulars regarding the state of this tract of country should be submitted on receipt.

PROCEEDINGS of the GOVERNMENT OF MADRAS, REVENUE DEPARTMENT,—No. 302, dated 3rd March 1874.

Read the following:—

PROCEEDINGS of the BOARD OF REVENUE,—Dated 27th February 1874.

Read the following:—

LETTER from J. H. GARSTIN, ESQ., Collector of South Arcot, to the SECRETARY to the BOARD OF REVENUE,—No. 92, dated Porto Novo, the 21st February 1874.

I have the honour to forward, for the perusal and consideration of the Board, the enclosed translation of a petition presented to me by the inhabitants of this place. They find it very hard to get grain, and it is to them an exasperating thing to see it being exported to Ceylon. A French vessel, the *Volta*, sailed only the day before yesterday with 5,000 sacks of rice (not paddy) equal to 750,000 lbs. of ordinary food.

2. The petitioners ask either to have the export trade stopped, or that all rice brought into the town on fair-days should be ordered to be sold in the local market. In an interview with me they asked to have as an alternative at least a proportion of all the rice brought here sold to the people, while the rest only might be exported.

3. I pointed out to them I had no power to do what they asked, but promised to refer their petition to higher authority, and send it to the Board accordingly. It would no doubt be much better for the district if no export trade in rice existed at present; but I do not consider the petitioners have made out a case for forbidding exports. Government can, in effect, stop them best by buying up the rice now.

4. The value of the petition, however, in my opinion, consists in its showing only too clearly that the high prices of food are already beginning to be severely felt, and to demonstrate the necessity for laying in stores of grain for the use of the poorer classes, while the opportunity still offers of getting it at prices which are reasonable, compared with what they will hereafter rise to.

5. The tahsildar of this taluq (Chellambram) tells me, he anticipates distress in the western and northern parts of his taluq before long.

Submitted for the information of Government.

2. The request of the petitioners is, of course, inadmissible.

ORDER thereon by the GOVERNMENT OF MADRAS.

The Government concur with the Board.

PROCEEDINGS of the GOVERNMENT OF MADRAS, REVENUE DEPARTMENT,—No. 304, dated 3rd March 1874.

Read the following:—

PROCEEDINGS of the BOARD OF REVENUE, No. 1470, dated 2nd August 1873.

Read the following:—

LETTER from H. E. SULLIVAN, ESQ., Acting Collector of South Arcot, to the SECRETARY to the BOARD OF REVENUE,—No. 184, dated 30th May 1873.

In my letter, dated 26th instant, No. 183, I had the honour to reply to the Board's Proceedings, dated 5th February last, No. 157, with reference to the proposed increase in the numbers and emoluments of Revenue Inspectors; and the report called for in the same proceedings in regard to the necessity of revising the taluq establishments generally will follow as soon as I get in the necessary information from the divisions. As, however, a considerable time must elapse before the much-needed reform in these respects can be given effect to, I would urge the Board to take up for separate and early consideration the claims of the Kullakurchi Taluq to be put on a similar footing at once in regard to the establishment with the neighbouring taluq of Virdachellum.

2. I append a comparative statement showing the area, number of villages, beriz, and population of the two taluqs :—

—	Area in Acres.	Number of Villages.	Beriz.	Population.
			Rs.	
Virdachellum - - - - -	3,62,323	304	3,91,929	1,80,411
Kullakurchi - - - - -	3,88,819	413	3,59,548	1,97,912

Kullakurchi is the only taluq in the district where there is not a Deputy Tahsildar and Sub-Magistrate to relieve the Tahsildar of a portion of his magisterial work. During the past year 489 cases were tried by, and five cases committed by the Sub-Magistrate. Moreover, there are only three Revenue Inspectors against four Revenue Inspectors employed in Virdachellum.

3. The necessity of putting the establishment of this taluq on a more efficient footing has been repeatedly urged on me by the Sub-Collector, in whose division it is situated, and I enclose an extract from a letter of his on the subject dated so far back as June 1872. I did not bring it forward at the time, because in my letter, dated 23rd July 1872, No. 220, in reply to the Board's Proceedings of the 8th January 1872, No. 52, I expressed my opinion that the time had arrived for a thorough revision of establishments throughout the Presidency, and I observe, with satisfaction, that a step is being made in that direction; but, as remarked above, so long a time must necessarily elapse before the measure can be carried out, that I do not feel myself justified in delaying any longer to submit for consideration the necessity for early action in this particular case.

4. The additional establishment asked for this taluq is as follows :—

	Rs.
1 Deputy Tahsildar and Sub-Magistrate - - -	70
2 Gumastahs, at Rs. 15 - - - - - -	30
1 Massalchee „ 5 - - - - - -	5
2 Peons „ 6 - - - - - -	12
1 Dufterbund „ 7 - - - - - -	7
1 Revenue Inspector - - - - - -	20
	44 per mensem.
	or 1,728 „ annum.

5. A copy of a later communication on the same subject from the Sub-Collector, dated 25th ultimo, No. 176, is also enclosed for the Board's information.

Enclosure No. 1.

EXTRACT from a letter from the ACTING SUB-COLLECTOR to the ACTING COLLECTOR of SOUTH ARCOT.—No. 261, dated 25th June 1872.

7. Though this letter is in answer to a call on a general question, I wish to bring to notice the under-handed state of Kullakurchi Taluq. It is the only taluq in the district where there is no out-station Sub-Magistrate and Deputy Tahsildar. The taluq has an area of 579 square miles, and is larger than Trikalore or Virdachellum, with nearly the same beriz. Besides being without a Deputy Tahsildar, there are only three Revenue Inspectors and nine Taluq Gumastahs against four Revenue Inspectors and nine Taluq Gumastahs in Virdachellum.

8. I have no hesitation in saying that the revenue agency in Kullakurchi Taluq is inadequate for satisfactory revenue administration. Why should Rs. 159 a month (irrespective of the difference in the pay of the Tahsildars) be paid to subordinate revenue servants in Virdachellum Taluq in excess of that paid to the revenue servants in Kullakurchi Taluq?

9. It is hardly safe to hazard prophecies in an official letter; but the Curnams have it all their own way in Kullakurchi, and I cannot doubt that a proper establishment would lead immediately to increased revenue.

10. I trust, therefore, you will advocate Kullakurchi being put on the same footing as the sister taluqs of Trikalore and Virdachellum. Even Trinamallay has a Sub-Magistrate at Chengum, but I do not wish to have a Rs. 50 Sub-Magistrate at an out-station, and would rather be without one at all. I ask for a Sub-Magistrate and Deputy Tahsildar on Rs. 70 a month with a proper office establishment of two Gumastahs on Rs. 15 each, a Dufterbund on Rs. 7, two Peons on Rs. 6 each, and a Massalchee.

Enclosure No. 2.

Letter from A. L. Lister, Esq., Acting Sub-Collector, to the Acting Collector of South Arcot,—No. 176, dated Porto Novo, the 25th April 1873.

I have the honor to ask your attention to paragraphs 7–10 of my letter No. 261 of the 25th June last, and to request you to move Government to appoint a Sub-Magistrate to Kullakurchi Taluq.

2. This is a separate question from the general one of increasing the subordinate revenue agency, and I hope you will make it the subject of a special reference.

3. After ten months' further experience, I wish again to declare my opinion that satisfactory revenue administration is impossible with the inadequate staff at the Tahsildar's disposal in Kullakurchi Taluq ; the Curnams are complete masters of the situation.

4. If you decide to address Government about this, there is one disadvantage South Arcot labours under, which might be represented; while in all the surrounding districts (Chingleput, Tanjore, Salem, North Arcot, and even Trichinopoly) there are one or more Sub-Magistrates' posts on Rs. 100, there is not a single one in South Arcot. Trivady and Manargoody are important stations.

It would be useless to apply to Government for this increase in the establishment of one taluq at present. The letter must lie over for consideration with the general subject; but, in the meantime, the Board, who recognise the force of the Collector's recommendations, will receive favourably any proposal that may be made for strengthening the establishment of Kullakurchi by transfers from other taluqs without increasing the total charge.

Extract from the Proceedings of the Board of Revenue,—Dated 3rd March 1874.

Read the following papers:—

Letter from J. H. Garstin, Esq., Collector of South Arcot, to the Secretary to the Board of Revenue,—No. 96, dated 24th February 1874.

In forwarding the enclosed copy of a letter from Mr. Lister, Acting Sub-Collector, dated 21st February 1874, No. 104, and translation of an arzi to that officer from the Tahsildar of Kullakurchi, I have the honor to request that the application for an additional establishment for that taluk may be sent on at once to Government. The case is of such a pressing nature, looking to the probability of great scarcity in parts of the taluq, that I trust the Board will modify the views expressed in their proceedings of the 2nd August last, No. 1470, and forward the application for the favourable consideration of Government, with a view to immediate sanction being accorded for the entertainment of the establishment asked for.

2. It appears to me that the necessity of placing the taluq establishment of Kullakurchi on a proper footing is, even in a fair season, a question quite apart from the general one of the revision of taluq establishments, and that in a bad season like the present one the necessity becomes imperative.

3. The force of Mr. Lister's figures and arguments has been already admitted by the Board in the proceedings above quoted, and if it had been possible to act on the Board's suggestion to transfer the necessary establishment from other taluqs, I would have done so, but such an arrangement is, I fear, impossible.

Letter from J. H. Garstin, Esq., Collector of South Arcot, to the Secretary to the Board of Revenue,—No. 97, dated 26th February 1874.

I have the honour to forward copies of a report * from the Assistant Collector in charge of the Cuddalore Taluq, and its three enclosures, for the Board's information.

* Dated 24th February 1874, No. 39.

2. I do not consider that the Tahsildar's estimates of the numbers to be fed, or the cost of feeding them, are to be relied upon; both, I fear, will prove to be under the mark if relief houses have to be established in this taluq.

3. With my letter of the 24th instant, No. 96, I sent to the Board a copy of the Sub-Collector's letter on the state of the Kullakurchi Taluq, and a translation of the arzi of the Tahsildar of that taluq.

4. I have not yet received detailed reports regarding the other six taluqs, but expect them hourly. In the Villapuram Taluq I learn from the Head Assistant Collector, demi-officially, that the crops on about 450 acres of wet land under the Valavanur tank, which has the largest beriz of any in the district, have perished.

Letter from C. Sri Baliah, Deputy Collector, General Duties, South Arcot, to the Collector of South Arcot,—No. 68, dated 24th February 1874.

In reply to your circular memorandum No. 135, dated 17th instant, I have the honor to inform you that from inquiries I have made personally and from those of the Tahsildars who had recently to make long tours in their respective taluqs in connexion with the work of revising the tank ayacuts, there is strong reason to believe that scarcity of grains will be severely felt in several places in this division just after the present cutting should be over. Should the season change for the better, the earliest dry crop we can hope for is cumboo, which will come to hand about the end of August. Till then the difficulty will be more or less felt according as the season continues as at present or changes for the better.

2. Relief houses may, therefore, be required in the months of April to July in the localities named in the margin. I am of opinion, however, that a great saving might be effected by opening certain famine works reproductive in their nature, and this would prevent the transfer of able-bodied men to congee-houses. We already read in the newspapers that workmen in Bengal have removed to Tirhoot and other places to be fed in relief houses in preference to earning their means of livelihood by some occupation or other.

Trikalore Taluq.	*Trinomallay Taluq.*
1. Manalurpett.	1. Trinomallay.
2. Trikalore.	2. Pachel.
3. Ulandurpett.	3. Eryur.
4. Elavanasur.	4. Chinniampett.

3. I would recommend that relief houses be open to old and helpless men and children, and where no famine works are available within easy distance; and that the works to be hereafter detailed be commenced or sanction obtained for their commencement when relief operations become inevitable.

Atmanadha Mudaliar recommends three works:—

(1.) Excavating a channel, about eight miles in length, to conduct the surplus water of the river-fed tank of Eryur village, in Trinomallay Taluq, to the large tank of Samudram village and to several intermediate tanks.

(2.) Widening the river-channel feeding the tank of Keelavannakkambadi, and also the channel taking its surplus water to the tank of Radhapuram; and

(3.) Continuing the Chekkadi road from Thandramput to Salem frontier viâ Chinniampett.

4. As to the first-mentioned work, the ryots concerned have repeatedly asked for it, and although the levels seem to have been taken some time ago by the officers of the Public Works Department, nothing has been done towards carrying out the work. The channel, it would appear, has to be taken through a rocky soil some distance, but the work for which I learn there is sufficient fall would prove a great boon to the ryots in that portion of the dry taluq. The Tahsildar informs me that the overseer who inspected the line thinks the work a feasible and remunerative one, and I would strongly recommend that some competent officer be desired to report specially on this proposal.

The second work requires no comment.

3rd Item.—The Chekkadi tract is singularly devoid of roads. There is but one isolated line of about ten miles in length, and being out of the way, it does not seem to receive any attention from the superior officers of the department.

The road from Trinomallay to Thandramput was formed in the famine season of 1868, and was intended to be taken into the heart of Chekkadi, and to this day it goes by the name of Chekkadi road. The opening of the works (1) and (3) would obviate the necessity for opening relief houses at Pechel and Chinniampett, except perhaps for the old and helpless.

5. I am collecting information as to relief works required in the Trikalore Taluq, and will shortly submit my proposals.

Endorsed by the Collector of South Arcot,—No. 102, dated Cuddalore, the 28th February 1874.

Forwarded to the Revenue Board for their information, in continuation of the collector's letter of the 24th instant, No. 96.

In these papers, information is given as to threatened distress in the taluqs of Cuddalore, Kullakurchi, Trikalore, and Trinomallay.

2. In Cuddalore the assistant collector states that there has been a considerable failure of dry and wet crops throughout the taluq and an entire failure of dry crops in 58 villages, with a population of 29,679 (the total population of the taluq is 284,849). There is likely to be a scarcity of food-grains from the beginning of April to the beginning of July. The stock of last year's paddy is said to have been destroyed by "some insect." A large amount of grain can be had at cheap rates in Trivady.

3. The Tahsildar thinks that Government interference will only be required in the 58 villages referred to above. The assistant collector can think of no other work to employ the people on than clearing tank-beds and channels and repairing bunds. He recommends that relief houses, costing Rs. 7 each, should be erected at Kurinjepady, Trivady, and Cuddalore, and that arrangements should be made for feeding 845 people for three months, at a cost of 10 pies a-head per diem for food, the total expenditure at the relief houses being altogether Rs. 4,100.

4. Mr. Garstin, in sending on this report, merely remarks that, if relief houses are established, the estimate limiting the number relieved to 845 will be exceeded. The Board agree with him. Just as workmen at Calcutta are said to have left for the famine-stricken province of Tirhoot when they heard that rice was to be got there for nothing at the Government relief houses, so the establishment of relief houses at Cuddalore, Trivady, and Kurinjepady must, even under the most careful restrictions, foster vagrancy and pauperism. Government have already said that relief houses must be opened if it proves necessary to do so. The opening of such houses must be deferred as long as it safely can be, and until scarcity has weakened the population, so as to make it inexpedient to demand the ordinary tale of work as a condition of relief, the distribution must be strictly limited to those who are incapable of work by reason of age or infirmity. Even then, professional beggars, the most undeserving of the population, will reap more benefit than the industrious.

G. O., dated 24th February 1874, No. 251.

5. The statement that last year's stock of grain has been destroyed by insects should form the subject of careful inquiry.

6. In the meantime, Government have given the Collector discretion to institute relief works. The officials should endeavour to project more extensive schemes than the repair of village irrigation works.

7. In Kullakurchi (population 119,644), the Tahsildar says that some dry lands have been left waste for want of rain, that some have yielded nothing, and that the rest have only yielded a half or at most a three-quarter crop. He thinks a 25 per cent. remission will be enough, but the sub-collector advises a remission of the March, April, and May kists, or 5-16ths of the whole. Scarcity is likely to be felt, and prices are very high. The sub-collector urges very strongly the necessity of at once strengthening the taluq establishment by appointing temporarily a sub-magistrate and deputy tahsildar on Rs. 70 and two revenue inspectors on Rs. 30, with a peon each on Rs. 6, to relieve the tahsildar from his heavy sedentary duties, and assist him in the inspections and supervision which the threatened scarcity calls for. The facts recorded in Board's proceedings, 2nd August 1873, No. 1470, show that the existing establishment is utterly insufficient for ordinary business, and the conclusion that it must be strengthened now is inevitable. The Board accordingly resolve to recommend Government to allow the entertainment of the officials named above for five months, and to let their sanction be communicated to the collector by telegram.

8. As for prices, the Board understand that they are now beginning to fall, the exceptional demand in Ceylon having greatly diminished.

9. In a remarkably well considered letter, the deputy collector on general duties, Sri Baliah, reports on the state of Trikalore (population 131,390) and Trinomallay (population 97,953). He anticipates scarcity from the harvest now being cut until August, when a cumboo crop may be expected; recommends that reproductive relief works should be commenced as soon as the necessity for them arrives; and thinks that four relief houses in Trikalore and four in Trinomallay may have to be kept open from April to July for old and helpless men and children, and where no famine works are available within easy distance.

10. He mentions three works which might be undertaken in Trinomallay:—

- (1.) Excavating a channel from the Eryur tank to Samudram.
- (2.) Widening the channel from the river to Keelavannakkambadi and from thence to Radhapuram.
- (3.) A continuation of the Chekkadi road which now stops at Thandramput.

11. The Board think these works are well chosen, and the commencement of them, in anticipation of the sanction of estimates, &c., should be allowed.

12. The Board await Mr. Garstin's application with respect to Punjab remissions.

13. He will be good enough to report what works are in progress in connection with the new railway, and what demand for labour is furnished in this way.

ORDER thereon by the GOVERNMENT of MADRAS.

With reference to the continued bad reports of the state of South Arcot. His Excellency the Governor in Council resolves to direct Mr. Banbury, Second Member of the Board of Revenue, to procced at once to that district for the purpose of drawing up a special report on its condition, and the measures which should be adopted to mitigate the effects of the scarcity which has begun to show itself.

2. In the meantime the three works in Trinomallay, the commencement of which is recommended in the 10th paragraph of the proceedings recorded above, should be at once taken in hand in anticipation of regular estimates. The District Engineer will be directed in the Public Works Department to give every assistance in the laying out and supervision of these works.

3. The entertainment for a period not exceeding five months of a temporary Sub-Magistrate and Deputy Tehsildar in the Kullakurchi taluq on Rs. (70) seventy and two Revenue Inspectors on Rs. (30) thirty each is sanctioned, and a telegram accordingly will be sent to the Collector. Four peons on Rs. 6 are also sanctioned, two for the Deputy Teshildar, and one for each of the Revenue Inspectors.

4. The Government concur in the Board's remarks about the opening of relief houses. Great discretion should be exercised in this respect. As sanction has already been accorded in General Order 24th February last, No. 251, no further orders are now called for on this point.

PROCEEDINGS of the MADRAS GOVERNMENT, REVENUE DEPARTMENT,—No. 330, dated 10th March 1874.

Read the following:—

PROCEEDINGS of the BOARD OF REVENUE,—Dated 10th March 1874.

Read the following letter:—

LETTER from A. WEDDERBURN, ESQ., Collector of Coimbatore, to the SECRETARY to the BOARD of REVENUE,—No. 53, dated 8th March 1874.

Copy of Head Assistant Collector's letter, No. 48 of 7th March 1874.
Letter to ditto, No. 236 of 8th March 1874.

I have the honor to forward, for the information of the Board of Revenue and of Government, a letter I have just received from my Acting Head Assistant Collector, Mr. Rice, and reply thereto regarding an "anticipated scarcity to some extent."

2. A full report on this subject will be forwarded; but, in the meantime, whenever any anticipations of scarcity are entertained, the nature of relief to

be afforded, if such anticipations are realized, requires previous forethought and decision; a scarcity well provided against in such cases results in good effects of a permanent nature, instead of an ineffective scattering of money.

3. Any relief to be of use should be very prompt, and if the nature of it be previously determined on it can be so.

4. I speak from experience on this point, as when on my joining Bellary in 1866 I found immediate measures of relief required, I had to provide work for about 14,000 persons, 6,000 under my own supervision; and to provide suitable and instant work was a matter of great difficulty.

5. I have indicated in my letter to the head assistant the work which will be found most suitable. There are many desirable works connected with the supply of water, but, as noted, these are the province of a separate profession who are never unemployed owing to the progress of agricultural improvements, and consequently do not require relief.

6. The repair of village lanes, which from long neglect have become even difficult of passage, seems to be the most suitable work from its being so widely extended, and so near the residences of the presumed distressed parties, and from its not being undertaken by the Local Fund, and so not competing with ordinary work.

7. When I took charge of this district in 1868, my predecessor had advertised a scarcity when three works had been proposed; the clearance of the silt of a tank, the construction of a road, and the clearance of an obstructed jungle-canal.

8. The first would have been an utterly unprofitable expenditure of money; the second was undertaken, but it confined the relief to a small area; and as the third happened to be in an uninhabited country it was not undertaken at all at the time. These were the results of hurried proposals and tahsildar's suggestions; and that expenditure in the present occasion may be useful is the object of the present reference. A few thousand rupees (say, within ten) will probably meet any demand; this can be at once arranged when rough estimates are prepared, but the plan of relief is submitted for early sanction of Government. Expenditure will not exceed requirements.

LETTER from A. WEDDERBURN, ESQ., Collector of Coimbatore, to the ACTING HEAD ASSISTANT COLLECTOR of COIMBATORE,—No. 236, dated 8th March 1874.

With reference to your letter of the 7th instant, No. 48, I have the honor to request you will inform me, at an early date, the grounds on which you apprehend scarcity in your division during the year, noting in detail the failure and to what extent, of crops.

2. So far as I am aware, raggi is the staple of food; this is grown chiefly as a garden-crop under wells; whether wells have dried up and so caused loss of any of such crop should be stated. In such cases, a suitable relief would be the advance of money to deepen the wells.

3. I believe that the dry ground crops have been poor from the absence of rain; if scantiness of crops has affected the cultivators, and has been very general and to a great extent, it becomes a question of remission or postponement of demand.

4. If again there are such numbers of destitute poor, whose livelihood is the collection of grass for sale, or daily miscellaneous labor, which is impeded or for which there is not a demand, this fact should be separately stated.

5. Careful inquiries into these details are necessary when announcing a "scarcity to some "extent," for upon these details depends the sort of relief.

6. As regards periodical reports on the state of the season, there is no ground for expecting a change of season at this time of year. The cultivating season is over, and at least two months must elapse before it is renewed. Crops are nearly all harvested, so that whatever distress has to be met must depend on present actualities, and not on future prospects.

7. It seems most probable to me that the poor may be pinched from the rise of the price of grain which may be expected; but here again, the rise will chiefly be in paddy or rice which this district imports to some extent; it is not a staple which affects the poor.

8. It would be of use if you ascertain any authentic rise in the price of grains consumed by the poor.

9. It is always objectionable to commence work in a hurry, and without sufficient forethought; and to leave the selection of work to the tahsildars is not, in my opinion, a correct procedure. The works to be undertaken should be considered at once.

10. Ordinary road repairs are generally the usual mode of relief as applicable to unskilled labour; irrigation works and well sinking belong to a professional class who are fully employed in all seasons, and who, therefore, seldom experience distress.

11. In my opinion any special measure of relief should consist in the repair and improvement of ittaries or village lanes. These are not undertaken by the Local Fund, and they are specially suitable as affording work to people in the immediate vicinity of their villages.

12. If you will, therefore, find out in what parts distress exists and to what extent, *i.e.*, affecting what proportion of the people, and get estimates prepared of the cost of improving such ittaries or lanes, including the clearance from them of obstructions as prickly pear, a permanent good will be effected, and a work supplied suitable to the class for whom it should be undertaken.

LETTER from R. RICE, ESQ., Acting Head Assistant Collector, to the COLLECTOR of COIMBATORE,—No. 48, dated 7th March 1874.

I think it right to bring to your notice that there are reasons for apprehending scarcity to some extent in the taluqs comprising my division. I have directed the tahsildars to keep me informed, from time to time, of the state of the season, &c. in their taluqs, and I have, at the same time, thought it well to direct them to prepare a list of works on which people might be employed in case my apprehension turn out well-founded.

Submitted to Government with the recommendation that Mr. Wedderburn be authorized to open simple relief works whenever and wherever he may be satisfied of the necessity for them, and that a sum of Rs. 10,000 be placed at his disposal for that purpose.

2. There can be no objection to the repair of village lanes being one mode of relief; but the deepening of wells, the clearance of channels, and the repair of tank bunds are all works of public utility, and capable of being performed by all classes.

3. Of course Mr. Wedderburn will stimulate all Local Fund works within the area in which distress may appear.

4. At this season of the year, if distress is coming, it will be felt immediately, and Mr. Wedderburn should be provided with means and be prepared to act at once if any action is necessary.

5. Mr. Rice must endeavour to see as much of his division as he can personally, and the Board hope soon to have before them some at least of the information which, as has been pointed out by the Collector, ought to be furnished when scarcity is feared.

ORDER thereon by the MADRAS GOVERNMENT.

His Excellency the Right Honorable the Governor in Council accordingly authorizes a sum of Rs. (10,000) to be placed at the disposal of the Collector of Coimbatore for the purpose stated in paragraph 1 of the proceedings above recorded.

2. Mr. Wedderburn will submit at an early date detailed information regarding the tracts in which scarcity and distress are anticipated.

3. The observations contained in his letter to Mr. Rice are appropriate.

PROCEEDINGS of the GOVERNMENT OF MADRAS in the REVENUE DEPARTMENT,—No. 358, dated 17th March 1874.

Read the following:—

PROCEEDINGS of the BOARD OF REVENUE,—dated 17th March 1874.

Read the following:—

LETTER from J. H. GARSTIN, ESQ., Collector of South Arcot, to the SECRETARY to the BOARD OF REVENUE,—No. 115, dated Cuddalore, 9th March 1874.

I have the honor to acknowledge the receipt of the Board's proceedings of the 3rd instant, relative to the threatened scarcity in this district and the measures to be taken with respect thereto.

2. In those proceedings the Board say they await my application with respect to punjah remissions, and call on me to report what works are in progress in connection with the new railway, and what demand for labour is furnished in this way.

3. I am unable to make any application with respect to punjah remissions at present, because I have no facts to go on except as regards the Cuddalore Taluq (of which I am doing the Jummabundi), and only partially for it. I am awaiting the report of the Deputy Collector on remission duty, but fear I shall not get it for some months for the whole district.

4. In the meantime, the different divisional officers will be pushing on with the settlement of their respective taluqs, and have power to direct the suspension of the collection of the March, April, and May punjah kists. They will, I trust, as directed by me note carefully all cases of complete punjah shavi brought to their notice, and in this way assist the Remission Deputy Collector who will then make his own suggestions for the different tracts that have suffered.

5. As far as I am able to judge, in many, if not in most, instances if the remission is to be proportionate to the loss of crop, it will have to be total; but if such an idea is repugnant to the Board, then no simpler plan could be devised than to give a general remission of the three remaining punjah kists wherever in a village there has been shavi or short produce of punjah crops on more than half of the whole dry cultivation. This, however, would render any action on the report of the Remission Deputy Collector almost unnecessary.

6. As to railway works, I have ascertained from Mr. Logan, the Chief Engineer of the Carnatic Railway, who happens to be here, that there are four railway divisions in this district in which a great deal of the earth-work has been already completed, and that about 580,000 cubic yards remain to be done, but generally of a very light description. These works have been, for the most part, given out on contract, so that any interference with them as regards labour is difficult. I do not consider, therefore, that as a relief work the railway, except in the Villapuram Taluq where earth-work has not been yet commenced, will be of much service as a relief work.

7. I am selecting some extensive works in each taluq for execution as relief works in case of necessity.

8. I enclose translations of two reports on the insect which did so much damage last year to paddy in store, received from the Tahsildars of Villapuram and Kallakurchi in August last, and of one from the former officer in December last. Further inquiries will be made on this subject.

Submitted for the information of Government.

2. The Board think Mr. Garstin has mistaken the orders of Government about the Special Deputy Collector. It was not intended that he should report on the whole district, and that the settlement of remissions should await his report. He was rather intended as an extra Assistant to the Collector, to be employed anywhere where his services were most needed in settling remissions. Mr. Garstin should send in his proposals for each taluq as soon as he has materials for doing so. It is most desirable that remissions, when they are likely to be extensive, should be settled promptly.

3. Mr. Garstin thinks that railway works which have been given as contract cannot be counted as relief works; but contractors must employ labour and pay for it, so that their operations will be of great assistance in the anticipated crisis. It would be interesting to know how many men are employed on railway works in the different railway divisions of the district, and what kind of work remains to be done. The Collector will be good enough to ascertain and report further particulars.

4. Mr. Garstin's action in selecting works in the different taluqs is approved. He should send in lists of the works and localities when selected.

5. His further report on the attack of insects on last year's grain is awaited. A description of the insects should be given so as to enable those conversant with the subject to identify it.

Order thereon by the Government of Madras.

The Board's proceedings are approved. They are quite right in their view of the object of the appointment of an extra Deputy Collector.

2. Specimens (living and preserved) of the insect referred to should be obtained and forwarded to Mr. Bidie, Superintendent, Central Museum, who will be requested to submit his opinion on the subject after examination.

NOTE.—The figures for table rice represent those for the Port of Calcutta only, as those for the minor ports cannot be distinguished; but it is believed that the exports of table rice from the latter ports are unimportant.

R. B. CHAPMAN,

Financial Department, the 17th April 1874.

Secretary to the Government of India, Financial Department.

No. 25 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To the Most Honorable the MARQUIS OF SALISBURY, P. C., Her Majesty's Secretary of State for India.

MY LORD MARQUIS, Calcutta, the 24th April 1874.

WE have the honor to acknowledge the receipt of your Lordship's despatch No. 10, Revenue, of the 19th March.*

We have to express our sincere acknowledgments for the approval which your Lordship has conveyed of the policy which we have hitherto pursued, and for the assurances we have received of the cordial support of Her Majesty's Government.

* See Part II. page 248.

2. We fully share your Lordship's anxiety that no precaution should be neglected by which the danger still impending over many millions of people may be effectually averted. In spite of a sudden and severe outbreak of distress in a portion of Tirhoot before the measures in course of preparation to meet it were quite complete, we think that Sir Richard Temple is fully justified in saying, in the words of the last special narrative, "that the famine has been "got well in hand, and will, it may be hoped, be effectually met and averted."

3. Our recent despatches have furnished more complete information than was contained in the telegram of March 4th, to which your Lordship alludes in the despatch under reply.

The information with respect to the famine, which we have forwarded home, although very voluminous, has been necessarily sent somewhat in a fragmentary condition. We have been anxious to give your Lordship the latest information before us at the date of the despatch of each mail. We fear, therefore, that the information which we afforded was not sufficiently explicit on some points of importance.

4. In our despatch, No. 17 of the 20th March,† we reviewed the policy of Government and gave a summary of the general position of affairs. We propose in the present despatch to enter into some further explanations which are suggested by the remarks in your Lordship's despatch of March 19th, and, in doing so, we trust that we shall be able to remove at any rate a portion of your Lordship's anxiety.

†See Part III. page 160.

5. Your Lordship observes in the 3rd paragraph of the despatch that the "deficiencies of transport, from which your present difficulties have principally "arisen, will scarcely be diminished as time goes on, but will, on the contrary, "be rather aggravated when the rains have fallen and the roads have become "less serviceable. Against this danger you have provided, at least partially "by commencing a Railway from the riverside opposite the Barrh station to "Durbungah." If our intention had been to send into the distressed districts from time to time a sufficient quantity of grain to meet their current wants, the difficulties in connection with local transport would, without doubt, be greatly aggravated after the rains commence. This, however, is not the actual position of affairs. Our arrangements have been made with the object of storing in the interior of each district before the rains commence a sufficient supply of food to last until after the rains have ceased. Your Lordship will observe, therefore, that we hope that, although other difficulties connected with the distribution of food may remain, those connected with the transport of food to the principal local depôts will, for the most part, have been overcome before the commencement of the rains.

The Railway from Barrh to Durbungah was not intended as a reserve means of transport by which to enable us to supply Eastern Tirhoot during the rai although it may be useful after the monsoon sets in; it was recommended by Sir Richard Temple as a reserve means of transport, in the event of the contract for the conveyance of grain by road failing, to secure a sufficient quantity of grain in Eastern Tirhoot before the commencement of the rains. The wisdom of Sir Richard Temple's proposal has been clearly shown, for the contract for transport has partially failed, and without the Railway the supplies for North-Eastern Tirhoot could not have been completed before the rains.

6. We are as yet unable to say with certainty whether we shall be completely successful in storing the whole of the allotments of grain at the local depôts within the given time, but we trust that we shall be able to do so. Sir George Campbell's note on the transport arrangements, which is attached to the fifteenth special narrative, states that the solution of the problem very much depends upon the carrying power of the East India Railway; but he anticipated that "if the " Railway can take without fail 2,500 tons a day as now arranged, we may " expect that all the grain will be stored before the rains, if the monsoon sets in " at the usual time." The officers of the East India Railway Company have exerted themselves to the utmost, and for some weeks that Railway has been taking an average of fully 2,500 tons a day. The total amount despatched by the line up to the evening of the 22nd instant was about 203,000 tons, and there remained about 74,000 tons to go. By the Eastern Bengal Railway about 63,000 tons had been despatched up to the evening of the 22nd instant, and there remained only about 3,500 tons to go.

7. In respect to the amount of our reserve, to which your Lordship alludes in the 5th, 6th, and 7th paragraphs of your despatch, the figures have undergone such frequent, although unavoidable, changes by a revision of the estimates, and by making fresh allotments and fresh purchases, that we fear they are somewhat confusing. The matter now stands as follows:—According to Sir Richard Temple's Minute No. 66 of March 28th,* 10,550,000 maunds, or about 388,000 tons, were allotted to the Patna, Bhaugulpore, and Rajshahye divisions. In addition to the above, the following allotments have since been made:—

	Maunds.
To the Patna district - - - - - -	67,500
" Hazareebagh district - - - - -	25,000
" Manbhoom district (probable, but not final) -	150,000
" Palamow sub-division (Lohardugga district) -	10,000
" Moorshedabad district - - - -	5,000
Total - - -	257,500

or about 9,500 tons.

The total amount of grain allotted to the several distressed districts is, therefore, about 397,500 tons, of which about 50,000 tons are a reserve over and above the calculations of the estimated requirements. We have purchased, or authorised the Government of Bengal to purchase, in all about 490,000 tons. Our unallotted reserve will, therefore, amount to about 92,500 tons, and the total reserve to about 142,500 tons.

Sir Richard Temple's estimates, on which we have mainly relied, have generally been in excess of those made by the local officers; they have been based on an average daily consumption of ¾ths of a seer all round for men, women, and children, which is a high average. Credit, moreover, has not been taken for the very considerable stores of grain which have been imported by zemindars and others with money advanced by Government.

8. We gather from the remarks contained in the 6th paragraph of the despatch under reply that your Lordship is under the impression that when, on the 4th of March, we spoke of the number of persons who are expected to be "on the hands of Government," we intended to include only those who would be likely to be in the receipt of wages or alms, and not that portion of the general public to whom, by reason of the absence of supplies in the local markets, we should have to sell

---

* See despatch No. 21 of April 10th, 1874.

grain. Such, however, was not our meaning. When we spoke of the number of persons who would be "on the hands of Government," we included all those for whom we thought it probable we should have to provide food, whether by payment in kind on relief works, by the distribution of food in the form of charitable relief, or, lastly, by the sale of grain. Your Lordship will observe from a perusal of the several minutes which Sir Richard Temple has written that the percentages of the population for whom he recommended that provision should be made in the most distressed districts are very high, being not unfrequently as much as 50 per cent. of their total population. In those tracts we are prepared to sell,—and we believe that the provision we have made will enable us to sell,—sufficient food to provide for the people until supplies are available in the ordinary course of trade.

9. We are now in a position to state that if we succeed in laying down the amount of grain already allotted to the several districts before the rains commence, we shall be able to meet demands considerably in excess of our estimates. Although, according to the latest returns, about 1,185,000 persons are employed on relief works, and over 116,000 are in receipt of charitable relief, the issues of grain from Government stores have, up to the present time, been inconsiderable. The local reserves of food have, therefore, practically been increased by the quantity which we provided for the month of March and a part of April, most of which, as a matter of fact, still remains in the Government store-houses.

10. In the 7th paragraph of the despatch under reply your Lordship alludes to our rough estimate made last November that we might have to provide for 2½ millions of persons for seven months. That estimate was based more on the general results of past experience applied to the whole area affected by the drought than on any attempt to calculate in detail the future liabilities of particular districts. At that time the great rice crop of 1873 had not been all harvested, and the yield was still to some extent a matter of uncertainty. The spring crops were only in course of being sown, and it was impossible for any one to predict with accuracy what the outturn of those crops would be. The estimate was the best which we could make at the time, but it was, of course, liable to subsequent alteration and amendment.

11. Our present estimate, as will be seen from Sir Richard Temple's Minute No. 66 of the 28th of March,* is that about ½ millions will, at the worst period *Page 49. of scarcity, require aid from Government; on the other hand, during a portion of the period of seven months, for the whole of which we estimated that 2½ millions of people would require support, a very much less number will be upon the hands of Government. We are now in the middle of the second month of the seven named in our estimate, and the total number of persons employed on relief works, or in receipt of gratuitous relief, is about 1,200,000, or about half the number for which we estimated last November. The vast majority, moreover, of these have been up to present time supported by money with which they buy food in the local bazars, and not by the issue of Government grain. As your Lordship is already aware, we have thought it desirable to base our more recent estimates on an average daily consumption of three-quarters of a seer a day; hence the necessity arose for increasing our supplies very considerably.

12. As your Lordship has alluded to our expression of disappointment that the arrangements for local transport were in some parts delayed for too long a time, we think that, in justice to Sir George Campbell and his officers, we should make some further remarks upon this subject. The letter from which your Lordship has quoted referred only to the transport arrangements of the Tirhoot district. As your Lordship is aware, the present famine affects more or less severely a very extensive and densely populated tract of country. Over the greater portion of that area we believe the local arrangements for the transport of food and the relief of distress to have been carried out in time. In one limited portion only (Eastern Tirhoot) the distress came on very suddenly, and for a short time outstripped the measures which were in course of adoption to avert it. Although we have thought it our duty to express our sense of disappointment at this partial and temporary failure, we have not considered it necessary, in the interests of the public service, to enquire very particularly upon whom the responsibility rested. We wished to encourage all Government officers to further

exertions rather than to impute blame for any past shortcomings. We fully sympathised with Sir George Campbell and his officers in the great difficulties which they had to encounter,—difficulties which have strained the weak administrative machinery of Bengal to the utmost, and which were more particularly felt in Tirhoot on account of the peculiar habits and characteristics of the people. We felt sure that all, from the Lieutenant-Governor downwards, were exerting themselves to the best of their ability, and that any partial failure arose from errors of judgment, which would be speedily rectified, or from the fact that the difficulties in the way of rapidly organising the necessary machinery complete in all its branches were well-nigh insuperable.

13. In so vast and novel an undertaking it would be unreasonable to expect complete success everywhere. Speaking generally, we are of opinion that the efforts which have been made by the local officers have been very judicious and successful. Moreover, as will be seen from a perusal of the letters quoted in the margin, we have from the first attached the utmost importance to the necessity of making early and complete arrangements for the transport of grain and the organization of the machinery for the distribution of relief; and although we have throughout felt that it would not be in the interests of the public service to interfere or to give minute instructions as to the detail of those arrangements, at the same time we are fully alive to the fact that upon us rested the responsibility not only of giving instructions, but of seeing that they were everywhere carried out. We fully accept this responsibility, and we, therefore, thought that it was unnecessary and, indeed, unjust to the Lieutenant-Governor and his officers to impute serious blame to them on account of the single exception to their generally successful efforts, especially as the failure was temporary, and was speedily remedied.

Despatch to Secretary of State, No. 3 of January 9th, 1874.*

Enclosures to despatch No. 5 of January 16th, 1874.†

- Proceedings at Conference held on January 8th, 1874.

From Government of India to Government of Bengal, No. 126 of January 17th, 1874. (Enclosure to despatch to Secretary of State, No. 6 of January 23rd, 1874.)‡

In respect to Sir George Campbell's personal services, we have already* acknowledged the zeal and ability with which from the first he devoted himself to the arduous task of conducting the operations for the relief of distress, and we have particularly recorded our high appreciation of the manner in which he personally directed and supervised the relief operations on the occasion of his visit to North Behar. As regards the officers who acted under Sir George Campbell's orders, in spite of a temporary failure in one portion of the Tirhoot district, we cannot speak too highly of the zeal, energy, and devotion which they have from the first displayed. These officers deserve our warmest thanks; they deserve, and they will obtain, our cordial support in the performance of their arduous duties.

* Resolution of Government of India, No. 1200 A. of April 8th, 1874. See enclosure 4 to despatch to Secretary of State, No. 21 of April 10th, 1874.§

14. Your Lordship will perceive from the explanations contained in this despatch that since the date of the information, upon which the calculations contained in the despatch under reply were based, we have increased our purchases of grain from 420,000 to about 492,000 tons. We have already bought a larger amount of rice than it will be possible to send up the country by railway before the rains commence. The reserve beyond the allotments which have been already made will be held in store at Calcutta. We have availed ourselves of the discretion which your Lordship placed in our hands as respects further purchases; but, bearing in mind your Lordship's wishes, we shall continue to secure an ample margin to meet contingencies, and we shall not hesitate to order further supplies should there be any probability of their being required. A considerable amount of rice is obtainable from Burma in the months of June and July, when, from the rising of the water in the creeks, rice, which is now stored in the interior, is brought down to the seaports. Moreover, in the abundant markets of Northern India, ample supplies of grain can readily be obtained. We are unwilling to pur-

‡ See Part I., page 164.

§ See Parf IV. page 165.

chase largely in those markets, until the necessity has clearly arisen, as by doing so we should raise prices, and thus interfere with the trade between the Punjab and Behar. This trade, although it has lately somewhat fallen off owing to a fall of prices at Patna, is certain to revive again in the very probable contingency of a rise of price at Patna, or a fall in the northern markets.

We have the honor to be,
